99495	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge	Oct 2012	Transitional Care Management Services	8	CPT 2013	October 2017	Survey for April 2018	☐
99496	Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of high complexity during the service period Face-to-face visit, within 7 calendar days of discharge	Oct 2012	Transitional Care Management Services	08	CPT 2013	October 2017	Survey for April 2018	☐
99497	Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; first 30 minutes, face-to-face with the patient, family member(s), and/or surrogate	Jan 2014	Advance Care Planning	19	CPT 2015	October 2019	Review in 2 years (October 2019)	☐
99498	Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; each additional 30 minutes (List separately in addition to code for primary procedure)	Jan 2014	Advance Care Planning	19	CPT 2015	October 2019	Review in 2 years (October 2019)	☐
994X7		Apr 2017	Chronic Care Management Services	09	CPT 2019	October 2022		☐

CPT Code	2018 Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes		Fecal Bacteriotherapy		CPT 2013	October 2018	The specialty societies indicated that they tried to develop a category I code to replace 44705 which is not currently covered by Medicare, but the CPT Editorial Panel did not accept the coding change proposal due to a lack in literature provided. The Workgroup recommended that these services be reviewed in 2 year after additional utilization data is available (October 2018).	☐

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

Seema Verma
Administrator
Center for Medicare
Centers for Medicare and Medicaid Services
7500 Security Boulevard
Baltimore, MD 21244-1850

Dear Ms. Verma:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the October 2017 meeting, the following issue was reviewed by the HCPAC:

- Psychological and Neuropsychological Testing (96105, 96125, 96130, 96131, 96136 –96138, 96139, 96146)

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2019 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Samantha Ashley (ph: 312-464-4720; email: samantha.ashley@ama-aassn.org) at the AMA for clarification regarding these recommendations.

Sincerely,

Michael D. Bishop, MD
HCPAC Chair

Dee Adams Nikjeh, PhD, CCC-SLP
HCPAC Co-Chair

RUC Health Care Professionals Advisory Committee (HCPAC) Summary of Recommendations
CMS High Expenditure Procedural Codes

October 2017

Psychological and Neuropsychological Testing

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010-day and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In January 2016, the specialty societies requested that the entire family of codes be referred to the CPT Editorial Panel to be revised. The testing practice has been significantly altered by the growth and availability of technology. The current codes do not reflect the multiple standards of practice and therefore result in confusion about how to report the codes. The RUC recommended the entire psychological and neuropsychological testing codes be referred to the CPT Editorial Panel for revision. CMS also requested that the entire family of services be reviewed. In September 2016, the CPT Editorial Panel created seven codes to differentiate technician administration of psychological testing and neuropsychological testing from physician/ psychologist administration and assessment of testing; and deleted codes 96101-96103, 96111, 96118, 96119, 96120. In January 2017, organizations representing psychiatry, psychology, neurology, pediatrics and speech-language pathology conducted a survey for the January 2017 RUC and HCPAC Review Board meetings. During this effort, it became apparent that further CPT revisions were required. Survey respondents were unable to articulate the work at the 60 or 30 minute coding increments and there is significant concern regarding the duplication of pre- and post- work as several units of service would be reported. Therefore, the organizations submitted a letter to the CPT Editorial Panel and the RUC to rescind the coding changes summarized below for CPT 2018. In June 2017, the CPT Editorial Panel revised 96116, added 13 codes to provide better definition and description to psychological and neuropsychological testing, and deleted codes 96101-96103, 96111, 96118, 96119, 96120.

Assessment of Aphasia and Cognitive Performance Testing

96105 ***Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour***
The HCPAC reviewed the survey responses from 130 speech language pathologists and determined that it was appropriate to maintain the current work RVU of 1.75. The HCPAC agreed with the specialty society's expert panel that the median survey time and work RVU were not appropriate because the service has not changed significantly since it was last surveyed in 2009. In addition, CPT code 96105 is a per hour code, which is reflected in the survey 25th percentile. Medicare data shows that this code is a low-volume procedure and typically only billed once per date of service. The HCPAC recommends 4 minutes pre-service time, 60 minutes intra-service time, and 10 minutes of immediate post-service time. The specialty recommended an increase from 5 to 10 minutes of immediate post-service time. The specialty society indicated and the HCPAC agreed

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

that the increase from 5 minutes post-service time to 10 minutes of post-service time is due to the complexity of communicating information and instructions to patients with a communication disorder and their caregivers. This will also ensure consistency with the rest of the family.

The RUC HCPAC Review Board recommends the current work RVU of 1.75, which is comparable in time and intensity to CPT code 92640 *Diagnostic analysis with programming of auditory brainstem implant, per hour* (work RVU = 1.76, total time = 69 minutes). For additional support, the HCPAC compared the survey code to key reference service CPT code 92607 *Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour* (work RVU = 1.85, intra-service time = 60) and MPC code 92540 *Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording* (work RVU = 1.50, intra-service time = 60) and noted that the survey code is appropriately bracketed by these two services. **The RUC HCPAC Review Board recommends a work RVU of 1.75 for CPT code 96105.**

96125 ***Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report***
The HCPAC reviewed the survey responses from 137 speech language pathologists and determined that it was appropriate to maintain the current work RVU of 1.70. The HCPAC agreed with the specialty society's expert panel that the survey times were not appropriate because the service has not changed significantly since it was last surveyed in 2009. In addition the survey median intra-service time of 60 minutes supported CPT code 96125 as a per hour code. Medicare data shows that this code is typically only billed once per date of service. The HCPAC recommends 4 minutes pre-service time, 60 minutes intra-service time, and 10 minutes of immediate post-service time. The specialty recommended an increase from zero immediate post-time to 10 minutes of immediate post-service time. The specialty society indicated and the HCPAC agreed that the increase from zero post-service time to 10 minutes of post-service time is due to the complexity of communicating information and instructions to cognitively-impaired patients and their caregivers. This is also consistent with CPT code 96105 and will ensure consistency with the rest of the family.

The RUC HCPAC Review Board recommends the current work RVU of 1.70, which is comparable in time to CPT code 92640 *Diagnostic analysis with programming of auditory brainstem implant, per hour* (work RVU = 1.76, intra-service time = 60 minutes), but is less intense to perform and should be valued slightly lower. For additional support, the HCPAC compared the survey code to CPT code 92607 *Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour* (work RVU = 1.85, intra-service time = 60) and MPC code 92540 *Basic vestibular evaluation, includes spontaneous nystagmus test with eccentric gaze fixation nystagmus, with recording, positional nystagmus test, minimum of 4 positions, with recording, optokinetic nystagmus test, bidirectional foveal and peripheral stimulation, with recording, and oscillating tracking test, with recording* (work RVU = 1.50, intra-service time = 60) and noted that the survey code is appropriately bracketed by these two services. **The RUC HCPAC Review Board recommends a work RVU of 1.70 for CPT code 96125.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Testing Evaluation Services

96130 ***Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour***

The HCPAC reviewed the survey responses from 68 psychologists and determined that the survey respondents overestimated the provider time for this service. Based on initial comments from the HCPAC, the specialty societies modified the pre- and post-service times to be consistent with this family of services and other similar services. The HCPAC confirmed that this service will not be reported with an Evaluation and Management (E/M) service. The HCPAC also confirmed that neuropsychological testing evaluation service, CPT code 96132 and psychological testing evaluation service, CPT code 96130 are distinct and separate services and will not be reported together on the same day. A representative of CMS raised concerns about the assumptions used for budget neutrality. The HCPAC assured CMS that the Relativity Assessment Workgroup (RAW) will reexamine the services in one year if the actual figures are more then ten percent different then the assumptions. The HCPAC recommends 5 minutes of pre-service, 60 minutes of intra-service and 5 minutes of post-service time for CPT code 96130. Using magnitude estimation the HCPAC determined that a work RVU of 2.50, crosswalked to CPT code 90847 *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes* (work RVU = 2.50 and 5 minutes pre-service, 50 minutes intra-service and 21 minutes post-service time) was appropriate. Additionally, a work RVU of 2.50 was recommended for codes 96112 and 96132, which require the same provider time and work to perform. For additional support the HCPAC referenced similar services 90846 *Family psychotherapy (without the patient present), 50 minutes* (work RVU = 2.40 and 50 minutes intra-service time) and 95954 *Pharmacological or physical activation requiring physician or other qualified health care professional attendance during EEG recording of activation phase* (eg, thiopental activation test) (work RVU = 2.45 and 5 minutes pre-service, 60 minutes intra-service and 5 minutes post-service time). **The HCPAC recommends a work RVU of 2.50 for CPT code 96130.**

96131 ***Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)***

The HCPAC reviewed the survey responses from 65 psychologists and determined that the survey respondents overestimated the provider work and time for this service. The HCPAC recommends 60 minutes of intra-service time. Using magnitude estimation the HCPAC determined that a work RVU of 1.90, crosswalked to CPT code 90836 *Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)* (work RVU = 1.90 and 48 minutes total time) was appropriate. Additionally, a work RVU of 1.90 was recommended for code 96133, which require the same provider time and work to perform. For additional support the HCPAC referenced similar services 88323 *Consultation and report on referred material requiring preparation of slides* (work RVU = 1.83 and 60 minutes intra-service time), 95864 *Needle electromyography; 4 extremities with or without related paraspinal areas* (work RVU = 1.99 and 50 minutes intra-service time) and 92640 *Diagnostic analysis with programming of auditory brainstem implant, per hour* (work RVU = 1.76 and 60 minutes intra-service time). **The HCPAC recommends a work RVU of 1.90 for CPT code 96131.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Test Administration and Scoring

96136 ***Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes***
The HCPAC reviewed the survey responses from 147 psychologists and determined that the survey respondents overestimated the provider time for this service. Based on initial comments from the HCPAC, the specialty societies modified the pre- and post-service times to be consistent with this family of services and other similar services. The specialty society noted and the HCPAC agreed that the provider time and intensity of 96136, essentially a data gathering code, should be less than the time and intensity of the psychological/neuropsychological evaluation services (96130 and 96132). In addition to the difference in work of the codes, 96136 is a 30 minute code while 96130 and 96132 are 60 minute codes.

A representative of CMS raised concerns that this work was previously billed using 96102 which had 15 minutes of provider time for each hour of technician work and the recommendation for 96136 is 30 minutes of provider work at only 0.05 RVUs more. The specialty societies clarified that previously this procedure was typically billed as 96101 (work RVU = 1.86), which included both data gathering and evaluation services. In the revised codes, 96130 will be used for the evaluation service and 96136 will be used for the data gathering service. The HCPAC recommends 3 minutes of pre-service, 30 minutes of intra-service and 3 minutes of post-service time for CPT code 96136. Using magnitude estimation the HCPAC determined that a work RVU of 0.55, crosswalked to CPT code 97605 *Negative pressure wound therapy (eg, vacuum assisted drainage collection), utilizing durable medical equipment (DME), including topical application(s), wound assessment, and instruction(s) for ongoing care, per session; total wound(s) surface area less than or equal to 50 square centimeters* (work RVU = 0.55 and 3 minutes pre-service, 20 minutes intra-service and 5 minutes post-service time) was appropriate. The specialty acknowledged that the crosswalk code times for 97605 do not completely align with the recommended times for 96136 and it remains the most appropriate crosswalk give the limited pool of codes. For additional support the HCPAC referenced CPT codes 88312 *Special stain including interpretation and report; Group I for microorganisms (eg, acid fast, methenamine silver)* (work RVU = 0.54 and 24 minutes intra-service time), and 88104 *Cytopathology, fluids, washings or brushings, except cervical or vaginal; smears with interpretation* (work RVU = 0.56 and 24 minutes intra-service time). **The HCPAC recommends a work RVU of 0.55 for CPT code 96136.**

96137 ***Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes (List separately in addition to code for primary procedure)***
The HCPAC reviewed the survey responses from 148 psychologists and determined that the survey respondents overestimated the provider work and time for this service. The specialty society noted and the HCPAC agreed that the provider time and intensity of 96137, essentially a data gathering code, should be less than the time and intensity of the psychological/neuropsychological evaluation services add-on codes (96131 and 96133). In addition to the difference in work of the codes, 96137 is a 30-minute code while 96131 and 96133 are 60-minute codes and 96137 should be valued less than its base code, 96136. The HCPAC recommends 30 minutes of intra-service time. Using magnitude estimation the HCPAC determined that a work RVU of 0.46, crosswalked to CPT code 96152 *Health and behavior intervention, each 15 minutes, face-to-face;*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

individual (work RVU = 0.46 and 24 minutes total time) was appropriate. The specialty society acknowledged that this crosswalk is not a ZZZ code, noting that there were limited codes available for comparison. For additional support the HCPAC referenced CPT code 93016 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; supervision only, without interpretation and report* (work RVU = 0.45 and 19 minutes total time). **The HCPAC recommends a work RVU of 0.46 for CPT code 96137.**

Practice Expense
CPT code 96125 includes an equipment item SK050, *neurobehavioral status forms, average*, that is an average of a variety of neurobehavioral tests. The PE Subcommittee requested that the specialty societies that utilize this supply item work together to determine the 3 most typical tests and submit paid invoices to CMS to facilitate updated pricing. CPT codes 96130 and 96131 require no direct practice expense inputs.

96136 ***Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes***
96137 ***Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes (List separately in addition to code for primary procedure)***
CPT codes 96136 and 96137 require no clinical staff time. The PE Subcommittee removed all supplies and equipment related to printing. The PE Subcommittee determined that equipment item ED021, *computer, desktop, w-monitor* is an indirect expense for this service. 0.165 of each of three supply items: WAIS-IV Record Forms, WAIS-IV Response Booklet #1 and WAIS-IV Response Booklet #2 is allocated for each code. This is because the service typically requires 3 hours. Each code is 30 minutes, so the typical billing would be one unit of the base code (96136) and 5 units of the add-on code (96137) to equal the typical three hours. One supply item is needed each time the service is performed so in the typical billing scenario 1 item of each of the three supplies will be allocated.

96138 ***Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes***
96139 ***Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)***
CPT codes 96138 and 96139 are practice expense only codes to be used when a technician rather than a provider performs the service. The PE Subcommittee removed all supplies and equipment related to printing. The PE Subcommittee determined that equipment item ED021, *computer, desktop, w-monitor* is an indirect expense for this service. 0.165 of each of three supply items: WAIS-IV Record Forms, WAIS-IV Response Booklet #1 and WAIS-IV Response Booklet #2 is allocated for each code. This is because the service typically requires 3 hours. Each code is 30 minutes, so the typical billing would be one unit of the base code (96138) and 5 units of the add-on code (96139) to equal the typical three hours. One supply item is needed each time the service is performed so in the typical billing scenario 1 item of each of the three supplies will be allocated.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96146 ***Psychological or neuropsychological test administration, with single automated, standardized instrument via electronic platform, with automated result only***

CPT code 96146 is a practice expense only code to be used when the service is automated. The specialty had recommended a new supply item, CANTAB Mobile (per single automated assessment), however the PE Subcommittee determined that since it is a software license it is more appropriately classified as equipment. The time that the item is in use is not directly related to the clinical activity time and is typically in use for 10 minutes while the patient takes the test. The specialty had recommended an iPad as a new equipment item; however it was removed as it is commercially available for less than $500.

The HCPAC recommends the direct practice expense inputs as reviewed and modified by the Practice Expense Subcommittee.

Work Neutrality

The HCPAC recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Medicine
Neurology and Neuromuscular Procedures Functional Brain Mapping

96020 *Neurofunctional testing selection and administration during noninvasive imaging functional brain mapping, with test administered entirely by a physician or other qualified health care professional (ie, psychologist), with review of test results and report*

(For functional magnetic resonance imaging [fMRI], brain, use 70555)

(Do not report 96020 in conjunction with ~~96101-96103~~, 96116~~-96120~~, 96112, 96113, 96121, 96130, 96131, 96132)

(Do not report 96020 in conjunction with 70554)

(Evaluation and Management services codes should not be reported on the same day as 96020)

Central Nervous System Assessments/Tests (eg, Neuro-Cognitive, Mental Status, Speech Testing)

The following codes are used to report the services provided during testing of the central nervous system functions. The central nervous system assessments include, but are not limited to: memory, language, ~~cognitive of the central nervous system. The testing of cognitive processes,~~ visual motor responses, and abstract~~ive~~ reasoning/problem-solving abilities. It is accomplished by the combination of several types of testing procedures. Testing procedures include assessment of aphasia and cognitive performance testing; developmental screening and behavioral assessments and testing; and psychological/neuropsychological testing. ~~It is expected that t~~ The administration of these tests will generate material that will be formulated into a report or an automated result. ~~A minimum of 31 minutes must be provided to report any per hour code. Services 96101, 96116, 96118, and 96125 report time as face-to- face time with the patient and the time spent interpreting and preparing the report.~~

(For development of cognitive skills, see 97532, 97533)

(Do not report ~~9610~~51~~-96125~~ assessment of aphasia and cognitive performance testing services [96105, 96125], developmental/behavioral screening and testing services [96110, 96112, 96113, 96127] and psychological/neuropsychological testing services [96116, 96130, 96131, 96132, 96133, 96136, 96137, 96138, 96139. 96142, 96146, 96X13 in conjunction with 0364T,0365T, 0366T, 0367T, 0373T, 0374T)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Definitions

Codes in this family describe a number of services that are defined below:

Cognitive performance testing assesses the patient's ability to complete specific functional tasks applicable to the patient's environment in order to identify or quantify specific cognitive deficits. The results are used to determine impairments and develop therapeutic goals and objectives.

Interactive feedback is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when preformed.

Interpretation and report is performed by a physician or other qualified health care professional. In some circumstances, a result is generated through the use of a computer, tablet, or other device.

Neurobehavioral status exam is a clinical assessment of cognitive functions and behavior, and may include an interview with the patient, other informants, and/or staff, as well as integration of prior history and other sources of clinical data with clinical decision making, further assessment and/or treatment planning and report. Evaluation domains may include acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities.

Neuropsychological testing evaluation services typically include integration of patient data with other sources of clinical data, interpretation, clinical decision making, and treatment planning and report. It may include interactive feedback to the patient, family member(s) or caregiver(s) when performed. Evaluation domains for neuropsychological evaluation may include intellectual function, attention, executive function, language and communication, memory, visual-spatial function, sensorimotor function, emotional and personality features, and adaptive behavior.

Psychological testing evaluation services typically include integration of patient data with other sources of clinical data, interpretation, clinical decision making, and treatment planning and report. It may include interactive feedback to the patient, family members or caregiver(s) when performed. Evaluation domains for psychological evaluation may include emotional and interpersonal functioning, intellectual function, thought processes, personality, and psychopathology.

Standardized instruments are used in the performance of these services. Standardized instruments are validated tests that are administered and scored in a consistent or "standard" manner consistent with their validation.

Testing is administered by a physician, other qualified health care professional, and technician or completed by the patient. The mode of completion can be by a person (eg, paper and pencil) or via automated means.

~~Reporting Instructions~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Assessment of aphasia and cognitive performance testing which includes interpretation and report, are described by 96105, 96125.

Developmental screening services are described by 96110. Developmental/behavioral testing services, which include interpretation and report, are described by 96112, 96113.

Neurobehavioral status exam, which includes interpretation and report, is described by 96116, 96121.

Psychological and neuropsychological test evaluation services, which include integration of patient data, interpretation of test results and clinical data, treatment planning and report, and interactive feedback, are described by 96130, 96131, 96132, 96133.

Testing and administration services (96136, 96137) are performed by a physician or other qualified health care professional. For 96136, 96137, do not include time for evaluation services (eg, integration of patient data or interpretation of test results). This time is included with psychological and neuropsychological test evaluation services (96130, 96131, 96132, 96133). Testing and administration services (96138, 96139) are performed by a technician. The tests selected, test administration and method of testing and scoring are the same regardless of whether the testing is performed by a physician, other qualified health care professional, or a technician for 936X7, 96137, 96138, 96139. Single test administration with interpretation and report is described by 96142. Automated testing and result code 96146 describes testing performed by a single automated instrument with an automated result.

Some of these ~~codes~~ services are typically performed together. For example, psychological/neuropsychological testing evaluation services (96130, 96131, 96132, 96133) may be reported with psychological/neuropsychological test administration and scoring services (96136, 96137, 96138, 96139).

A requirement of testing services (96105, 96125, 96112, 96113, 96121, 96130, 96131, 96132, 96133, 96142, 96146) is that there is an interpretation and report when performed by a qualified health care professional, or a result when generated by automation. These services follow standard CPT time definitions (ie, a minimum of 16 minutes for 30-minute codes and 31 minutes for 1-hour codes must be provided to report any per hour code). ~~Services,~~The time reported in 96116, 96130, 96131, 96132, 96133, 96125 ~~report time as~~ is the face-to-face time with the patient and the time spent integrating and interpreting data.

Report the total time at the completion of the entire episode of evaluation.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
~~**D**96101~~	-	~~Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg,MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report (96101 is also used in those circumstances when additional time is necessary to integrate other sources of clinical data, including previously completed and reported technician- and computer-administered tests) (Do not report 96101 for the interpretation and report of 96102, 96103)~~	XXX	N/A (2017 Work RVU = 1.86)
D~~96102~~	-	~~Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face~~	XXX	N/A (2017 Work RVU = 0.50)

Background: Psychological/Neuropsychological Testing Services (Tab 8/20) – October 2017 RUC Meeting

Appreciating the complexity of Tabs 8 and 20, societies assigned to these tabs have prepared brief background material to assist RUC and HCPAC members orient themselves to these tabs.

Overview of Tab

Category	Code #	Meeting	Societies
Assessment of Aphasia and Cognitive Performance Testing	96105, 96125	HCPAC	ASHA
Developmental/Behavioral Screening and Testing	96110, 96127	PE Only	AAP
	96112, +96113	RUC	AAP, AAN, APA
Neurobehavioral Status Exam	96116, +96121	RUC	AAN, APA
Psychological/Neuropsychological Testing			
Testing Evaluation Services	96130, +96131	HCPAC	APA
	96132, +96133	RUC	AAN, APA
Test Administration and Scoring	96136, +96137	HCPAC	APA
	96138, +96139	PE Only	APA
Single Test Administration with Interpretation and Report	96142	RUC	AAN, APA
Automated Testing and Report	96146	PE Only	APA

Change in Reporting Psychological/Neuropsychological Testing Services

The table below provides a comparison of the change in coding for psychological/neuropsychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under one code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

Code	How Often Billed	Services Included in the Code				
		Evaluation	Interactive Feedback	Scoring/ Admin Prof.	Scoring/ Admin Tech.	Inter. & Report
Current Coding Scenarios						
96101 (psych)	Per hour	X		X		X
96102 (psych)	Per hour				X	X
96118 (neuropsych)	Per hour	X		X		X
96119 (neuropsych)	Per hour				X	X
New Coding Scenarios						
96130 (psych)	First hour	X	X			X
+96131 (psych)	Each addl hour	X	X			X
96132 (neuropsych)	First hour	X	X			X
+96133 (neuropsych)	Each addl hour	X	X			X
96136	First 30 min.			X		
+96137	Each addl 30 min.			X		
96138	First 30 min.				X	
+96139	Each addl 30 min.				X	

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96105 Tracking Number Original Specialty Recommended RVU: **1.75**
Presented Recommended RVU: **1.75**
Global Period: XXX Current Work RVU: **1.75** RUC Recommended RVU: **1.75**

CPT Descriptor: Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Patient presents post cerebrovascular accident (CVA). A comprehensive language evaluation is required to determine the nature and extent of language deficits and to make recommendations for rehabilitation. This procedure is a comprehensive evaluation of language in addition to and separate from the neurological evaluation.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The qualified health care professional reviews the patient's medical record, including records of previous assessment and treatment procedures, and selects the tests for administration.

Description of Intra-Service Work: The qualified health care professional reviews the patient's case history and conducts an interview with the patient (if able to participate) and family/caregiver(s) concerning the communication and related difficulties the patient faces. Information about family/caregivers' efforts to aid communication attempts is explored. The patient is advised about what the testing will entail. The qualified health care provider uses a variety of strategies to assess all aspects of communication, including analysis of interactions and responses in the clinic setting and administration of formal tests (e.g., the Boston Diagnostic Aphasia Examination, the Boston Naming Test, Communicative Abilities in Daily Living, the Minnesota Test for Differential Diagnosis of Aphasia, the Western Aphasia Battery, and the Aphasia Reading Battery). During testing, techniques to facilitate communication are attempted to determine strategies the family/caregiver(s) might be able to attempt to improve communication. The qualified health care provider also assesses stimulability for direct therapeutic interventions. Results from the formal test responses are scored, analyzed, and interpreted. These are incorporated with observations of the patient's communication attempts in the clinical setting, and the effects of facilitation techniques. A comprehensive report of the findings and recommendations for plan of care is written, incorporating the dimensions of communication and related impairments, activity limitations, and the patient's participation in society.

Description of Post-Service Work: The qualified health care provider's evaluation of test and interactive responses and other clinical observations are shared with the patient and family/caregiver(s). Specific instruction is provided to the family/caregiver(s) regarding ways to enhance communication attempts. Prognosis is discussed and the patient's and family/caregivers' questions are answered. Tentative goals are agreed upon for the treatment plan. Final findings and recommendations are communicated to referral sources.

Technical skill required	33%	33%	33%
Physical effort required	0%	100%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	67%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey:
The psychological and neuropsychological evaluation and testing family of codes was identified on the CMS High Expenditure Procedural Codes screen and was reviewed at the May/June 2017 CPT Editorial Panel meeting. CPT code 96105 is a low volume code, was not captured in this screen, did not undergo CPT revisions, and is only one of two codes in the family that are primarily billed by speech-language pathologists (SLPs). However, it is being reviewed as

part of the family in order to ensure appropriate rank ordering. The family includes codes in the following areas, and proposed times and RVWs are outlined in the table below.

- Assessment of aphasia and Cognitive performance testing (96105, 96125)
- Neurobehavioral status exam (96116, +96121)
- Developmental and behavioral screening and testing services (96112, +96113)
- Psychological and neuropsychological testing (96130, +96131, 96132, +96133, 96136, +96137, 96142)

Survey Sample:
The survey data and recommendations are based upon a random sample of applicable subsets of the ASHA membership. Specifically, the random sample was drawn from established specialty society member sections comprised of speech-language pathologists. The total sample size was 6000 with 130 completed responses.

Expert Panel Recommendations:
A panel of speech-language pathologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

Qualified Healthcare Provider Time:
The expert panel recommends a **pre-service time of 4 minutes, an intra-service time of 60 minutes, and a post-service time of 10 minutes for a total of 74 minutes**. CPT code 96105 is a per hour code. Medicare data shows that this code is typically only billed by the individual provider once per date of service. Additionally, there are Medicare medically unlikely edits (MUEs) in place that allow up to 3 units billed per individual provider, per date of service.

Pre-Service Time
The expert panel reviewed the pre-service time and concluded that the survey median time of 18 minutes should be decreased to account for those times when multiple units are billed on the same date of service. Therefore, **the expert panel recommends the current pre-service time of 4 minutes**.

Intra-Service Time
The expert panel disagreed with the survey respondents regarding the median intra-service time of 75 minutes because CPT code 96105 is a per hour code. As such, **the expert panel recommends maintaining the current intra-service time of 60 minutes**.

Post-Service Time
The expert panel concluded that the median post-service time of 30 minutes should also be reduced and **recommends a post-service time of 10 minutes** to account for multiple units billed**.** Although this is higher than the current post-service time of 5 minutes, the expert panel believes that 10 minutes is appropriate due to the complexity of communicating information and instructions to communicatively-impaired patients and their caregivers.

RVW
Upon review of the survey results, the expert panel did not agree with the median RVW of 3.00 and **recommends maintaining the current RVW of 1.75.**

RVW Rationale
We recognize the recommended work value is much lower than the median survey RVW of 3.00. However, we are convinced that most survey respondents made a common error that led to an overestimation of the RVW for this code. Specifically, when valuing 96105—a timed, per hour code—in relation to the key reference service of 92523—an untimed code—we must assume that respondents did not know that there are 120 minutes of intra-service time associated with 92523. As such, they could not perform the magnitude estimation needed to make an accurate RVW comparison of two codes with very different intra-service times.

We believe that the current RVW of 1.75 is appropriate and accurately reflects current practice, which has not fundamentally changed since the last review of 96105. Additionally, the recommended RVW is supported by the key reference service, MPC codes, and other reference codes as outlined in the following discussion.

To summarize, we recommend an RVW of 1.75 with a pre-service time of 4, an intra-service time of 60, and a post-service time of 10 for a total of 74 minutes.

Comparison to Key Reference Service, 92523

CPT code 92523 describes an evaluation of speech sound production and language comprehension and expression. The typical patient for this code is pediatric, and the evaluation can include standardized and informal testing.

Survey code 96105 describes an assessment of aphasia. Aphasia is an impairment of language, affecting the production and/or comprehension of speech and the ability to read or write due to brain damage, most often secondary to a stroke. CPT code 96105 includes an extensive evaluation of speech and language, but specifically through standardized testing for patients who have suffered brain injury. This typical, brain injured patient, often presenting with multiple comorbidities, is more complex than the typical pediatric patient with a developmental disorder evaluated using 92523.

Of the 120 survey respondents who chose CPT 92523 as the reference service, 52% indicated that 96105 was higher in overall intensity and complexity than the reference code. Patient complexity, combined with the additional work associated with standardized testing, scoring, and interpretation supports the rank order in relation to the reference code, as illustrated below.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
96105	Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour	1.75	0.0240	74	4	60	10	Survey code
92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)	3.00	0.0181	157	7	120	30	Key reference service HCPAC MPC

Comparison to Other Codes

The following table provides other RUC and HCPAC valued services, including MPC reference codes, to illustrate appropriate rank order and further support the requested values for time and professional work for 96105. The expert panel noted that CPT code 92640 (diagnostic analysis with programming of auditory brainstem implant) provides further support for the recommended value of 96105, with a similar RVW of 1.76 and pre, intra, and post-service times of 4, 60, and 5 minutes, resulting in an IWPUT of 0.0260 as compared to the survey code IWPUT of 0.0240.

Comparison to MPC and additional reference codes (RVW order)

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
92522	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria);	1.50	0.0157	85	5	60	20	
92540	Basic vestibular evaluation	1.50	0.0187	77	7	60	10	HCPAC MPC
96105	Assessment of aphasia	1.75	0.0240	74	4	60	10	Survey code
92640	Diagnostic analysis with programming of auditory brainstem implant, per hour	1.76	0.0260	69	4	60	5	Similar in time, RVW, and IWPUT
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits	1.82	0.0594	40	5	25	10	HCPAC MPC
92607	Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; first hour	1.85	0.0196	90	10	60	20	2nd key reference service HCPAC MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96105

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-language pathology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. For the national estimate, we used proprietary actuarial data related to commercial billing for 96105, and used the RUC database percentage of utilization to estimate speech-language pathology utilization.

Specialty Speech-language pathology Frequency 3121 Percentage 91.79 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 463 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 2016 utilization information obtained from the RUC database. We also reviewed facility-based claims from 500 institutions across the country and found that utilization is consistent with the number reflected in the RUC database.

Specialty Speech-Language Pathology Frequency 425 Percentage 91.79 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96125 Tracking Number Original Specialty Recommended RVU: **1.70**
Presented Recommended RVU: **1.70**
Global Period: XXX Current Work RVU: **1.70** RUC Recommended RVU: **1.70**

CPT Descriptor: Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Patient with diagnosed brain damage is referred for standardized cognitive performance testing.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The qualified health care professional reviews the patient's medical record, including records of previous asssessment and treatment procedures, and selects the tests for administration.

Description of Intra-Service Work: The qualified health care professional reviews the patient's case history and conducts an interview with the patient (if able to participate) and family/caregiver(s) to assess the cognitive demands on relevant social, academic, and/or vocational tasks, and the support competencies of the family/caregiver(s) or others in the patient's daily environment. The patient is advised about what testing will entail. The qualified health care professional completes a face-to-face administration of the appropriate standardized test(s) (e.g., Ross Information Processing Assessment) to assess the patient’s ability to complete specific functional tasks applicable to the patient’s environment in order to identify or quantify specific cognitive deficits in areas such as attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning. The patient's potential for effective compensatory behaviors and associated motivational barriers and facilitators are also examined. Raw and standardized scores are derived, analyzed, and interpreted. A comprehensive report of findings and recommendations for plan of care is written, incorporating the dimensions of cognitive and related impairments, activity limitations, and the patient's participation in society.

Description of Post-Service Work: The qualified health care provider's evaluation of test and interactive responses and other clinical observations are shared with the patient and family/caregiver(s). Specific instruction is provided to the family/caregiver(s) regarding ways to enhance compensatory strategies. Prognosis is discussed and the patient's and family/caregivers' questions are answered. Tentative goals are agreed upon for the treatment plan. Final findings and recommendations are communicated to referral sources.

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	2%	4%	38%	39%	17%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	45%	46%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	6%	41%	53%
Physical effort required	11%	76%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	61%	34%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	15%	62%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	16%	28%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	31%	61%
Physical effort required	8%	69%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	54%	34%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey:
The psychological and neuropsychological evaluation and testing family of codes was identified on the CMS High Expenditure Procedural Codes screen and was reviewed at the May/June 2017 CPT Editorial Panel meeting. CPT code 96125 is a low volume code, was not captured in this screen, did not undergo CPT revisions, and is only one of two codes in the family that are primarily billed by speech-language pathologists (SLPs). However, it is being reviewed as

part of the family in order to ensure appropriate rank ordering. The family includes codes in the following areas, and proposed times and RVWs are outlined in the table below.

- Assessment of aphasia and Cognitive performance testing (96105, 96125)
- Neurobehavioral status exam (96116, +96121)
- Developmental and behavioral screening and testing services (96112, +96113)
- Psychological and neuropsychological testing (96130, +96131, 96132, +96133, 96136, +96137, 96142)

Survey Sample:

The survey data and recommendations are based upon a random sample of applicable subsets of the ASHA membership. Specifically, the random sample was drawn from established specialty society member sections comprised of speech-language pathologists. The total sample size was 6000 with 137 completed responses.

Expert Panel Recommendations:

An expert panel of speech-language pathologists was convened to consider the survey data and provide recommendations regarding appropriate times and professional work values, as outlined below.

Qualified Health Care Provider Time:

The expert panel recommends a **pre-service time of 4 minutes, an intra-service time of 60 minutes, and a post-service time of 10 minutes for a total of 74 minutes**. CPT code 96125 is a per hour code. Medicare data shows that this code is typically only billed once per date of service. Additionally, there are Medicare medically unlikely edits (MUEs) in place that allow up to 2 units billed per individual provider, per date of service.

Pre-Service Time

The expert panel reviewed the pre-service time and concluded that the survey median time of 20 minutes should be decreased to account for multiple units billed. Therefore, **the expert panel recommends a pre-service time of 4 minutes**, which is less than the current pre-service time of 7 minutes. We do not believe the pre-service requires more work or time than the assessment of aphasia (CPT code 96105), for which we are also proposing 4 minutes.

Intra-Service Time

The expert panel **agrees with the median intra-service time of 60 minutes.**

Post-Service Time

The expert panel concluded that the median post-service time of 30 minutes should also be reduced and **recommends a post-service time of 10 minutes** to account for multiple units billed. Although there is currently no post-service time associated with 96125, the panel feels it is important to capture standard post-service activities, such as discussion of results with the patient/caregiver and with the referring physician. This will also ensure consistency with the rest of the family. The expert panel believes that 10 minutes is appropriate due to the complexity of communicating information and instructions to cognitively-impaired patients and their caregivers. This is also consistent with our recommendation for the assessment of aphasia (CPT code 96105).

RVW

Upon review of the survey results, the expert panel did not agree with the median RVW of 3.00 and **recommends maintaining the current RVW of 1.70.**

RVW Rationale

We recognize the recommended work value is much lower than the median survey RVW of 3.00. However, we are convinced that most survey respondents made a common error that led to an overestimation of the RVW for this code, as they did with CPT code 96105 (aphasia assessment). Specifically, when valuing 96125—a timed, per hour code—in relation to the key reference service of 92523—an untimed code—we must assume that respondents did not know that there are 120 minutes of intra-service time associated with 92523. As such, they could not perform the magnitude estimation needed to make an accurate RVW comparison of two codes with very different intra-service times.

We believe that the current RVW of 1.70 is appropriate and accurately reflects current practice, which has not fundamentally changed since the last review of 96125. Additionally, the recommended RVW is supported by the key reference service, MPC codes, and other reference codes, as outlined in the following discussion.

To summarize, we recommend an RVW of 1.70 with a pre-service time of 4, an intra-service time of 60, and a post-service time of 10 for a total of 74 minutes.

Comparison to Key Reference Service, 92523

CPT code 92523 describes an evaluation of speech sound production and language comprehension and expression. The typical patient for this code is pediatric, and the evaluation can include standardized and informal testing.

Survey code 96125 describes standardized testing to assess the patient's ability to complete specific functional tasks applicable to the patient's environment in order to identify or quantify specific cognitive deficits. The results are used to identify strengths and weaknesses in order to develop a therapeutic plan of care. Patients requiring cognitive performance testing often have more than one comorbidity due to brain injury, including underlying psychological, speech and/or language impairments.

Of the 114 survey respondents who chose CPT 92523 as the reference service, 56% indicated that 96125 was higher in overall intensity and complexity than the reference code. Patient complexity, combined with the additional work associated with standardized testing, scoring, and interpretation supports the rank order in relation to the reference code, as illustrated below.

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
96125	Cognitive performance testing	1.70	0.0230	74	4	60	10	Survey code
92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)	3.00	0.0181	157	7	120	30	Key reference service HCPAC MPC

Comparison to Other Codes

The following table provides other RUC and HCPAC valued services, including the MPC reference codes, to illustrate appropriate rank order and further support the requested values for time and professional work for 96125. The expert panel noted that CPT code 92640 (diagnostic analysis with programming of auditory brainstem implant) provides further support for the recommended value of 96125, with a similar RVW of 1.76 and pre, intra, and post-service times of 4, 60, and 5 minutes, resulting in an IWPUT of 0.0260 as compared to the survey code IWPUT of 0.0230.

Comparison to MPC and additional reference codes (RVW order)

CPT Code	Descriptor	RVW	IWPUT	Total Time	PRE	INTRA	POST	Note
96150	Health and behavior assessment (eg, health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; initial assessment	0.50	0.0214	23	3	15	5	2nd key reference service
92540	Basic vestibular evaluation	1.50	0.0187	77	7	60	10	HCPAC MPC
96125	Cognitive performance testing	1.70	0.0230	74	4	60	10	Survey code
92640	Diagnostic analysis with programming of auditory brainstem implant, per hour	1.76	0.0260	69	4	60	5	Similar in time, RVW, and IWPUT
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits	1.82	0.0594	40	5	25	10	HCPAC MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96125

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Speech-language pathology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9300
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. For the national estimate, we used proprietary actuarial data related to commercial billing for 96125, and used the RUC database percentage of utilization to estimate speech-language pathology utilization.

Specialty Speech-language pathology Frequency 6475 Percentage 69.62 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,373
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is 2016 utilization information obtained from the RUC database. We also reviewed facility-based claims from 500 institutions across the country and found that utilization is consistent with the numbers reflected in the RUC database.

Specialty Speech-Language Pathology Frequency 1652 Percentage 69.61 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Do many physicians perform this service across the United States? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99215	XXX	2.11	**RUC Time**	9,800,887

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99222	XXX	2.61	**RUC Time**	6,942,280

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the

problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
99343	XXX	2.53	**RUC Time**

CPT Descriptor Home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 HCPAC meeting (some of these codes are being presented at the RUC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96142)

RUC	Psychological/neuropsychological single test administration with interpretation and report	96142	0.80	3/30/3	0.022

October 2017 RUC Work Survey and Recommendation

The American Psychological Association (APA) surveyed *96130, Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour* for the October 2017 HCPAC meeting.

CPT code 96130 is the base code of a base code/add-on combination.

- 96130, Psychological testing evaluation services, first hour
- +96131, Psychological testing evaluation, each addl hour

A total of 68 responses were received from a random sample of 3,596 APA members (1.8 percent response rate). APA convened an Expert Panel to review the survey data. ***The society is recommending: 2.53 wRVUs and 5/60/5 for time.***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 3.00 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	3.00	3.17	3.5
Pre		24	
Intra	60	87.5	211.50
Post		32	

The Expert Panel concluded the survey data was too high to develop a wRVU recommendation. Because of the complex changes in coding structure, which has resulted in professional work being re-aligned within the code set, the Expert Panel concluded that it is appropriate to recommend a redistribution of the wRVUs within the family. The revised recommendations maintain budget neutrality and reflect what was concluded to be an appropriate redistribution of wRVUs.

wRVU recommendation: The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. This was supported by the survey 25th percentile. The Expert Panel felt that 5 minutes pre-time and 5 minutes post-time was necessary to perform the typical pre- and post-service tasks. A recommendation of 5 minutes for both pre- and post-time seemed to align with other similar XXX codes.

Response to reviewer comments: In the description of post-service work by the healthcare professional "arrangement of referrals and report distribution" is listed. Reviewers questioned if this is healthcare professional work or if it is done by office staff. The Expert Panel discussed this issue. They concluded that a majority of providers of this service are in private practice and do not have clinical or clerical staff. So in the typical scenario when this service is performed, these tasks are done by the healthcare professional.

Custom Question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96130 and all increments of +96131)?*

Min.	25th Percentile	Median	75th Percentile	Max.
60 min.	180 min.	300 min.	420 min.	1380 min.

Currently, this service is predominately reported by 96101. It is also reported by 96102. Based on 2015 Medicare claims data the median number of units of 96101 billed on the same day was 2 units. The median number of units of 96102 billed on the same day was 1 unit.

Change in Reporting Psychological Testing Services

The following provides a comparison of the change in coding for psychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under one code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

Code	Work RVU	How Often Billed	Evaluation	Interactive Feedback	Scoring/ Admin Prof.	Scoring/ Admin Tech.	Inter. & Report
2017 Coding Scenarios							
96101	1.86	Per hour	X		X		X
96102	0.50	Per hour				X	X
New Coding Scenarios							
96130	**2.53**	**First hour**	**X**	**X**			**X**
+96131	1.90	Each addl hour	X	X			X
96136	0.55	First 30 min.			X		
+96137	0.46	Each addl 30 min.			X		
96138	PE only	First 30 min.				X	
96139	PE only	Each addl 30 min.				X	

In the new code the lower intensity and less complex tasks of test administration and scoring are reported separately using test administration and scoring codes (96136 to +96139). The redistribution of intra-service clinical decision making associated with test selection/battery modification and interpretation and report by the healthcare professional from the current technician code (96102) to the new psychological evaluation testing services codes (96130, +96131) supports the increase in work RVU and IWPUT for 96130.

Evaluation services include the integration and interpretation of the data. The healthcare professional takes all of the historical, behavioral and psychometric data and integrates that into what is their final interpretation.

Additionally, code 96130 includes interactive feedback which is not included in the current code. Interactive feedback, as it will be defined in the CPT book, is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when performed. The inclusion of interactive feedback increased the intensity and complexity of the service and provided further support of the recommendation for a higher work RVU and higher IWPUT in comparison to current codes 96101 and 96102.

wRVU Recommendation Rationale: Crosswalk to code 99343

The Expert Panel agreed that due to the work redistribution within the family and the addition of interactive feedback, the value of the code should be greater than 1.86 wRVUs, the current value of 96101. Yet, it should also be less than the survey 25th percentile of 3.00 wRVUs. In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code **90847** (*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*) valued at **2.50 wRVUs** and the second highest reference service selected, code **90791** (Psychiatric diagnostic evaluation) valued at **3.00 wRVUs**. A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes or 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed XXX codes between wRVU value of 2.50 to 2.60, IWPUT between 0.03 and 0.05, with intra time between 45 and 60 minutes that are not currently being surveyed at this meeting, six codes were identified: **74262** (*CT colonography dx w/dye @* **2.50 wRVU**), **75561** (*Cardiac MRI for morph w/dye @* **2.60 wRVU**), **90847** (*Family psychotherapy w/pat. 50 min @* **2.50 wRVU**), **95911** (*Nerve conduction studies, 9-10 studies @* **2.50 wRVU**), and **99343** (Home visit, new patient @ **2.53 wRVUs**).

Based on this list the Expert Panel felt that code 90847 and 99343 were the best candidates for a crosswalk. Since 90847 had 50 minutes intra-service time and the surveyed code had 60 minutes they felt it was appropriate to choose a code with a slightly higher wRVU. The Expert Panel agreed that code 99343 was the most appropriate crosswalk.

Response to reviewer comments: During the pre-facilitation call, a reviewer questioned if 99343 was an appropriate crosswalk since CMS had made changes to the code from what was recommended by the RUC. Since code 99343 is on the RUC MPC list, and codes on the MPC list have been identified by the RUC as being appropriate to help rank value of codes in the RUC process, the Expert Panel felt it was an appropriate selection.

The Expert Panel noted that the recommended value was less than both reference service codes selected by survey respondents: 99205 (*Office/Outpatient visit, new patient*) @ 3.17 wRVUs and 90791 (*Psychiatric diagnostic evaluation*) @ 3.00 wRVUs.

Comparison to other services

The Expert Panel compared 96130 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
99204	Office outpatient visit/new	2.43	5	30	10	45	Feb 2006	0.0698	9,985,403
90847	Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes	2.50	5	50	21	76	April 2012	0.0384	188,656

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
96130	**Psychological testing evaluation, first hour**	**2.53**	**5**	**60**	**5**	**70**	***	**0.038**	**NEW**
99326	Domiciliary or rest home visit for the evaluation and management of a new patient	2.63	15	45	17	77	Feb 2007	0.0425	52,724
90791*	Psychiatric diagnostic evaluation	3.00	10	60	20	90	April 2012	0.039	904,682

* 2nd highest reference service

The Expert Panel noted that the intensity of 96130 was very similar to 90791. They felt that these codes were very clinically similar and that this provided further evidence of the appropriateness of the recommended value.

Rank order with other Psychological/Neuropsychological Testing Codes
Rank order within the family was also found to be appropriate. Code 96130 has a work RVU value and IWPUT above the neurobehavioral status exam (96116) base code. The higher work RVU and IWPUT values appropriately reflect the relative intensity and complexity of the different procedures.

The recommended work RVU for 96130 is the same as 96132 (*Neuropsychological testing, first hour*). Separate codes were created for psychological and neuropsychological services due to the fundamental differences in the services performed. Those differences are reflected in the respective domains that are assessed by psychological and neuropsychological testing. Although separate codes were created, the Expert Panel agreed that the values should be the same since the intensity and complexity were similar.

When these factors are considered, the recommendation of 2.53 work RVUs for 96130 maintains appropriate rank order in the family.

Code #	Descriptor	Work RVU	Intra-Time (min)	IWPUT
96116	Neurobehavioral status exam, first hour	1.86	60	0.027
96130	**Psychological testing evaluation, first hour**	**2.53**	**60**	**0.038**
96132	Neuropsychological testing, first hour	2.53	60	0.038

In summary, for CPT code 96130 (*Psychological testing evaluation services, first hour*) ***APA recommends 2.53 wRVUs and 5/60/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
963X3	XXX	2.53	5	60	5
+963X4	ZZZ	1.90	0	60	0
963X7	XXX	0.55	3	30	3
+963X8	ZZZ	0.46	0	30	0
963X9	XXX	PE Only	N/A		
+96X10	ZZZ	PE Only	N/A		

Note: Clinician would bill X7/X8 or X9/X10 for administration and scoring depending on if performed by healthcare professional or technician

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96101 or 96102

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 294950
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume represents 20% of national utilization; Medicare volume is estimated in the following manner: 25% of the utilization of 96101 and 12.5% of the utilization of 96102 will be reported by 963X3.

Specialty Clinical Psychology Frequency 265455 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 58,990
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume is estimated in the following manner: 25% of the utilization of 96101 and 12.5% of the utilization of 96102 will be reported by 963X3.

Specialty Clinical Psychology Frequency 53091 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96101

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96131 Tracking Number K10 Original Specialty Recommended RVU: **1.90**
Presented Recommended RVU: **1.90**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **1.90**

CPT Descriptor: Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female who is experiencing depressive symptoms, social withdrawal, and substantial fatigue presents with a positive medical history of autoimmune disorder and recent emotional trauma. Her primary care physician refers her for psychological testing. Patient requires an additional hour of psychological testing beyond the first hour.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Interpretation of tests. Integration of patient data. Clinical decision making. Diagnosis and/or treatment planning. Interactive feedback, when performed. Creation of report.

Description of Post-Service Work: N/A

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90840	ZZZ	1.50	**RUC Time**	5,345

CPT Descriptor 1 Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
11045	ZZZ	0.50	**RUC Time**	390,492

CPT Descriptor 2 Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
90836	ZZZ	1.90	**RUC Time**

CPT Descriptor Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 24 **% of respondents:** 36.9 **%**

Number of respondents who choose 2nd Key Reference Code: 16 **% of respondents:** 24.6 **%**

TIME ESTIMATES (Median)

	CPT Code: 96131	Top Key Reference CPT Code: 99205	2nd Key Reference CPT Code: 90791

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	13%	46%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	38%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	29%	67%
Physical effort required	4%	46%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	21%	58%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	0%	56%	31%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	31%	69%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	13%	81%
Physical effort required	0%	38%	63%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	25%	69%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 HCPAC meeting (some of these codes are being presented at the RUC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96142)

MEETING	Category	Code #	Work RVU	Time	IWPUT

October 2017 RUC Work Survey and Recommendation

The American Psychological Association (APA) surveyed *+96131, Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)* for the October 2017 HCPAC meeting.

CPT code +96131 is the add-on code of a base code/add-on combination.

- 96130, Psychological testing evaluation services, first hour

- +96131, Psychological testing evaluation, each addl hour

A total of 65 responses were received from a random sample of 3,596 APA members (1.8 percent response rate). APA convened an Expert Panel to review the survey data. ***The society is recommending 1.90 work RVUs and 60 minutes intra-service time (0/60/0).***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 2.33 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.55	3.17	3.4
Intra-Time	60	132	240

The Expert Panel concluded the survey wRVU was too high. Because of the complex changes in coding structure, which has resulted in professional work being re-aligned within the code set, the Expert Panel concluded that it is appropriate to recommend a redistribution of the wRVUs within the family. The revised recommendations maintain budget neutrality and reflect what was concluded to be an appropriate redistribution of wRVUs.

wRVU recommendation: The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. The Expert Panel is recommending the survey 25th percentile for intra time. As a ZZZ code, the service does not have any pre- or post-time.

Custom question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96130 and all increments of +96131)?*

Min.	**25th Percentile**	**Median**	**75th Percentile**	**Max.**
60 min.	180 min.	300 min.	420 min.	1380 min.

Currently, this service is predominately reported by 96101. It is also reported by 96102. Based on 2015 Medicare claims data the median number of units of 96101 billed on the same day was 2 units. The median number of units of 96102 billed on the same day was 1 unit.

Change in Reporting Psychological Testing Services

The following provides a comparison of the change in coding for psychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under one

code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

In the new code the lower intensity and less complex tasks of test administration and scoring are reported separately using test administration and scoring codes (96136 to + 96139). The redistribution of intra-service clinical decision making associated with test selection/battery modification and interpretation and report by the healthcare professional from the current technician code (96102) to the new psychological evaluation testing services codes (96130, +96131) supports the increase in work RVU and IWPUT for +96131.

Evaluation services include the integration and interpretation of the data. The healthcare professional takes all of the historical, behavioral and psychometric data and integrates that into what is their final interpretation.

Additionally, code 96131 includes interactive feedback which is not included in the current code. Interactive feedback, as it will be defined in the CPT book, is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when performed. The inclusion of interactive feedback increased the intensity and complexity of the service and provided further support of the recommendation for a higher work RVU and higher IWPUT in comparison to current codes 96101 and 96102.

wRVU Recommendation Rationale: Crosswalk to Code 90836

The Expert Panel agreed that due to the work redistribution within the family and the addition of interactive feedback, the value of the code should be greater than 1.86 wRVUs, the current value of 96101. It also should be slightly less the recommendation for the base code which is 2.53 wRVUs. The Expert Panel was also constrained by maintaining budget neutrality within the family.

In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code **99355** (*Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)*) valued at **1.77 wRVUs** and code **90834** (*Psychotherapy, 45 minutes with patient*) valued at **2.00 wRVUs**. The Expert Panel was concerned that this range may undervalue the service, but felt their options were limited by maintaining rank order in the family and other factors.

Response to reviewer comments: The society received a comment from one reviewer if the wRVU proportionality between the base and add-on code should be consistent throughout the family. The Expert Panel considered this question and concluded that it should not necessarily be consistent. The add-on code is a continuation of the intra-service period of the base code so its value is driven by the value of the base code. What is included in the base code varies by each base code/add-on combination. Also in one instance, the developmental service (963X0, +963X1), the base code is for the first 60 minutes and the add-on code is for each subsequent 30 minutes which will result in a different relationship between the base and the add-on code.

A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties

- Limited options for XXX and ZZZ services with 60 minutes and 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed ZZZ codes between wRVU value of 1.77 to 2.00, IWPUT between 0.03 to 0.05, with intra- time between 45 and 60 minutes that are not currently being surveyed at this meeting, four codes were identified: **90836** (*Psychotherapy, 45 minutes with patient when performed with an evaluation and management service* @ **1.90 wRVU** and 45 min. intra-service time), **48400** (*Injection procedure for intraoperative pancreatography*@ **1.95 wRVU** and 45 min intra-service time), **77293** (*Respiratory motion management simulation* @ **2.00 wRVU** and 45 min intra-service time), and **31627** (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation* @ **2.00 wRVU** and 60 min intra-service time).

Based on this list the Expert Panel felt that even though the intra-service time of code 90836 was 15 minutes less than the surveyed code, it was the most clinically similar service. The Expert Panel agreed that code 90836 was the most appropriate crosswalk.

The Expert Panel noted that the recommended value was less than both reference service codes selected by survey respondents: 99205 (*Office/Outpatient visit, new patient*) @ 3.17 wRVUs and 90791 (*Psychiatric diagnostic evaluation*) @ 3.00 wRVUs.

Comparison to Other Services

The Expert Panel compared +96131 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule

	Descriptor	Global	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
+90840	Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)	ZZZ	1.50	0	30	0	30	April 2013	0.0500	5,345
+99355	Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)	ZZZ	1.77	0	30	0	30	June 1993	0.0590	26,172
+96131	**Psychological testing evaluation, each addl hour**	**ZZZ**	**1.90**	**0**	**60**	**0**	**60**	***	**0.032**	**NEW**
+31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance,	ZZZ	2.00	0	60	0	60	Feb 2009	0.0333	10,012

	Descriptor	Global	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
	when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])									
+99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)	ZZZ	2.25	0	30	0	30	Aug 2005	0.0750	508,905

Rank order with other Psychological/Neuropsychological Testing Codes

Rank order within the family was also found to be appropriate. Code +96131 has a work RVU value and IWPUT above the neurobehavioral status exam (963X2) add-on code. The higher work RVU and IWPUT values appropriately reflect the relative intensity and complexity of the different procedures.

The recommended work RVU for +96131 is the same as +963X6 (*Neuropsychological testing, each addl hour*). Separate codes were created for psychological and neuropsychological services due to the fundamental differences in the services performed. Those differences are reflected in the respective domains that are assessed by psychological and neuropsychological testing. Although separate codes were created, the Expert Panel agreed that the values should be the same since the intensity and complexity were similar.

When these factors are considered, the recommendation of 1.90 work RVUs for +96131 maintains appropriate rank order in the family.

Code #	Descriptor	Work RVU	Intra-Time (min)	IWPUT
+96121	Neurobehavioral status exam, each addl hour	1.71	60	0.029
+96131	**Psychological testing evaluation**, each addl hour	**1.90**	**60**	**0.032**
+96133	Neuropsychological testing, each addl hour	1.90	60	0.032

In summary, for CPT code +96131 (*Psychological testing evaluation services, each add'l hour*) ***APA recommends 1.90 wRVUs and 0/60/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96101 or 96102

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 508425
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume represents 20% of national utilization; Medicare volume is estimated in the following manner: 45% of the utilization of 96101 and 12.5% of the utilization of 96102 will be reported by +96131.

Specialty Clinical Psychology Frequency 457583 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 101,685 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume is estimated in the following manner: 45% of the utilization of 96101 and 12.5% of the utilization of 96102 will be reported by +96131.

Specialty Clinical Psychology Frequency 91517 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99203	XXX	1.42	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93224	XXX	0.52	**RUC Time**	367,012

CPT Descriptor 1 External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90832	XXX	1.50	**RUC Time**	2,308,136

CPT Descriptor 2 Psychotherapy, 30 minutes with patient

Other Reference CPT Code	Global	Work RVU	Time Source

97605	XXX	0.55	**RUC Time**

CPT Descriptor Negative pressure wound therapy (eg, vacuum assisted drainage collection), utilizing durable medical equipment (DME), including topical application(s), wound assessment, and instruction(s) for ongoing care, per session; total wound(s) surface area less than or equal to 50 square centimeters

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 37 **% of respondents:** 25.1 **%**

Number of respondents who choose 2nd Key Reference Code: 30 **% of respondents:** 20.4 **%**

Technical skill required	20%	33%	47%
Physical effort required	20%	57%	23%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	37%	33%	30%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 HCPAC meeting (some of these codes are being presented at the RUC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96142)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024

RUC	Psychological/neuropsychological single test administration with interpretation and report	96142	0.80	3/30/3	0.022

October 2017 RUC Work Survey and Recommendation

The American Psychological Association (APA) surveyed 96136, *Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes* for the October 2017 HCPAC meeting.

CPT code 96136 is the base code of a base code/add-on combination.

- 96136, *Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes*
- + 96137, *Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes (List separately in addition to code for primary procedure)*

Code 96136 describes the first 30 minutes of test administration and scoring performed by a healthcare professional for a psychological or neuropsychological testing services. Code +96137 describes each additional 30 minutes. The test evaluation services, which include evaluation, interactive feedback and interpretation and report, are reported by 96130 to +96133.

A total of 147 responses were received from a random sample of 3,596 APA members (4 percent response rate). APA convened an Expert Panel to review the survey data. ***The society is recommending 0.55 wRVU. They are also recommending 3/30/3 for time.***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 0.76 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.64	2.44	3.17
Pre-Time		15	
Intra-Time	30	120	287.5
Post-Time		35	

wRVU recommendation: The Expert Panel felt that the wRVW 25th percentile and median was too high. The Expert Panel concluded that the work RVU and intensity of 96136, essentially a data gathering code, should be less than the wRVU and intensity of the psychological/neuropsychological evaluation services (96130 and 96132). In addition to the difference in work of the codes, 96136 is a 30 minute code while 96130 and 96132 are 60 minute codes.

The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Time recommendation: By definition the code has 30 minutes intra-time. The Expert Panel agreed that the survey 25th percentile of 30 minutes was appropriate. The Expert Panel felt that the median survey times for pre- and post-time was too high. The Expert Panel recommended 3 minutes for pre-time and 3 minutes for post-time. This time seemed to align with other codes and was sufficient to complete the necessary pre- and post- tasks described below.

- Pre-service work: Select tests
- Post-service work: Transcribe all test scores onto data summary sheet.

Custom question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96136 and all increments of +96137)?*

Min.	25th Percentile	Median	75th Percentile	Max.

0 min.	202.5 min.	300 min.	480 min.	3600 min.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

wRVU Recommendation Rationale: Crosswalk to code 97605

Since the survey data was not appropriate the Expert Panel based its wRVU recommendation on a crosswalk to a RUC surveyed code.

The Expert Panel considered rank order in the family (should have value and intensity less than single test administration code 96142), maintaining budget neutrality within the family and reviewed the reference service list. Based on these factors, the Expert Panel concluded that the appropriate value should be between reference code **99201** (*Office/outpatient visit, new patient*) valued at **0.48 wRVUs** and reference code **90853** (group psychotherapy) valued at **0.59 wRVUs**. The Expert Panel was concerned that this range undervalued the service, but felt it was limited by maintaining rank order in the family and other factors.

A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes or 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed XXX codes between wRVU value of 0.48 to 0.59, IWPUT between 0.0150 to 0.0250, intra-time time between 20 and 30 minutes that are not currently being surveyed at this meeting, five codes were identified:

- **94014** (*Patient recorded spirometry* @ 0.52 wRVU and 20 min. intra-time)
- **94016** (*Review patient spirometry* @ 0.52 wRVU and 20 min intra-time)
- **88312** (*Special stains Group I* @ 0.54 wRVU and 24 min intra-time)
- **97605** (Negative pressure wound therapy @ 0.55 wRVU and 20 min intra-time)
- **88104 (***Cytopath fl nongyn smears* @ 0.56 wRVU and 24 min intra-time)

Based on this list the Expert Panel agreed that code 97605 was the most appropriate crosswalk. While 97605 was recently surveyed by the RUC (2014), the times for 97605 (3/20/5) do not completely align with the recommended times for 96136 (3/30/3). The Expert Panel acknowledged the pool of codes was limited since there are few codes with the above described parameters.

Maintaining Relativity within the Family

The Expert Panel found that the recommendation of 0.55 work RVUs maintained appropriate relativity within the family. The work RVU and intensity of 96136 is less than +96113 (*Developmental testing, each addl 30 min*.). While both are 30-minute codes, the Expert Panel agreed that 96136, a code that describes test administration and scoring, should be valued less and have a lower intensity than +96113, a code that describes developmental testing. The Expert

Panel also agreed that it was appropriate that 96136 is less than 96142 (*Psychological/neuropsychological single test administration with interpretation and report*) which has a recommended value of 0.80 wRVU.

Code#	Category	Work RVU	Time	IWPUT
96136	**Psychological or neuropsychological test admin. and scoring by physician or healthcare professional, first 30 min.**	**0.55**	**3/30/3**	**0.014**
96142	Psychological/neuropsychological single test administration with interpretation and report	0.80	3/30/3	0.022
+96113	Developmental testing, each addl 30 min.	0.92	0/30/0	0.031

In summary, for CPT code 96136 (*Psychological or neuropsychological test admin. and scoring by physician or healthcare professional, first 30 min*.) APA recommends ***0.55 wRVU and 3/30/3 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96101 or 96118

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 834065

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization for these services; code 96136 will replace 15% of the Medicare utilization for 96101 and 20% of the utilization for 96118.

Specialty Clinical Psychology Frequency 750659 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 166,813 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Code 96136 will replace 15% of the Medicare utilization for 96101 and 20% of the utilization for 96118.

Specialty Clinical Psychology Frequency 150132 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96118

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99355	ZZZ	1.77	**RUC Time**

CPT Descriptor Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
11045	ZZZ	0.50	**RUC Time**	390,492

CPT Descriptor 1 Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
90840	ZZZ	1.50	**RUC Time**	5,345

CPT Descriptor 2 Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)

Other Reference CPT Code	Global	Work RVU	Time Source
96152	XXX	0.46	**RUC Time**

CPT Descriptor Health and behavior intervention, each 15 minutes, face-to-face; individual

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 38 **% of respondents:** 25.6 **%**

Number of respondents who choose 2nd Key Reference Code: 20 **% of respondents:** 13.5 **%**

TIME ESTIMATES (Median)

	CPT Code: 96137	Top Key Reference CPT Code: 99205	2nd Key Reference CPT Code: 99355

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	24%	24%	42%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	16%	24%	61%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	26%	68%
Physical effort required	8%	39%	53%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	37%	58%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	5%	5%	35%	45%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	25%	65%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	10%	80%
Physical effort required	5%	65%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	55%	35%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 HCPAC meeting (some of these codes are being presented at the RUC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96142)

October 2017 RUC Work Survey and Recommendation

The American Psychological Association (APA) surveyed *+96137, Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes* for the October 2017 HCPAC meeting.

CPT code +96137 is the add-on code of a base code/add-on combination.

- 96136, *Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes*

- +96137, *Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes (List separately in addition to code for primary procedure)*

Code 96136 describes the first 30 minutes of test administration and scoring performed by a healthcare professional for a psychological or neuropsychological testing services. Code +96137 describes each additional 30 minutes. The test evaluation services, which include evaluation, interactive feedback and interpretation and report, are reported by 96130 to +96133.

A total of 148 responses were received from a random sample of 3,596 APA members (4.1 percent response rate). APA convened an Expert Panel to review the survey data. ***The society is recommending 0.46 work RVUs and 0/30/0 for the time.***

<u>Response to reviewer comments</u>: This recommendation is a reduction from the original recommendation of 0.69 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.75	2.43	3.17
Intra-Time	30	90	300

<u>*wRVU recommendation*</u>*:* The Expert Panel felt that the survey wRVW 25th percentile and median was too high. The Expert Panel concluded that the work RVU and intensity of +96137, essentially a data gathering code, should be less than the work RVU and intensity of the psychological/neuropsychological evaluation services add-on codes (+96131 and +96133). In addition to the difference in work of the codes, +96137 is a 30-minute code while +96131 and +96133 are 60-minute codes. The Expert Panel also agreed that +96137 should be valued less than its base code, 96136.

The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

<u>*Time recommendation*</u>*:* By definition the code has 30 minutes of intra-time. The Expert Panel agreed that the survey 25th percentile of 30 minutes was appropriate.

<u>*Custom question*</u>*:* Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96136 and all increments of +96137)?*

Min.	**25th Percentile**	**Median**	**75th Percentile**	**Max.**
0 min.	202.5 min.	300 min.	480 min.	3600 min.

wRVU Recommendation Rationale: Crosswalk to code 96152

Since the survey data was not appropriate the Expert Panel based its wRVU recommendation on a crosswalk to a RUC surveyed code.

The Expert Panel considered rank order in the family (should have value less than 96136, the base code which has a wRVU value of 0.55), maintaining budget neutrality within the family and reviewed the reference service list. Based on these factors, the Expert Panel concluded that the appropriate value should be between 0.45 wRVU and 0.55 the value of the base code. The Expert Panel was concerned that this range undervalued the service, but felt it was limited by maintaining rank order in the family and other factors.

Response to reviewer comments: The society received a comment from one reviewer if the wRVU proportionality between the base and add-on code should be consistent throughout the family. The Expert Panel considered this question and concluded that it should not necessarily be consistent. The add-on code is a continuation of the intra-service period of the base code so its value is driven by the value of the base code. What is included in the base code varies by each base code/add-on combination. Also in one instance, the developmental service (96112, +96113), the base code is for the first 60 minutes and the add-on code is for each subsequent 30 minutes which will result in a different relationship between the base and the add-on code.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes and 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

One reviewer suggested codes 92608 (0.70 wRVU) and 92618 as crosswalks for code +96137 (0.68 wRVU). While the Expert Panel appreciated these recommendations, the wRVU values were too high to recommend for this code.

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed ZZZ codes between wRVU value between 0.45 and 0.55, IWPUT between 0.0150 to 0.0250, and intra-time between 15 and 30 minutes (expanded from 20 to 30 minutes) no ZZZ codes were identified. The Expert Panel then conducted a search for XXX codes using these same parameters and two codes were identified:

- **93016** (*Cardiovascular stress test* @ 0.45 wRVU and 15 min. intra-time)
- **96152** (*Intervene hlth/behave indiv* @ 0.46 wRVU and 15 min intra-time)

Based on this search the Expert Panel agreed that code 96152 was the most appropriate crosswalk.

Maintaining Relativity within the Family

The Expert Panel noted that 0.46 work RVUs maintained appropriate relativity within the family. The wRVU and intensity of +96137 is less than +96113 (*Developmental testing, each addl 30 min*.). While both 30-minute codes, the Expert Panel agreed that +96137, a code that describes test administration and scoring, should be valued less and have a lower intensity than +96113, a code that describes developmental testing. The Expert Panel also agreed that it was appropriate that +96137 is less than 96142 (*Psychological/neuropsychological single test administration with interpretation and report*) which has a recommended value of 0.80 work RVUs.

Code#	Category	Work RVU	Time	IWPUT
+96137	**Psychological or neuropsychological test admin. and scoring by physician or healthcare professional, each addl 30 min**	**0.46**	**0/30/0**	**0.015**
96142	Psychological/neuropsychological single test administration with interpretation and report	0.80	3/30/3	0.022
+96113	Developmental testing, each addl 30 min.	0.92	0/30/0	0.031

In summary, for CPT code +96137 (*Psychological or neuropsychological test admin. and scoring by physician or healthcare professional, each addl 30 min*) the society recommends ***0.46 wRVU and 0/30/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96101 or 96118

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1154274
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization for these services; code +96137 will replace 45% of the Medicare utilization for 96101 and 20% of 96118.

Specialty Clinical Psychology Frequency 1038847 Percentage 90.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 230,855 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Code +96137 will replace 45% of the Medicare utilization for 96101 and 20% of the utilization of 96118.

Specialty Clinical Psychology   Frequency 207770   Percentage 90.00 %

Specialty   Frequency 0   Percentage 0.00 %

Specialty   Frequency 0   Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96118

CPT Code: 96105 (Assessment of aphasia)
Specialty Society: American Speech-Language-Hearing Association

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, eg, by Boston Diagnostic Aphasia Examination) with interpretation and report, per hour**

Global Period: XXX   Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The practice expense elements were determined by a consensus panel of speech-language pathologists. The panel drew upon the current practice expense information from the RUC database for CPT code 96105.

   We do not recommend any changes to the current direct PE inputs for 96105, and there is no associated clinical staff time for this code.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   We are using the current direct PE inputs for CPT code 96105, the surveyed code.

3. Is this code(s) typically billed with an E/M service? **No**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)

   The dominant provider for both nonfacility and global is speech-language pathology. Speech-language pathologists provide this service in the nonfacility setting 63% of the time.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **There is no associated clinical staff time for CPT code 96105.**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code: 96125 (Cognitive performance testing)
Specialty Society: American Speech-Language-Hearing Association

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Standardized cognitive performance testing (eg, Ross Information Processing Assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report**

Global Period: XXX   Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The practice expense elements were determined by a consensus panel of speech-language pathologists. The panel drew upon the current practice expense information from the RUC database for CPT code 96125.

   We do not recommend any changes to the current direct PE inputs for 96125, and there is no associated clinical staff time for this code.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   We are using the current direct PE inputs for CPT code 96125, the surveyed code.

3. Is this code(s) typically billed with an E/M service? **No**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)

   The dominant provider for both nonfacility and global is speech-language pathology. Speech-language pathologists provide this service in the nonfacility setting 87% of the time.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **There is no associated clinical staff time for CPT code 96125.**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code:_ 96130________
Specialty Society: ___APA_______________

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour

Global Period:_XXX__ Meeting Date: _Oct 2017_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the society listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **We are listing CPT code 96101, *Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report*, as the reference code.**

   - **New CPT code 96130 is currently reported by CPT code 96101 and 96102.**

3. Is this code(s) typically billed with an E/M service?
   - **No.**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting more than 50 percent of the time.**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   - **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    - **Equipment from the existing 96101 crosswalk:**

      ED032 printer, laser, paper
      ED021 computer, desktop, w-monitor

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here:

   - **A consensus panel of experts from the society listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **We are listing 96102, *Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face*, and 96119, *Neuropsychological testing (eg, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face,* as the reference codes.**
   - **New CPT 96139 is currently reported with 96102 for psychological testing and 96119 for neuropsychological testing.**

3. Is this code(s) typically billed with an E/M service?
   - **No.**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting more than 50 percent of the time.**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **When our reference code, 96102 was originally valued in 2006, the PE input, "MCMI-III kit and manual" (Medical Supply Code: SK108) was included; however, no dollar amount was assigned to this supply. Additionally, included in the equipment for 96102 was "psychological testing equipment" (Equipment code: ED039), which also has no dollar amount assigned. Therefore, the PE for this service has been calculated in error, and**

psychologists performing this service have not been properly reimbursed for the supplies and/or equipment required to perform this service.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **Technician gathers tests as ordered by the physician or qualified health care professional.**
   - **Administers a series of tests (standardized, rating scales and/or projective). Record behavioral observations made during the testing.**
   - **Score test protocol(s) according to the latest methods for each test.**
   - **Transcribes all test scores onto data summary sheet.**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   - **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    Invoices are included for the following supplies:
    - **WAIS-IV Record Forms**
    - **WAIS-IV Response Booklet #1**
    - **WAIS-IV Response Booklet #2**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

    - **An invoice is included for WAIS-IV Testing Equipment**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

    - **Invoice** **WAIS-IV Testing Equipment**
    - **ED032** **printer, laser, paper**

- **ED021 computer, desktop, w-monitor**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here:
    - **N/A**

CPT Code: _96146 (Revised)_____
Specialty Society: ___APA_______________

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Psychological or neuropsychological test administration, with single automated instrument via electronic platform, with automated result only

Global Period: _XXX__ Meeting Date: _Oct 2017_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the society listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
3.
   - **We are listing CPT code 96120,** ***Neuropsychological testing (eg, Wisconsin Card Sorting Test), administered by a computer, with qualified health care professional interpretation and report*****, as the closest reference code. However, the new code is PE only and has no professional work.**

   - **New code CPT code 96146 would currently be reported with 96120.**

4. Is this code(s) typically billed with an E/M service?
   - **No.**

5. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting more than 50 percent of the time.**

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

7. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **Since the current computerized assessment code, 96120, was passed in 2006, there has been a significant increase in technology driven, computer-based neuropsychological assessments using desktop computers and tablets for administration. Over 20 such products are available in the healthcare marketplace currently. The supply option we have selected, the CANTAB Mobile (per single automated assessment), is a representative example of an automated instrument via electronic platform (iPAD), that yields high**

reliability and discriminate validity. Enclosed please find two (2) scientific citations to support this change in technology.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

9. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

10. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    - **N/A**

11. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

12. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

13. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **NEW: CANTAB Mobile (per single automated assessment) - $28.00 per single automated administration**

14. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **NEW: iPAD with Wi-Fi 128GB - $559.00**

15. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

16. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - **N/A**

17. If there is any other item on your spreadsheet that needs further explanation please include here:
    - **N/A**

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS Request – Final Rule for 2016

October 2017

Fine Needle Aspiration

CPT code 10021 was identified as part of the CMS OPPS/ASC cap payment proposal in the CMS Proposed Rule for CY2014. The proposal was to limit the practice expense payment through the physician payment schedule at the lower of two facility payment schedules, either the OPPS or ASC payment schedule. Although the CMS OPPS/ASC cap proposal was not implemented in the final rule for CY2014, the RUC forwarded a number of practice expense only recommendations for CY2015. In the CY2016 Medicare Physician Payment Schedule Final Rule, CMS noted concern about implementing practice expense inputs without the corresponding work being reviewed. The RUC identified CPT code 10021 as one of the services that CMS' request pertained to and requested that the specialties that perform this service submit recommendations for the January 2016 RUC meeting. The specialty societies provided two reasons why these codes need to be referred to the CPT Editorial Panel prior to receiving a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 *Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation* more than 75% of the time together and a bundled code solution will be developed. In June 2017, the CPT Editorial Panel deleted one code, revised one code and created 9 new codes to describe fine needle aspiration procedures with and without imaging.

10021 *Fine needle aspiration biopsy, without imaging guidance; first lesion*
The RUC reviewed the survey results from 158 physicians and agreed with the societies on the following physician time components: 10 minutes of pre-service time, 15 minutes of intra-service time and 8 minutes of post-service time. The RUC noted that the current times in the RUC database were from 1995 and resulted in an inappropriately low IWPUT of 0.034. Therefore, the drop in total time did not warrant a proportional change in work RVU as the previous times were not appropriate.

This service is typically performed with an Evaluation and Management (E/M) service. The specialties noted, and the RUC agreed, that although this service is typically performed with an E/M visit, the pre-service and post-service time is appropriate to account for the work that is distinct from what is performed during the E/M visit. The 10 minutes of pre-service time is appropriate to explain the procedure to the patient, including potential complications, obtain informed consent, position and prep the patient, and clean the biopsy site with disinfectant and inject local anesthesia and wait for it to take effect. The 8 minutes of post-service time is necessary to prepare a report of the procedure for the medical record. The slides and cell block solution are checked to insure proper sealing and transportability to pathology (either locally or via mail). The appropriate clinical history documents, labeling, and requisition forms are packaged in the sealed, transportable packaging and sent to the appropriate pathology agency. The patient is monitored for any evidence of hematoma, bleeding, drug reaction, or other complication(s).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey 25th percentile work RVU of 1.20 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 1.20, the RUC compared the survey code to MPC code 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU= 1.27, intra-service time of 15 minutes, total time of 25 minutes) and noted that both service involve a similar amount of physician work and have identical intra-service times. The RUC also compared the survey code to MPC code 99283 *Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity* (work RVU= 1.34, intra-service time of 18 minutes, total time of 30 minutes) and noted that the reference code has somewhat more intra-service and total time and that it was appropriate to value the survey code somewhat less than the reference code. **The RUC recommends a work RVU of 1.20 for CPT code 10021.**

10004 ***Fine needle aspiration biopsy, without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 125 physicians and agreed with the specialty societies on the following physician time components: 14 minutes of intra-service time. The RUC reviewed the survey 25th percentile work RVU of 0.80 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 0.80, the RUC compared the survey code to the 2nd key reference code 10036 *Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion (List separately in addition to code for primary procedure)* (work RVU=0.85, intra-service time of 14 minutes) and noted that both services have identical intra-service and total times involve a similar amount of physician work. The RUC also compared the survey code to MPC code 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)* (work RVU=0.80, intra-service time of 15 minutes) and noted that both services have very similar times and involve a similar amount of physician work. **The RUC recommends a work RVU of 0.80 for CPT code 10004.**

10005 ***Fine needle aspiration biopsy, including ultrasound guidance; first lesion***

The RUC reviewed the survey results from 203 physicians and agreed with the societies on the following physician time components: 10 minutes of pre-service time, 20 minutes of intra-service time and 9 minutes of post-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an E/M service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

The RUC reviewed the survey 25th percentile work RVU of 1.63 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 1.63, the RUC compared the survey code to MPC code 93351 *Echocardiography, transthoracic, real-time*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional (work RVU= 1.75, intra-service time of 20 minutes total time of 35 minutes) and noted that both services have identical intra-service time, whereas the survey code involves 4 minutes more total time. The RUC also compared the survey code to CPT code 75572 *Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)* (work RVU= 1.75, intra-service time of 20 minutes, total time of 40 minutes) and noted that both codes have identical intra-service times, very similar total times and involve a similar amount of physician work. **The RUC recommends a work RVU of 1.63 for CPT code 10005.**

10006 *Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure)*

The RUC reviewed the survey results from 200 physicians and agreed with the societies on the following physician time components: 15 minutes of intra-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an E/M service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

The RUC reviewed the survey 25th percentile work RVU of 1.00 and agreed that this value appropriately accounts for the physician work involved. To justify a work RVU of 1.00, the RUC compared the survey code to top key reference code 19084 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance* (work RVU= 1.55, intra-service time of 20 minutes, total time of 25 minutes) and noted that given the longer intra-service, and total time and increased physician work of performing both an image guided biopsy then an image guided localization device placement, 19084 is appropriately valued higher than 10006 with a slightly higher physician work intensity. The RUC also compared the survey code to MPC code 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level* (work RVU 1.20, intra-service time of 15 minutes) and noted that both add-on codes have identical times, whereas the reference code is somewhat more technically demanding than the typical case for 10006, supporting the relative valuation between the two services. **The RUC recommends a work RVU of 1.00 for CPT code 10006.**

10007 *Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion*

The RUC reviewed the survey results from 31 physicians and agreed with the societies on the following physician time components: 10 minutes of pre-service time, 27 minutes of intra-service time and 10 minutes of post-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an E/M service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey 25th percentile work RVU of 2.23 and agreed that this value somewhat overvalues the physician work involved in performing this service. To determine an appropriate value for this service, the RUC noted that this service is currently reported with codes 10022 *Fine needle aspiration; with imaging guidance* (work RVU = 1.27) and 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)* (work RVU = 0.54), which have a combined work RVU of 1.81. The RUC agreed that this value is appropriate for code 10007. To justify a work RVU of 1.81, the RUC compared the survey code to MPC code 99221 *Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit* (work RVU= 1.92, intra-service time of 30 minutes, total time of 50 minutes) and noted that the reference code involves slightly more intra-service time and total time, supporting a somewhat lower valuation for the survey code. The RUC also compared the survey code to MPC code 92004 *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits* (work RVU= 1.82, intra-service time of 25 minutes, total time 40 minutes) and noted that the survey code involves more intra-service time and more total time. **The RUC recommends a work RVU of 1.81 for CPT code 10007.**

10008 *Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)*

The RUC reviewed the survey results from 31 physicians and agreed with the societies on the following physician time components: 20 minutes of intra-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an evaluation and management service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

The RUC reviewed the survey 25th percentile work RVU of 1.50 and agreed that this value somewhat overvalues the physician work involved in performing this service. To determine an appropriate value for this service, the RUC reviewed how this service is currently reported with codes 10022 and 77002 which have a combined work RVU of 1.81. Although Medicare does not apply the multiple procedure reduction to this service currently, the specialties based their proposed value on if the multiple procedure reduction was applied to deleted code 10022, which would produce a combined work RVU with 77002 of 1.18 (0.64+0.54 = 1.18). To justify a work RVU of 1.18, the RUC compared the survey code to MPC code 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)* (work RVU= 1.20, intra-service time of 15 minutes) and noted that the survey code involves more intra-service and total time, whereas the reference code involves a bit more complexity, and would value the codes appropriately to each other. The RUC also compared the survey code to top key reference code 19082 *Biopsy, breast, with*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (work RVU=1.65, intra-service time of 25 minutes, total time of 30 minutes) and noted that given the longer total time and increased work of doing both an image guided biopsy then image guided localization device placement, 19082 is appropriately valued higher than 10008 with a slightly higher physician work intensity. **The RUC recommends a work RVU of 1.18 for CPT code 10008.**

10009 ***Fine needle aspiration biopsy, including CT guidance; first lesion***
The RUC reviewed the survey results from 91 physicians and agreed with the societies on the following physician time components: 15 minutes of pre-service time, 35 minutes of intra-service time and 12 minutes of post-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an E/M service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

The RUC reviewed the survey 25th percentile work RVU of 2.43 and agreed that this value appropriately accounts for the physician work involved. The RUC also noted that this is the aggregate work value for the two CPT codes that are being bundled into this new code. To justify a work RVU of 2.43, the RUC compared the survey code to CPT code 99204 *Office or other outpatient visit for the evaluation and management of a new patient…*(work RVU= 2.43, intra-service time of 30 minutes, total time of 45 minutes) and noted that the survey code involves more intra-service time and total time. The RUC also compared the survey code to CPT code 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)* (work RVU= 2.40, intra-service time of 30 minutes, total time of 50 minutes) and noted that the survey code involves more intra-service and total time. **The RUC recommends a work RVU of 2.43 for CPT code 10009.**

10010 ***Fine needle aspiration biopsy, including CT guidance; each additional lesion (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 91 physicians and agreed with the societies on the following physician time components: 25 minutes of intra-service time. The RUC reviewed the billed together data for deleted code 10022 *Fine needle aspiration; with imaging guidance* and confirmed that it was not typically reported with an E/M service. Deleted code 10022 was bundled into new CPT codes 10005-10012.

The RUC reviewed the survey 25th percentile work RVU of 1.65 and agreed that this value appropriately accounts for the physician work involved. The RUC noted that this is a much lower valuation than current reporting. To justify a work RVU of 1.65, the RUC compared the survey code to the 2nd key reference code 19082 *Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)* (work RVU= 1.65, intra-service time of 25 minutes) and noted that both services have identical intra-service time. Although the reference code has somewhat more total time, 67 percent of the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

survey respondents that selected 19082 as their key reference code indicated the survey code was a more intense and complex service to perform, supporting a slightly higher IWPUT for the survey code. **The RUC recommends a work RVU of 1.65 for CPT code 10010.**

10011 ***Fine needle aspiration biopsy, including MR guidance; first lesion***
The RUC reviewed the survey results from 13 physicians and noted that the number of survey responses collected did not reach the minimum threshold. The specialties noted that this service is projected to have very low utilization and based on AMA staff recommendation, have kept their survey open to collect more responses. For the January meeting, the ACR requested Research Subcommittee approval to perform a targeted survey for MR-guided FNA, CPT codes 10011-10012. ACR has reached out to the Society of Abdominal Radiology (SAR) as a potential sample pool and is hoping to coordinate with them. The Research Subcommittee approved for the specialty to use a random sample of SAR membership along with a random sample of ACR membership. **The RUC recommends an interim designation to contractor price CPT code 10011.**

10012 ***Fine needle aspiration biopsy, including MR guidance; each additional lesion (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 13 physicians and noted that the number of survey responses collected did not reach the minimum threshold. The specialties noted that this service is projected to have very low utilization and based on AMA staff recommendation, have kept their survey open to collect more responses. For the January meeting, the ACR requested Research Subcommittee approval to perform a targeted survey for MR-guided FNA, CPT codes 10011-10012. ACR has reached out to the Society of Abdominal Radiology (SAR) as a potential sample pool and is hoping to coordinate with them. The Research Subcommittee approved for the specialty to use a random sample of SAR membership along with a random sample of ACR membership. **The RUC recommends an interim designation to contractor price CPT code 10012.**

Affirmation of RUC Recommendations
The RUC affirmed the recent RUC recommendations for CPT codes 76942, 77002 and 77012. The relativity within the family remains correct.

77021 ***Magnetic resonance guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation***
For CPT code 77021, the RUC recommends for the specialty to survey this code, as the RUC had last reviewed this service in the year 2000. It was noted that Urology is one of the top providers for 77021 and should be involved in the valuation of this service.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Potential Miscoding for CPT code 77021
It was noted that there may be some miscoding for MR Guidance code 77021, where this code is inappropriately being reported for a service that involves using software to fuse pre-existing MR images with real-time ultrasound images of the prostate during a prostate biopsy. 42.3 percent of the global reporting for mr guidance code 77021 is with ultrasound guidance code 76942 per 2015 billed together data.

Practice Expense
The Practice Expense Subcommittee reviewed the proposed compelling evidence arguments and accepted them as follows:

	PE Compelling Evidence for Fine Needle Aspiration									
Components of PE Compelling Evidence	**10021**	**10004**	**10005**	**10006**	**10007**	**10008**	**10009**	**10010**	**10011**	**10012**
• Evidence that patient population has changed.	**No**	**No**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**
• Evidence that technology has changed clinical staff time.	**No**	**No**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**
• Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data.	**No**	**No**	**Yes**	**Yes**	**No**	**No**	**No**	**No**	**No**	**No**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Summary of revisions made by the Practice Expense Subcommittee relative to the original proposal from the specialties:

- Added additional time to the clinical staff time to reflect the typical amount of time for preparing supplies
- Verified the top specialty for each service in the office setting, including, in the office setting, that ENT was top provider for 10021, endocrinology for 10022 and rehab medicine for 77002 and urology for 76942 and 77021.
- Extensively deleted supplies that were duplicative of the biopsy tray, excessive personal protection gear, eliminated microscope slides that were already included in the pathology codes for reviewing the biopsy specimens
- Deleted additional ultrasound needles that were not typical
- Eliminated the PACS from the appropriate specialties where a PACS system was not present in the physician's office.
- Increase from 2 to 3 is now typical for the number of needle passes also changes the supplies for several of the codes

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Surgery
General
Fine Needle Aspiration (FNA) Biopsy
A **fine needle aspiration** (FNA) **biopsy** is performed when material is aspirated with a fine needle and the cells are examined cytologically. A **core needle biopsy** is typically performed with a larger bore needle to obtain a core sample of tissue for histopathologic evaluation. FNA biopsy procedures are performed with or without imaging guidance. Imaging guidance codes (eg, 76942, 77002, 77012, 77021) may not be reported separately with 10021, 10004-10012. Codes 10021, 10004-10012 are reported once per lesion sampled in a single session. When more than one FNA biopsy is performed on separate lesions at the same session, same day, same imaging modality, use the appropriate imaging modality add-on code for the second and subsequent lesion(s). When more than one FNA biopsy is performed on separate lesions, same session, same day, using different imaging modalities, report the corresponding primary code with modifier 59 for each additional imaging modality and corresponding add-on codes for subsequent lesions sampled. This instruction applies regardless of whether the lesions are ipsilateral or contralateral to each other, and/or whether they are in the same or different organs/structures. When FNA biopsy and core needle biopsy both are performed on the same lesion, same session, same day using the same type of imaging guidance, do not separately report the imaging guidance for the core needle biopsy. When FNA biopsy is performed on one lesion and core needle biopsy ~~are~~is performed on ~~different lesions~~a separate lesion, same session, same day using the same type of imaging guidance, both the core needle biopsy and the imaging guidance for the core needle biopsy may be reported separately with modifier 59. When FNA biopsy is performed on one lesion and core needle biopsy ~~are~~is performed on ~~different~~ a separate lesions, same session, same day using different types of imaging guidance, both the core needle biopsy and the imaging guidance for the core needle biopsy may be reported with modifier 59.

~~(For percutaneous image-guided fluid collection drainage by catheter of soft tissue [eg, extremity, abdominal wall, neck], use 10030)~~

Subject: ACR Request to Reaffirm Code Value Recommendations for FNA Guidance codes

Dear Dr. Smith,

As depicted on the New and Revised Status Summary LOI for the October 2017 RUC meeting, the ACR along with several other specialty societies have indicated interest in surveying some or all codes from the Fine Needle Aspiration (FNA) code family. Along with the new FNA biopsy codes (10021, 10X11-10X19), there are other guidance codes that were included on the LOI, but are not part of this family.

We recognize that these needle guidance codes (77002, 77012, 76942, and 77021) are components of the bundled, imaging guidance for the FNA codes. However, we do not consider them within the same family as the FNA biopsy codes. Two of these codes would have been included on the RSL, but they were either recently surveyed (77012 *(CT guidance for needle placement)* at the April 2017 RUC meeting) or are currently on the RAW list pending an Action Plan (76942 *(US guidance for needle placement)*, which has a declining utilization and was surveyed in April 2014). Additionally, 77002 *(Fluoroscopic guidance for needle placement)* was recently surveyed in April 2015.

CPT code 77021*(MR guidance for needle placement)* also has a decreasing utilization and is a very low volume code. We do not believe this code is misvalued and considering current trends, we believe it is most likely being undervalued, especially given the recent valuation recommended for 77012.

With respect to utilization of 77021 with FNA guidance, the participating specialties expect this to be a very low volume service overall. We did not want to unintentionally orphan the MRI modality with respect to imaging guidance for FNA procedures and chose to mirror this family based on the breast biopsy codes. This is with the understanding that this bundled code will be used infrequently.

Therefore the ACR would like to request removal of these codes from the LOI and that the RUC reaffirm the previous or pending value recommendations for these guidance codes.

Fine Needle Guidance Codes:

CPT Code	Descriptor	RUC Review Year
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)	October 2015
77012	Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation	April 2017
76942	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	April 2014
77021	Magnetic resonance guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation	April 2000

Please contact ACR staff person Christy Buranaamorn at (703) 648-8900, ext. 5653 if you have any questions.

Thank you for your consideration of this request.

Subject: ACR and SIR to Keep Modified FNA Survey Open To Collect Responses

Dear Dr. Smith,

Several specialties, including the American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) surveyed the Fine Needle Aspiration (FNA) codes for the October 2017 RUC Meeting. There are ten new or revised codes in the family (10021, 10X11-10X19). Most of the specialties only surveyed the first four codes; however, the ACR and SIR surveyed the eight codes that include imaging guidance, 10X12-10X19 (ultrasound, fluoroscopic, CT, or MR).

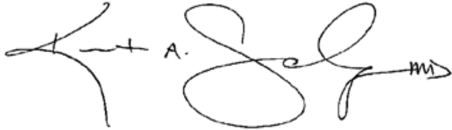
After several weeks of survey, expanded survey samples, and multiple reminders, the ACR and the SIR continued to struggle to obtain surveys for 10X18 and 10X19 (FNA with MR guidance). In mid-August, when we only had about 10 surveys combined for those codes and were not optimistic that we would obtain the required minimum of 30 surveys in time for the September 2017 RUC submission deadline, we reached out to the AMA for guidance.

The AMA staff advised the ACR and SIR to modify our survey instruments to only collect for those codes that were in need of responses and to keep our surveys open until we had obtained 30 surveys. We were informed that we needed to present recommendations for the FNA family at the October 2017 meeting. Codes that did not meet the minimum 30 surveys would be assigned interim values, and the codes would have to be presented again at the January meeting for valuation.

At this time, the ACR and SIR's surveys are still open and collecting data for the MR-guided FNA codes, 10X18 and 10X19. Please contact ACR staff person Stephanie Le at (703) 648-8900, ext. 4584 if you have any questions.

Thank you for your consideration of this request.

Sincerely,



Kurt A. Schoppe, MD

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:10021 Tracking Number G1 Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: XXX Current Work RVU: **1.27** RUC Recommended RVU: **1.20**

CPT Descriptor: Fine needle aspiration, without imaging guidance; first lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male presents with a palpable lesion in the submandibular region. A FNA biopsy of the lesion is performed without imaging guidance.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure and its purpose are explained to the patient, including potential complications. Informed consent is obtained. Current medications and allergies are again reviewed with the patient. Slides are prepared and labeled with all patient and specimen information. Pathology requisition forms are filled out and confirmed with respective patient, provider, and referring physician information. The mayo stand is prepared and draped. Medications are drawn, labeled, and reviewed. The physician and assistant put on appropriate barrier protection and sterile gloves. Topical anesthesia is applied. The patient is positioned and prepped. The biopsy site is cleaned with disinfectant. The site is draped. A timeout is then performed. Local anesthesia is injected. Time is then allotted for anesthetic onset and patient is monitored for evidence of local or systemic reactions to medications given.

Description of Intra-Service Work: A needle with attached syringe is inserted into the lesion. An FNA biopsy without imaging guidance of the lesion is performed by making multiple passes with the same needle under suction with the syringe. The needle is withdrawn and material expressed onto slides The slides are smeared and inspected for adequacy, and slide fixative is applied. The appropriate solution is aspirated into the syringe and needle and expressed in cell block fixative solution for purposes of cell block preparation. The previous process is repeated in the same lesion (typically repeated two additional times). Between each aspiration, compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). A dressing is applied and compression is then held for several minutes.

Description of Post-Service Work: A report of the procedure is documented for the medical record. The slides and cell block solution are checked to insure proper sealing and transportabililty to pathology (either locally or via mail). The appropriate clinical history documents, labeling, and requisition forms are packaged in the sealed, transportable packaging and sent to the appropriate pathology agency. The patient is monitored for any evidence of hematoma, bleeding, drug reaction, or other complication(s).

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	19%	56%	21%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	9%	45%	43%

- Urgency of medical decision making

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	16%	61%	20%
Physical effort required	25%	68%	5%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	43%	48%	7%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	50%	17%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	42%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	58%	42%
Physical effort required	33%	58%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	33%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey: Following publication of the 2014 Final Rule, the RUC solicited feedback from specialty societies regarding CPT codes potentially impacted by the OPPS/ASC payment cap proposal. Specialty societies looked over the list of 211 codes identified by the proposal and indicated which services they have an interest in reviewing. The RUC recommended developing practice expense (PE) inputs only for the subset of codes identified by specialty societies, grouped by specialty, at the April 2014 RUC meeting. In the 2016 Final Rule, CMS noted their concerns about implementing PE inputs without the corresponding work being reviewed. The RAW analyzed the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remained, including codes 10021 and 10022.

The specialty societies provided two reasons why these codes need to be referred to the CPT Editorial Panel prior to conducting a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 75% of the time together and a bundled code solution was necessary. This family of codes was reviewed during the June 2017 CPT meeting where the CPT Editorial Panel approved the addition of 8 codes to report fine needle aspiration biopsy, with and without various methods of image guidance. They are now being presented for valuation by the RUC.

Survey Sample:
The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto and head and neck surgeons) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), The Endocrine societies utilized targeted random surveys of their members who specialize in thyroid and the Pathology societies utilized a random survey of all members. The total sample size was 9736 physicians.

Physician Time:
Pre-Service Time
This is an XXX code and therefore, does not require a preservice package. Our expert panel felt the survey's median pre-service time of 10 minutes for evaluation was appropriate to allow time to explain the procedure to the patient, including potential complications, obtain informed consent, position and prep the patient, clean the biopsy site with disinfectant, and inject local anesthesia. **Therefore, we recommend a total pretime of 10 minutes.**

Intra-Service Time
We are recommending our median survey time of 15 minutes for intra service work.

Post-Service Time
Again, this is an XXX code and does not require a post-operative package. **We are recommending the median time from the survey of 8 minutes for post service work.** This includes time to develop a report of the procedure to document in the medical record.

Physician Work RVU
Upon review of the survey results, the expert panel **recommends the survey 25th percentile of 1.20 RVUs with a total time of 33 minutes**

Key Reference Services:
Our recommended work RVU and service period times fall are supported by the two most commonly chosen key reference services (KRS):

- 32554 *(Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance),* chosen by 27% of respondents, and
- 99214 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or*

family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.), chosen by 8% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the multiple specialties participating in the survey and the limitations of the reference service list. Specifically, there are few appropriate XXX global procedure codes to compare with this newly bundled service.

Even with the wide time and RVU ranges spanned by these comparisons, the relativity of the values is appropriately reflected. The surveyed code, 10021, has less intra-service time than both KRS codes, more pre-time than the E/M but less than the thoracentesis, less post-time than both procedures, and less total time than both procedures. These differences are appropriately reflected in the recommended wRVU. Accordingly, 10021 has a lower recommended wRVU.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10021	Fine needle aspiration biopsy, without imaging guidance	**1.20**	**33**	**10**	**15**	**8**	**0.053**	**XXX**
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components	1.50	40	5	25	10	0.047	XXX
32554	Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance	1.82	56	21	20	15	0.054	XXX

MPC Codes:
The surveyed code (10021) is supported by two MPC codes with XXX global periods:

- 99283 *(Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity*.), which has slight more intra-service time and slightly shorter total time, and
- 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections*), which has a higher wRVU, slightly longer intra-service time, and less total time.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10021	Fine needle aspiration biopsy, without imaging guidance	**1.20**	**33**	**10**	**15**	**8**	**0.053**	**XXX**
99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.	1.34	30	5	18	7	0.059	XXX
74170	Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections	1.40	28	5	18	5	0.065	XXX

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10021	**Fine needle aspiration biopsy, without imaging guidance; first lesion**	**1.20**	**33**	**10**	**15**	**8**	**0.053**	**XXX**
10X11	Fine needle aspiration biopsy, without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)	0.80	14		14		0.057	ZZZ
10X12	Fine needle aspiration biopsy, including ultrasound guidance; first lesion	1.63	39	10	20	9	0.060	XXX
10X13	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion	1.00	15		15		0.067	ZZZ
10X14	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion	1.81	47	10	27	10	0.050	XXX
10X15	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion	1.18	20		20		0.059	ZZZ
10X16	Fine needle aspiration biopsy, including CT guidance; first lesion	2.43	62	15	35	12	0.052	XXX
10X17	Fine needle aspiration biopsy, including CT guidance; each additional lesion	1.65	25		25		0.066	ZZZ
10X18	Fine needle aspiration biopsy, including MR guidance; first lesion	2.77	60	10	40	10	0.058	XXX
10X19	Fine needle aspiration biopsy, including MR guidance; each additional lesion	2.14	30		30		0.071	ZZZ

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) 10021 is reported with an E/M service 58% of the time.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10021

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty AAOHNS How often? Commonly

Specialty Pathology (CAP, ASC) How often? Commonly

Specialty Endocrinology (ES, AACE) How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 74274
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This volume represents the annual Medicare volume multiplied by three to account for non-medicare patients who receive the service.

Specialty Otolaryngology Frequency 33423 Percentage 44.99 %

Specialty Pathology Frequency 14285 Percentage 19.23 %

Specialty Endocrine Frequency 2970 Percentage 3.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 24,758
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This volume is based on the Medicare database volume for CY 2016.

Specialty Otolaryngology Frequency 11141 Percentage 44.99 %

Specialty Pathology Frequency 4952 Percentage 20.00 %

Specialty Endocrinology Frequency 990 Percentage 3.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 10021

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:10004 Tracking Number G2 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: ZZZ Current Work RVU: **n/a** RUC Recommended RVU: **0.80**

CPT Descriptor: Fine needle aspiration biopsy, without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male presents with a palpable lesion in the submandibular region and second palpable lesion in the contralateral lower neck. After a FNA biopsy of the first lesion is performed (reported separately), a FNA biopsy without imaging guidance is performed on the second lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 64%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: A needle with attached syringe is inserted into the lesion. An FNA biopsy without imaging guidance of the lesion is performed by making multiple passes with the same needle under suction with the syringe. The needle is withdrawn and material expressed onto slides The slides are smeared and inspected for adequacy, and slide fixative is applied. The appropriate solution is aspirated into the syringe and needle and expressed in cell block fixative solution for purposes of cell block preparation. The previous process is repeated in the same lesion (typically repeated two additional times). Between each aspiration, compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). A dressing is applied and compression is then held for several minutes. A report of the procedure is documented for the medical record.The patient is monitored for any evidence of hematoma.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2017

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	19%	33%	38%	10%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	24%	33%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	38%	57%
Physical effort required	19%	48%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	38%	48%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	33%	42%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	42%	42%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	58%	42%
Physical effort required	17%	33%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	25%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Reason for Survey: Following publication of the 2014 Final Rule, the RUC solicited feedback from specialty societies regarding CPT codes potentially impacted by the OPPS/ASC payment cap proposal. Specialty societies looked over the list of 211 codes identified by the proposal and indicated which services they have an interest in reviewing. The RUC recommended developing practice expense (PE) inputs only for the subset of codes identified by specialty societies, grouped by specialty, at the April 2014 RUC meeting. In the 2016 Final Rule, CMS noted their concerns about implementing PE inputs without the corresponding work being reviewed. The RAW analyzed the 58 services that the RUC submitted PE recommendations for and determined that one or more of the following is true of many of the codes: frequency less than 10,000; reviewed for work within the last five years; included in the list of proposed potentially misvalued codes identified through high expenditure by specialty screen that CMS included in the proposed rule for 2016. If you apply these criteria only 6 codes remained, including codes 10021 and 10022.

The specialty societies provided two reasons why these codes need to be referred to the CPT Editorial Panel prior to conducting a RUC survey. First, both codes need clarifying language stating that they should be reported per lesion rather than for every pass on the same lesion. Second, CPT code 10022 is reported with 76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation more than 75% of the time together and a bundled code solution was necessary. This family of codes was reviewed during the June 2017 CPT meeting where the CPT Editorial Panel approved the addition of 8 codes to report fine needle aspiration biopsy, with and without various methods of image guidance. They are now being presented for valuation by the RUC.

Survey Sample:
The survey data and recommendations are based upon a Random Sample of Applicable Subsets (general oto and head and neck surgeons) of American Academy of Otolaryngology-Head and Neck Surgery (AAO-HNS), The Endocrine societies utilized targeted random surveys of their members who specialize in thyroid and the Pathology societies utilized a random survey of all members. The total sample size was 9736 physicians.

Physician Time:
This is a ZZZ add-on code and therefore, does not have any pre or post procedure time.

Intra-Service Time
We are recommending our median survey time of 14 minutes for intra service work.

Physician Work RVU
Upon review of the survey results, the expert panel **recommends the survey 25th percentile of 0.80 RVUs with a total time of 14 minutes.** We believe this recommendation is consistent with the requested value of the base code 10021, as the intra time is almost identical, and when the value of the pre and post minutes of 18 total minutes are backed out of 10021, the remaining value for that service is exactly .80 work RVUs which matches our survey's 25th percentile identically. We feel this demonstrates how strong our survey is, and reflects overall consistency in valuation from our survey respondents.

Key Reference Services:
The two most commonly chosen key reference services (KRS) are below:

- 88331 (*Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen*), chosen by 17% of respondents, and
- 10036 *(Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion (List separately in addition to code for primary procedure)),* chosen by 10% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the multiple specialties participating in the survey and the limitations of the reference service list. Specifically, there are few appropriate ZZZ global procedure codes to compare with this newly bundled service.

Even with the wide time and RVU ranges spanned by these comparisons, the relativity of the values is appropriately reflected. The surveyed code, 10004, has identical intra-service time of the second most selected KRS and much less than the first. These differences are appropriately reflected in the recommended wRVU. Accordingly, 10004 has a lower recommended wRVU.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10004	**Fine needle aspiration; without**	0.80	14		14		0.057	**ZZZ**

	imaging guidance each additional lesion (List separately in addition to code for primary procedure)							
10036	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion (List separately in addition to code for primary procedure)	0.85	14		14		0.061	ZZZ
88331	Pathology consultation during surgery; first tissue block, with frozen section(s), single specimen	1.19	25		25		0.048	XXX

MPC Codes:
The surveyed code (10004) is bracketed by two MPC codes with ZZZ global periods:

- 51797 (*Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)*), which has identical wRVU and almost identical intra-service time, and
- 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)*), which has a higher wRVU, but slightly less intra-service time.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
51797	*Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure*	0.80	15		15		0.053	ZZZ
10004	**Fine needle aspiration biopsy, without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)**	**0.80**	**14**		**14**		**0.057**	**ZZZ**
64484	*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure*	1.00	10		10		0.100	ZZZ

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10021	Fine needle aspiration biopsy, without imaging guidance; first lesion	1.20	33	10	15	8	0.053	XXX
10004	**Fine needle aspiration biopsy, without imaging guidance; each additional lesion (List separately in addition to code for primary procedure)**	**0.80**	**14**		**14**		**0.057**	**ZZZ**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Recommended 10021 - XXX - 1.20 RVUs, 10 pre, 15 intra, 8 post, total time 33 minutes. Add on code X11 - ZZZ - .80 RVUs, 14 intra, 14 total minutes. When billed together the base code would be reimbursed in full and the MPPR will apply to the add on code, reducing it down to .40 RVUs, for a total of 1.60 RVUs when billed together.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10021

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Commonly

Specialty Pathology How often? Commonly

Specialty Endocrinology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? Please see our recommendations for 10021 volume, we anticipate that 100% of existing volume of 10021 will be captured by 10021 and 10004 jointly, but the percentage breakdown between how often only one lesion is done versus one or more is unknown at this time.
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

SUMMARY OF RECOMMENDATION

CPT Code:10005 Tracking Number G3 Original Specialty Recommended RVU: **1.63**

Presented Recommended RVU: **1.63**

Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **1.63**

CPT Descriptor: Fine needle aspiration biopsy, including ultrasound guidance; first lesion

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 59 year old female presents with a non-palpable thyroid nodule previously identified with diagnostic ultrasound. The patient undergoes an ultrasound-guided FNA biopsy of the lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure and its purpose are explained to the patient, including potential complications. Informed consent is obtained.

Description of Intra-Service Work: A preliminary ultrasound is performed to identify the appropriate approach for the initial needle placement. Ultrasound is used to confirm the correct trajectory for needle advancement to the target anatomic lesion, and to avoid vascular structures and non-target organs. Site is marked.
The patient is positioned and prepped. The biopsy site is cleaned with disinfectant. Local anesthesia is injected.
Using concurrent real-time ultrasound visualization, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent ultrasound visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution for the pathology workup. The previous process is repeated in the same lesion (typically a total of 3 or 4 samples are acquired). Sample evaluated by pathology representative (pathologist or cytotechnologist) to assess adequacy. Additional FNA biopsy samples are obtained as needed.
Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

Description of Post-Service Work: A report of the procedure is dictated for the medical record. An addendum to the report is dictated when the final pathology results are received. The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	1%	4%	37%	45%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	44%	46%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	35%	62%
Physical effort required	7%	54%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	40%	31%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	26%	37%	26%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	53%	47%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	21%	79%
Physical effort required	0%	32%	68%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	26%	63%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

Ultrasound Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with ultrasound guidance were created by CPT.

- 10005 *(Fine needle aspiration biopsy, including ultrasound guidance; first lesion)* is an XXX global code, and
- 10006 *(Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 76942 *(Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation).*

Survey Process:
The American College of Radiology (ACR), Society of Interventional Radiology (SIR), American Society of Cytopathology (ASC), College of American Pathologists (CAP), American Association of Clinical Endocrinologists (AACE), and The Endocrine Society (ES) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. These societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendations:
We recommend a work RVU of 1.63, which is the 25th percentile survey value and a decrease from the current combined code values of 1.94 wRVU.

Time Recommendation:
We recommend the median survey times of 10 minutes pre-service, 20 minutes intra-service, and 9 minutes post-service, for a total time of 39 minutes.

Key Reference Services:
Our recommended work RVU and service period times fall between the two most commonly chosen key reference services (KRS):
- 32555 *(Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance),* chosen by 45% of respondents, and
- 76536 *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation),* chosen by 9% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the multiple specialties participating in the survey and the limitations of the reference service list. Specifically, there are few appropriate XXX global procedure codes to compare with this newly bundled service. Additionally, since the imaging guidance was bundled into these new codes, it was unavailable as a comparison for the survey respondents.

Even with the wide time and RVU ranges spanned by these comparisons, the relativity of the values is appropriately reflected. The surveyed code, 10X12, has twice the intra-service time of 76536, more pre- and post-time, and is an invasive procedure as opposed to a diagnostic imaging study. These differences are appropriately reflected in the recommended wRVU. While 10X12 has the same intra-service time as 32555, it has much less pre- and post-service time, as well as being a relatively safer invasive procedure. Accordingly, 10X12 has a lower recommended wRVU.

MPC Codes:
The surveyed code (10X12) is bracketed by two non-radiology MPC codes with XXX global periods:

- 99203 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.)*, which has identical intra-service time and slightly shorter total time, and
- 93351 *(Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional)*, which has a higher wRVU, identical intra-service time, and slightly less total time.

The surveyed code (10X12) has 10 more minutes of pre- and post-service time than 99203, which itself accounts for the wRVU difference of 0.21 wRVU's. As well, 10X12 has the same intra-service time as 93351, as well as more pre-service time, but a lower wRVU recommendation. We believe 10X12 is appropriately positioned in the RBRVS at the recommended value given these comparisons.

The surveyed code and the two MPC codes are listed in the table below for comparison.

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

We would like to directly quantify the relationship between two Ultrasound guided codes, 10005 and 10006. When the pre- and post-time is removed from the add-on code, 10006, at the 0.0224 RVU/minute rate, the expected value of this code would be 1.20 wRVU compared to the recommended wRVU and 25th percentile survey value of 1.00. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:
The survey results and comparisons with applicable codes support the recommended values for 10X12.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Endocrinology How often? Commonly

Specialty Radiology How often? Commonly

Specialty Pathology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 413148
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10005 provided nationally in a one-year period is estimated to be 413,148.

Specialty Endocrinology Frequency 144602 Percentage 35.00 %

Specialty Radiology Frequency 123944 Percentage 29.99 %

Specialty Pathology Frequency 20657 Percentage 4.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 137,716 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialities estimates that CPT code 10005 is billed approximately 137,716 times in total for Medicare patients nationally in a one-year period

Specialty Endocrinology Frequency 48200 Percentage 34.99 %

Specialty Radiology	Frequency 41315	Percentage 30.00 %
Specialty Pathology	Frequency 6886	Percentage 5.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 59-year-old male presents with non-palpable nodules in both the left and right lobes of the thyroid previously identified by diagnostic ultrasound. After a FNA biopsy of the first lesion is performed (reported separately) using ultrasound guidance, an ultrasound-guided FNA biopsy is performed on the second lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The additional procedure and its purpose are explained to the patient, including potential complications. The differences between the subsequent procedure and the first FNA biopsy procedure are clarified for the patient. Informed consent is obtained.

A preliminary ultrasound is performed to identify the appropriate approach for the initial needle placement. Ultrasound is used to confirm the correct trajectory for needle advancement to the target anatomic lesion, and to avoid vascular structures and non-target organs. Site is marked.

The patient is repositioned and reprepped. The biopsy site is cleansed with disinfectant. Local anesthesia is injected.

Using concurrent real-time ultrasound visualization, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent ultrasound visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution. The previous process is repeated in the same lesion (typically a total of 3 or 4 samples are acquired). Sample evaluated by cytopathologist to assess adequacy. Additional FNA biopsy samples obtained as needed.

Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

A report of the additional procedure is dictated for the medical record (which may be included in the report for 10X12). An addendum to the report is dictated when the final pathology results are received (which may be included in the report for 10X12). The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging

Description of Post-Service Work:

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
19084	ZZZ	1.55	**RUC Time**

CPT Descriptor Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
10036	ZZZ	0.85	**RUC Time**

CPT Descriptor Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
51797	ZZZ	0.80	**RUC Time**	131,261

CPT Descriptor 1 Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64480	ZZZ	1.20	**RUC Time**	23,439

CPT Descriptor 2 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
19082	ZZZ	1.65	**RUC Time**

CPT Descriptor Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 46 **% of respondents:** 23.0 **%**

Number of respondents who choose 2nd Key Reference Code: 30 **% of respondents:** 15.0 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	52%	35%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	63%	15%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	61%	35%
Physical effort required	9%	72%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	59%	24%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	60%	27%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	63%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	57%	40%
Physical effort required	7%	60%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	50%	37%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

Ultrasound Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with ultrasound guidance were created by CPT.

- 10004 *(Fine needle aspiration biopsy, including ultrasound guidance; first lesion)* is an XXX global code, and
- 10006 *(Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 76942 *(Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation).*

Survey Process:
The American College of Radiology (ACR), Society of Interventional Radiology (SIR), American Society of Cytopathology (ASC), College of American Pathologists (CAP), American Association of Clinical Endocrinologists (AACE), and The Endocrine Society (ES) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. These societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendation:
We recommend a work RVU of 1.00, which is the 25th percentile survey value and a decrease from the current code value of 1.31 wRVU.

Time Recommendation:
We recommend the median survey time of 15 minutes for the intra-service period.

Key Reference Services:
Our recommended work RVU and service period times fall between the three most commonly chosen key reference services (KRS):

- 19084 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure))*, chosen by 23% of respondents,
- 10036 *(Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion (List separately in addition to code for primary procedure))*, chosen by 15% of respondents, and
- 19082 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion,*

including stereotactic guidance (List separately in addition to code for primary procedure)), chosen by 15% of respondents.

The recommended time and work RVU for 10006 are best compared with 19084, an ultrasound guided breast lesion biopsy with placement of a localization device. Given the longer time and increased work of doing both an image guided biopsy then image guided localization device placement, 19084 is appropriately valued higher than 10006 with a slightly higher intensity.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10036	Placement of soft tissue localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous, including imaging guidance; each additional lesion	0.85	14		14		0.061	ZZZ
10006	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion	**1.00**	**15**		**15**		**0.067**	**ZZZ**
19084	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance	1.55	25	5	20		0.075	ZZZ
19082	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance	1.65	30	5	25		0.064	ZZZ

MPC Codes:

The surveyed code (10006) is bracketed by two other MPC codes with ZZZ global periods:

- 51797 *(Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure))* and
- 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)).*

Both MPC codes have 15 minutes of intra-service time as does the surveyed code, 10006. 51797 has a lower wRVU than the recommendation for the surveyed code; however, while it is an invasive procedure, there is no removal of tissue and so correspondingly less risk and complexity. Similarly, 64480 is also an invasive procedure, but is more technically demanding than the typical 10006 and so has an appropriately higher wRVU.

Family of FNA Codes:

Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below. We would like to directly quantify the relationship between the two Ultrasound guided codes, 10005 and 10006. When the pre- and post-time is removed from the add-on code, 10005, at the 0.0224 RVU/minute rate, the expected value of this code would be 1.20 wRVU compared to the recommended wRVU and 25th percentile survey value of 1.00. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:

The survey results and comparisons with applicable codes support the recommended values for 10X13.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - [x] The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - [ ] Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - [ ] Multiple codes allow flexibility to describe exactly what components the procedure included.
   - [ ] Multiple codes are used to maintain consistency with similar codes.
   - [ ] Historical precedents.
   - [ ] Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code is typically reported with 10X12.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Endocrinology How often? Commonly

Specialty Radiology How often? Commonly

Specialty Pathology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 45906
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10X13 provided nationally in a one-year period is estimated to be 45,906.

Specialty Endocrinology Frequency 16067 Percentage 34.99 %

Specialty Radiology Frequency 13772 Percentage 30.00 %

Specialty Pathology Frequency 2295 Percentage 4.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 15,302
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialities estimates that CPT code 10X13 is billed approximately 15,302 times in total for Medicare patients nationally in a one-year period

Specialty Endocrinology Frequency 5356 Percentage 35.00 %

Specialty Radiology Frequency 4590 Percentage 29.99 %

Specialty Pathology Frequency 765 Percentage 4.99 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 19084

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:10007 Tracking Number G5 Original Specialty Recommended RVU: **1.81**
Presented Recommended RVU: **1.81**
Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **1.81**

CPT Descriptor: Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old female presents with a lung lesion visible on chest radiographs. The patient undergoes a fluoroscopic-guided FNA biopsy of the lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure and its purpose are explained to the patient, including potential complications. Informed consent is obtained.

Description of Intra-Service Work: The patient is placed on a fluoroscopy table and positioned appropriately. Targeted fluoroscopy, including angulation of the image intensifier, is performed in order to identify the appropriate level and approach for the initial needle placement. The skin entry site is prepped and marked, and sterile drapes are applied. Determine approach to the lesion. Local anesthesia is injected with fluoroscopic guidance. During needle placement, intermittent fluoroscopy and angulation of the image intensifier are used to confirm the correct approach and the need for needle repositioning or realignment. If the position is not correct, additional fluoroscopy is used to guide repositioning until the proper position is achieved. Intermittent contrast material injection is performed as needed.

Using fluoroscopic guidance, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent fluoroscopic visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution for further pathology workup. The previous process is repeated in the same lesion (typically three or four samples are acquired). Sample evaluated by pathology representative (pathologist or cytotechnologist) to assess adequacy. Additional FNA biopsy samples obtained as needed.

Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

Description of Post-Service Work: A report of the procedure is dictated for the medical record. An addendum to the report is dictated when the final pathology results are received. The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
32555	000	2.27	**RUC Time**

CPT Descriptor Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC’s MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99318	XXX	1.71	**RUC Time**	116,304

CPT Descriptor 1 Evaluation and management of a patient involving an annual nursing facility assessment, which requires these 3 key components: A detailed interval history; A comprehensive examination; and Medical decision making that is of low to moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 30 minutes are spent at the bedside and on the patient's facility floor or unit.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99221	XXX	1.92	**RUC Time**	1,879,723

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	29%	36%	36%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	21%	64%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	29%	64%
Physical effort required	0%	36%	64%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	29%	71%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	25%	25%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	25%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	25%	75%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	13%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

Fluoroscopy Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with fluoroscopic guidance were created by CPT.

- 10007 *(Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion)* is an XXX global code, and
- 10008 *(Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 77002 *(Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)).*

Survey Process:
The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. The societies assembled an expert panel to review the data and develop the following recommendations.

<u>**10007**</u>

Work RVU Recommendations:
We recommend a work RVU of 1.81, which is the current value, and far below the 25th percentile survey value of 2.23 wRVU.

Time Recommendation:
We recommend the median survey times of 10 minutes pre-service, 27 minutes intra-service, and 10 minutes post-service, for a total time of 47 minutes.

Key Reference Services:
Our recommended work RVU and service period times fall between the two most commonly chosen key reference services (KRS):

- 32555 *(Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance),* chosen by 45% of respondents, and
- 99205 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family),* chosen by 26% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the multiple specialties participating in the survey and the limitations of the reference service list. Specifically, there are few appropriate XXX global procedure codes to compare with this newly bundled service. Additionally, since the imaging guidance was bundled into these new codes, it was unavailable as a comparison for the survey respondents.

The survey respondents' selection of 32555 as the most appropriate KRS is also reflected in the 25th percentile and median wRVU values from the survey, which were 2.23 and 2.50, respectively. In the absence of compelling evidence, we feel that recommending the current value is the most appropriate action. Though this value is lower than the survey responses indicated, it maintains relativity with the other FNA biopsy family codes and MPC codes as detailed below.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
32555	Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance	2.27	57	22	20	15	0.076	000
10007	**Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion**	**1.81**	**47**	**10**	**27**	**10**	**0.050**	**XXX**
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.17	67	7	45	15	0.059	XXX

MPC Codes:
The surveyed code (10007) is compares favorably to two non-radiology MPC codes with XXX global periods:

- 99318 *(Evaluation and management of a patient involving an annual nursing facility assessment, which requires these 3 key components: A detailed interval history; A comprehensive examination; and Medical decision making that is of low to moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the*

nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 30 minutes are spent at the bedside and on the patient's facility floor or unit.), and

- 99221 *(Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.).*

Both of the MPC codes are evaluation and management codes. 99221 has a higher intra-service period time of 30 minutes compared with 27 minutes for the surveyed code, 10007. 99318 has the same intra-service period and total times as the surveyed code. Given that 10007 is an invasive procedure, we feel it is appropriately valued slightly higher than 99318 and slightly lower than 99221 given the longer intra-service time for 99221.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
99318	Evaluation and management of a patient involving an annual nursing facility assessment, which requires these 3 key components: A detailed interval history; A comprehensive examination; and Medical decision	1.71	47	10	27	10	0.047	XXX

	making that is of low to moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 30 minutes are spent at the bedside and on the patient's facility floor or unit.							
10007	**Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion**	**1.81**	**47**	**10**	**27**	**10**	**0.050**	**XXX**
99221	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.	1.92	50	10	30	10	0.049	XXX

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

We would like to directly quantify the relationship between two Fluoroscopic guided codes, 10007 and 10008. When the pre- and post-time is removed from the add-on code, 10008, at the 0.0224 RVU/minute rate, the expected value of this code would be 1.36 wRVU compared to the recommended wRVU and current value of 1.18. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:
The survey results and comparisons with applicable codes support the recommended values for 10007.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 77002

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 10329
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10X14 provided nationally in a one-year period is estimated to be 10,329.

Specialty Diagnostic Radiology Frequency 5164 Percentage 49.99 %

Specialty Interventional Radiology Frequency 3099 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,443
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialities estimates that CPT code 10X14 is billed approximately 3,443 times in total for Medicare patients nationally in a one-year period

Specialty Diagnostic Radiology Frequency 1721 Percentage 49.98 %

Specialty Interventional radiology Frequency 1033 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Global Period: ZZZ Current Work RVU: **n/a** RUC Recommended RVU: **1.18**

CPT Descriptor: Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 79-year-old male is found to have two lung lesions on chest radiographs.
After a fluoroscopic-guided FNA biopsy of the first lesion is performed (reported separately), a fluoroscopic-guided FNA biopsy is performed on the second lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The additional procedure and its purpose are explained to the patient, including potential complications. The differences between the subsequent procedure and the first FNA biopsy procedure are clarified for the patient. Informed consent is obtained.

The patient is repositioned on the fluoroscopy table. Targeted fluoroscopy, including angulation of the image intensifier, is performed in order to identify the appropriate level and approach for the initial needle placement. The skin entry site is prepped and marked, and sterile drapes are applied. Determine approach to the lesion. Local anesthesia is injected with fluoroscopic guidance. During needle placement, intermittent fluoroscopy and angulation of the image intensifier are used to confirm the correct approach and the need for needle repositioning or realignment. If the position is not correct, additional fluoroscopy is used to guide repositioning until the proper position is achieved. Intermittent contrast material injection is performed as needed.

Using fluoroscopic guidance, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent fluoroscopic visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution. The previous process is repeated in the same lesion (typically three or four samples are acquired). Sample evaluated by pathology representative (pathologist or cytotechnologist) to assess adequacy. Additional FNA biopsy samples obtained as needed.

Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

A report of the additional procedure is dictated for the medical record (which may be included in the report for 10X14). An addendum to the report is dictated when the final pathology results are received (which may be included in the report for

10X14). The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	50%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	17%	83%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	17%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	50%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	17%	83%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

Fluoroscopy Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with fluoroscopic guidance were created by CPT.

- 10007 *(Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion)* is an XXX global code, and
- 10008 *(Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 77002 *(Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)).*

Survey Process:
The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. The societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendations:
We recommend a work RVU of 1.18, which is the current value, and far below the 25th percentile survey value of 1.50 wRVU.

Time Recommendation:
We recommend the median survey time of 20 minutes for the intra-service period.

Key Reference Services:
Our recommended work RVU and service period times fall between the three most commonly chosen key reference services (KRS):

- 19082 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)),* chosen by 19% of respondents,
- 19084 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)),* chosen by 19% of respondents, and
- 19086 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion,*

including magnetic resonance guidance (List separately in addition to code for primary procedure)), chosen by 16% of respondents.

The recommended time and work RVUs for 10008 are best compared with 19082, a stereotactic guided breast lesion biopsy with placement of a localization device. Given the longer time and increased work of doing both an image guided biopsy and then image guided localization device placement, 19082 is appropriately valued higher than 10008 with a slightly higher intensity.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10008	**Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion**	**1.18**	**20**		**20**		**0.059**	**ZZZ**
19084	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including ultrasound guidance	1.55	25	5	20		0.075	ZZZ
19082	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance	1.65	30	5	25		0.064	ZZZ
19086	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance	1.82	43	5	38		0.046	ZZZ

MPC Codes:

The surveyed code (10008) compares well with two other MPC codes with ZZZ global periods:

- 52442 (*Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)*); and
- 64480 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level) (List separately in addition to code for primary procedure)).*

The surveyed code, 10008, has a recommended value below both MPC codes, which are valued at 1.20 wRVU. 64480 has a higher wRVU than the recommendation for the surveyed code, but a lower intra-service time of only 15 minutes compared to 20 minutes for 10008. This is appropriate given the higher complexity, technical difficulty, and more intense work of performing 64480 compared to the typical 10008.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10008	**Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion**	**1.18**	**20**		**20**		**0.059**	**ZZZ**
64480	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level	1.20	15		15		0.080	ZZZ
52442	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant	1.20	25		25		0.048	ZZZ

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

We would like to directly quantify the relationship between two Fluoroscopic guided codes, 10X14 and 10008. When the pre- and post-time is removed from the add-on code, 10008, at the 0.0224 RVU/minute rate, the expected value of this code would be 1.36 wRVU compared to the recommended wRVU and current value of 1.18. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:
The survey results and comparisons with applicable codes support the recommended values for 10008.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code is typically reported with 10X14.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 77002

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1149
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10X15 provided nationally in a one-year period is estimated to be 1,149.

Specialty Diagnostic Radiology Frequency 575 Percentage 50.04 %

Specialty Interventional Radiology Frequency 345 Percentage 30.02 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 383 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialities estimates that CPT code 10X15 is billed approximately 383 times in total for Medicare patients nationally in a one-year period

Specialty Diagnostic Radiology Frequency 192 Percentage 50.13 %

Specialty Interventional Radiology Frequency 115 Percentage 30.02 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 19082

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:10009 Tracking Number G7 Original Specialty Recommended RVU: **2.43**
Presented Recommended RVU: **2.43**
Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **2.43**

CPT Descriptor: Fine needle aspiration biopsy, including CT guidance; first lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male presents with a lesion in the left lung on prior chest CT. The patient undergoes a CT-guided FNA biopsy of the lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The procedure and its purpose are explained to the patient, including potential complications. Informed consent is obtained.

Description of Intra-Service Work: Targeted CT is performed to identify the appropriate approach for the initial needle placement. The patient is repositioned as necessary to facilitate the safest CT guided access to the lesion. The skin entry site is prepped and marked, and sterile drapes are applied. Determine approach to the lesion. Local anesthesia is injected with CT guidance. CT guidance is used to confirm the correct trajectory for needle advancement to the target anatomic lesion, avoiding vascular structures and non-target organs. During needle placement, intermittent CT is used to confirm the correct approach and the need for needle repositioning or realignment. If the position is not correct, additional CT guidance is used to facilitate repositioning until the proper position is achieved. Intermittent contrast material injection is performed as needed.

Using CT guidance, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent CT visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution. The previous process is repeated in the same lesion (typically three or four samples are acquired). Sample evaluated by pathology representative (pathologist or cytotechnologist) to assess adequacy. Additional FNA biopsy samples obtained as needed.

Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

Obtain and interpret post-procedural CT to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies.

Description of Post-Service Work: A report of the procedure is dictated for the medical record. An addendum to the report is dictated when the final pathology results are received. The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging.

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
32555	000	2.27	**RUC Time**

CPT Descriptor Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.43	**RUC Time**	10,162,554

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	6%	42%	48%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	18%	79%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	6%	91%
Physical effort required	3%	21%	76%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	15%	82%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	16%	36%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	24%	36%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	12%	88%
Physical effort required	4%	36%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	8%	92%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

CT Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with CT guidance were created by CPT.

- 10009 *(Fine needle aspiration biopsy, including CT guidance; first lesion)* is an XXX global code, and
- 10010 *(Fine needle aspiration biopsy, including CT guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 77012 *(Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation).*

Survey Process:
The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. The societies assembled an expert panel to review the data and develop the following recommendations.

10009

Work RVU Recommendations:
We recommend a work RVU of 2.43, which is the current value, and equal to the 25th percentile survey value.

However, 77012, the CT guidance code, was just valued at the April 2017 RUC meeting at 1.50 wRVU compared with the current value of 1.16. This recommendation therefore reflects a discount of 0.34 wRVU over what would have been the combined values of 10022 (FNA biopsy) and the new value for 77012 (CT guidance for needle placement) pending CMS review.

Time Recommendation:
We recommend the median survey times of 15 minutes pre-service, 35 minutes intra-service, and 12 minutes post-service, for a total time of 62 minutes.

Key Reference Services:
Our recommended work RVU and service period times fall between the two most commonly chosen key reference services (KRS):

- 32555 *(Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance),* chosen by 36% of respondents, and
- 99205 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high*

severity. Typically, 60 minutes are spent face-to-face with the patient and/or family), chosen by 27% of respondents.

32555 has 15 fewer minutes of intra-service period time, but longer pre- and post-service period times than the surveyed code, 10009. We believe the recommendation for 10009 is appropriately valued higher than 32555 based on the surveyed times and the fact that the most commonly performed procedures with 10009 will be more complex and technically demanding than 32555. This is also reflected by the recent increase of wRVU for 77012, the CT imaging guidance code bundled into 10009. 77012 was recently increased from 1.16 to 1.50 at the April 2017 RUC meeting due to the change in patients and the complexity of procedures now performed with 77012.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
32555	Thoracentesis, needle or catheter, aspiration of the pleural space; with imaging guidance	2.27	57	22	20	15	0.076	000
10009	**Fine needle aspiration biopsy, including CT guidance; first lesion**	**2.43**	**62**	**15**	**35**	**12**	**0.052**	**XXX**
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.17	67	7	45	15	0.060	XXX

MPC Codes:
The surveyed code (10009) is compares favorably to two non-radiology MPC codes with XXX global periods:

- 99204 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.)*, and
- 95810 *(Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist).*

The surveyed code, 10009, has the same recommended value as 99204, but has 5 more minutes of intra-service time and 12 total minutes more pre- and post-service period time. The recommended value of 10009 is slightly lower than 95810, which is appropriate given the 4.5 more minutes of intra- and post-service time in 95810.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	2.43	45	5	30	10	0.070	XXX
10009	**Fine needle aspiration biopsy, including CT guidance; first lesion**	**2.43**	**62**	**15**	**35**	**12**	**0.052**	**XXX**
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	66.5	15	36.5	15	0.050	XXX

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

We would like to directly quantify the relationship between two CT guided codes, 10009 and 10010. When the pre- and post-time is removed from the add-on code, 10009, at the 0.0224 RVU/minute rate, the expected value of 10X17, the add-on code, would be 1.83 wRVU compared to the recommended wRVU of 1.65. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:
The survey results and comparisons with applicable codes support the recommended values for 10009.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 92958
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10X16 provided nationally in a one-year period is estimated to be 92,958.

Specialty Interventional Radiology Frequency 46480 Percentage 50.00 %

Specialty Diagnostic Radiolgoy Frequency 27887 Percentage 29.99 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 30,986
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please

explain the rationale for this estimate. The specialities estimates that CPT code 10X16 is billed approximately 30, 986 times in total for Medicare patients nationally in a one-year period

Specialty Interventional Radiology Frequency 15493 Percentage 50.00 %

Specialty Diagnostic Radiology Frequency 9296 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 19081

SUMMARY OF RECOMMENDATION

CPT Code:10010 Tracking Number G8 Original Specialty Recommended RVU: **1.65**
Presented Recommended RVU: **1.65**
Global Period: ZZZ Current Work RVU: **n/a** RUC Recommended RVU: **1.65**

CPT Descriptor: Fine needle aspiration biopsy, including CT guidance; each additional lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male is found to have two lung lesions on prior chest CT.
After a CT-guided FNA biopsy of the first lesion is performed (reported separately), a CT-guided FNA biopsy is performed on the second lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The additional procedure and its purpose are explained to the patient, including potential complications. The differences between the subsequent procedure and the first FNA biopsy procedure are clarified for the patient. Informed consent is obtained.

The patient is repositioned on the CT scanner as needed. Targeted CT is performed in order to identify the appropriate level and approach for the initial needle placement. The patient is repositioned as necessary to facilitate the safest CT guided access to the lesion. The skin entry site is prepped and marked, and sterile drapes are applied. Determine approach to the lesion. Local anesthesia is injected with CT guidance. CT guidance is used to confirm the correct trajectory for needle advancement to the target anatomic lesion, avoiding vascular structures and non-target organs. During needle placement, intermittent CT is used to confirm the correct approach and the need for needle repositioning or realignment. If the position is not correct, additional CT guidance is used to facilitate repositioning until the proper position is achieved. Intermittent contrast material injection is performed as needed.

Using CT guidance, a needle with attached syringe is inserted into the lesion. A FNA biopsy of the lesion is performed. Intermittent CT visualization may take place during the intervention which necessitated the needle placement. The needle is withdrawn and material expressed onto slides, into fixative, and/or the appropriate solution. The previous process is repeated in the same lesion (typically three or four samples are acquired). Sample evaluated by pathology representative (pathologist or cytotechnologist) to assess adequacy. Additional FNA biopsy samples obtained as needed.

Compression is applied at the FNA biopsy site and the patient is observed for bleeding, hematoma, or other complication(s). Permanent image(s) are recorded.

Obtain and interpret post-procedural CT to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies.

A report of the additional procedure is dictated for the medical record (which may be included in the report for 10X16). An addendum to the report is dictated when the final pathology results are received (which may be included in the report for 10X16). The referring physician or QHP is called and the report provided if the test results are significant or if final pathology is discordant with imaging.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	48%	35%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	52%	48%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	43%	57%

Physical effort required	0%	48%	52%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	35%	65%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	7%	27%	47%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	33%	47%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	7%	40%	53%
Physical effort required	7%	60%	33%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	27%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
The existing fine needle aspiration biopsy codes, 10021 *(Fine needle aspiration; without imaging guidance)* and 10022 *(Fine needle aspiration; with imaging guidance)* were identified by CMS for review. CPT code 10021 had

recently updated practice expense inputs without the physician work being reviewed, and code 10022 was identified on the CMS High Expenditure Procedure list. At the April 2016 RUC meeting, these codes were referred to CPT to clarify parentheticals regarding appropriate utilization and to bundle in the appropriate imaging guidance codes.

The new bundled FNA biopsy procedure family now includes 10 codes structured as follows. There are 5 base FNA codes with 5 paired add-on codes for each additional lesion when performed with the base codes.

CT Guided FNA Codes:
Two new codes to describe fine needle aspiration biopsy with CT guidance were created by CPT.

- 10009 *(Fine needle aspiration biopsy, including CT guidance; first lesion)* is an XXX global code, and
- 10010 *(Fine needle aspiration biopsy, including CT guidance; each additional lesion (List separately in addition to code for primary procedure))* is the corresponding ZZZ add-on.

These codes will be used in place of 10022 *(Fine needle aspiration; with imaging guidance)* and 77012 *(Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation).*

Survey Process:
The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform interventional radiology. The societies assembled an expert panel to review the data and develop the following recommendations.

Work RVU Recommendations:
We recommend a work RVU of 1.65, which is equal to the 25th percentile survey value.

Time Recommendation:
We recommend the median survey time of 25 minutes for the intra-service period.

Key Reference Services:
Our recommended work RVU and service period times fall between the two most commonly chosen key reference services (KRS):

- 19086 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance (List separately in addition to code for primary procedure))*, chosen by 25% of respondents.
- 19082 *(Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance (List separately in addition to code for primary procedure)),* chosen by 16% of respondents

The recommended time and work RVU for 10010 are best compared with 19082, a stereotactic guided breast lesion biopsy with placement of a localization device, which has identical intra service time, similar total time, and an identical RVU.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
10010	**Fine needle aspiration biopsy, including CT guidance; each additional lesion**	**1.65**	**25**		**25**		**0.066**	**ZZZ**
19082	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including stereotactic guidance	1.65	30	5	25		0.064	ZZZ
19086	Biopsy, breast, with placement of breast localization device(s) (eg, clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance	1.82	43	5	38		0.046	ZZZ

MPC Codes:
The surveyed code (10010) is between two other MPC codes with ZZZ global periods:

- 64480 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure))*, and
- 99292 *(Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service))*.

There is a broad range of value between 64480 and 99292, from 1.20 to 2.25. The recommended value for 10010 is closer to 64480, but at 25 minutes of intra-service time, the time spent on 10010 is closer to 99292, which has a much higher wRVU.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	Global Period
64480	Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)	1.20	15		15		0.080	ZZZ
10010	**Fine needle aspiration biopsy, including CT guidance; each additional lesion**	**1.65**	**25**		**25**		**0.066**	**ZZZ**
99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)	2.25	30		30		0.075	ZZZ

Family of FNA Codes:
Relativity across the entire FNA biopsy code family is maintained at the recommended values as can be seen in the table below.

We would like to directly quantify the relationship between two CT guided codes, 10009 and 10010. When the pre- and post-time is removed from the base code, 10009, at the 0.0224 RVU/minute rate, the expected value of 10010, the add-on code, would be 1.83 wRVU compared to the recommended wRVU of 1.65. We think this appropriately reflects any efficiencies gained in performing a biopsy of an additional lesion while recognizing all of the work that goes into beginning an entirely separate biopsy procedure at a new site on the patient.

Conclusion:
The survey results and comparisons with applicable codes support the recommended values for 10010.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. This code is typically reported with 10X16.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 10022, 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 10329
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 10010 provided nationally in a one-year period is estimated to be 10,329.

Specialty Interventional Radiology Frequency 5165 Percentage 50.00 %

Specialty Diagnostic Radiology Frequency 3099 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,443
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialities estimates that CPT code 10010 is billed approximately 3,443 times in total for Medicare patients nationally in a one-year period

Specialty Interventional Radiology Frequency 1722 Percentage 50.01 %

Specialty Diagnostic Radiology Frequency 1033 Percentage 30.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 19082

CPT Code: 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010
Specialty Society: AAOHNS, AACE, ES, ASC, CAP, ACR and SIR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs – REVISED at Meeting

Meeting Date: October 2017

Global Period: XXX

CPT Long Descriptors:

●10021 Fine needle aspiration, without imaging guidance; first lesion

●10005 Fine needle aspiration, including ultrasound guidance; first lesion

●10007 Fine needle aspiration, including fluoroscopic guidance; first lesion

●10009 Fine needle aspiration, including CT guidance; first lesion

---

Global Period: ZZZ

CPT Long Descriptors:

●+10004 Fine needle aspiration, without imaging guidance; each additional lesion
(List separately in addition to code for primary procedure)

●+10006 Fine needle aspiration, including ultrasound guidance; each additional lesion *(List separately in addition to code for primary procedure)*

●+10008 Fine needle aspiration, including fluoroscopic guidance; each additional lesion *(List separately in addition to code for primary procedure)*

●+10010 Fine needle aspiration, including CT guidance; each additional lesion
(List separately in addition to code for primary procedure)
[Note: This code only includes the additional work related to performing a CT-guided fine needle aspiration of the second lesion.

---

1. **Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:**

   AAOHNS, AACE, ES, ASC, CAP, ACR and SIR convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for this family of fine needle aspiration services.

2. **You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:**

   The multispecialty group included the existing direct practice expense inputs for the underlying CPT Codes. The multispecialty group also included the recently approved PE inputs for CPT Code 77012 (April 2017).

3. **Is this code(s) typically billed with an E/M service?**

   CPT Code 10021 "without imaging' is typically billed with an E/M service.
   The "with imaging" services are NOT typically billed with an E/M service.

4. **What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)**

   Current 10021 "without imaging" – all data 45% otolaryngology, NF data only 54% otolaryngology
   Current 10022 "with imaging" – all data 52% radiology, NF data only 41% endocrinology
   New coding "with imaging" FL, CT and MR radiology will be dominant provider

5. **If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:**

   We have included 2 extra minutes of positioning time to X12, X14, X16 and X18. The extra positioning time is needed to position the patient to ensure the imaging equipment will work appropriately with their positioning.

6. **If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:**

   The specialty societies are recommending supplies for the new FNA codes that are not in the existing/predecessor codes. Below is a detailed description of the supplies needed for these new FNA procedures. The specialties believe there is compelling evidence to change the direct inputs for the newly created codes based on change in technique, change in knowledge/technology and change from previous code-specific PE to newly applicable IR standards. See below:

• Evidence that patient poulation has changed.	**No**	**No**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**		
• Evidence that technology has changed clinical staff time.	**No**	**No**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**		
• Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data.	**No**	**No**	**Yes**	**Yes**	**No**	**No**	**No**	**No**		

The increases in total clinical time are based on (1) physician work time and (2) the addition of a second clinical staff person to the flouro, CT and MR procedures to assist with imaging acquisition. The inclusion of a second clinical staff person to assist with image based intervention procedures is typical. That second person assists with the image acquisition. The existing model is to allocate 75% of a tech (specific type depending on procedure) and 25% at the lower rate of a nurse blend.

Based on the typical vignettes for these newly created codes, the specialties are requesting 3 needles/syringes (not 2). The typical number of passes will be 3-5.

Non-Imaging Guide – ENT Dominant Specialty in the NF setting. Clean procedure.

***Note compelling evidence is not required as the overall practice expense for these codes was reduced from existing inputs*

SA061 biopsy tray – *RATIONALE: replaces many of the itemized inputs that previously existed in the 10021 code.*

SB024 gloves, sterile – *RATIONALE: both the staff and the physician wear sterile gloves during the procedure. The staff needs gloves because they hand sterile instruments to the physician during the procedure.*
SB034 mask, surgical, with face shield – *RATIONALE: physician wears during procedure to protect against splatter of fluids.*

SB044 underpad 2ft x 3 ft (Chux) – *RATIONALE: protects patient and catches any fluid from the neck during the procedure.*

SC029 needle, 18-27 g – *RATIONALE: additional needles to what is in the tray are required, there are three in the tray – 2 are used for drawing up and injecting lidocaine, one is used for the first*

pass of the biopsy and these two additional needles are needed for the second and third pass of the biopsy. Three passes are the minimum typical number of passes performed to get a sufficient sample.
SC051 syringe 10-12 ml – *RATIONALE: additional syringes are needed beyond what is in the biopsy tray. A separate needle and syringe are needed for each pass on the same lesion to protect each sample.*

The items below were removed by the Panel during the practice expense presentation.

~~SB001 cap, surgical~~
~~SB004 cover, thermometer probe~~
~~SB012 drape, sterile, for Mayo stand~~
~~SB014 drape, sterile, three-quarter sheet~~
~~SB019 drape-towel, sterile 18in x 26in~~
~~SB026 gown, patient~~
~~SB027 gown, staff, impervious~~
SB034 mask, surgical, with face shield
~~SB039 shoe covers, surgical~~
~~SH030 Emla cream~~
~~SJ029 ice pack, instant~~
~~SJ041 povidone soln (Betadine)~~
~~SJ053 swab-pad, alcohol~~
~~SL154 alcohol ethyl 100%~~
~~SL180 phophate buffered saline (PBS)~~
~~SM018 gluteraldehyde 3.4% (Cidex, Maxcide, Wavicide)~~

U/S Code – Endocrinology Dominant in NF setting. Clean procedure.

SA048 pack, minimum multi-specialty

SA061 tray, biopsy procedure

SB024 gloves, sterile: For surgeon and hip-to-hip assistant.
SB034 mask, surgical, with face shield: For surgeon

SB044 underpad 2ft x 3ft (Chux): For beneath patient to protect table and bedsheets,

SC029 needle, 18-27 g – Additional needles to what is in the tray are required, there are three in the tray – 2 are used for drawing up and injecting lidocaine, one is used for the first pass of the biopsy and these two additional needles are needed for the second and third pass of the biopsy. Three passes are the minimum typical number of passes performed to get a sufficient sample.
SC051 syringe 10-12ml: For aspirating through the needles during biopsy (2 additional, 1 on tray)
SJ053 swab-pad, alcohol: For wiping top of multiuse drug vials prior to drawing up medication (lidocaine).
*SB005 cover-condom, transducer or US probe: For U/S probe coverage. This must be sterile and protects the sterile field and protects the US probe.
*SJ089 ultrasound transmission gel, sterile (single use): For use during US guidance for acoustic coupling between probe and patient’s skin. Must be sterile.
SM012 disinfectant spray (transeptic) 10 ml

FLUORO Code – Radiology/IR Dominant in NF setting. Sterile procedure.

SA061 tray, biopsy procedure

SB026 gown, patient – Patient must be changed out of their clothes and placed in a gown for interventions in the chest. E/M is not typically billed with this procedure.
SB004 cover, thermometer probe. For vital signs prior to the procedure. E/M is not typically billed with this procedure.

SB001 cap, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB022 gloves, non-sterile: for nurse blend circulator
SB024 gloves, sterile: For surgeon and hip-to-hip assistant.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB034 mask, surgical, with face shield: For surgeon and hip-to-hip assistant.
SB039 shoe covers, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.

SB044 underpad 2ft x 3ft (Chux): For beneath patient to protect table and bedsheets,
*SB008 drape, sterile, c-arm, fluoro – For covering the Image intensifier/flat panel during the procedure to protect the sterility of the field.
SB012 drape, sterile, for Mayo stand: Working area where sterile biopsy supplies are arranged during procedure.
SB014 drape, sterile, three-quarter sheet: Additional sterile coverage of the patient's body. Fenestrated drape in biopsy kit is very small and doesn't allow for a large enough working space.
SB019 drape-towel, sterile 18in x 26in: Sterile towels for marking off sterile prepped area.

SC035 needle, Chiba: Biopsy needle. Each needle is used only once and it is typical to perform three or more passes on each lesion biopsied.
SC051 syringe 10-12ml: For aspirating through the needles during biopsy (2 additional, 1 on tray)
SJ053 swab-pad, alcohol: For wiping top of multiuse drug vials prior to drawing up medication (lidocaine).
SM012 disinfectant spray (transeptic) 10 ml

CT Code – Radiology/IR Dominant in NF setting. Sterile procedure.

SA061 tray, biopsy procedure

SB026 gown, patient – Patient must be changed out of their clothes and placed in a gown for interventions in the chest. E/M is not typically billed with this procedure.
SB004 cover, thermometer probe. For vital signs prior to the procedure. E/M is not typically billed with this procedure.

SB001 cap, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB022 gloves, non-sterile: for nurse blend circulator
SB024 gloves, sterile: For surgeon and hip-to-hip assistant.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB034 mask, surgical, with face shield: For surgeon and hip-to-hip assistant.
SB039 shoe covers, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.

SB044 underpad 2ft x 3ft (Chux): For beneath patient to protect table and bedsheets,
SB012 drape, sterile, for Mayo stand: Working area where sterile biopsy supplies are arranged during procedure.
SB014 drape, sterile, three-quarter sheet: Additional sterile coverage of the patient’s body. Fenestrated drape in biopsy kit is very small and doesn’t allow for a large enough working space.
SB019 drape-towel, sterile 18in x 26in: Sterile towels for marking off sterile prepped area.

SC035 needle, Chiba: Biopsy needle. Each needle is used only once and it is typical to perform three or more passes on each lesion biopsied.
SC051 syringe 10-12ml: For aspirating through the needles during biopsy (2 additional, 1 on tray)
*SD086 grid – Single use disposable item which is placed on the patient prior to and during biopsy planning to provide a reference on the skin to mark needle entry planned on CT imaging. Can be used only for the same patient for the base code and add-on code, then it is discarded.
SJ053 swab-pad, alcohol: For wiping top of multiuse drug vials prior to drawing up medication (lidocaine).
SM012 disinfectant spray (transeptic) 10 ml

MR Code – Radiology/IR Dominant in NF setting. Sterile procedure.
SA061 tray, biopsy procedure

SB026 gown, patient – Patient must be changed out of their clothes and placed in a gown for interventions in the chest. E/M is not typically billed with this procedure.
SB004 cover, thermometer probe. For vital signs prior to the procedure. E/M is not typically billed with this procedure.

SB001 cap, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB022 gloves, non-sterile: for nurse blend circulator
SB024 gloves, sterile: For surgeon and hip-to-hip assistant.
SB027 gown, staff, impervious: For surgeon and hip-to-hip assistant.
SB034 mask, surgical, with face shield: For surgeon and hip-to-hip assistant.
SB039 shoe covers, surgical: For surgeon, hip-to-hip assistant, and nurse blend circulating in room.

SB044 underpad 2ft x 3ft (Chux): For beneath patient to protect table and bedsheets,
SB012 drape, sterile, for Mayo stand: Working area where sterile biopsy supplies are arranged during procedure.
SB014 drape, sterile, three-quarter sheet: Additional sterile coverage of the patient’s body. Fenestrated drape in biopsy kit is very small and doesn’t allow for a large enough working space.
SB019 drape-towel, sterile 18in x 26in: Sterile towels for marking off sterile prepped area.

*NEW ITEM: MREYE CHIBA Biopsy Needle – This is a new item specifically for MR guided needle biopsy. This needle is MRI compatible and non-ferromagnetic. A typical steel Chiba needle is not MRI safe and cannot be used.
SC051 syringe 10-12ml: For aspirating through the needles during biopsy (2 additional, 1 on tray)

*SC022 mammotome probe guide – Cutaneous marker/guide which allows for marking the skin entry site and passively supporting/guiding the needle during repeated imaging acquisition/needle repositioning cycles.
SJ053 swab-pad, alcohol: For wiping top of multiuse drug vials prior to drawing up medication (lidocaine).
SM012 disinfectant spray (transeptic) 10 ml

SA061 tray, biopsy procedure
0.9% Sodium Chloride, 5mL: for flushing samples out of needles as needed.
Specimen tubes and caps (2): for samples in formalin, RPMI or phosphate buffered saline
Slides, fully frosted (2): for touch preps and smears
frosted end (2): for touch preps and smears
25 Ga x 5/8" needle: local anesthesia (superficial)
22 Ga x 1-1/2" needle: local anesthesia (deep)
18 Ga x 2" blunt needle: drawing up medications
10 cc Plastic Syringes, Luer Lock (2): (lidocaine or other solution delivery)
No. 11 scalpel assembly: skin nick for biopsy site
Needle stop: sharps management
PVP Swabsticks (triples): sterile prep
Alcohol Wipe: wiping medication vials before drawing up
1% Lidocaine HCl, 5 mL (2 ampules): local anesthesia
3" x 3" Gauze (3): cleaning small blood droplets
Disposable Towel: cleaning Povidone off skin post procedure
Fenestrated drape: site drape for biopsy
Puncture site bandage:
8" paper ruler: for measuring and planning puncture site.
Sterile indicator: the strip that comes in the pack confirming sterility
Hospital wrap: packaging

7. **If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:**

N/A

8. **Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:***

**activities related to "with imaging" procedures*

Pre-Service Clinical Labor Activities:
*Confirm availability of prior images/studies
*Review patient clinical extant information and questionnaire

Intra-Service Clinical Labor Activities:
Prepare room, equipment, supplies after consulting with MD
Patient is greeted, gowned and escorted into procedure room
Prepare and position patient on table
Clean prep performed and draping of target site
Ensure proper patient position for use of equipment

Assist physician (100% - hip to hip)
*Perform procedure (75% - related to imaging)
*Perform procedure (25% - floater)
Clean room/equipment by physician staff
Complete post-procedure diagnostic forms, lab and x-ray requisitions
Review/read post-procedure x-ray, lab and pathology reports
*Technologist archives and QC's images to/in PACS, checking for all images and dose page
*Review examination with interpreting MD
*Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue
Review home care instructions, coordinate visits/prescriptions

Post-Service Clinical Labor Activities:
N/A

9. **If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.**

For the fluoroscopy, CT and MR codes we have included a tech at 75% of the physician work time to perform the imaging acquisition portion of the procedure and a nurse blend at 25% of the physician work time as the floater.

10. **If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:**

N/A

11. **If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.**

N/A

12. **If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

CPT Code 10X18 MR FNA will need a MREYE CHIBA BIOPSY NEEDLE. The Chiba needle for MRI guided biopsy must be safe for the high magnetic field environment. In particular, in must not be ferromagnetic and therefore cannot be made from stainless steel. The MRI safe Chiba needle is made from a nonferromagnetic alloy. Copy of a paid invoice is attached. One needed $37.

13. **If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:**

N/A

14. **List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:**

EF015 Mayo Stand – default formula
EF023 Table, exam – default formula
EQ250 portable U/S – default formula
EL014 room, radiographic/fluoroscopic – default formula
EL007 CT room – highly technical formula
EL008 MR room – highly technical formula
ED050 PACS workstation proxy – PACS formula
ED053 Professional PACS – linked to physician work *(half of pre and all of intra)*

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

N/A

16. If there is any other item on your spreadsheet that needs further explanation please include here:

The specialty societies are asking the PE subcommittee to reaffirm the direct practice expense inputs for CPT Codes 76942, 77002 and 77012.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS/Other Source – Utilization over 100,000

April 2017

CT Scan for Needle Biopsy

In October 2016, the Relativity Assessment Workgroup expanded the CMS/Other Source codes screen, lowering the Medicare utilization threshold from 250,000 to 100,000 based on 2015 Medicare utilization data. CPT code 77012 was identified via this screen for review.

Compelling Evidence
The specialty society presented compelling evidence for CPT code 77012. The society noted that the prior methodology for valuing these codes is unknown and considered flawed, as the source is CMS/Other. As the RUC has noted previously during review of other services, codes with the CMS/Other designation were never surveyed by the RUC or any other stakeholder; their physician time and work were assigned by CMS in rulemaking over 20 years ago using an unknown methodology. The specialty society also noted that an increase in value for this code is justified by the survey data and comparisons with the key reference services. The RUC accepted that there is compelling evidence that CPT code 77012 was originally valued using a flawed methodology.

77012 ***Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation***
The RUC reviewed the survey results from 93 physicians and agreed with the following physician time component: pre-service evaluation time of 15 minutes, intra-service time of 35 minutes, and post-service time of 5 minutes. The RUC reviewed the recommended work RVU of 1.50, which is the 25th percentile and agreed that this value appropriately accounts for the physician work involved. To justify the work RVU of 1.50, the RUC referenced MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family* (work RVU= 1.50, pre-service time of 5 minutes, intra-service time of 25 minutes, and post-time of 10 minutes, total of 40 minutes) and noted that both services require similar physician work and time to perform and therefore should be valued similarly. The RUC also reviewed CPT code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU= 1.54, pre-service time of 10 minutes, intra-service time of 29 minutes, and post-service time of 10 minutes) and noted that both services have similar work RVUs, intra-service, and post times, further supporting a work RVU at the 25th percentile of 1.50 for the survey code. **The RUC recommends a work RVU of 1.50 for CPT code 77012.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The RUC reviewed the direct practice expenses and made no amendments. The RUC recommends the direct practice expense inputs as reviewed by the Practice Expense Subcommittee.

CPT Descriptor: Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An elderly patient presents with a right upper lobe nodule that is suspicious for lung cancer. The patient is referred for a CT guided lung biopsy.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging exams. Confirm appropriateness of imaging guidance and determine appropriate protocol and approach. Assess need for contrast administration to assist guidance. Review patient history for contrast allergy, renal insufficiency or other contraindications for receiving contrast as needed. Discuss with the patient (and family) the risks due to radiation exposure and use of contrast dye (if needed) relative to other potential imaging modalities. Discuss the equipment being used, the close proximity of the CT gantry and potential for claustrophobia, prolonged immobility and repositioning to ensure optimal imaging for guidance and interpretation. Provide instructions for the radiologic technologists regarding patient positioning and proper settings for the imaging equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure (i.e. the field must be clear of impediments to table motion for movement into and out of the CT gantry). The physician dresses in radiation safety attire.

Description of Intra-Service Work: Supervise and interpret scout views of area to be imaged to select appropriate field of view. Obtain and interpret preliminary CT images acquired to assess appropriate approach to the target(s), evaluate for unexpected findings, interval changes in target lesion(s), and adjust patient positioning or protocol as needed. The skin entry site is marked and prepped in sterile fashion. Perform intermittent or continuous CT guidance to direct needle to target(s) and reposition as necessary. Confirm satisfactory needle placement in the target(s). Obtain and interpret post-procedural CT to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies. Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	17%	83%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	41%	14%	45%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	3%	14%	83%
Urgency of medical decision making	3%	0%	97%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	3%	93%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	0%	0%	100%
Outcome depends on the skill and judgment of physician	0%	3%	97%
Estimated risk of malpractice suit with poor outcome	0%	10%	90%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	5%	24%	71%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	43%	19%	38%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	10%	24%	67%
Urgency of medical decision making	0%	14%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	0%	0%	100%
Outcome depends on the skill and judgment of physician	0%	10%	90%
Estimated risk of malpractice suit with poor outcome	0%	14%	86%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
CPT Code 77012 *(Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation)* was identified as potentially mis-valued through the CMS/Other - Utilization over 100,000 screen.

Survey Process
The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who perform CT imaging. Both societies assembled an expert panel to review the data and develop the following recommendations.

Compelling Evidence
We are requesting an increase in value for this code. The prior methodology for valuing this code is unknown and considered flawed, as the source is CMS/Other.

There is a significant difference between the work and time values currently listed for this code compared with the survey responses. The median survey work and time values were nearly double and triple the current values, respectively. We believe this indicates that the prior work and time values were incorrectly assigned and/or that the nature of work for this code has changed sufficiently that the prior values are no longer accurate.

An increase in value for this code is justified by the survey data, comparisons with both KRS codes, and to maintain relativity within the RBRVS for codes with similar times and physician work.

Work RVU Recommendation:
We recommend a work RVU of 1.50, which is the 25th percentile survey value and an increase from the existing value of 1.16 wRVU.

Time Recommendation:
We recommend the median survey times of 15 minutes pre-service and 35 minutes intra-service. We recommend a post-service time of 5 minutes, which accurately reflects the time required to perform the post-service work related to CT guidance.

Key Reference Services:
Our recommendation compares favorably to the three most commonly chosen key reference services (KRS): 73722 *(Magnetic resonance (eg, proton) imaging, any joint of lower extremity; with contrast material(s)),* chosen by 31% of respondents, 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections),* chosen by 23% of respondents, and 74150 *(Computed tomography, abdomen; without contrast material)* , also chosen by 23% of respondents.

Our recommended work value for 77012 is bracketed by these key reference services, while the surveyed code has 15 more minutes of intra-service time compared to the highest valued KRS. Additionally, there is more pre-service time in the surveyed code compared with all three key reference services. Given that the survey respondents indicated the surveyed code is much more intense overall than the key reference services, the

recommended value is appropriate since there is some non-intense work inherent to the service (e.g. scan time and repositioning). So even with a longer intra-service time, the surveyed code is appropriately valued less than the highest valued KRS.

All four codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74150	CT Abdomen without contrast	1.19	20	3	12	5	0.084
74170	CT Abdomen with and without contrast	1.40	28	5	18	5	0.065
77012	**CT guidance for needle placement**	**1.50**	**55**	**15**	**35**	**5**	**0.030**
73722	MRI lower extremity joint with contrast	1.62	38.5	8.5	20	10	0.060

MPC Codes:
The surveyed code compares well with two non-radiology MPC codes: 99214 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.)*, which has the same wRVU, but less overall service times, and 95861 *(Needle electromyography; 2 extremities with or without related paraspinal areas)*, which has a higher wRVU, but lower total time than the surveyed code.

The surveyed code (77012) has more intra-service period time than either of the MPC codes, while it has a similar value. Other MPC codes with similar intra-service period times are valued between 2.11 and 2.35 wRVU (99215 and 99310, respectively). These comparisons and the recommended value for the surveyed code (77012) are appropriate because the work being performed for 77012 has both highly intense components and some less intense periods. While this adds up to a longer intra-service time, the work of the service in 77012 is not uniformly intense and therefore should be valued similarly to these MPC codes.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99214	Outpatient E&M, established patient, moderate to high severity	1.50	40	5	25	10	0.047
77012	**CT guidance for needle placement**	**1.50**	**55**	**15**	**35**	**5**	**0.030**
95861	Needle electromyography, 2 areas	1.54	49	10	29	10	0.038

Conclusion:
The compelling evidence, survey results, and comparison with applicable codes support an increase in value for 77012 (CT guided needle placement) to the 25th percentile survey value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 591321
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 77012 provided nationally in a one-year period is estimated to be 591,321.

Specialty Diagnostic Radiology Frequency 491325 Percentage 83.08 %

Specialty Interventional Radiology Frequency 85666 Percentage 14.48 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 197,107 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2015 Medicare data estimates that CPT code 77012 is billed approximately 197,107 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 163775 Percentage 83.08 %

Specialty Interventional Radiology Frequency 28555 Percentage 14.48 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Chest

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77012

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: 77012
Specialty Society: ACR, SIR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

77012	Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation

Global Period: XXX   Meeting Date: April 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and Society of Interventional Radiology (SIR) convened a consensus panel to finalize the practice expense data for the CT needle biopsy CPT code 77012.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

The societies included the existing PE inputs for CPT code 77012 on the spreadsheet to serve as a reference.

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page** – CMS finalized a standard of 3 minutes for services involving CTs which are considered "intermediate" in the CY 2017 MPFS Final Rule.

4. Please provide rationale for the minutes you are recommending for clinical activities that do not have PE Subcommittee standards:

5. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Prepare room, equipment and supplies (CA013):** time increased to the standard 2 minutes.
- **Confirm order, protocol exam (CA014):** clinically necessary for performing the procedure. Standard is 1 minute.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page:** time increased to the standard 2 minutes.
- **Review examination with interpreting MD/DO:** time increased to the standard 2 minutes.
- **Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue:** time increased to the standard 1 minute.
- **Professional PACS Workstation (ED053):** In the CY 2017 MPFS Final Rule, CMS finalized an equipment time for the PACS Professional Workstation which is equal to half the preservice physician work time and the full intra-service physician work time.
- **PACS Workstation Proxy (ED050):** CMS finalized an equipment time for the PACS Workstation Proxy which is equal to the clinical staff service period time.
- **Room, CT (EL007):** highly technical equipment formula used.

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Spreadsheet Update Workgroup and listed in tab 2, please explain the difference here:

7. Please describe in detail the clinical activities of your staff below:

Pre-Service Period Clinical Activities:
- Confirm availability of prior images/studies

Service Period Clinical Activities:

Pre-Service (of Service Period):
- Provide education/obtain consent
- Prepare room, equipment and supplies
- Confirm order, protocol exam
- Prepare, set-up and start IV, initial positioning and monitoring of patient

Intra-Service (of Service Period):
- Perform procedure/service—NOT directly related to physician work

Post-Service (of Service Period):
- Clean room/equipment by clinical staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD/DO
- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.

Post-Service Period Clinical Activities:

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

After positioning patient on the CT table at the direction of the radiologist, the technologist loads the CT protocol and chooses an appropriate field of view. Scout images of the procedure area are acquired and reviewed in consultation with the radiologist. Thereafter, axial CT images are acquired through an appropriately selected region. These images are reviewed with the radiologist and the parameters of the biopsy scans are chosen (slice thickness, number of slices, level of imaging, field of view, window widths/levels) and prepared for the viewing screen in the CT room.

While the radiologist initiates the procedure and uses CT guidance for needle placement, the technologist assists the physician by opening additional equipment items (e.g. needles, fiducials, etc.), changing CT scan parameters or repositioning the patient as needed. For each repeated CT scan during needle guidance, the technologist confirms the agreed upon settings and acquires the axial CT data, which is then presented to the radiologist. This series of activities is repeated for any change in position or separate biopsy site as needed.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

- **PACS Workstation Proxy (ED050)** [Other formula]: Equal to the total clinical service period time
- **Professional PACS Workstation Proxy (ED053)** [Other formula]: Equal to the physician work intra service time + ½ of the physician work pre-service time.
- **Room, CT (EL007)** [Highly technical equipment formula]

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

AMA/Specialty Society RVS Update RUC Summary of Recommendations
Final Rule for 2015

October 2015

Fluoroscopic Guidance

In May 2015, the CPT Editorial Panel deleted 62310, 62311, 62318 and 62319, and created eight new codes for epidural injections to differentiate injections with and without imaging guidance. CPT codes 77001, 77002 and 77003 were included as part of this family to review. The specialty societies requested that these services be reviewed independently from the epidural injection codes since only 77003 relates to spine interventions, 77002 involves body interventions and 77001 relates to central venous catheters. Additionally, CMS requested that all three services be surveyed as add-on (ZZZ global period) services. CMS indicated that while these codes have been classified as stand-alone XXX codes previously, they believe that their vignettes and CPT Manual parentheticals are consistent with an add-on code as has been established for 77001. Therefore, the global periods for 77002 and 77003 reflect an add-on code global of ZZZ with modifications to the vignettes and parentheticals anticipated at the upcoming October 2015 CPT Editorial Panel meeting. The specialty societies performed this survey based on the anticipated update to the vignette.

The RUC discussed the issues with the physician pre-service and post-service time recommended for these ZZZ global period services. The RUC noted that add-on services rarely include pre- and post-service time as that is associated with the base code in which these are reported. The RUC noted that the recommendations for the related epidural injection codes with and without fluoroscopic guidance, reviewed at this meeting, established a difference of two additional minutes of pre-service positioning time for the fluoroscopic guidance as the only difference in physician time. After much deliberation on whether additional pre and post-service time are included in these services the RUC determined that it would be difficult to now recommend 7 minutes pre-service time and 5 minutes immediate post-service time as indicated by the survey respondents. The RUC also discussed the same physician time for all three services (77001, 77002 and 77003) and agreed with the specialty societies that the physician work, intensity and complexity of 7700,1 the central venous catheter code, is less compared to 77002 and, likewise, the physician work, intensity and complexity for 77002 is less than that required to perform 77003. The intensity regarding guidance relates to the nature of the base code with which these services were reported. The intensity and complexity increases as one moves through the body where there are additional anatomy considerations, superficial and deep structures to consider with 77002 and then additional neuro and spinal structures to consider when performing 77003.

77001 Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC reviewed the survey results from 52 physicians and recommends maintaining the current work RVU of 0.38 for CPT code 77001. The RUC recommends 2 minutes of positioning time, the additional pre-service time as established for the epidural injection with fluoroscopic guidance codes, and 15 minutes intra-service time. The RUC noted that the 15 minutes of intra-service time is appropriate to account for physician time required to review previous imaging, which the physician only reviews if performing an intervention using fluoroscopic guidance, confirmation of appropriate imaging equipment settings, applying lead gowns to the patient and the physician, draping and placing a shield on the fluoro machine as well as selecting the proper images for documentation; which would typically be included in the intra-service time for add-on codes, not as separate pre- and post-service time. The RUC referenced ZZZ-global period CPT code 93320 *Doppler echocardiography, pulsed wave and/or continuous wave with spectral display (List separately in addition to codes for echocardiographic imaging); complete* (work RVU = 0.38 and 15 minutes intra-service time) and MPC codes 92025 *Computerized corneal topography, unilateral or bilateral, with interpretation and report* (work RVU = 0.35) and 95874 *Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure)* (work RVU = 0.37) to support the recommended physician work and time recommended for CPT code 77001. **The RUC recommends a work RVU of 0.38 for CPT code 77001.**

77002 Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 72 physicians and recommends maintaining the current work RVU of 0.54 for CPT code 77002. The RUC recommends 2 minutes of positioning time, the additional pre-service time as established for the epidural injection with fluoroscopic guidance codes, and 15 minutes intra-service time. The RUC noted that the 15 minutes of intra-service time is appropriate to account for physician time required to review previous imaging which the physician only reviews if performing an intervention using fluoroscopic guidance, confirmation of appropriate settings, applying lead gowns to the patient and the physician, draping and placing a shield on the fluoro machine as well as selecting the proper images for documentation; which would typically be included in the intra-service time for add-on codes not as separate pre- and post-service time. The RUC referenced ZZZ-global period CPT code 96571 *Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract)* (work RVU = 0.55 and 15 minutes intra-service time) and MPC codes 93224 *External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional* (work RVU = 0.52) and 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56) to support the recommended physician work and time recommended for CPT code 77002. **The RUC recommends a work RVU of 0.54 for CPT code 77002.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

77003 Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 114 physicians and recommends maintaining the current work RVU of 0.60 for CPT code 77003. The RUC recommends 2 minutes of positioning time, the additional pre-service time as established for the epidural injection with fluoroscopic guidance codes, and 15 minutes intra-service time. The RUC noted that the 15 minutes of intra-service time is appropriate to account for physician time required to review previous imaging which the physician only reviews if performing an intervention using fluoroscopic guidance, confirmation of appropriate settings, applying lead gowns to the patient and the physician, draping and placing a shield on the fluoro machine as well as selecting the proper images for documentation; which would typically be included in the intra-service time for add-on codes not as separate pre- and post-service time. The RUC referenced ZZZ-global period CPT code 96571 *Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract)* (work RVU = 0.55 and 15 minutes intra-service time) and MPC codes 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU = 0.56) and 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81) to support the recommended physician work and time recommended for CPT code 77003. **The RUC recommends a work RVU of 0.60 for CPT code 77003.**

Work Neutrality

The RUC noted that CPT code 77003 was bundled into the new epidural injection codes which will result in an 83% decrease in 77003 being reported alone. The RUC's recommendation for the epidural injection codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Practice Expense

The PE Subcommittee made one minor modification correcting the equipment minutes for the PACS workstation. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
77001(f)	D9	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)	ZZZ	0.38 (No Change)
77002(f)	D10	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure) *(See appropriate surgical code for procedure and anatomic location)* (Use 77002 in conjunction with 10022, 10160, 20206, 20220, 20225, 20520, 20525, 20526, 20550, 20551, 20552, 20553, 20555, 20600, 20605, 20610, 20612, 20615, 21116, 21550, 23350, 24220, 25246, 27093, 27095, 27370, 27648, 32400, 32405, 32553, 36002, 38220, 38221, 38505, 38794, 41019, 42400, 42405, 47000, 47001, 48102, 49180, 49411, 50200, 50390, 51100, 51101, 51102, 55700, 55876, 60100, 64505, 64508, ~~64517~~ 64600, 64605) *(77002 is included in all arthrography radiological supervision and interpretation codes. AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77001 Tracking Number Original Specialty Recommended RVU: **0.38**
Presented Recommended RVU: **0.38**
Global Period: ZZZ RUC Recommended RVU: **0.38**

CPT Descriptor: Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 60-year-old male presents in need of hemodialysis. Tunneled central venous access placement is performed (the catheter placement is reported separately) during which fluoroscopic guidance is used to facilitate the catheter and wire manipulations and ensure proper positioning of the catheter.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 63%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 42%

Description of Pre-Service Work: The physician reviews the patient's history and prior imaging studies (eg, radiographs, computed tomography [CT] scans, and/or magnetic resonance imaging [MRI] scans) to be familiar with the patient's anatomy to plan for central venous catheter placement including potential contra-indications. The physician dresses in radiation attire and instructs the radiologic technologists in the imaging equipment required and the proper settings for the imaging equipment.

Description of Intra-Service Work: Following achievement of venous access (reported separately), use fluoroscopy and angulation of the image intensifier to manipulate the guidewire and subsequently the catheter into an appropriate central venous position. Include any contrast injection through access site (via needle, catheter, or sheath) for venographic evaluation and mapping of appropriate path. Additional fluoroscopy after venography may be necessary for optimal positioning. Perform spot film or other radiographic confirmation of final catheter position.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient’s medical record. The results of the procedure are communicated to the referring physician when appropriate.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

Mental Effort and Judgment (Mean)

	Top Key Ref Code	2nd Key Ref Code
The number of possible diagnosis and/or the number of management options that must be considered	0.32	0.63
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.12	0.63

Urgency of medical decision making	0.28	1.00

Technical Skill/Physical Effort (Mean)

Technical skill required	0.28	0.88
Physical effort required	0.32	0.75

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.48	1.13
Outcome depends on the skill and judgment of physician	0.36	0.38
Estimated risk of malpractice suit with poor outcome	0.29	0.00

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	0.36	0.63

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

THE ADDITIONAL RATIONALE BELOW IS THE ORIGINAL RATIONALE SUBMITTED BY THE SPECIALTY SOCIETY(IES) PRIOR TO THE RUC MEETING AND DOES NOT NECESSARILY REPRESENT THE RATIONALE FOR THE RUC RECOMMENDATION. TO VIEW THE RUC'S RATIONALE, PLEASE REVIEW THE SEPARATE RUC RECOMMENDATION DOCUMENT.

Introduction

This family of codes describes the use of fluoroscopic guidance for localization and placement of needles or catheters during a variety of procedures:

Code	Descriptor
77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) *(List separately in addition to code for primary procedure)*
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) *(List separately in addition to code for primary procedure)*
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) *(List separately in addition to code for primary procedure)*

All three codes in this family have been reviewed by the RUC within the last 4 years: 77001 and 77002 in April of 2013 and 77003 in January of 2012. During each of these reviews, the existing values have been maintained.

More recently, the RAW identified a number of codes describing epidural spinal injections (62310-62311, 62318-62319), requesting bundling of these codes with their associated imaging guidance code, 77003, prompting the re-review of 77003. The "family" for 77003 was then expanded to include 77001-77002. Shortly thereafter, CMS elected to change the global period for 77002-77003 from XXX to ZZZ.

In parallel to this RUC survey, the CPT Editorial Panel is editorially revising the codes in this family to update the descriptors, vignettes, and parentheticals to accommodate a ZZZ global period.

General Comments on the Global Period

The specialty societies have concerns regarding the ZZZ global period for these codes. ZZZ add-on codes typically involve only intra-service work. The codes in this family include imaging-specific pre- and post-service period physician work that is separate from the physician work associated with the primary code. As with other ZZZ codes, there is additional imaging specific intra-service work also. In fact, during the survey of 77001 in 2013, the specialties recommended a change in the global period from ZZZ to XXX to capture this work.

These coding conventions are congruent with component coding rules for interventional procedures which have been in existence since the early 90s, as described in the June 5, 1991 Federal Register (Medicare Physician Fee Schedule Proposed Rule, pg. 25806) which directs that carriers "pay for the radiological aspect of interventional procedures as described by supervision and interpretation (S&I) CPT codes and the primary non--radiological procedure code such as a surgical code at the full fee schedule amounts." This language was accepted into the Final Rule as documented in the Federal Register November 25, 1991. The specialties are not aware of language in the interim directing carriers to abandon the conventions of component coding or for CMS to abandon a system they themselves championed over "complete procedure" coding which preceded the component coding system. When these component codes were initially and more recently valued by the RUC, care was taken to differentiate the work and practice expense activities for the S&I codes and the surgical codes so no duplication in work or PE RVUs occurred.

Nevertheless, the specialties surveyed all three codes as ZZZ codes, utilizing the RUC survey instrument which enables pre- and post-service time inputs as well. For all three codes, the survey respondents indicated pre- and post- service times and our recommendations reflect this.

Survey Process

The specialty societies performed a random survey of their respective members and convened an expert panel of physicians familiar with these services to review the survey data and provide recommendations. The American College of Radiology, the Society of Interventional Radiology, and the American Society of Anesthesiologists surveyed all three codes, the American Academy of Physical Medicine & Rehabilitation surveyed both 77002 and 77003, and the American Society of Neuroradiology and the American Academy of Pain Medicine surveyed only 77003.

General Comment on recommendations:

The specialties recommend the existing work RVUs for all three codes, and also recommend the same service period times for all three codes.

Work RVU Recommendation

The expert panel recommends maintaining the existing work RVU of 0.38 which is below the survey 25th percentile value.

Service Period Times

The panel recommends the following service period times for 77001, the same as the other codes in the family: pre, intra, and post times of 7, 15, and 5 minutes, respectively. These values are below the survey median for the pre and intra, and the same as the survey median for the post, an increase over the current service period times.

Key Reference Service

The most commonly selected key reference service is 76937 *(Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure))*, which is also an imaging guidance code used in central venous catheter placements. This ZZZ code was selected by nearly half of those surveyed, and it has a comparable RVU of 0.30 and similar intra- and post-service times of 10 and 4 minutes, respectively.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
77001	Fluoro guidance during central catheter	0.38	7	15	5	27	0.007
76937	Ultrasound guidance for vascular access	0.30	0	10	4	14	0.021

MPC Code

The panel recommendation of 0.38 RVUs for 77001 is bracketed by three MPC codes with XXX and ZZZ global periods: 92025 *(Computerized corneal topography, unilateral or bilateral, with interpretation and report)*, 95874 *(Needle electromyography for guidance in conjunction with chemodenervation (List separately in addition to code for primary procedure))*, and 93923 *(Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia))*.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Global
92025	Computerized corneal topography	0.35	5	12	0	17	0.020	XXX
95874	EMG during chemodenervation	0.37	0	20	0	20	0.019	ZZZ
77001	Fluoro guidance during central catheter	0.38	7	15	5	27	0.007	ZZZ
93923	Doppler/duplex extremity	0.45	3	10	3	16	0.032	XXX

Comparison within the Family

Our recommendations maintain relativity across the family. Our RVU recommendations increase with each successive code even though the service period times are the same, reflecting the increased intensity of the successive codes. The intensity during imaging guidance for body interventions falls between the intensity for central catheter and spine interventions.

In summary, our recommendations are as follows:

Codes in Family	Descriptor	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
77001	Fluoro guidance during central catheter	0.38	7	15	5	27	0.007
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77001

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1291900

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 77001 provided nationally in a one-year period is estimated to be 1,291,900.

Specialty Diagnostic Radiology Frequency 727500 Percentage 56.31 %

Specialty Interventional Radiology Frequency 171500 Percentage 13.27 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 430,633 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 77001 was billed approximately 430,600 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 242489 Percentage 56.30 %

Specialty Interventional Radiology Frequency 57200 Percentage 13.28 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77001

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77002 Tracking Number Original Specialty Recommended RVU: **0.54**
Presented Recommended RVU: **0.54**
Global Period: ZZZ RUC Recommended RVU: **0.54**

CPT Descriptor: Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with hip pain and suspected joint effusion is referred for joint aspiration. Fluoroscopic guidance is used to advance a needle into the joint space, after which joint fluid is aspirated (needle aspiration is reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 33%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 29%

Description of Pre-Service Work: The physician reviews the patient's history and prior imaging studies (eg, radiographs, computed tomography [CT] scans, and/or magnetic resonance imaging [MRI] scans) to be familiar with the patient's anatomy to plan an appropriate trajectory for the needle placement (including access site, pertinent landmarks, and variant anatomy). The physician dresses in radiation attire and instructs the radiologic technologists in the imaging equipment required and the proper settings for the imaging equipment.

Description of Intra-Service Work: The patient is placed on a fluoroscopy table and positioned appropriately depending on the type of procedure to be performed. Preliminary fluoroscopy including angulation of the image intensifier is performed to identify the appropriate level and approach for the initial needle placement, and the skin entry site is prepped and marked. Sterile drapes are applied. During the needle placement, intermittent fluoroscopy and angulation of the image intensifier are used to confirm the correct approach and the need for needle repositioning or realignment. When the needle position appears correct, radiographic contrast may be injected to confirm the proper position or tissue samples may be acquired and reviewed. If the position is not correct, additional fluoroscopy is utilized to guide repositioning until the proper position is achieved.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient's medical record. The results of the procedure are communicated to the referring physician when appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

THE ADDITIONAL RATIONALE BELOW IS THE ORIGINAL RATIONALE SUBMITTED BY THE SPECIALTY SOCIETY(IES) PRIOR TO THE RUC MEETING AND DOES NOT NECESSARILY REPRESENT THE RATIONALE FOR THE RUC RECOMMENDATION. TO VIEW THE RUC'S RATIONALE, PLEASE REVIEW THE SEPARATE RUC RECOMMENDATION DOCUMENT.

Introduction

This family of codes describes the use of fluoroscopic guidance for localization and placement of needles or catheters during a variety of procedures:

Code	Descriptor
77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) *(List separately in addition to code for primary procedure)*
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) *(List separately in addition to code for primary procedure)*
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) *(List separately in addition to code for primary procedure)*

All three codes in this family have been reviewed by the RUC within the last 4 years: 77001 and 77002 in April of 2013 and 77003 in January of 2012. During each of these reviews, the existing values have been maintained.

More recently, the RAW identified a number of codes describing epidural spinal injections (62310-62311, 62318-62319), requesting bundling of these codes with their associated imaging guidance code, 77003, prompting the re-review of 77003. The "family" for 77003 was then expanded to include 77001-77002. Shortly thereafter, CMS elected to change the global period for 77002-77003 from XXX to ZZZ.

In parallel to this RUC survey, the CPT Editorial Panel is editorially revising the codes in this family to update the descriptors, vignettes, and parentheticals to accommodate a ZZZ global period.

General Comments on the Global Period

The specialty societies have concerns regarding the ZZZ global period for these codes. ZZZ add-on codes typically involve only intra-service work. The codes in this family include imaging-specific pre- and post-service period physician work that is separate from the physician work associated with the primary code. As with other ZZZ codes, there is additional imaging specific intra-service work also. In fact, during the survey of 77001 in 2013, the specialties recommended a change in the global period from ZZZ to XXX to capture this work.

These coding conventions are congruent with component coding rules for interventional procedures which have been in existence since the early 90s, as described in the June 5, 1991 Federal Register (Medicare Physician Fee Schedule Proposed Rule, pg. 25806) which directs that carriers "pay for the radiological aspect of interventional procedures as described by supervision and interpretation (S&I) CPT codes and the primary non--radiological procedure code such as a surgical code at the full fee schedule amounts." This language was accepted into the Final Rule as documented in the Federal Register November 25, 1991. The specialties are not aware of language in the interim directing carriers to abandon the conventions of component coding or for CMS to abandon a system they themselves championed over "complete procedure" coding which preceded the component coding system. When these component codes were initially and more recently valued by the RUC, care was taken to differentiate the work and practice expense activities for the S&I codes and the surgical codes so no duplication in work or PE RVUs occurred.

Nevertheless, the specialties surveyed all three codes as ZZZ codes, utilizing the RUC survey instrument which enables pre- and post-service time inputs as well. For all three codes, the survey respondents indicated pre- and post- service times and our recommendations reflect this.

Survey Process

The specialty societies performed a random survey of their respective members and convened an expert panel of physicians familiar with these services to review the survey data and provide recommendations. The American College of Radiology, the Society of Interventional Radiology, and the American Society of Anesthesiologists surveyed all three codes, the American Academy of Physical Medicine & Rehabilitation surveyed both 77002 and 77003, and the American Society of Neuroradiology and the American Academy of Pain Medicine surveyed only 77003.

General Comment on recommendations:

The specialties recommend the existing work RVUs for all three codes, and also recommend the same service period times for all three codes.

Work RVU Recommendation

The expert panel recommends maintaining the existing work RVU of 0.54 which is below the survey 25thpercentile value.

Service Period Times

The panel recommends the following service period times for 77002, the same as the other codes in the family: pre, intra, and post times of 7, 15, and 5 minutes, respectively. These values are below the survey

median for the pre, and the same as the survey median for the intra and post, the same as the current service period times.

Key Reference Services

The most commonly selected key reference service is 64484, *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure))*. This ZZZ code has a higher RVU of 1.00 and a lower intraservice time of 10 minutes, reflecting the higher intensity of spine procedures than body procedures.
The second key reference is 19286 *(Placement of breast localization device(s) (eg, clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including ultrasound guidance (List separately in addition to code for primary procedure)*, at 0.85 RVUs and 14 minutes intra-service time.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
19286	Clip placement, breast; using US guidance	0.85	5	14	0	19	0.057
64484	Injection, transforaminal epidural; lumbar or sacral	1.00	0	10	0	10	0.100

MPC Code

The panel recommendation of 0.54 RVUs for 77002 is bracketed by two MPC codes with XXX global periods: 93224 *(External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional)* and 76536 *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation).*

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Global
93224	EKG monitoring	0.52	2	15	7	24	0.021	XXX
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018	ZZZ
76536	Head and neck u/s	0.56	4	10	4	18	0.038	XXX

Comparison within the Family

Our recommendations maintain relativity across the family. Our RVU recommendations increase with each successive code even though the service period times are the same, reflecting the increased intensity of the successive codes. The intensity during imaging guidance for body interventions falls between the intensity for central catheter and spine interventions.

In summary, our recommendations are as follows:

Codes in Family	Descriptor	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
77001	Fluoro guidance during central catheter	0.38	7	15	5	27	0.007
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77002

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology　　How often? Commonly

Specialty Anesthesiology　　How often? Commonly

Specialty Physical Medicine & Rehabilitation　　How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 1144600
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 77002 provided nationally in a one-year period is estimated to be 1,144,600.

Specialty Diagnostic Radiology　　Frequency 550800　　Percentage 48.12 %

Specialty Anesthesiology　　Frequency 111000　　Percentage 9.69 %

Specialty Physical Medicine & Rehabilitation Frequency 76000 Percentage 6.63 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 381,540 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The 2014 Medicare data estimates that CPT code 77002 was billed approximately 381,500 times for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 183640 Percentage 48.13 %

Specialty Anesthesiology Frequency 37000 Percentage 9.69 %

Specialty Physical Medicine & Rehabilitation Frequency 25300 Percentage 6.63 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Imaging/procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77002

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77003 Tracking Number Original Specialty Recommended RVU: **0.60**
Presented Recommended RVU: **0.60**
Global Period: ZZZ RUC Recommended RVU: **0.60**

CPT Descriptor: Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Fluoroscopic guidance is utilized for needle placement during a separately reported underlying procedure involving the spine (eg, biopsy, aspiration, injection).

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 38%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 15%

Description of Pre-Service Work: The physician reviews the patient's history and prior imaging studies (radiographs, computed tomography [CT] scans, and/or magnetic resonance imaging [MRI] scans) to be familiar with the patient's spine anatomy (numbering of levels, anatomic variants, prior surgery, pathology, etc). The physician dresses in radiation attire and instructs the radiologic technologists in the imaging equipment required and the proper settings for the imaging equipment.

Description of Intra-Service Work: Place patient on a fluoroscopy table in the prone, decubitus, or prone oblique position, depending on the type of injection to be performed. Perform preliminary fluoroscopy including angulation of the image intensifier to identify the appropriate level and approach for initial needle placement, and mark the skin entry site. During the needle/catheter placement, use intermittent fluoroscopy and angulation of the image intensifier to confirm the correct approach and need for needle repositioning or realignment. When the needle position appears correct, inject the radiographic contrast to confirm proper position. If position is not correct, provide additional fluoroscopy during repositioning until proper position is achieved. If a catheter is to be placed, provide additional fluoroscopic guidance during and after the catheter positioning to confirm proper positioning, and perform additional contrast injections as necessary.

Description of Post-Service Work: A report describing the guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient's medical record. The results of the procedure are communicated to the referring physician when appropriate.

Urgency of medical decision making	0.19	0.32
Technical Skill/Physical Effort (Mean)		
Technical skill required	0.32	0.45
Physical effort required	0.15	0.39

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.21	0.45
Outcome depends on the skill and judgment of physician	0.17	0.61
Estimated risk of malpractice suit with poor outcome	0.25	0.48

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	0.30	0.61

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

THE ADDITIONAL RATIONALE BELOW IS THE ORIGINAL RATIONALE SUBMITTED BY THE SPECIALTY SOCIETY(IES) PRIOR TO THE RUC MEETING AND DOES NOT NECESSARILY REPRESENT THE RATIONALE FOR THE RUC RECOMMENDATION. TO VIEW THE RUC'S RATIONALE, PLEASE REVIEW THE SEPARATE RUC RECOMMENDATION DOCUMENT.

Introduction

This family of codes describes the use of fluoroscopic guidance for localization and placement of needles or catheters during a variety of procedures:

Code	Descriptor
77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) *(List separately in addition to code for primary procedure)*
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) *(List separately in addition to code for primary procedure)*
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) *(List separately in addition to code for primary procedure)*

All three codes in this family have been reviewed by the RUC within the last 4 years: 77001 and 77002 in April of 2013 and 77003 in January of 2012. During each of these reviews, the existing values have been maintained.

More recently, the RAW identified a number of codes describing epidural spinal injections (62310-62311, 62318-62319), requesting bundling of these codes with their associated imaging guidance code, 77003, prompting the re-review of 77003. The "family" for 77003 was then expanded to include 77001-77002. Shortly thereafter, CMS elected to change the global period for 77002-77003 from XXX to ZZZ.

In parallel to this RUC survey, the CPT Editorial Panel is editorially revising the codes in this family to update the descriptors, vignettes, and parentheticals to accommodate a ZZZ global period.

General Comments on the Global Period

The specialty societies have concerns regarding the ZZZ global period for these codes. ZZZ add-on codes typically involve only intra-service work. The codes in this family include imaging-specific pre- and post-service period physician work that is separate from the physician work associated with the primary code. As with other ZZZ codes, there is additional imaging specific intra-service work also. In fact, during the survey of 77001 in 2013, the specialties recommended a change in the global period from ZZZ to XXX to capture this work.

These coding conventions are congruent with component coding rules for interventional procedures which have been in existence since the early 90s, as described in the June 5, 1991 Federal Register (Medicare Physician Fee Schedule Proposed Rule, pg. 25806) which directs that carriers “pay for the radiological aspect of interventional procedures as described by supervision and interpretation (S&I) CPT codes and the primary non--radiological procedure code such as a surgical code at the full fee schedule amounts.” This language was accepted into the Final Rule as documented in the Federal Register November 25, 1991. The specialties are not aware of language in the interim directing carriers to abandon the conventions of component coding or for CMS to abandon a system they themselves championed over “complete procedure” coding which preceded the component coding system. When these component codes were initially and more recently valued by the RUC, care was taken to differentiate the work and practice expense activities for the S&I codes and the surgical codes so no duplication in work or PE RVUs occurred.

Nevertheless, the specialties surveyed all three codes as ZZZ codes, utilizing the RUC survey instrument which enables pre- and post-service time inputs as well. For all three codes, the survey respondents indicated pre- and post- service times and our recommendations reflect this.

Survey Process

The specialty societies performed a random survey of their respective members and convened an expert panel of physicians familiar with these services to review the survey data and provide recommendations. The American College of Radiology, the Society of Interventional Radiology, and the American Society of Anesthesiologists surveyed all three codes, the American Academy of Physical Medicine & Rehabilitation surveyed both 77002 and 77003, and the American Society of Neuroradiology and the American Academy of Pain Medicine surveyed only 77003.

General Comment on recommendations:

The specialties recommend the existing work RVUs for all three codes, and also recommend the same service period times for all three codes.

Work RVU Recommendation

The expert panel recommends maintaining the existing work RVU of 0.60 which is below the survey 25^{th}percentile value.

Service Period Times

The panel recommends the following service period times for 77003, the same as the other codes in the family: pre, intra, and post times of 7, 15, and 5 minutes, respectively. These values are below the survey

median for the pre, and the same as the survey median for the intra and post, the same as the current service period times.

Key Reference Service

The most commonly selected key reference service is 64484 *(Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure))*. This ZZZ code has a higher RVU of 1.00 and a lower intra service time of 10 minutes reflecting the higher intensity of a nerve block versus a more general spine procedure.

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022
64484	Injection, transforaminal epidural; lumbar or sacral	1.00	0	10	0	10	0.100

MPC Code

The panel recommendation of 0.60 RVUs for 77003 is bracketed by two MPC codes with XXX global periods: 76536 *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation)* and 76700 *(Ultrasound, abdominal, real time with image documentation; complete).*

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	Global
76536	Head and neck u/s	0.56	4	10	4	18	0.038	XXX
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022	ZZZ
76700	Abdominal u/s; complete	0.81	5	11	5	21	0.053	XXX

Comparison within the Family

Our recommendations maintain relativity across the family. Our RVU recommendations increase with each successive code even though the service period times are the same, reflecting the increased intensity of the successive codes. The intensity during imaging guidance for body interventions falls between the intensity for central catheter and spine interventions.

In summary, our recommendations are as follows:

Codes in Family	Descriptor	Recommended RVUs	Pre Time	Intra Time	Post Time	Total Time	IWPUT
77001	Fluoro guidance during central catheter	0.38	7	15	5	27	0.007
77002	Fluoro guidance during biopsy	0.54	7	15	5	27	0.018
77003	Fluoro guidance for spine intervention	0.60	7	15	5	27	0.022

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77003

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology How often? Commonly

Specialty Anesthesiology How often? Commonly

Specialty Physical Medicine & Rehabilitation How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 480,000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by 77003 provided nationally in a one-year period is estimated to be 480,000

Specialty Diagnostic Radiology Frequency 58128 Percentage 12.11 %

Specialty Anesthesiology Frequency 171072 Percentage 35.64 %

Specialty Physical Medicine & Rehabilitation Frequency 51456 Percentage 10.72 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 160,372 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. With the bundling fluoroscopic guidance in the epidural injection codes the utilization for 77003 alone will decrease by 83%.

Specialty Diagnostic Radiology Frequency 19421 Percentage 12.10 %

Specialty Anesthesiology Frequency 57156 Percentage 35.63 %

Specialty Physical Medicine & Rehabilitation Frequency 17191 Percentage 10.71 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Other

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 77003

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

Global Period: _ZZZ__ Meeting Date: _October 2015

77001	Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) *(List separately in addition to code for primary procedure)*
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device) *(List separately in addition to code for primary procedure)*
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid) *(List separately in addition to code for primary procedure)*

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The American College of Radiology (ACR), the Society of Interventional Radiology (SIR), the American Society of Anesthesiologists (ASA), the American Academy of Physical Medicine & Rehabilitation (AAPM&R), the American Society of Neuroradiology (ASNR) and the American Academy of Pain Medicine (AAPM) convened a consensus panel to finalize the practice expense data for fluoroscopic guidance codes 77001-77003.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The societies included the existing PE inputs for 77001, 77002, and 77003 on the spreadsheet to serve as a reference. We also included surgical codes to the PE for reference, consistent with our PE from April 2013, and to avoid any duplication of activities.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:
N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

- **Availability of prior images confirmed**- For this code family, CMS proposed a standard of 2 minutes as per Table 5 “Clinical Labor Tasks Associated With Digital Technology” in the CY 2016 MPFS Proposed Rule.

- **Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist**- For this code family, CMS proposed a standard of 2 minutes as per Table 5 "Clinical Labor Tasks Associated With Digital Technology" in the CY 2016 MPFS Proposed Rule.

- **Prepare room, equipment, supplies**- In order to maintain consistency across the code family, the standard time of 2 minutes was allocated to code 77003.

- **Prepare and position patient/ monitor patient/ set up IV**- In order to maintain consistency across the code family, a standard time of 2 minutes was allocated to code 77003.

- **Acquire Images** - In order to maintain consistency across the code family, 15 minutes was allocated to code 77001.

- **Clean room/equipment by physician staff**- In order to maintain consistency across the code family, the standard time of 3 minutes was allocated to code 77003.

- **Technologist QC's images in PACS, checking for all images, reformats, and dose page**- For this code family, CMS proposed a standard of 2 minutes as per Table 5 "Clinical Labor Tasks Associated With Digital Technology" in the CY 2016 MPFS Proposed Rule.

- **Review examination with interpreting MD**- For this code family, CMS proposed a standard of 2 minutes as per Table 5 "Clinical Labor Tasks Associated With Digital Technology" in the CY 2016 MPFS Proposed Rule.

- **Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue**- For this code family, CMS proposed a standard of 1 minute as per Table 5 "Clinical Labor Tasks Associated With Digital Technology" in the CY 2016 MPFS Proposed Rule.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:
- Availability of prior images confirmed
- Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist

Intra-Service Clinical Labor Activities:
- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS-Other – Utilization over 500,000 / NPRM for 2014

April 2014

Ultrasound Guidance for Needle Placement

In April 2011, this service was identified through the CMS/Other codes with Medicare utilization over 500,000 screen. The specialty societies initially recommended a delay in surveying 76942 since 76942 has been recently bundled into a number of services including paracentesis, thoracentesis, chest tube placement, breast biopsy and most recently arthrocentesis. The RUC recommended to review the survey instrument at the Research Subcommittee October 2013 and to survey for work and develop direct practice expense inputs by April 2014.

Prior to valuing this service, the RUC reviewed the specialty societies' compelling evidence that the current value for this procedure may be misvalued. The specialty societies explained that a flawed methodology was used to arrive at the current work value of 0.67. Prior to this survey, 76942 had not been reviewed by the RUC and was originally valued using a CMS/Other crosswalk methodology. Since it is unknown how CMS valued this service originally, the RUC agreed that this represents a flawed methodology. Furthermore, there has been a significant change in the dominant providers of this service since its initial valuation. In 1993, two specialties, urologists and diagnostic radiologists provided the vast majority of services. In 2013, there was a plurality of performing specialties with the dominant providers being orthopedic surgeons and rheumatologists. The RUC agreed that there is compelling evidence that CPT code 76942 may be misvalued.

76942 Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation
The RUC reviewed the survey results from 255 diagnostic and interventional radiologists, endocrinologists, anesthesiologists, rheumatologists, urologists and breast surgeons and agreed with the specialty societies that the following physician time components are accurate for 76942: pre-service time of 7 minutes, intra-service time of 15 minutes and immediate post-service time of 5 minutes. The pre-service and post-service times were reduced from the survey median in order to render them compatible with other recently reviewed XXX global image guidance codes 77002 *Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device* and 77003 *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid).*

The RUC reviewed the survey respondents' estimated physician work values and agreed that while compelling evidence exists that 76942 is potentially misvalued, the survey median work RVU of 0.76 was not appropriate. Therefore, the RUC agreed that the current work RVU of 0.67 accurately values this procedure. To justify a value of 0.67, the RUC compared the surveyed code to key reference code 76536 *Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation* (work RVU= 0.56) and noted that since 76536 has less intra-service time than the surveyed code, 10 minutes compared to 15 minutes, the reference code is appropriately valued less than 76942. The RUC also reviewed CPT codes 76881 *Ultrasound, extremity, nonvascular, real-time with image documentation; complete* (work RVU= 0.63,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intra time= 15 minutes) and MPC code 76816 *Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus* (work RVU= 0.85, intra time= 15 minutes) and agreed that both reference codes, with identical intra-service time compared to the surveyed code, provide appropriate brackets below and above the recommended value for 76942, respectively. Finally, the RUC compared 76942 to other image guidance for needle placement codes and agreed that a recommended work value of 0.67 accurately places this service in the mid-range of guidance codes, slightly above the less intense and complex CPT code 77003 *Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid)* (work RVU= 0.60, intra time= 15 minutes). **The RUC recommends a work RVU of 0.67 for CPT code 76942.**

Practice Expense

The RUC reviewed the direct PE inputs and noted a slight increase in clinical labor time for 76942 due to the increase of 5 minutes of intra-service time from the survey. The RUC approved the direct practice expense with no modifications as approved by the Practice Expense Subcommittee.

Medicare Utilization

The RUC noted that CMS identified 76942 as being potentially misvalued in the 2014 NPRM because of the high frequency that it is billed with CPT code 20610 *Arthrocentesis, aspiration and/or injection; major joint or bursa (eg, shoulder, hip, knee joint, subacromial bursa),* which has a shorter clinical staff intra-service time than the ultrasound guidance procedure. In response, the specialty societies created a bundled code for arthrocentesis performed with ultrasound guidance which will be a new service in CY2015. As the expected billing pattern for 76942 as a stand-alone service is unknown, the RUC agreed to monitor the future utilization of 76942 to ensure that the services commonly billed with it do not include clinical staff times which is non –congruent with the clinical staff times of the ultrasound guidance service.

CPT Code (●New)	CPT Descriptor	Global Period	Work RVU Recommendation
76942	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	XXX	0.67

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:76942 Tracking Number Original Specialty Recommended RVU: **0.76**
Presented Recommended RVU: **0.76**
Global Period: XXX RUC Recommended RVU: **0.67**

CPT Descriptor: Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Ultrasonic guidance is utilized for needle placement during a separately reported underlying procedure (eg, biopsy, aspiration, injection).

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 23%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 5%

Description of Pre-Service Work: The physician instructs the diagnostic medical sonographer in the ultrasound equipment required, including appropriate transducers, needle guides and probe covers, as well as the proper settings for the ultrasound equipment.

Description of Intra-Service Work: Preliminary ultrasound is performed to identify the appropriate approach for the initial needle placement. Ultrasound is used to confirm the correct trajectory for needle advancement to the target anatomic location, with care taken to avoid vascular structures and non-target organs. Intermittent ultrasound visualization may take place during the separately reportable intervention which necessitated the needle placement. Permanent images are recorded.

Description of Post-Service Work: A report describing the ultrasound guidance procedure, including the final position of the needle/catheter, is dictated, proofread, and submitted for the patient's medical record.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

Background:
CPT code 76942 *(Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation)* was identified by the CMS/Other – Utilization over 500,000 screen, and an action plan was requested by the RAW. For the February 2012 RUC meeting, the specialty societies submitted an action plan requesting a delay in surveying, pending the effects of the recent bundling of 76942 into the newly created thoracentesis and paracentesis codes. 76942 was also discussed extensively in the CY2014 NPRM, leading to submission of another action plan for the October 2013 RUC meeting. At that time, the specialty societies addressed the concerns raised in the NPRM but agreed to survey 76942 for April of 2014.

76942 has been performed together with a wide variety of underlying procedures and by a large number of different specialties. In the past two years, many of the most common procedures reported with 76942 have had their CPT codes modified to bundle the ultrasound guidance into the underlying codes. Consequently, for this large group of procedures, which includes thoracentesis, paracentesis, arthrocentesis, and breast biopsy, ultrasound guidance is no longer reported separately as 76942. As a result of these CPT code changes, the total utilization and the specialty distribution of 76942 is changing rapidly.

Survey Process
Nine specialty societies (American College of Radiology, American Association of Clinical Endocrinologists, American Academy of Physical Medicine & Rehabilitation, American College of Rheumatology, American Society of Anesthesiologists, American Society of Breast Surgeons, American Urological Association, Society of Interventional Radiology, The Endocrine Society) randomly surveyed their respective members using an RSL and vignette approved by the Research Subcommittee. A total of 255 complete surveys across seven specialties were received and analyzed. An expert panel, including physicians familiar with these services from each specialty, reviewed the survey data and developed the recommendations contained in the SOR.

Compelling Evidence
The specialty societies are recommending an increase in work RVU over the current value. The RUC database indicates the time source for 76942 as "CMS/Other ", indicating that this code was not Harvard valued and has never been surveyed. We believe that the requirement for compelling evidence is met since 76942 meets the criterion, "a flawed mechanism or methodology used in the previous valuation".

Work Recommendation:
The specialty societies recommend the median survey work RVU of 0.76, an increase of 0.09 RVU over the existing value of 0.67 RVU.

Service Period Time Recommendations:
Based on the analysis of the expert panel, the specialty societies recommend a pre-service time of 7 minutes, which is less than the survey median pre-service time of 10 minutes, in order to render the pre-time of 76942 compatible with two other recently reviewed XXX image guidance codes, 77002 *(Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device))* and 77003 *(Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid))*. The societies also recommend intra-service time of 15 minutes (survey median) and the post service time of 5 minutes (survey median).

Key Reference Service:

Two separate key reference services were chosen by a nearly identical number of survey respondents: 76536 *(Ultrasound, soft tissues of head and neck (eg, thyroid, parathyroid, parotid), real time with image documentation)* and 76881 *(Ultrasound, extremity, nonvascular, real-time with image documentation; complete)*, both of which support our recommendation.

76536 has 0.56 RVU, with less pre-time and intra time than 76942. However, our societies believe that guiding a needle into a specific location in an internal organ (e.g. thyroid), as is done with 76942, is of considerably greater intensity and complexity than 76536, which is a non-invasive, involving only visual observation of an internal structure (e.g. thyroid). This increased intensity/complexity of 76942 as compared to 76536, coupled with the increased time involved, accounts for the slightly higher work RVU value for 76942.

76881 is a diagnostic ultrasound code involving evaluation of the extremity. 76881 has the same intra-service and post-service time as 76942 and 2 minutes less pre-service time. In October of 2008, the RUC accepted and recommended to CMS an RVU of 0.72 RVU for 76881. However, CMS lowered the value to its current 0.63 RVU. The original RUC recommended value of 0.72, supported by a specialty society survey, supports our recommendation for 76942.

Code	RUC-approved RVU	CMS-lowered RVU	Pre	Intra	Post	Total	IWPUT
76536	0.56	0.56	4	10	4	18	0.0381
76881	0.72	0.63	5	15	5	25	0.0271
76942		**0.67**	**7**	**15**	**5**	**27**	**0.0327**

MPC Codes:

Our recommendation is bracketed by two ultrasound codes on the MPC list: 76817 *(Ultrasound, pregnant uterus, real time with image documentation, transvaginal)* and 76816 *(Ultrasound, pregnant uterus, real time with image documentation, follow-up (eg, re-evaluation of fetal size by measuring standard growth parameters and amniotic fluid volume, re-evaluation of organ system(s) suspected or confirmed to be abnormal on a previous scan), transabdominal approach, per fetus)*. 76817 has a comparable RVU of 0.75 and a lower intra time and total time. 76816 has a slightly higher RVU, the same intra time, more total time and a higher RVU.

Code	RVU	Pre	Intra	Post	Total	IWPUT
76817	0.75	5	10	8	23	0.0459
76942	**0.67**	**7**	**15**	**5**	**27**	**0.0327**
76816	0.85	6	15	10	31	0.0328

Comparison to other image guidance codes

Our recommendation compares favorably to the other RUC surveyed XXX imaging guidance codes and our expert panel believes that ultrasound guidance is more technically demanding than fluoroscopic guidance, requiring the manipulation of an ultrasound transducer with one hand and the needle / biopsy system with the other. Practiced, coordinated maneuvering is required to maintain visualization of the needle along its entire length to ensure proper target sampling and avoidance of non-target structures.

The entire family is summarized in the following table:

Code	Descriptor	RVU	Pre	Intra	Post	Total	IWPUT	RUC Meeting

76937	Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)	0.30		10	4	14	0.0210	Apr 2003
77002	Fluoroscopic guidance for needle placement (eg, biopsy, aspiration, injection, localization device)	0.54	7	15	5	27	0.0181	Apr 2013
77003	Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid)	0.60	7	15	5	27	0.0221	Apr 2013
76942	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation	**0.67**	**7**	**15**	**5**	**27**	**0.0327**	**Apr 2014**
77012	Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation	1.16				22		CMS/Other
77021	Magnetic resonance guidance for needle placement (eg, for biopsy, needle aspiration, injection, or placement of localization device) radiological supervision and interpretation	1.50	20	42.5	15	77.5	0.0168	Apr 2000

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76942

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology How often? Commonly

Specialty Anesthesiology How often? Commonly

Specialty Urology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 5070400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. It is estimated that this service will be provided 5,070,400 times nationally in a one-year period.

Specialty Radiology Frequency 1227500 Percentage 24.20 %

Specialty Anesthesiology Frequency 675000 Percentage 13.31 %

Specialty Urology Frequency 468000 Percentage 9.23 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,690,154 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2012 Medicare utilization data, it is estimated that this service will be provided to Medicare patients 1,690,154 times nationally within a one-year period. For 2013 and later, the utilization of 76942 will be less than these 2012 data as a result of new bundled codes for breast biopsy, thoracentesis, and arthrocentesis.

Specialty Radiology Frequency 409200 Percentage 24.21 %

Specialty Anesthesiology Frequency 225000 Percentage 13.31 %

Specialty Urology Frequency 156000 Percentage 9.22 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76942

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Code: _76942_______

Specialty Society('s)__ACR, AACE, AAPMR, ACRh, ASA, ASBS, AUA, SIR, TES_

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

76942	Ultrasonic guidance for needle placement (eg, biopsy, aspiration, injection, localization device), imaging supervision and interpretation

Global Period:_XXX____ Meeting Date: _April 2014_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee:

The ACR, AACE, AAPMR, ACRh, ASA, ASBS, AUA, SIR, and TES convened a consensus panel to finalize the practice expense data for CPT code 76942.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale:

The basis for the April 2014 PE inputs is the existing PE inputs for 76942, as approved by the February 2005 PEAC. The clinical labor time has been updated to capture CMS' recent refinement of the intra service time from 45 minutes to 10 minutes.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time:

N/A

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence:

Clinical Staff Time

- **Acquire Images** - increase to be consistent with the recommended physician intra service time, based on the survey median.

Supplies.

- **Lubricating jelly (Surgilube) (SJ033) -** clinically necessary for ultrasound examinations.

Equipment

- **Film processor, dry, laser (ED024) –** The time reflects typical use exclusive to a patient. The slight increase to the intra service time is reflected in the slight increase in equipment time.
- **Film alternator (motorized film viewbox) (ER029) –** The time reflects typical use exclusive to a patient. The slight increase to the intra service time is reflected in the slight increase in equipment time.

- **Ultrasound unit, portable (EQ250) -** The time reflects typical use exclusive to a patient. The slight increase to the intra service time is reflected in the slight increase in equipment time.

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

- Availability of prior images confirmed

Intra-Service Clinical Labor Activities:

- Prepare room, equipment, supplies
- Prepare and position patient/ monitor patient/ set up IV
- Acquire images
- Clean room/equipment by physician staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD
- Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue

Post-Service Clinical Labor Activities:

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Harvard Valued - Utilization Over 30,000-Part2 / High Volume Growth / CMS High Expenditure Procedural Codes

October 2017

Knee Arthrography Injection

In 2008, CPT code 27370 was initially identified on the high volume growth screen. In February 2009, this procedure was referred to CPT for possible deletion of 73580 and 27370 and creation of a new code accurately describing the procedure that is being performed, including the radiologic guidance in the procedure codes. In October 2009, the RUC recommended that the specialty society develop a CPT Assistant article to address misuse reporting of arthrography codes. In October 2013, CPT code 27370 appeared on the second iteration of the high volume growth screen. The RUC recommended to survey. At the February 2014 CPT Editorial Panel meeting this services was editorially revised. In October 2015, AMA staff re-ran the Harvard valued codes with utilization over 30,000 based on 2014 Medicare claims data and this service was identified. The RAW determined that this service will be placed on the next level of interest form to survey. This service was also identified as a service on the third iteration of the high volume growth screen. In October 2016, the RUC went through the history of this code. The specialty societies explained that the high volume growth for this procedure is likely due to its being reported incorrectly as arthrocentesis or aspiration. The correct reporting of those services is CPT code 20610 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); without ultrasound guidance* (work RVU= 0.79). The RUC extensively discussed the appropriate options to address the rising inappropriate utilization of this procedure. The RUC noted that deleting this code and then bundling it into the arthrography base procedures would not be ideal because it would involve edits to over 70 codes. The RUC also discussed that this procedure could become an add-on code. However, the RUC came to an agreement that this code should be referred to CPT for deletion and be replaced by a new code. The members agreed that this is the most efficient way to stem the rising inappropriate volume. The RUC recommended that CPT code 27370 be referred to the CPT Editorial Panel for deletion and be replaced with a new code. In June 2017, the CPT Editorial Panel deleted the injection of contrast for knee arthrography code, 27370, and replaced it with a new code, 27369, to report injection procedure for knee arthrography or enhanced CT/MRI knee arthrography.

27369 *Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography*
The RUC reviewed the survey results from 34 physicians and agreed with the following physician time component: pre-service time of 8 minutes, intra-service time of 15 minutes, and post-service time of 5 minutes, for a total of 28 minutes. The RUC reviewed the recommended work RVU of 0.96 which is below the survey 25th percentile but is the existing work RVU for the deleted code, 27370 *Injection of contrast for knee arthrography* (work RVU= 0.96). The RUC agreed that this value appropriately accounts for the physician work involved. To justify the work RVU of 0.96, the RUC reviewed CPT code 27370 and noted that both services should be valued identically rather than seeking the survey 25th

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

percentile, which would have necessitated a compelling evidence argument. The RUC agreed that the survey code work RVU should reflect that of the deleted code and the survey code physician time component should parallel the physician times of the top key reference service code, 23350 *Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography* (pre-service time of 8 minutes, intra-service time of 15 minutes, and post-service time of 5 minutes), noting that the top key reference code involves an identical amount of both intra-service time and total time, as well as a similar amount of physician work, further supporting a work RVU of 0.96 for the survey code. **The RUC recommends a work RVU of 0.96 for CPT code 27369.**

CPT Referral
At the October 2017 RUC meeting, code 27369 *Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography* was discussed. In an effort to support accurate reporting for codes 20610, 20611, it was suggested that the parenthetical note currently placed under new code 27369 also be placed after the deletion note for code 27370.

(For arthrocentesis of the knee or injection of any material other than contrast for subsequent arthrography, see 20610, 20611)

Practice Expense
The specialty society originally recommended 14 minutes of clinical staff time for clinical activity CA021, *Perform procedure/service---NOT directly related to physician work time.* The PE Subcommittee determined that this was clinical staff time spent assisting the physician not working independently and moved the clinical staff time to clinical activity CA018, *Assist physician or other qualified healthcare professional---directly related to physician work time (100%).* This change caused the time to increase from 14 to 15 minutes because it is directly tied to the physician work intra-service time of 15 minutes. The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee for CPT code 27369.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Descriptor: Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male with a prior meniscal tear repair presents with new onset knee pain. There is clinical concern for recurrent meniscal tear. A contrast injection into the knee joint is requested for a subsequent arthrography exam.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review reason for the examination and any pertinent clinical history, including any allergies. Review any prior imaging studies and plan the procedure. Explain the procedure and its purpose to the patient, including potential complications. Obtain and document informed consent.

Description of Intra-Service Work: Position the patient on the fluoroscopy table. Perform a time-out procedure to ensure correct patient, procedure, and site. Prepare contrast mixtures for the test injection and the arthrogram injection. The affected knee is prepped and sterilely draped.
Under fluoroscopic guidance (separately reported with 73580 for plain film arthrography or with 77002 for subsequent CT or MR arthrography), the needle is inserted into the knee joint. Perform a test injection to confirm intraarticular positioning of the needle tip and proper distribution of contrast (needle is repositioned as necessary). Inject the arthrogram contrast material into knee joint (typically 40-60 mL). Confirm proper distribution of contrast in the joint and adequate joint distention with intermittent imaging. Remove the needle and apply a dressing at the injection site.

Description of Post-Service Work: Provide instructions to the patient on joint care. Transport the patient to appropriate imaging suite for arthrogram while avoiding excess joint manipulation or loading.
Dictate the injection procedure report. Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	0%	70%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	30%	70%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

CPT Code 27370 *(Injection procedure for knee arthrography)* was identified through the April 2013 Relativity Assessment Workgroup (RAW) screen for all services with a total Medicare utilization of 10,000 or more that have increased by at least 100% from 2006 through 2011. It was felt that miscoding explained the growth of this code. At the October 2013 CPT meeting, the descriptor of code 27370 was revised from “injection procedure for knee arthrography” to “injection of contrast for knee arthrography.” This change was reflected in the 2015 CPT manual.
Subsequently, CPT code 27370 *(Injection of contrast for knee arthrography)* was identified by CMS as potentially mis-valued in the 2016 MPFS NPRM. It was recommended that CPT Code 27370 be deleted.

CPT Code 27369 *(Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography)* was created to replace CPT Code 27370 *(Injection of contrast for knee arthrography).*

Survey Process:
The American College of Radiology (ACR) conducted a random survey of members. The ACR also surveyed a random subset of members who have indicated that they perform musculoskeletal radiology and/or radiography/fluoroscopy procedures. The ACR assembled an expert panel to review the data and develop the following recommendations.

Compelling Evidence:
This code replaces CPT Code 27370 *(Injection of contrast for knee arthrography)*. For this new code, we are requesting a value identical to shoulder arthrography, CPT code 23350, to avoid rank order anomalies between injection codes. Additionally, the dominant specialty of the new code will be radiology, while the deleted code was predominantly performed by Family Practice (23.75%), Physical Medicine and Rehabilitation (19.17%), and General Practice (8.18%).

Work RVU Recommendation:
We recommend a work RVU of 1.00, which is the 25th percentile survey value and an increase from deleted code value of 0.96 wRVU.

Time Recommendation:
We recommend the median survey times of 10 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service, for a total time of 30 minutes. In the pre-service period, we recommend 5, 3, and 2 minutes, allocated to Evaluation, Positioning, and Scrub/Dress/Wait, respectively.

Key Reference Services:
Our recommendation compares favorably to the two most commonly chosen key reference services (KRS):

- 23350 *(Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography)* chosen by 38% of respondents, and
- 20611 *(Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting)* chosen by 29% of respondents.

Our recommended work value of 1.00 wRVU for 27369 is identical to the first key reference service, CPT code 23350, which is also an MPC code. Additionally, the recommended value for 27369 is below the second key reference service, CPT code 20611, which has a wRVU of 1.10. While 27369 has 2 more minutes of pre-service time compared to 23350, the intra service times are identical, and the total times and overall intensity are similar, indicating that the recommended value is appropriate. Additionally, the higher intra-service time compared to 20611 reflects greater time and effort required to confirm contrast injection into the joint.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total	Pre	Intra	Post	IWPUT

			Time				
23350	Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography	1.00	28	8	15	5	0.049
27369	**Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography**	**1.00**	**30**	**10**	**15**	**5**	**0.046**
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	27	12	10	5	0.079

MPC Codes:
The most commonly chosen KRS for 27369 is 23350, which is also an MPC code and has the same work RVU as our recommendation.

The surveyed code (27369) also compares well with two non-radiology MPC codes:

- 11042 *(Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less)* and
- 12011 *(Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less)*.

The surveyed code (27369) has the same intra-service period as MPC code 11042, and nearly identical wRVUs (1.00 for 27369 and 1.01 for 11042, respectively).

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
27369	**Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography**	**1.00**	**30**	**10**	**15**	**5**	**0.046**
11042	Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less	1.01	36	11	15	10	0.037
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	24	7	12	5	0.068

Conclusion:
The compelling evidence, survey results, and comparison with applicable codes support the recommended value for 27369 *(Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography)* at the 25th percentile survey value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 27369 is typically reported with fluoroscopic guidance code 77002 and an imaging code.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 27370

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Orthopedic Surgery How often? Sometimes

Specialty Physical Medicine and Rehabilitation How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 93000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 27369 provided nationally in a one-year period is estimated to be 93,000 .

Specialty Diagnostic Radiology Frequency 79050 Percentage 85.00 %

Specialty Orthopedic Surgery Frequency 9300 Percentage 10.00 %

Specialty Physical Medicine and Rehabilitation Frequency 4650 Percentage 5.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 31,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR recommends that CPT code 27369 is billed approximately 31,000 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 26350 Percentage 85.00 %

Specialty Orthopedic Surgery Frequency 3100 Percentage 10.00 %

Specialty Physical Medicine and Rehabilitation Frequency 1550 Percentage 5.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Standard imaging

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 23350

CPT Code: 27369
Specialty Society: ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

27369	Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography

Global Period: XXX   Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the knee arthrography injection CPT code 27369.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   The society included the existing PE inputs for CPT code 27370, the current code for 27369, on the spreadsheet to serve as a reference.

3. Is this code(s) typically billed with an E/M service?

   No. CPT code 27370 was typically billed with an E/M service (Non-Fac only) 41% of the time. The new code, 27369, was created to correct miscoding issues and is expected to be billed with an E/M service much less frequently.

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)

   CPT code 27369 was created and is being reviewed by the RUC due to issues with miscoding of the now deleted old code, 27370. The RUC Database currently shows family practice as being the dominant provider of 27370, but this will not accurately reflect the dominant provider of the new code. Radiology should be the dominant provider for this new code.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

n/a

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   The clinical staff monitors the patient throughout the injection procedure. In addition, the clinical staff assists the physician in drawing up all medications used during the procedure (e.g. short acting anesthetic, long acting anesthetic, saline, steroid, x-ray contrast and MR contrast). This includes safety checks of medication type, dosage, expiration dates and patient allergies as well as documenting administered doses. The clinical staff positions the patient as directed by the physician (e.g. knee flexion, extension, internal or external rotation) in order to facilitate injection distribution. The clinical staff monitors patient pain during procedure and documents pain at end of procedure.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   n/a

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    n/a

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    n/a

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    n/a

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    n/a

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **Room, radiographic-fluoroscopic (EL014):** highly technical formula

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    n/a

16. If there is any other item on your spreadsheet that needs further explanation please include here:
    n/a

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedural Codes

October 2017

Breast MRI with Computer-Aided Detection

In the NPRM for 2016, CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In preparation to survey CPT codes 77058 and 77059, the specialty societies noted that the clinical indications had changed for these exams. Additionally, the technology had advanced such that there were changes in physician work, practice expense, and work flow. Further, these codes did not parallel the structure of other MRI codes. Finally, computer-aided detection (CAD) had become typical for the without and with contrast examinations. The RUC recommended CPT code 77058 and 77059 be referred to the CPT Editorial Panel. In June 2017 the CPT Editorial Panel deleted codes 0159T, 77058, and 77059 and created two new codes to report breast MRI without contrast and two new breast MRI without and with contrast material codes (including computer-aided detection).

Compelling Evidence
The specialty society presented compelling evidence for codes 77048 and 77049. The society noted that their compelling evidence argument is based on a change in patient population and change in technology. This code family was last valued by the RUC in 1995 with both 77058 *MRI breast; unilateral* and 77059 *MRI breast; bilateral* assigned a work RVU of 1.63, with total times of 50 and 55 minutes respectively. At that time, the indications for breast MRI were far more limited and were not even sufficiently differentiated between the assessment of implant integrity and the detection and evaluation of breast cancer to necessitate the creation of separate CPT codes. As dynamic contrast enhanced sequences became available, MRI has proven to be the most sensitive tool for detection of breast cancer. These developments were made possible by the development of new software, hardware, and physician skill. Some of this additional physician work and practice expense was initially described in a Category III code, 0159T, which has been used since July 2006. The specialty society believes that 0159T now meets all the requirements of a Category I Code, including FDA approval, widespread usage by many physicians across the United States, being performed with frequency consistent with intended clinical use, and documented clinical efficacy in the literature. This Category III code has been bundled with the unilateral and bilateral breast MRI without and with contrast material (77048 and 77049). The RUC accepted that there is compelling evidence for codes 77048 and 77049.

77046 *Magnetic resonance imaging, breast, without contrast material; unilateral*
The RUC reviewed the survey results from 49 physicians and agreed with the following physician time component: pre-service time of 5 minutes, intra-service time of 25 minutes, and post-service time of 5 minutes. The RUC reviewed the recommended work RVU of 1.45

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

which is the survey 25th percentile and agreed that this value appropriately accounts for the physician work involved. The RUC compared CPT codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU= 1.74, pre-service time of 5 minutes, intra-service time of 22 minutes, and post-service time of 5 minutes) and 74177 *Computed tomography, abdomen and pelvis; with contrast material(s)* (work RVU=1.82, pre-service time of 5 minutes, intra-service time of 25 minutes, and post-service time of 5 minutes) and noted that the recommended work RVU for the surveyed code is appropriately less than the top two key reference services. Additionally, the RUC also reviewed MPC code 92014 *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits* (work RVU= 1.42, pre-service time of 5 minutes, intra-service time of 24 minutes, and post-service time of 8 minutes) and noted that these services require similar physician work and time to perform, further supporting a work RVU of 1.45 for the surveyed code. **The RUC recommends a work RVU of 1.45 for CPT code 77046.**

77047 ***Magnetic resonance imaging, breast, without contrast material; bilateral***
The RUC reviewed the survey results from 49 physicians and agreed with the following physician time component: pre-service time of 5 minutes, intra-service time of 30 minutes, and post-service time of 5 minutes. The RUC reviewed the recommended work RVU of 1.60 which is the survey 25th percentile and agreed that this value appropriately accounts for the physician work involved. The RUC compared the survey code to CPT code 78452 *Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection* (work RVU= 1.62, pre-service time of 10 minutes, intra-service time of 20 minutes, post-service time of 10 minutes, and total time of 40 minutes) and noted that both services have similar work RVUs and identical total physician time, and therefore should be valued similarly. The RUC also reviewed CPT code 73719 *Magnetic resonance (eg, proton) imaging, lower extremity other than joint; with contrast material(s)* (work RVU= 1.62, pre-service time of 10 minutes, intra-service time of 20 minutes, post-service time of 10 minutes, and total time of 40 minutes) and noted that both services also have similar work RVUs and identical total physician time, further supporting the recommended value of 1.60 for the survey code. **The RUC recommends a work RVU of 1.60 for CPT code 77047.**

77048 ***Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral***
The RUC reviewed the survey results from 49 physicians and agreed with the following physician time component: pre-service time of 8 minutes, intra-service time of 32 minutes, and post-service time of 8 minutes. The RUC reviewed the recommended work RVU of 2.10, the survey 25th percentile and agreed that this value appropriately accounts for the physician work involved. To justify the work RVU of 2.10, the RUC referenced the most commonly chosen key reference services, codes 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions* (work RVU= 2.01, pre-service time of 5 minutes, intra-service time of 30 minutes, and post-service time of 5 minutes) and 71552 *Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences* (work RVU= 2.26, pre-service time of 7.5 minutes, intra-service time of 24 minutes, and post-service time of 10 minutes) and noted that the survey code

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

has 2 more minutes of intra-service time and 6 more total minutes of pre and post-service time compared to code 74178. CPT code 74178 is also an MPC code. The recommended value for the survey code is appropriately higher than code 74178 at 2.10, compared to 2.01 for the key reference service. Additionally, code 71552 has less intra-service time and less total time compared to the survey code, but more overall intensity/ complexity and a higher work value. Both key reference and MPC services support the recommended value for the surveyed code. **The RUC recommends a work RVU of 2.10 for CPT code 77048.**

77049 ***Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral***
The RUC reviewed the survey results from 49 physicians and agreed with the following physician time component: pre-service time of 8 minutes, intra-service time of 42 minutes, post-service time of 8 minutes, and a total time of 58 minutes. The RUC reviewed the recommended work RVU of 2.30 which is the survey 25th percentile and agreed that this value appropriately accounts for the physician work involved. To justify the work RVU of 2.30, the RUC referenced CPT code 75557 *Cardiac magnetic resonance imaging for morphology and function without contrast material;* (work RVU= 2.35, pre-service time of 10 minutes, intra-service time of 40 minutes, post-service time of 10 minutes, and total time of 60 minutes) and noted that both services have similar intra-service times and similar total physician times. The recommended work RVU and the physician time of the survey code is slightly lower than the reference code, therefore a work RVU of 2.30 for the survey code is appropriate. To further support a work RVU of 2.30 for the survey code, the RUC also reviewed CPT code 99386 *Initial comprehensive preventive medicine evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; 40-64 years* (work RVU= 2.33, pre-service time of 10 minutes, intra-service time of 40 minutes, post-service time of 10 minutes, and total time of 60 minutes) and noted that both services involve similar physician work, further supporting a work RVU of 2.30 for the survey code. **The RUC recommends a work RVU of 2.30 for CPT code 77049.**

Practice Expense
The PE Subcommittee made the following modifications to the PE spreadsheet:

- **77048:** Removal of SG021 (bandage, strip 0.75in x 3in [Bandaid]), removal of SG053 (gauze, sterile 2in x 2in), removal of SG079 (tape, surgical paper 1in [Micropore]), and removal of SJ043 (providone swabsticks [3 pack uou])

- **77049:** Removal of SG021 (bandage, strip 0.75in x 3in [Bandaid]), removal of SG053 (gauze, sterile 2in x 2in), removal of SG079 (tape, surgical paper 1in [Micropore]), and removal of SJ043 (providone swabsticks [3 pack uou])

The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee for CPT codes 77048 and 77049.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

New Technology/New Services
These services will be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Radiology Diagnostic Radiology (Diagnostic Imaging) Chest				
71550		*Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s)*		
71551		*with contrast material(s)*		
71552		*without contrast material(s), followed by contrast material(s) and further sequences*		
		(For breast MRI, see 77046, 77047, 77048, 77049, ~~77058~~, ~~77059~~)		
Other Procedures				
76376		*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation*		
		(Use 76376 in conjunction with code[s] for base imaging procedure[s])		
		(Do not report 76376 in conjunction with 31627, 34839, 70496, 70498, 70544, 70545, 70546, 70547, 70548, 70549, 71275, 71555, 72159, 72191, 72198, 73206, 73225, 73706, 73725, 74174, 74175, 74185, 74261, 74262, 74263, 75557, 75559, 75561, 75563, 75565, 75571, 75572, 75573, 75574, 75635, 76377, 77046, 77047, 77048, 77049, 77061, 77062, 77063, 78012-78999, 93355, ~~0159T~~)		
76377		*requiring image postprocessing on an independent workstation*		
		(Use 76377 in conjunction with code[s] for base imaging procedure[s])

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77046 Tracking Number I1 Original Specialty Recommended RVU: **1.45**

Presented Recommended RVU: **1.45**

Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **1.45**

CPT Descriptor: Magnetic resonance imaging, breast, without contrast material; unilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old female status-post right mastectomy with implant reconstruction and suspected implant rupture.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness, and review the clinical history as well as any prior applicable studies. Review patient history questionnaire and technologist notes. Assess patient risk factors from questionnaire. Confirm that there is no contraindication for an MRI. Communicate the protocol to the technologist.

Description of Intra-Service Work: Interpret images, evaluating implant integrity and for evidence of intra- or extra-capsular implant rupture. Evaluate for etiology of clinical exam findings or abnormalities questioned on previous imaging. Assess the breast tissue for any abnormalities. Evaluate remainder of structures in the visualized anatomy, including the axilla, internal mammary lymph node chain, skin, pectoral muscles and chest wall, bones, visualized mediastinum and upper abdomen.
Compare the current imaging to all pertinent available prior studies. Dictate a report, utilizing standardized lexicon to describe findings and formulating a final recommendation according to standardized reporting system (BIRADS).

Description of Post-Service Work: Review and sign the final report. Communicate the findings with the referring physician and/or patient.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	30%	10%	60%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	30%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	10%	70%
Physical effort required	30%	60%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	29%	71%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	29%	71%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	29%	57%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	29%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
In the past, two codes have been used to describe Breast MRI - 77058 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral)* and 77059 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral).* In addition, one Category III Code (0159T) has been used to describe Breast MRI Computer Aided Detection (CAD). CPT code 77059 was identified as potentially misvalued in the NPRM 2016 High Expenditure by Specialty Screen, and the family was expanded to include CPT code 77058. The family was then referred to the CPT Editorial Panel for review, and four new codes were created to describe Breast MRI:

- 77046 *(Magnetic resonance imaging, breast, without contrast material; unilateral)*,
- 77047 *(Magnetic resonance imaging, breast, without contrast material; bilateral)*,
- 77048 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral)*, and
- 77049 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral).*

Survey Process:
The ACR surveyed a total of 1250 members (a random sample of 625 members and a separate random sample of 625 members who perform in the modalities of mammography, magnetic resonance imaging, and/or breast imaging). An expert panel, including physicians familiar with these services, reviewed the data and developed the following recommendations. Out of the total number of survey respondents, 88% found the service to be typical.

Work RVU Recommendation:
The society recommends a work RVU of 1.45 (at the 25% survey percentile), which is below current value.

Time Recommendation:
We recommend the following survey times: 5 minutes pre-service, 25 minutes intra-service, and 5 minutes post-service. This is a total time of 35 minutes compared to the existing time of 50 minutes.

Key Reference Services:
Our recommended work RVU falls below both of the most commonly chosen key reference services, but all three services have similar intra-service period times.

- 74176 *(Computed tomography, abdomen and pelvis; without contrast material),* chosen by 20% of respondents, and
- 74177 *(Computed tomography, abdomen and pelvis; with contrast material(s)),* chosen by 14% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the limitations of the reference service list. Specifically, there were unfortunately few appropriate XXX global procedure codes to compare with this newly bundled service that are also commonly performed by the physicians who perform the surveyed codes. Specifically, many comparable MRI codes (including extremity, abdominal, and pelvic MRI) have been recently surveyed and could not be used for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
77046	**Magnetic resonance imaging, breast, without contrast material; unilateral**	**1.45**	**35**	**5**	**25**	**5**	**0.049**	
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069	20%
74177	Computed tomography, abdomen and pelvis; with contrast material(s)	1.82	35	5	25	5	0.064	14%

MPC Codes:
The surveyed code compares well with four other MPC codes, only two of which are radiology codes:

- 74170 *(Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections)*,
- 92014 *(Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits)*,
- 99214 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.)*, and
- 78072 (*Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization).*

The surveyed code, 77046, is closely bracketed by the non-radiology MPC codes 92014 and 99214. Additionally, 77046 has a longer intra-service time than either 74170 or 78072, but the recommended work RVU is between the values of these two codes. These four MPC codes are included in a table below for comparison and confirm the appropriateness of the recommended wRVU for 77046 within the larger RBRVS.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74170	Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections	1.40	28	5	18	5	0.065
92014	Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits	1.42	37	5	24	8	0.047
77046	**Magnetic resonance imaging, breast, without contrast material; unilateral**	**1.45**	**35**	**5**	**25**	**5**	**0.049**
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.	1.50	40	5	25	10	0.047
78072	Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization	1.60	30	5	20	5	0.069

Family of Codes:

Our recommendations for 77046 fit appropriately within the family of Breast MRI. The recommended work RVU of 1.45 is less than the current RVU (1.63) and is supported by the aforementioned KRS and MPC codes.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
77046	**Magnetic resonance imaging, breast, without contrast material; unilateral**	**1.45**	**35**	**5**	**25**	**5**	**0.049**
77047	Magnetic resonance imaging, breast, without contrast material; bilateral	1.60	40	5	30	5	0.046
77048	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral	2.10	48	8	32	8	0.054
77049	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral	2.30	58	8	42	8	0.046

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77058

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2031
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 77X49 provided nationally in a one-year period is estimated to be 2,031.

Specialty Diagnostic Radiology Frequency 1906 Percentage 93.84 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 677 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR recommends that CPT code 77X49 is billed approximately 677 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 635 Percentage 93.79 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 77065

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 53-year-old female with bilateral breast implants and suspected implant rupture.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness, and review the clinical history as well as any prior applicable studies. Review patient history questionnaire and technologist notes. Assess patient risk factors from questionnaire. Confirm that there is no contraindication for an MRI. Communicate the protocol to the technologist.

Description of Intra-Service Work: Interpret images, evaluating implant integrity and for evidence of intra- or extra-capsular implant rupture. Evaluate for etiology of clinical exam findings or abnormalities questioned on previous imaging. Assess the breast tissue for any abnormalities. Evaluate remainder of structures in the visualized anatomy, including the axillas, internal mammary lymph node chain, skin, pectoral muscles and chest wall, bones, visualized mediastinum and upper abdomen.
Compare the current imaging to all pertinent available prior studies. Dictate a report, utilizing standardized lexicon to describe findings and formulating a final recommendation according to standardized reporting system (BIRADS).

Description of Post-Service Work: Review and sign the final report. Communicate the findings with the referring physician and/or patient.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	30%	70%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	20%	60%

Physical effort required	10%	40%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	30%	70%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	22%	44%	33%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	22%	56%	22%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	22%	33%	44%
Physical effort required	11%	78%	11%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	44%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In the past, two codes have been used to describe Breast MRI - 77058 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral)* and 77059 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral)*. In addition, one Category III Code (0159T) has been used to describe Breast MRI Computer Aided Detection (CAD). CPT code 77059 was identified as potentially misvalued in the NPRM 2016 High Expenditure by Specialty Screen, and the family was expanded to include CPT code 77058. The family was then referred to the CPT Editorial Panel for review, and four new codes were created to describe Breast MRI:

- 77046 *(Magnetic resonance imaging, breast, without contrast material; unilateral)*,
- 77047 *(Magnetic resonance imaging, breast, without contrast material; bilateral)*,
- 77048 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral)*, and
- 77049 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral)*.

Survey Process:
The ACR surveyed a total of 1250 members (a random sample of 625 members and a separate random sample of 625 members who perform in the modalities of mammography, magnetic resonance imaging, and/or breast imaging). An expert panel, including physicians familiar with these services, reviewed the data and developed the following recommendations. Out of the total number of survey respondents, 96% found the service to be typical.

Work RVU Recommendation:
The society recommends a work RVU of 1.60 (the 25th percentile survey value), which is below current value.

Time Recommendation:
We recommend the following survey times: 5 minutes pre-service, 30 minutes intra-service, and 5 minutes post-service. This is a total time of 40 minutes compared to the existing time of 55 minutes.

Key Reference Services:
Our recommended work RVU falls below both of the most commonly chosen key reference services.

- 74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions),* chosen by 20% of respondents, and
- 74176 *(Computed tomography, abdomen and pelvis; without contrast material),* chosen by 18% of respondents.

The difference between the chosen key reference services and the surveyed code reflect the limitations of the reference service list. Specifically, there were few appropriate XXX global procedure codes to compare with this newly bundled service that are also commonly performed by the physicians who perform the surveyed codes. Specifically, many comparable MRI codes (including extremity, abdominal, and pelvic MRI) have been recently surveyed and could not be used for comparison. Despite these limitations, the chosen key reference services demonstrate that the recommended value for 77047 is well within an appropriate range.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
77047	**Magnetic resonance imaging, breast, without contrast material; bilateral**	**1.60**	**40**	**5**	**30**	**5**	**0.046**	
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	32	5	22	5	0.069	18%
74178	Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions	2.01	40	5	30	5	0.060	20%

MPC Codes:

The surveyed code compares well with three other MPC codes, two of which are non-radiology codes:

- 78072 *(Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization)*,
- 92004 *(Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits),* and
- 99239 *(Hospital discharge day management; more than 30 minutes).*

77047 has the save recommended wRVU as 78072, but 10 more minutes of intra-service time. This would suggest 77047 may be undervalued. As well, 92004 has the same total time as 77047 of 40 minutes, but a slightly higher work RVU with less intra-service time. This also suggests 77047 may be undervalued. However, while 99239 and 77047 both have 30 minutes of intra-service time, 99239 has 15 more minutes of pre- and post-service work, which accounts for the 0.3 wRVU difference between the two codes (at the 0.0224 RVU/minute rate).

These comparisons support the recommended value for 77047 and show that it is likely at the low end of an expected wRVU range for this service.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
78072	Parathyroid planar imaging (including subtraction, when performed); with tomographic (SPECT), and concurrently acquired computed tomography (CT) for anatomical localization	1.60	30	5	20	5	0.069
77047	**Magnetic resonance imaging, breast, without contrast material; bilateral**	**1.60**	**40**	**5**	**30**	**5**	**0.046**
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits	1.82	40	5	25	10	0.059
99239	Hospital discharge day management; more than 30 minutes	1.90	55	10	30	15	0.045

Family of Codes:

Our recommendations for 77047 fit appropriately within the family of Breast MRI. The recommended work RVU of 1.60 is less than the current RVU (1.63) and at the low end of expected work RVUs given the KRS and MPC comparisons.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
77046	Magnetic resonance imaging, breast, without contrast material; unilateral	1.45	35	5	25	5	0.049
77047	**Magnetic resonance imaging, breast, without contrast material; bilateral**	**1.60**	**40**	**5**	**30**	**5**	**0.046**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77059

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 27690
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 77X50 provided nationally in a one-year period is estimated to be 27,690.

Specialty Diagnostic Radiology Frequency 26569 Percentage 95.95 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,230
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR recommends that CPT code 77X50 is billed approximately 9,230 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 8856 Percentage 95.94 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 54-year-old female who is status post left mastectomy for previous breast cancer and who is a high risk for breast cancer based on genetic mutation.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness, and review the clinical history as well as any prior applicable studies. Specifically review clinical notes from the surgeon, oncologist, and PCP relevant to cancer diagnosis, including tumor staging, physical exam findings and how MRI results may impact surgical and treatment plan (e.g. multicentric disease on MRI would warrant mastectomy in a patient who would otherwise be a candidate for lumpectomy). Review pathology from prior biopsy. Confirm that there is no contraindication for an MRI. Communicate the protocol to the technologist.

Description of Intra-Service Work: Interpret images, evaluating background parenchymal enhancement, biopsy sites, and any cystic or solid masses or non-mass enhancement. Characterize lesions with respect to margins, enhancement pattern, associated features (including architectural distortion, edema, skin or nipple retraction), location, and depth from the nipple. Activate computer-aided detection (CAD). Review CAD images to determine if there are lesions that enhance to a greater extent than normal background parenchymal enhancement. Use CAD software to acquire kinetic enhancement curves to determine temporal pattern of enhancement. If multiple lesions are present, establish whether there is multifocal or multicentric disease. Determine if any findings require further imaging or intervention (e.g. second look ultrasound and/or MR-guided biopsy). Evaluate remainder of structures in the visualized anatomy, including the axilla, internal mammary lymph node chain, skin, pectoral muscles and chest wall, bones, visualized mediastinum and upper abdomen.
Compare the current imaging to all pertinent available prior studies. Correlate biopsy results with imaging findings. Dictate a report, utilizing standardized lexicon to describe findings and formulating a final recommendation according to standardized reporting system (BIRADS).

Description of Post-Service Work: Review and sign the final report. Communicate the findings with the referring physician and/or patient.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	25%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	17%	83%
Physical effort required	25%	50%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	0%	83%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	44%	56%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	0%	89%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	22%	78%
Physical effort required	0%	56%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	11%	89%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
In the past, two codes have been used to describe Breast MRI - 77058 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral)* and 77059 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral).* In addition, one Category III Code (0159T) has been used to describe Breast MRI Computer Aided Detection (CAD). CPT code 77059 was identified as potentially misvalued in the NPRM 2016 High Expenditure by Specialty Screen, and the family was expanded to include CPT code 77058. The family was then referred to the CPT Editorial Panel for review, and four new codes were created to describe Breast MRI:

- 77046 *(Magnetic resonance imaging, breast, without contrast material; unilateral)*,
- 77047 *(Magnetic resonance imaging, breast, without contrast material; bilateral)*,
- 77048 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral)*, and
- 77049 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral).*

Survey Process:
The ACR surveyed a total of 1250 members (a random sample of 625 members and a separate random sample of 625 members who perform in the modalities of mammography, magnetic resonance imaging, and/or breast imaging). An expert panel, including physician familiar with these services, reviewed the data and developed the following recommendations. Out of the total number of survey respondents, 86% found the service to be typical.

Work RVU Recommendation:
The society recommends a work RVU of 2.10 (the 25th percentile survey value).

Compelling Evidence:
We are requesting an increase in value for only two of the four codes in this family (77048 and 77049) and a decrease in value for the other two (77046 and 77047). This compelling evidence argument is based on a change in patient population and change in technology.

This code family was last valued by the RUC in 1995 with both 77058 *(MRI breast; unilateral)* and 77059 *(MRI breast; bilateral)* assigned a wRVU of 1.63, with total times of 50 and 55 minutes, respectively. At that time, the indications for breast MRI were far more limited and were not even sufficiently differentiated between the assessment of implant integrity and the detection and evaluation of breast cancer to necessitate the creation of separate CPT codes. As dynamic contrast enhanced sequences became available, MRI has proven to be the most sensitive tool for detection of breast cancer. These developments were made possible by the development of new software, hardware, and physician skill. Some of this additional physician work and practice expense was initially described in a Category III code, 0159T, which has been used since July 2006. Breast MRI CAD involves complex post processing, including subtraction of multiple contrast enhanced sequences from unenhanced sequences to highlight lesion conspicuity, selection of regions of interest by the physician to assess enhancement characteristics, generation of kinetic curves, and correlation between multi-planar reformatted images to localize lesions and demonstrate their extent. We believe that 0159T now meets all the requirements of a Category I Code, including FDA approval, widespread usage by many physicians across the United States, being performed with frequency consistent with intended clinical use, and documented clinical efficacy in the literature. This Category III code has been bundled with the unilateral and bilateral breast MRI without and with contrast material (77048 and 77049).

In the ensuing years since the breast MRI codes were last valued; the ACR developed a breast MRI practice parameter and a breast MRI Accreditation Program to define standards for optimal care. The technology to perform MRI guided biopsies has been developed as well. The indications for breast MRI have greatly expanded, including evaluation for extent of disease for surgical decision making and presence of unsuspected

contralateral cancer in patients with newly diagnosed breast cancer, presence of residual disease after lumpectomy with positive or close margins, detection of mammographically occult breast cancer in patients with axillary nodal metastases, and to assess response to neoadjuvant chemotherapy. In addition, the American Cancer Society recommends that women at high-risk for breast cancer have breast MRI screening. Although the tracking of utilization of a Category III code is sometimes difficult due to variable payment policies, the increase in Medicare utilization of 77059 likely reflects an accurate increase in utilization of breast MRI without and with contrast and CAD.

Time Recommendation:
We recommend the following survey times: 8 minutes pre-service, 32 minutes intra-service, and 8 minutes post-service. This is a total time of 48 minutes compared to the existing time of 50 minutes.

Key Reference Services:
The surveyed code, 77048, is bracketed by the two most commonly chose key reference services:

- 74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)*, chosen by 24% of respondents, and
- 71552 *(Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences)*, chosen by 18% of respondents.

77048 has 2 more minutes of intra-service time and 6 more minutes of pre- and post-service time compared with 74178, and the recommended value for 77048 is appropriately higher than 74178 at 2.10 compared with 2.01. Additionally, 71552 has shorter total time and intra-service time compared with 77048, but a slightly higher value. These key reference services support the recommended value for 77048 and indicate that it is at the lower end of the expected wRVU range given the service period times and demanding, technical nature of the work.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
74178	Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further	2.01	40	5	30	5	0.060	24%

	sections in one or both body regions							
77048	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral**	**2.10**	**48**	**8**	**32**	**8**	**0.054**	
71552	Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences	2.26	41.5	7.5	24	10	0.078	18%

MPC Codes:
The surveyed code, compares well with two radiology MPC codes, which are also the most commonly chose key reference services:

- 74178 *(Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions)*, and
- 71552 *(Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences).*

Additionally, there are two non-radiology MPC codes that compare well with 77048:

- 99460 *(Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant),* and
- 99215 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.).*

The relativity of 77048 and the two radiology MPC codes was adequately discussed in the KRS section. Code 99215 has substantially the same wRVU as 77048, 2.11 compared with 2.10 but slightly longer total time and intra-service time. Similarly, 99460 has a lower wRVU compared to 77048, but also has less intra-service time. Both of these codes confirm the appropriate relativity of the wRVU recommendation for 77048 compared with the larger RBRVS.

Both the radiology and non-radiology MPC codes are included in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
99460	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn	1.92	50	10	30	10	0.049

	infant						
74178	Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions	2.01	40	5	30	5	0.060
77048	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral**	**2.10**	**48**	**8**	**32**	**8**	**0.054**
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.	2.11	55	5	35	15	0.048
71552	Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences	2.26	41.5	7.5	24	10	0.078

Family of Codes:
Our recommendations for 77048 fit appropriately within the family of Breast MRI. The recommended work RVU of 2.10 is supported by the KRS and MPC code comparisons.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
77046	Magnetic resonance imaging, breast, without contrast material; unilateral	1.45	35	5	25	5	0.049
77047	Magnetic resonance imaging, breast, without contrast material; bilateral	1.60	40	5	30	5	0.046
77048	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral**	**2.10**	**48**	**8**	**32**	**8**	**0.054**
77049	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral	2.30	58	8	42	8	0.046

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77058

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 41634
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 77X51 provided nationally in a one-year period is estimated to be 41,634.

Specialty Diagnostic Radiology Frequency 40264 Percentage 96.70 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 13,878
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR recommends that CPT code 77X51 is billed approximately 13,878 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 13421 Percentage 96.70 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 77065

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:77049 Tracking Number I4 Original Specialty Recommended RVU: **2.30**
Presented Recommended RVU: **2.30**
Global Period: XXX Current Work RVU: **n/a** RUC Recommended RVU: **2.30**

CPT Descriptor: Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 46-year-old female with recently diagnosed invasive lobular breast carcinoma undergoing evaluation for extent of disease, including unsuspected contralateral synchronous breast carcinoma, before undergoing preoperative (neoadjuvant) chemotherapy. .

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness, and review the clinical history as well as any prior applicable studies. Specifically review clinical notes from the surgeon, oncologist, and PCP relevant to cancer diagnosis, including tumor staging, physical exam findings and how MRI results may impact surgical and treatment plan (e.g. multicentric disease on MRI would warrant mastectomy in a patient who would otherwise be a candidate for lumpectomy). Review pathology from prior biopsy. Confirm that there is no contraindication for an MRI. Communicate the protocol to the technologist.

Description of Intra-Service Work: Interpret images, evaluating background parenchymal enhancement, biopsy sites, and any cystic or solid masses or non-mass enhancement. Characterize lesions with respect to margins, enhancement pattern, associated features (including architectural distortion, edema, skin or nipple retraction), location, and depth from the nipple. Activate computer-aided detection (CAD). Review CAD images to determine if there are lesions that enhance to a greater extent than normal background parenchymal enhancement. Use CAD software to acquire kinetic enhancement curves to determine temporal pattern of enhancement. If multiple lesions are present, establish whether there is multifocal. multicentric or contralateral disease. Determine if any findings require further imaging or intervention (e.g. second look ultrasound and/or MR-guided biopsy). Evaluate remainder of structures in the visualized anatomy, including the axillas, internal mammary lymph node chain, skin, pectoral muscles and chest wall, bones, visualized mediastinum and upper abdomen.
Compare the current imaging to all pertinent available prior studies. Correlate biopsy results with imaging findings. Dictate a report, utilizing standardized lexicon to describe findings and formulating a final recommendation according to standardized reporting system (BIRADS).

Description of Post-Service Work: Review and sign the final report. Communicate the findings with the referring physician and/or patient.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
70553	XXX	2.29	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
71552	XXX	2.26	**RUC Time**

CPT Descriptor Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99204	XXX	2.43	**RUC Time**	10,162,554

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99336	XXX	2.46	**RUC Time**	1,356,078

CPT Descriptor 2 Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	40%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed	10%	30%	60%

- and analyzed
- Urgency of medical decision making

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	10%	50%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	10%	90%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	11%	0%	44%	44%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	0%	89%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	22%	78%
Physical effort required	11%	33%	56%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	11%	89%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:
In the past, two codes have been used to describe Breast MRI - 77058 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral)* and 77059 *(Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral)*. In addition, one Category III Code (0159T) has been used to describe Breast MRI Computer Aided Detection (CAD). CPT code 77059 was identified as potentially misvalued in the NPRM 2016 High Expenditure by Specialty Screen, and was expanded to include CPT code 77058. The family was then referred to the CPT Editorial Panel for review, and four new codes were created to describe Breast MRI:

- 77046 *(Magnetic resonance imaging, breast, without contrast material; unilateral)*,
- 77047 *(Magnetic resonance imaging, breast, without contrast material; bilateral)*,
- 77048 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral)*, and
- 77049 *(Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral).*

Survey Process:
The ACR surveyed a total of 1250 members (a random sample of 625 members and a separate random sample of 625 members who perform in the modalities of mammography, magnetic resonance imaging, and/or breast imaging). An expert panel, including physician familiar with these services, reviewed the data and developed the following recommendations. Out of the total number of survey respondents, 100% found the service to be typical.

Work RVU Recommendation:
The society recommends a work RVU of 2.30 (the 25th percentile survey value).

Compelling Evidence:
We are requesting an increase in value for only two of the four codes in this family (77048 and 77049) and a decrease in value for the other two (77046 and 77047). This compelling evidence argument is based on a change in patient population and change in technology.

This code family was last valued by the RUC in 1995 with both 77058 *(MRI breast; unilateral)* and 77059 *(MRI breast; bilateral) assigned* a wRVU of 1.63, with total times of 50 and 55 minutes, respectively. At that time, the indications for breast MRI were far more limited and were not even sufficiently differentiated between the assessment of implant integrity and the detection and evaluation of breast cancer to necessitate the creation of separate CPT codes. As dynamic contrast enhanced sequences became available, MRI has proven to be the most sensitive tool for detection of breast cancer. These developments were made possible by the development of new software, hardware, and physician skill. Some of this additional physician work and practice expense was initially described in a Category III code, 0159T, which has been used since July 2006.

Breast MRI CAD involves complex post processing, including subtraction of multiple contrast enhanced sequences from unenhanced sequences to highlight lesion conspicuity, selection of regions of interest by the physician to assess enhancement characteristics, generation of kinetic curves, and correlation between multi-planar reformatted images to localize lesions and demonstrate their extent. We believe that 0159T now meets all the requirements of a Category I Code, including FDA approval, widespread usage by many physicians across the United States, being performed with frequency consistent with intended clinical use, and

documented clinical efficacy in the literature. This Category III code has been bundled with the unilateral and bilateral breast MRI without and with contrast material (77048 and 77049).

In the ensuing years since the breast MRI codes were last valued, the ACR developed a breast MRI practice parameter and a breast MRI Accreditation Program to define standards for optimal care. The technology to perform MRI guided biopsies has been developed as well. The indications for breast MRI have greatly expanded, including evaluation for extent of disease for surgical decision making and presence of unsuspected contralateral cancer in patients with newly diagnosed breast cancer, presence of residual disease after lumpectomy with positive or close margins, detection of mammographically occult breast cancer in patients with axillary nodal metastases, and to assess response to neoadjuvant chemotherapy. In addition, the American Cancer Society recommends that women at high-risk for breast cancer have breast MRI screening. Although the tracking of utilization of a Category III code is sometimes difficult due to variable payment policies, the increase in Medicare utilization of 77059 likely reflects an accurate increase in utilization of breast MRI without and with contrast and CAD.

Time Recommendation:
We recommend the following survey times: 8 minutes pre-service, 42 minutes intra-service, and 8 minutes post-service. This is a total time of 58 minutes compared to the existing time of 55 minutes.

Key Reference Services:
The recommendations for 77049 compare well with both of the most commonly chosen key reference services.

- 70553 *(Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences),* chosen by 20% of respondents, and
- 71552 *(Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences),* chosen by 18% of respondents.

The best comparison for 77049 is 71552, an MRI of the Chest with and without contrast. The intra-service period time for 77049 is longer than 71552, 42 minutes compared with 24 minutes. This disparity is due to the extensive physician work related to CAD and engineering the appropriate image analysis (e.g. kinetic enhancement curves). Both of the key reference services are technically demanding MRI exams. Given the time and technical skill required for 77049, it is appropriately valued higher than both of these reference services, which are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT	% chosen
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequence	2.29	37	5	25	7	0.081	20%
71552	Magnetic resonance (eg, proton)	2.26	41.5	7.5	24	10	0.078	18%

	imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences							
77049	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral**	**2.30**	**58**	**8**	**42**	**8**	**0.046**	

MPC Codes:
The second most commonly chose KRS, 71552, is also an MPC code.

The surveyed code compares well with two other non-radiology MPC codes:

- 99204 *(Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.)*, and
- 99336 *(Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.)*.

Code 99336 has 2 minutes less intra-service time than 77049, but 14 more minutes of pre- and post-service time, while being valued at 2.46 wRVU compared with the recommendation of 2.30 for 77049. Moreover, 99204 has 12 minutes less intra-service period time and 3 fewer pre/post minutes, but is valued higher at 2.43 compared with the recommended 2.30 for 77049. Both of these comparisons support the relativity of the recommended wRVUs for 77049 and suggest that it is likely undervalued given the intra-service time.

All three MPC codes and the surveyed code are listed in the table below for comparison.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
71552	Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without	2.26	41.5	7.5	24	10	0.078

	contrast material(s), followed by contrast material(s) and further sequences						
77049	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral**	**2.30**	**58**	**8**	**42**	**8**	**0.046**
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	2.43	45	5	30	10	0.070
99336	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.	2.46	65	10	40	15	0.048

Family of Codes:

Our recommendations for 77049 fit appropriately within the family of Breast MRI. The recommended work RVU of 2.30 is more than the current RVU (1.63), and is supported by the KRS and MPC code comparisons, which suggest it is likely undervalued.

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
77046	Magnetic resonance imaging, breast, without contrast material; unilateral	1.45	35	5	25	5	0.049
77047	Magnetic resonance imaging, breast, without contrast material; bilateral	1.60	40	5	30	5	0.046
77048	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral	2.10	48	8	32	8	0.054
77049	**Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral**	**2.30**	**58**	**8**	**42**	**8**	**0.046**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77059

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 203103
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The overall number of services described by code 77X52 provided nationally in a one-year period is estimated to be 203,103.

Specialty Diagnostic Radiology Frequency 194877 Percentage 95.94 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 67,701
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The ACR recommends that CPT code 77X52 is billed approximately 67,701 times in total for Medicare patients nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 64959 Percentage 95.94 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Advanced imaging

BETOS Sub-classification Level II:
MRI/MRA: Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 77066

CPT Code: 77046, 77047, 77048, 77049
Specialty Society: ACR

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SOR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

77046	Magnetic resonance imaging, breast, without contrast material; unilateral
77047	Magnetic resonance imaging, breast, without contrast material; bilateral
77048	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral
77049	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD- real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral

Global Period: XXX Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology (ACR) convened a consensus panel to finalize the practice expense data for the MRI Breast CPT codes 77046, 77047, 77048, and 77049.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code.** You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

   As references for 77046 and 77048, the unilateral MR breast codes, the society included the PE inputs for the following CPT codes:
   - 77061 (*Digital breast tomosynthesis; unilateral*) – RUC-approved values,
   - 77065/G0206 (*Diagnostic mammography, including computer-aided detection (cad) when performed; unilateral*), and
   - 77058 (*Magnetic resonance imaging, one breast*).

   As references for 77047 and 77049, the bilateral MR breast codes, the society included the PE inputs for the following CPT codes:
   - 77062 (*Digital breast tomosynthesis; bilateral*) – RUC-approved values,
   - 77066/G0204 (*Diagnostic mammography, including computer-aided detection (cad) when performed; bilateral*), and
   - 77059 (*Magnetic resonance imaging, both breasts*).

3. Is this code(s) typically billed with an E/M service?
   No, these codes are not typically billed with an E/M service.

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)

The dominant provider of these services is Diagnostic Radiology. In reference to the current PE code 77058 (*Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral*), Diagnostic Radiology provides this service 93.87% of the time in the nonfacility setting. In reference to the other current PE code 77059 (*Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral*), Diagnostic Radiology provides this service 90.14% of the time in the nonfacility setting. For the global, Diagnostic Radiology remains the dominant provider.

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

- **Prepare room, equipment and supplies (CA013):** These times parallel other recent MR codes, including, MRI brain, MRI spine, MRI face/neck, and MRI abdomen/pelvis. MR involves strong magnetic fields and ensuring patient safety is important. More specifically, all objects in the room must be MRI compatible. MR exams involve the use of MR coils which vary based on the body part studied and are specifically selected to fit the patient. These coils must be prepared for the intended exam, positioned, and attached to the MR unit. In addition, the examinations involving the use of contrast require setup of the injector apparatus and preparation of the contrast material.
- **Prepare, set-up and start IV, initial positioning and monitoring of patient (CA016):** MR breast procedures require longer set-up time than other typical MRI procedures. The patient must be positioned prone on the MR scanner table and the breast(s) positioned in a special coil. Image quality is dependent on patient positioning and breast position within the coil. This typically necessitates repositioning the patient after acquiring scout images. The technologist and patient must work together to find a comfortable position so that the patient has the appropriate anatomy covered while being able to lay still for 30 to 45 minutes.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page (CA030):** CMS finalized a standard of 3 minutes for services involving MR which are considered "intermediate" in the CY 2017 MPFS Final Rule.

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:

Equipment: We are requesting new equipment items for dedicated breast coils and for Breast MRI CAD that are not currently priced by CMS.

Since the breast MRI codes were originally adopted in 1995, dedicated breast coils have been developed and have had ongoing improvements. Modern coils incorporate gradient technology with multiple channels and parallel processing. These advances in coil technology have allowed the more accurate depiction of breast cancers and enabled not only qualitative lesion characterization but also quantitative and temporal characterization of lesion enhancement.

This led to the development of breast MRI CAD programs, which permit further characterization of lesion kinetics. CAD programs, which were originally addressed by a Category III code (0159T), have continued to evolve as well, which has made it possible for information from breast MRI to meaningfully contribute to the detection of breast cancer and the clinical care of breast cancer patients. In addition to reviewing the images on PACS, the data from the breast MRI sequences is sent to a separate server which performs subtractions, kinetic contrast enhancement analysis, and multiplanar reformats that are reviewed on a proprietary workstation. The radiologist also identifies regions of interest for which focused quantitative analysis is performed by the radiologist and then transmitted to the PACS for storage and retrieval for future comparison if needed. Lesions are also evaluated and localized in multiple planes using the CAD images and workstation to evaluate distance from the nipple, skin, and chest wall.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

   Pre-service clinical labor activity *"Patient clinical information and questionnaire reviewed ~~by technologist~~, order ~~from physician~~ confirmed and exam protocoled/prepared ~~by radiologist~~"* was revised by the Workgroup and divided into two line items, the first in the pre-service period and the second in the service period as follows:

   - Pre-service period
     - Patient clinical information and questionnaire reviewed
   - Service period
     - Order confirmed and exam protocoled/prepared"

   The time is 1 minute for each item CA007 and CA014 because the original input standard time was 2 minutes.

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   After positioning the patient on the MR scanner within the breast coil, the appropriate scan parameters are loaded and scout images are acquired. The patient is repositioned as necessary to cover the appropriate anatomy within the breast coil. Multiple different MR sequences are acquired in multiple different planes according to the necessary protocol for the patient's history and the clinical scenario. Images are reviewed in real time for appropriate anatomic coverage and quality, and sequences are repeated as necessary. When contrast is required, the post contrast rapid imaging sequences are constructed and prepared for execution pending the contrast injection. The patient is informed again about the impending injection, a test bolus of saline is injected using the anticipated injection settings, and the integrity of the IV access is assessed again. Then contrast is injected. The post-contrast sequences are acquired and the image quality is reviewed as the sequences are being performed. The sequences are prepared and labeled appropriately. When necessary, the pre- and post-contrast sequences are sent to the CAD workstation. A final quality review is performed and, if necessary, sequences are repeated.

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   n/a

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    n/a

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    n/a

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **CAD Software -** CAD software for evaluation.
    - **CAD Server -** Server in data center used for interpretation.
    - **Additional CAD User License -** The software typically comes with two user licenses. Most practices typically have 3 licenses. We are requesting an additional license.
    - **Breast coil -** This is a 16 channel, high resolution breast coil that is attached to the MRI table. A dedicated breast coil is required for breast MRI and is used for both diagnostic breast MRI (without contrast and without and with contrast) and for MRI guided breast biopsies.
    - **CAD Workstation (separate from PACS)**
        - **PC Tower** - This is a CPU used to display the data that comes from the CAD server and software. This is separate from the PACS, though some post processed data from the images is transmitted to the PACS for long term storage for display, correlation with images from other modalities (for example, mammography and breast ultrasound) and for future comparison.
        - **3 MP Color Monitor** - The CAD images require a color monitor to display initial contrast uptake and washout characteristics of lesions.

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **PACS Workstation Proxy (ED050)** - PACS formula
    - **Room/MR (EL008)** - Highly technical formula
    - **CAD Software** - PACS formula
    - **CAD Workstation (separate from PACS)** - PACS formula
    - **CAD Server** - PACS formula
    - **Breast coil** - Highly technical formula

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    n/a

16. If there is any other item on your spreadsheet that needs further explanation please include here:
    n/a

AMA/Specialty Society RVS Update Committee Summary of Recommendations

Harvard Valued - Utilization over 100,000 / CMS Request - Final Rule for 2016 / High Volume Growth

October 2017

Neurostimulator Services

In October 2013, CPT code 95971 was identified in the second iteration of the High Volume Growth screen and the RUC recommended to survey for January 2014. In January 2014, the RUC recommended that CPT codes 95971, 95972 and 95973 be referred to the CPT Editorial Panel to address the entire family regarding the time referenced in the CPT code descriptors. Specifically, the descriptor for code 95972 specifies "first hour" but survey results indicate that the majority of physicians reporting this code take less than 30 minutes. Per CPT rules, since the midpoint of the specified time is not exceeded, the code is not reportable in the majority of circumstances under which the service is performed. The relevant specialties were asked to submit a code change proposal for CY 2016 to more definitely address the concern and make the codes more consistent with current practice. The specialties anticipated two separate families; one for peripheral nerve root stimulators and another for spinal cord stimulators. In June 2017, the CPT Editorial Panel revised codes 95970, 95971, and 95972, deleted codes 95974, 95975, 95978, and 95979 and created four new codes for analysis and programming of implanted cranial nerve neurostimulator pulse generator, analysis, and programming of brain neurostimulator pulse generator systems and analysis of stored neurophysiology recording data. Introductory guidelines were also revised extensively.

95970 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming***

The RUC reviewed the survey responses from 62 neurologists and neurosurgeons and determined that the current work RVU of 0.45 appropriately accounts for the work required to perform this service. The survey respondents indicated a slightly higher work RVU but the specialty societies indicated that the work has not changed for this service. The specialty societies reduced the pre-service time, which accounts for this service being reported with an Evaluation and Management (E/M) service. The RUC recommends 3 minutes pre-service, 7 minutes intra-service and 5 minutes post-service time. The RUC noted that this service had never been surveyed and the previous total time of 19 minutes was Harvard time. The RUC notes that the current survey time now appropriately allocates the pre-, intra- and post-service time.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The RUC compared 95970 to the top key reference service 62368 *Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming* (work RVU = 0.67 and 27 minutes total time) and agreed that the surveyed service requires less physician work and time to perform. The RUC also reviewed MPC codes 99281 *Emergency department visit for the evaluation and management of a patient…* (work RVU = 0.45 and 13 minutes total time) and 76857 *Ultrasound, pelvic (nonobstetric), real time with image documentation; limited or follow-up (eg, for follicles)* (work RVU = 0.50 and 17 minutes total time), which support the recommended work RVU. **The RUC recommends a work RVU of 0.45 for CPT code 95970.**

95976 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional***
The RUC noted 95976 is defined as simple programming of cranial nerve neurostimulator (adjustment of 1-3 parameters) versus deleted code 95974 which was time based and defined as the first hour of programming. **The RUC recommends that the specialty societies develop a CPT Assistant article to direct providers on when to report simple versus complex cranial nerve neurostimulator services.**

The RUC reviewed the survey responses from 57 neurologists and neurosurgeons and determined that the survey 25th percentile work RVU of 0.95 appropriately accounts for the work required to perform this service. The specialty societies reduced the pre-service time, which accounts for this service being reported with an E/M service. The RUC recommends 3 minutes pre-service, 11 minutes intra-service and 10 minutes post-service time. The specialty societies indicated and the RUC agreed that the 10 minutes required for the post-time includes reviewing all the parameters, documenting final program measurements and any other relevant clinical information obtained during the programming session, reducing side effects and making treatment adjustments. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device. The RUC confirmed that the physician times appropriately mirror other similar services.

The RUC compared 95976 to the top key reference service 95816 *Electroencephalogram (EEG); including recording awake and drowsy* (work RVU = 1.08 and 5 minutes pre-service, 15 minutes intra-service and 6 minutes post-service time) and agreed with the survey respondents that the surveyed service is similar, but somewhat more intense and complex to perform. Thus, the survey 25th percentile work RVU appropriately places CPT code 95976 relative to the top key reference service. The RUC also reviewed MPC codes 92012 *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient* (work RVU = 0.92 and 25 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient* (work RVU = 0.97 and 23 minutes total time), which support the recommended work RVU. All three services involve a similar amount of total time and physician work. For additional support the RUC referenced code 78265 *Gastric emptying imaging study (eg, solid, liquid, or both); with small bowel transit* (work RVU = 0.98 and 25 minutes total time). Thus, the survey 25th percentile work RVU appropriately places CPT code 95976 relative to the top key reference service and other similar services. **The RUC recommends a work RVU of 0.95 for CPT code 95976.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

95977 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional***
The RUC noted 95977 is defined as complex programming of cranial nerve neurostimulator (adjustment of more than 3 parameters) versus deleted code 95975, which was a time-based add-on code defined as each additional 30 minutes of programming. **The RUC recommends that the specialty societies develop a CPT Assistant article to direct providers on when to report simple versus complex cranial nerve neurostimulator services.**

The RUC reviewed the survey responses from 56 neurologists and neurosurgeons and determined that the survey 25th percentile work RVU of 1.19 appropriately accounts for the physician work required to perform this service. The specialty societies reduced the pre-service time, which accounts for this service being reported with an E/M service. The RUC recommends 3 minutes pre-service, 17 minutes intra-service and 10 minutes post-service time. The specialty societies indicated and the RUC agreed that the 10 minutes required for the post-time include reviewing all the parameters, documenting final program measurements and any other relevant clinical information obtained during the programming session, reducing side effects and making treatment adjustments. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device. The RUC confirmed that the physician times appropriately mirror other similar services.

The RUC noted that the top to key reference services were disparate compared to this service. Therefore, as a better comparison, the RUC compared 95977 to MPC codes 99308 *Subsequent nursing facility care, per day, for the evaluation and management of a patient* (work RVU = 1.16, 15 minutes of intra-service time and 31 minutes total time) and 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, 15 minutes of intra-service time and 27 minutes total time), which support the recommended work RVU as the survey code involves somewhat more intra-service and total time and a comparable amount of physician work. For additional support, the RUC referenced code 93975 *Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study* (work RVU = 1.16, 20 minutes of intra-service time and 30 minutes total time) and 67810 *Incisional biopsy of eyelid skin including lid margin* (work RVU = 1.18, 13 minutes of intra-service time and 27 minutes total time). Thus, the survey 25th percentile work RVU appropriately places CPT code 95977 relative to the top key reference service and other similar services. **The RUC recommends a work RVU of 1.19 for CPT code 95977.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

95983 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator /transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional***
The RUC noted 95983 is defined as the first 15 minutes of programming for brain neurostimulator versus deleted code 95978, which was defined as the first hour of programming. The specialty societies indicated that programming for brain neurostimulators is always complex therefore it is unnecessary for a simple versus complex coding structure. **The RUC noted the CPT coding conventions when reporting timed codes and recommends that the specialty societies develop a CPT Assistant article to direct providers on how to correctly report the brain neurostimulator services.**

The RUC reviewed the survey responses from 56 neurologists and neurosurgeons and determined that the survey 25th percentile work RVU of 1.25 appropriately accounts for the work required to perform this service. The specialty societies reduced the pre-service time, which accounts for this service being reported with an E/M service. The RUC recommends 3 minutes pre-service, 15 minutes intra-service and 10 minutes post-service time. The specialty societies indicated and the RUC agreed that the 10 minutes required for the post-time include documenting final program measurements and any other relevant clinical information obtained during the programming session, reducing side effects and making treatment adjustments. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device. The RUC confirmed that the physician times appropriately mirror other similar services.

The RUC noted that the top to key reference services were disparate compared to this service. Therefore, as a better comparison, the RUC reviewed MPC codes 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, intra-service time of 15 minutes and 27 minutes total time) and 70470 *Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.27, 15 minutes of intra-service time and 25 minutes total time), which required similar physician time, work, intensity and complexity. For additional support, the RUC referenced similar codes 70488 *Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections* (work RVU = 1.27 and 15 minutes of intra-service time and 25 minutes total time) and 92614 *Flexible endoscopic evaluation, laryngeal sensory testing by cine or video recording;* (work RVU = 1.27 and 15 minutes of intra-service time and 28 minutes total time). Thus, the survey 25th percentile work RVU appropriately places CPT code 95983 relative to other similar services. **The RUC recommends a work RVU of 1.25 for CPT code 95983.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

95984 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)***

The RUC noted 95984 is defined as an add-on service for each additional 15 minutes of brain neurostimulator programming versus the deleted code 95979 which was defined as each additional 30 minutes. The specialty societies indicated that programming for brain neurostimulators is always complex therefore it is unnecessary for a simple versus complex coding structure. **The RUC noted the CPT coding conventions when reporting timed codes and recommends that the specialty societies develop a CPT Assistant article to direct providers on how to correctly report the brain neurostimulator services.**

The RUC reviewed the survey responses from 48 neurologists and neurosurgeons and determined that the survey 25th percentile work RVU of 1.00 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes intra-service time. The RUC compared the surveyed code to the top to key reference service 64645 *Chemodenervation of one extremity; each additional extremity, 5 or more muscles (List separately in addition to code for primary procedure)* (work RVU = 1.39 and 15 minutes of intra-service time) and noted that the survey respondents indicated the surveyed code is more intense and complex to perform but 64645 requires more technical skill. Therefore CPT code 64645 appropriately requires slightly more work than 95984. The RUC reviewed MPC codes 64484 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.00 and 10 minutes total time) and 64480 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)* (work RVU = 1.20 and 15 minutes total time), which required similar physician time, work, intensity and complexity. Thus, the survey 25th percentile work RVU appropriately places CPT code 95984 relative to the top key reference service and other similar services. **The RUC recommends a work RVU of 1.00 for CPT code 95984.**

95971 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming***

95972 ***Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord~~,~~ or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional***

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

The specialty societies indicated that at the June 2017 CPT Editorial Panel meeting, a code change application was submitted for editorial changes only to the descriptors for CPT codes 95971 and 95972. These codes were previously surveyed and reviewed by the RUC in April 2015. The RUC recommended physician work RVUs of 0.78 for 95971 and 0.80 for 95972. There has been no change in the physician work since the survey. The specialty societies who perform this procedure did not believe it needs to be re-surveyed at this time. **The RUC affirmed the current work RVU of 0.78 for CPT code 95971 and 0.80 for CPT code 95972.**

Gastric Neurostimulator Services

The specialty societies indicated and the RUC agreed that CPT codes 95980, 95981 and 95982 are not part of this family of services. There was no specialty society interest to survey these services. The RUC confirmed that the physician work and time for these services are appropriate relative to other neurostimulator services.

Practice Expense

The specialty societies removed all the clinical staff time and the PE reviewed the remaining equipment time. The RUC recommends the practice expenses without modification as submitted by the specialty societies and approved by the PE Subcommittee.

Work Neutrality

The RUC's recommendation for this code is work neutral.

Refer to CPT Assistant

The RUC noted 95976 is defined as simple programming of cranial nerve neurostimulator (adjustment of 1-3 parameters) versus deleted code 95974 which was time based and defined as the first hour of programming and 95977 is defined as complex programming of cranial nerve neurostimulator (adjustment of more than 3 parameters) versus deleted code 95975, which was a time-based add-on code defined as each additional 30 minutes of programming. **The RUC recommends that the specialty societies develop a CPT Assistant article to direct providers on when to report simple versus complex cranial nerve neurostimulator services.**

The RUC noted 95983 is defined as the first 15 minutes of programming for brain neurostimulator versus deleted code 95978, which was defined as the first hour of programming and 95984 is defined an add-on service for each additional 15 minutes of brain neurostimulator programming versus the deleted code 95979 which was defined as each additional 30 minutes. The specialty societies indicated that programming for brain neurostimulators is always complex therefore it is unnecessary for a simple versus complex coding structure. **The RUC noted the CPT coding conventions when reporting timed codes and recommends that the specialty societies develop a CPT Assistant article to direct providers on how to correctly report the brain neurostimulator services.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Neurology and Neuromuscular Procedures
Neurostimulators, Analysis-Programming

~~Simple intraoperative or subsequent programming of the neurostimulator pulse generator/transmitter (95971) includes changes to three or fewer of the following parameters: rate, pulse amplitude, pulse duration, pulse frequency, eight or more electrode contacts, cycling, stimulation train duration, train spacing, number of programs, number of channels, alternating electrode polarities, dose time (stimulation parameters changing in time periods of minutes including dose lockout times), more than one clinical feature (eg, rigidity, dyskinesia, tremor). Complex intraoperative or subsequent programming (95972-95979) includes changes to more than three of the above.~~

~~Code 95970 describes subsequent electronic analysis of a previously implanted simple or complex brain, spinal cord, or peripheral neurostimulator pulse generator system, without reprogramming. Code 95971 describes intraoperative or subsequent electronic analysis of an implanted simple spinal cord, or peripheral (ie, peripheral nerve, autonomic nerve, neuromuscular) neurostimulator pulse generator system, with programming. Code 95972 describes intraoperative (at initial insertion/revision) or subsequent electronic analysis of an implanted complex spinal cord or peripheral (except cranial nerve) neurostimulator pulse generator system, with programming. Codes 95974 and 95975 describe intraoperative (at initial insertion/revision) or subsequent electronic analysis of an implanted complex cranial nerve neurostimulator pulse generator system, with programming. Codes 95978 and 95979 describe initial or subsequent electronic analysis of an implanted brain neurostimulator pulse generator~~

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

~~system, with programming.~~

Electronic analysis of an implanted neurostimulator pulse generator/transmitter involves documenting settings and electrode impedances of the system parameters prior to programming. Programming involves adjusting the system parameter(s) to address clinical signs and symptoms of the patient. Parameters available for programming can vary between systems and may need to be adjusted multiple times during a single programming session. The iterative adjustments to parameters provide information that is required for the physician or other qualified healthcare provider to assess and select the most appropriate final program parameters to provide for consistent delivery of appropriate therapy. The values of the final program parameters may or may not differ from the starting values after the programming session.

Examples of parameters include: contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters. Not all parameters are available for programming in every neurostimulator pulse generator/transmitter.

For coding purposes, a neurostimulator system is considered implanted when the electrode array(s) are inserted into the target area for either permanent or trial placement.

There are several types of implantable neurostimulator pulse generator/transmitters that are differentiated by the nervous system region that is stimulated. A brain neurostimulator may stimulate either brain surface regions (cortical stimulation) or deep brain structures (deep brain stimulation). A brain neurostimulation system consists of array(s) that target one or more of these regions.

A cranial nerve neurostimulator targets the fibers of the cranial nerves or their branches and divisions. There are 12 pairs of cranial nerves. (See nerve anatomy figure on page XXX) Each cranial nerve has its origin in the brain and passes through one or more foramina in the skull to innervate extracranial structures. A cranial nerve neurostimulator stimulates the nerve fibers of either the extracranial or intracranial portion(s) of one or more cranial nerve(s) (eg, vagus nerve, trigeminal nerve).

A spinal cord or peripheral nerve neurostimulator targets nerve(s) that originate in the spinal cord, and exit the spine through neural foramina and give rise to peripheral nerves. The peripheral nervous system consists of the nerves and ganglia outside of the brain and spinal cord. Peripheral nerves may give rise to independent branches or branches that combine with other peripheral nerves in neural plexuses (ie, brachial plexus, lumbosacral plexus). Under the lumbosacral plexus, the sacral nerves (specifically S2, S3, S4) are located in the lower back just above the tailbone. Neurostimulation of the sacral nerves affect pelvic floor muscles and urinary organs (eg, bladder, urinary sphincter).

Cranial nerve, spinal cord, peripheral nerve, and sacral nerve neurostimulator analysis with programming (95971, 95972, 95976, 95977) is reported based on the number of parameters adjusted during a programming session. Brain neurostimulator analysis with programming (95983, 95984) is reported based on physician or qualified healthcare professional face-to-face time.

Code 95970 describes electronic analysis of the implanted brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter without programming. Electronic analysis is inherent to implantation codes 43647, 43648, 43881, 43882, 61850, 61860, 61863, 61864, 61837, 61868, 61870, 61880, 61885, 61886, 61888, 63650, 63655, 63661, 63662, 63663, 63664, 63685, 63688, 64553-64581,

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

64585, 64590, and 64595 and is not separately reportable at the same operative session.

Codes 95971, 95972, 95976, and 95977 describe electronic analysis with simple or complex programming of the implanted neurostimulator pulse generator/transmitter. *Simple* programming of a neurostimulator pulse generator/transmitter includes adjustment of one to three parameter(s). *Complex* programming includes adjustment of more than three parameters. For purposes of counting the number of parameters being programmed, a single parameter that is adjusted two or more times during a programming session, counts as one parameter.

Code 95971 describes electronic analysis with simple programming of an implanted spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator /transmitter.

Code 95972 describes electronic analysis with complex programming of an implanted spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter.

Code 95976 describes electronic analysis with simple programming of an implanted cranial nerve neurostimulator pulse generator/transmitter.

Code 95977 describes electronic analysis with complex programming of an implanted cranial nerve neurostimulator pulse generator/transmitter.

Codes 95983 and 95984 describe electronic analysis with programming of an implanted brain neurostimulator pulse generator/transmitter. Code 95983 is reported for the first 15 minutes of physician or qualified healthcare professional face-to-face time for analysis and programming and code 95984 is reported for each additional 15 minutes. A unit of service is attained when the mid-point is passed. Physician or qualified healthcare professional face-to-face time of less than 8 minutes is not separately reportable.

Brain Neurostimulator Analysis with Programming Physician or qualified healthcare professional face-to-face time	**Code(s) Reported**
Less than 8 minutes	Not reported
8-22 minutes	95983
23-37 minutes	95983 + 95984 X 1
38-52 minutes	95983 + 95984 X 2
53-67 minutes	95983 + 95984 X 3
68 minutes or longer	add units of 95984

68 minutes or longer	add units of 95984

Code 95980 describes intraoperative electronic analysis of an implanted gastric neurostimulator pulse generator system, with programming; code 95981 describes subsequent analysis of the device; code 95982 describes subsequent analysis and reprogramming. For electronic analysis and

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

reprogramming of gastric neurostimulator, lesser curvature, see 95980-95982.

~~When~~ Codes 95971, 95972, 95976, 95977, 95983, 95984 are reported when programming a neurostimulator is performed by a physician or other qualified health care professional. Programming may be performed ~~a neurostimulator is performed by a physician or other qualified health care professional~~ in the operating room, postoperative care unit, inpatient, and/or outpatient setting. Programming a neurostimulator in the operating room is not inherent in the service of the implantation code and may be reported by either the implanting surgeon or other qualified healthcare professional, when performed.

Test stimulations are typically performed during an implantation procedure (43647, 43648, 43881, 43882, 61850, 61860, 61863, 61864, 61837, 61868, 61870, 61880, 61885, 61886, 61888, 63650, 63655, 63661, 63662, 63663, 63664, 63685, 63688, 64553-64581, 64585, 64590, 64595) to confirm correct target site placement of the electrode array(s) and/or to confirm the functional status of the system. Test stimulation is not considered electronic analysis or programming of the neurostimulator system (test simulation is included in the service described by the implantation code) and should not be reported with code 95970, 95971, 95972, 95983, 95984, 95980, 95981, or 95982. Electronic analysis of a device (95970) is not separately reported at the time of implantation.

~~For 95974 and 95978, use modifier 52 if less than 31 minutes in duration.~~

(For insertion of neurostimulator pulse generator, see 61885, 61886, 63685, 64568, 64590)

Re: 95971 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

95972 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

Dear Dr. Smith,

On behalf of the undersigned specialty societies, we write to you today asking the RUC to reaffirm the physician work values for CPT codes 95971 and 95972 on the agenda for the October 2017 RUC meeting.

At the June 2017 CPT Editorial Panel meeting, a code change proposal was submitted for editorial changes only to the descriptors for CPT codes 95971 and 95972. These codes were previously surveyed and reviewed by the RUC in April 2015. The RUC recommended physician work RVU of 0.78 for 95971 and 0.80 for 95972. There has been no change in the physician work since the survey. The specialty societies who perform this procedure do not believe it needs to be re-surveyed at this time. We request that the RUC reaffirm the values established from the April 2015 RUC meeting.

Please contact us if you have any questions.

Sincerely,

Thomas Turk, MD

RE: Tab 7 Neurostimulator Services, October 2017 RUC Meeting

Dear Dr. Smith,

The surveying societies of Tab 7: Neurostimulator Services, American Academy of Neurology (AAN) and the American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS) would like to clarify that they did not consider 95980, 95981, and 95982 as part of the family of codes for tab 7.

The CMS NPRM 2016 Requests and Relativity Assessment Level of Interest noted the following: "CPT codes 95971-95973 were recently reviewed for CY 2015. Due to significant time changes in the base codes, CMS requests that the entire family should be considered as potentially misvalued and reviewed in a manner consistent with review of CPT codes 95971, 95972 and 95973. **The RUC will add CPT codes 95970 and 95974-95982 to the list of potentially misvalued services to review."**

In response, the AAN submitted an action plan requesting that 95970, 95974, 95975, 95978, and 95979 be revised and presented to the CPT Editorial Panel. There was "no specialty interest" in code 95980, 95981, or 95982 on the Level of Interest (LOI) from January 2016. The societies that were involved in the coding change request at CPT do not have an interest in these three codes.

Sincerely,

Marianna V. Spanaki, MD, PhD – RUC Advisor, American Academy of Neurology
John Ratliff, MD – RUC Advisor American Association of Neurological Surgeons
Alexander Mason, MD – RUC Advisor Congress of Neurological Surgeons
Marc Nuwer, MD, PhD, FAAN – RUC Advisor, American Clinical Neurophysiology Society
Thomas, Turk, MD – RUC Advisor, American Urological Association

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95970 Tracking Number J1 Original Specialty Recommended RVU: **0.45**
Presented Recommended RVU: **0.45**
Global Period: XXX Current Work RVU: **0.45** RUC Recommended RVU: **0.45**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old male with an implanted nerve stimulator returns to the clinic for device analysis without programming.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The programming equipment is turned on. Necessary programs to interrogate the implanted neurotimulator are loaded. The patient is positioned appropriately and the communication wand is placed over the patient's implanted device. Communication between the patient's implanted device and programming equipment is established. Patient device history is downloaded to the programming equipment and an automated device self check is performed.

Description of Intra-Service Work: Patient specific data populate on the programming equipment and are verified, including patient demographics and device history. Electronic analysis of the implanted neurostimulator pulse generator/transmitter is performed (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters). The diagnostic analysis, including the battery state, current program settings, and impedances of electrodes, as well as any event logs from the programming equipment and patient device interrogation are documented in the patient's medical record. No program settings are changed.

Description of Post-Service Work: The electronic analysis and therapy expectations are discussed with the patient and family. The patient is re-educated on the use of the patient device.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Codes 95971 and 95972 were identified under a high-volume growth screen. During the RUC review of these codes in January 2014, a discrepancy was noted between the code descriptor and survey time data. The CPT Panel approved a temporary revision to the code descriptor for CPT 2015 and the RUC recommended that codes 95971, 95972 and 95973 be referred to CPT. Codes 95971 and 95972 were revised and code 95973 was deleted at the February 2015 CPT meeting, followed by another RUC survey of codes 95971 and 95972 for the April 2015 RUC meeting.

In the physician fee schedule proposed rule for CY 2016, CMS indicated that due to significant time changes in 95971 and 95972, that the entire family should be considered as potentially misvalued and reviewed. The RUC added codes 95970 and 95974-95982 to the list of potentially misvalued services to review. The specialty societies requested the codes be referred to CPT to revise the code language for the other codes identified to more accurately reflect the services being performed.

At the June 2017 CPT meeting, code 95970 was revised; codes 95975, 95975, 95978, 95979 were deleted and new codes 959X3-959X6 were approved.

Code 95970

Until 1999, code 95970 (analysis only) was reported with code 63690. For CPT 1999, code 63690 was renumbered to 95970 and code 63691 (analysis with programming) was deleted and several new codes (9597X) were created to report analysis with programming. During review in February 1998, the RUC agreed with the specialties that the work for 95970 did not change and maintained the Harvard work RVU and time. **Therefore, this is the first time that 95970 has been surveyed.**

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS), American Clinical Neurophysiology Society (ACNS), and the North American Neuromodulation Society (NANS) was conducted.

Work RVU Recommendation

We recommend maintaining the current work RVU of 0.45. The work to perform this service has not changed and the Harvard total time is similar to the survey total time.

Pre-time

We recommend 3 minutes of pre-service time for the physician to verify that the physician and patient programming equipment is functioning properly. This work does not overlap with E/M work.

Post-time

We recommend 5 minutes of post-service time for the physician to address patient and family questions about planned therapy and to re-educate the patient and family on the use of the patient device.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) According to the Medicare same day billing occurences claims data, 95970 is typically performed on same date of service as an E/M visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95970

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Neurosurgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 139016
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 4 times the annual Medicare utilization; based on 2016 utilization data.

Specialty Neurology Frequency 73680 Percentage 53.00 %

Specialty Neurosurgery Frequency 4852 Percentage 3.49 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 34,754
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2016 Medicare utilization data from the RUC database. Neurology and neurosurgery estimated provided below. The percentage utilization of other specialties who provide this service is not expected to change.

Specialty Neurology Frequency 18420 Percentage 53.00 %

Specialty Neurosurgery Frequency 1213 Percentage 3.49 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95970

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95976 Tracking Number J4 Original Specialty Recommended RVU: **0.95**
Presented Recommended RVU: **0.95**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.95**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health are professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female with intractable epilepsy had a vagus nerve stimulator (VNS) surgically implanted for better seizure control. The patient returns to clinic for VNS electronic analysis and programming in which three or fewer of the parameters are adjusted.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The programming equipment is turned on. Necessary programs to interrogate the implanted neurotimulator are loaded. The patient is positioned appropriately and the communication wand is placed over the patient's implanted device. Communication between the patient's implanted device and programming equipment is established. Patient device history is downloaded to the programming equipment and an automated device self check is performed.

Description of Intra-Service Work: Patient specific data populate on the programming equipment and are verified, including patient demographics and device history. Electronic analysis of the implanted neurostimulator pulse generator/transmitter is performed (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters). The diagnostic analysis, including the battery state, current program settings, and impedances of electrodes, as well as any event logs from the programming equipment and patient device interrogation are documented in the patient's medical record.
Attention is turned to the stimulation parameters to achieve optimal therapeutic stimulation of the vagus nerve. Three or fewer parameters (eg, current, frequency, pulse width, and train duration, magnet mode, or sensing) are adjusted, as limited by pain, respiratory, and/or swallowing problems. The physician or QHP conducts multiple stimulation trials, adjusting the three or fewer parameters until optimal therapeutic stimulation is achieved.

Description of Post-Service Work: The final program measurements and any other relevant clinical information obtained from the programming are documented in the patient's medical record. The electronic analysis and programming results and therapy expectations are discussed with the patient and family. The patient is re-educated on the use of the patient device.

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
95816	XXX	1.08	**RUC Time**

CPT Descriptor Electroencephalogram (EEG); including recording awake and drowsy.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
92012	XXX	0.92	**RUC Time**	6,834,091

CPT Descriptor 1 Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99213	XXX	0.97	**RUC Time**	101,180,420

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed	10%	50%	40%

- and analyzed
- Urgency of medical decision making

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	70%	30%
Physical effort required	10%	30%	60%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

2nd Key Reference Code

	Much Less	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	38%	50%	12%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	38%	50%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	12%	88%
Physical effort required	38%	38%	24%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	24%	38%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 95971 and 95972 were identified under a high-volume growth screen. During the RUC review of these codes in January 2014, a discrepancy was noted between the code descriptor and survey time data. The CPT Panel approved a temporary revision to the code descriptor for CPT 2015 and the RUC recommended that codes 95971, 95972 and 95973 be referred to CPT. Codes 95971 and 95972 were revised and code 95973 was deleted at the February 2015 CPT meeting, followed by another RUC survey of codes 95971 and 95972 for the April 2015 RUC meeting.

In the physician fee schedule proposed rule for CY 2016, CMS indicated that due to significant time changes in 95971 and 95972, that the entire family should be considered as potentially misvalued and reviewed. The RUC added codes 95970 and 95974-95982 to the list of potentially misvalued services to review. The specialty societies requested the codes be referred to CPT to revise the code language for the other codes identified to more accurately reflect the services being performed.

At the June 2017 CPT meeting, code 95970 was revised; codes 95975, 95975, 95978, 95979 were deleted and new codes were approved.

Code 95976

New code **95976** is defined as simple programming (adjustment of 1-3 parameters) versus deleted code 95974 which was time based and defined as the first hour of programming.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS), American Clinical Neurophysiology Society (ACNS), and the North American Neuromodulation Society (NANS) was conducted.

Work RVU Recommendation

We recommend the survey 25th percentile work RVU of 0.95.

Pre-time

We recommend 5 minutes of pre-service time for the physician to verify that the physician and patient programming equipment is functioning properly. This work does not overlap with E/M work.

Post-time

We recommend 10 minutes of post-service time for the physician to document final program measurements and any other relevant clinical information obtained during the programming session. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) According to the Medicare same day billing occurences claims data, 95970 is typically performed on same date of service as an E/M visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95974

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Neurosurgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15800
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 4 times the annual Medicare utilization.

Specialty Neurology Frequency 12798 Percentage 81.00 %

Specialty Neurosurgery Frequency 632 Percentage 4.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 3,950
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate approximately 1/3 of the current combined utilization of 95975 and 95975 (2016 Medicare utilization data from the RUC database) of 12,950 will be simple programming and reported with 95X83. This equates to 3950. We do not anticipate that current specialty distribution will change.

Specialty Neurology Frequency 3160 Percentage 80.00 %

Specialty Neurosurgery Frequency 158 Percentage 4.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 95974

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95977 Tracking Number J5 Original Specialty Recommended RVU: **1.19**
Presented Recommended RVU: **1.19**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.19**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old female with intractable epilepsy had a vagus nerve stimulator (VNS) surgically implanted for better seizure control. The patient returns to clinic for VNS electronic analysis and programming in which four or more of the parameters are adjusted.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The programming equipment is turned on. Necessary programs to interrogate the implanted neurotimulator are loaded. The patient is positioned appropriately and the communication wand is placed over the patient's implanted device. Communication between the patient's implanted device and programming equipment is established. Patient device history is downloaded to the programming equipment and an automated device self check is performed.

Description of Intra-Service Work: Patient specific data populate on the programming equipment and are verified, including patient demographics and device history. Electronic analysis of the implanted neurostimulator pulse generator/transmitter is performed (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters). The diagnostic analysis, including the battery state, current program settings, and impedances of electrodes, as well as any event logs from the programming equipment and patient device interrogation are documented in the patient's medical record. Attention is turned to the stimulation parameters to achieve optimal therapeutic stimulation of the vagus nerve. Four or more parameters (eg, current, frequency, pulse width, and train duration, magnet mode, or sensing) are adjusted, as limited by pain, respiratory, and/or swallowing problems. The physician or QHP conducts multiple stimulation trials, adjusting the four or more parameters until optimal therapeutic stimulation is achieved.

Description of Post-Service Work: The final program measurements and any other relevant clinical information obtained from the programming are documented in the patient's medical record. The electronic analysis and programming results and therapy expectations are discussed with the patient and family. The patient is re-educated on the use of the patient device.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99215	XXX	2.11	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99308	XXX	1.16	**RUC Time**	11,024,167

CPT Descriptor 1 Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
12013	000	1.22	**RUC Time**	52,170

CPT Descriptor 2 Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	56%	11%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	44%	44%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	22%	78%
Physical effort required	22%	34%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	22%	45%	33%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	29%	0%	42%	29%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	14%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	14%	72%
Physical effort required	29%	14%	57%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	29%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 95971 and 95972 were identified under a high-volume growth screen. During the RUC review of these codes in January 2014, a discrepancy was noted between the code descriptor and survey time data. The CPT Panel approved a temporary revision to the code descriptor for CPT 2015 and the RUC recommended that codes 95971, 95972 and 95973 be referred to CPT. Codes 95971 and 95972 were revised and code 95973 was deleted at the February 2015 CPT meeting, followed by another RUC survey of codes 95971 and 95972 for the April 2015 RUC meeting.

In the physician fee schedule proposed rule for CY 2016, CMS indicated that due to significant time changes in 95971 and 95972, that the entire family should be considered as potentially misvalued and reviewed. The RUC added codes 95970 and 95974-95982 to the list of potentially misvalued services to review. The specialty societies requested the codes be referred to CPT to revise the code language for the other codes identified to more accurately reflect the services being performed.

At the June 2017 CPT meeting, code 95970 was revised; codes 95975, 95975, 95978, 95979 were deleted and new codes were approved.

Code 95977

New code **95977** is defined as complex programming (adjustment of more than 3 parameters) versus deleted code 95975, which was a time-based add-on code defined as each additional 30 minutes of programming.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS), American Clinical Neurophysiology Society (ACNS), and the North American Neuromodulation Society (NANS) was conducted.

Work RVU Recommendation

We recommend the survey 25th percentile work RVU of 1.19.

Pre-time

We recommend 5 minutes of pre-service time for the physician to verify that the physician and patient programming equipment is functioning properly. This work does not overlap with E/M work.

Post-time

We recommend 10 minutes of post-service time for the physician to document final program measurements and any other relevant clinical information obtained during the programming session. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device. This work does not overlap with E/M work.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) According to the Medicare same day billing occurences claims data, 95970 is typically performed on same date of service as an E/M visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95975

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Neurosurgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 36000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 4 times the annual Medicare utilization.

Specialty Neurology Frequency 28800 Percentage 80.00 %

Specialty Neurosurgery Frequency 1440 Percentage 4.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 9,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate approximately 2/3 of the combined current utilization of 95974 and

95975 (2016 Medicare utilization data from the RUC database) of 12,950 will be complex programming and reported with 95X84. This equates to 9000. We anticipate that the specialty utilization distribution will not change.

Specialty Neurology   Frequency 7200   Percentage 80.00 %

Specialty Neurosurgery   Frequency 360   Percentage 4.00 %

Specialty   Frequency 0   Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95983 Tracking Number J6 Original Specialty Recommended RVU: **1.25**
Presented Recommended RVU: **1.25**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.25**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator /transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with Parkinson's disease had a brain neurostimulator surgically implanted and now returns to clinic for electronic analysis and programming by the physician or other qualified health care professional.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: [Please note that code 95X85 is reported for the initial 15 minutes face-to-face time with physician or other qualified health care professional for analsys and programming.] The programming equipment is turned on. Necessary programs to interrogate the implanted neurotimulator are loaded. The patient is positioned appropriately and the communication wand is placed over the patient's implanted device. Communication between the patient's implanted device and programming equipment is established. Patient device history is downloaded to the programming equipment and an automated device self check is performed. .

Description of Intra-Service Work: Patient specific data populate on the programming equipment and are verified, including patient demographics and device history. Electronic analysis of the implanted neurostimulator pulse generator/transmitter is performed (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters). The diagnostic analysis, including the battery state, current program settings, and impedances of electrodes, as well as any event logs from the programming equipment and patient device interrogation are documented in the patient's medical record.
Attention is turned to the stimulation parameters and electrode mapping. Each electrode contact on the array is systematically activated one at a time in monopolar mode as a cathode. The parameters are adjusted (eg, amplitude, frequency, pulse width, contact combinations, patient controllable parameters) while neurologic effects on symptoms and signs (eg, bradykinesia, rigidity) are noted as well as side-effects (eg, twitching, pulling of face/contralateral limb). After electrode mapping, the physician or QHP then determines which combination of parameters result in an optimal effect while minimizing adverse side effects and the final exit parameters are selected to balance benefits to bradykinesia and rigidity with least side-effects..

Description of Post-Service Work: The final program measurements and any other relevant clinical information obtained from the programming are documented in the patient's medical record. The electronic analysis and programming results

and therapy expectations are discussed with the patient and family. The patient is re-educated on the use of the patient device.

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	8%	42%	50%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	58%	42%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	50%	33%	17%

Physical effort required	16%	42%	42%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	12%	25%	38%	25%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	25%	63%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	12%	63%	25%
Physical effort required	0%	12%	88%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	12%	88%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 95971 and 95972 were identified under a high-volume growth screen. During the RUC review of these codes in January 2014, a discrepancy was noted between the code descriptor and survey time data. The CPT Panel approved a temporary revision to the code descriptor for CPT 2015 and the RUC recommended that codes 95971, 95972 and 95973

be referred to CPT. Codes 95971 and 95972 were revised and code 95973 was deleted at the February 2015 CPT meeting, followed by another RUC survey of codes 95971 and 95972 for the April 2015 RUC meeting.

In the physician fee schedule proposed rule for CY 2016, CMS indicated that due to significant time changes in 95971 and 95972, that the entire family should be considered as potentially misvalued and reviewed. The RUC added codes 95970 and 95974-95982 to the list of potentially misvalued services to review. The specialty societies requested the codes be referred to CPT to revise the code language for the other codes identified to more accurately reflect the services being performed.

At the June 2017 CPT meeting, code 95970 was revised; codes 95975, 95975, 95978, 95979 were deleted and new codes were approved.

Code 95983

New code **95983** is defined as the first 15 minutes of programming versus the deleted code 95978 which was defined as the first hour of programming.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS), American Clinical Neurophysiology Society (ACNS), and the North American Neuromodulation Society (NANS) was conducted.

Work RVU Recommendation

We recommend survey 25th percentile work RVU of 1.25.

Pre-time

We recommend 5 minutes of pre-service time for the physician to verify that the physician and patient programming equipment is functioning properly. This work does not overlap with E/M work.

Post-time

We recommend 10 minutes of post-service time for the physician to document final program measurements and any other relevant clinical information obtained during the programming session. The physician will also address patient and family questions about planned therapy and re-educate the patient and family on the use of the patient device. This work does not overlap with E/M work.

Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.	XXX	**1.34**	0.060	**30**	5	18	7

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) According to the Medicare same day billing occurences claims data, 95970 is typically performed on same date of service as an E/M visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in

the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95978

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Neurosurgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 54884
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 4 times the annual Medicare utilization.

Specialty Neurology Frequency 41163 Percentage 75.00 %

Specialty Neurosurgery Frequency 3842 Percentage 7.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 13,721
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 1/3 of the combined current utilization of 95978 and 95979 (2016 Medicare utilization data from the RUC database) of 41,163 will be the initial 15 minute programming code and be reported with 95X85. This equates to 13,721. We anticipate that the specialty distribution will not change.

Specialty Neurology Frequency 10291 Percentage 75.00 %

Specialty Neurosurgery Frequency 961 Percentage 7.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Code 95X86 is reported for each additional 15 minutes of face-to-face time with physician or other qualified health care professional for the following analysis/programming work:

Patient specific data populate on the programming equipment and are verified, including patient demographics and device history. Electronic analysis of the implanted neurostimulator pulse generator/transmitter is performed (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters). The diagnostic analysis, including the battery state, current program settings, and impedances of electrodes, as well as any event logs from the programming equipment and patient device interrogation are documented in the patient's medical record.
Attention is turned to the stimulation parameters and electrode mapping. Each electrode contact on the array is systematically activated one at a time in monopolar mode as a cathode. The parameters are adjusted (eg, amplitude, frequency, pulse width, contact combinations, patient controllable parameters) while neurologic effects on symptoms and signs (eg, bradykinesia, rigidity) are noted as well as side-effects (eg, twitching, pulling of face/contralateral limb). After electrode mapping, the physician or QHP then determines which combination of parameters result in an optimal effect while minimizing adverse side effects and the final exit parameters are selected to balance benefits to bradykinesia and rigidity with least side-effects.
Any additional final program measurements and any other relevant clinical information obtained from the additional programming are documented in the patient's medical record.

Description of Post-Service Work: N/A

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2017
Presenter(s):	Marianna Spanaki, MD, PhD; Alexander Mason, MD; Marc Nuwer, MD PhD; Peter Pahipill, MD

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
64645	ZZZ	1.39	**RUC Time**

CPT Descriptor Chemodenervation of one extremity; each additional extremity, 5 or more muscles (List separately in addition to code for primary procedure).

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99292	ZZZ	2.25	**RUC Time**

CPT Descriptor Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service).

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64484	ZZZ	1.00	**RUC Time**	480,712

CPT Descriptor 1 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64480	ZZZ	1.20	**RUC Time**	23,439

CPT Descriptor 2 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 13 **% of respondents:** 27.0 **%**

Number of respondents who choose 2nd Key Reference Code: 10 **% of respondents:** 20.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 95984	Top Key Reference CPT Code: 64645	2nd Key Reference CPT Code: 99292

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	8%	46%	23%	23%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	38%	54%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	54%	31%	15%

Physical effort required	23%	31%	46%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	31%	62%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	50%	20%	30%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	30%	70%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	10%	30%	60%
Physical effort required	20%	40%	40%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	20%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Codes 95971 and 95972 were identified under a high-volume growth screen. During the RUC review of these codes in January 2014, a discrepancy was noted between the code descriptor and survey time data. The CPT Panel approved a temporary revision to the code descriptor for CPT 2015 and the RUC recommended that codes 95971, 95972 and 95973

be referred to CPT. Codes 95971 and 95972 were revised and code 95973 was deleted at the February 2015 CPT meeting, followed by another RUC survey of codes 95971 and 95972 for the April 2015 RUC meeting.

In the physician fee schedule proposed rule for CY 2016, CMS indicated that due to significant time changes in 95971 and 95972, that the entire family should be considered as potentially misvalued and reviewed. The RUC added codes 95970 and 95974-95982 to the list of potentially misvalued services to review. The specialty societies requested the codes be referred to CPT to revise the code language for the other codes identified to more accurately reflect the services being performed.

At the June 2017 CPT meeting, code 95970 was revised; codes 95975, 95975, 95978, 95979 were deleted and new codes were approved.

Code 95984

New code **95984** is an add-on service for each additional 15 minutes of programming versus the deleted code 95979 which was defined as each additional 30 minutes.

Survey Sample and Process

A survey of physicians from the membership rosters of the American Academy of Neurology (AAN), American Association of Neurological Surgeons / Congress of Neurological Surgeons (AANS/CNS), American Clinical Neurophysiology Society (ACNS), and the North American Neuromodulation Society (NANS) was conducted.

Work RVU Recommendation

We recommend the survey 25th percentile work RVU of 1.00.

Pre-time

We recommend 0 minutes of pre-service time for this add-on code.

Post-time

We recommend 0 minutes of post-service time for this add-on code.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - [x] The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - [ ] Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - [ ] Multiple codes allow flexibility to describe exactly what components the procedure included.
   - [ ] Multiple codes are used to maintain consistency with similar codes.
   - [ ] Historical precedents.
   - [ ] Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95979

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Neurosurgery How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 109768
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 4 times the annual Medicare utilization. / PA

Specialty Neurology Frequency 86717 Percentage 79.00 %

Specialty Neurosurgery Frequency 3294 Percentage 3.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 27,442
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate 2/3 of the combined current utilization of 95978 and 95979 (2016 Medicare utilization data from the RUC database) of 41,163 will be the additional 15 minute programming code and be reported with 95X86. This equates to 27,442. We anticipate that the specialty distribution will not change.

Specialty Neurology Frequency 21681 Percentage 79.00 %

Specialty Neurosurgery Frequency 824 Percentage 3.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:
Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters
by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming

Global Period: XXX   Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: **The surveying societies convened a panel of experts, including advisors who are familiar with the service. The panel of experts reviewed and collaborated via email and phone call to review existing direct practice expense inputs for 95970.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **The panel of experts used the existing PE inputs of 95970 as a starting point and made adjustments as appropriate to reflect any changes in technology of practice.**

3. Is this code(s) typically billed with an E/M service? **Yes**

4. What specialty is the dominant provider in the nonfacility? **Neurology** What percent of the time does the dominant provider provide the service(s) in the nonfacility? **56%** Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder) **No**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **We are not requesting an increase over the current totally cost for clinical staff time.**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

   Pre-Service Period Clinical Activities: (0 minutes) There are no clinical activities performed by staff during the pre-service period.

Service Period **Clinical Activities: (0 minutes) There are no clinical activities performed by staff during the pre-service period.**

Post-Service **Period Clinical Activities: (0 minutes) There are no clinical activities performed by staff during the pre-service period.**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **The exam table time and the programmer, neurostimulator time is the same as the physician time.**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth Screen

April 2015

Analysis of Neurostimulator Pulse Generator System

Codes 95971 and 95972 were identified under the High Volume Growth Screen. The RUC requested that these services be surveyed for work and that PE inputs be developed for the January 2014 RUC meeting. At the January 2014 meeting, the RUC reviewed the survey results for code 95971 and recommended the current work RVU of 0.78. The RUC reviewed the survey results for code 95972 and determined that the survey 25th percentile work RVU of 0.90 appropriately accounts for the work required to perform this service. The RUC agreed that 8 minutes pre-time, 23 minutes intra-service time and 5 minutes immediate post-service time appropriately account for the work required to perform this service. Because of the discrepancy between the code descriptor specifying "1 hour" of work time and the new survey data, the CPT Panel approved a temporary revision to the code descriptor for CPT 2015 to state "up to 1 hour." The RUC recommended that codes 95971, 95972 and 95973 be referred to CPT to address the entire family regarding the time referenced in the CPT code descriptors. Specifically, the descriptor for code 95972 specifies "first hour" but survey results indicate the majority of physicians reporting this code take less than 30 minutes. The RUC reviewed these services again in April 2015, after the new CPT language.

95971 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, intraoperative or subsequent programming
The RUC reviewed the survey results from 33 physicians for CPT code 95971 and agreed with the specialty that the current value is appropriate for this service. The specialty society noted that the current work RVU of 0.78 is below the survey 25th percentile work RVU of 0.98. The specialty society indicated that there is no compelling evidence to warrant an increase in physician work for this service. The survey also supported the current physician time for this service. The RUC recommends maintaining the current time of 8 minutes pre-service time, 20 minutes intra-service time and 5 minutes immediate post service time. The RUC noted that CPT code 95971 is typically reported with an Evaluation and Management (E/M) service on the same date and the reduction of the survey pre-service time from 15 to 8 minutes appropriately accounts for physician pre-service time. The RUC compared the survey code to the top two key reference services *62370 Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming and refill (requiring skill of a physician or other qualified health care professional)* (work RVU = 0.90 and 20 minutes intra-service time) and 62368 *Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming* (work RVU = 0.67 and 15 minutes intra-service time) and determined these services require similar physician work and time to perform and appropriately valued similarly. For additional support the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC compared the surveyed code to MPC codes 95991 *Refilling and maintenance of implantable pump or reservoir for drug delivery, spinal (intrathecal, epidural) or brain (intraventricular), includes electronic analysis of pump, when performed; requiring skill of a physician or other qualified health care professional* (work RVU = 0.77) and 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* (work RVU = 0.85). **The RUC recommends a work RVU of 0.78 for CPT code 95971.**

95972 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

The specialty societies indicated that the survey for CPT 95972 was conducted with an old descriptor that specified *with intraoperative or subsequent programing "first hour"*. The specialty societies noted and the RUC agreed that the survey respondents have already indicated on two recent surveys that this service is well under 60 minutes. Therefore, the descriptor changes have not altered the survey respondents' median intra-service time estimates for providing this service. When surveying for "up to 1 hour" in January 2014 the median intra-service time was 23 minutes and when surveying in April 2015, albeit with the wrong descriptor "first hour", the survey median intra-service time was 25 minutes. The RUC agreed that, since this service was not surveyed with the current descriptor, the survey was invalid and the current work and time should be maintained. The RUC recommends 8 minutes pre-service time, 23 minutes intra-service time and 5 minutes immediate post-service time. The RUC noted that, relative to CPT code 95971, CPT code 95972 is more complex, requires more parameters (6-7) and requires updating these parameters to change the polarity of different leads and therefore requires slightly more physician time and work. The RUC noted that CMS did not accept the January 2014 RUC recommendation of 0.90 work RVUs for this service and instead set a work RVU of 0.80 for CPT code 95972. The RUC noted the difference in physician work for 95971 and 95972 is greater than 0.02 work RVUs however, recommend maintaining the current work RVU at this time. The RUC referenced MPC codes 95991 *Refilling and maintenance of implantable pump or reservoir for drug delivery, spinal (intrathecal, epidural) or brain (intraventricular), includes electronic analysis of pump, when performed; requiring skill of a physician or other qualified health care professional* (work RVU = 0.77) and 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report* (work RVU = 0.85). **The RUC recommends a work RVU of 0.80 for CPT code 95972.**

Practice Expense

The Practice Expense Subcommittee made revisions to the direct practice expense inputs for CPT code 95971 reduced clinical staff already attributable to E/M, reduced the cleaning room by 2 minutes and correctly calculated the equipment time to include the appropriate line items. The PE Subcommittee notes that for both services the clinical staff intra-service time to assist physicians in performing procedure is 2/3 of the physician intra-service time, the equipment minutes include the entire physician intra-service time. The RUC reviewed and approved the direct practice expense inputs with revisions as approved by the Practice Expense Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

Neurology and Neuromuscular Procedures
Neurostimulators, Analysis-Programming

Simple intraoperative or subsequent programming of the neurostimulator pulse generator/transmitter (95971) includes changes to three or fewer of the following parameters: rate, pulse amplitude, pulse duration, pulse frequency, eight or more electrode contacts, cycling, stimulation train duration, train spacing, number of programs, number of channels, alternating electrode polarities, dose time (stimulation parameters changing in time periods of minutes including dose lockout times), more than one clinical feature (eg, rigidity, dyskinesia, tremor). Complex intraoperative or subsequent programming (95972-95979) includes changes to more than three of the above.

Code 95970 describes subsequent electronic analysis of a previously-implanted simple or complex brain, spinal cord, or peripheral neurostimulator pulse generator system, without reprogramming. Code 95971 describes intraoperative or subsequent electronic analysis of an implanted simple spinal cord, or peripheral (ie, peripheral nerve, autonomic nerve, neuromuscular) neurostimulator pulse generator system, with programming. Code~~s~~ 95972 ~~and 95973~~ describes intraoperative (at initial insertion/revision) or subsequent electronic analysis of an implanted complex spinal cord or peripheral (except cranial nerve) neurostimulator pulse generator system, with programming.

Codes 95974 and 95975 describe intraoperative (at initial insertion/revision) or subsequent electronic analysis of an implanted complex cranial nerve neurostimulator pulse generator system, with programming. Codes 95978 and 95979 describe initial or subsequent electronic analysis of an implanted brain neurostimulator pulse generator system, with programming. Code 95980 describes intraoperative electronic analysis of an implanted gastric neurostimulator pulse generator system, with programming; code 95981 describes subsequent analysis of the device; code 95982 describes subsequent analysis and reprogramming. For electronic analysis and reprogramming of gastric neurostimulator, lesser curvature, see 95980-95982.

For ~~95972,~~ 95974~~,~~ and 95978, use modifier 52 if less than 31 minutes in duration.

(For electronic analysis and reprogramming of a peripheral subcutaneous field stimulation pulse generator, use 0285T)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

(For insertion of neurostimulator pulse generator, see 61885, 63685, 64590)

(For revision or removal of neurostimulator pulse generator or receiver, see 61888, 63688, 64595)

(For implantation of neurostimulator electrodes, see43647, 43881, 61850-61870, 63650-63655, 64553-64580. For revision or removal of neurostimulator electrodes, see 43648, 43882, 61880, 63661-63664, 64585)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95971 Tracking Number GG1 Original Specialty Recommended RVU: **0.78**
Presented Recommended RVU: **0.78**
Global Period: XXX RUC Recommended RVU: **0.78**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old patient with a condition that requires nerve stimulation returns for simple programming of the implanted neurostimulator pulse generator system in which three or fewer of the parameters are adjusted.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 26%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 9%

Description of Pre-Service Work: Obtain and review records and previous history, laboratory studies, and all imaging studies before the procedure. Evaluate patient's voiding diary if applicable. Verify appropriate programming equipment and patient's handheld programmer. Place patient on examination table.

Description of Intra-Service Work: Link programmer with patient programmer (handheld device). Interrogate patient's neurostimulator device. Review preset program settings by switching with handheld programmer between programs and record patient sensation. Change the lead configuration. Change amplitude until stimulation is felt if appropriate then maintain that configuration. If inappropriate, repeat process until appropriate response is obtained. Assess three parameters and change as necessary. Re-sync new program with patient's handheld programmer.

Description of Post-Service Work: Plan for programmer replacement if necessary. Discuss expectations with patient. Re-educate patient on use of device. Discuss follow-up appointment. Transfer data to hard copy and scan results into computer. Dictate chart note. Contact referring physician as appropriate. Contact company about device malfunction and/or failure as necessary.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

Mental Effort and Judgment (Mean)	**Top Key Ref Code**	**2nd Key Ref Code**
The number of possible diagnosis and/or the number of management options that must be considered	0.80	0.86
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0.70	0.71
Urgency of medical decision making	0.30	-0.57

Technical Skill/Physical Effort (Mean)

Technical skill required	1.20	0.14
Physical effort required	0.30	0.29

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.30	-0.43
Outcome depends on the skill and judgment of physician	0.70	0.57
Estimated risk of malpractice suit with poor outcome	0.10	-0.29

INTENSITY/COMPLEXITY MEASURES	**Top Key Ref Code**	**2nd Key Ref Code**
Time Segment (Mean)		
Overall intensity/complexity	1.00	0.86

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

CPT code 95971 was surveyed by six different specialty societies, American Urological Association, American Congress of Obstetricians and Gynecologists, American Society of Anesthesiologists, North American Spine Society, American Academy of Pain Medicine, International Spine Intervention Society. The surveys were sent to random 1190 members of these specialty societies of which we received 33 responses at a 2.7% response rate. In 2013, 11.947 of these procedures were performed in the Medicare population so the number of responses to this survey meets the new RUC criteria of 30 respondents as the minimum survey sample size for this code.

A conference call of the participating specialty societies RUC advisors compared the current information in the RUC database and compared and reviewed the physician work survey results as well as practice expense. The survey median preservice time was 15 minutes and the survey median postservice time was 15 minutes. The expert panel believes that the preservice time should be reduced to align with the 95972 code. The postservice time has increased in this survey has to compared to currently what is in the RUC database. The expert panel believes the amount of time to discuss the expectations and the education of this device to the patient requires more time than the current postservice time of 5 minutes.

The current intraservice time for 95971 is 20 minutes and the survey results came out exactly at 20 minutes as well. The current work RVU for 95971 is .78. The median survey RVU was 1.10 and the 25th percentile work RUV was 0.98. The involved specialty societies recommend that the current RVU of .78 be maintained.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Typically reported with an E/M service on the same day

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95971

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty Interventional Pain How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data is not available

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 11,947
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2013 claims data RUC Database

Specialty Urology Frequency 3926 Percentage 32.86 %

Specialty Neurology Frequency 1679 Percentage 14.05 %

Specialty Pain Management Frequency 1530 Percentage 12.80 %

Do many physicians perform this service across the United States? Yes

---

March 27, 2015

Barbara Levy, MD, Chair
AMA/Specialty Society RVS Update Committee
Relative Value Systems
American Medical Association
515 North State Street,
Chicago, Illinois 60654

Dear Dr. Levy,

Re: Tab 21 – CPT code 95972

On behalf of all specialty societies involved in surveying Tab 21, the American Urological Association (AUA) is writing to inform the RUC of an problem found in the survey process for CPT code *95972 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming.*

This code is being surveyed as a new/revised code from the recent Current Procedural Terminology (CPT) Editorial Panel Meeting in February 2015 where the descriptor was changed to delete "up to 1 hour" as it appears in the 2015 CPT Manual. However, when the survey was built into RVS Online, the CPT code descriptor for 95972 automatically populated itself to use the 2014 code descriptor that included the words "first hour." Reference to time in the descriptor was removed. Unfortunately, the incorrect descriptor was not identified until the survey had closed. All specialty societies involved were notified of the inclusion of the incorrect descriptor when it was discovered. RUC staff was notified and led to the submission of this letter. The specialty societies involved have a contract with RVS Online and have found it easier to perform joint surveys and we used this survey process for the original survey in 2014.

American
Urological
Association

In the RUC database, the current RVU physician work value is 0.80. The pre-service work is eight minutes, intra-service work is twenty three minutes and the immediate post service time is five minutes for a total time of thirty six minutes.

The recent survey results showed a median RVU of 1.25. The pre-service work is thirteen minutes, intra service work is twenty five minutes and the immediate post service time was fifteen minutes for a total time of fifty three minutes. After all specialty societies reviewed the survey data, it was felt to maintain the current work RVU of 0.80. The survey intraservice time still comes in under the hour and only two additional minutes from the survey of one year ago.

Please let us know how the RUC would like to proceed. If further work is needed, please notify the AUA as soon as possible so we can work collaboratively with the other specialty societies involved to address any concerns prior to the meeting.

Thank you for your consideration in this matter and we apologize for any inconvenience this has caused to the RUC.

Sincerely,

Thomas Turk, MD
RUC Advisor, American Urological Association

CC: American College of Obstetrics and Gynecology
American Society of Anesthesiologists
American Academy of Pain Medicine
International Spine Intervention Society

Congress of Neurological Surgeons

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:95972 Tracking Number GG2 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: XXX RUC Recommended RVU: **0.80**

CPT Descriptor: Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old patient with a condition that requires nerve stimulation returns for complex programming of the implanted neurostimulator pulse generator system in which four or more parameters are adjusted.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Moderate Sedation

Is moderate sedation inherent to this procedure in the Hospital/ASC setting? No
Percent of survey respondents who stated moderate sedation is typical in the Hospital/ASC setting? 19%

Is moderate sedation inherent to this procedure in the office setting? No
Percent of survey respondents who stated moderate sedation is typical in the office setting? 4%

Description of Pre-Service Work: Obtain and review records and previous history, laboratory studies, and all imaging studies before the procedure. Evaluate patient's voiding diary if applicable. Verify appropriate programming equipment and patient's handheld programmer. Place patient on examination table.

Description of Intra-Service Work: Link programmer with patient programmer (handheld device). Interrogate patient's neurostimulator device. Review preset program settings by switching with handheld programmer between programs and record patient sensation. Change the lead configuration. Change amplitude until stimulation is felt if appropriate then maintain that configuration. If inappropriate, then repeat process until appropriate response is obtained. Assess four or more parameters and change as necessary. Re-sync new program with patient's handheld programmer.

Description of Post-Service Work: Plan for programmer replacement if necessary. Discuss expectations with patient. Re-educate patient on use of device. Discuss follow-up appointment. Transfer data to hard copy and scan results into computer. Dictate chart note. Contact referring physician as appropriate. Contact company about device malfunction and/or failure as necessary.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2015		
Presenter(s):	Marc Leib, MD; Christopher Merified, MD; Mitchell Schuster, MD; Norman Smith, MD; Phillip Wise, MD		
Specialty(s):	American Uroloigcal Association, American Congress of Obstetrics and Gynecology, American Society of Anesthesiologists, International Spine Intervention Society, and National Association of Spine Surgeons, American Association of Neurological Surgeons, Congress of Neurological Surgeons, American Academy of Physical Medicine and Rehabilitation.		
CPT Code:	95972

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
62370	XXX	0.90	**RUC Time**

CPT Descriptor Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming and refill (requiring skill of a physician or other qualified health care professional)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99214	XXX	1.50	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95991	XXX	0.77	**RUC Time**	23,563

CPT Descriptor 1 Refilling and maintenance of implantable pump or reservoir for drug delivery, spinal (intrathecal, epidural) or brain (intraventricular), includes electronic analysis of pump, when performed; requiring skill of a physician or other qualified health care professional

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95251	XXX	0.85	**RUC Time**	29,201

CPT Descriptor 2 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; interpretation and report

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by the mean) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 14 **% of respondents:** 43.7 **%**

Number of respondents who choose 2nd Key Reference Code: 10 **% of respondents:** 31.2 **%**

TIME ESTIMATES (Median)

	CPT Code: 95972	Top Key Reference CPT Code: 62370	2nd Key Reference CPT Code: 99214
Median Pre-Service Time	8.00	7.00	5.00
Median Intra-Service Time	23.00	20.00	25.00
Median Immediate Post-service Time	5.00	10.00	10.00
Median Critical Care Time	0.0	0.00	0.00
Median Other Hospital Visit Time	0.0	0.00	0.00
Median Discharge Day Management Time	0.0	0.00	0.00
Median Office Visit Time	0.0	0.00	0.00
Prolonged Services Time	0.0	0.00	0.00
Median Subsequent Observation Care Time	0.0	0.00	0.00
Median Total Time	**36.00**	**37.00**	**40.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Intensity & Complexity Rating Scale: (much less= -2.00, somewhat less= -1.00, identical= 0.00, somewhat more= 1.00, much more= 2.00)

	Top Key Ref Code	2nd Key Ref Code
Mental Effort and Judgment (Mean)		
The number of possible diagnosis and/or the number of management options that must be considered	1.14	0.20

The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	1.00	0.40
Urgency of medical decision making	0.36	0.70

Technical Skill/Physical Effort (Mean)

Technical skill required	1.00	1.60
Physical effort required	0.64	1.00

Psychological Stress (Mean)

The risk of significant complications, morbidity and/or mortality	0.29	0.40
Outcome depends on the skill and judgment of physician	1.07	0.80
Estimated risk of malpractice suit with poor outcome	0.14	0.40

INTENSITY/COMPLEXITY MEASURES	Top Key Ref Code	2nd Key Ref Code
Time Segment (Mean)		
Overall intensity/complexity	1.00	1.00

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

CPT code 95972 was surveyed by six different specialty societies, American Urological Association, American Congress of Obstetrics and Gynecology, American Society of Anesthesiologists, International Spine Intervention Society, and National Association of Spine Surgeons, American Association of Neurological Surgeons, Congress of Neurological Surgeons, American Academy of Pain Medicine.. The surveys were sent to random 1191 members of these specialty societies of which we received 32 responses at a 2.6% response rate. In 2013, 63,547 of these procedures were performed in the Medicare population so the number of responses to this survey meets the new RUC criteria of 30 respondents as the minimum survey sample size for this code.

A conference call of the participating specialty societies RUC advisors compared the current information in the RUC database and compared and reviewed the physician work survey results as well as practice expense. The current intraservice time for 95972 is 23 minutes and the survey results indicated that the intraservice time was increased to 25 minutes. The current work RVU for 95972 is 0.80. The median survey RVU was 1.25 and the 25th percentile work RUV was 1.00. The involved specialty societies recommend that the current RVU of .80 be maintained

---

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 95972

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Anesthesia How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data is not available

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 63,547
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2013 claims data from the RUC database

Specialty Urology Frequency 19586 Percentage 30.82 %

Specialty Pain Management Frequency 9958 Percentage 15.67 %

Specialty Anesthesia Frequency 7975 Percentage 12.54 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95972

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

95971 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

Global Period: xxx Meeting Date: April 2015

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: RUC Advisors from each specialty society involved in this survey process reviewed the practice expense recommendations and approved them.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: These codes are being revised so we are using 95971 as our reference code.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: NA

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: NA

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Visit prior to procedure:
Provide pre-service education and obtain consent from patient

Day of Procedure – Pre-Service
Greet the patient
Provide gown
Ensure appropriate medical records are available
Obtain three vitals (BP, weight and temperature)
Prepare room, equipment and supplies

Intra-Service Clinical Labor Activities:

Assist physician in programming the neurostimulation system

Post-Service Clinical Labor Activities:

Clean the room and equipment
Provide follow up information to patient.
Patient education/teaching as appropriate based upon the visit
Confers with the MD verbally for any last minute instructions for patient.
Next appointment is set up for patient while checking out.

Next day after patient leaves the office, calls patient to verify if the new programming is working.

CPT Code: 95972

Specialty Society('s) American Urological Association, American Congress of Obstetricians and Gynecologists, American Society of Anesthesiologists, American Academy of Pain Medicine, International Spine Intervention Society, American Association of Neurological Surgeons, Congress of Neurological Surgeons

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation
Non Facility Direct Inputs

CPT Long Descriptor:

95972 Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, first hour

Global Period: xxx   Meeting Date: April 2015

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society Practice Expense Committee: RUC Advisors from each specialty society involved in this survey process reviewed the practice expense recommendations and approved them.

2. You must provide reference code(s) for comparison on your spreadsheet. **If the code you are making recommendations on is a revised code you must use the current PE direct inputs for the code as your comparison.** You must provide an explanation for the selection of reference codes. Reference Code Rationale: These codes are being revised so we are using 95972 as our reference code.

3. If you are recommending more minutes than the PE Subcommittee standards you must provide evidence to justify the time: NA

4. If you are requesting an increase over the current inputs in clinical staff time, supplies or equipment you must provide compelling evidence: NA

5. Please describe in detail the clinical activities of your staff:

Pre-Service Clinical Labor Activities:

Visit prior to procedure:
Provide pre-service education and obtain consent from patient

Day of Procedure – Pre-Service
Greet the patient
Provide gown
Ensure appropriate medical records are available
Obtain three vitals (BP, weight and temperature)
Prepare room, equipment and supplies

Intra-Service Clinical Labor Activities:

Assist physician in programming the neurostimulation system

Post-Service Clinical Labor Activities:

Clean the room and equipment
Provide follow up information to patient.
Patient education/teaching as appropriate based upon the visit
Confers with the MD verbally for any last minute instructions for patient.
Next appointment is set up for patient while checking out.

Next day after patient leaves the office, calls patient to verify if the new programming is working.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS High Expenditure Procedural Codes

October 2017

Psychological and Neuropsychological Testing

In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010-day and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In January 2016, the specialty societies requested that the entire family of codes be referred to the CPT Editorial Panel to be revised. The testing practice has been significantly altered by the growth and availability of technology. The current codes do not reflect the multiple standards of practice and therefore result in confusion about how to report the codes. The RUC recommended the entire psychological and neuropsychological testing codes be referred to the CPT Editorial Panel for revision. CMS also requested that the entire family of services be reviewed. In September 2016, the CPT Editorial Panel created seven codes to differentiate technician administration of psychological testing and neuropsychological testing from physician/ psychologist administration and assessment of testing; and deleted codes 96101-96103, 96111, 96118, 96119, 96120. In January 2017, organizations representing psychiatry, psychology, neurology, pediatrics and speech pathologists conducted a survey for the January 2017 RUC and HCPAC Review Board meetings. During this effort, it became apparent that further CPT revisions were required. Survey respondents were unable to articulate the work at the 60 or 30 minute coding increments and there is significant concern regarding the duplication of pre- and post- work as several units of service would be reported. Therefore, the organizations submitted a letter to the CPT Editorial Panel and the RUC to rescind the coding changes summarized below for CPT 2018. In June 2017, the CPT Editorial Panel revised 96116, added 13 codes to provide better definition and description to psychological and neuropsychological testing, and deleted of codes 96101-96103, 96111, 96118, 96119, 96120.

96112 ***Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour***
The RUC reviewed the specialty societies' recommendation of 2.60, the current value of to be deleted CPT code 96111 *Developmental testing, (includes assessment of motor, language, social, adaptive, and/or cognitive functioning by standardized developmental instruments) with interpretation and report* (work RVU = 2.60 and 5 minutes pre-time, 60 minutes intra-service time and 30 minutes post-time), and determined that the survey data did not support that recommendation. The RUC reviewed the survey responses from 48 pediatricians, neurologists and psychologists and noted the survey 25th percentile was 2.48 work RVUs and median was 3.13 work RVUs. The RUC understood that this service is typically performed on a pediatric patient on the autism spectrum, which may be more intense and complex to test than the previous typical patient. However, the survey data did not indicate an increase. Therefore, using magnitude estimation the RUC determined that a work RVU of 2.50, crosswalked to CPT code 90847 *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes* (work RVU = 2.50 and 5

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes pre-service, 50 minutes intra-service and 21 minutes post-service time) was appropriate. Additionally, a work RVU of 2.50 was recommended for codes 96130 and 96132, which require the same physician time and similar work to perform. For additional support the RUC referenced similar services 90846 *Family psychotherapy (without the patient present), 50 minutes* (work RVU = 2.40 and 50 minutes intra-service time) and 95954 *Pharmacological or physical activation requiring physician or other qualified health care professional attendance during EEG recording of activation phase* (eg, thiopental activation test) (work RVU = 2.45 and 5 minutes pre-service, 60 minutes intra-service and 5 minutes post-service time). Based on initial comments from the RUC, the specialty societies modified the pre- and post-service times to be consistent with this family of services and other similar services. The RUC recommends 5 minutes pre-service, 60 minutes intra-service and 5 minutes post-service time for CPT code 96112. **The RUC recommends a work RVU of 2.50 for CPT code 96112.**

96113 ***Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)***
The RUC reviewed the survey responses from 43 pediatricians, neurologists and psychologists and determined that the survey respondents overestimated the physician time and work required to perform this service. The RUC expressed concerned about the intensity of this add-on service related to the intensity of the base code. Therefore, the RUC recommends that CPT code 96113 be crosswalked to CPT code 96570 *Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); first 30 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract)* (work RVU of 1.10 and 30 minutes intra-service time). The RUC recommends 30 minutes for CPT code 96113. For additional support the RUC referenced CPT code 52442 *Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)* (work RVU = 1.20 and 25 minutes intra-service time), which is valued slightly higher because it is more intense and complex to perform. **The RUC recommends a work RVU of 1.10 for CPT code 96113.**

96116 ***Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour***
The RUC reviewed the survey responses from 53 neurologists and psychologists and determined the current work RVU of 1.86 appropriately accounts for the work required to perform this service. The RUC recommends 5 minutes of pre-service, 60 minutes of intra-service and 5 minutes of post-service time. Based on initial comments from the RUC, the specialty societies modified the pre- and post-service times to be consistent with this family of services and other similar services. The RUC confirmed that this service will not be reported with an Evaluation and Management (E/M) service. For additional support, the RUC referenced similar services 92524 *Behavioral and qualitative analysis of voice and resonance* (work RVU = 1.50 and 60 minutes intra-service time) and 95864 *Needle electromyography; 4 extremities with or without related paraspinal areas* (work RVU = 1.99 and 50 minutes intra-service time). **The RUC recommends a work RVU of 1.86 for CPT code 96116.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96121 ***Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure)***
The RUC reviewed the survey responses from 53 neurologists and psychologists and determined that the survey respondents overestimated the physician work required for this service. Therefore, the RUC recommends that CPT code 96121 be crosswalked to CPT code 99356 *Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour (List separately in addition to code for primary procedure)* (work RVU = 1.71 and 60 minutes intra-service time). The RUC recommends 60 minutes of intra-service time for CPT code 96121. For additional support, the RUC referenced add-on code 90836 *Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)* (work RVU = 1.90 and 48 minutes total time). **The RUC recommends a work RVU of 1.71 for CPT code 96121.**

96132 ***Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour***
The RUC reviewed the survey responses from 140 neurologists and psychologists and determined that the survey respondents overestimated the physician time for this service. Based on initial comments from the RUC, the specialty societies modified the pre- and post-service times to be consistent with this family of services and other similar services. The RUC confirmed that this service will not be reported with an Evaluation and Management (E/M) service. The RUC also confirmed that psychological testing evaluation service, CPT code 96130 and neuropsychological testing evaluation service, CPT code 96132 are distinct and separate services and will not be reported together on the same day. The RUC recommends 5 minutes of pre-service, 60 minutes of intra-service and 5 minutes of post-service time for CPT code 96132. Using magnitude estimation the RUC determined that a work RVU of 2.50, crosswalked to CPT code 90847 *Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes* (work RVU = 2.50 and 5 minutes pre-service, 50 minutes intra-service and 21 minutes post-service time) was appropriate. Additionally, a work RVU of 2.50 was recommended for codes 96112 and 96130, which require the same physician time and work to perform. For additional support the RUC referenced similar services 90846 *Family psychotherapy (without the patient present), 50 minutes* (work RVU = 2.40 and 50 minutes intra-service time) and 95954 *Pharmacological or physical activation requiring physician or other qualified health care professional attendance during EEG recording of activation phase* (eg, thiopental activation test) (work RVU = 2.45 and 5 minutes pre-service, 60 minutes intra-service and 5 minutes post-service time). **The RUC recommends a work RVU of 2.50 for CPT code 96132.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96133 ***Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)***

The RUC reviewed the survey responses from 138 neurologists and psychologists and determined that the survey respondents overestimated the physician work and time for this service. The RUC recommends 60 minutes of intra-service time. Using magnitude estimation the RUC determined that a work RVU of 1.90, crosswalked to CPT code 90836 *Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)* (work RVU = 1.90 and 48 minutes total time) was appropriate. Additionally, a work RVU of 1.90 was recommended for code 96131, which require the same physician time and work to perform. For additional support the RUC referenced similar services 88323 *Consultation and report on referred material requiring preparation of slides* (work RVU = 1.83 and 60 minutes intra-service time), 95864 *Needle electromyography; 4 extremities with or without related paraspinal areas* (work RVU = 1.99 and 50 minutes intra-service time) and 92640 *Diagnostic analysis with programming of auditory brainstem implant, per hour* (work RVU = 1.76 and 60 minutes intra-service time). **The RUC recommends a work RVU of 1.90 for CPT code 96133.**

96X11 ***Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed***

The RUC reviewed the survey responses from 143 neurologists and psychologists and determined that the issue with this service was that the primary providers were not surveyed (primary care and nurse practitioners).This service describes a single test that is currently reported with 96103 *Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI), administered by a computer, with qualified health care professional interpretation and report* (work RVU = 0.51, 8 minutes pre-service, 8 minutes intra-service and 14 minutes post service time) or 96120 *Neuropsychological testing (eg, Wisconsin Card Sorting Test), administered by a computer, with qualified health care professional interpretation and report* (work RVU = 0.51, 8 minutes pre-service, 8 minutes intra-service and 14 minutes post service time). The RUC did not believe this single test will typically require 30 minutes. The RUC agreed the new coding structure for the other psychological and neuropsychological tests accurately describe testing performed by psychologists and neurologists, whereas the test as described in CPT code 96X11 will be a single test conducted by primary care physicians and nurse practitioners. **The RUC recommends an interim value of 0.51 for CPT code 96X11 and 8 minutes pre-service, 8 minutes intra-service and 14 minutes post service time (the current value and physician times as that of 96103 and 96120) and resurvey the correct providers for January 2018. The specialty societies should submit a revised vignette to the Research Subcommittee prior to survey.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
CPT codes 96113, 96121, 96132 and 96133 require no direct practice expense inputs.

96110 ***Developmental screening (eg, developmental milestone survey, speech and language delay screen) with scoring and documentation, per standardized instrument***
96127 ***Brief emotional/behavioral assessment (eg, depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale), with scoring and documentation, per standardized instrument***
CPT code 96127 was reviewed in April 2014. At that time the RUC recommended 15 minutes of staff time for clinical activity, *Perform procedure/service---NOT directly related to physician work time.* This time was subsequently refined by CMS and reduced to 7 minutes. The PE Subcommittee reviewed this service as part of the family at the October 2017 RUC meeting and determined that 6 minutes is the appropriate time for this clinical activity. To maintain consistency across the family, clinical activity, *Perform procedure/service---NOT directly related to physician work time* in CPT code 96110 was also reduced from 15 to 6 minutes.

96112 ***Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour***
CPT codes 96112 requires no clinical staff time. There is 1 equipment item, EQ087 *cognitive abilities testing software (Woodcock Johnson)* allocated to this service. The time that the item is in use is not directly related to the clinical activity time and is typically in use for 10 minutes while the physician or other qualified health care professional administers the test.

96116 ***Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour***
CPT code 96116 includes an equipment item SK050, *neurobehavioral status forms, average*, that is an average of a variety of neurobehavioral tests. The PE Subcommittee requested that the specialty societies that utilize this supply item work together to determine the 3 most typical tests and submit paid invoices to CMS to facilitate updated pricing.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

96132 ***Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour***
96133 ***Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)***
96X11 ***Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed***
CPT codes 96132, 96133 and 96X11 require no clinical staff time. The PE Subcommittee removed all supplies and equipment related to printing. The PE Subcommittee determined that equipment item ED021, *computer, desktop, w-monitor* is an indirect expense for this service.

The RUC recommends the direct practice expense inputs as reviewed and modified by the Practice Expense Subcommittee.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Medicine **Neurology and Neuromuscular Procedures Functional Brain Mapping**				
96020		*Neurofunctional testing selection and administration during noninvasive imaging functional brain mapping, with test administered entirely by a physician or other qualified health care professional (ie, psychologist), with review of test results and report* *(For functional magnetic resonance imaging [fMRI], brain, use 70555)* (Do not report 96020 in conjunction with ~~96101-96103~~, 96116~~-96120~~, 96112, 96113, 96121, 96130, 96131, 96132) *(Do not report 96020 in conjunction with 70554)* *(Evaluation and Management services codes should not be reported on the same day as 96020)*		

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Central Nervous System Assessments/Tests (eg, Neuro-Cognitive, Mental Status, Speech Testing)

The following codes are used to report the services provided during testing of the central nervous system functions. The central nervous system assessments include, but are not limited to: memory, language, ~~cognitive of the central nervous system. The testing of cognitive processes,~~ visual motor responses, and abstrac~~tive~~ reasoning/problem-solving abilities. It is accomplished by the combination of several types of testing procedures. Testing procedures include assessment of aphasia and cognitive performance testing; developmental screening and behavioral assessments and testing; and psychological/neuropsychological testing. ~~It is expected that t~~ The administration of these tests will generate material that will be formulated into a report or an automated result. ~~A minimum of 31 minutes must be provided to report any per hour code. Services 96101, 96116, 96118, and 96125 report time as face-to- face time with the patient and the time spent interpreting and preparing the report.~~

(For development of cognitive skills, see 97532, 97533)

(Do not report ~~96105~~1 ~~96125~~ assessment of aphasia and cognitive performance testing services [96105, 96125], developmental/behavioral screening and testing services [96110, 96112, 96113, 96127] and psychological/neuropsychological testing services [96116, 96130, 96131, 96132, 96133, 96136, 96137, 96138, 96139, 96X11, 96146 in conjunction with 0364T,0365T, 0366T, 0367T, 0373T, 0374T)

Definitions

Codes in this family describe a number of services that are defined below:

Cognitive performance testing assesses the patient's ability to complete specific functional tasks applicable to the patient's environment in order to identify or quantify specific cognitive deficits. The results are used to determine impairments and develop therapeutic goals and objectives.

Interactive feedback is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when preformed.

Interpretation and report is performed by a physician or other qualified health care professional. In some circumstances, a result is generated through the use of a computer, tablet, or other device.

Neurobehavioral status exam is a clinical assessment of cognitive functions and behavior, and may include an interview with the patient, other informants, and/or staff, as well as integration of prior history and other sources of clinical data with clinical decision making, further assessment and/or treatment planning and report. Evaluation domains may include acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Neuropsychological testing evaluation services typically include integration of patient data with other sources of clinical data, interpretation, clinical decision making, and treatment planning and report. It may include interactive feedback to the patient, family member(s) or caregiver(s) when performed. Evaluation domains for neuropsychological evaluation may include intellectual function, attention, executive function, language and communication, memory, visual-spatial function, sensorimotor function, emotional and personality features, and adaptive behavior.

Psychological testing evaluation services typically include integration of patient data with other sources of clinical data, interpretation, clinical decision making, and treatment planning and report. It may include interactive feedback to the patient, family members or caregiver(s) when performed. Evaluation domains for psychological evaluation may include emotional and interpersonal functioning, intellectual function, thought processes, personality, and psychopathology.

Standardized instruments are used in the performance of these services. Standardized instruments are validated tests that are administered and scored in a consistent or "standard" manner consistent with their validation.

Testing is administered by a physician, other qualified health care professional, and technician or completed by the patient. The mode of completion can be by a person (eg, paper and pencil) or via automated means.

~~**Reporting Instructions**~~

Assessment of aphasia and cognitive performance testing which includes interpretation and report, are described by 96105, 96125.

Developmental screening services are described by 96110. Developmental/behavioral testing services, which include interpretation and report, are described by 96112, 96113.

Neurobehavioral status exam, which includes interpretation and report, is described by 96116, 96121.

Psychological and neuropsychological test evaluation services, which include integration of patient data, interpretation of test results and clinical data, treatment planning and report, and interactive feedback, are described by 96130, 96131, 96132, 96133.

Testing and administration services (96136, 96137) are performed by a physician or other qualified health care professional. For 96136, 96137, do not include time for evaluation services (eg, integration of patient data or interpretation of test results). This time is included with psychological and neuropsychological test evaluation services (96130, 96131, 96132, 96133). Testing and administration services (96138, 96139) are performed by a technician. The tests selected, test administration and method of testing and scoring are the same regardless of whether the testing is performed by a physician, other qualified health care professional, or a technician for 96136, 96137, 96138, 96139. Single test administration with interpretation and report is described by 96X11. Automated testing and result code 96146 describes testing performed by a single automated instrument with an automated result.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Some of these ~~codes~~ services are typically performed together. For example, psychological/neuropsychological testing evaluation services (96130, 96131, 96132, 96133) may be reported with psychological/neuropsychological test administration and scoring services (96136, 96137, 96138, 96139).

A requirement of testing services (96105, 96125, 96112, 96113, 96121, 96130, 96131, 96132, 96133, 96X11, 96146) is that there is an interpretation and report when performed by a qualified health care professional, or a result when generated by automation. These services follow standard CPT time definitions (ie, a minimum of 16 minutes for 30-minute codes and 31 minutes for 1-hour codes must be provided to report any per hour code). ~~Services,~~The time reported in 96116, 96130, 96131, 96132, 96133, 96125 ~~report time as~~ is the face-to-face time with the patient and the time spent integrating and interpreting data.

Report the total time at the completion of the entire episode of evaluation.

(Use 0374T in conjunction with 0373T)

(0373T, 0374T are reported based on a single technician's face-to-face time with the patient and not the combined time of multiple technicians)

(Do not report 0373T, 0374T in conjunction with 90785-90899, 96101, 96105, 96110, 96116, 96150-96155)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Background: Psychological/Neuropsychological Testing Services (Tab 8/20) – October 2017 RUC Meeting

Appreciating the complexity of Tabs 8 and 20, societies assigned to these tabs have prepared brief background material to assist RUC and HCPAC members orient themselves to these tabs.

Overview of Tab

Category	Code #	Meeting	Societies
Assessment of Aphasia and Cognitive Performance Testing	96105, 96125	HCPAC	ASHA
Developmental/Behavioral Screening and Testing	96110, 96127	PE Only	AAP
	963X0, +963X1	RUC	AAP, AAN, APA
Neurobehavioral Status Exam	96116, +963X2	RUC	AAN, APA
Psychological/Neuropsychological Testing			
Testing Evaluation Services	963X3, +963X4	HCPAC	APA
	963X5, +963X6	RUC	AAN, APA
Test Administration and Scoring	963X7, +963X8	HCPAC	APA
	963X9, +96X10	PE Only	APA
Single Test Administration with Interpretation and Report	96X11	RUC	AAN, APA
Automated Testing and Report	96X12	PE Only	APA

Change in Reporting Psychological/Neuropsychological Testing Services

The table below provides a comparison of the change in coding for psychological/neuropsychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under one code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

Code	How Often Billed	Services Included in the Code				
		Evaluation	Interactive Feedback	Scoring/ Admin Prof.	Scoring/ Admin Tech.	Inter. & Report
Current Coding Scenarios						
96101 (psych)	Per hour	X		X		X
96102 (psych)	Per hour				X	X
96118 (neuropsych)	Per hour	X		X		X
96119 (neuropsych)	Per hour				X	X
New Coding Scenarios						
963X3 (psych)	First hour	X	X			X
+963X4 (psych)	Each addl hour	X	X			X
963X5 (neuropsych)	First hour	X	X			X
+963X6 (neuropsych)	Each addl hour	X	X			X
963X7	First 30 min.			X		
+963X8	Each addl 30 min.			X		
963X9	First 30 min.				X	
+96X10	Each addl 30 min.				X	

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96112 Tracking Number K4 Original Specialty Recommended RVU: **2.60**
Presented Recommended RVU: **2.60**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.50**

CPT Descriptor: Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 5-year-old male previously diagnosed with autism, but not enrolled in early intervention due to family circumstances, presents for extended developmental testing after he could not be successfully assessed for kindergarten entry.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Prior to the appointment, referrals were sent for a formal hearing evaluation and an assessment of visual acuity. These results were reviewed and the family was contacted with this information. Prior to administration of the tests, the child and his mother were observed as he explored provided toys for any signs of restricted interests or other limitations of exploratory behaviors.

Description of Intra-Service Work: Multiple standardized tests of fine and gross motor, expressive and receptive language, visual/spatial problem solving, social interactions were administered during which child-examiner interactions and perceived difficulty engaging the patient provided additional diagnostic information. The parent was present during the testing, and explanation of observed behaviors was briefly noted to the mother as the testing progressed. The test results were scored and a report was developed integrating the standardized results, informal observations, medical, developmental and behavioral history.

Description of Post-Service Work: A report was sent to the family and development representative at the school. Physician or qualified health care professional followed up with telephone discussion with those who received the report.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99222	XXX	2.61	**RUC Time**	7,048,864

CPT Descriptor 1 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99284	XXX	2.56	**RUC Time**	6,031,842

CPT Descriptor 2 Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.

Other Reference CPT Code	Global	Work RVU	Time Source
90837	XXX	3.00	**RUC Time**

CPT Descriptor Psychotherapy, 60 minutes with patient

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 26 **% of respondents:** 54.1 **%**

Number of respondents who choose 2nd Key Reference Code: 5 **% of respondents:** 10.4 **%**

TIME ESTIMATES (Median)

	CPT Code: 96112	Top Key Reference CPT Code: 99205	2nd Key Reference CPT Code: 90791

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	27%	38%	27%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	57%	35%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	12%	30%	58%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	31%	54%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	20%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	0%	40%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (several of the codes are being reviewed by HCPAC). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
    - Neurobehavioral status exam (96116, +96121)
    - Testing evaluation services (96130, +96131, 96132, +96133)
    - Test administration and scoring (96136, +96137)
    - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024
HCPAC	Cognitive performing testing	96125	1.70	4/60/10	0.023
Developmental/Behavioral Screening and Testing					
RUC	**Developmental testing, first hour**	**96112**	**2.60**	**5/60/30**	**0.030**
RUC	Developmental testing, each addl 30 min.	+96113	0.92	0/30/0	0.031
Psychological/Neuropsychological Testing					
Neurobehavioral Status Exam					
RUC	Neurobehavioral status exam, first hour	96116	1.86	5/60/5	0.027
RUC	Neurobehavioral status exam, each addl hour	+96121	1.71	0/60/0	0.029
Test Evaluation Services					
HCPAC	Psychological testing evaluation services, first hour	96130	2.53	5/60/5	0.038
HCPAC	Psychological testing evaluation, each addl hour	+96131	1.90	0/60/0	0.032

HCPAC	Psychological or neuropsychological test admin. and scoring by physician or healthcare professional, each addl 30 min.	+96137	0.46	0/30/0	0.015
Single Test Administration with Interpretation and Report					
RUC	Psychological/neuropsychological single test administration with interpretation and report	96X11	0.80	3/30/3	0.022

October 2017 RUC Work Survey and Recommendation

The American Academy of Pediatrics (AAP), American Association of Neurology (AAN) and the American Psychological Association (APA) surveyed *96112, Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour* for the October 2017 RUC meeting.

CPT code 96112 is the base code of a base code/add-on combination.

- 96112 Developmental testing, first hour
- +96113, Developmental testing, each addl 30 minutes

A total of 48 responses were received from a random sample of 5,096 AAP, AAN and APA members (.9 percent response rate). The societies convened an Expert Panel to review the survey data. The service is currently reported with code 96111 (*Developmental test extend*). ***The societies are recommending maintaining the current value and time of 2.60 wRVUs and 5/60/30 for the time.***

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.48	3.13	3.20
Pre		18	
Intra	50	60	90
Post		30	

wRVU recommendation: The Expert Panel recommends maintaining the wRVU of the current code. The Expert Panel concluded that the survey data supported this recommendation.

Time recommendation: By definition the code has 60 minutes intra time. The Expert panel concluded that the survey median supports the recommended intra-time. The Expert Panel also recommended maintaining the current pre- and post-time of 5 minutes pre-time and 30 minutes post-time.

Custom question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (963X0 and all increments of +96113)?*

Min.	25th Percentile	Median	75th Percentile	Max.
0	88.75	150	240	3610

wRVU Recommendation: Rationale: Maintain the Current Value of the Code

The Expert Panel felt that maintaining the current value was appropriate because of the precedent established by the April 2003 RUC. When the April 2003 RUC recommended a wRVU for 96111 of 2.60, the code descriptor included ‘per hour.’ Therefore, the RUC also recommended that the AAP editorially revise the 96111 code descriptor, removing the ‘per hour’ reference so that the code could only be reported once.

We are now recommending the same wRVU (2.60) for code 96112, which represents the first hour of service – but which now can be extended via the additional reporting of 96113 (each additional 30 minutes).

- The April 2003 RUC validated that one hour of developmental testing is worth 2.60 wRVUs
- We are asking for re-validation of the RUC-recommended wRVU for that hour of work

The Expert Panel noted that while under the current code structure a provider is limited to reporting code just once for the service, under the new coding structure 96112 is billed for the first hour and +96113 is billed for each additional 30 minutes.

The Expert Panel also noted, that based on RUC process rules, existing RUC values are considered correct.

Comparison to Other Codes with Similar Times and Values

Finally, the societies compared 963X0 to other codes across the fee schedule. The recommended wRVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule.

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
90847	Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes	2.50	5	50	21	76	April 2012	0.0384	193,683
96112	**Developmental testing, first hour**	2.60	5	60	30	95		**0.030**	**NEW**
99326	Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.	2.63	15	45	17	77	Feb 2007	0.0425	52,511
90837	Psychotherapy, 60 minutes with patient	3.00	5	60	10	75	April 2012	0.0444	5,299,115

In summary, for CPT code 963X0 (*Developmental testing, first hour*) the societies recommend ***2.60 wRVUs and 5/60/30 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.

☐ Multiple codes are used to maintain consistency with similar codes.
☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96112	XXX	2.60	5	60	30
+96113	ZZZ	0.92	0	30	0

Can also be billed with E/M services

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96111

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty Clinical Psychology How often? Sometimes

Specialty Neurology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 89200
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization for CPT code 96111 represents 1% of the national utilization. 2016 Medicare utilization for 96111 is 892.

Specialty Pediatrics Frequency 71360 Percentage 80.00 %

Specialty Clinical Psychology Frequency 4460 Percentage 5.00 %

Specialty Neurology Frequency 4460 Percentage 5.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 892 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This code will replace 100% of the Medicare utilization for CPT code 96111

Specialty Clinical Psychology Frequency 232 Percentage 26.00 %

Specialty Neurology Frequency 134 Percentage 15.02 %

Specialty Pediatrics Frequency 17 Percentage 1.90 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96111

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96113 Tracking Number K5 Original Specialty Recommended RVU: **0.92**
Presented Recommended RVU: **0.92**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **1.10**

CPT Descriptor: Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 5-year-old male previously diagnosed with autism, but not enrolled in early intervention due to family circumstances, presents for extended developmental testing after he could not be successfully assessed for kindergarten entry. Patient requires an additional 30 minutes of extended developmental testing beyond the first hour.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Multiple standardized tests of fine and gross motor, expressive and receptive language, visual/spatial problem solving, social interactions were administered during which child-examiner interactions and perceived difficulty engaging the patient provided additional diagnostic information. The parent was present during the testing, and explanation of observed behaviors was briefly noted to the mother as the testing progressed. The test results were scored.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99355	ZZZ	1.77	**RUC Time**

CPT Descriptor Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service).

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64484	ZZZ	1.00	**RUC Time**	480,712

CPT Descriptor 1 Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
51797	ZZZ	0.80	**RUC Time**	131,261

CPT Descriptor 2 Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
93750	XXX	0.92	**RUC Time**

CPT Descriptor Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 10 **% of respondents:** 23.2 **%**

Number of respondents who choose 2nd Key Reference Code: 10 **% of respondents:** 23.2 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	20%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	30%	70%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	40%	50%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	50%	20%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	60%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	10%	60%	30%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	30%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (several of the codes are being reviewed by HCPAC). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
	report				

October 2017 RUC Work Survey and Recommendation

The American Academy of Pediatrics (AAP), American Association of Neurology (AAN) and the American Psychological Association (APA) surveyed *+96113, Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes (List separately in addition to code for primary procedure)* for the October 2017 RUC meeting.

CPT code +96113 is the add-on code of a base code/add-on combination.

- 96112, Developmental testing, first hour
- +96113, Developmental testing, each addl 30 minutes

A total of 43 responses were received from a random sample of 5,096 AAP, AAN and APA members (.08 percent response rate). The societies convened an Expert Panel to review the survey data. ***The societies are recommending 0.92 work RVUs and 0/30/0 for the time.***

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	1.77	2.23	2.86
Intra-Time	38.5	60	85

wRVU recommendation: The Expert Panel felt that the survey work RVW 25th percentile and median was too high. The current value of the base code is 2.60 work RVUs. The base code (963X0) and the add-on code (+96113) have no pre-time. Since the base code is 60 minutes, and the add-on code is 30 minutes, the Expert Panel felt that it should be valued less than half of the base code. On the other hand, the base code and the add-on code should have similar intensity since the subsequent 30 minutes should have the same intensity as the first hour.

The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Time recommendation: By definition the code has 30 minutes intra-time. The Expert Panel agreed that the survey median of 60 minutes intra-time was too high as was the 25th percentile of 38.5 minutes. The Expert Panel agreed that 30 minutes intra-time was appropriate. As an add-on code this code has no pre- or post-time.

Custom question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (963X0 and all increments of +96113)?*

Min.	25th Percentile	Median	75th Percentile	Max.
0	88.75	150	240	3610

wRVU Recommendation Rationale: Crosswalk to code 93750

Since the survey data was not appropriate the Expert Panel based its work RVU recommendation on a crosswalk to a RUC surveyed code.

Since the survey data was not appropriate the Expert Panel based its work RVU recommendation on a crosswalk to a RUC surveyed code.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes and 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

The Expert Panel did a search on the RUC database to find an appropriate crosswalk. In conducting the search they considered the intra-time (30 minutes) and intensity (similar to the base code).

Based on these parameters and their clinical expertise with the service the Expert Panel recommended a crosswalk to:

- 93750, *Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report*
    - Work RVU = 0.92
    - IWPUT = 0.0307
    - Time = 0/30/0
    - 2016 utilization: 80,883

The code was surveyed by the RUC in 2009. The Expert Panel acknowledged that the survey data was slightly dated but the pool of codes was limited since there are few codes with the above described parameters. In addition, the entire family of codes is being surveyed, which includes codes that could have been used as crosswalks, resulting in even fewer crosswalk options. The Expert Panel noted the recommended crosswalk was technically an XXX code, but it did not have pre or post time and felt that it made it similar to a ZZZ code.

The Expert Panel concluded that the appropriate work RVW value is 0.92 crosswalked from code 93750.

Comparison to the Base Code

The first hour of the service is reported by code 96112. The societies are recommending maintaining the current work RVU value of 2.60 for 96112. Code 96112 has 60 minutes intra-service time while +96113 has an intra-service time of 30 minutes. The recommended value of 0.92 work RVUs for code +96121 has a similar IWPUT as the base code (96112 IWPUT = 0.0303; +96113 IWPUT = 0.0307).

Since the professional work and intensity of the work is the same in the first hour of work as the subsequent 30 minutes of work, the societies felt a similar IWPUT was appropriate.

Response to reviewer comments: The societies received a comment from one reviewer if the wRVU proportionality between the base and add-on code should be consistent throughout the family. The Expert Panel considered this question and concluded that it should not necessarily be consistent. The add-on code is a continuation of the intra-service period of the base code so its value is driven by the value of the base code. What is included in the base code varies by each base code/add-on combination. Also in one instance, the developmental service (96112, +96113), the base code is for the first 60 minutes and the add-on code is for each subsequent 30 minutes which will result in a different relationship between the base and the add-on code.

Comparison to Other Codes with Similar Times and Values

Finally, the societies compared +96113 to other codes across the fee schedule with similar times and values. The recommended work RVUs and resulting IWPUT seem to provide appropriate relativity when compared to other services in the fee schedule.

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT	Most Recent RUC Review
17315	Mohs micrographic technique, including removal of all gross tumor, surgical excision of tissue specimens, mapping, color coding of specimens, microscopic examination of specimens by the surgeon, and histopathologic preparation including routine stain(s) (eg, hematoxylin and eosin, toluidine blue), each additional block after the first 5 tissue blocks, any stage (List separately in addition to code for primary procedure)	0.87	0	30	0	30	0.0290	April 2013
+96113	**Developmental testing, each addl 30 minutes**	**0.92**	**0**	**30**	**0**	**30**	**0.031**	**NEW**
13102	Repair, complex, trunk; each additional 5 cm or less (List separately in addition to code for primary procedure)	1.24	0	30	0	30	0.0413	April 2012

In summary, for CPT code +963X1 (*Developmental testing, each addl 30 min*.) the societies recommend ***0.92 work RVUs and 0/30/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96112	XXX	2.60	5	60	30
+96113	ZZZ	0.92	0	30	0

Can also be billed with E/M services

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96111

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pediatrics How often? Commonly

Specialty Clinical Psychology How often? Sometimes

Specialty Neurology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 267600
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 1% of national utilization. +96121 will be reported 300% of the time when the base code 96112 is reported. 2016 Medicare utilization of 96111 is 802.

Specialty Pediatrics Frequency 214080 Percentage 80.00 %

Specialty Clinical Psychology Frequency 13380 Percentage 5.00 %

Specialty Neurology Frequency 13380 Percentage 5.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,676
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. +96121 will be reported 300% of the time when the base code 96112 is reported. 2016 Medicare utilization of 96111 is 892.

Specialty Clinical Psychology Frequency 723 Percentage 27.01 %

Specialty Neurology Frequency 401 Percentage 14.98 %

Specialty Pediatrics Frequency 401 Percentage 14.98 %

Do many physicians perform this service across the United States? Yes

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96111

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96116 Tracking Number K7 Original Specialty Recommended RVU: **1.86**
Presented Recommended RVU: **1.86**
Global Period: XXX Current Work RVU: **1.86** RUC Recommended RVU: **1.86**

CPT Descriptor: Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old female is referred by her physician because of family reports of changes in her behavior including attention difficulties, memory problems, and difficulties with problem solving. A neurobehavioral status examination is completed.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review referral and accompanying records. Select methods to evaluate neurobehavioral status.

Description of Intra-Service Work: Meet with patient and, if appropriate, significant others. Perform neurobehavioral status examination, which involves clinical assessment for impairments in acquired knowledge, attention, language, learning, memory, problem solving, and visual-spatial abilities. Observe behavior and record responses. Develop clinical impression.

Description of Post-Service Work: Review findings for additional assessment planning and interaction.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95819	XXX	1.08	**RUC Time**	236,046

CPT Descriptor 1 Electroencephalogram(EEG); including recording awake and asleep

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99233	XXX	2.00	**RUC Time**	22,500,172

CPT Descriptor 2 Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source

99221	XXX	1.92	**RUC Time**

CPT Descriptor Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 41 **% of respondents:** 50.6 **%**

Number of respondents who choose 2nd Key Reference Code: 18 **% of respondents:** 22.2 **%**

TIME ESTIMATES (Median)

	CPT Code: 96116	**Top Key Reference CPT Code:** 99205	**2nd Key Reference CPT Code:** **90791**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	2%	3%	29%	44%	22%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	34%	61%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	44%	46%
Physical effort required	10%	66%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	49%	37%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	6%	33%	28%	33%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	22%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	28%	61%
Physical effort required	17%	39%	44%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	33%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (some of these codes are being presented at the HCPAC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024

Single Test Administration with Interpretation and Report					
RUC	Psychological/neuropsychological single test administration with interpretation and report	96X11	0.80	3/30/3	0.022

October 2017 RUC Work Survey and Recommendation

The American Association of Neurology (AAN) and the American Psychological Association (APA) surveyed *96116, Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour* for the October 2017 RUC meeting.

CPT code 96116 is the base code of a base code/add-on combination.

- 96116, Neurobehavioral status exam, first hour
- +96121, Neurobehavioral status exam, each addl hour

A total of 81 responses were received from a random sample of 4,602 AAN and APA members (1.7 percent response rate). AAN and APA convened an Expert Panel to review the survey data. ***The societies are recommending maintaining the current wRVU value of 1.86 and 5/60/5 for the time.***

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.90	3.15	3.30
Pre		20	
Intra	45	60	105
Post		23	

The Expert Panel concluded that the survey data was too high to recommend for the wRVU.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Custom Question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96116 and all increments of +96121)?*

Min.	**25th Percentile**	**Median**	**75th Percentile**	**Max.**
30 min.	75 min.	110 min.	180 min.	1200 min.

Based on 2015 Medicare claims data, the median number of units of 96116 billed on the same day was 1 unit.

wRVU Recommendation: Maintain Current Value

The recommendation is based on a cosswalk to the current wRVU. The appropriateness of this recommendations is supported by rank order in the family and comparison to other codes with similar times and values.

wRVU and Time Recommendations

wRVU recommendation: The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation for the wRVU. The societies felt that maintaining the current wRVU value for 96116 was appropriate since the newly revised code is very similar to the current code. They are both one hour codes, although the current code is a per hour code while the newly revised code is for the first hour (base code of a base code/add-on combination).

2017 Coding Scenario				New Coding Scenario			
Code	RVU	Time	IWPUT	Code	RVU*	Time*	IWPUT
96116	1.86	7/60/0	0.0284	96116	1.86	5/60/5	0.027
				+96121	1.71	0/60/0	0.029

* Recommended RVUs and time

In 2017 the provider bills 96116 (1.86 work RVUs) per hour of the service. Under the new codes the provider would bill 96116 (1.86 work RVUs) for the first hour and +96121 (1.71 work RVUs) for each additional hour.

Response to reviewer comments: One reviewer asked why there was no post-time assigned to the code even though there was work associated with it. A reviewer also commented that they would like to see greater consistency in the family with pre-and post-time. The Expert Panel thanks the reviewers for this observation and agrees with their assessment. For time, they are recommending 5 minutes pre-time and 5 minutes post time. This time seemed aligned with other services in the family as well as other XXX codes.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. This aligned well with the survey median for intra-time. The Expert Panel felt that 5 minutes pre-time and 5 minutes post-time was necessary to perform the typical pre- and post-service tasks. A recommendation of 5 minutes for both pre- and post-time seemed to align with other similar XXX codes.

Rank order in the Family

Rank order in the family was also found to be appropriate. Code 96116 has a wRVU value and IWPUT below the psychological/neuropsychological testing evaluation base codes (96130, 96132). A neurobehavioral status exam may be completed prior to neuropsychological testing and helps determine what further testing, if any, is required. Therefore, a work RVU below codes 96130 and 96132 seemed appropriate.

Category	Code #	Work RVU	Time	IWPUT
Neurobehavioral status exam, first hour	**96116**	**1.86**	**5/60/5**	**0.027**
Psychological testing evaluation services, first hour	96130	2.53	5/60/5	0.038
Neuropsychological testing evaluation, first hour	96132	2.53	5/60/5	0.038

Comparison to Other Codes with Similar Times and Values

Finally, the societies compared 96116 to other codes across the fee schedule. The recommended wRVUs and resulting IWPUT seem to provide relativity when compared to other services in the fee schedule.

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
92524	Behavioral and qualitative analysis of voice and resonance	1.50	5	60	10	75	Jan 2013	0.0194	12,778
99356	Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour (List separately in addition to code for inpatient Evaluation and Management service)	1.71	0	60	0	60	June 1993	0.0285	196,647
96116	**Neurobehavioral status exam, first hour**	1.86	5	60	5	70	*****	**.027**	**REVISED**
95864	Needle electromyography; 4 extremities with or without related paraspinal areas	1.99	10	50	13.5	73.5	April 2012	0.0293	3,626
90834	Psychotherapy, 45 minutes with	2.00	5	45	10	60	April	0.0370	5,411,556

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
	patient						2012		

In summary, for CPT code 96116 (*Neurobehavioral status exam, first hour*) the societies recommend ***1.86 work RVUs and 5/60/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96116	XXX	1.86	5	60	5
+96121	ZZZ	1.71	0	60	0
96132	XXX	2.53	5	60	5
+96133	ZZZ	1.90	0	60	0
96136	XXX	0.55	3	30	3
+96137	ZZZ	0.46	0	30	0
96138	XXX	PE Only	N/A		
+96139	ZZZ	PE Only	N/A		
96X11	XXX	0.80	3	30	0
96146	XXX	PE Only	N/A		

Note: Clinician would bill either would bill X7/X8 or X9/X10 for administration and scoring (by healthcare professional or technician).

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96116

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinicial Psychology How often? Commonly

Specialty Neurology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 620063
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization; Revised 96116 (base code) represents 81% of the current 96116 2016 Medicare volume (remaining volume of current 96116 reported by +96121 (add-on code).

Specialty Clinical Psychology Frequency 396840 Percentage 63.99 %

Specialty Neurology Frequency 93009 Percentage 14.99 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 124,013 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Revised 96116 (base code) represents 81% of the current 96116 2016 Medicare volume (remaining volume of current 96116 reported by +96121 (add-on code)).

Specialty Clinical Psychology Frequency 79368 Percentage 63.99 %

Specialty Neurology Frequency 18602 Percentage 15.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99354	ZZZ	2.33	**RUC Time**

CPT Descriptor Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
51797	ZZZ	0.80	**RUC Time**	127,566

CPT Descriptor 1 Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99292	ZZZ	2.25	**RUC Time**	508,905

CPT Descriptor 2 Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)

Other Reference CPT Code	Global	Work RVU	Time Source

99356	ZZZ	1.71	**RUC Time**

CPT Descriptor Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour (List separately in addition to code for inpatient Evaluation and Management service)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 24 **% of respondents:** 46.1 **%**

Number of respondents who choose 2nd Key Reference Code: 8 **% of respondents:** 15.3 **%**

TIME ESTIMATES (Median)

	CPT Code: 96121	Top Key Reference CPT Code: 99205	2nd Key Reference CPT Code: 99354

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	4%	8%	29%	33%	25%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	13%	29%	58%

- Urgency of medical decision making

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	38%	54%
Physical effort required	13%	54%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	63%	25%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	25%	38%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	25%	63%
Physical effort required	13%	50%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	25%	63%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (some of these codes are being presented at the HCPAC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (963X0, +963X1)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +963X2)
  - Testing evaluation services (963X3, +963X4, 963X5, +963X6)
  - Test administration and scoring (963X7, +963X8)
  - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024
HCPAC	Cognitive performing testing	96125	1.70	4/60/10	0.023
Developmental/Behavioral Screening and Testing

Single Test Administration with Interpretation and Report					
RUC	Psychological/neuropsychological single test administration with interpretation and report	96X11	0.80	3/30/3	0.022

October 2017 RUC Work Survey and Recommendation

The American Association of Neurology (AAN) and the American Psychological Association (APA) surveyed *+96121, Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified*

health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure) for the October 2017 RUC meeting.

CPT code +96121 is the add-on code of a base code/add-on combination.

- 96116, Neurobehavioral status exam, first hour
- +96121, Neurobehavioral status exam, each addl hour

A total of 53 responses were received from a random sample of 4,602 AAN/APA members (1.1 percent response rate). AAN/APA convened an Expert Panel to review the survey data. ***The societies are recommending a work RVU value of 1.71 and 0/60/0 for the time.***

Survey Data

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.43	3.00	3.25
Intra-Time	47.25	60	125

wRVU recommendation: The Expert Panel concluded the survey data was too high for a wRVU recommendation. The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. This aligned well with the survey median value for intra-time.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Custom Question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (96116 and all increments of +963X2)?*

Min.	**25th Percentile**	**Median**	**75th Percentile**	**Max.**
30 min.	75 min.	110 min.	180 min.	1200 min.

Based on 2015 Medicare claims data, the median number of units of 96116 billed on the same day was 1 unit.

wRVU Recommendation Rationale: Crosswalk to code 99356

The Expert Panel agreed that the value of the code should be less than the base code, 96116, which has a recommended wRVU of 1.86. Since 963X2 is a continuation of the service provided by the base code and the complexity or intensity does not decrease, the Expert Panel concluded the value should have a similar IWPUT as the base code.

Response to reviewer comments: The society received a comment from one reviewer if the wRVU proportionality between the base and add-on code should be consistent throughout the family. The Expert Panel considered this question and concluded that it should not necessarily be consistent. The add-on code is a continuation of the intra-service period of the base code so its value is driven by the value of the base code. What is included in the base code varies by each base code/add-on combination. Also in one instance, the developmental service (96112, +96113), the base code is for the first 60 minutes and the add-on code is for each subsequent 30 minutes which will result in a different relationship between the base and the add-on code.

In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code 90840 (*Psychotherapy for crisis, each additional 50 minutes*) valued at 1.50 wRVUs and reference code 99355 (*Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)*) valued at 1.77 wRVUs. Both of these codes are ZZZ global codes. A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes and 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed ZZZ codes between wRVU value of 1.50 and 1.77, IWPUT between 0.02 and 0.04, with intra time between 45 and 60 minutes that are not currently being surveyed at this meeting only a single ZZZ code was identified: **99356**, *Prolonged service in the inpatient or observation setting, requiring unit/floor time beyond the usual service; first hour (List separately in addition to code for inpatient Evaluation and Management service)*.

Code 99356 has a wRVU value of 1.71 and an intra time of 60 minutes. The Expert Panel also felt it was clinically similar. The Expert Panel agreed that code 99356 was an appropriate crosswalk.

Rank order in the family

Rank order in the family was also found to be appropriate. Code +963X2 has a work RVU value and IWPUT below the psychological/neuropsychological testing evaluation add-on codes (+963X4, +963X6). A neurobehavioral status exam may be completed prior to neuropsychological testing and helps determine what further testing, if any, is required. Therefore, a work RVU below add-on codes +963X4, and +963X6 seemed appropriate. When these factors are considered, the recommendation of 1.71 work RVU for +963X2 maintains appropriate rank order in the family.

Code #	Descriptor	Work RVU	Intra-Time (min)	IWPUT
+96121	**Neurobehavioral status exam, each addl hour**	**1.71**	**60**	**0.029**
+96131	Psychological testing evaluation, each addl hour	1.90	60	0.032
+96133	Neuropsychological testing, each addl hour	1.90	60	0.032

Comparison to Other Services

The Expert Panel compared +963X2 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule.

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT	Most Recent RUC Review
+99357	Prolonged service in the inpatient or	1.71	0	30	0	30	0.0570	June 1993

Code	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT	Most Recent RUC Review
	observation setting, requiring unit/floor time beyond the usual service; each additional 30 minutes							
+96121	**Neurobehavioral status exam, each add'l hour**	**1.71**	**0**	**60**	**0**	**60**	**0.0285**	**NEW**
+90836	Psychotherapy, 45 minutes with patient when performed with an evaluation and management service	1.90	0	45	3	48	0.0407	April 2012

In summary, for CPT code +963X2 (*Neurobehavioral status exam, each addl hour*) the societies recommend ***1.71 work RVUs and 0/60/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96116	XXX	1.86	5	60	5
+96121	ZZZ	1.71	0	60	0
96132	XXX	2.53	5	60	5
+96133	ZZZ	1.90	0	60	0
96136	XXX	0.55	3	30	3
+96137	ZZZ	0.46	0	30	0
96138	XXX	PE Only	N/A		
+96139	ZZZ	PE Only	N/A		
96X11	XXX	0.80	3	30	3
96146	ZZZ	PE Only	N/A		

Note: Clinician would bill either would bill 96136/96137 or 96138/96139 for administration and scoring (by healthcare professional or technician)

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96116

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Neurology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 145445
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume represents 20% of national utilization; 19% of 2016 volume of 96116 would be billed by +96121 (remaining 81% of 96116 volume reported by revised 96116 (base code))

Specialty Clinical Psychologist Frequency 93085 Percentage 64.00 %

Specialty Neurology Frequency 21817 Percentage 15.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 29,089
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 19% of 2016 volume of 96116 would be billed by +96121 (remaining 81% of 96116 volume reported by revised 96116 (base code))

Specialty Clinical Psychology Frequency 18617 Percentage 64.00 %

Specialty Neurology Frequency 4363 Percentage 14.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96116

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96132 Tracking Number K11 Original Specialty Recommended RVU: **2.53**
Presented Recommended RVU: **2.50**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **2.50**

CPT Descriptor: Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male with a history of diabetes and hypertension presents with a 6 month change in behavior, personality, and cognition and a positive family history of Alzheimer's disease. His physician refers him for neuropsychological testing.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Preliminary selection of tests. Record review. Call to the referring physician to ascertain the referral question.

Description of Intra-Service Work: Interpretation of tests. Integration of patient data. Clinical decision making. Diagnosis and/or treatment planning. Interactive feedback, when performed. Creation of report.

Description of Post-Service Work: Report distribution and arrangement of referrals.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99343	XXX	2.53	**RUC Time**	61,567

CPT Descriptor 1 Home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99222	XXX	2.61	**RUC Time**	6,942,280

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the

problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	3%	34%	30%	33%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	42%	57%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	31%	67%
Physical effort required	5%	66%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	13%	51%	36%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	19%	30%	48%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	26%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	4%	22%	74%
Physical effort required	4%	74%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	44%	56%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (some of these codes are being presented at the HCPAC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
  - Neurobehavioral status exam (96116, +96121)
  - Testing evaluation services (96130, +96131, 96132, +96133)
  - Test administration and scoring (96136, +96137)
  - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT

October 2017 RUC Work Survey and Recommendation

The American Psychological Association (APA) and the American Academy of Neurology (AAN) surveyed *96132, Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour* for the October 2017 RUC meeting.

CPT code 96132 is the base code of a base code/add-on combination.

- 96132, Neuropsychological testing evaluation services, first hour
- +96133, Neuropsychological testing evaluation, each addl hour

A total of 140 responses were received from a random sample of 4,602 AAN and APA members (3 percent response rate). The societies convened an Expert Panel to review the survey data. ***The society is recommending: 2.53 wRVUs and 5/60/5 for time.***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 3.00 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	3.00	3.17	3.5
Pre		30	
Intra	60	120	240
Post		45	

The Expert Panel concluded the survey data was too high to develop a wRVU recommendation. Because of the complex changes in coding structure, which has resulted in professional work being re-aligned within the code set, the Expert Panel concluded that it is appropriate to recommend a redistribution of the wRVUs within the family. The revised recommendations maintain budget neutrality and reflect what was concluded to be an appropriate redistribution of wRVUs.

wRVU recommendation: The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. While this code was surveyed by both APA and AAN, the Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. The survey 25th percentile supported this recommendation. The Expert Panel felt that 5 minutes pre-time and 5 minutes post-time was necessary to perform the typical pre- and post-service tasks. A recommendation of 5 minutes for both pre- and post-time seemed to align with other similar XXX codes.

Response to reviewer comments: In the description of post-service work by the healthcare professional “arrangement of referrals and report distribution” is listed. Reviewers questioned if this is healthcare professional work or if it is done by office staff. The Expert Panel discussed this issue. They concluded that a majority of providers of this service are in

private practice and do not have clinical or clerical staff. So in the typical scenario when this service is performed, these tasks are done by the healthcare professional.

Custom Question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (963X5 and all increments of +96133)?*

Min.	25th Percentile	Median	75th Percentile	Max.
0 min.	240 min.	360 min.	540 min.	36,000 min.

Currently, this service is predominately reported by 96118. It is also reported by 96119. Based on 2015 Medicare claims data the median number of units of 96118 billed on the same day was 3 units. The median number of units of 96119 billed on the same day was 2 units.

Change in Reporting Neuropsychological Testing Services

The following provides a comparison of the change in coding for neuropsychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under one code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

Code	Work RVU	How Often Billed	Evaluation	Interactive Feedback	Scoring/ Admin Prof.	Scoring/ Admin Tech.	Inter. & Report
2017 Coding Scenarios							
96118	1.86	Per hour	X		X		X
96119	0.55	Per hour				X	X
New Coding Scenarios							
96132	**2.53**	**First hour**	**X**	**X**			**X**
+96133	1.90	Each addl hour	X	X			X
96136	0.55	First 30 min.			X		
+96137	0.46	Each addl 30 min.			X		
96138	PE only	First 30 min.				X	
96139	PE only	Each addl 30 min.				X	

In the new code the lower intensity and less complex tasks of test administration and scoring are reported separately using test administration and scoring codes (96136 to +96139). The redistribution of intra-service clinical decision making associated with test selection/battery modification and interpretation and report by the healthcare professional from the current technician code (96119) to the new neuropsychological evaluation testing services codes (96132, +96133) supports the increase in work RVU and IWPUT for 96132.

Evaluation services include the integration and interpretation of the data. The healthcare professional takes all of the historical, behavioral and psychometric data and integrates that into what is their final interpretation.

Additionally, code 96132 includes interactive feedback which is not included in the current code. Interactive feedback, as it will be defined in the CPT book, is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when performed. The inclusion of interactive feedback increased the intensity and complexity of the service and provided further support of the recommendation for a higher work RVU and higher IWPUT in comparison to current codes 96118 and 96119.

wRVU Recommendation Rationale: Crosswalk to code 99343

The Expert Panel agreed that due to the work redistribution within the family and the addition of interactive feedback, the value of the code should be greater than 1.86 wRVUs, the current value of 96118. Yet, it should also be less than the survey 25th percentile of 3.00 wRVUs. In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code **90847** (*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*) valued at **2.50 wRVUs** and the second highest reference service selected, code **90791** (Psychiatric diagnostic evaluation) valued at **3.00 wRVUs**. A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 minutes and 30 minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed XXX codes between wRVU value of 2.50 to 2.60, IWPUT between 0.03 and 0.05, with intra time between 45 and 60 minutes that are not currently being surveyed at this meeting, six codes were identified: **74262** (*CT colonography dx w/dye @* **2.50 wRVU** with intra-time of 45 min), **75561** (*Cardiac MRI for morph w/dye @* **2.60 wRVU** with intra-time of 45 min) , **90847** (*Family psychotherapy w/pat. 50 min @* **2.50 wRVU** with intra-time of 50 min), **95911** (*Nerve conduction studies, 9-10 studies @* **2.50 wRVU** with intra-time of 50 min), and **99343** (Home visit, new patient @ **2.53 wRVUs** with intra-time of 45 min).

Based on this list the Expert Panel felt that code 90847 and 99343 were the best candidates for a crosswalk. Since 90847 had 50 minutes intra-service time and the surveyed code had 60 minutes they felt it was appropriate to choose a code with a slightly higher wRVU. The Expert Panel agreed that code 99343 was the most appropriate crosswalk.

Response to reviewer comments: During the pre-facilitation call, a reviewer questioned if 99343 was an appropriate crosswalk since CMS had made changes to the code from what was recommended by the RUC. Since code 99343 is on the MPC list, and codes on the MPC list have been identified by the RUC as being appropriate to help rank value of codes in the RUC process, the Expert Panel felt it was an appropriate selection.

The Expert Panel noted that the recommended value was less than both reference service codes selected by survey respondents: 99205 (*Office/Outpatient visit, new patient*) @ 3.17 wRVUs and 90791 (*Psychiatric diagnostic evaluation*) @ 3.00 wRVUs.

Comparison to Other Services

The Expert Panel compared 963X5 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule.

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
99204	Office outpatient visit/new	2.43	5	30	10	45	Feb 2006	0.0698	9,985,403

	Descriptor	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
90847	Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes	2.50	5	50	21	76	April 2012	0.0384	188,656
96132	**Neuropsychological testing evaluation, first hour**	**2.53**	**5**	**60**	**5**	**70**	***	**0.0384**	**NEW**
99326	Domiciliary or rest home visit for the evaluation and management of a new patient	2.63	15	45	17	77	Feb 2007	0.0425	52,724
90791*	Psychiatric diagnostic evaluation	3.00	10	60	20	90	April 2012	0.0388	904,682

* 2nd highest reference service

The Expert Panel noted that the intensity of 963X5 was very similar to 90791. They felt that these codes were very clinically similar and that this provided further evidence of the appropriateness of the recommended value.

Rank order with other Psychological/Neuropsychological Testing Codes

Rank order within the family was also found to be appropriate. Code 963X5 has a work RVU value and IWPUT above the neurobehavioral status exam (96116) base code. The higher work RVU and IWPUT values appropriately reflect the relative intensity and complexity of the different procedures.

The recommended work RVU for 96132 is the same as 96130 (*Psychological testing, first hour*). Separate codes were created for psychological and neuropsychological services due to the fundamental differences in the services performed. Those differences are reflected in the respective domains that are assessed by psychological and neuropsychological testing. Although separate codes were created, the Expert Panel agreed that the values should be the same since the intensity and complexity were similar.

When these factors are considered, the recommendation of 2.53 wRVUs for 96132 maintains appropriate rank order in the family.

Code #	Descriptor	Work RVU	Intra-Time (min)	IWPUT
96116	Neurobehavioral status exam, first hour	1.86	60	0.027
96130	Psychological testing evaluation, first hour	2.53	60	0.038
96132	**Neuropsychological testing, first hour**	**2.53**	**60**	**0.038**

In summary, for CPT code 963X5 (*Neuropsychological testing evaluation services, first hour*) ***APA and AAN recommend 2.53 wRVUs and 5/60/5 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96116	XXX	1.86	5	60	5
+96121	ZZZ	1.71	0	60	0
96132	XXX	2.53	5	60	5
+96133	ZZZ	1.90	0	60	0
96136	XXX	0.55	3	30	3
+96137	ZZZ	0.46	0	30	0
96138	XXX	PE Only	N/A		
+96139	ZZZ	PE Only	N/A		

Note: Clinician would bill X7/X8 OR X9/X10 for administration and scoring.

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96118 and 96119

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Neurology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1123765
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization for these services; 30% of the utilization for 96118 will be reported by 96132 and 12.5% of the utilization for 96119 will be reported by 96132.

Specialty Clinical Psychology Frequency 1011389 Percentage 90.00 %

Specialty Neurology Frequency 56189 Percentage 5.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 224,753 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 30% of the utilization for 96118 will be reported by 96132 and 12.5% of the utilization for 96119 will be reported by 96132.

Specialty Clinical Psychology Frequency 202278 Percentage 90.00 %

Specialty Neurology Frequency 11238 Percentage 5.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96119

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96133 Tracking Number K12 Original Specialty Recommended RVU: **1.90**
Presented Recommended RVU: **1.90**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **1.90**

CPT Descriptor: Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old male with a history of diabetes and hypertension presents with a 6 month change in behavior, personality, and cognition and a positive family history of Alzheimer's disease. His physician refers him for neuropsychological testing. Patient requires an additional hour of neuropsychological testing beyond the first hour.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Interpretation of tests. Integration of patient data. Clinical decision making. Diagnosis and/or treatment planning. Interactive feedback, when performed. Creation of report.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
52442	ZZZ	1.20	**RUC Time**	20,614

CPT Descriptor 1 Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99292	ZZZ	2.25	**RUC Time**	508,905

CPT Descriptor 2 Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)

Other Reference CPT Code	Global	Work RVU	Time Source
90836	ZZZ	1.90	**RUC Time**

CPT Descriptor Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 68 **% of respondents:** 49.2 **%**

Number of respondents who choose 2nd Key Reference Code: 19 **% of respondents:** 13.7 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	1%	31%	28%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	37%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	26%	74%
Physical effort required	3%	59%	38%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	43%	46%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	5%	11%	37%	47%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	32%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	16%	79%
Physical effort required	0%	84%	16%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	42%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 RUC meeting (some of these codes are being presented at the HCPAC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (96112, +96113)
- Psychological/neuropsychological testing
    - o Neurobehavioral status exam (96116, +96121)
    - o Testing evaluation services (96130, +96131, 96132, +96133)
    - o Test administration and scoring (96136, +96137)
    - o Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024

<u>October 2017 RUC Work Survey and Recommendation</u>

The American Psychological Association (APA) and the American Academy of Neurology (AAN) surveyed *+96133, Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)* for the October 2017 RUC meeting.

CPT code +96133 is the add-on code of a base code/add-on combination.

- 96132, Neuropsychological testing evaluation services, first hour
- +96133, Neuropsychological testing evaluation, each addl hour

A total of 138 responses were received from a random sample of 4,602 APA members (2.9 percent response rate). AAN and APA convened an Expert Panel to review the survey data. ***The societies are recommending 1.90 wRVUs. They are also recommending 60 minutes intra-service time (0/60/0).***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 2.33 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	3.00	3.17	3.50
Intra-Time	60	137.5	240

The Expert Panel concluded the survey wRVU was too high. Because of the complex changes in coding structure, which has resulted in professional work being re-aligned within the code set, the Expert Panel concluded that it is appropriate to recommend a redistribution of the wRVUs within the family. The revised recommendations maintain budget neutrality and reflect what was concluded to be an appropriate redistribution of wRVUs.

wRVU recommendation: The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Time recommendation: By definition the code has 60 minutes intra-service time assigned to it. The Expert Panel is recommending the survey 25th percentile for intra time. As a ZZZ code, the service does not have any pre- or post-time.

Custom Question: Per the request of the Research Subcommittee, the following custom question was added to the survey: *For the typical patient, how much total time do you personally spend performing this entire service from start to finish (963X5 and all increments of +963X6)?*

Min.	**25th Percentile**	**Median**	**75th Percentile**	**Max.**
0 min.	240 min.	360 min.	540 min.	36,000 min.

Based on 2015 Medicare claims data the median number of units of 96118 billed on the same day was 3 units. The median number of units of 96119 billed on the same day was 2 units.

Change in Reporting Neuropsychological Testing Services

The following provides a comparison of the change in coding for neuropsychological testing services from the current codes to the new codes surveyed for the October 2017 RUC meeting. Under the new coding structure there are separate codes for professional evaluation services and test administration and scoring. These services are billed under

one code in the current coding structure. These changes were made for the coding structure to better reflect how the services are provided in current practice.

Code	Work RVU	How Often Billed	Evaluation	Interactive Feedback	Scoring/ Admin Prof.	Scoring/ Admin Tech.	Inter. & Report
2017 Coding Scenarios							
96118	1.86	Per hour	X		X		X
96119	0.55	Per hour				X	X
New Coding Scenarios							
96132	2.53	First hour	X	X			X
+96133	**1.90**	**Each addl hour**	**X**	**X**			**X**
96136	0.55	First 30 min.			X		
+96137	0.46	Each addl 30 min.			X		
96138	PE only	First 30 min.				X	
96139	PE only	Each addl 30 min.				X	

In the new code the lower intensity and less complex tasks of test administration and scoring are reported separately using test administration and scoring codes (96136 to +96139). The redistribution of intra-service clinical decision making associated with test selection/battery modification and interpretation and report by the healthcare professional from the current technician code (96119) to the new neuropsychological evaluation testing services codes (96132, +96133) supports the increase in work RVU and IWPUT for +96133.

Evaluation services include the integration and interpretation of the data. The healthcare professional takes all of the historical, behavioral and psychometric data and integrates that into what is their final interpretation.

Additionally, code +96133 includes interactive feedback which is not included in the current code. Interactive feedback, as it will be defined in the CPT book, is used to convey the implications of psychological or neuropsychological test findings and diagnostic formulation. Based on patient-specific cognitive and emotional strengths and weaknesses, interactive feedback may include promoting adherence to medical and/or psychological treatment plans, educating and engaging the patient about his/her condition to maximize patient collaboration in their care, addressing safety issues, facilitating psychological coping, coordinating care, and engaging the patient in planning given the expected course of illness or condition when performed. The inclusion of interactive feedback increased the intensity and complexity of the service and provided further support of the recommendation for a higher work RVU and higher IWPUT in comparison to current codes 96118 and 96119.

wRVU Recommendation Rationale: Crosswalk to Code 90836

The Expert Panel agreed that due to the work redistribution within the family and the addition of interactive feedback, the value of the code should be greater than 1.86 wRVUs, the current value of 96101. It also should be slightly less the recommendation for the base code which is 2.53 wRVUs. The Expert Panel was also constrained by maintaining budget neutrality within the family.

In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code **99355** (*Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)*) valued at **1.77 wRVUs** and code **90834** (*Psychotherapy, 45 minutes with patient*) valued at **2.00 wRVUs**. The Expert Panel was concerned that this range undervalued the service, but felt it was limited by maintaining rank order in the family and other factors.

<u>*Response to reviewer comments*</u>: The society received a comment from one reviewer if the wRVU proportionality between the base and add-on code should be consistent throughout the family. The Expert Panel considered this question and concluded that it should not necessarily be consistent. The add-on code is a continuation of the intra-service period of the base code so its value is driven by the value of the base code. What is included in the base code varies by each base code/add-on combination. Also in one instance, the developmental service (96112, +96113), the

base code is for the first 60 minutes and the add-on code is for each subsequent 30 minutes which will result in a different relationship between the base and the add-on code.

A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for XXX and ZZZ services with 60 and 30 minutes minutes intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed ZZZ codes between wRVU value of 1.77 to 2.00, IWPUT between 0.03 and 0.05, with intra- time between 45 and 60 minutes that are not currently being surveyed at this meeting, four codes were identified: **90836** (*Psychotherapy, 45 minutes with patient when performed with an evaluation and management service* @ **1.90 wRVU** and 45 min. intra-service time), **48400** (*Injection procedure for intraoperative pancreatography*@ **1.95 wRVU** and 45 min intra-service time), **77293** (*Respiratory motion management simulation* @ **2.00 wRVU** and 45 min intra-service time), and **31627** (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation* @ **2.00 wRVU** and 60 min intra-service time).

Based on this list the Expert Panel felt that even though the intra-service time of code 90836 was 15 minutes less than the surveyed code, it was the most clinically similar service. The Expert Panel agreed that code 90836 was the most appropriate crosswalk.

The Expert Panel noted that the recommended value was less than both reference service codes selected by survey respondents: 99205 (*Office/Outpatient visit, new patient*) @ 3.17 wRVUs and 90791 (*Psychiatric diagnostic evaluation*) @ 3.00 wRVUs.

Comparison to Other Services

The Expert Panel compared +96133 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule

	Descriptor	**Global**	**Work RVU**	**Pre**	**Intra Time**	**Post Time**	**Total Time**	**Most Recent RUC Review**	**IWPUT**	**2016 Utilization**
+90840	Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)	ZZZ	1.50	0	30	0	30	April 2013	0.0500	5,345
+99355	Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the	ZZZ	1.77	0	30	0	30	June 1993	0.0590	26,172

	Descriptor	Global	Work RVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
	office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)									
+96133	**Neuropsychological testing evaluation, each addl hour**	**ZZZ**	**1.90**	**0**	**60**	**0**	**60**	*******	**0.032**	**NEW**
+31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with computer-assisted, image-guided navigation (List separately in addition to code for primary procedure[s])	ZZZ	2.00	0	60	0	60	Feb 2009	0.0333	10,012
+99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)	ZZZ	2.25	0	30	0	30	Aug 2005	0.0750	508,905

Rank order with Other Psychological/Neuropsychological Testing Codes

Rank order within the family was also found to be appropriate. Code +96133 has a work RVU value and IWPUT above the neurobehavioral status exam (+96121) add-on code. The higher work RVU and IWPUT values appropriately reflect the relative intensity and complexity of the different procedures.

The recommended work RVU for +96133 is the same as +96131 (P*sychological testing, each addl hour*). Separate codes were created for psychological and neuropsychological services due to the fundamental differences in the services performed. Those differences are reflected in the respective domains that are assessed by psychological and neuropsychological testing. Although separate codes were created, the Expert Panel agreed that the values should be the same since the intensity and complexity were similar.

When these factors are considered, the recommendation of 1.90 work RVUs for +96133 maintains appropriate rank order in the family.

Code #	Descriptor	Work RVU	Intra-Time (min)	IWPUT
+96121	Neurobehavioral status exam, each addl hour	1.71	60	0.029
+96131	Psychological testing evaluation, each addl hour	1.90	60	0.032
+96133	**Neuropsychological testing, each addl hour**	**1.90**	**60**	**0.032**

In summary, for CPT code +963X6 (*Neuropsychological testing evaluation services, each add'l hour*) ***APA and AAN recommends 1.90 wRVUs and 0/60/0 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Code	Global	Work RVU	Pre	Intra	Post
96116	XXX	1.86	5	60	5
+96121	ZZZ	1.71	0	60	0
96132	XXX	2.53	5	60	5
+96133	ZZZ	1.90	0	60	0
96136	XXX	0.55	3	30	3
+96137	ZZZ	0.46	0	30	0
96138	XXX	PE Only	N/A		
+96139	ZZZ	PE Only	N/A		

Note: Clinician would bill X7/X8 or X9/X10 for administration and scoring

3.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96118 and 96119

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty Neurology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1797725
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization for these services; 50% of the utilization for 96118 will be reported by +96133 and 12.5% of the utilization for 96119 will be reported by +96133.

Specialty Clinical Psychology Frequency 1617953 Percentage 90.00 %

Specialty Neurology Frequency 89886 Percentage 4.99 %

Specialty 6 Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 359,545 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 50% of the utilization for 96118 will be reported by +96133 and 12.5% of the utilization for 96119 will be reported by +96133.

Specialty Clinical Psychology Frequency 323591 Percentage 90.00 %

Specialty Neurology Frequency 17977 Percentage 4.99 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96119

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96X11 Tracking Number K17 Original Specialty Recommended RVU: **0.80**
Presented Recommended RVU: **0.80**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.51**

CPT Descriptor: Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed (For multiple tests see 963X3, 963X4, 963X5, 963X6, 963X7, 963X8, 963X9, 96X10)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 42-year-old female is experiencing depressive symptoms and social withdrawal. She is given a single measure of personality and emotional functioning in conjunction with clinical interview.

Percentage of Survey Respondents who found Vignette to be Typical: 75%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Select test. Review records.

Description of Intra-Service Work: A single, psychological test instrument is administered by paper and pencil or on an electronic platform, and scored. The interpretation and report are performed by the physician or qualified health care professional. Interactive feedback is provided to the patient/family member(s)/caregiver(s).

Description of Post-Service Work: Report distribution.

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99205	XXX	3.17	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
90791	XXX	3.00	**RUC Time**

CPT Descriptor Psychiatric diagnostic evaluation.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93015	XXX	0.75	**RUC Time**	1,071,181

CPT Descriptor 1 Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95819	XXX	1.08	**RUC Time**	236,046

CPT Descriptor 2 Electroencephalogram (EEG); including recording awake and asleep

Other Reference CPT Code	Global	Work RVU	Time Source
95972	XXX	0.80	**RUC Time**

CPT Descriptor Electronic analysis of implanted neurostimulator pulse generator system (eg, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and

patient compliance measurements); complex spinal cord, or peripheral (ie, peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	22%	40%	31%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	31%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	24%	76%
Physical effort required	5%	5000%	4500%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	45%	48%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	3%	6%	26%	26%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	20%	66%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	23%	71%
Physical effort required	6%	54%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	49%	46%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A family of psychological/neuropsychological testing CPT codes was identified by CMS on the High Expenditure Procedural Codes screen. The reporting specialties went to CPT to revise and update the family. The new code family was approved at the May/June 2017 CPT Editorial Panel meeting and surveyed for the October 2017 HCPAC meeting (some of these codes are being presented at the RUC meeting). This family includes codes in three areas:

- Assessment of aphasia/cognitive performance testing (96105, 96125)
- Developmental/behavioral screening and testing (963X0, +963X1)
- Psychological/neuropsychological testing
    - Neurobehavioral status exam (96116, +963X2)
    - Testing evaluation services (963X3, +963X4, 963X5, +963X6)
    - Test administration and scoring (963X7, +963X8)
    - Single test administration with interpretation and report (96X11)

MEETING	Category	Code #	Work RVU	Time	IWPUT
Assessment of Aphasia and Cognitive Performance Testing					
HCPAC	Assessment of aphasia	96105	1.75	4/60/10	0.024

October 2017 RUC Work Survey and Recommendation

The American Association of Neurology (AAN) and the American Psychological Association (APA) surveyed *96X11, Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed* for the October 2017 RUC meeting.

A total of 143 responses were received from a random sample of 4,602 AAN/APA members (3.1 percent response rate). AAN/APA convened an Expert Panel to review the survey data. ***The societies are recommending 0.80 work RVUs and 5/30/5 for the time.***

Response to reviewer comments: This recommendation is a reduction from the original recommendation of 1.05 wRVUs. The Expert Panel reduced the recommended wRVU based on comments from reviewers during the pre-facilitation process.

Survey Data: wRVU and Time

The Expert Panel reviewed the survey data.

Highlights from Survey Data			
	25th Percentile	**Median**	**75th Percentile**
Work	2.50	3.00	3.20
Pre-Time		20	
Intra-Time	45	75	180
Post-Time		30	

wRVU recommendation

The Expert Panel felt that the work survey RVW 25th percentile and median was too high. Code 96X11 describes test administration, with interpretation and report of a single instrument. Codes 963X3 through +963X6 describe psychological/neuropsychological test evaluation for multiple tests for 60 minutes. The Expert Panel concluded that the work RVU and intensity of 96X11 should be less than these codes. The Expert Panel concluded that they could not rely on survey data as the basis of their recommendation and that they would need to develop a recommendation based on a crosswalk to a RUC-reviewed code.

Time recommendation: The Expert Panel agreed that the survey 25th percentile and median for intra-time was too high. The Expert Panel agreed that 30 minutes was appropriate for the test administration, scoring with interpretation and report for a single test.

The Expert Panel agreed that the median and 25th percentile surveyed time for pre- and post-time was too high. They also agreed that it should be less than the pre- and post-time for 963X3 and 963X5. The Expert Panel agreed that 3 minutes pre- and 3 minutes post-time was appropriate and aligned well with other similar services. They also noted this reflected a reduction from the original recommendation of 7 minutes pre-time and 0 minutes post-time.

Response to reviewer comments: Reviewers requested societies to explain the rationale for 30 minutes intra-time. The reviewers noted that the codes that are used to currently report this service (96103 and 96120) have intra-service time of 8 minutes and 15 minutes. The Expert Panel would note that the total time for both of these codes are 30 minutes and 23 minutes respectively. In using their clinical experience, they concluded that 30 minutes was an appropriate intra-time value. Code 96X11 describes a single psychological or neuropsychological test administration with interpretation and report. In contrast 963X3 to +963X6 describe multiple tests within a 60 minute intra-service period. The Expert Panel estimated that at minimum 30 minutes of intra-service time would be needed to administer a test, interpret results and provide feedback.

The Expert Panel noted that even with a computer administered self report test completed by the patient, the intra-service professional work of interpretation, dictating the report and providing feedback to the patient will alone require 30 minutes.

Response to reviewer comments: A reviewer noted that the top reference code selected was an E/M service (99205) but that psychologists do not report E/M services. The Expert Panel agreed that this was both odd and unexpected and that they could not explain why this occurred. Since the survey data was not being used to develop the recommendation the issue was not further explored.

Response to reviewer comments: In the description of post-service work by the healthcare professional “report distribution” is listed. Reviewers questioned if this is healthcare professional work or if it is done by office staff. The

Expert Panel discussed this issue. They concluded that a majority of providers of this service are in private practice and do not have clinical or clerical staff. So in the typical scenario when this service is performed, these tasks are done by the healthcare professional.

wRVU Recommendation Rationale: Crosswalk to code 95972

The Expert Panel agreed that due to the work redistribution within the family and the addition of interactive feedback, the value of the code should be greater than how this service is currently reported (96103 @ 0.51 wRVUs and 96120 @ 0.51 wRVUs). Since it is a code that is used to report a single instrument test it should be valued less than 963X3 and 963X5 that describe multiple instrument tests.

In reviewing the reference service list the Expert Panel concluded that the appropriate value should be between reference code 90853 (*Group psychotherapy (other than of a multiple family-group)* valued at 0.59 wRVUs and reference code 99202 (Office or outpatient visit, new) valued at 0.93 wRVUs. A search of the RUC database was conducted to identify an appropriate crosswalk.

Response to reviewer comments: The society received comments from reviewers that in general selected crosswalks for this family of codes were not as robust as they would have liked. Codes were selected with older survey data, they were not always clinically similar to the surveyed code, the intra-service time was slightly off from the intra-service time of the surveyed code, and in the case of a crosswalk to a ZZZ surveyed code a XXX code was selected. We very much agree with the reviewers that the crosswalks were not always ideal. Unfortunately the Expert Panel was constrained by a variety of factors:

- Entire family was being surveyed, eliminating potential ideal crosswalks with clinical similarity
- Generally, psychology/neuropsychology has fewer codes within the specialty and more limited clinically similar services to other specialties
- Limited options for services with 60 minutes and 30 minutes of intra-time with appropriate wRVUs
- Some crosswalks suggested by reviewers were just too high and would not have maintained budget neutrality in the family

Within these constraints, the Expert Panel attempted to find the most suitable crosswalks.

In a search of the RUC database for RUC-reviewed XXX codes between wRVU value of 0.59 to 0.93, IWPUT between 0.02 and 0.03, with intra time between 20 and 30 minutes that are not currently being surveyed at this meeting, six codes were identified (12 codes were identified but six were dismissed since they did not have any Medicare volume associated with them or they were flagged in the RUC database that CMS did not accept the RUC recommendation):

- **92557** (*Comprehensive hearing test* @ 0.60 wRVU with 20 min intra-time)
- **76948** (*Echo guidance ova aspiration* @ 0.67 wRVU and 25 min intra-time)
- **88342** (*Immunohist antb 1st stain* @ 0.70 wRVU and 25 min time)
- **95971** (*Analyze neurostim, simple* @ 0.78 wRVUs and 20 min)
- **95972** (*Analyze neurostim, complex* @ 0.80 wRVUs and 23 min)
- **96931** (*RCM cellular subcellular IMG SK* @ 0.80 wRVUs and 25 min)

Based on this list the Expert Panel felt that code 95972 was the best candidate for a crosswalk.

Comparison to Other Services

The Expert Panel compared 96X11 to other codes across the fee schedule. The recommended work RVUs and resulting IWPUT seem to provide relativity when compared to other service in the fee schedule.

	Descriptor	wRVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
97168	Re-evaluation of occupational therapy established plan of care	0.75	5	30	10	45	2015	0.0138	N/A
96X11	**Psychological/neuropsychological**	**0.80**	**3**	**30**	**3**	**36**	***	**0.022**	**NEW**

	Descriptor	wRVU	Pre	Intra Time	Post Time	Total Time	Most Recent RUC Review	IWPUT	2016 Utilization
	single test administration with interpretation and report								
88374	Morphometric analysis, in situ hybridization (quantitative or semi-quantitative), using computer-assisted technology, per specimen; each multiplex probe stain procedure	0.93	0	30	0	30	April 2014	0.0310	97,801

In summary, for CPT code 96X11 (*Psychological/neuropsychological single test administration with interpretation and report*) APA and AAN recommend 0.80 ***wRVUs and 3/60/3 for time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96103 or 96120

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Clinical Psychology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 490860
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare utilization represents 20% of national utilization for these services; 50% of utilization for 96103 and 96120 will now be reported by 96X11

Specialty Nurse Practitioners Frequency 127624 Percentage 26.00 %

Specialty Neurology Frequency 78537 Percentage 15.99 %

Specialty Clinical Psychology Frequency 29452 Percentage 6.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 98,172
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 50% of utilization for 96103 and 96120 will now be reported by 96X11

Specialty Nurse Practitioners Frequency 25524 Percentage 25.99 %

Specialty Neurology Frequency 15708 Percentage 16.00 %

Specialty Clinical Psychology Frequency 5896 Percentage 6.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 96120

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

CPT Code: 96110
Specialty Societies: AAP

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: **Developmental screening (eg, developmental milestone survey, speech and language delay screen) with scoring and documentation, per standardized instrument**

Global Period: **XXX** Meeting Date: **October 2017**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: **An AAN-AAP/APA expert panel formulated direct practice expense input recommendations for code 96110 utilizing the RUC-approved inputs for key reference code G0451/96110.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **G0451/96110**
The current inputs for G0451 are the same as those that CMS used in valuing 96110. For most of the services with RVUs displayed even though Medicare does not make separate payment, CMS develops PE RVUs based on the direct PE inputs through its standard methodology. In the case of 96110, CMS does not develop PE RVUs. Instead, CMS develops PE RVUs for G0451, which is payable by Medicare, and then display the RVUs for G0451 for 96110. The direct PE inputs are included in the direct PE input database only for G0451.

3. Is this code(s) typically billed with an E/M service? **N/A (Data for 96110 is not included)**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder) **N/A (Data for 96110 is not included)**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **Scoring completed developmental screening tool**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here: **N/A**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code: _96116 (Revised)________
Specialty Society: ___AAN, APA_______________

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour

Global Period: _XXX__ Meeting Date: _Oct 2017_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the societies listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **We are listing the current direct PE inputs for CPT code 96116,** ***Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report*****, as the reference code.**

3. Is this code(s) typically billed with an E/M service?
   - **No.**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting 45% of the time.**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **When 96116 was originally valued in 2006, the PE input, "neurobehavioral status form, average" (Medical Supply Code: SK050, unit price $5.77) for this one-hour code was valued at 0.25 items or $1.44 per the 60-minute code. This indicates the expectation that 96116 would be billed in multiple units (i.e. 4 units per patient). In actuality, the CMS database, based on 2015 data, shows that the mean number of unique occurrences is 1.24, and the median is 1.00. Therefore, we are requesting an increase from 0.25 items to 1.00 items. The new coding structure is a base code/add-on model. The 96116 will only be billed 1 time per hour, per patient. No supplies are being requested for the second hour (i.e. add-on code 963X2).**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   - **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    N/A

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code: _+96121________
Specialty Society: ___AAN, APA_______________

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure) (Use 963X2 in conjunction with 96116)

Global Period: _XXX__ Meeting Date: _Oct 2017_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the societies listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **We are listing the current direct PE inputs to CPT code 96116*, Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), per hour of the psychologist's or physician's time, both face-to-face time with the patient and time interpreting test results and preparing the report*, as the reference code.**

   - **New code CPT code +96121 is currently reported with 96116.**

3. Is this code(s) typically billed with an E/M service?
   - **No.**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting 45% of the time.**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **N/A**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
    - **N/A**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    - **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    - **N/A**

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:
    - **N/A**

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:
    - **N/A**

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:
    - **N/A**

16. If there is any other item on your spreadsheet that needs further explanation please include here:
    - **N/A**

CPT Code: _96X11 (Revised)_____
Specialty Society: ___APA_______________

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed (For multiple tests see 963X3, 963X4, 963X5, 963X6, 963X7, 963X8, 963X9, 96X10)

Global Period: _XXX__ Meeting Date: _Oct 2017_______

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   - **A consensus panel of experts from the society listed above met by phone and email to develop the inputs.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   - **We are listing CPT code 96103, *Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI), administered by a computer, with qualified health care professional interpretation and report*, as the reference code.**

3. Is this code(s) typically billed with an E/M service?
   - **No.**

4. What specialty is the dominant provider in the nonfacility? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different then for the global? (please see provided data in PE Subcommittee folder)
   - **Clinical psychology is the dominant provider in the nonfacility setting.**
   - **The dominant provider provides the service in the nonfacility setting more than 50 percent of the time.**

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:
   - **N/A**

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   - **When our reference code, 96103, was originally valued in 2006, no supplies or equipment were incorporated into the PE inputs to account for the actual testing service. Although the code description for 96103 very clearly mentions specific types of tests administered, requiring a number of testing forms as supplies, none are apparent in the inputs. Therefore, we are requesting the addition of a single, generic psychological testing form (i.e. SK067, psych testing forms, average, $2.30/item), to be added to the PE inputs for 96X11.**

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:
   - **N/A**

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*
   - **N/A**

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
   - **N/A**

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:
    - **N/A**

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

High Volume Growth

October 2017

Bronchoscopy

A list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014 was assembled by AMA Staff. The query resulted in the identification of 12 services. In January 2017 the RUC recommended that these services be surveyed for October 2017. CPT code 31623 was one of the 12 services identified in this high volume growth screen and CPT code 31624 was added as part of the bronchoscopy family.

31623 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings***
The RUC reviewed the survey results from 83 pulmonologists and determined that it was appropriate to maintain the current work RVU of 2.63, which is below the survey 25th percentile. The RUC discussed the pre-service times (10 minutes evaluation time, 5 minutes positioning time, and 5 minutes scrub/dress/wait time) and confirmed the removal of moderate sedation. Pre-service package 1-FAC Straightforward Patient Procedure with no sedation/anesthesia was selected due to the coding changes that removed moderate sedation from all services. The pre-service evaluation time was reduced by 3 minutes consistent with the survey median and 4 minutes was added to the standard positioning time consistent with the survey median to provide for positioning/repositioning of IVs and the bronchoscopy equipment. The pre-service scrub/dress/wait time was adjusted to below the median 10 minutes to 5 minutes consistent with CPT code 31622. Post-service package 8A IV sedation/simple procedure was selected and adjusted by 10 minutes consistent with the survey median time of 15 minutes. The RUC agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service and is consistent with the current median time of CPT 31622. The RUC recommends 20 minutes pre-service time, 30 minutes intra-service time and 15 minutes immediate post-service time and noted that CMS already reduced the current value to 2.63 as part of the removal of moderate sedation for all services, so further reduction is not necessary.

The RUC compared CPT code 31623 to key reference service CPT code 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.53 and 30 minutes intra-service time) and noted that both services have identical intra-service time, however the survey code involves more total time, justifying the higher work value. The survey results support the reference service code in terms of relativity, intensity and complexity measures. The RUC agreed that the overall intensity/complexity measures for CPT code 31623 are generally the same or greater than 31622.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC compared the survey code to CPT code 43227 Esophagoscopy, flexible, transoral; with control of bleeding, any method (work RVU = 2.89, intra-service time of 30 minutes, total time of 63 minutes) and noted that both codes have identical intra-service time and similar total time. **The RUC recommends a work RVU of 2.63 for CPT code 31623.**

31624 ***Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage***
The RUC reviewed the survey results from 90 pulmonologists and determined that it was appropriate to maintain the current work RVU of 2.63, which is below the survey 25th percentile. The RUC discussed the pre-service times (10 minutes evaluation time, 5 minutes positioning time, and 5 minutes scrub/dress/wait time) and confirmed the removal of moderate sedation. Pre-service package 1-FAC Straightforward Patient Procedure with no sedation/anesthesia was selected due to the coding changes that removed moderate sedation from all services. The pre-service evaluation time was reduced by 3 minutes consistent with the survey median and 4 minutes was added to the standard positioning time consistent with the survey median to provide for positioning/repositioning of IVs and the bronchoscopy equipment. The pre-service scrub/dress/wait time was adjusted to below the median 10 minutes to 5 minutes consistent with CPT code 31622. Post-service package 8A IV sedation/simple procedure was selected and adjusted by 10 minutes consistent with the survey median time of 15 minutes. The RUC agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service and is consistent with the current median time of CPT 31622. The RUC recommends 20 minutes pre-service time, 30 minutes intra-service time and 15 minutes immediate post-service time and noted that CMS already reduced the current value to 2.63 as part of the removal of moderate sedation for all services, so further reduction is not necessary.

The RUC compared CPT code 31624 to key reference service CPT code 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* (work RVU = 2.53 and 30 minutes intra-service time) and noted that both services have identical intra-service time, however the survey code involves more total time, justifying the higher work value. The survey results support the reference service code in terms of relativity, intensity and complexity measures. The RUC agreed that the overall intensity/complexity measures for CPT code 31624 are generally the same or greater than 31622.
The RUC recommends a work RVU of 2.63 for CPT code 31624.

Practice Expense
The Practice Expense Subcommittee modified the direct practice expense inputs by approving 1 minute of clinical staff time for clinical activity CA029, *check dressings, catheters, wounds* and removing supply item SJ016, *denture cup*. The PE Subcommittee discussed that these modificiations deviate from the base code, 31622. The RUC recommends the direct practice expense inputs with modifications as reviewed and approved by the PE Subcommittee.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
31623	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings	000	2.63 (No Change)
31624 (f)	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage	000	2.63 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:31623 Tracking Number Original Specialty Recommended RVU: **2.63**
Presented Recommended RVU: **2.63**
Global Period: 000 Current Work RVU: **2.63** RUC Recommended RVU: **2.63**

CPT Descriptor: bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: 66 year-old female with an abnormal chest x -ray un
is visualized and brushings are performed.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's preprocedural work-up and medical records are reviewed. Communication with other professionals, the patient, and the patient's family is completed. The patient is examined to verify that the patient can undergo the procedure. The identity of the patient and the procedure to be performed are verified in accordance with The Joint Commission regulations. The details of the procedure are reviewed with the patient, including possible complications, and informed consent is obtained. The patient is brought into the bronchoscopy suite and is positioned for bronchoscopy. Need for respiratory isolation procedures are assessed and used where appropriate. A topical anesthetic is administered through a nebulizer. A surgical "time out" is performed with the team.

Description of Intra-Service Work: Once the patient has achieved appropriate topical anesthesia and moderate sedation, the procedure begins. A videobronchoscope is inserted through the mouth or nostril to visualize the upper airways to the vocal cords noting any abnormalities. The vocal cords are observed for function and structure. The bronchoscope is then advanced into the trachea. All of the airways are inspected. The videobronchoscope is then advanced into the tracheobronchial tree. Spray additional lidocaine after the videobronchoscope has entered the upper trachea and at the carina into the segmental airways. Visualize/inspect all 18 segments along with their subsegments. Capture images of abnormalities seen in the tracheobronchial tree. Pass a protected brush through the videobronchoscope Assure that the catheter is in the infiltrated area, break the catheter's seal, and use an un-contaminated brush to collect specimens for culture and sensitivity. Or, use an unprotected brush to take samples for cytology and microscopic examinations of an airway or lung segment or subsegment. Make several passes of the unprotected brush into the area of infiltrate. After obtaining specimens control any bleeding that occurs with the disruption of the endothelium. The physician examines the patient immediately post-endoscopy to ascertain that no complications such as respiratory decompensation.

Description of Post-Service Work: Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as bleeding, mucuc plugging, or shortness of breath has occurred. Ensure any images taken during procedure are reviewed, labeled and stored within medical record. Coordinate care with post anesthesia care team. The bronchoscopy report is generated and forwarded to the referring physician and other appropriate parties. The specimen(s) requisition form(s) are completed and verified. The results of the procedure, how the patient did during the procedure, and the patient's current condition are explained to the patient's family. Once the patient is awake, the

bronchoscopy findings are discussed with the patient. Orders for when the patient can drink or eat are given to the patient and the patient’s family. Necessary prescriptions, follow up tests and appoinmtents are provided to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93503	000	2.91	**RUC Time**

CPT Descriptor Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31622	000	2.53	**RUC Time**

CPT Descriptor Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
31622	000	2.53	**RUC Time**	64,510

CPT Descriptor 1 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99222	XXX	2.61	**RUC Time**	7,048,864

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
99326	XXX	2.63	**RUC Time**

CPT Descriptor Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity.

Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 47 **% of respondents:** 56.6 **%**

Number of respondents who choose 2nd Key Reference Code: 22 **% of respondents:** 26.5 **%**

TIME ESTIMATES (Median)	**CPT Code:** 31623	**Top Key Reference CPT Code:** 93503	**2nd Key Reference CPT Code:** **31622**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	30%	60%	8%	2%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	24%	68%	8%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	32%	53%	15%
Physical effort required	21%	72%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	36%	49%	15%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	40%	46%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	41%	59%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	60%	35%
Physical effort required	5%	68%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	73%	27%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The AMA staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. The query resulted in identification of 12 services. In January 2017, the RUC recommended that these services be surveyed for October 2017. CPT code 31623 was identified by the RUC and CPT 31624 was identified by the American Thoracic Society (ATS) and the American College of Chest Physicians (CHEST) as part of the family.

Survey Results & ATS/CHEST Recommendations:
CPT 31623

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for a call and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 83 responses to this code survey request. The survey pool was a standard random sample from both societies de-duplicating the members so any potential participant only received one survey request. The survey performance rate median of 20 studies per year among the 83 respondents is a reasonable rate given the RUC database volume for early 2016 data is 31,349 for this procedure.

- 90% of respondents found the vignette to be typical.

For both the CPT 31623 and the CPT 31624, survey the participants both chose the same two Key Reference Service codes, CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* and CPT 93503 (*Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes.*)

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 1-FAC straightforward patient procedure with no sedation/anesthesia. (this is due to the coding changes that removed moderate sedation from all services). We reduced the pre-service evaluation time by (-3) minutes consistent with the survey median and added 4 minutes to the standard positioning time; we adjusted the pre-service scrub, dress and wait time from the package 5 to below the median 10 to 5 minutes consistent with CPT 31622. The ATS/CHEST panel chose post service package 8A IV sedation/simple procedure adjusting by 10 minutes consistent with our survey median time of 15 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service today and is consistent with the current median time of CPT 31622. After review of the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 30 minutes with (10, 5, 5 total 20) pre and 15 post time for CPT 31623.

Work:

Survey respondents estimated CPT 31623 at a median work RVW of 3.04 and 25 percentile of 3.00 higher than the current work RVW of 2.63, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents in terms of

relativity and results of intensity and complexities, CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* (RVW 2.53) to have equal or higher measures including overall time intensity complexity and CPT 93503 (*Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes.*) (RVW 2.91) to have equal or lower work intensity and complexity, skill and psychological stress than 93503. The expert panel reviewed the intensity complexity measures and agreed with the survey respondents that the medical judgement, urgency of medical decision making, the technical skill and the physician effort for CPT 31623 is generally greater than CPT 31622.

The expert panel compared 31623 to three MPC codes CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* (RVW 2.53, times 16-30-15 total time 61 minutes), CPT 99222 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.*), (RVW 2.61, times 15-40-20, total 75 min). and CPT 99326 (*Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.*), (RVW 2.63, times 15-45-17, total 77 min). We believe these procedures along with our survey result support maintaining the current relative value.

In summary, we recommend maintaining the current RVW of 2.63 for 31623 with our median times per the survey adjusted per the preservice packages as noted earlier for a pre-service total time 20 minutes, intra service time 30 minutes and post time 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31623

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Internal Medicine How often? Sometimes

Specialty Critical Care How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 94047
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 times the Medicare RUC data base volume.

Specialty Pulmonary Frequency 75238 Percentage 80.00 %

Specialty Internal Medicine Frequency 7524 Percentage 8.00 %

Specialty Critical Care Frequency 6583 Percentage 6.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
31,349 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty.
Please explain the rationale for this estimate. Medicare RUC data base, early 2016 data

Specialty Pulmonary Frequency 25079 Percentage 79.99 %

Specialty Internal Medicine Frequency 2508 Percentage 8.00 %

Specialty Criticial Care Frequency 2194 Percentage 6.99 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31623

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's preprocedural work-up and medical records are reviewed. Communication with other professionals, the patient, and the patient's family is completed. The patient is examined to verify that the patient can undergo the procedure. The identity of the patient and the procedure to be performed are verified in accordance with The Joint Commission regulations. The details of the procedure are reviewed with the patient, including possible complications, and informed consent is obtained. The patient is brought into the bronchoscopy suite and is positioned for bronchoscopy. Need for respiratory isolation procedures are assessed and used where appropriate. A topical anesthetic is administered through a nebulizer. A surgical "time out" is performed with the team.

Description of Intra-Service Work: Once the patient has achieved appropriate topical anesthesia and moderate sedation, the procedure begins. A video bronchoscope is inserted through the mouth or nostril to visualize the upper airways to the vocal cords noting any abnormalities. The vocal cords are observed for function and structure. The bronchoscope is then advanced into the trachea. All of the airways are inspected. The videobronchoscope is then advanced into the tracheobronchial tree. Spray additional lidocaine after the videobronchoscope has entered the upper trachea and at the carina into the segmental airways. Visualize/inspect all 18 segments along with their subsegments. Capture images of abnormalities seen in the tracheobronchial tree. Wedge the bronchoscope into the subsegment under study, and instill saline through the bronchoscope into the area and aspirate into a sterile syringe or trap. Instill the saline in 20-50 ml aliquots. After each aliquot is infused, aspirate it into one or more containers. The total volume usually infused by site is 100 ml to 150 ml. Keep each aliquot separate and document. After obtaining specimens control any bleeding that occurs with the disruption of the endothelium. The physician examines the patient immediately post-endoscopy to ascertain that no complications such as desaturation or respiratory failure has occurred.

Description of Post-Service Work: Examine the patient after the procedure and before discharge from the facility to ascertain that no complications such as bleeding, mucuc plugging, or shortness of breath has occurred. Ensure any images taken during procedure are reviewed, labeled and stored within medical record. Coordinate care with post anesthesia care team. The bronchoscopy report is generated and forwarded to the referring physician and other appropriate parties. The specimen(s) requisition form(s) are completed and verified. The results of the procedure, how the patient did during the procedure, and the patient's current condition are explained to the patient's family. Once the patient is awake, the

bronchoscopy findings are discussed with the patient. Orders for when the patient can drink or eat are given to the patient and the patient's family. Necessary prescriptions, follow up tests and appoinmtents are provided to the patient. Once the patient has stable vital signs and feels well enough to leave, the patient is discharged from the bronchoscopy suite.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	10/2017
Presenter(s):	Katina Nicolacakis MD (ATS), Alan Plummer, MD (ATS), Robert DeMarco, MD (CHEST) and Kevin Kovitz, MD (CHEST), Omar Hussain, MD (ATS)
Specialty(s):	American Thoracic Society (ATS) and American College of Chest Physicians (CHEST)
CPT Code:	31624
Sample Size:	3885 — Resp N: 90 — Response: 2.3 %
Description of Sample:	Random survey of both ATS and CHEST memberships, deduplicate common members.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31622	000	2.53	**RUC Time**

CPT Descriptor Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
93503	000	2.91	**RUC Time**

CPT Descriptor Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
31622	000	2.53	**RUC Time**	64,510

CPT Descriptor 1 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99222	XXX	2.61	**RUC Time**	7,048,864

CPT Descriptor 2 Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.

Other Reference CPT Code	Global	Work RVU	Time Source
99326	XXX	2.63	**RUC Time**

CPT Descriptor Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity.

Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 48 **% of respondents:** 53.3 **%**

Number of respondents who choose 2nd Key Reference Code: 22 **% of respondents:** 24.4 **%**

TIME ESTIMATES (Median)	**CPT Code:** 31624	**Top Key Reference CPT Code:** 31622	**2nd Key Reference CPT Code:** **93503**
Median Pre-Service Time	20.00	16.00	12.00
Median Intra-Service Time	30.00	30.00	15.00

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	2%	2%	37%	52%	7%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	46%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	36%	56%
Physical effort required	6%	29%	65%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	59%	35%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	41%	50%	9%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	32%	54%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	38%	48%	20%
Physical effort required	36%	55%	9%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	41%	41%	18%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The AMA staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. The query resulted in identification of 12 services. In January 2017, the RUC recommended that these services be surveyed for October 2017. CPT code 31623 was identified by the RUC and CPT 31624 was identified by the American Thoracic Society (ATS) and the American College of Chest Physicians (CHEST) as part of the family.

Survey Results & ATS/CHEST Recommendations:
CPT 31624

A joint multi-society expert panel from the American Thoracic Society (ATS) and American College of Chest Physicians (CHEST) herein referred to as the ATS/CHEST expert panel, convened for a call and over subsequent e-mail to review and discuss the survey results. The ATS/CHEST panel was pleased that there were a total of 90 responses to this code survey request. The survey pool was a standard random sample from both societies de-duplicating the members so any potential participant only received one survey request. The survey performance rate median of 30 studies per year among the 90 respondents is a reasonable rate given the RUC database volume for early 2016 data is 114,370 for this procedure.

- 91% of respondents found the vignette to be typical.

For both the CPT 31623 and the CPT 31624, survey the participants both chose the same two Key Reference Service codes, CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* and CPT 93503 (*Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes.*)

Based on these observations and the rest of the survey results, the expert panel is recommending the following with respect to physician time and work.

Time:

The ATS/CHEST panel chose pre-service package 1-FAC straightforward patient procedure with no sedation/anesthesia. (this is due to the coding changes that removed moderate sedation from all services). We reduced the pre-service evaluation time by (-3) minutes consistent with the survey median and added 4 minutes to the standard positioning time; we adjusted the pre-service scrub, dress and wait time from the package 5 to below the median 10 to 5 minutes consistent with CPT 31622. The ATS/CHEST panel chose post service package 8A IV sedation/simple procedure adjusting by 10 minutes consistent with our survey median time of 15 minutes.

The ATS/CHEST expert panel agreed that the survey median intra-service time of 30 minutes accurately reflects the time required to perform this service today and is consistent with the current median time of CPT 31622. After review of the survey data in total and relativity between the family of codes, the expert panel is recommending our survey median intra-service time of 30 minutes with (10, 5, 5 total 20) pre and 15 post time for CPT 31624.

Work:

Survey respondents estimated CPT 31624 at a median work RVW of 3.00 and 25 percentile of 2.70 higher than the current work RVW of 2.63, based on a comparison to the top two key reference services. The survey results supports the top two reference service codes chosen by the survey respondents in terms of

relativity and results of intensity and complexities, CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* (RVW 2.53) to have equal or higher measures including overall time intensity complexity and CPT 93503 (*Insertion and placement of flow directed catheter (eg, Swan-Ganz) for monitoring purposes.*) (RVW 2.91) to have equal or lower work intensity and complexity, skill and psychological stress than 93503. The expert panel reviewed the intensity complexity measures and agreed with the survey respondents that the medical judgement, urgency of medical decision making, the technical skill and the physician effort for CPT 31624 is generally greater than CPT 31622.

The expert panel compared 31624 to three MPC codes CPT 31622 (*Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure))* (RVW 2.53, times 16-30-15 total time 61 minutes), CPT 99222 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.*), (RVW 2.61, times 15-40-20, total 75 min). and CPT 99326 (*Domiciliary or rest home visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent with the patient and/or family or caregiver.*), (RVW 2.63, times 15-45-17, total 77 min). We believe these procedures along with our survey result support maintaining the current relative value.

In summary, we recommend maintaining the current RVW of 2.63 for 31624 with our median times per the survey adjusted per the preservice packages as noted earlier for a pre-service total time 20 minutes, intra service time 30 minutes and post time 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 31624

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pulmonary How often? Commonly

Specialty Internal Medicine How often? Sometimes

Specialty Critical Care How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 343110
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. 3 times the Medicare RUC data base volume.

Specialty Pulmonary Frequency 243608 Percentage 70.99 %

Specialty Internal Medicine Frequency 30880 Percentage 9.00 %

Specialty Critical Care Frequency 37742 Percentage 10.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 114,370 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare RUC data base, early 2016 data

Specialty Pulmonary Frequency 81203 Percentage 71.00 %

Specialty Internal Medicine Frequency 10293 Percentage 8.99 %

Specialty Criticial Care Frequency 12581 Percentage 11.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 31624

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility and Facility Direct Practice Expense (PE) Inputs

CPT, Global and Long Descriptor:

CPT	Global	Long Description
31623	000	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings
31624	000	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage

Meeting Date: **October 2017 9-5-2017** **Revised 10-6-2017**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel: **The ATS and CHEST convened a consensus panel via telephone and email to develop the inputs for this code.**

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:
   Reference Code Rationale: The surveying societies supplied the existing codes and values as references, additionally a recently surveyed and PE reviewed CPT code 31622 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)* is also used as a reference. The examination of the vocal cords, glottic structures and all the bronchial segments and subsegments (the physician work of 31622) would be performed before performing either/or 31623 or 31624. A provider cannot bill 31622 in addition to either 31623 or 31624, as 31622 is an inherent part of any performed bronchoscopy.

3. Is this code(s) typically billed with an E/M service? **Per the AMA billed with files No.**

4. What specialty is the dominant provider in the nonfacility? Pulmonary Disease What percent of the time does the dominant provider provide the service(s) in the nonfacility? 72% Is the dominant provider in the non-facility different then for the global? No (please see provided data in PE Subcommittee folder)

Specialty (ALL)	Specialty Percent (ALL)	Site-of-Service (ALL)	Site-of-Service Percent (ALL)	Specialty (Non-Fac ONLY)	Specialty Percent (Non-Fac ONLY)
PULMONARY DISEASE	79%	OUTPATIENT HOSPITAL	54%	PULMONARY DISEASE	72%

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

Lines: 15 to 19 rationale, when decision for service is made. "While many of these procedures are performed in the facility setting, if done in a non-facility setting the coordination to set up appointments for any bronchoscopy such as 31623 or 31624 would be typical for 31622, therefore we cross walked to 31622 service inputs for RUC accepted times.

6. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:
   We cross walked the same PE clinical inputs from 31622, to perform 31623 or 31624 as one would first perform the physician work of a 31622. It would not make sense to have less clinical time for bronchoscopic procedures that are more complex than the base bronchoscopic service 31622. At the PE meeting, line 72 was taken from 3 minutes to 1 minute, therefore that line is inconsistent with other bronchoscopy services.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here:

8. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Pre-Service Clinical Labor Activities:

- Hospital outpatient and ASC admission and pre-procedural work-up, review of records, communication with other professionals, patient and family.
- Obtain informed consent.
- Obtain vital signs. (height, weight, temperature, respiratory rate, pulse rate/ regularity, supine BP, O2 Sat)
- Provide preservice education about the bronchoscopy and the bronchial brush and/or Bronchoalveolar lavage
- Dress in gown, non-sterile gloves and eye shield before the procedure. Don lead apron for fluoroscopic guidance, if used.
- Prepare room, equipment, supplies and bronchoscope.
- Prepare and position the patient and equipment, following instructions by the physician. Accepted the standard 2 minutes including prepare the video/scope equipment to allow access for the procedure and maintain patient monitoring. (Note: The patient will be monitored post procedure.)
- The RN/RT also verifies the identity of the patient and the procedure to be performed in accord with JCAHO regulations.

Intra-Service Clinical Labor Activities:

- The patient is placed on supplemental oxygen by the RN/RT in the bronchoscopy suite which has resuscitative equipment in place.
- The physician supervises the nebulized administration of inhaled topical anesthesia.

- The physician or RN/RT next applies local topical anesthesia to the oropharynx and nasopharynx.
- The RN/RT is available throughout the performance of the service to hand the physician instruments, to change the oxygen delivery system, to move the video, to reposition the patient, etc.
- The RN/RT places a bite block in the mouth to protect the bronchoscope from damage.
- Staff is 100% of the physician time.
- Typical is flexible scope.

Post-Service Clinical Labor Activities:

- The RN/RT examines the patient post-bronchoscopy and pre-discharge from the facility to ascertain that no complications, such as bleeding, mucus plugging, or shortness of breath have occurred.
- The RN/RT informs the patient and explains to the family the previous instructions about post-procedure complications.
- The RN/RT checks dressings, coordinates discharge, provides home care instructions, completes diagnostic forms, lab requisitions for specimens and a chest x-ray requisition.
- The RN/RT Cleans scope(s).

9. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

10. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities:

11. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

12. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here:

It is noted the PE committee had extensive discussion regarding the denture cup. In the end the denture cup was deleted as the decision was that the typical patient does not have dentures in the general population and the bronchoscopy population was thought to be typical due to the ICD 9 code of abnormal chest xray, therefore the cup was deleted from 31623 and 31624 which is inconsistent with other bronchoscopy services.

13. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here:

14. List all the equipment included in your recommendation and the equipment formula chosen (see document titled “Calculating equipment time”). If you have selected “other formula” for any of the equipment please explain here:

15. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

16. If there is any other item on your spreadsheet that needs further explanation please include here:

The patients undergoing bronchoscopies are **always** on oxygen for the entire procedure (not just the time for moderate sedation) which is continued until discharge. This is the standard of care. Additionally, these patients would have C02 monitored similarly.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
CMS 000-Day Global Typically Reported with an E/M

October 2017

Injection – Eye

In the Final Rule for 2017, CMS finalized the list of 000-day global services reported with an Evaluation and Management (E/M) service 50 percent of the time or more, on the same day of service, same patient, by the same physician, that have not been reviewed in the last five years with Medicare utilization greater than 20,000.

67500 ***Retrobulbar injection; medication (separate procedure, does not include supply of medication)***
The RUC reviewed the survey results from 47 ophthalmologists and determined that the survey 25th percentile work RVU of 1.18 accurately reflects the physician work necessary for this service. The pre-service time for evaluation substantially increased for this code while the intra-service time has not changed. The specialty noted that CPT code 67500 is not itself performed with an office visit but is reported alone 84% of the time. The RUC recommends pre-service package 6 unmodified, as the procedure is not typically done on the same day as an office visit and an interim history and dilated exam are required to assess the extent of the disease and the need for the procedure. The RUC recommends the following time components: 17 minutes evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 5 minutes intra-service time, and 5 minutes post-service time. The RUC compared the survey code to top key reference code 67028 *Intravitreal injection of a pharmacologic agent (separate procedure)* (work RVU = 1.44, intra-service time of 5 minutes) and noted that the survey code is appropriately valued lower because the reference code is an intra-occular injection while the survey code is extra-occular. While both procedures are high-risk, the specialty attested that the survey code should not be valued at the same level as the key reference service. The RUC agreed that the 25th percentile work RVU better reflects the intensity and complexity of the service.

The RUC compared the survey code to MPC codes 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22) and 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.15) and agreed that the survey code fits appropriately between these comparison codes. The RUC acknowledged that there are few MPC or recently reviewed 000-day global codes with intra-service times of 5 minutes, and none that match the intensity or complexity of a retrobulbar injection. **The RUC recommends a work RVU of 1.18 for CPT code 67500.**

67505 ***Retrobulbar injection; alcohol***
The RUC reviewed the survey results from 29 ophthalmologists and determined that the survey code should be valued the same as CPT code 67500 with a work RVU of 1.18, below the survey 25th percentile. The RUC discussed that the number of survey respondents falls below the survey threshold. The RUC typically requires a resurvey if below the threshold, however, there were only 201 procedures performed in the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Medicare population in 2016 and a resurvey would not warrant additional results. Therefore, the RUC is recommending the same work RVU as CPT code 67500. The specialty indicated that the survey code is almost identical in work to 67500 but it is in a blind eye. The RUC agreed that the survey code has similar work as CPT code 67500 despite differences in pre-service evaluation time as supported by the survey. The RUC recommends utilizing the work value of 67500 with the following time components: 10 minutes evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 5 minutes intra-service time, and 5 minutes post-service time.

The RUC compared the survey code to MPC code 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.15) while acknowledging that there are few good comparator codes with intra-service times of 5 minutes, and none that match the intensity or complexity of a retrobulbar injection. **The RUC recommends a work RVU of 1.18 for CPT code 67505.**

67515 *Injection of medication or other substance into Tenon's capsule*
The RUC reviewed the survey results from 43 ophthalmologists and recommends a work RVU of 0.84, crosswalking 67515 to the work of CPT code 65222 *Removal of foreign body, external eye; corneal, with slit lamp* (work RVU = 0.84, 7 minutes intra-service time and 15 minutes total time) and falls well below the survey 25th percentile. Pre-service package 6 was used and further reduced because the procedure is typically performed on the same day as an office visit. The RUC examined the pre-service times for potential overlap with E/M and recommends 3 minutes evaluation time, 1 minute positioning time, 1 minute scrub/dress/wait time, 3 minutes intra-service time, and 5 minutes of immediate post-service time. The specialty indicated that the intra-service portion of the procedure itself has not changed over the past 12 years despite the decrease in survey time. However, the RUC noted that the recommended decrease in work is reflective of the decrease in intra-service time. The RUC further noted that CPT code 67515 is less intense than the other codes in the family and should be valued less.

To further support a work RVU of 0.84, the RUC compared the survey code to CPT code 67820 *Correction of trichiasis; epilation, by forceps only* (work RVU = 0.71, 5 minutes intra-service time and 15 minutes total time) and CPT code 20527 *Injection, enzyme (eg, collagenase), palmar fascial cord (ie, Dupuytren's contracture)* (work RVU = 1.00, 5 minutes intra-service time and 18 minutes total time). The RUC recommends a crosswalk of 0.84 work RVUs to CPT code 65222 and believes that it appropriately ranks this procedure within this family of services. **The RUC recommends a work RVU of 0.84 for CPT code 67515.**

RUC Database Flag
The RUC recommends to flag CPT code 67505 as “do not use” for validation of work as 67505 physician time and work recommendations are based on only the 29 survey respondents who performed this service in the past 12 months.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Practice Expense
The Practice Expense Subcommittee accepted the argument for compelling evidence based on a change in practice equipment with the Atkinson needle becoming the standard of care. The RUC recommends the direct practice expense inputs with modifications as reviewed and approved by the PE Subcommittee.

Work Neutrality
The RUC's recommendation for this code family will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
67500 (f)	Retrobulbar injection; medication (separate procedure, does not include supply of medication)	000	1.18
67505 (f)	Retrobulbar injection; alcohol	000	1.18
67515	Injection of medication or other substance into Tenon's capsule	000	0.84

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:67500 Tracking Number Original Specialty Recommended RVU: **1.18**
Presented Recommended RVU: **1.18**
Global Period: 000 Current Work RVU: **1.44** RUC Recommended RVU: **1.18**

CPT Descriptor: Retrobulbar injection; medication (separate procedure, does not include supply of medication)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year old with posterior scleritis. An injection of steriod (1-3 cc) is performed for control of the uveitis

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the records and plan. Obtain an interval history. Perform a dilated examination of the patient to confirm the continued presence and severity of disease. Describe the planned procedure and obtain informed consent. Check the supplies. Confirm the eye for treatment. Recline the chair and position the patient. Prep the periocular skin and apply povidone-iodine to the ocular surface. Inject local anesthetic.

Description of Intra-Service Work: Swab the lower lid with alcohol. Place a sterile cotton-tipped applicator between the globe and inferior orbital rim to elevate the globe. Pass a blunt-tipped needle through the lateral half of the lower lid above the floor of the orbit and aimed towards the orbital apex. The needle pops through the intermuscular septum. The plunger is withdrawn slightly to confirm placement outside of a vascular space. The drug is injected into the retrobulbar space. The needle is withdrawn.

Description of Post-Service Work: Pressure is maintained over the closed lids to reduce bleeding and the globe is retropulsed to check for a retrobulbar hemorrhage. An operative report is written in the medical record and forwarded to the referring source and primary care provider. Postoperative medications are prescribed. Use of medications and analgesia are discussed.

Outcome depends on the skill and judgment of physician	0%	57%	43%
Estimated risk of malpractice suit with poor outcome	0%	29%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 67500 *Retrobulbar injection; medication (separate procedure, does not include supply of medication)* is part of a family of procedures including CPT 67515, which was identified by CMS with a screen for 000-day global services typically performed with an office visit. This code was last fully reviewed by the RUC in 2005.

CPT 67500 is not itself performed with an office visit. A query of the 2015 5% file from CMS for the 3 codes in this family showed 67515 to be reported on the same day as an E/M or eye office visit code 53% of the time. The same query showed 67500 to be reported alone 84% of the time.

CPT Code 1	CPT Code 2	% Billed Together
67500	67028	6%
67500	92012	5%
67500	92134	7%
67500	ALONE	84%
67515	65800	2%
67515	66984	1%
67515	67028	15%
67515	76512	2%
67515	92004	2%
67515	92012	13%
67515	92014	24%
67515	92020	1%
67515	92134	49%
67515	92225	2%
67515	92226	15%
67515	92235	10%
67515	92250	10%
67515	92285	1%
67515	99204	3%
67515	99213	4%
67515	99214	7%
67515	ALONE	20%
67515	92134	2%

A random survey of AAO, American Society of Cataract and Refractive Surgeons (ASCRS) and American Society of Retina Specialists (ASRS) had 47 respondents, 76% of whom found the vignette typical. The median WRVU was 1.50 and the 25th percentile was 1.18. Median IST was 5 minutes. The current value of the code is 1.44 WRVU. The primary reference service, chosen by 53%, was 67028, *Intravitreal injection of a pharmacologic agent (separate procedure)* (RUC October 2009) with a WRVU of 1.44 and 5 minutes IST. The second key reference service was 64405, *Injection, anesthetic agent; greater occipital nerve* (RUC October 2010) with a WRVU of 0.94 and 5 minutes IST. For both reference codes, the majority of respondents rated the overall intensity/complexity of the surveyed code as somewhat or much more intense/complex.

The expert panel of the AAO, ASCRS and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 5 minutes is unchanged from the current value. The intra-service portion of the procedure itself has not changed over the past 12 years. The survey pre-times were 24/5/5. We used pre-service package 6 times of 17/1/5 unmodified, as the procedure is not typically done on the same day as an office visit and an interim history and dilated exam are required to assess the extent of the disease and the need for the procedure. We maintained the survey post-time of 5 minutes to maintain pressure on the globe and check for a retrobulbar hemorrhage, counsel the patient, prepare the report and communicate the results. **We recommend times of 23/5/5 and 1.18 WRVU, the survey's 25th percentile.**

There are few MPC or recently reviewed 000-day global codes with ISTs of 5 minutes, and no 5-minute MPC codes that match the intensity or complexity of a retrobulbar injection. The closest MPC in value and total time is 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (RUC April 2007) with 1.15 WRVU, an IST of 10 minutes and total time of 22 minutes. The recommended value is supported by the key reference service, CPT code 67028 *Intravitreal injection of a pharmacologic agent (separate procedure)* (RUC October 2009) with a WRVU of 1.44, an IST of 5 minutes and total time of 22 minutes. It is also supported by CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (RUC January 2012) with a WRVU of 1.10, an IST of 7 minutes and total time of 21 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Retrobulbar injection; alcohol

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65- year-old male with a history of absolute glaucoma, blindness, and pain in the eye. Patient refuses enucleation.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the records and plan. Obtain an interval history. Perform a dilated examination to confirm the pathology in the involved eye. Describe the planned procedure and obtain informed consent. Check the supplies. Confirm the eye for treatment. Recline the chair and position the patient. Prep the periocular skin and apply povidone-iodine to the ocular surface. Inject local anesthetic.

Description of Intra-Service Work: The patient is instructed to look forward. A slightly blunt-tipped needle is passed through the outer half of the lower lid above the floor of the orbit aimed toward the orbital apex. The needle pops through the intermuscular septum, passing just below the globe and lateral to the inferior rectus, inferior oblique complex. The alcohol is injected in the retrobulbar space.

Description of Post-Service Work: An operative report is written in the medical record. Post-operative topical medications are prescribed. Analgesia is discussed.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
67028	000	1.44	**RUC Time**

CPT Descriptor Intravitreal injection of a pharmacologic agent (separate procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
65800	000	1.50	**RUC Time**

CPT Descriptor Paracentesis of anterior chamber of eye (separate procedure); with removal of aqueous

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
12013	000	1.22	**RUC Time**	52,170

CPT Descriptor 1 Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36620	000	1.15	**RUC Time**	573,357

CPT Descriptor 2 Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous

Other Reference CPT Code	Global	Work RVU	Time Source
31231	000	1.10	**RUC Time**

CPT Descriptor Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 13 **% of respondents:** 44.8 **%**

Number of respondents who choose 2nd Key Reference Code: 7 **% of respondents:** 24.1 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	31%	31%	23%	15%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	51%	24%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	15%	46%	39%
Physical effort required	15%	54%	31%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	36%	36%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	14%	14%	29%	43%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	19%	14%	67%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	14%	86%
Physical effort required	0%	14%	86%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	14%	72%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 67505 *Retrobulbar injection; alcohol* is part of a family of procedures including CPT 67515, which was identified by CMS with a screen for 000-day global services typically performed with an office visit. This code was last fully reviewed by the RUC in 2005.

CPT 67505 is not itself performed with an office visit. A query of the 2015 5% file from CMS for the 3 codes in this family showed 67515 to be reported on the same day as an E/M or eye office visit code 53% of the time. The same query showed 67500 to be reported alone 84% of the time. The report contained no data for 67505 because it is performed too infrequently. This is due to a change in the user agreement with CMS, which now stipulates that no data will be displayed if any value is less than 11.

CPT Code 1	CPT Code 2	% Billed Together
67500	67028	6%
67500	92012	5%
67500	92134	7%
67500	ALONE	84%
67515	65800	2%
67515	66984	1%
67515	67028	15%
67515	76512	2%
67515	92004	2%
67515	92012	13%
67515	92014	24%
67515	92020	1%
67515	92134	49%
67515	92225	2%
67515	92226	15%
67515	92235	10%
67515	92250	10%
67515	92285	1%
67515	99204	3%
67515	99213	4%
67515	99214	7%
67515	ALONE	20%
67515	92134	2%

A random survey of AAO and American Society of Retina Specialists (ASRS) had 29 respondents, 97% of whom found the vignette typical. The survey failed to meet the 30 respondents threshold, but the procedure is rarely performed (206 claims in 2016) and is almost identical in work and intensity to 67500. In addition, many respondents reported a zero performance rate for this procedure. Because the survey failed to meet the threshold and the median performance rate was zero, three separate SORs were prepared: one with the aggregate data, one with data from respondents who did perform the procedure, and one with data from respondents who did not perform the procedure. This SOR is based on the aggregate data. A summary of some key data elements comparing the aggregate data and that from performers and non-performers is presented in the following table:

	Aggregate	Performers	Non-Performers
n	29	14	15
Median performance rate	0	2	0
WRVU 25%	1.30	1.39	1.27
WRVU median	1.53	1.52	1.53
Total pre-time	20	23.5	20
Pre-eval	10	13.5	10
Pre-position	5	5	5
Pre-wait	5	5	5
IST median	5	4.5	5
Post-time	10	14.5	10

The median WRVU for the aggregate data was 1.53 and the 25th percentile was 1.30. Median IST was 5 minutes. The current value of the code is 1.27 WRVU. The primary reference service, chosen by 45%, was 67028, *Intravitreal injection of a pharmacologic agent (separate procedure)* (RUC October 2009) with a WRVU of 1.44 and 5 minutes IST. The intensity and complexity metrics for the surveyed code were similar to those of the reference code. The median performance rate for 67028 among all responders was 2000. The second key reference service was 65800, *Paracentesis of anterior chamber of eye (separate procedure); with removal of aqueous* (RUC April 2012) with a WRVU of 1.53 and 5 minutes IST. The intensity and complexity metrics for the surveyed code were higher than those for this reference code. The median performance rate for 65800 among all responders was 20.

The expert panel of the AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 5 minutes is unchanged from the current value. The intra-service portion of the procedure itself has not changed over the past 12 years. The survey pre-times were 25/5/5. We used pre-service package 6 times of 17/1/5, as this procedure is not typically done on the same day as an office visit. A dilated exam is required to confirm the need for the procedure. We reduced the pre-service evaluation time to 10 minutes to match the survey median. We maintained 1 minute for positioning the patient and 5 minutes for scrub/dress/wait to prep the surface and inject local anesthetic and wait for it to take effect. We reduced the survey post-time from 10 to 5 minutes to maintain pressure on the globe and check for a retrobulbar hemorrhage, counsel the patient, prepare the report and communicate the results. **We recommend times of 16/5/5 and 1.18 WRVU, identical to CPT 67500 and below the survey's 25th percentile.**

There are few MPC or recently reviewed 000-day global codes with ISTs of 5 minutes, and no 5-minute MPC codes that match the intensity or complexity of a retrobulbar injection. The closest MPC in value and total time is 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (RUC April 2007) with 1.15 WRVU, an IST of 10 minutes and total time of 22 minutes. The recommended value is supported by the key reference service, CPT code 67028 *Intravitreal injection of a pharmacologic agent (separate procedure)* (RUC October 2009) with a WRVU of 1.44, an IST of 5 minutes and total time of 22 minutes. It is also supported by CPT code 31231 *Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)* (RUC January 2012) with a WRVU of 1.10, an IST of 7 minutes and total time of 21 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmologu How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 309
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 259 Percentage 83.81 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 206
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 173 Percentage 83.98 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

CPT Descriptor: Injection of medication or other substance into Tenon's capsule

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old patient presents with panuveitis due to sarcoidosis

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Describe the planned procedure and obtain informed consent. Check the supplies. Confirm the eye for treatment. Recline the chair and position the patient. Prep the periocular skin and apply povidone-iodine to the ocular surface. Inject local anesthetic

Description of Intra-Service Work: Instruct the patient to look forward. Pass a slightly blunt-tipped needle through the bulbar conjunctiva in the inferotemporal quadrant passing just below the globe and medial to the intermuscular septum. Advance the needle into the sub-Tenon space, avoiding penetration of the globe. Rock the tip as necessary to be certain the needle is not in the eye. Inject the medication into the potential space between Tenon capsule and the sclera. Withdraw the needle.

Description of Post-Service Work: Pressure is maintained over the closed lids to reduce bleeding. An operative report is written in the medical record and forwarded to the referring source and primary care provider. Postoperative medications are prescribed. Use of medications and analgesia are discussed.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	19%	35%	38%	8%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	4%	35%	61%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	4%	42%	54%
Urgency of medical decision making	15%	62%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	27%	38%	35%
Physical effort required	0%	69%	31%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	35%	35%	30%
Outcome depends on the skill and judgment of physician	8%	54%	38%
Estimated risk of malpractice suit with poor outcome	23%	46%	31%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	14%	71%	14%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	0%	43%	57%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0%	43%	57%
Urgency of medical decision making	0%	57%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	28%	72%
Physical effort required	0%	43%	57%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	0%	29%	71%
Outcome depends on the skill and judgment of physician	0%	29%	71%
Estimated risk of malpractice suit with poor outcome	0%	43%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

67515 Revised SOR Rationale

CPT 67515 *Injection of medication or other substance into Tenon's capsule* was identified by CMS as a potentially misvalued 000-day global service typically performed with an office visit. A query of the 2015 5% file from CMS for the 3 codes in this family showed 67515 to be reported on the same day as an E/M or eye office visit code 53% of the time. It was last fully reviewed by the RUC in 2005.

A random survey of AAO and American Society of Retina Specialists (ASRS) had 43 respondents, 98% of whom found the vignette typical. The median WRVU was 1.44 and the 25th percentile was 1.27. Median IST was 3 minutes. The current value of the code is 1.40 WRVU. The primary reference service, chosen by 60%, was 67028, *Intravitreal injection of a pharmacologic agent (separate procedure)* (RUC October 2009) with a WRVU of 1.44 and 5 minutes IST. The intensity and complexity metrics for the surveyed code were similar to or greater than those of the reference code. The second key reference service was 68200, *Subconjunctival injection* (RUC September 2011) with a WRVU of 0.49 and 5 minutes IST. The intensity and complexity metrics for the surveyed code were higher than those for this reference code.

The expert panel of the AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 3 minutes is 2 minutes less than the current value. The panel questioned whether a difference of 2 minutes in a survey of this nature is meaningful given the recent instructions to not round up or down compared to previous surveys that lacked those instructions. The intra-service portion of the procedure itself has not changed over the past 12 years despite the decrease in survey time. The survey pre-times were 20/4/5. We used pre-service package 6 with times of 17/1/5. We reduced the pre-service time further because the procedure is typically done on the same day as an office visit, utilizing 3 minutes to prepare for the procedure, describe the procedure to the patient and obtain consent, 1 minute to position the patient, and 1 minute to administer and wait for the anesthetic, for a total pre-time of 5 minutes. We maintained the survey post-time of 5 minutes to maintain pressure on the globe to reduce bleeding, counsel the patient, prepare the report and communicate the results. **We recommend times of 5/3/5 and 1.00 WRVU, below the survey's 25th percentile.**

There are no MPC or recently reviewed 000-day global codes with ISTs of 3 minutes. The closest MPC in value is 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (RUC April 2007) with 01.15 WRVU, an IST of 10 minutes and total time of 22 minutes. The highest-valued MPC with an IST of 5 minutes is 67820 *Correction of trichiasis; epilation, by forceps only* (RUC August 2005) with 0.71 WRVU. We expect that value to drop further after publication of the final rule, based on a re-review last year, but this code is much less intense than 67515. The recommended value is supported by CPT code 20527 *Injection, enzyme (eg, collagenase), palmar fascial cord (ie, Dupuytren's contracture)* (RUC April 2011) with a WRVU of 1.00, an IST of 5 minutes and total time of 18 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☒ Other reason (please explain) Billed with an office

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

	CPT Code	Pre-	Intra-	Post-	Total Time	Work RVU	Global Period
3.							
4.	92002	5	15	5	25	.88	XXX
5.	92004	5	25	10	40	1.82	XXX
6.	92012	5	15	5	25	.92	XXX
7.	92014	5	24	8	37	1.42	XXX
8.	99212	2	10	4	16	.48	XXX
9.	99213	3	15	5	23	.97	XXX

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 38904
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 38749 Percentage 99.60 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,936 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 25833 Percentage 99.60 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Other

BETOS Sub-classification:
NA

BETOS Sub-classification Level II:
NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 67515

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

CPT Code: 67500
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Retrobulbar injection; medication (separate procedure, does not include supply of medication)

Global Period: 000 Meeting Date: October, 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **N/A**

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

Minimal staff time is maintained for lines 14 and 16 for this code since it requires time to schedule space and equipment in the facility and to complete diagnostic and referral forms. Our specialty comprises mostly private practice physicians who are not employees of a hospital. As such, the process of staff from the practice communicating with staff from a separate facility (very often with a different EMR) in order to schedule space and complete pre-service forms requires time that should be recognized. Although we believe this work has not changed from the prior review, in a good faith demonstration, we have reduced the pre-service minutes from 5 to 3 in this code.

4. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

5. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

6. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A.**

7. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

9. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

10. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

12. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A**

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

14. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code: 67500
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Retrobulbar injection; medication (separate procedure, does not include supply of medication)

Global Period: 000 Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here:

In this sheet, the existing code (67500) was listed as the reference.

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time: **N/A, see below.**

4. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

5. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

6. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A.**

Although the technician may be called upon to assist the physician in securing the patient's head or elevating the eyelid, this assistance is likely less than 50% of the time and we have not included it on our PE sheet.

7. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

9. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

10. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

12. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here:

EL005 – ophthalmic exam lane. The default formula was used as this procedure does not include highly-technical equipment by CMS's definition. Exam lane is more typical than screening lane with this code, as it is used to treat posterior pathology and dilation is typical. This must have been an unintentional error in the previously reviewed code.

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

Pre-service clinical activities: **N/A**

Service period clinical activities:
Pre-service of service period:

Code 67500 is not typically performed with an E&M, so RUC-approved standards are used for pre-service times.

Line 32: PE standard of 3 minutes are allocated for greeting patient, gowning, and ensuring appropriate medical records are available.

Line 34: PE standard 2 minutes are allocated for providing education.

Line 36: Two minutes are allocated for preparing equipment for the procedure. The supplies for this procedure are not included in the standard ophthalmic exam lane, and are not typically kept there. These supplies are retrieved, drawn up, and prepared by the technician for use in the procedure. The typical supplies used are listed below:

Line 101: Ophthalmology pack with dilation is typically used, since this code is typically done to treat posterior pathology and dilation is typical with the use of this code.

Line 102**:** Two syringes: one syringe to draw up and administer lidocaine, and one syringe to draw up and administer the injected medication.

Line 103: One 18 gauge, filtered needle to draw up lidocaine without particulate matter.

Line 104: One 18 gauge, unfiltered needle to draw up injected medication (typically an emulsified steroid)

Line 105: One Atkinson needle for safely injecting the lidocaine for anesthesia. One Atkinson needle for safely injecting medication into the retrobulbar space. (Although sharp needles may have been used in the past for this procedure, the Atkinson needles are now typically used in order to improve the safety profile of the procedure significantly. The Atkinson needle is a long, stiff, relatively blunted needle, which is more uncomfortable to the patient, but is much less likely to perforate the globe or cause other inadvertent trauma while attempting to place medicine in the retrobulbar space.)

Line 106: 3cc lidocaine which is instilled for anesthesia prior to injecting the medication, which could otherwise cause significant discomfort.

Line 108: 4 non-sterile gauze pads for hemostasis and applying pressure post-injection.

Intra-service of service period:

N/A Staff are often present assisting the physician by holding the patient's eyelid up with a cotton-tipped applicator, securing the patient's head, and handing the physician instruments. We believe that this is still done quite frequently in practice, but less than half of the time. We have therefore removed this intraservice time from the practice expense sheet.

Post-service of service period:

Code 67500 is not typically performed with an E&M, so RUC-approved standards are used for pre-service times.

Line 61: 3 minutes are allocated for disposing of the instruments used for the procedure in the sharps and biohazard waste locations and for replacing medicine bottles used during the procedure.

Post-service clinical activities: N/A

14. If there is any other item on your spreadsheet that needs further explanation please include here:

Line 113: Represents the total time taken to perform the code in the exam lane (which is not able to be occupied by another patient during the time of the procedure), plus the time inputs for the technician work as listed above. Physician service time is submitted as 5 minutes, as listed in line 122 (placeholder to allow for RUC changes while maintaining an accurate formula on line 113 for total exam lane time).

5. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

6. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A.**

Although the technician may be called upon to assist the physician in securing the patient's head or elevating the eyelid, this assistance is likely less than 50% of the time and we have not included it on our PE sheet.

7. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

9. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

10. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

12. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **EL005 – ophthalmic exam lane. The default formula was used as this procedure does not include highly-technical equipment by CMS's definition. Exam lane is more typical than screening lane with this code, as it is used to treat posterior pathology and dilation is typical. This must have been an unintentional error in the previously reviewed code.**

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

Pre-service clinical activities: **N/A**

Service period clinical activities:

Pre-service of service period:
Code 67505 is not typically performed with an E&M, so RUC-approved standards are used for pre-service times.

Line 32: PE standard of 3 minutes are allocated for greeting patient, gowning, and ensuring appropriate medical records are available.

Line 34: PE standard 2 minutes are allocated for providing education.

Line 36: Two minutes are allocated for preparing equipment for the procedure. The supplies for this procedure are not included in the standard ophthalmic exam lane, and are not typically kept there. These supplies are retrieved, drawn up, and prepared by the technician for use in the procedure. The typical supplies used are listed below:

Line 101: Ophthalmology pack with dilation is typically used, since this code is typically done to treat posterior pathology and dilation is typical with the use of this code.

Line 102**:** Two syringes: one syringe to draw up and administer lidocaine, and one syringe to draw up and administer alcohol.

Line 104: Two 18 gauge, filtered needles: One to withdraw lidocaine without particulate matter and a second one to withdraw the ethanol from a glass ampule without any glass shards.

Line 105: One Atkinson needle for safely injecting the lidocaine for anesthesia. One Atkinson needle for safely injecting alcohol into the retrobulbar space. (Although sharp needles may have been used in the past for this procedure, the Atkinson needles are now typically used in order to improve the safety profile of the procedure significantly. The Atkinson needle is a long, stiff, relatively blunted needle, which is more uncomfortable to the patient, but is much less likely to perforate the globe or cause other inadvertent trauma while attempting to place medicine in the retrobulbar space than a typical needle.)

Line 106: 3cc lidocaine which is instilled for anesthesia prior to injecting the medication, which could otherwise cause significant discomfort.

Line 107: 1cc ethanol which is instilled for the procedure. This is significantly uncomfortable and requires anesthesia to tolerate.

Line 108: 4 non-sterile gauze pads for hemostasis and applying pressure post-injection.

Intra-service of service period:

N/A Staff are often present assisting the physician by holding the patient's eyelid up with a cotton-tipped applicator, securing the patient's head, and handing the physician instruments. We believe that this is still done quite frequently in practice, but less than half of the time. We have therefore removed this intra-service time from the practice expense sheet.

Post-service of service period:
Code 67505 is not typically performed with an E&M, so RUC-approved standards are used for pre-service times.

Line 61: 3 minutes are allocated for disposing of the instruments used for the procedure in the sharps and biohazard waste locations and for replacing medicine bottles used during the procedure. These supplies are not typically part of an exam lane, and require clean-up in excess of a typical E&M visit.

Post-service clinical activities: N/A

14. If there is any other item on your spreadsheet that needs further explanation please include here:

Line 113: Represents the total time taken to perform the code in the exam lane (which is not able to be occupied by another patient during the time of the procedure), plus the time inputs for the technician work as listed above. Physician service time is submitted as 5 minutes, as listed in line 122 (placeholder to allow for RUC changes while maintaining an accurate formula on line 113 for total exam lane time).

CPT Code: 67515
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection of medication or other substance into Tenon's capsule

Global Period: 000 Meeting Date: October, 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **N/A**

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

Minimal staff time is maintained for lines 14 and 16 for this code since it requires time to schedule space and equipment in the facility and to complete diagnostic and referral forms. Our specialty comprises mostly private practice physicians who are not employees of a hospital. As such, the process of staff from the practice communicating with staff from a separate facility (very often with a different EMR) in order to schedule space and complete pre-service forms requires time that should be recognized. Although we believe this work has not changed from the prior review, in a good faith demonstration, we have reduced the pre-service minutes from 5 to 3 in this code.

4. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence: **N/A**

5. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

6. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:* **N/A.**

7. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

9. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

10. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

12. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A**

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

14. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

CPT Code: 67515
Specialty Society: American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor: Injection of medication or other substance into Tenon's capsule

Global Period: 000 Meeting Date: October 2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. EL005 – ophthalmic exam lane. The default formula was used as this procedure does not include highly-technical equipment by CMS's definition. Exam lane is more typical than screening lane with this code, as it is used to treat posterior pathology and dilation is typical. This must have been an unintentional oversight in the previously reviewed code.

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here:

Pre-service clinical activities: **N/A**

Service period clinical activities:

Pre-service of service period:

(Lines 32, and 34 have been removed since this code is typically done now in conjunction with an E&M code.)

Line 36: 2 minutes are allocated for preparing equipment for the procedure. Although this procedure is typically done with an E&M service, the supplies for this procedure are not included in the standard ophthalmic exam lane, and are not typically kept there. These supplies are retrieved, drawn up, and prepared by the technician for use in the procedure, in excess of typical E&M service.

The typical supplies used are listed below:

Line 102: Two syringes: one syringe to draw up and administer lidocaine, and one syringe to draw up and administer the intended medication (typically an emulsified corticosteroid)

Line 103: Three needles; one unfiltered 18 gauge needle to withdraw the medication (typically an emulsified corticosteroid), one 25 gauge needle for injecting the lidocaine into the Sub-Tenon's space, and a third 25 gauge needle for injecting the medication into the Sub-Tenon's space.

Line 104: One filtered 18 gauge needle to withdraw the lidocaine without particulate matter.

Line 106: 3cc lidocaine used for anesthesia

Line 108: 4 non-sterile gauze pads for hemostasis and applying pressure post-injection.

Intra-service of service period:

N/A Staff are often present assisting the physician by holding the patient's eyelid up with a cotton-tipped applicator, securing the patient's head, and handing the physician instruments. We believe that this is still done quite frequently in practice, but less than half of the time. We have therefore removed this intraservice time from the practice expense sheet.

Post-service of service period:

Line 61: 3 minutes are allocated for disposing of the instruments used for the procedure in the sharps and biohazard waste locations, and for replacing medicine bottles used during the procedure. These supplies are not typically a part of the standard ophthalmic exam lane, and are in excess of the typical cleaning performed for the E&M visit.

Post-service clinical activities: N/A

14. If there is any other item on your spreadsheet that needs further explanation please include here:

Line 113: *R*epresents the total time taken to perform the code in the exam lane (which is not able to be occupied by another patient during the time of the procedure), plus the time inputs for the technician work as listed above. Physician service time is submitted as 5 minutes, as listed in line 122 (placeholder to allow for RUC changes while maintaining an accurate formula on line 113 for total exam lane time).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Negative IWPUT

October 2017

Echo Exam of Eye Thickness

A RUC member requested that the Relativity Assessment Workgroup review services with negative intra-service work per unit of time (IWPUT) as a possible screen. AMA Staff gathered 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes with a negative IWPUT, which resulted in 21 services identified.

76514 *Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)*
The RUC reviewed the survey results from 55 ophthalmologists and optometrists and determined that it was appropriate to maintain the current work RVU of 0.17 which is the survey 25th percentile. The RUC questioned the reductions in time reflected in the survey. The median survey intra-service time of 3 minutes is 2 minutes less than the current value. The specialties explained that while the steps in the procedure are unchanged since it was first valued, the workflow has changed. With the advent of smaller, portable, easier to use pachymeters, the technician now typically takes the measurements that used to be taken by the physician. The intra-service time was reduced by two minutes to account for the technician performing this service. The remaining three minutes of intra-service time reflects the more intense cognitive work performed by the physician after the measurements are taken. The survey pre-service time was 3 minutes. Since the procedure is typically done on the same day as an office visit, this was reduced to 1 minute of evaluation time to discuss the test with the patient and place an order in the medical record. The survey immediate post-service time was reduced from 3 minutes to 1 minute to enter the findings into the medical record and explain the implications to the patient. The RUC recommends 1 minute evaluation pre-service time, 3 minutes intra-service time and 1 minute immediate post-service time. The RUC discussed these changes in time and determined that the reductions effectively address the negative IWPUT issue. To support the recommendation, the RUC examined the top key reference service, CPT code 92145 *Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report* (work RVU = 0.17 and 5 minutes intra-service time) and noted that the recommended total intra-service time for the survey code is 2 minutes less but represents the same overall work. Additionally, the overall intensity/ complexity rating was identical or somewhat more relative to the key reference code.

For additional support, the RUC compared the survey code to the following MPC codes: 71010 *Radiologic examination, chest; single view, frontal* (work RVU = 0.18), 73120 *Radiologic examination, hand; 2 views* (work RVU = 0.16), and CPT code 73080 *Radiologic examination, elbow; complete, minimum of 3 views* (work RVU = 0.17) and noted that all three codes have an identical intra-service time of 3 minutes and total time of 5 minutes as the survey code. The RUC recommends maintaining the current work RVU at the survey's 25th percentile. **The RUC recommends a work RVU of 0.17 for CPT code 76514.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

In addition, the RUC noted that "a final, written report" is required for CPT code 76514. The CPT guidelines under Diagnostic Ultrasound state, "For those codes whose sole diagnostic goal is a biometric measure (ie, 76514, 76516, and 76519), permanently recorded images are not required. A final, written report should be issued for inclusion in the patient's medical record."

Practice Expense

The Practice Expense Subcommittee accepted the argument for compelling evidence based on the change in practice from the physician typically performing the service to the ophthalmic technician. The RUC recommends the direct practice expense inputs with modifications as reviewed and approved by the PE Subcommittee.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
76514	Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)	XXX	0.17 (No Change)

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:76514 Tracking Number Original Specialty Recommended RVU: **0.17**
Presented Recommended RVU: **0.17**
Global Period: XXX Current Work RVU: **0.17** RUC Recommended RVU: **0.17**

CPT Descriptor: Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68 year old female is being evaluated for glaucoma. Corneal pachymetry is indicated to measure corneal thickness.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Describe the examination and its purpose to the patient. Enter an order into the medical record.

Description of Intra-Service Work: Review the readings obtained by the technician. IOP adjustments and contribution to glaucoma risk associated with the readings are determined.

Description of Post-Service Work: Enter the findings into the medical record and discuss the implications with the patient.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	10%	53%	33%	3%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	3%	50%	47%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	6%	70%	24%
Urgency of medical decision making	0%	77%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	67%	20%
Physical effort required	3%	80%	17%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	3%	77%	20%
Outcome depends on the skill and judgment of physician	6%	67%	27%
Estimated risk of malpractice suit with poor outcome	3%	77%	20%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	22%	45%	33%	0%

Mental Effort and Judgment	Less	Identical	More
The number of possible diagnosis and/or the number of management options that must be considered	78%	11%	11%
The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	45%	33%	22%
Urgency of medical decision making	0%	89%	11%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	33%	56%
Physical effort required	22%	34%	44%

Psychological Stress	Less	Identical	More
The risk of significant complications, morbidity and/or mortality	12%	44%	44%
Outcome depends on the skill and judgment of physician	23%	33%	44%
Estimated risk of malpractice suit with poor outcome	12%	44%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

A random survey of AAO, AGS, ASCRS, Cornea Society and AOA members had 55 respondents, 82% of whom found the vignette typical. The median WRVU was 0.25 and the 25th percentile was 0.17. Median IST was 3 minutes. The current value of the code is 0.17 WRVU. The primary reference service, chosen by 55%, was 92145, *Corneal hysteresis determination, by air impulse stimulation, unilateral or bilateral, with interpretation and report* (RUC April 2014) with a WRVU of 0.17 and 5 minutes IST. The second key reference service was 92025, *Computerized corneal topography, unilateral or bilateral, with interpretation and report* (RUC February 2006) with a WRVU of 0.35 and 12 minutes IST. The intensity and complexity metrics for the surveyed code were similar to those of both reference codes.

The expert panel of the AAO, AGS, ASCRS, Cornea Society and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings. The median survey IST of 3 minutes is 2 minutes less than the current value. The panel considered whether a difference of 2 minutes in a survey of this nature is meaningful given the recent instructions to not round up or down compared to previous surveys that lacked those instructions. While the steps in the procedure are unchanged since it was first valued, the workflow has changed. With the advent of smaller, portable, easier to use pachymeters, the technician now typically takes the measurements that used to be taken by the physician. This may also explain the reduction in IST. The survey pre-time was 3 minutes. Since the procedure is typically done on the same day as an office visit, we reduced this to 1 minute to discuss the test with the patient and place an order in the medical record. We reduced the survey post-time from 3 minutes to 1 minute to enter the findings into the medical record and explain the implications to the patient. **We recommend times of 1/3/1 and 0.17 WRVU, the survey's 25th percentile.**

This value is supported by MPC code 73120, *Radiologic examination, hand; 2 views* (RUC August 2005) with 0.16 WRVU, and MPC 71010, *Radiologic examination, chest; single view, frontal* (RUC August 2005) with 0.18 WRVU. The recommended value is also supported by CPT code 73080, *Radiologic examination, elbow; complete, minimum of 3 views* (RUC April 2010) with a WRVU of 0.17. All 3 of these codes share an identical IST of 3 minutes and total time of 5 minutes with the surveyed code.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Billed with an office visit

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. E/M or the ophthalmalogic exam codes

3. CPT Code Pre- Intra- Post- Total Time Work RVU Global Period

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 971250
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimation Only

Specialty Ophthalmology Frequency 754564 Percentage 77.68 %

Specialty Optometry Frequency 215423 Percentage 22.17 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 485,625 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. RUC database

Specialty Ophthalmology Frequency 377282 Percentage 77.68 %

Specialty Optometry Frequency 107711 Percentage 22.17 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76514

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SS Rec Summary

INSTRUCTIONS

Insert information and data into all applicable cells except IWPUT and TOTAL TIME. These cells will automatically calculate.

Hide columns and rows that do not contain data.

1st REF = Top Key Reference code data

2st REF = Second Highest Key Reference code data

CURRENT = Current data (Harvard or RUC) for code being surveyed. If this is a new code, this row will be blank.

SVY = Survey data - as it appears on the Summary of Recommendation form.

REC = Specialty Society recommended data as it appears on the Summary of Recommendation form.

ISSUE: **Echo Exam of Eye Thickness**

CPT Code 76514
Specialty Society American Academy of Ophthalmology

AMA/Specialty Society Update Process
Practice Expense Summary of Recommendation (SoR)
Non Facility Direct Practice Expense (PE) Inputs

CPT Long Descriptor:

Global Period: 000 Meeting Date: 10/2017

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. You must provide reference code(s) for comparison on your spreadsheet. If the code you are making recommendations on is not new, you must use the current direct PE inputs as your reference code. You can provide one additional reference code if you are required to use the current direct PE inputs. Provide an explanation for the selection of reference code(s) here: **N/A (current PE inputs are reference)**

3. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

N/A. RUC approved standard times are placed for minimal staff time for line 36 for this code, since the equipment for this code is not typically housed in the screening lane, and is brought in, set up, taken down, and cleaned, requiring time that is not included in E&M codes.

4. If you are requesting an increase over the current total cost for clinical staff time (This does not include minutes to assist physician and the number of post-op visits, as they are directly related to physician work), total cost of supplies, and/or total cost of equipment you must provide compelling evidence:

To accurately value this code, AOA and AAO performed an informal survey of whether the physician or technician or both acquired the thickness readings. The combined informal survey had 40 respondents. The physician acquired the thickness readings 37% of the time and the technician acquired the readings 63% of the time. The current value of the code is based upon the physician acquiring the readings.

This change in practice represents compelling evidence supporting an increase in staff PE times to reflect the increase in technician work. This shift in workflow is due to a combination of better-trained staff and easier-to-use machines. The newer pachymetry machines are more automated, smaller, and more portable than the older, larger machines, which required more manual input. This change allows the technician to obtain the readings and frees up the physician to do other work during the acquisition of the measurements.

In accordance with this change, we are recommending a decrease in the IST used to determine physician work in the same amount (2 minutes) that we are recommending here for the technician to acquire the measurements.

RUC approved standard times are placed for minimal staff time for line 36 and 61 for this code, since the equipment for this code is not typically housed in the screening lane, and time is required to set up and take down that are additional to the E&M code time. This extra work is in excess of the typical PE set up and take down required for a typical E&M visit.

The technician brings the pachymeter in from its outside storage location, turns it on, checks to insure that memories are cleared, and cleans the instrument (line 36).

The technician applies a topical anesthetic, positions the patient, and after an appropriate wait time applies the instrument to the surface of the cornea to obtain measurements, which are recorded in the medical record (line 51).

Following the measurement, the technician cleans the instrument, clears the values, turns it off, and carries it back to its storage place so another technician can use it for another patient (line 61).

The test is done in the screening lane with equipment that is stored outside of the screening lane, in order to make it accessible to technicians who require it in other screening lanes when it is available. When this code is being performed, no other patient care may occur in that screening lane.

5. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and listed in tab 2, please explain the difference here: **N/A**

6. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *Assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Technician anesthetizes the cornea, then positions the patient in the exam chair. After awaiting corneal anesthesia, 5 to 25 measurements of each corneal thickness are taken from the right eye by applying the ultrasound tip to the cornea in axial fashion along the visual axis. If readings are erroneous, fixation is not held, or angle is off the visual axis, they are repeated until accurate results are obtained. The mean reading for the right eye is recorded in the chart, along with the date and time of the recordings. The machine is cleared, and the process is repeated for the left eye.

7. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived. **N/A**

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities: **N/A**

9. If you wish to identify a new staff type, please include a very specific staff description, a salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov. **N/A**

10. If you wish to include a supply that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

11. If you wish to include an equipment item that is not on the list please provide a paid invoice. Identify and explain the invoice here: **N/A**

12. List all the equipment included in your recommendation and the equipment formula chosen (see document titled "Calculating equipment time"). If you have selected "other formula" for any of the equipment please explain here: **N/A. Standard formula was used to calculate, since this is not highly technical equipment.**

13. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail please include here: **N/A**

14. If there is any other item on your spreadsheet that needs further explanation please include here: **N/A**

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth Screen

October 2017

Coronary Flow Reserve Measurement

AMA Staff assembled a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100% from 2009 through 2014. The query resulted in the identification of 12 services, including CPT code 93571. In January 2017, the RUC recommended that these services and associated family codes be surveyed for October 2017.

93571 ***Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 65 physicians and recommend 15 minutes of intra-service time. The RUC reviewed the specialty society recommended current value and 25th percentile work RVU of 1.80 and determined that the 5 minutes reduction in intra-service time was not accounted for in a reduction in work RVU. Therefore, for the RUC recommends a crosswalk to CPT code 15136 *Dermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU= 1.50 and intra-service time of 15 minutes). The RUC noted that both services have identical intra-service times and require the same amount of physician work. The RUC noted the lack of ZZZ global period codes with similar work RVUs and intra-service times as the survey code and agreed that a crosswalk to code 15136 is appropriate. For additional support, the RUC also reviewed CPT code 58611 *Ligation or transection of fallopian tube(s) when done at the time of cesarean delivery or intra-abdominal surgery (not a separate procedure) (List separately in addition to code for primary procedure)* (work RVU= 1.45 and intra-service time of 13.5 minutes) and noted that the survey code has more intra-service time, justifying the higher work RVU. The RUC notes that CMS did not accept the original RUC recommendation for work from May 1998, therefore the previous survey time does not directly correlate with the current valuation. The RUC agrees that the crosswalk is an appropriate estimation of the relativity of this code to other services with 15 minutes intra-time. **The RUC recommends a work RVU of 1.50 for CPT code 93571.**

93572 ***Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 65 physicians and recommend 11 minutes of intra-service time. The RUC noted that the survey intra-service time decreased by 4 minutes, thus the work RVU should decrease. The RUC recommends a crosswalk to CPT code 64484 *Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

separately in addition to code for primary procedure) (work RVU= 1.00 and intra-service time of 10 minutes). Both services require the same physician work and similar time to perform. The RUC notes that CMS did not accept the original RUC recommendation for work from May 1998, therefore the previous survey time does not directly correlate with the current valuation. The RUC agrees that the crosswalk is an appropriate estimation of the relativity of this code to other services with 11 minutes intra-time. **The RUC recommends a work RVU of 1.00 for CPT code 93572.**

Practice Expense
There are no direct PE inputs because these services are only performed in the facility setting.

Work Neutrality
The RUC's recommendation for this code will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
93571	Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (List separately in addition to code for primary procedure)	ZZZ	1.50
93572 (f)	Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (List separately in addition to code for primary procedure)	ZZZ	1.00

CPT Descriptor: Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female presents with a three-week history of progressive chest discomfort at rest and with mild exertion. at cardiac catheterization, 60% stenosis exists in the midleft anterior descending artery. to determine the hemodynamic significance of the lesion, the cardiologist performs intra-coronary fractional flow reserve measurement (ffr) testing.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Exchange diagnostic catheter (usually 5 French) for a guide catheter (usually 6 French) and selectively cannulate the coronary artery. Prepare the FFR wire, calibrating the pressure sensor outside of the body. Pass the wire through the guide catheter and into the coronary artery. Normalize (equalize) the pressure tracings from the guide catheter and the FFR wire, readjusting the guide catheter as needed to avoid damping or other artifacts. Pass the FFR wire across the target lesion(s) until the tip of the wire is approximately 50 mm beyond the lesion(s). Mix a pharmacologic agent for either intra-coronary or intra-venous infusion. If the former, inject the drug as a bolus through the guide catheter and flush it into the artery. If the latter, administer the drug for 3 minutes. Then take FFR measurements. Repeat as needed if artifacts occur in tracings, if tracings are disrupted by asystole or complete heart block caused by the drug, or if FFR measurements are of uncertain clinical significance. If serial lesions are being assessed, pull the FFR wire back across the most distal lesion and repeat measurements. After measurements are complete, pull the wire proximal to all lesions and check FFR measurements to assess for electronic drift. If electronic drift has occurred, re-normalize the pressure tracings and repeat the above process. Remove the wire from the guide catheter. Perform coronary arteriography in 1 or 2 views to be sure that the FFR wire has not disrupted coronary plaques or damaged the coronary artery.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	55%	30%	6%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	55%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	70%	30%
Physical effort required	6%	82%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	9%	46%	45%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	27%	47%	13%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	47%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	67%	20%
Physical effort required	20%	67%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	40%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 93571 for coronary fractional flow reserve (FFR) measurement during angiography was identified by the RAW as a service with more >10,000 utilization and 100% increase from 2009 through 2014. Utilization appropriately grew during that time in response to a higher-level guideline recommendation for FFR, though it is still performed with less than 10% of angiography services. FFR is an invasive procedure used during coronary angiography to determine the functional significance of coronary stenoses. Overall, FFR is a useful adjunct to coronary angiography that allows precise quantification of the degree of myocardial ischemia. Its use is particularly helpful in intermediate or angiographically ambiguous lesions in the absence of noninvasive functional studies. Randomized clinical trials have demonstrated improved clinical outcomes with the use of FFR to guide coronary revascularization, including a reduction in cardiac death or myocardial infarction, as well as costs with an FFR-based strategy compared with a conventional angiography-based approach. Current societal guidelines provide a Class IIa recommendation to perform FFR in angiographically-intermediate stenoses in the absence of stress testing, or in the presence of discordant stress test and angiographic findings. The Appropriate Use Criteria for coronary revascularization also endorse the concept of "functional percutaneous coronary intervention," with revascularization decisions on the basis of hemodynamic significance, rather than anatomic lesion severity. Attention to detail is critical when performing the FFR test. In particular, FFR results should be interpreted with caution in patients with microvascular dysfunction and conditions that can lead to it, left ventricular hypertrophy, severe aortic stenosis, and severely elevated right atrial pressure, as FFR can be artificially elevated, leading to an underestimation of lesion severity. FFR is now considered to be a reference standard for the evaluation of the ischemic potential and the expected benefit from revascularization of coronary stenosis.

65 surveys were completed by a random pool of 600 ACC and SCAI members who are familiar with the service. A joint RVS panel of ACC and SCAI members reviewed the survey data to develop the recommendations.

33 survey respondents selected code 37252 for noncoronary intravascular ultrasound as a comparison code, making it the key reference service. Recently surveyed in 2015, that code has a longer intraservice time of 20 minutes and includes 1 minute preservice and 1 minute postservice time. A majority of those 33 respondents found 93571 to be of identical intensity/complexity to 37252, while roughly another third found it to be more intense/complex. Survey respondents who felt it was more intense probably did so because in comparison to IVUS of a peripheral vessel, coronary arteries are constantly moving, are much smaller, and are more likely to cause catastrophic complications if the FFR wire disrupts plaques or damages the artery as it is passed across the lesion. In addition, the drug used to cause vasodilatation often causes transient symptoms that are distressing to patients, and often cause transient asystole or complete heart block.

Consistent with the current work RVU and the survey 25th-percentile response, **we recommend a work RVU of 1.80 for this code with an intraservice time of 15 minutes**. While the time goes down for this service from 19 years ago, that stems from better workflows that allow introduction of the wire more quickly once the decision to obtain FFR is made, not from a change in FFR measurement itself. Finally, it makes sense for this service to be both shorter and more intense when it is performed in the heart than similar imaging like IVUS performed in a noncoronary vessel. In fact, we would suggest that valuing coronary FFR lower than the noncoronary IVUS KRS would create an anomalous relationship in the fee schedule. For reference, MPC codes with identical times of 15 minutes and values that bracket this recommendation are included on this SOR and in the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93571 is an add-on code that may be used in conjunction with percutaneous coronary intervention, diagnostic catheterization, or EP ablation codes.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93571

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty interventional cardiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 126000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming an equal split between Medicare and non-Medicare patients, this number is double the FFS estimate below.

Specialty cardiology Frequency 80000 Percentage 63.49 %

Specialty interventional cardiology Frequency 46000 Percentage 36.50 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 63,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming another year of modest growth, around 63,000 services may be provided in 2017 in the FFS population compared to nearly 59,000 in 2016 data.

Specialty cardiology Frequency 40000 Percentage 63.49 %

Specialty interventional cardiology Frequency 23000 Percentage 36.50 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:93572	Tracking Number	Original Specialty Recommended RVU: **1.44**
		Presented Recommended RVU: **1.44**
Global Period: ZZZ	Current Work RVU: **1.44**	RUC Recommended RVU: **1.00**

CPT Descriptor: Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old female presents with a 3-week history of progressive chest discomfort at rest and with mild exertion. at cardiac catheterization, 60% stenosis of exists in two coronary arteries. after intra-coronary fractional flow reserve measurement (ffr) testing is performed to evaluate the first lesion (coded separately), ffr testing is performed to evaluate the second artery lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Exchange diagnostic catheter (usually 5 French) for a guide catheter (usually 6 French) and selectively cannulate the coronary artery. Prepare the FFR wire, calibrating the pressure sensor outside of the body. Pass the wire through the guide catheter and into the coronary artery. Normalize (equalize) the pressure tracings from the guide catheter and the FFR wire, readjusting the guide catheter as needed to avoid damping or other artifacts. Pass the FFR wire across the target lesion(s) until the tip of the wire is approximately 50 mm beyond the lesion(s). Mix a pharmacologic agent for either intra-coronary or intra-venous infusion. If the former, inject the drug as a bolus through the guide catheter and flush it into the artery. If the latter, administer the drug for 3 minutes. Then take FFR measurements. Repeat as needed if artifacts occur in tracings, if tracings are disrupted by asystole or complete heart block caused by the drug, or if FFR measurements are of uncertain clinical significance. If serial lesions are being assessed, pull the FFR wire back across the most distal lesion and repeat measurements. After measurements are complete, pull the wire proximal to all lesions and check FFR measurements to assess for electronic drift. If electronic drift has occurred, re-normalize the pressure tracings and repeat the above process. Remove the wire from the guide catheter. Perform coronary arteriography in 1 or 2 views to be sure that the FFR wire has not disrupted coronary plaques or damaged the coronary artery.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)
Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	53%	33%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	17%	53%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	67%	33%
Physical effort required	3%	80%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	47%	46%

2nd Key Reference Code

	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	31%	46%	15%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	23%	46%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	23%	62%	15%
Physical effort required	23%	69%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	31%	46%	23%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Code 93572 for coronary fractional flow reserve (FFR) measurement during angiography in an additional vessel was surveyed as part of a family with 93571 after identification by the RAW. 65 surveys were completed by a random pool of 600 ACC and SCAI members who are familiar with the service. A joint RVS panel of ACC and SCAI members reviewed the survey data to develop the recommendations.

30 survey respondents selected code 37253 for noncoronary intravascular ultrasound in an additional vessel as a comparison code, making it the key reference service. Recently surveyed in 2015, that code has a longer intraservice time of 20 minutes and includes 1 minute postservice time. A majority of those 30 respondents found 93572 to be of identical intensity/complexity to 37252, while roughly another 40% found it to be more intense/complex. Survey respondents who felt it was more intense probably did so because in comparison to IVUS of a peripheral vessel, coronary arteries are constantly moving, are much smaller, and are more likely to cause catastrophic complications if the FFR wire disrupts plaques or damages the artery as it is passed across the lesion. In addition, the drug used to cause vasodilatation often causes transient symptoms that are distressing to patients, and often cause transient asystole or complete heart block.

Consistent with the current work RVU and just below the survey 25th-percentile response, **we recommend a work RVU of 1.44 for this code despite the reduced intraservice time of 11 minutes**. As with the prior code, while the times go down for this service from 19 years ago, it makes sense for this service to be both shorter and more intense when it is performed in the heart than similar imaging like IVUS performed in a noncoronary vessel. In fact, we would suggest that valuing coronary FFR lower than the noncoronary IVUS KRS would create an anomalous relationship in the fee schedule. Finally, MPC codes with values that bracket this recommendation are included on this SOR and in the summary spreadsheet.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. 93572 is an add-on code for additional vessels to 93571 that may be used in conjunction with percutaneous coronary intervention, diagnostic catheterization, or EP ablation codes.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93572

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty cardiology How often? Commonly

Specialty interventional cardiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 20000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming an equal split between Medicare and non-Medicare patients, this number is double the FFS estimate below.

Specialty cardiology Frequency 8200 Percentage 41.00 %

Specialty interventional cardiology Frequency 11800 Percentage 59.00 %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 10,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Assuming another year of modest growth, around 10,000 services may be provided in 2017 in the FFS population compared to a bit over 9,000 in 2016 data.

Specialty cardiology Frequency 4100 Percentage 41.00 %

Specialty interventional cardiology Frequency 5900 Percentage 59.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/Specialty Society RVS Update Committee
Practice Expense Subcommittee
Obtain Consent Workgroup
July 18, 2017
7:00pm-8:00pm CST

Conference Call Report

Members participating on call: *Doctors Gregory L. Barkley, MD (Chair); Karen Nakano, MD (CMS); Mary Newman, MD; Ezequiel Silva III, MD; Thomas J. Weida, MD*

At the April 2017 RUC meeting the PE Subcommittee reviewed data indicating that the following are the typical times allocated for the recently updated PE spreadsheet clinical activity, *provide education/obtain consent,* which was previously *Provide pre-service education/obtain consent* or *Provide pre-service education/obtain consent/ Interview patient for contraindications* for MR services performed without, with and without and with contrast.

without contrast	7 minutes
with contrast	9 minutes
without and with contrast	9 minutes

The Subcommittee discussed and agreed that although the data indicate that the CT time allocated for clinical activity *provide education/obtain consent* is less then for MR service, there is no standard that has developed for CT services in the same way it has for MR services. The Subcommittee decided that no standard was needed for CT services. The Subcommittee then engaged in a broad discussion about the work of obtaining consent and whether it is performed by the physician or the clinical staff. Some PE Subcommittee members added that the physician and the clinical staff both have a role to play in obtaining consent, and this is not duplicative work. When the physician *obtains consent* it is a discussion about the service, whereas the clinical staff conduct distinct work to educate the patient about the service and help the patient complete the paperwork required. A Workgroup was formed to examine the issue further.

The Obtain Consent Workgroup met via conference call on July 18th, 2017. Workgroup Chair Doctor Barkley began the call by reviewing the charge of the Workgroup which is to:

1. Determine the staff work involved in the clinical activity *provide education/obtain consent* and confirm that it is not duplicative of physician work.
2. Discuss what type of staff typically performs this task.
3. Discuss the general clinical staff time standards and confirm they are appropriate.

Prior to looking at the broader obtain consent issues, the Workgroup decided to first discuss obtain consent as it applies to MR services. The Workgroup members discussed that there is extensive pre-MRI safety screening done by the ordering physician and their clinical staff. There is also prescreening performed by the clerical staff in the radiology office over the phone and sometimes in the waiting room prior to arrival in the MRI suite. The safety checklist and/or questionnaire most often administered by clerical staff is usually done to prevent waste of valuable MRI time.

The Workgroup then discussed whether or not the informal time standard of 7/9/9 should be implemented as a formal time standard for clinical activity, *provide education/obtain consent* for MR services. A Workgroup member explained that for magnetic resonance (MR) procedures in the non-facility setting much of the staff time is devoted to the pre-service education which is captured within the same clinical activity, *provide education/obtain consent*. Extensive education is necessary because MR is a long test

that can have complicating factors. The Workgroup discussed that it is appropriate to have this on one line item of the spreadsheet because the two tasks occur together and complement each other; however it is important that enough time is allocated to complete both tasks. The Physician is also allocated time for obtain consent in the physician work and a member of the Workgroup stated that they did not believe that the physician had any role in obtain consent. The member continued that, although it might be different for interventional procedures, from personal experience when having an MRI, the Radiologist did not leave the reading room to obtain consent. AMA staff clarified that there is no physician work time allocated for obtain consent for imaging services and that there are two separate issues, the first to determine the appropriate time standard for MR and CT services and the other to discuss potential overlap between the physician and staff for general procedural services. One of the radiology RUC advisors further explained the extensive work that goes into the pre-service safety questionnaire and the detailed discussion of that questionnaire and any other safety issues on the day of the service. AMA staff clarified that the clinical activity where the potential standard that we are discussing today would be applied is the work that takes place within the service period when the patient is in the office for the study. The Advisor further explained that after the patient is checked in and taken into the center to change clothes, the Technologist will sit down with the patient and have a bi-directional conversation addressing the safety checks line by line; this is "provide education/obtain consent". The Advisor also explained that the extra 2 minutes included for MR services done with contrast is to explain the safety concerns around gadolinium contrast agents and if appropriate administer the screening forms to determine if the patient has mild kidney problems that have not been diagnosed. Another radiology advisor offered further information about the education for studies with contrast, included explaining to the patient not to be startled, and to remain still, when they experience warming sensations or a metallic taste during contrast injection, and to notify the Technologist of any pain in their arm during the study.

The Workgroup members discussed the time of 7/9/9 and determined that the increment of 2 minutes for "with contrast" codes are appropriate, but were uncomfortable with the 7 minutes for the base code. One Workgroup member suggested 4 minutes. The Workgroup compared the code to the recently reviewed colonoscopy code, CPT code 45378 *Colonoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)* with 3 minutes in the service period for the non-facility and 5 minutes in the pre-service period for the facility for the clinical staff to *provide education and obtain consent*. The Workgroup thought that 3 minutes was not enough time but using the colonoscopy code as a starting point determined that 5 minutes is appropriate. **The Workgroup recommends a standard time of 5 minutes, 7 minutes and 7 minutes for MR codes without, with and with and without contrast respectively, for the clinical activity, *provide education/obtain consent,* in the non-facility setting. The 51 MR services were this standard should be applied are provided as an attachment to this report.**

The Workgroup discussed the possibility of scheduling another call to discuss the broader issues apart from imaging services for this clinical activity. Ultimately it was determined that the original issue had been sufficiently addressed and that the Workgroup would present this standard to the RUC at the October meeting and refrain from any further recommendations at this time. If the PE Subcommittee determines that there is utility in reconvening the Workgroup at a later date to further examine this clinical activity for non-imaging codes the group will reconvene.

AMA/Specialty Society RVS Update Committee
Practice Expense Subcommittee
Exam Light Workgroup
August 1, 2017
7:00pm-8:00pm CST

Conference Call Report

Members participating on call: *Doctors Thomas J. Weida, MD (Chair); Eileen Brewer, MD; William F. Gee, MD; Stephen Sentovich, MD; Lloyd S. Smith, DPM*

At the April 2017 RUC meeting the Practice Expense Subcommittee discussed the type of lights that are used in services and for what reason. For example the exam light (EQ168) is allocated equipment time in many services that are billed with an evaluation and management (E/M) service even though it is not standard equipment in the room for an E/M service. The standard equipment for an E/M service is an *exam table (EF023)* and an *otoscope-ophthalmoscope (wall unit) (EQ189).* PE Subcommittee members have consistently questioned the need for other lights, such as the xenon light source (EQ167). The PE Subcommittee discussed the need for further analysis of various light sources included as equipment. A Workgroup was formed to examine the data and determine if any standard equipment is needed and what guidelines are necessary. The Workgroup will also determine whether or not the problem is significant enough to revise retroactively.

The Exam Light Workgroup met via conference call on August 1st, 2017 to discuss the equipment items: exam light (EQ168), xenon light source (EQ167) and fiberoptic headlight w-source light (EQ170). The main issue is that at the last RUC meeting it became clear that the PE Subcommittee had fairly routinely been allocating the exam light (EQ168) to a service when it is billed on the same day as an E/M service because it was thought to be standard equipment. Many of these procedures may legitimately require the exam light to perform the service and/or it may be typical equipment in an exam room for the dominant specialty, however this determination should be based on these two factors and not an incorrect assumption that it is part of the E/M standard package. Taking these two factors into account it may be that none of the lights are included in services inappropriately, however it is important that the Subcommittee is evaluating the service based on the correct assumptions.

Part of the data that the Workgroup reviewed was an analysis of the cost to Medicare for the light sources. A Workgroup member brought up that if you look at the money aspect there are services that are not billed with an E/M that may not need an exam light. The Workgroup member suggested focusing on the high expense codes. The same Workgroup member also questioned the need for the exam light in every room, stating that his office has roughly three lights that are only utilized when needed. A different PE Subcommittee member gave the example that in dermatology offices it is typical to have the exam light (EQ168) in every exam/procedure room because there can be no shadowing and the physician will need a light source that they can grab onto and direct.

The Chair of the Workgroup brought up the issue of two surgical lights being allocated to many of these services. For example 10140 *Incision and drainage of hematoma, seroma or fluid collection* includes both an exam light (EQ168) and a surgical light (EF014). Many of the services that have two lights have not been surveyed since 2003 or not at all. The Chair suggested that although it may not be possible for the Workgroup to determine whether or not a light is needed, it might be appropriate to recommend a screen for code review, using the criteria of two or more surgical lights included in the direct PE inputs. Specialty society staff clarified that in those instances when two lights are in one code you can see by the amount of minutes allocated that one light is for the service itself and the other is for the post-operative visits included in the global. A Workgroup member expressed concern that they do not have a surgical

light in their office although it is allocated to services that they provide on a regular basis. Specialty society staff explained that the direct practice expense inputs are based on the dominant provider of the service so even if one specialty can provide the service without the light, it is important to keep in mind that the light may typically be used or in the room for the dominant provider of that service.

The Workgroup then discussed the inverse problem which is that when services requiring a light source are billed with an E/M service the cost of the light is not included for the time spent on the E/M even though the service and the E/M both take place in the same room. AMA staff clarified that although this is true, it is an issue that the Workgroup was not tasked with and the PE Subcommittee cannot address it because it would entail creating E/M codes specific to specialty type which is not feasible.

Ultimately the Workgroup determined that there does not seem to be a significant problem here other than the assumptions that the PE Subcommittee brings to reviewing the codes. **The Workgroup recommends:**

- **The PE Subcommittee reviews the E/M standard package (provided with this report).**
- **That as codes are reviewed the PE Subcommittee pays special attention to:**
    - **The resources necessary to provide the service apart from the E/M service, and**
    - **The makeup of the dominant specialty's exam rooms when considering the type of light(s) included in the direct practice expense inputs for the procedure.**
- **Specialties should not include the time of the E/M in the equipment time for lights.**
- **Specialties provide justification for the lights that they are recommending in their written PE summary of recommendation (SoR).**

Evaluation and Management Service have the following supplies, equipment and clinical staff time:

Supplies: E/M visit pack
Equipment: EQ189, otoscope-ophthalmoscope (wall unit) and EF023 exam table
