

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 4-A-10

Subject: Protecting the Patient-Physician Relationship

Presented by: Barbara L. McAneny, MD, Chair

Referred to: Reference Committee G
(James Chris Fleming, MD, Chair)

1 At the 2009 Annual Meeting, the House of Delegates adopted amended Resolution 709 (Policy
2 D-165.944, AMA Policy Database), which called for the American Medical Association (AMA) to
3 prepare a report on the health of the patient-physician relationship addressing the impact of new
4 methods of health care financing, third party judgments of physician quality, and third party
5 directed use of comparative clinical effectiveness research data on the patient-physician
6 relationship. Resolution 709 (A-09) also called for the report to recommend specific strategies to
7 protect the patient-physician relationship. The Board of Trustees assigned this item to the Council
8 on Medical Service (CMS) for a report back to the House of Delegates at the 2010 Annual
9 Meeting.

10
11 As discussed in this report, the techniques of bundled payments, physician profiling, and
12 comparative effectiveness research (CER) represent the key critical elements highlighted in
13 Resolution 709 (A-09). This report summarizes previous Council consideration of the patient-
14 physician relationship; identifies methods that have been proposed for health insurers to restrain
15 costs using the identified techniques; reviews AMA advocacy and policy; outlines strategies to
16 protect the patient-physician relationship; and presents policy recommendations.

17 18 BACKGROUND

19
20 Council on Medical Service Report 7-I-99, "Socioeconomic Factors Influencing the Patient-
21 Physician Relationship," previously considered the patient-physician relationship. The report
22 reaffirmed policy advocating for the viability of individually owned health insurance (Policy
23 H-165.920). As directed by Policy H-140.920, the AMA continues to monitor infringements on
24 the patient-physician relationship and respond with policy development and advocacy initiatives
25 that are both timely and appropriate.

26
27 In the ten years since the Council prepared its Report 7-I-99, health system reform has become a
28 key political issue. A focus of political concern has been the limited evidence base for medical
29 procedures that impacts the quality of care and the fragmentation of services that undermine
30 integrated care, all of which drive health care spending. One school of thought, primarily held by
31 health insurers, proposes a variety of methods for insurers to restrain costs, including bundled
32 payment methods, statistical oversight of physicians' practices (physician profiling), and the
33 consideration of treatment options utilizing payment and coverage exclusions based on
34 comparative effectiveness research (CER) findings. Concerns have been raised that these specific
35 techniques threaten to override the individual physician's judgment of their patients' needs.

1 BUNDLED PAYMENTS

2
3 Serious consideration is being given to bundled payment arrangements and other innovative
4 models due to concerns that the current fragmented health care system leads to a lack of care
5 coordination and accountability. The Patient Protection and Affordable Care Act, signed into law
6 in March 2010, (P.L. 111-149) calls for new pilot programs and establishes a new Center for
7 Medicare and Medicaid Innovation within CMS to promote more rapid development and testing of
8 these new payment models. Under a bundled payment approach, the health care services related to
9 the management of a specific medical condition would be grouped together in an episode of care
10 and a single payment would be made. The services could relate to the activities of a single
11 physician (or other health care provider) or to services provided by multiple physicians and
12 providers. Medicare already uses bundled payments for certain services and is engaged in a
13 Medicare Acute Care Episode (ACE) Demonstration to determine if a greater alignment of the
14 financial incentives between hospitals and physicians will result in improvements in the quality,
15 coordination, and efficiency of care.

16
17 Proponents believe that bundled payment methods will promote care coordination resulting in
18 increased quality and efficiency while controlling costs. However, the potential impact on the
19 patient-physician relationship is a concern because bundled payment arrangements base payment
20 on a pre-determined treatment plan for a specific medical condition. Accordingly, they may
21 adversely impact a physician's decision-making ability and jeopardize individualized therapy and
22 patient autonomy for those patients whose conditions are more complex or varied. In addition,
23 such methods could create disincentives for diagnosing and treating new conditions or components
24 of a disease that may not fall under the bundled services, thereby hindering coordination and
25 quality of care.

26
27 AMA ADVOCACY AND POLICY ON BUNDLED PAYMENTS

28
29 AMA advocacy and policy have focused on the impact of bundled payment methods on the
30 practice of medicine including the potential effect on the patient-physician relationship. In part as
31 a response to Policy D-385.967, the AMA has developed a white paper, "Accountability with
32 Autonomy: Enabling Physicians to Succeed under Healthcare Payment and Delivery Reforms,"
33 regarding the organizational arrangements and legal issues involved in a variety of innovative
34 physician payment models. The paper addresses how physicians participating in these approaches
35 can receive and distribute bundled payments without becoming hospital employees. It provides
36 guidance on how physicians can partner with hospitals in bundled payment arrangements without
37 giving up their professional autonomy, as well as how smaller medical practices can begin to
38 engage in payment models such as gainsharing, accountable care organizations, medical homes,
39 and pay-for-performance models. The paper also addresses legal issues, barriers and opportunities
40 arising from antitrust and self-referral laws and regulations.

41
42 Council on Medical Service Report 6-A-09, "Medicare Physician Payment Reform," directed the
43 AMA to work with relevant entities to ensure that bundled payments, if implemented, do not lead
44 to hospital-controlled payments to physicians (Policy D-390.961[6]). The AMA has closely
45 monitored the inclusion of bundled payment methodologies in health system reform legislation and
46 has provided comments consistent with AMA policy. In addition, the AMA will closely monitor
47 the results of Medicare demonstration projects that include a bundled payment methodology to
48 ensure that they are rigorously studied and to prevent the adoption of unproven or potentially
49 harmful payment models into Medicare payment policy.

1 PHYSICIAN PROFILING

2

3 A physician profiling program is any system that compares, rates, ranks, measures, tiers, or
4 classifies a physician's or physician group's performance, quality, or cost of care against objective
5 or subjective standards. The Patient Protection and Affordable Care Act of 2010 contains troubling
6 elements of physician profiling in the Medicare program that the AMA will work to change.

7

8 While the AMA neither supports nor opposes physician profiling *per se*, when it is done, patients
9 and physicians should be given the information necessary to understand how the profiles are
10 developed and should have an expectation that the results accurately reflect aspects of the
11 physician practice. Inaccurate physician rankings and the publication of erroneous information can
12 disrupt patients' longstanding relationships with physicians they have known and trusted for years.
13 It can impact the continuity of care if the profiling information results in a decision to end a
14 relationship. In addition, incorrect and misleading information is unfair to patients who may be
15 considering it seriously when choosing a new physician.

16

17 AMA ADVOCACY AND POLICY ON PHYSICIAN PROFILING

18

19 The preponderance of AMA policy on physician profiling is contained in the principles for the
20 public release and accurate use of physician data and policy regarding the release of claims and
21 payment data from government health care programs (Policies H-406.991 and H-406.990). AMA
22 policy primarily focuses on safeguarding physicians in the context of profiling programs. The
23 principles describe the needs of patients for information that is accurate and transparent and
24 supports the continuation of the patient-physician relationship. The principles advocate that
25 effective safeguards should be established to protect against the dissemination of inconsistent,
26 incomplete, invalid or inaccurate physician-specific medical practice data; limitations of the data
27 sources used to create physician profiles should be clearly identified and acknowledged in terms
28 understandable to consumers; and the capabilities and limitations of the methodologies and
29 reporting systems applied to the data to profile and rank physicians should be publicly revealed in
30 understandable terms to consumers (Policy H-406.991[2,3]). The AMA will continue its extensive
31 efforts to educate the public about the potential risks and liabilities of public reporting programs
32 that are not consistent with AMA policies, principles, and guidelines (Policy H-406.989[5]).

33

34 In addition, Policy H-450.941 addresses interference in the patient-physician relationship by
35 strongly opposing the use of tiered and narrow physician networks that deny patient access to, or
36 attempt to steer patients toward, certain physicians primarily based on cost of care factors.

37

38 COMPARATIVE EFFECTIVENESS RESEARCH

39

40 The purpose of CER is to provide more rigorous evidence about which treatments work best for
41 which patients by comparing different diagnostic or treatment options for diagnosing or managing
42 a specific health problem, condition or disease. The American Recovery and Reinvestment Act of
43 2009 (ARRA, P.L. 111-5) provided \$1.1 billion funding for CER coordinated on a national level.
44 The Patient Protection and Affordable Care Act of 2010 establishes an independent entity with a
45 governing body that includes representatives of practicing clinicians to support and coordinate
46 CER.

47

48 An organized effort to make comparative information readily available should help patients and
49 physicians benefit from prioritized research and timely dissemination of information about the
50 relative effectiveness of treatments for diseases or medical conditions for specified patient
51 populations. Appropriate uses for CER include clinical registries, which can be used to generate or

1 obtain outcomes data, decision support programs, and best practice guidelines. A major caveat of
2 those concerned that CER may over-reach, is that the primary goal of CER should not be used to
3 contain costs. Rather, the goal of CER should be to enhance physician clinical judgment and foster
4 the delivery of quality patient-centered care. There are concerns that research findings would be
5 used to restrict the availability of care options by health insurers through payment policies. If used
6 in this manner, CER could limit patient choice of treatment and personal autonomy by
7 incentivizing the available options for a given medical condition, compromise physician's
8 decision-making abilities, and interfere in the patient-physician relationship.

9 10 AMA ADVOCACY AND POLICY ON COMPARATIVE EFFECTIVENESS RESEARCH

11
12 The AMA recognizes the need for increased research to help improve medicine's understanding
13 about best practices and optimize the balance between medical outcomes and treatment costs
14 (Policy H-155.960[4]). Council on Medical Service Report 5-I-08, "Comparative Effectiveness
15 Research," contained principles to guide AMA advocacy efforts on CER and for creating a federal
16 CER entity (Policy H-460.909). While the principles mainly focus on guiding the creation of a
17 centralized comparative effectiveness research entity, the policy includes the following principle,
18 which addresses the patient-physician relationship:

19
20 Patient Variation and Physician Discretion: Physician discretion in the treatment of individual
21 patients remains central to the practice of medicine. CER evidence cannot adequately address
22 the wide array of patients with their unique clinical characteristics, co-morbidities and certain
23 genetic characteristics. In addition, patient autonomy and choice may play a significant role in
24 both CER findings and diagnostic/treatment planning in the clinical setting. As a result,
25 sufficient information should be made available on the limitations and exceptions of CER
26 studies so that physicians who are making individualized treatment plans will be able to
27 differentiate patients to whom the study findings apply from those for whom the study is not
28 representative (Policy H-460.909 [K]).

29
30 As CER is implemented on a federal level, the AMA will continue to monitor its progress,
31 advocate that aspects of the AMA principles are included in CER efforts, and support effective
32 methods of translating research findings relating to quality of care into clinical practice (Policy
33 D-390.961[1]).

34 35 STRATEGIES TO PROTECT THE PATIENT-PHYSICIAN RELATIONSHIP

36
37 In addition to the AMA's positions on protecting the patient-physician relationship in the context
38 of bundled payment methodologies, physician profiling and CER, the AMA has a solid foundation
39 of policy that supports protecting the patient-physician relationship in general (Policies
40 H-450.941[3], H-285.954[1,p], H-120.988, H-275.937[2], and H-5.989).

41
42 The Council believes that the closer patients and physicians are to health care transactions and
43 collaborations regarding the patient's well-being, the better the relationship and resulting health
44 care outcomes. The AMA supports the physician's duty of patient advocate as a fundamental
45 element of the patient-physician relationship that should not be altered by the system of health care
46 delivery. Physicians must continue to place the interests of their patients first (Opinion E-8.13 [1]).
47 The AMA advocates for the right of physicians and patients to privately contract for health care
48 services, supports the freedom of physicians to choose their method of earning a living (fee-for-
49 service, salary, capitation, etc.) and supports the right of physicians to charge their patients their
50 usual fee that is fair, irrespective of insurance coverage arrangements between the patient and the
51 insurers (Policies H-383.991 and H-385.926). The AMA has adopted principles of patient-centered

1 medical homes, which may enhance the patient-physician relationship by allowing physicians to
 2 have more continuous contact with patients, to coordinate care better across the entire health
 3 system and to use more evidence-based medicine in clinical decision-making (Policy H-160.919).

4
 5 In addition, the Council highlights the importance of patients and physicians collaborating on the
 6 patient's well-being, such as by using shared decision-making tools as outlined in Council on
 7 Medical Service Report 7-A-10, "Shared Decision-Making," which is being considered at this
 8 meeting and value-based decision-making tools (Policies H-450.938 and D-155.994). These tools
 9 serve different and complementary functions in the decision-making process. Shared decision-
 10 making tools provide patients with background information to ensure that they have enough
 11 information necessary to make health care decisions in conjunction with their physician that best
 12 reflect their personal values and preferences in cases where the best choice of treatment option is
 13 not clinically evident. Value-based decision-making tools, on the other hand, assist patients and
 14 physicians in the consideration of costs and benefits of a specific treatment option using evidence-
 15 based information when the best choice of treatment option is clinically evident.

16
 17 The Council believes payment arrangements that encourage patients to be more responsible for the
 18 resources used for health care and that foster transparency enhance the patient-physician
 19 relationship. The AMA supports the use of consumer-directed health care, such as health savings
 20 accounts (HSAs) and health reimbursement arrangements (HRAs), which empower patients to take
 21 responsibility for their health care decision-making and to spend resources wisely (Policies
 22 H-165.852 and H-165.854). AMA policy outlines concerns with financial incentives used in the
 23 management of medical care by insurance companies and encourages physicians to be aware of
 24 such practices and the resulting potential for some types of plans to create conflicts of interest
 25 (Policy H-285.951[2]). The relationship between a physician and a patient is fundamental and
 26 should not be constrained or adversely affected by any considerations other than what is best for
 27 the patient. The existence of other considerations, including financial or contractual concerns, is
 28 and must be secondary to the fundamental relationship (H-275.937[2]).

29
 30 Furthermore, while financial transparency can be achieved through cost-sharing arrangements such
 31 as the use of coinsurance, the Council studied the benefits of coinsurance versus copayment for
 32 pharmaceuticals in Council on Medical Service Report 1-I-07, "Cost-Sharing Arrangements for
 33 Prescription Drugs," and concluded that cost-sharing arrangements should be designed to
 34 encourage the judicious use of health care resources, rather than simply shifting costs to patients.
 35 For example, cost-sharing requirements should be based on considerations such as: unit cost of
 36 medication; availability of therapeutic alternatives; medical condition being treated; personal
 37 income; and other factors known to affect patient compliance and health outcomes (H-110.990).

38
 39 **DISCUSSION**

40
 41 The political urgency of health system reform throughout 2009 and in 2010 stimulated the
 42 consideration of techniques to address health care spending, with a possible threat to the patient-
 43 physician relationship. The AMA successfully advocated on behalf of patients and physicians
 44 using a foundation of policies aimed at protecting this key relationship, and will continue to do so
 45 as implementing regulations are developed. AMA policy emphasizes protecting the patient-
 46 physician relationship in the context of physician profiling and CER (Policies H-406.991[2,3] and
 47 H-460.909[K]). Additional AMA policy outlines specific strategies to further protect the patient-
 48 physician relationship.

49
 50 At critical junctures in the health system reform debate, the AMA sent letters to the Administration
 51 and Congress encouraging continued efforts to enact meaningful health system reform this year.

1 The communications outlined essential elements of health system reform, based on long-standing
2 AMA policy, including assuring that health care decisions are made by patients and their
3 physicians and allowing them to privately contract without penalty (Policies H-165.838 [1,c] and
4 H-385.926). The AMA will continue to monitor relevant legislation, related regulatory activity,
5 and advocate for the protection of the patient-physician relationship.
6

7 The increased focus on restraining costs and improving quality through payment reform, while
8 presenting some challenges, also provides opportunities for physicians to develop innovative
9 practice models that appear to be the wave of the future. Practice groups that have embraced these
10 difficult changes, whether it be accepting pay-for-performance, bundled payment methods or
11 realigning to establish an accountable care organization, have started to report their experiences,
12 including positive outcomes. The Council is aware of the challenges involved in such changes, but
13 remains cautiously optimistic regarding these emerging trends.
14

15 This report accomplishes the request to prepare a report on the health of the patient-physician
16 relationship addressing the impact of new methods of health care financing, third party judgments
17 of physician quality, and third party directed use of comparative clinical effectiveness research data
18 on the patient-physician relationship. In addition, specific strategies to protect the patient-
19 physician relationship have been recommended. Accordingly, the Council recommends that Policy
20 D-165.944 be rescinded.
21

22 RECOMMENDATIONS

23

24 The Council on Medical Service recommends that the following be adopted and the remainder of
25 the report be filed:
26

- 27 1. That our American Medical Association (AMA) support protecting the patient-physician
28 relationship by continuing to advocate for: the obligation of physicians to be patient
29 advocates; the ability of patients and physicians to privately contract; the viability of the
30 patient-centered medical home; the use of value-based decision-making and shared
31 decision-making tools; the use of consumer-directed health care alternatives; the obligation
32 of physicians to prioritize patient care above financial interests; and the importance of
33 financial transparency for all involved parties in cost-sharing arrangements. (New HOD
34 Policy)
35
- 36 2. That our AMA continue to advocate protecting the patient-physician relationship in the
37 context of bundled payment methodologies, comparative effectiveness research and
38 physician profiling. (New HOD Policy)
39
- 40 3. That our AMA rescind Policy D-165.944. (Rescind HOD Policy)

Fiscal Note: Staff cost estimated to be less than \$500 to implement.
