78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (spect)	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an	☑

							effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
81275	Kras (kirsten rat sarcoma viral oncogene homolog) (eg, carcinoma) gene analysis; variants in exon 2 (eg, codons 12 and 13)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	Mthfr (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677t, 1298c)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81293	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81294	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81295	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81296	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

81297	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81298	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81299	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81300	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81301	Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) of markers for mismatch repair deficiency (eg, bat25, bat26), includes comparison of neoplastic and normal tissue, if performed	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81302	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81303	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

81304	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81315	Pml/raralpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; common breakpoints (eg, intron 3 and intron 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81316	Pml/raralpha, (t(15;17)), (promyelocytic leukemia/retinoic acid receptor alpha) (eg, promyelocytic leukemia) translocation analysis; single breakpoint (eg, intron 3, intron 6 or exon 6), qualitative or quantitative	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81317	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81318	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81319	Pms2 (postmeiotic segregation increased 2 [s. cerevisiae]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81321	Pten (phosphatase and tensin homolog) (eg, cowden syndrome, pten hamartoma tumor syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
81322	Pten (phosphatase and tensin homolog) (eg, cowden syndrome, pten hamartoma tumor syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81323	Pten (phosphatase and tensin homolog) (eg, cowden syndrome, pten hamartoma tumor syndrome) gene analysis; duplication/deletion variant	Sep 2011	Molecular Pathology Test - Tier 1	09	CPT 2013	October 2016	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81331	Snrpn/ube3a (small nuclear ribonucleoprotein polypeptide n and ubiquitin protein ligase e3a) (eg, prader-willi syndrome and/or angelman syndrome), methylation analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81332	Serpina1 (serpin peptidase inhibitor, clade a, alpha-1 antiproteinase, antitrypsin, member 1) (eg, alpha-1-antitrypsin deficiency), gene analysis, common variants (eg, *s and *z)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81340	Trb@ (t cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using amplification methodology (eg, polymerase chain reaction)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81341	Trb@ (t cell antigen receptor, beta) (eg, leukemia and lymphoma), gene rearrangement analysis to detect abnormal clonal population(s); using direct probe methodology (eg, southern blot)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81342	Trg@ (t cell antigen receptor, gamma) (eg, leukemia and lymphoma), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

CPT Code	Long Descriptor	RUC Meeting	Issue	Tab	CPT Year	Date to Re-Review	RUC Rec	Complete
99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	January 2023	In January 2020, the RUC identified Psychiatric Collaborative Care Management Services (CPT codes 99492, 99493 and 99494) via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommends that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. This family is also scheduled on the new technology/new services list for review at the January 2023 Relativity Assessment Workgroup meeting. The Workgroup recommends postponing the new	☐

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

*Codes highlighted in blue were reviewed by the RUC for CPT 2023. The surgical procedure times and values included for these codes are the RUC recommendations for CPT 2023. Also, any code that is being deleted for CPT 2023 was removed from this analysis.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Removal of Sutures or Staples – Tab 4

In October 2021, the CPT Editorial Panel approved the deletion of CPT code 15850 and revision of CPT code 15851 to clarify the intent of the phrase "requiring anesthesia" included in the code descriptor. Specifically, code 15851 may only be reported for suture/staple removal requiring general anesthesia or moderate sedation. These codes were also revised to allow reporting by any physician that performs suture/staple removal under general anesthesia or moderate sedation in the facility setting, even within a global period, as this would be covered as a take-back to the operating room and reported with an appropriate modifier.

In addition, two new add-on CPT codes, 158X1 and 158X2, were established for reporting the practice expense (PE) related to suture/staple removal when not inherent to a procedure code (ie, 000-day global codes). For the non-facility setting (eg, office, home), these add-on codes may only be reported in conjunction with an office visit E/M code to account for only the additional practice expense related to suture/staple removal and not the work related to the E/M service. It was noted that for 10-day and 90-day global codes, if the suture/staple removal were performed by a different provider not in the same group, then the related practice expense would be included in the payment for transferred postoperative care only using modifier–55.

Compelling Evidence (CPT Code 15851)
The RUC reviewed, and agreed, that flawed methodology was used in the previous valuation of this service. CPT code 15851 is a Harvard-based code. Fifteen plastic surgeons reviewed this code with a 30-day global period during the Harvard study. Pediatric surgeons, the likely provider of this service, were not included in the Harvard study. The RUC noted that the pre- and post-times that were assigned by the Harvard algorithm may have underestimated the total time by not including positioning time or scrub, dress, wait time resulting in an underestimation of relative physician work. Therefore, the RUC agreed that the Harvard study estimated times for this service are not valid for comparison to the current RUC survey. In addition, the Final Rule for the 1992 Medicare Physician Payment Schedule indicated the global period was 000-day, not 030-day, and the source of the work RVU was indicated as “established by HCFA,” not the Harvard study. The specialties also noted that there was prior miscoding of CPT code 15851 for suture removal in the office, and it was clear that “anesthesia other than local” and the intent of CPT code 15851 was misunderstood. **The RUC concurred that there is compelling evidence to support a change in physician work for CPT code 15851 based on flawed methodology.**

15851 ***Removal of sutures or staples requiring anesthesia (i.e., general anesthesia, moderate sedation)***
The RUC reviewed the survey results from 131 surgeons and determined that the survey median work RVU somewhat overestimated and the survey 25th percentile underestimated the physician work typically required to perform this service. The RUC also discussed the pre-service times and considered the challenges of selecting the correct pre-time package for this service. Ultimately, the committee agreed that the physician times from the robust survey should be supported with the exception of a decrease of 10 minutes in pre-service evaluation time for this post-operative procedure. The RUC agreed that pre-service time package 2 was appropriate with the amended survey times recommended: 10 minutes evaluation,

3 minutes positioning, 10 minutes scrub/dress/wait time, 15 minutes intra-service time, 15 minutes immediate post-service time. The RUC reiterated that the current times for this service are from the Harvard study and not valid for comparison.

The RUC recommends a direct work RVU crosswalk to CPT code 50431 *Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (e.g., ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access* (work RVU= 1.10, 15 minutes intra-service time and 55 minutes total time), noting that both services involve an identical amount of intra-service time, identical amount of post-service time and similar total time. Further, it was noted that the crosswalk value falls appropriately between the survey median and 25th percentile and reflects a relative value of 15851 when compared with code 50431.

The RUC concurred that the recommended work RVU of 1.10 for CPT code 15851 is appropriately bracketed by the top key reference service MPC code 11042 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less* (work RVU= 1.01, 15 minutes intra-service time and 36 minutes total time) and MPC code 12002 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm* (work RVU= 1.14, 15 minutes intra-service time and 27 minutes total time) and, additionally, CPT code 93283 *Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system* (work RVU= 1.15, 15 minutes intra-service time and 35 minutes total time). The RUC concluded that CPT code 15851 should be valued based on a direct work RVU crosswalk to CPT code 50431 which falls between the survey median and 25th percentile. **The RUC recommends a work RVU of 1.10 for CPT code 15851.**

Practice Expense
CPT code 15851 is now a facility-only code and CPT codes 158X1 and 158X2 are non-facility PE-only add-on codes. The Practice Expense (PE) Subcommittee considered and supported compelling evidence for code 15851 as it has not been previously reviewed for direct inputs in the facility. The code family was reviewed by the PE Subcommittee and the direct practice expense inputs were approved as submitted by the specialty societies without modification. The PE Subcommittee discussed the potential for a change in specialty from surgical to primary care and therefore requested that the codes be re-reviewed in three years. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

Relativity Assessment Workgroup Review
The RUC recommends that the Relativity Assessment Workgroup review CPT codes 158X1 and 158X2 when three years of claims data are available to assess if there is a shift in the specialty performing these services.

Chicago, IL 60611

Re: Tab 4 Removal of Sutures or Staples (Codes 15851, 158X1, 158X2)

Dear Doctor Silva:

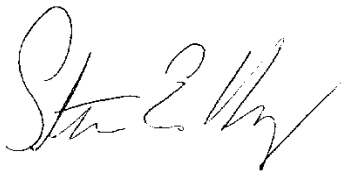
The American Academy of Pediatrics (AAP) would like to offer comments on codes 15851 (*Removal of sutures or staples requiring anesthesia (ie, general anesthesia, moderate sedation)*) , 158X1 (*Removal of sutures or staples not requiring anesthesia (List separately in addition to E/M code)*), and 158X2 (*Removal of sutures and staples not requiring anesthesia (List separately in addition to E/M code)*).

The valuation recommendations are reasonable, and it is clarifying that the codes are now linked to E/M services through their add-on designation.

The AAP is fully supportive of these recommendations.

Thank you for the opportunity to comment.

Sincerely,



Steven E. Krug, MD, FAAP
AAP RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:15851 Tracking Number W1 Original Specialty Recommended RVU: **1.20**
Presented Recommended RVU: **1.20**
Global Period: 000 Current Work RVU: **0.86** RUC Recommended RVU: **1.10**

CPT Descriptor: Removal of sutures or staples requiring anesthesia (ie, general anesthesia, moderate sedation)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 3-year-old male who is status post repair of multiple lacerations, now undergoes suture removal while under general anesthesia.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient is reexamined to confirm that physical findings have not changed. The history and physical examination are then updated in the electronic health record. The planned procedure and postoperative management are reviewed with the family/caregiver. The site of suture removal is marked. Informed consent is reviewed and obtained, including witness confirmation. Review length and type of anesthesia with anesthesiologist.Verify that all required instruments and supplies are available. Monitor and assist when necessary in transfer of the patient from gurney to operating table. Coordinate with the anesthesia team with line placement to be certain operative field is clear. The areas of skin to be prepared and draped are indicated by the surgeon to ensure that all of the potential operative field is included in the preparation. Assist with positioning of patient. The surgeon scrubs and gowns. A surgical time-out is performed with operating surgical team.

Description of Intra-Service Work: The area surrounding the wound(s) is/are cleansed with normal saline or soaked if crusting inhibits access to sutures. The sutures are removed. The wound line(s) is/are observed for separation during the procedure. Hemostasis is obtained with pressure as needed. Steri-strips are applied as needed.

Description of Post-Service Work: Sterile dressings are applied. Postoperative recovery care is discussed with anesthesia and nursing staff. Procedure and outcome are discussed with family/caregiver in waiting area. A brief operative note and/or a postoperative note is written in the recovery area. An operative report is dictated, and a copy is sent to the referring physician(s). Home restrictions (eg, activity, bathing) are discussed with family/caregiver. Medications are reconciled. All appropriate medical records are completed, including day-of-discharge progress notes, discharge summary, discharge instructions, and insurance forms.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	59%	32%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	27%	50%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	23%	59%	18%
Physical effort required	5%	80%	16%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	64%	23%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	71%	13%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	42%	54%	4%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	46%	21%
Physical effort required	4%	67%	29%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	58%	21%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

While reviewing the issue of reporting suture/staple removal for codes with a 000 global assignment, we discovered unusual reporting for code 15851 and recommended coding changes to more clearly represent the intent of suture removal requiring anesthesia.

It was clear that "anesthesia other than local" and the intent of code 15851 had not been understood since 80% of the Medicare claims for 15851 are in an office setting, with current practice expense inputs for suturing a wound, not removing sutures. The CPT Panel agreed that the intent of code 15851 is for instances where deep sedation is required to remove sutures for patients such as children or those who are intellectually disabled. The CPT Panel approved deletion of code 15850, with reference to use code 15851 along with revision of the Harvard-based code 15851 to indicate the type of anesthesia to be "general anesthesia or moderate sedation." Consistent with this revision, there will be no nonfacility practice expense inputs for this facility-only code.

In addition, it should be noted that prior miscoding of code 15851 for suture removal in the office was typically reported with an office visit code. Removal of sutures in the office, when correctly reportable, will not be reported with an add-on code (158X1) to and E/M code, eliminating the overlapping pre-and post-time. It is not expected that the revised code 15851 will be reported with an E/M code moving forward.

Compelling Evidence - Flawed methodology of previous review

Code 15851 is a Harvard-based code. Fifteen plastic surgeons reviewed this code with a 30-day global period during the Harvard study. Pediatric surgeons—the likely provider of this service—were not included in the Harvard study and other surgeons were additionally not included. We believe the pre- and post-times that were assigned by the Harvard algorithm underestimated the total time by not including positioning time and scrub, dress, wait time resulting in an underestimation of physician work. In addition, in the final rule for the 1992 fee schedule, the global period was indicated as 000 (not 030) and the source of the RVW was indicated as "established by HCFA," not the Harvard study. We believe that all of these factors provide compelling evidence of flawed methodology for what should be a relatively infrequent procedure.

Survey Process

The American College of Surgeons (ACS), American Society of Surgeon for the Hand (ASSH) and American Society of Colon and Rectal Surgeons (ASCRS) conducted a standard RUC survey for code 15851.

ASSH participated in the survey because hand surgeons perform congenital hand surgery in infants/children and some members would have experience with 15851. ASCRS participated in the survey because colorectal surgeons perform anal procedures on infants/children and some members would have experience with 15851. The ACS survey request was sent to 3,300 surgeons, including 615 ACS Fellows who self-identify as pediatric surgeons and 2,685 ACS Fellows independent of self-identified specialty. This resulted in survey responses from many surgical specialties, including, general surgeons, otolaryngologists, plastic surgeons, oral and maxillofacial surgeons, orthopaedic surgeons, and pediatric surgeons.

We believe the survey process resulted in robust survey data. In fact, only ten of all respondents indicated zero experience for both 12 months and 5 years and the median response for these ten surgeons was the identical or almost identical as the overall median of all respondents.

Recommendation

We recommend a work RVU of 1.20 for 15851. This minimally corrects the HCFA-based value for code 15851 that excluded positioning and scrub, dress, wait time and that will now clearly indicate the procedure as performed under moderate sedation or general anesthesia and only in a facility setting.

Pre-time

It is difficult to choose a correct package for this procedure. Package 2 could be chosen if considering the patient/procedure or package 3 could be chosen if considering type of anesthesia. Said another way, the times could be reduced from package 3 or added to package 2 so as not to exceed survey median.

Below is the Pre-time package chart. While we could have recommended additional minutes to package 2 for other activities that are mostly related to the difference between procedures with and without anesthesia, we chose Package 2 and added time as discussed below so as not to exceed the survey median time for each category.

FACILITY				
1	2	REC	3	4

CPT Code: 15851

	Total Pre-Service Time	20	25	33	51	63
	CATEGORY SUBTOTALS					
A	Pre-Service Evaluation (IWPUT =0.0224)	13	18	20	33	40
B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	3
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	10	15	20
	DETAILS					
A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10		10	15
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2		2	4
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3		5	5
A	Communicate with other professionals	0	0	+2	5	5
A	Check/set-up room, supplies and equipment	1	1		5	5
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1		5	5
A	Prepare/ review/ confirm procedure	1	1		1	1
B	Perform/ supervise patient positioning	1	1	+2	3	3
C	Administer local/topical anesthesia	1	1		0	0
C	Observe (wait anesthesia care)	0	0	+4	10	15
C	Dress and scrub for procedure	5	5		5	5

Evaluation time: Package 2 time of 18 minutes has been increased to the median survey time of 20 minutes to account for discussion with the anesthesiologist and other members of the surgical team regarding length and type of anesthesia. This work is not included in package 2, but is typical of procedures requiring general anesthesia or moderate sedation.

Positioning time: Package 2 time of 1 minute has been increased to 3 minutes to account for additional positioning time related to moderate or deep sedation IV lines. Three minutes is consistent with the minimum amount of time for supine positioning for all procedures requiring moderate or deep sedation in an operating room (see Packages 3 and 4 supine positioning time).

Scrub, dress, wait time: Package 2 time of 6 minutes has been increased to the survey median time of 10 minutes. A scrub, dress, wait time of 10 minutes is consistent with extra time included in package 3 for " Observe (wait anesthesia care)" as it relates to moderate sedation or general anesthesia.

Total Pre-time: As a reality check, the total pre-time of 33 minutes is conservative because of the expected typical patient (child or those who are intellectually disabled).

Post-time

Package 8A is selected with a reduction in time from 25 minutes to 15 minutes to match the survey median time. There will likely not be postop orders and monitoring patient recovery will not be extensive.

Key Reference Codes

Code 11042 is typically performed in an office, nursing home, or assisted living facility and may include (not typical) topical anesthesia. Although the intra-time is the same for both codes, code 15851 requires more pre- and post-work related to a procedure under general anesthesia or moderate sedation and a procedure where all patient communications are second hand through a parent or caregiver. The slightly higher RVW reflects the additional time and work.

Code 36555 was valued based on the survey increment of 36556 (over 5 years of age) and 36555 after the value for 36556 was established. The pre-time package and service description indicate the procedure is performed using local anesthetic. The current survey respondents who chose 36555 indicated that 15851 was similar/somewhat less complex/intense than 36555 and therefore should be valued less. Similar to the discussion above, the intra-time is the same for both codes, however code 15851 requires more pre- and post-work related to a procedure under general anesthesia or moderate sedation and a procedure where all patient communications are second hand through a parent or caregiver.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	POSIT	SDW	INTRA	POST

MPC Codes

Code 12002 is typically performed in conjunction with an EM service and therefore includes less pre- and post-time. Code 54150 is similar to 15851 as it is a minor procedure performed on an infant. Code 54150 requires less pre time because local anesthesia and a block is used instead of IV lines and moderate sedation or general anesthesia. Less post op time is associated with 54150 because monitoring of reversal from anesthesia is not necessary.

CPT	DESCRIPTOR	RVW	IWPUT	WPUT	TOTAL TIME	PRE	POSIT	SDW	INTRA	POST
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	**1.14**	**0.059**	**0.042**	**27**	**5**	**1**	**1**	**15**	**5**

Other Code Comparison

The table below presents every RUC reviewed 0-day global code with 15 minutes of intra-time that was reviewed since January 2016 (past 5 years). In the first column, an "X" indicates that CMS did not accept the RUC recommendations. The table also shows the typical place of service (Facility or Office) in the column labeled SOS and the pre-time package selected for the code. This table shows that a procedure with the same intraservice time can require variable pre and post time which is reflective of whether anesthesia is typical, what type of anesthesia is typical, whether an E/M is typically performed on the same day, and whether another procedure is performed on the same day. All of these pre, and post differences add to the difference in work RVU. We believe these codes support the survey median RVW of 1.20 for revised code 15851. [*CMS reject = CMS did not accept RUC recommendation]

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 15850, 15851

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery How often? Rarely

Specialty colorectal surgery How often? Rarely

Specialty hand surgery How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national frequency not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 250 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The typical patient will not be Medicare-aged. Estimate is based on current Medicare utilization in facilities that can accommodate general anesthesia or moderate sedation (inpatient hospital, outpatient hospital, ACS).

Specialty general surgery Frequency 50 Percentage 20.00 %

Specialty colorectal surgery Frequency 10 Percentage 4.00 %

Specialty hand surgery Frequency 10 Percentage 4.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Skin

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15758 represents a code with the closest expected specialty mix for this revised facility only code.

158X2	Removal of sutures AND staples not requiring anesthesia (List separately in addition to E/M code)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
~~15850~~	~~The patient is a 3-month-old infant who has had repair of a cleft lip and a few days later needs to have the small skin sutures removed while under general anesthesia.~~
15851	A 3-year-old male who is status post repair of multiple lacerations, now undergoes suture removal while under general anesthesia.
158X1	During a separately reportable office or other outpatient evaluation and management service, a 60-year-old male status post hernia repair of a defect that was 3 to 10 cm undergoes removal of sutures. (Note: This is an add-on service. Consider only the work associated with the removal of sutures.)
158X2	During a separately reportable office or other outpatient evaluation and management service, a 60-year-old male status post hernia repair of a defect that was 3 to 10 cm undergoes removal of sutures and staples. (Note: This is an add-on service. Consider only the work associated with the removal of sutures and staples.)

The following information is only related to code 15851 in Facility

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   15851: The society advisors discussed the patients that would require a return to the operating room (eg, within a global period) and general anesthesia or moderate sedation for removal of sutures and/or staples and determined this would typically be a child that cannot be controlled (for example, an infant who had cleft lip repair or who had repair of multiple facial lacerations including near the eye). The specialties also agreed that this would not be a common procedure as the vast majority of suture/staple removal would not require moderate sedation or general anesthesia.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for

FACILITY DIRECT PE INPUTS

CPT CODE(S): 15850, 15851, 158X1, 158X2
SPECIALTY SOCIETY(IES): ACS, ASCRS, ASSH (15851), SAGES (158X1, 158X2)
PRESENTER(S): Charles Mabry MD FACS, Steve Sentovich MD FACS, Guy Orangio MD FACS, Anne Miller MD, Ketan Sheth MD FACS

the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

Code 15851 is shown as the reference code, however, it is clear that "anesthesia other than local" and the intent of this code had not been understood since 80% of the Medicare claims are in an office setting, with current practice expense inputs for suturing a wound, not removing sutures. We believe the intent of this code was for instances where deep sedation is required to remove sutures/staples for patients such as children or those who are intellectually disabled who cannot be otherwise controlled for the procedure.

3. Is this code(s) typically reported with an E/M service?

No.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

When code 15851 was reviewed by the PEAC in Feb 2005, it was an "unclaimed" code and the PEAC only considered the old Clinical Practice Expense Panel (CPEP) details for the office setting (ie, the facility details were not critically reviewed and updated). This is documented in the RUC database which shows "N" for "Out of Office CMS Profiled" as shown below.

CMS PROFILED	
IN OFFICE	OUT OF OFFICE
Y	N

Code 15851 was likely not claimed by any surgical group during the PEAC review because an "other surgeon" as included in the previous code descriptor would never return a patient to the OR for suture/staple removal and instead the same surgeon would perform the procedure.

We believe that compelling evidence has been met in that code 15851 was never reviewed for facility PE details and that the code descriptor has been extensively revised to clearly define an OR facility-only procedure.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

n/a

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are recommending preservice "Minimal Use of Clinical Staff". All patients requiring this procedure will be atypical - the patient will be an infant or child that cannot undergo the standard removal of sutures/staples in an office setting and all communications will be with parents or caregivers that add a layer to work to the service. Many codes at recent meetings have been allocated additional clinical staff time for a similar clinical scenario of managing preservice activities with a patient's parent/caregiver.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

n/a

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

CA001	Complete pre-service diagnostic and referral forms	One or more phone calls to obtain prior authorization for OR take-back procedure
CA002	Coordinate pre-surgery services (including test results)	One or more phone calls with pediatrician/PCP and anesthesia to coordinate sedation clearance.
CA003	Schedule space and equipment in facility	One or more phone calls to arrange for pediatric procedure.
CA004	Provide pre-service education/obtain consent	One or more phone calls with anxious parent / caregiver about procedure.
CA005	Complete pre-procedure phone calls and prescription	One or more phone calls to confirm health of patient and NPO instructions.

   b. Service period (includes pre, intra and post):

n/a

   c. Post-service period:

n/a

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

n/a

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01-2022

Please Note
15850 - deleted
15851 - No nonfacility inputs recommended – this is now a facility-only code

CPT Code	Long Descriptor	Global Period
~~15850~~	~~Removal of sutures under anesthesia (other than local), same surgeon~~	~~000~~
15851	Removal of sutures or staples requiring anesthesia (ie, general anesthesia, moderate sedation)	000
158X1	Removal of sutures OR staples not requiring anesthesia (List separately in addition to E/M code)	ZZZ
158X2	Removal of sutures AND staples not requiring anesthesia (List separately in addition to E/M code)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
~~15850~~	~~The patient is a 3-month-old infant who has had repair of a cleft lip and a few days later needs to have the small skin sutures removed while under general anesthesia.~~
15851	A 3-year-old male who is status post repair of multiple lacerations, now undergoes suture removal while under general anesthesia.
158X1	During a separately reportable office or other outpatient evaluation and management service, a 60-year-old male status post hernia repair of a defect that was 3 to 10 cm undergoes removal of sutures. (Note: This is an add-on service. Consider only the work associated with the removal of sutures.)
158X2	During a separately reportable office or other outpatient evaluation and management service, a 60-year-old male status post hernia repair of a defect that was 3 to 10 cm undergoes removal of sutures and staples. (Note: This is an add-on service. Consider only the work associated with the removal of sutures and staples.)

The following information is only related to codes 158X1, 158X2 in Nonfacility – PE only

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Society advisors considered the incremental additional PE details that are not included in an E/M service that would be required for 158X1, 158X2.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   Codes 61800 and 33257 are ZZZ global codes that include suture removal pack and suture/staple

removal pack and are used as references.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   Yes, service is add-on to specific EM codes.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

   What specialty is the dominant provider in the nonfacility? The dominant provider will remove sutures after simple laceration repair or 0-day surgical procedures. Considering the utilization for 0-day procedures requiring suture/staple removal, this may include: family practice, nurse practitioner, general surgery, plastic surgery, orthopaedic surgery, and dermatology
   What percent of the time does the dominant provider provide the service(s) in the nonfacility? For code 158X1, there will be many specialties that may report this service equally. Code 10080 specialty distributed may be similar to what is expected for 158X1.
   For code 158X2, it will more likely be a surgical specialty reporting this service for the few 0-day global major surgical procedure that include closure by staple and sutured drains. Code 11008 specialty distributed may be similar to what is expected for 158X2
   Is the dominant provider in the nonfacility different than for the global? N/A, these non-facility PE-only codes do not apply to facilities.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 15851, 158X1, 158X2
SPECIALTY SOCIETY(IES): ACS, ASCRS, ASSH (15851), SAGES (158X1, 158X2)
PRESENTER(S): Charles Mabry MD FACS, Steve Sentovich MD FACS, Guy Orangio MD FACS, Anne Miller MD, Ketan Sheth MD FACS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

N/A

    b. Service period (includes pre, intra and post):

- PRE: One minute to set up supplies related to suture / staple removal – this is clearly additional to any supply setup that would be attributed to an E/M (ie, table paper, pillow case cover, thermometer cover)
- INTRA: (6 minutes for 158X1 and 10 minutes for 158X2) The area surrounding the wound(s) is/are cleansed with normal saline or the area is soaked if crusting inhibits access to sutures/staples. The sutures/staples are removed. The wound line(s) is/are observed for separation during the procedure. Hemostasis is obtained with pressure as needed. Steri-strips are applied as needed. Sterile dressings are applied.
- POST: One minute for clinical staff to separate and dispose of contaminated (hazardous waste) supplies/ instruments and removed sutures/staples into red bag and sharps containers. [Note: the additional minute above the time allocated for cleaning a room after an E/M service is consistent with the additional minute recently approved for immunization codes at the April 2021 RUC meeting - "CA024: Disposal of vaccine specific medical waste." Keeping in mind that the amount and type of hazardous waste related to 158X1, 158X2 exceeds what is related to vaccinations]

    c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

The area surrounding the wound(s) is/are cleansed with normal saline or soaked if crusting inhibits access to sutures/staples. The sutures/staples are removed. The wound line(s) is/are observed for separation during the procedure. Hemostasis is obtained with pressure as needed. Steri-strips are applied as needed. Sterile dressings are applied.

PRESENTER(S): Charles Mabry MD FACS, Steve Sentovich MD FACS, Guy Orangio MD FACS, Anne Miller MD, Ketan Sheth MD FACS

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The "skin to skin" time for clinical staff is based on the results of a physician work survey using the vignettes on the cover of this SoR. The request was sent to a random selection of members from the ACS, ASCRS, and SAGES based on the LOI response for these codes.

There were 111 respondents representing the following surgical specialties: general surgery, colon and rectal surgery; pediatric surgery; plastic surgery; otolaryngology; trauma surgery; surgical oncology; vascular surgery; breast surgery; and cardiac surgery.

The expert panel reviewing the survey data believe that the survey median times (6 minutes for 158X1 and 10 minutes for 158X2) fairly represent the time for suture/staple removal for physicians who place sutures and staples and conservative for clinical staff time.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Total Disc Arthroplasty – Tab 5

In September 2021, the CPT Editorial Panel created Category I code 228XX to describe *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)* and replace Category III code 0163T, *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure).* CPT codes 228XX and 22857, *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar* were surveyed for the January 2022 RUC meeting.

The specialty societies surveyed codes 228XX and 22857 for the January 2022 RUC meeting. The survey was sent to a random sample of members from five specialty societies with a total of 48 respondents. In reviewing the survey responses for code 22857, the specialties noted, and the RUC concurred that the collected data was inaccurate for several suspected reasons. The survey results indicated a median intra-service (i.e., skin-to-skin) time of 120 minutes which immediately suggested to the specialty societies, and RUC members familiar with this service, that the survey results were inaccurate. It is likely that survey respondents were unfamiliar with the procedure as it is very low volume and generally takes much longer than 120 minutes to perform the intra-service work. The RUC concludes that the survey respondents only accounted for the work of the orthopaedic or neurosurgeon and did not account for the additional co-surgeon that routinely performs part of the intra-service work for this procedure. Those familiar with this procedure further indicated that respondents likely did not account for the time spent performing the approach and closure, which is typically performed by a second surgeon. Furthermore, the standard survey tool used for this survey did not include specific instructions regarding the skin-to-skin related work by each surgeon, and this likely contributed to respondents inaccurate reporting of skin-to-skin time. Therefore, after thorough review, the specialty societies indicated, and the RUC agreed, that the survey results for both CPT codes 22857 and 228XX were erroneous and that the codes should be resurveyed for the April 2022 RUC meeting with a targeted survey tool that has been reviewed and approved by the Research Subcommittee. **The RUC recommends an interim work RVU of 27.13 for CPT code 22857 and contractor pricing for CPT code 228XX. The specialty society will resurvey for the April 2022 RUC meeting and work with the RUC's Research Subcommittee to draft a targeted survey.**

Practice Expense
The RUC recommends the current direct practice expense inputs for CPT codes 22857 and 228XX. The specialty society will resurvey for the April 2022 RUC meeting.

December 14, 2021

Ezequiel Silva, III, MD
Chair, AMA/Specialty Society RVS Update Committee
AMA Plaza
330 N Wabash Avenue, Suite 39300
Chicago, IL 60611-5885

Dear Dr. Silva,

Our societies are writing in regards to Tab 5-Total Disc Arthroplasty, CPT code, 22857, *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), single interspace, lumbar,* that was flagged for survey for the January 2022 RUC meeting as part of the family with code 228XX, *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure)*. Code 228XX was approved at the 2021 September/October CPT Editorial Panel meeting as a conversion from Category III code 0163T, *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure)*

Codes 22857 and 228XX were surveyed together as an array survey by AAOS, AANS, CNS, ISASS, and NASS using random samples of membership. This procedure is mature and has been performed for over 15 years. Codes 22857 and 0163T were approved as new codes for CPT 2007.

In reviewing the survey data, the Advisors determined that the survey respondents did not understand that the skin-to-skin time was for all work and not just the work of the orthopedic or neurosurgeon. Our group of surgical advisors believe this procedure is typically performed by two surgeons acting as co-surgeons using modifier 62. We believe the standard RUC survey led to erroneous estimates for total intra-time by the respondents because they did not account for the time spent doing the approach and closure, typically performed by a second surgeon. The standard RUC survey does not include instructions specifically asking surgeons to account for the total skin-to-skin time spent by Co-Surgeons, even if it does specify "skin-to-skin."

The surveying societies recommend that the existing value and times for code 22857 be maintained for CY 2023 and that code 228XX be contractor-priced for CY 2023. The societies will resurvey both codes with a revised survey tool noting that the co-surgeon's approach and closure time and work should be included in the intra-service time estimates. The societies would then present recommendations based on this modified survey instrument. We note that maintaining the current times and work RVUs for 22857 and contractor-pricing code 228XX for CY 2023 will have little impact for Medicare payment since Medicare rarely pays for this procedure because it is not indicated for Medicare-aged patients. Medicare has a National Coverage Determination (NCD) that lists lumbar total disc arthroplasty as non-covered, which is appropriate based on the clinical data indicating the procedure is for non-Medicare-aged patients.

In summary, we recommend maintaining current work, time, and visits for 22857and contractor-pricing for 228XX for CY 2023, and a resurvey with a revised survey tool that requests the total skin-to-skin time and work of all surgeons.

We appreciate that the RUC is reluctant to resurvey procedures. However, we believe for this specific tab, with the unique circumstances of being non-covered by Medicare and typically requiring co-surgeons, this approach will allow the most accurate review of 22857 and 228XX.

Thank you for considering our recommendations.

Sincerely,

William R. Creevy, MD
AAOS RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Percutaneous Arteriovenous Fistula Creation – Tab 6

In October 2021, the CPT Editorial Panel created two new Category I CPT codes (368X1 and 368X2) to describe the creation of an arteriovenous fistula in an upper extremity via a percutaneous approach. Previously, CPT coding did not account for percutaneous arteriovenous access creation, as current CPT codes 36818, 36819, 36820, and 36821 only describe an open surgical approach. Given that new technologies have been developed that allow for less invasive approaches that utilize percutaneous image-guided methods to approximate a target artery and vein using magnets or mechanical capture, CMS had created two temporary HCPCS G-codes (G2170 and G2171) in July 2020 that describe two approaches to percutaneous arteriovenous access creation. The most significant material difference between these procedures is that G2170 requires two catheters from two different percutaneous access sites, one in the vein and one in the artery that are then approximated using magnets, while G2171 requires a single percutaneous access that then connects the artery and the vein under ultrasound guidance and then uses mechanical capture for approximation. Both procedures may require flow directing techniques and intra-procedural guidance, including arteriography or venography, depending on the vascular anatomy and the choice of the physician or operator.

CPT codes 368X1 and 368X2, which represent two percutaneous approaches to creating arteriovenous access for End-Stage Renal Disease (ERSD) patients during hemodialysis, are intended to replace HCPCS codes G2170 and G2171, both of which the RUC have submitted for deletion by CMS. Both 368X1 and 368X2 were surveyed by a random sample of diagnostic and interventional radiologists, as well as nephrologists and vascular surgeons for the January 2022 RUC meeting.

368X1 ***Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation***

The RUC reviewed the survey results from 37 physicians and recommends the survey 25th percentile work RVU of 7.50 for CPT code 368X1. The RUC recommends 15 minutes of pre-service evaluation time, 5 minutes positioning time, 6 minutes scrub/dress/wait time, 60 minutes of intra-service time, and 18 minutes of immediate post-service time. The specialties noted that the 26 minutes of pre-service time accounts for diagnostic imaging retrieval and review, in addition to preoperative preparation and positioning. The recommended 15 minutes of pre-service time is 3 minutes less than the 18 minutes of pre-service time in the pre-service package and median time, and the RUC found that to be appropriate. Additionally, the RUC agreed with the recommended increase from 1 to 5 minutes of positioning time given the importance of proper positioning and demarcation of the venous access site in this procedure and other similar upper extremity procedures utilizing ultrasound guidance. The RUC determined that the physician work and time maintain relativity to open arteriovenous anastomosis codes (36818-36821).

The RUC compared the surveyed code to the top key reference service and Multi-Specialty Points of Comparison (MPC) code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (work RVU = 10.42, 90 minutes of intra-service time, and 141 minutes total time) and noted that the survey code typically involves less intra-service and total time, and even though it is slightly more intense to perform, it involves less physician work overall. The RUC noted that 75 percent of those that selected the top key reference code had indicated that the surveyed code is more intense and complex to perform and the RUC recommendation appropriately accounts for this difference in intensity. The RUC also compared the surveyed code to the second top key reference service and MPC code 36905 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty* (work RVU = 9.00, 75 minutes of intra-service time, and 126 minutes total time) and again determined that CPT code 368X1 requires less physician work and time to perform, thus appropriately valued lower. The RUC concluded that CPT code 368X1 should be valued at the 25th percentile work RVU as supported by the survey.

For additional support, the RUC referenced the MPC code 52353 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy (ureteral catheterization is included)* (work RVU= 7.50, 60 minutes of intra-service time and 133 minutes of total time) and noted that it is a reasonable comparator code to 368X1. MPC code 52353 exactly matches the intra-service time of the survey code and closely aligns in terms of total time and intensity of physician work. **The RUC recommends a work RVU of 7.50 for CPT code 368X1.**

368X2 ***Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation***

The RUC reviewed the survey results from 39 physicians and recommends the survey 25th percentile work RVU of 9.60 for CPT code 368X2. The RUC recommends 15 minutes of pre-service evaluation time, 5 minutes positioning time, 6 minutes scrub/dress/wait time, 75 minutes of intra-service time, and 18 minutes of immediate post-service time. The RUC determined that the pre-service time for 368X2 should be the same as CPT code 368X1. This is because the need for diagnostic imaging retrieval and review, as well as preoperative preparation and positioning, is identical to the work associated with the procedure in code 368X1. The specialties noted that the 26 minutes of pre-service time accounts for diagnostic imaging retrieval and review, in addition to preoperative preparation and positioning. The recommended 15 minutes of pre-service time is 3 minutes less than the 18 minutes of pre-service time in the pre-service package and median time, and the RUC found that to be appropriate. Additionally, the RUC agreed with the recommended increase from 1 to 5 minutes of positioning time given the importance of proper positioning and demarcation of the venous access site in this procedure and other similar upper extremity procedures utilizing ultrasound guidance. The RUC again determined that the physician work and time maintain relativity to open arteriovenous anastomosis codes (36818-36821).

The RUC compared the surveyed code to the top key reference service and MPC code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (work RVU = 10.42, 90 minutes of intra-service time, and 141 minutes total time) and noted that the survey code typically involves less intra-service and total time, and even though it is more intense to perform, it involves less physician work overall. The RUC noted that 90 percent of that selected the top key reference code had indicated that the survey is more intense and complex to perform and the RUC recommendation appropriately accounts for this difference in intensity. The RUC compared the surveyed code to the second top key reference service and MPC code 36905 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty* (work RVU = 9.00, 75 minutes of intra-service time, and 126 minutes total time) and recognized that the intra-service time of KRS 36905 is an exact match to the survey code. The RUC further determined that the recommendation for 368X2 accounts for the increased level of intensity in the physician work and concluded that 25th percentile work RVU was appropriate and supported by the survey. Futhermore, the survey code RVU is properly bracketed by the top two key reference services in terms of their work RVU. **The RUC recommends a work RVU of 9.60 for CPT code 368X2.**

Practice Expense

The Practice Expense (PE) Subcommittee discussed the new supply and equipment items recommended for these services. The two new supply inputs are the procedure specific catheters for the individual codes, the Ellipsys catheter/device (386X1) and the Wavelinq catheters/device (386X2). These items are required to create the arteriovenous anastomosis during the procedures. Two new equipment inputs are recommended that correspond to the industry specific/procedure specific RF generators for these catheters, the Ellipsys Generator, and the Wavelinq Generator. These generators can only be used for this specific service. The PE Subcommittee noted the high cost of the two new supply inputs and reiterates its previous request to CMS:

> The RUC calls on CMS to separately identify and pay for high-cost disposable supplies. The RUC makes this recommendation to address the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology. The current system not only accounts for a large amount of direct practice expense for these supplies, but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. Because of specialty pools, when CPT codes include a high-cost disposable supply, a larger portion of indirect practice expense is allocated to the subset of practices performing the service which is subsidized by the broader specialty. If high costs supplies were paid separately with appropriate HCPCS codes, the indirect expense would no longer be associated with that service. The result would be that indirect PE RVUs would be redistributed throughout the specialty practice expense pool. **The RUC recommends that CMS separately identify and pay for high-cost disposable supplies priced in excess of $500 using appropriate HCPCS codes. The pricing of these supplies should be based on a transparent process, where items are annually reviewed and updated.**

In addition, it was clarified that EF019 *stretcher chair* is needed on hand in the ultrasound room for preoperative and postoperative sedation and recovery. The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

New Technology/New Service
The RUC recommends that CPT codes 368X1 and 368X2 be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Recommendation to Delete G2170 and G2171
The RUC recommends that CMS delete both G2170 *Percutaneous arteriovenous fistula creation (avf), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed* and G2171 *Percutaneous arteriovenous fistula creation (avf), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, wen performed) and fistulogram(s), angiography, enography, and/or ultrasound, with radiologic supervision and interpretation, when performed.*

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Cardiovascular System **Arteries and Veins** **Hemodialysis Access, Intervascular Cannulation for Extracorporeal Circulation, or Shunt Insertion**				
36832		*Revision, open, arteriovenous fistula; without thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)*		
36833		*with thrombectomy, autogenous or nonautogenous dialysis graft (separate procedure)*		
		(For percutaneous thrombectomy within the dialysis circuit, see 36904, 36905, 36906)		
		(For central dialysis segment angioplasty in conjunction with 36818-36833, use 36907)		
		(For central dialysis segment stent placement in conjunction with 36818-36833, use 36908)		
		(Do not report 36832, 36833 in conjunction with 36901, 36902, 36903, 36904, 36905, 36906 for revision of the dialysis circuit)		

Codes 368X1, 368X2 describe percutaneous arteriovenous fistula creation in the upper extremity for hemodialysis access, including image-guided percutaneous access into a peripheral artery and peripheral vein via single access (368X1) or two separate access sites (368X2). The artery and vein are approximated and then energy (eg, thermal) is applied to establish the fistulous communication between the two vessels. Fistula maturation procedures promote blood flow through the newly created fistula by augmentation (eg, angioplasty) or redirection (eg, coil embolization of collateral pathways) of blood flow. Codes 368X1, 368X2 include all vascular access, angiography, imaging guidance, and blood flow redirection or maturation techniques (eg, transluminal balloon angioplasty, coil embolization) performed for fistula creation. These procedures may not be reported separately with 368X1, 368X2 when performed at the same operative session.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
●368X1	V1	Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation (For arteriovenous fistula creation via an open approach, see 36800, 36810, 36815, 36818, 36819, 36820, 36821) (For percutaneous arteriovenous fistula creation in any location other than the upper extremity, use 37799) (Do not report 368X1 in conjunction with 368X2) (Do not report 368X1 in conjunction with 36005, 36140, 36215, 36216, 36217, 36218, 36245, 36246, 36247, 36248, 36901, 36902, 36903, 36904, 36905, 36906, 36907, 36908, 36909, 37236, 37238, 37241, 37242, 37246, 37248, 37252, 37253, 75710, 75716, 75820, 75822, 75894, 75898, 76937, 77001)	000	7.50
●368X2	V2	Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation (For arteriovenous fistula creation via an open approach, see 36800, 36810, 36815, 36818, 36919, 36820, 36821)	000	9.60

		(For percutaneous arteriovenous fistula creation in any location other than the upper extremity, use 37799) (Do not report 368X2 in conjunction with 368X1) (Do not report 368X2 in conjunction with 36005, 36140, 36215, 36216, 36217, 36218, 36245, 36246, 36247, 36248, 36901, 36902, 36903, 36904, 36905, 36906, 36907, 36908, 36909, 37236, 37238, 37241, 37242, 37246, 37248, 37252, 37253, 75710, 75716, 75820, 75822, 75894, 75898, 76937, 77001)		
G2170	-	Percutaneous arteriovenous fistula creation (avf), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed	YYY	Request for CMS to Delete
G2171	-	Percutaneous arteriovenous fistula creation (avf), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, enography, and/or ultrasound, with radiologic supervision and interpretation, when performed	YYY	Request for CMS to Delete

Vascular Injection Procedures

Intravenous

36005 *Injection procedure for extremity venography (including introduction of needle or intracatheter)*

(Do not report 36005 in conjunction with 368X1, 368X2)

(For radiological supervision and interpretation, see 75820, 75822)

Intra-Arterial—Intra-Aortic

36140 *Introduction of needle or intracatheter, upper or lower extremity artery*

(Do not report 36140 in conjunction with 368X1, 368X2)

(For insertion of arteriovenous cannula, see 36810-36821)

...

36215 *Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family*

36216 *initial second order thoracic or brachiocephalic branch, within a vascular family*

36217 *initial third order or more selective thoracic or brachiocephalic branch, within a vascular family*

+36218 *additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)*

(Do not report 36215, 36216, 36217, 36218 in conjunction with 368X1, 368X2)

...

36245 *Selective catheter placement, arterial system; each first order abdominal, pelvic, or lower extremity artery branch, within a vascular family*

36246 *initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family*

36247 *initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family*

+36248 *additional second order, third order, and beyond, abdominal, pelvic, or lower extremity artery branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)*

(Do not report 36245, 36246, 36247, 36248 in conjunction with 368X1, 368X2)

(Use 36248 in conjunction with 36246, 36247)

Dialysis Circuit

36901 *Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report;*

(Do not report 36901 in conjunction with 36833, 368X1, 368X2, 36902, 36903, 36904, 36905, 36906)

36902 *with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty*

(Do not report 36902 in conjunction with 368X1, 368X2, 36903)

36903	*with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis segment*
	(Do not report 36902, 36903 in conjunction with 36833, 368X1, 368X2, 36904, 36905, 36906)
	(Do not report 36901, 36902, 36903 more than once per operative session)
	(For transluminal balloon angioplasty within central vein(s) when performed through dialysis circuit, use 36907)
	(For transcatheter placement of intravascular stent(s) within central vein(s) when performed through dialysis circuit, use 36908)
36904	*Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s);*
	(Do not report 36904 in conjunction with 368X1, 368X2)
	(For open thrombectomy within the dialysis circuit, see 36831, 36833)
36905	*with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty*
	(Do not report 36905 in conjunction with 368X1, 368X2, 36904)
36906	*with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit*
	(Do not report 36906 in conjunction with 368X1, 368X2, 36901, 36902, 36903, 36904, 36905)
	(Do not report 36904, 36905, 36906 more than once per operative session)
	(For transluminal balloon angioplasty within central vein(s) when performed through dialysis circuit, use 36907)
	(For transcatheter placement of intravascular stent(s) within central vein(s) when performed through dialysis circuit, use 36908)
✚*36907*	*Transluminal balloon angioplasty, central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the angioplasty (List separately in addition to code for primary procedure)*
	(Use 36907 in conjunction with 36818-36833, 36901, 36902, 36903, 36904, 36905, 36906)

	(Do not report 36907 in conjunction with 368X1, 368X2, 36908)
	(Report 36907 once for all angioplasty performed within the central dialysis segment)
✚*36908*	*Transcatheter placement of intravascular stent(s), central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the stenting, and all angioplasty in the central dialysis segment (List separately in addition to code for primary procedure)*
	(Use 36908 in conjunction with 36818-36833, 36901, 36902, 36903, 36904, 36905, 36906)
	(Do not report 36908 in conjunction with 368X1, 368X2, 36907)
	(Report 36908 once for all stenting performed within the central dialysis segment)
✚*36909*	*Dialysis circuit permanent vascular embolization or occlusion (including main circuit or any accessory veins), endovascular, including all imaging and radiological supervision and interpretation necessary to complete the intervention (List separately in addition to code for primary procedure)*
	(Report 36909 in conjunction with 36901, 36902, 36903, 36904, 36905, 36906)
	(36909 includes all permanent vascular occlusions within the dialysis circuit and may only be reported once per encounter per day)
	(Do not report 36909 in conjunction with 368X1, 368X2)
	(For open ligation/occlusion in dialysis access, use 37607)
	(For percutaneous procedure, use 37182)
Endovascular Revascularization (Open or Percutaneous, Transcatheter)	
37236	*Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; initial artery*
✚*37237*	*each additional artery (List separately in addition to* code for primary procedure)
	(Use 37237 in conjunction with 37236)
	(Do not report 37236, 37237 in conjunction with 368X1, 368X2)
	(Do not report 37236, 37237 in conjunction with 34841-34848 for bare metal or covered stents placed into the visceral branches within the endoprosthesis target zone)

	(For stent placement(s) in iliac, femoral, popliteal, or tibial/peroneal artery(s) for occlusive disease, see 37221, 37223, 37226, 37227, 37230, 37231, 37234, 37235)
	(For transcatheter placement of intravascular cervical carotid artery stent(s), see 37215, 37216)
	(For transcatheter placement of intracranial stent(s), use 61635)
	(For transcatheter placement of intracoronary stent(s), see 92928, 92929, 92933, 92934, 92937, 92938, 92941, 92943, 92944)
	(For stenting of visceral arteries in conjunction with fenestrated endovascular repair, see 34841-34848)
	(For open or percutaneous antegrade transcatheter placement of intrathoracic carotid/innominate artery stent(s), use 37218)
	(For open or percutaneous transcatheter placement of extracranial vertebral artery stent(s), see Category III codes 0075T, 0076T)
	(For open retrograde transcatheter placement of intrathoracic common carotid/innominate artery stent(s), use 37217)
	(For placement of a stent at the arterial anastomosis of a dialysis circuit with or without transluminal mechanical thrombectomy and/or infusion for thrombolysis, see 36903, 36906)
37238	*Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; initial vein*
+37239	*each additional vein (List separately in addition to code for primary procedure)*
	(Use 37239 in conjunction with 37238)
	(Do not report 37238, 37239 in conjunction with 368X1, 368X2)
	(Do not report 37238, 37239 in conjunction with 0505T, within the femoral-popliteal segment)
	(Do not report 37238, 37239 in conjunction with 0620T within the tibial-peroneal segment)
	(For placement of a stent[s] within the peripheral segment of the dialysis circuit, see 36903, 36906)
	(For transcatheter placement of an intravascular stent[s] within central dialysis segment when performed through the dialysis circuit, use 36908)
#37246	*Transluminal balloon angioplasty (except lower extremity artery(ies) for occlusive disease, intracranial, coronary, pulmonary, or dialysis circuit), open or percutaneous, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty within the same artery; initial artery*
#+37247	*each additional artery (List separately in addition to code for primary procedure)*
	(Use 37247 in conjunction with 37246)

(Do not report 37246, 37248 in conjunction with 368X1, 368X2)

(Do not report 37246, 37247 in conjunction with 37215, 37216, 37217, 37218, 37220-37237 when performed in the same artery during the same operative session)

(Do not report 37246, 37247 in conjunction with 34841, 34842, 34843, 34844, 34845, 34846, 34847, 34848 for angioplasty[ies] performed, when placing bare metal or covered stents into the visceral branches within the endoprosthesis target zone)

Intravascular Ultrasound Services

✚*37252* *Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel (List separately in addition to code for primary procedure)*

✚*37253* *each additional noncoronary vessel (List separately in addition to code for primary procedure)*

(Use 37253 in conjunction with 37252)

(Report 37252, 37253 in conjunction with 33361, 33362, 33363, 33364, 33365, 33366, 33367, 33368, 33369, 33477, 33880, 33881, 33883, 33884, 33886, 34701, 34702, 34703, 34704, 34705, 34706, 34707, 34708, 34709, 34710, 34711, 34712, 34718, 34841, 34842, 34843, 34844, 34845, 34846, 34847, 34848, 36010, 36011, 36012, 36013, 36014, 36015, 36100, 36140, 36160, 36200, 36215, 36216, 36217, 36218, 36221, 36222, 36223, 36224, 36225, 36226, 36227, 36228, 36245, 36246, 36247, 36248, 36251, 36252, 36253, 36254, 36481, 36555-36571, 36578, 36580, 36581, 36582, 36583, 36584, 36585, 36595, 36901, 36902, 36903, 36904, 36905, 36906, 36907, 36908, 36909, 37184, 37185, 37186, 37187, 37188, 37200, 37211, 37212, 37213, 37214, 37215, 37216, 37218, 37220, 37221, 37222, 37223, 37224, 37225, 37226, 37227, 37228, 37229, 37230, 37231, 37232, 37233, 37234, 37235, 37236, 37237, 37238, 37239, 37241, 37242, 37243, 37244, 37246, 37247, 37248, 37249, 61623, 75600, 75605, 75625, 75630, 75635, 75705, 75710, 75716, 75726, 75731, 75733, 75736, 75741, 75743, 75746, 75756, 75774, 75805, 75807, 75810, 75820, 75822, 75825, 75827, 75831, 75833, 75860, 75870, 75872, 75885, 75887, 75889, 75891, 75893, 75894, 75898, 75901, 75902, 75956, 75957, 75958, 75959, 75970, 76000, 77001, 0075T, 0076T, 0234T, 0235T, 0236T, 0237T, 0238T, 0338T)

(Do not report 37252, 37253 in conjunction with 368X1, 368X2, 37191, 37192, 37193, 37197)

Vascular Embolization and Occlusion

37241 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; venous, other than hemorrhage (eg, congenital or acquired venous malformations, venous and capillary hemangiomas, varices, varicoceles)*

37242 *arterial, other than hemorrhage or tumor (eg, congenital or acquired arterial malformations, arteriovenous malformations, arteriovenous fistulas, aneurysms, pseudoaneurysms)*

(Do not report 37241, 37242 in conjunction with 368X1, 368X2)

(Do not report 37241 in conjunction with 36468, 36470, 36471, 36473, 36474, 36475-36479, 75894, 75898 in the same surgical field)

(For sclerosis of veins or endovenous ablation of incompetent extremity veins, see 36468-36479)

(For dialysis circuit permanent endovascular embolization or occlusion, use 36909)

Radiology
Diagnostic Radiology (Diagnostic Imaging)
Vascular Procedures
Aorta and Arteries

75710 *Angiography, extremity, unilateral, radiological supervision and interpretation*

(Do not report 75710 in conjunction with 368X1, 368X2)

75716 *Angiography, extremity, bilateral, radiological supervision and interpretation*

(Do not report 75716 in conjunction with 368X1, 368X2)

Veins and Lymphatics

75820 *Venography, extremity, unilateral, radiological supervision and interpretation*

(Do not report 75820 in conjunction with 368X1, 368X2)

75822 *Venography, extremity, bilateral, radiological supervision and interpretation*

(Do not report 75822 in conjunction with 368X1, 368X2)

Transcatheter Procedures

75894 *Transcatheter therapy, embolization, any method, radiological supervision and interpretation*

(Do not report 75894 in conjunction with 36475, 36476, 36478, 36479, 368X1, 368X2, 37241-37244)

75898 *Angiography through existing catheter for follow-up study for transcatheter therapy, embolization or infusion, other than for thrombolysis*

(For thrombolysis infusion management other than coronary, see 37211-37214, 61645)

(For non-thrombolysis infusion management other than coronary, see 61650, 61651)

(Do not report 75898 in conjunction with 368X1, 368X2, 37211-37214, 37241-37244, 61645, 61650, 61651)

Ultrasonic Guidance Procedures

✚*76937* *Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)*

(Do not report 76937 in conjunction with 33274, 33275, 36568, 36569, 36572, 36573, 36584, 368X1, 368X2, 37191, 37192, 37193, 37760, 37761, 76942)

(Do not report 76937 in conjunction with 0505T, 0620T for ultrasound guidance for vascular access)

(If extremity venous non-invasive vascular diagnostic study is performed separate from venous access guidance, see 93970, 93971)

Radiologic Guidance
Fluoroscopic Guidance

✚*77001* *Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)*

(Do not report 77001 in conjunction with 33957, 33958, 33959, 33962, 33963, 33964, 36568, 36569, 36572, 36573, 36584, 368X1, 368X2, 77002)

(If formal extremity venography is performed from separate venous access and separately interpreted, use 36005 and 75820, 75822, 75825, or 75827)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:368X1 Tracking Number V1 Original Specialty Recommended RVU: **7.50**
Presented Recommended RVU: **7.50**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **7.50**

CPT Descriptor: Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial artery and perforating vein with a distance between the respective vessels of <1.5 mm, suitable for percutaneous arteriovenous fistula creation in the upper extremity.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical history, physical exam, and laboratory studies, are reviewed and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed for the chosen upper extremity, with site marking. The patient is positioned supine on the procedure table with extremity extended and secured. Ultrasound guidance is used to mark the target venous access site prior to prepping and draping in order to include all necessary anatomy within the field. A time out is performed. The skin over the upper extremity of the intended percutaneous arteriovenous fistula site is prepared and draped in sterile fashion and local anesthetic is administered subcutaneously over the intended access site under ultrasound guidance.

Description of Intra-Service Work: Using ultrasound guidance the target vein is accessed with a micropuncture needle. Next, using continuous ultrasound guidance, the same needle is carefully navigated within the perforator vein and advanced to the level of the adjacent artery. After confirming location of the needle on orthogonal views by ultrasound, the artery is then punctured using the needle. A guidewire is advanced through the artery. The needle is exchanged over the wire for a sheath until the distal end just enters the artery. A catheter is advanced into the artery. The catheter is then carefully retracted to grasp the arterial wall allowing approximation of the artery and vein, which must be confirmed with ultrasound. Energy is applied to create the anastomosis. The catheter is then removed and the anastomosis and perforating vein are dilated with a balloon to ensure adequate flow under imaging guidance. The balloon, guidewire and sheath are removed. Hemostasis is achieved at the percutaneous venous access site using manual pressure.

Description of Post-Service Work: Sterile dressings are applied. The patient is transported to the recovery room for hemodynamic monitoring and pain control. The procedure is documented in the permanent record. Imaging results and patient status are communicated to the patient's family. Permanent reports are created for the medical record and copies of the reports are sent to the patient's referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	25%	44%	31%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	12%	88%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	12%	88%
Physical effort required	0%	25%	75%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	25%	75%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	60%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	20%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In July of 2020 CMS created two HCPCS G codes to capture two percutaneous approaches to creating an arteriovenous anastomosis.

G2170 *Percutaneous arteriovenous fistula creation (avf), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed.*

G2171 *Percutaneous arteriovenous fistula creation (avf), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed.*

The most significant material difference between the procedures is that one approach requires two catheters from two different percutaneous access sites, one in the vein and one in the artery that are then approximated using magnets and radiofrequency energy, while the other technique requires a single percutaneous access that then connects the artery and the vein under ultrasound guidance and then uses mechanical capture and thermal energy for approximation. Flow directing techniques and intra-procedural guidance including arteriography or venography can also be needed depending on the vascular anatomy and the choice of the physician.

There was no CPT code that captured a percutaneous approach to creating an arteriovenous anastomosis. CPT codes 36818, 36819, 36820 and 36821 describe an open surgical approach only. New technologies have been developed that allow for less invasive approaches utilizing percutaneous image-guided methods to approximate a target artery and vein using magnets or mechanical capture. Thermal energy is applied to fuse the artery and vein together and to cut an elliptical anastomosis, permanently connecting the artery and vein. These techniques may also use balloons or coils to direct blood flow as well as different imaging methods (e.g., ultrasound and/or fluoroscopy) to guide the percutaneous procedure.

Two new CPT codes (368X1 and 368X2) were approved by CPT Editorial Panel for percutaneous arteriovenous access creation at the September 2021 meeting.

Methodology

A multi-disciplinary survey including SIR, SVS, ACR, and RPA was distributed randomly to the members of the representative societies. For code 368X1 37 surveys were completed. The surveys were reviewed by the multi-specialty group and determined to be valid and reflective of the work and intensity involved.

Work RVU Recommendation for 368X1

We are recommending the 25th percentile survey value of 7.50 RVW for 368X1.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 2 (difficult patient/straightforward procedure), with standard package times of 18 minutes pre-evaluation time, 1 minute of pre-positioning time, and 6 minutes of pre-scrub, dress, and wait time.

The specialties recommend the following times

1. Evaluation: We recommend a pre-service evaluation time of 15 minutes. This is 3 minutes less than the pre-service package and median time, but still appropriate for the evaluation needed and similar to the time also recommended for code 368X2.

2. Positioning: We recommend time of 5 minutes, which is 4 minutes more than the package time. We feel this additional time is justified given the importance of positioning in these procedures and other similar upper extremity procedures utilizing ultrasound guidance. This is critical as the added time needed to ensure proper positioning and demarcation of the venous access site with ultrasound may result in more efficient and safe procedural success.

3. Scrub, dress, and wait: We recommend the pre-service package time of 6 minutes for pre-service scrub, dress, and wait time.

4. Post: We recommend the post-service package 7A (local anesthesia/straightforward patient) time of 18 minutes.

Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (43%) and 36905 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty* (11%). These key references are similar to 368X1 and the following data and established values supports this.

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36906 Key Ref	10.42	0.104	141	22	4	5	90	20
368X1 Survey	7.50	0.110	104	15	5	6	60	18
36905 Key Ref	9.00	0.106	126	22	4	5	75	20

This comparison thus favorably supports our recommendation for the 25th percentile survey value of 7.50 RVW for CPT 368X1.

Comparison to MPC codes

The highest value 000 day global MPC code is 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* with 10.42 wRVUs is also our top reference code. See values above.

Conclusion

A multi-disciplinary survey of CPT 368X1 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, which are also two MPC codes, we believe that the 25th percentile survey RVW of 7.50 appropriately ranks CPT 368X1 relative to other services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2170

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Sometimes

Specialty Nephrology How often? Sometimes

Specialty Vascular Surgery How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2200
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Due to lack of claims data, the estimate is based on vendor sales monthly data to determine potential frequency of service. Estimate is based on 2020 sales data (1,461) plus 50%

Specialty Interventional Radiology Frequency 733 Percentage 33.31 %

Specialty Nephrology Frequency 733 Percentage 33.31 %

Specialty Vascular Surgery Frequency 733 Percentage 33.31 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,760
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on specialty estimate in consideration of vendor sales data

Specialty Interventional Radiology Frequency 586 Percentage 33.29 %

Specialty Nephrology Frequency 586 Percentage 33.29 %

Specialty Vascular Surgery Frequency 586 Percentage 33.29 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

CPT Descriptor: Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial and ulnar artery, presence of a perforating vein, and radial and ulnar vein within < 1mm of the respective corresponding arteries, suitable for percutaneous arteriovenous fistula creation in the upper extremity.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical history, physical exam, and laboratory studies are reviewed, and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed for the chosen upper extremity, with site marking. The patient is positioned supine on the angiography table with the upper extremity extended and secured. Ultrasound guidance is used to mark the target arterial and venous access sites prior to prepping and draping in order to include all necessary anatomy within the field. A time out is performed. The skin over the upper extremity of the intended percutaneous arteriovenous fistula site is prepared and draped in a sterile fashion. Local anesthetic is administered subcutaneously over each intended access site under ultrasound guidance.

Description of Intra-Service Work: Ultrasound-guided access is obtained in a vein in the extremity, and a guidewire is inserted. Next, a dilator and vascular sheath is introduced, and a venogram of the central veins is performed. Next, under ultrasound guidance, the target artery is then accessed separately. An arteriogram of the entire extremity is then performed. A guidewire is advanced to the target creation site. Using the arterial guidewire as a roadmap, the venous guidewire is advanced into the vein and navigated under fluoroscopy to the intended fistula site. Then a venogram is performed at the intended fistula site to confirm superficial communication via the presence of a perforator vein. Under fluoroscopic guidance, the arterial catheter is carefully advanced over the guidewire to the target fistula creation site making sure proper orientation to the venous guide catheter is maintained. The venous catheter is then inserted into the sheath and advanced over the guidewire to the target fistula creation. The catheters and magnetic components are optimally positioned and brought into alignment. Correct orientation and alignment are confirmed via fluoroscopy in multiple orthogonal projections. Radiofrequency energy is delivered to the electrode for 0.7 seconds creating the arteriovenous fistula. After the arteriovenous fistula has been created, catheters are removed. An angiogram of the newly created fistula is then obtained through the arterial sheath or an arterial catheter that has been advanced central to the percutaneous arteriovenous fistula to verify successful arteriovenous fistula creation with outflow in cephalic and/or basilic veins. From the venous access site, a catheter is navigated to the brachial vein. The brachial vein in the mid-upper extremity is then occluded by coil embolization to direct more flow to the cephalic and/or basilic veins, which is confirmed by repeat arteriography to evaluate the percutaneous arteriovenous fistula and outflow veins. Then the venous and arterial sheaths are removed.

Finally, hemostasis is obtained at the arterial and venous access sites using manual compression for a minimum of 20 minutes.

Description of Post-Service Work: Sterile dressings are applied. The patient is transported to the recovery room for hemodynamic monitoring and pain control. The procedure is documented in the permanent record. Fluoroscopic and ultrasound results and patient status are communicated to the patient's family. Permanent reports are created for the medical record, and copies of the reports are sent to the patient's referring physician

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
36906	000	10.48	**RUC Time**

CPT Descriptor Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
36905	000	9.00	**RUC Time**

CPT Descriptor Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36906	000	10.42	**RUC Time**	14,028

CPT Descriptor 1 Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36905	000	9.00	**RUC Time**	41,205

CPT Descriptor 2 Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	10%	38%	52%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	9%	86%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	19%	76%
Physical effort required	0%	29%	71%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	24%	76%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	50%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	17%	83%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	17%	17%	66%
Physical effort required	17%	66%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	33%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In July of 2020 CMS created two HCPCS G codes to capture two percutaneous approaches to creating an arteriovenous anastomosis.

G2170 *Percutaneous arteriovenous fistula creation (avf), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed.*

G2171 *Percutaneous arteriovenous fistula creation (avf), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed.*

The most significant material difference between the procedures is that one approach requires two catheters from two different percutaneous access sites, one in the vein and one in the artery that are then approximated using magnets, while the other technique requires a single percutaneous access that then connects the artery and the vein under ultrasound guidance and then uses mechanical capture for approximation. Flow directing techniques and intra-procedural guidance including arteriography or venography can also be needed depending on the vascular anatomy and the choice of the physician.

There was no CPT code that captured a percutaneous approach to creating an arteriovenous anastomosis. CPT codes 36818, 36819, 36820 and 36821 describe an open surgical approach only. New technologies have been developed that allow for less invasive approaches utilizing percutaneous image-guided methods to approximate a target artery and vein using magnets or mechanical capture. Thermal energy is applied to fuse the artery and vein together and to cut an elliptical anastomosis, permanently connecting the artery and vein. These techniques may also use balloons or coils to direct blood flow as well as different imaging methods (e.g., ultrasound and/or fluoroscopy) to guide the percutaneous procedure.

Two new CPT codes (368X1 and 368X2) were approved by CPT Editorial Panel for percutaneous arteriovenous access creation at the September 2021 meeting.

Methodology

A multi-disciplinary survey including SIR, SVS, ACR, and RPA was distributed randomly to the members of the representative societies. For code 368X2 39 surveys were completed. The surveys were reviewed by the multi-specialty group and determined to be valid and reflective of the work and intensity involved.

Work RVU Recommendation for 368X2

We are recommending the 25th percentile survey value of 9.60 RVW for 368X2.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 2 (difficult patient/straightforward procedure), with standard package times of 18 minutes pre-evaluation time, 1 minute of pre-positioning time, and 6 minutes of pre-scrub, dress, and wait time.

The specialties recommend the following times

1. Evaluation: We recommend the median time of 15 minutes of evaluation time based on median survey data. This is 3 minutes less than package time, but still appropriate for the evaluation needed and similar to the time also recommended for code 368X1.

2. Positioning: We recommend time of 5 minutes, which is 4 minutes more than the package time. We feel this additional time is justified given the importance of positioning in these procedures and other similar upper extremity procedures utilizing ultrasound guidance. This is critical as the added time needed to ensure proper positioning and demarcation of the venous access site with ultrasound may result in more efficient and safe procedural success.

3. Scrub, dress, and wait: We recommend the pre-service package time of 6 minutes for pre-service scrub, dress, and wait time.

4. Post: We recommend the post-service package 7A (local anesthesia/straightforward patient) time of 18 minutes.

Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (54%) and 36905 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty* (13%). These key references are similar to 368X2 and the following data and established values supports this.

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
36906 Key Ref	10.42	0.104	141	22	4	5	90	20
368X2 Survey	9.60	0.116	119	15	5	6	75	18
36905 Key Ref	9.00	0.106	126	22	4	5	75	20

This comparison thus favorably supports our recommendation for the 25th percentile survey value of 9.60 RVW for CPT 368X2.

Comparison to MPC codes

The highest value 000 day global MPC code is 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* with 10.42 wRVUs is also our top reference code. See values above.

Conclusion

A multi-disciplinary survey of CPT 368X2 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, which are also two MPC codes, we believe that the 25th percentile survey RVW of 9.60 appropriately ranks CPT 368X2 relative to other services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G2171

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Invertentional Radiology How often? Sometimes

Specialty Nephrology How often? Sometimes

Specialty Vascular Surgery How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2222
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Due to lack of claims data, an estimate based on vendor sales data since inception in 2018 to determine potential frequency of service. Estimate is based on 1/3 of sales from April 2018 -April 2021 (total 4,443 or 1,481/year) plus 50%

Specialty Interventional Radiology Frequency 740 Percentage 33.30 %

Specialty Nephrology Frequency 740 Percentage 33.30 %

Specialty Vascular Surgery Frequency 740 Percentage 33.30 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,777
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on specialty estimate in consideration of vendor sales data

Specialty Interventional Radiology Frequency 592 Percentage 33.31 %

Specialty Nephrology Frequency 592 Percentage 33.31 %

Specialty Vascular Surgery Frequency 592 Percentage 33.31 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 36901

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 1/2022

CPT Code	Long Descriptor	Global Period
368X1	*Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation*	000
368X2	Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
368X1	A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial artery and perforating vein with a distance between the respective vessels of <1.5 mm, suitable for percutaneous arteriovenous fistula creation in the upper extremity.
368X2	A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial and ulnar artery, presence of a perforating vein, and radial and ulnar vein within < 1mm of the respective corresponding arteries, suitable for percutaneous arteriovenous fistula creation in the upper extremity.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   SIR, ACR, RPA, and SVS convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for two new Endovascular Creation of Arteriovenous Fistula codes.

2.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The Endovascular Arteriovenous Fistula Creation tab includes two new bundled procedures. We have included the code 36905 as the comparison code for the practice expense as it is a commonly performed dialysis access procedure. This code also happens to be one of the most frequently selected Key Reference Services and is an MPC. The clinical staff times for scheduling the Facility site of service should be the similar based on the similar patient type and demands of procedure.

3.

3. Is this code(s) typically reported with an E/M service?

No

4.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

N/A

5.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We believe there is extensive use of clinical staff time for these codes.

386X1-386X2
Pre Service Time

- *CA002 Coordinate pre-surgery services (3)*
- *CA003 Schedule space and equipment in facility (3)*

Intra Service Time (post service of service period)

- *CA035 Follow-up phone calls & prescriptions (3)*

Post-Service Period

- *CA039 Coordinate post-procedure services (3)*

We are recommending 12 minutes of clinical staff time total. This staff time is necessary to coordinate multiple services to schedule a complicated patient, in a clinical Facility remote from the office and with very specific equipment, supply and room requirements that need to be coordinated and scheduled.

7.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8.

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

- *Coordinate pre-surgery services (3) - During this time the staff is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed. In addition, the staff is arranging an preoperative medical clearances and coordinating with dialysis centers and primary care staff the medical fitness for procedure.*
- *Schedule space and equipment in facility (3) - Staff must schedule availability in the OR (386X1) or Hybrid OR/Angiography Suite (386X2) as well as confirm availability of the procedure specific Equipment and supplies.*

   b.
   c. Service period (includes pre, intra and post):

- *Follow-up phone calls & prescriptions (3) - During this period staff calls patient and monitors for postoperative pain control and assures patients is taking prescribed anti-platelet medications.*

   d.
   e. Post-service period:

- *Coordinate post-procedure services (3) - During this period Post-operative calls to dialysis centers regarding access monitoring during dialysis visits.*

   f.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10.

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/a

14.

14. Are you recommending a PE supply pack for this recommendation? No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/a

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/a

16.

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/a

17.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

18.

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/a

    d.

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

20. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/a

21.

ADDITIONAL INFORMATION

21. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

22.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition to those revisions, please also provide an

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S):386X1-2**
SPECIALTY SOCIETY(IES):SIR, ACR, SVS, RPA
PRESENTER(S): Curtis Anderson, MD, Minhaj Khaja, MD, Matthew Sideman, MD, Wayne Causey, MD, Lauren Golding, MD, and Stephen Clyne, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 1/2022

CPT Code	Long Descriptor	Global Period
368X1	Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation	000
368X2	Percutaneous arteriovenous fistula creation, upper extremity, separate access sites of the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
368X1	A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial artery and perforating vein with a distance between the respective vessels of <1.5 mm, suitable for percutaneous arteriovenous fistula creation in the upper extremity.
368X2	A 65-year-old male with advanced chronic kidney disease will require hemodialysis. Preoperative vascular imaging shows appropriate size and patency of the radial and ulnar artery, presence of a perforating vein, and radial and ulnar vein within < 1mm of the respective corresponding arteries, suitable for percutaneous arteriovenous fistula creation in the upper extremity.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   SIR, ACR, RPA, and SVS convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for two new Endovascular Creation of Arteriovenous Fistula codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes):

The Endovascular Arteriovenous Fistula Creation tab includes two new bundled procedures. We have included the code 36905 as the comparison code for the practice expense as it is a commonly performed dialysis access procedure. This code also happens to be one of the most frequently selected Key Reference Services and is an MPC.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   No

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

   The dominant provider of this service is not known as this is a new service. It is believed that this procedure will be performed 80% in the non facility setting.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   No, new CPT codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We believe there is extensive use of clinical staff time for this tab. However, we are recommending 13 minutes of pre service staff time instead of the standard 18 minutes.

Pre Service Time

- *Complete pre-service diagnostic & referral forms (3)*
- *Coordinate pre-surgery services (3)*
- *Complete pre-procedure phone calls & prescriptions (3)*
- *Confirm availability of prior images/studies (2)*
- *Patient Clinical Information and Questionnaire reviewed by technologist (2) - The standard for this input is 1 minute however additional minute is used to discuss risks of fluoroscopy and contrast, particularly as it pertains to residual renal function and possible pregnancy.*

Prepare and Position Patient
We are requesting three additional minutes of positioning over the standard of two minutes. This extra time is needed to prepare the arm for the procedure in relation to the imaging equipment and other procedural equipment.

Review home care instructions
We are requesting three minutes instead of the standard 2 minutes as monitoring of the newly created access by the patient is necessary.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We are requesting 5 minutes for vital signs because this patient population has a very high incidence of cardiovascular comorbidities. We measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure before these procedures.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- *Complete pre-service diagnostic & referral forms (3) - During this time the staff is collecting and cooordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.*
- *Coordinate pre-surgery services (3) - During this portion the staff is arranging an preoperative medical clearances and coordinating with dialysis centers and primary care staff the medical fitness for procedure.*
- *Complete pre-procedure phone calls & prescriptions (3)* -Coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing. Ensure procedure and recovery do not conflict with dialysis schedule.
- *Confirm availability of prior images/studies (2) - Staff must ensure that imaging studies are available for review prior to the procedure.*
- *Patient Clinical Information and Questionnaire reviewed by technologist (2) - Staff discuss with the patient the procedure, confirms patient information and planned side of procedure and patient handedness. If contrast or fluoroscopy is to be used, associated risks determined such as pregnancy or damage to residual kidney function.*

b. Service period (includes pre, intra and post):

- Assist Physician - Angio Tech L041A 100% Physician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close.
- Nurse /Tech blend - Circulating staff in the room that acquires images, opens supplies, adjusts and connects equipment. This by convention has been a 75% Angio Tech (L041A) 25% Nurse/LPN/MTA (L037D) role for interventional procedures.

c. Post-service period:

- Monitor patient following procedure (CA022) - Nurse monitors patients vital signs and and pain post procedure as well as monitors for signs of bleeding, vascular complications or neurologic complications.
- Clean room (CA024) - This is typically done by the Angio technician (L041A) including cleaning the US equipment, table and fluoroscopy machine (if used). This was listed as the Nurse blend staff (L037D) on the comparator code but this does not represent the typical scenario in the non facility setting.
- Check dressings, catheters and wounds (CA029) - The nurse blend staff (L037D) check on the operative site(s) and confirm hemostasis prior to discharge.
- Technologist QC's images in PACS (CA030) - The Angio technologist QCs all images and makes sure the images transfer to PACS. Both procedures require numerous images to be obtained that will be need to be stored for future review as the access matures.
- Review examination with interpreting MD/DOs - Angio Tech (L041A) reviews the images to confirm accuracy and completeness of imaging record of procedure, particularly intraprocedural doppler imaging to access flow of fistula post creation.
- Scan exam documents into PACS - Angio Tech (L041A) scans all documentation into PACS including any drawings/diagrams which may have been created for communication of new access anatomy.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

- Assist Physician - Angio Tech L041A 100% Physician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the procedure from puncture to close. This staff person directly works with physician to complete procedure including handing equipment/supplies off the sterile table, maintaining sterility of wires, catheters and devices. Often the technologist will hold the ultrasound probe while the physician manipulates the needles or wires.
- Nurse /Tech blend - Circulating staff in the room that acquires images, opens supplies, adjusts and connects equipment. This by convention has been a 75% Angio Tech (L041A) 25% Nurse/LPN/MTA (L037D) role for interventional procedures. This staff member operates both the fluoroscopy machine and the ultrasound machine, obtaining images, adjusting imaging parameters, opening sterile and nonsterile supplies and otherwise assists in a mobile capacity while not scrubbed in.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

For CPT Codes 368X1 and 368X2 we have included a tech at 75% of the physician work time to perform the image acquisition portion of the procedure and a nurse blend at 25% of the physician time as the circulator.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. **X** Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. **X** Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

> We have introduced two new supply inputs. The supply inputs are the procedure specific catheters for the individual codes. These catheters are the Ellipsys catheter/device (386X1) and the Wavelinq catheters/device (386X2). These items are required to create the arteriovenous anastomosis during the procedures.

18. Are you recommending a PE supply pack for this recommendation? Yes.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

> SA048

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**5.02**
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We have requested two new equipment inputs for this tab. The equipment inputs correspond to the industry specific/procedure specific RF generators for these catheters. These generators can only be used for this specific service. These are the Ellipsys Generator and the Wavelinq Generator.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

The specialty societies and manufacturers suggest a 5 year usable life and the equipment cost per minute should be based on this lifespan.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EL011 room, angiography – Highly technical formula
ED050 Technologist PACS workstation – PACS formula
EF027 table, instrument, mobile – Default formula
EF019 stretcher chair – Default formula - This chair is used for the 1 hour recovery and monitoring period. The patient is not recovered in the Ultrasound room.
EQ011 ECG, 3-channel (with SpO2, NIBP, temp, resp) – Default formula
EQ032 IV infusion pump – Default formula
EL016 room, ultrasound, vascular – Highly technical formula
New Equipment Wavelinq EndoAVF generator – Default formula
New Equipment. Ellipsys EndoAVF generator – Default formula

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

25. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

In order to provide a more detailed explanation for the supply item choices, below is a table detaining the rationale for the inclusion and item number for each item and for each different code.

Code	Description	386X1	386x2	Explanation
SA048	pack, minimum multi-specialty visit	1	1	Basic patient encounter supplies
SA016	kit, guidewire introducer (Micro-Stick)	1	2	Initial access to blood vessels
SA019	kit, iv starter	1	1	For IV access for the patient
SA067	tray, shave prep	1	1	Arm typically needs to be shaved for sterile preparation.
SB001	cap, surgical	3	3	One for MD, Angio Tech (hip to hip), and Tech/nurse blend
SB008	drape, sterile, c-arm, fluoro	1	1	To cover the image intensifier/flat panel during procedure
SB009	drape, sterile, femoral	1	1	Drapes sterile field. This is the most commonly used drape for these procedures to protect a large area from wire/catheter contamination.
SB014	drape, sterile, three-quarter sheet	1	1	To cover back table as a workspace
SB019	drape-towel, sterile 18in x 26in	2	2	To frame operate site.
SB022	gloves, non-sterile	1	1	For placing IV, prepping patient, and cleanup (one staff at each activity, two pairs are in SA048)
SB024	gloves, sterile	2	2	For MD and Angio Tech (hip to hip)
SB028	gown, surgical, sterile	2	2	For MD and Angio Tech (hip to hip)
SB033	mask, surgical	2	2	For AngioTech/circulator

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

SB034	mask, surgical, with face shield	2	2	For MD and Angio Tech (hip to hip)
SB039	shoe covers, surgical	3	3	One for MD, Angio Tech (hip to hip), Tech/nurse blend
SB044	underpad 2ft x 3ft (Chux)	1	1	To place under the arm during procedure.
SC010	closed flush system, angiography	1	1	Flush system for fluid administration and waste management
SC051	syringe 10-12ml		2	For Contrast administration during 386X2
SC053	syringe 20ml	2	2	For Heparinized Saline Flushes
SC058	syringe w-needle, OSHA compliant (SafetyGlide)	1	1	For lidocaine administration
SD089	guidewire, hydrophilic		1	For catheterization of fistula creation site at artery and vein.
SD136	vascular sheath	1	2	One access site for 386x1 and two for 386X2
SD147	catheter, (Glide)		1	For catheterization of fistula creation site at artery and vein.
SD149	catheter, balloon inflation device	1	1	Both procedures require gentle angioplasty of new anastomosis.
SD152	catheter, balloon, PTA	1	1	Both procedures require gentle angioplasty of new anastomosis.
SD171	guidewire bowl w-lid, sterile	1	1	For wire management and saline soak.
SD172	guidewire, cerebral (Bentson)		1	Primary access wire for sheath
SD173	guidewire, low profile (SpartaCore)	1	2	Wire needed for catheter and balloon delivery. Two for 386x2 since requires two treatment catheters (artery/vein)
SD176	guidewire, torque		1	For hydrophilic wire used in catheterization (386x2)
SD211	tubing, pressure injection line (angiography)		1	For power injector used in arteriography (386X2)
SF007	blade, surgical (Bard-Parker)	1	1	Skin knick to introduce sheath.
SF056	Detachable coil		1	Coil embolization is typical. Dialysis embolization typically is high flow, requiring a detachable coil first to secure location.
SF057	Non-detachable embolization coil		2	Two additional non-detachable coils are utilized once a secure coil is placed.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

SG009	applicator, sponge-tipped	4	4	For sterile preparation with Betadine
SG035	dressing, 3in x 4in (Telfa, Release)		1	For wiping hydrophilic wire during procedure.
SG037	dressing, 4in x 4.75in (Tegaderm)	1	2	For operative site(s).
SG055	gauze, sterile 4in x 4in	6	12	For wiping Bentson and Spartacore wires and operative field during procedure. Two access sites for X2 code.
SG095	Hemostatic patch	1	2	For operative site(s).
SH039	heparin 1,000 units-ml inj	5	5	Intraoperative anticoagulation is recommended for both procedures.
SH047	lidocaine 1%-2% inj (Xylocaine)	10	20	Local anesthesia. Two access sites for X2 code.
SH069	sodium chloride 0.9% irrigation (500-1000ml uou)	1	1	Saline Flush for the table
SJ088	swab, patient prep, 3.0 ml (chloraprep)	1	2	Sterile preparation
SM013	disinfectant, surface (Envirocide, Sanizide)	2	3	For cleaning of operative table, patient table, and US (386X1) as well as C-arm components (386X2)
SM021	sanitizing cloth-wipe (patient)	1	1	To clean arm of remaining Betadine.
	Wavelinq EndoAVF catheters		1	Procedure specific catheter kit for creating fistula
	Ellipsys Vascular Access Catheter	1		Procedure specific catheter kit for creating fistula

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Energy Based Repair of Nasal Valve Collapse – Tab 7

In September 2021, the CPT Editorial Panel created Category I code 37X01 to report *Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling* which is currently reported with an unlisted code. For the January 2022 RUC meeting, both CPT code 37X01 and family code 30468 *Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)* were reviewed.

30468 *Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)*
The RUC reviewed the specialty society request to affirm the recent RUC valuations for CPT code 30468. Although this code was identified with the new code to be surveyed, the specialty society elected not to survey because the code was recently surveyed and valued by the RUC in January 2020. Additionally, there are no changes to the code descriptor or related work to perform this service. **The RUC recommends affirming a work RVU of 2.80 for CPT code 30468.**

37X01 *Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling*
The RUC reviewed the survey results from 82 otolaryngologists and recommends a work RVU of 2.70 based on a direct work RVU crosswalk to CPT code 31295 *Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); maxillary sinus ostium, transnasal or via canine fossa* (work RVU = 2.70, 20 minutes intra-service time, and 56 minutes total time). This valuation maintains relativity in comparison to family code 30468 as well as other 000-day global otolaryngology codes within the Medicare Physician Payment Schedule (MFS). The RUC recommends 17 minutes of pre-service evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 20 minutes intra-service time, and 10 minutes immediate post-service time. The post service package was reduced to as to not exceed survey median data.

The original CPT coding change application (CCA) brought forth by industry stated this service was primarily performed in the hospital outpatient setting. After discussion, the RUC determined that this service is typically performed in an office setting under local anesthesia, which differs from the CCA, but was the consensus of those who routinely perform the service. Based on this determination, and to maintain relativity, the RUC determined that the survey 25th percentile work RVU of 2.80 was not appropriate because it is the same value as CPT code 30468, which requires 20 minutes more total time. In addition, CPT code 30468 is typically performed in the operating room, and CPT code 37X01 is typically performed in an office setting. While the intra-service time is the same for both procedures, there is a noticeable difference in intensity between these two services. The RUC noted that the work required for 30468 is less intense and more straightforward, albeit being performed in the operating room and requiring more total time. Though 37X01 requires less total time, the intra-service time requires more meticulous care to perform the procedure using the radiofrequency handpiece to determine the appropriate amount of tissue ablation. For this reason, the RUC determined that the survey 25th percentile for code 37X01 did not maintain relativity, and a direct crosswalk to CPT code 31295 with 2.70 work RVUs, was more appropriate given the similarities in site of service, total time, and intensity within 20 minutes of intra-service work.

To support the recommended work RVU, the RUC compared the surveyed code to key reference service codes 30140 *Submucous resection inferior turbinate, partial or complete, any method* (work RVU = 3.00, 20 minutes intra-service time and 78 minutes total time) and 31238 *Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage* (work RVU = 2.74, 25 minutes intra-service time and 53 minutes total time) which demonstrate appropriate comparisons to determine relativity. Most of the survey respondents that selected these key reference codes identified the surveyed code as having either identical or somewhat more intensity and complexity. It is important to note that 30140 is typically performed in the hospital outpatient setting and notably requires more total time. The second key reference service, code 31238, is typically performed in the physician office and has identical total time to the survey code suggesting that the codes should be valued similarly. For additional support, the RUC did a database search of 000-day global codes with intra-service time between 20 and 25 minutes, intensity between 0.08 and 0.12, total time between 40 and 80 minutes, and work RVU between 2.40 and 2.80 and found that the survey code falls appropriately within the middle to upper range of the list. The RUC concluded that the value of CPT code 37X01 should be 2.70, which is below the survey 25th percentile and maintains relativity within the family and MFS. **The RUC recommends a work RVU of 2.70 for CPT code 37X01.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made modifications to the pre-service clinical staff time to both CPT codes 30468 and 37X01 in accordance with current standards. Specifically, the Subcommittee discussed whether the requested inputs were sufficient or whether there was an oversight in valuing the PE for CPT code 30468 previously and whether all time for "extensive use of clinical staff" standards when applied to 000-day global periods, should be included for both codes. The specialty recommended that the standard time for phone calls be included in CA005 *Complete pre-procedure phone calls and prescription*, but not the standard time for CA002 *Coordinate pre-surgery services (including test results)*, as there was not clinical rationale to include it. The PE subcommittee agreed and voted to approve compelling evidence based on a prior error in valuation. Thus, three additional minutes were included for CA005 for both codes in the office and facility settings.

The PE Subcommittee also discussed the new supply and equipment inputs recommended for CPT code 37X01. The new supply item, the *VivAer Stylus*, is the radio frequency wand needed to deliver the radio frequency to the nasal valve. It is used for only one patient at a time and disposed of after use. The new equipment item, *Console Set*, is the console required to generate the radiofrequency that is delivered, via the wand, to the nasal valve. The PE Subcommittee noted the high cost of the new supply input and reiterates its previous request to CMS:

> The RUC calls on CMS to separately identify and pay for high-cost disposable supplies. The RUC makes this recommendation to address the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology. The current system not only accounts for a large amount of direct practice expense for these supplies, but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. Because of specialty pools, when CPT codes include a high-cost disposable supply, a larger portion of indirect practice expense is allocated to the subset of practices performing the service which is subsidized by the broader specialty. If high costs supplies were paid separately with appropriate HCPCS codes, the indirect expense would no longer be associated with that service. The result would be that indirect PE RVUs would be redistributed throughout the specialty practice expense pool. **The RUC recommends that CMS separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate HCPCS codes. The pricing of these supplies should be based on a transparent process, where items are annually reviewed and updated.**

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

RE: Request for Reaffirmation of Values for CPT 30468

Dear Dr. Silva,

On behalf of the American Academy of Otolaryngology - Head and Neck Surgery (AAO-HNS), we would like to respectfully request that the RUC reaffirm the existing values for CPT 30468 *Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)* as part of its review of Tab 7 – Energy Based Repair of Nasal Valve.

As you may be aware, the other code in this tab, 30XX1 *Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling*, was approved by the CPT Editorial Panel at the October 2021. CPT 30468 is also a newer code, valued in January of 2020. When the RUC LOI for the January 2022 meeting was issued, both CPT codes were indicated. However, due to the recent review of 30468 by the RUC, we are respectfully requesting that the RUC reaffirm the January 2020 values recommended for this code, which were approved by CMS through rulemaking.

The values we are requesting be reaffirmed for 30468 are captured in both our PE and work recommendations for Tab 7. For ease of review, we are also listing them here: CPT 30468 *Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s);* 2.80 work RVUs, 38 minutes pre time, 20 minutes intra time, and 15 minutes post time, for a total time of 73 minutes and an IWPUT of 0.0878.

Thank you in advance for your consideration of this request. If you have any questions, please contact Jenna Minton, AAO-HNS RUC staff, at jenna@proactivestrategies.net or 517.927.8696.

Sincerely,

T: 1-703-836-4444

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:37X01 Tracking Number X2 Original Specialty Recommended RVU: **2.70**
Presented Recommended RVU: **2.70**
Global Period: 000 Current Work RVU: **N/A** RUC Recommended RVU: **2.70**

CPT Descriptor: Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male presents with chronic bilateral nasal airway obstruction that affects breathing and disturbs sleep. The patient is unresponsive to medical therapy and has nasal valve collapse on examination. The patient is referred for nasal valve collapse repair with low energy, temperature controlled subcutaneous remodeling with a radiofrequency device.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with the patient and family to describe and discuss in detail the planned procedure. Review and update the patient's medical history. Perform a current physical examination. Reconcile medications and allergies. Discuss the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common complications. Review and obtain informed consent. Confirm planned site to apply radiofrequency technology. Provide a detailed description of the postoperative changes to the treated site and the expected dynamic changes in cosmesis as the wound matures. Examine and mark the nasal anatomy as well as the area of maximum lateral wall collapse during inspiration to identify the target treatment site. Evaluate the area of maximum collapse using the modified Cottle maneuver. Verify availability of all required instruments and supplies. Perform a time-out with the entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. Position the patient. Wash hands and don proper gloves, gown, and personal protective equipment. Drape the patient. Apply topical decongestant and anesthetic sprays to the nostrils, followed by a wait-time for them to take effect. Inject the ablation sites with local anesthetic very slowly, taking care not to expand the lateral nasal sidewall tissue, inject intravascularly, or create a hematoma from the angular artery in this location.

Description of Intra-Service Work: The radiofrequency handpiece is introduced into the caudal border of the upper lateral cartilage, and radiofrequency treatment is applied in three adjacent non-overlapping areas. The treatments are performed in both an active period and a cool-down period. Meticulous care is taken to perform this in a non-overlapping fashion. Hemostasis is carefully monitored and maintained during the procedure. The same procedure is then repeated on the opposite side.

Description of Post-Service Work: Monitor the patient for adequate hemostasis. Clean the prepared areas of the surgical sites. Dictate a procedure report. Reconcile discharge medications. Review the prescription drug monitoring database. Write postoperative orders, medications, and instructions. Talk with the family and patient regarding the procedure and findings. Reiterate convalescence instructions, precautions, follow-up appointments, expected postoperative course, signs and symptoms of complications, and review of the written postoperative instructions.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
30140	000	3.00	**RUC Time**

CPT Descriptor Submucous resection inferior turbinate, partial or complete, any method

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
31238	000	2.74	**RUC Time**

CPT Descriptor Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
15002	000	3.65	**RUC Time**	24,066

CPT Descriptor 1 Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
31622	000	2.53	**RUC Time**	52,315

CPT Descriptor 2 Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing, when performed (separate procedure)

Other Reference CPT Code	Global	Work RVU	Time Source
31295	000	2.70	**RUC Time**

CPT Descriptor Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); maxillary sinus ostium, transnasal or via canine fossa

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 37 **% of respondents:** 45.1 **%**

Number of respondents who choose 2nd Key Reference Code: 14 **% of respondents:** 17.0 **%**

TIME ESTIMATES (Median)

	CPT Code: 37X01	Top Key Reference CPT Code: 30140	2nd Key Reference CPT Code: **31238**
Median Pre-Service Time	23.00	43.00	18.00

Median Total Time	**53.00**	**78.00**	**53.00**
Other time if appropriate			

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	46%	46%	8%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	46%	54%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	8%	54%	38%

Physical effort required	8%	72%	20%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	46%	46%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	21%	36%	43%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	21%	72%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	36%	43%	21%
Physical effort required	28%	43%	29%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	28%	36%	36%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, Aerin Medical brought forward a Code Change Application requesting a new CPT code to report repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal

remodeling. The panel approved this request and created CPT code 37X01. This code is now being presented to the RUC for physician work and practice expense valuation. We are also presenting the related code 30468 Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s) which was initially valued in January of 2020 by the RUC, for reaffirmation. Please see the submitted letter requesting the RUC reaffirm the RUC / CMS approved values for that code.

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 4089 members from the AAO-HNS of those with sub-specialty designations of general otolaryngology, rhinology or facial plastics.

Key Reference Codes

The first KRS selected was CPT 30140 Submucous resection inferior turbinate, partial or complete, any method valued at 3.00 RVUs with a pre time of 43 / intra time of 20 / post time of 15, totaling 78 minutes. 37 respondents selected this as their primary KRS.

The second KRS selected was CPT 31238 Nasal/sinus endoscopy, surgical; with control of nasal hemorrhage valued at 2.74 RVUs with a pre time of 18 / intra time of 25 / post time of 10, totaling 53 minutes. 14 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU **2.70 and 20 minutes of intra service time**, based on a crosswalk to CPT 31295. Our expert panel felt this value which was close to our survey's 25th percentile, maintains relativity with 30468 and fits well related to other 000 otolaryngology codes within the fee schedule.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

This service is typically performed in the physician office setting. We acknowledge that the CCA indicated the typical site of services was hospital outpatient, however, the CCA (as referenced above) was submitted by Aerin medical and not our specialty. Our expert panel, therefore, disagrees with the CCAs assignment of hospital outpatient as the typical site of service and is correcting that with this recommendation for pre and post packages utilized in the physician office setting under local/topical anesthesia care.

Evaluation Time – We are recommending 17 minutes of evaluation time which less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 1 minutes of positioning time which is less than the survey median time, but consistent with the preservice package.

Scrub, Dress, Wait Time – We are recommending 5 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 23 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 7B Local Anesthesia/ Complex Procedure

Recommended time has been reduced to 10 minutes which is a decrease of 20 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 10 minutes, taking the lesser of surveyed time or the pre-service package time.***

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 30999

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 15000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on utilization data provided by Aerin medical for years 2018-2021 and assumes an increase in 2022 commensurate with the prior four years.

Specialty Otolaryngology Frequency 15000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 5,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the information provided above to estimate national volume and attributes 1/3 of the national volume for this service to Medicare aged patients.

Specialty Otolaryngology Frequency 5000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Skin

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 30140

FACILITY DIRECT PE INPUTS

CPT CODE(S): 30468, 37X01
SPECIALTY SOCIETY(IES): AAO-HNS
PRESENTER(S): R. Peter Manes, MD & Ari Wirtschafter, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
30468	Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)	000
37X01	Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling	000

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
30468	A 50-year-old male presents with chronic nasal obstruction affecting his activity level and sleep despite medical management. Examination reveals nasal valve collapse on normal inspiration relieved by Cottle maneuver. Patient undergoes bilateral absorbable nasal implants to support the upper and lower lateral nasal cartilages.
37X01	A 50-year-old male presents with chronic bilateral nasal airway obstruction that affects breathing and disturbs sleep. The patient is unresponsive to medical therapy and has nasal valve collapse on examination. The patient is referred for nasal valve collapse repair with low energy, temperature controlled subcutaneous remodeling with a radiofrequency device.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and facial plastics. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The current inputs for 30468 were utilized for reaffirming those inputs at this meeting. Code 30140 was used as well as for the reference code for new code 37X01

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   No.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

We are recommending clinical staff pre-time above the standard for 000 globals of 0 minutes. This is consistent with the PE approved in the January 2017 for the FESS family of codes and October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that non-facility staff are essential to completing diagnostic and referral forms and providing education and consent to the patient prior to the procedure. During the presentation of PE for these codes, the PE subcommittee discussed whether the requested inputs were sufficient or whether there was an oversight in valuing the PE for 30468 previously. Specifically, they questioned whether all time for "extensive use of clinical staff" standards when applied to 000 globals should be included for both of these codes. AAO-HNS recommended that the standard time for phone calls be included, but not the standard time for coordinating pre surgery services, as there was not clinical rationale to include it. The PE subcommittee agreed, and voted to approve compelling evidence based on prior error in valuation. Thus, three additional minutes were include for pre-surgery phone calls for both codes in the office and facility settings.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A	

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

N/A Facility	

   b. Service period (includes pre, intra and post):

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A Facility

c. Post-service period:

N/A Facility

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

a. If yes, please explain how the computer is used for this service(s).
b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

20. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

21. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 30468, 37X01**

SPECIALTY SOCIETY(IES): AAO-HNS

PRESENTER(S): R. Peter Manes, MD & Ari Wirtschafter, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
30468	Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)	000
37X01	Repair of nasal valve collapse with low energy, temperature-controlled (ie, radiofrequency) subcutaneous/submucosal remodeling	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
30468	A 50-year-old male presents with chronic nasal obstruction affecting his activity level and sleep despite medical management. Examination reveals nasal valve collapse on normal inspiration relieved by Cottle maneuver. Patient undergoes bilateral absorbable nasal implants to support the upper and lower lateral nasal cartilages.
37X01	A 50-year-old male presents with chronic bilateral nasal airway obstruction that affects breathing and disturbs sleep. The patient is unresponsive to medical therapy and has nasal valve collapse on examination. The patient is referred for nasal valve collapse repair with low energy, temperature controlled subcutaneous remodeling with a radiofrequency device.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, rhinology and facial plastics. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   The current inputs for 30468 were utilized for reaffirming those inputs at this meeting. Reference code 30140 was used as well as for the reference code for new code 37X01

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

   No.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

Otolaryngology is the dominant specialty for all sites of service. There is no data in the database at present due to these being new codes.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

We are recommending clinical staff pre-time above the standard for 000 globals of 0 minutes. This is consistent with the PE approved in the January 2017 for the FESS family of codes and October 2016 meeting for CPT 30140 Resection of Inferior Turbinate. The rationale for this time is that non-facility staff are essential to completing diagnostic and referral forms and providing education and consent to the patient prior to the procedure. During the presentation of PE for these codes, the PE subcommittee discussed whether the requested inputs were sufficient or whether there was an oversight in valuing the PE for 30468 previously. Specifically, they questioned whether all time for "extensive use of clinical staff" standards when applied to 000 globals should be included for both of these codes. AAO-HNS recommended that the standard time for phone calls be included, but not the standard time for coordinating pre surgery services, as there was not clinical rationale to include it. The PE subcommittee agreed, and voted to approve compelling evidence based on prior error in valuation. Thus, three additional minutes were included for pre-surgery phone calls for both codes in the office and facility settings.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Obtain vital signs (3-5) - *heart rate, blood pressure, temperature, oxygen saturation*

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Complete pre-service diagnostic and referral forms Provide pre-service education/obtain consent Conduct pre surgery phone calls

    b. Service period (includes pre, intra and post):

Greet patient, provide gowning, ensure appropriate medical records are available Obtain vital signs (3-5) - *heart rate, blood pressure, temperature, oxygen saturation* Prepare room, equipment and supplies Prepare, set-up and start IV, initial positioning and monitoring of patient Sedate/apply anesthesia Assist physician or other qualified healthcare professional---directly related to physician work time (100%) Monitor patient following procedure/service, multitasking 1:4 Clean room/equipment by clinical staff Clean surgical instrument package - Check dressings, catheters, wounds Review home care instructions, coordinate visits/prescriptions - *educate on what patient needs to do at home - activity, meds / confirm pharmacy, set up f/u appt.*

    c. Post-service period:

Conduct patient communications - *check in to see how the patient is doing.*

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Staff is there during the entirety of the procedure. They are directly involved in assisting throughout the procedure, handing off instruments to the physician, dabbing the treated area to avoid any collection of blood and acting to ease any anxiety the patient is experiencing through conversation and distraction techniques.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):
    N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:
    The radio frequency wand is needed to deliver the radio frequency to the nasal valve. It is used for only one patient at a time and disposed of after use.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    Yes, these are established packs SA045 and SA048

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

SA043	pack, cleaning, surgical instruments	12.61	pack
SA048	pack, minimum multi-specialty visit	5.02	pack

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:
    The console generates the radiofrequency that is delivered, via the wand, to the nasal valve.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

Estimated useful life is five years on this device.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

We selected "other formula" for line 134, Chair with headrest, reclining, exam. The reason for this is that it is the default formula with the monitoring time added to it. The patient is in this chair for the entire procedure (pre/intra/post) as well as the one hour of monitoring time. ENT offices do not have waiting rooms or stretchers for monitoring, so the patient remains in the exam chair during this time.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: Site of Service Anomaly – 2019

January 2022

Percutaneous Nephrolithotomy – Tab 8

In October 2019, CPT code 50081 was identified via the site of service anomaly screen because it is performed less than 50% of the time in the inpatient setting but includes inpatient hospital E/M services within the global period based on 2016-2018 Medicare claims data. The RUC recommended to survey for the January 2020 RUC meeting. In January 2020, the specialty societies requested that CPT codes 50080 and 50081 be referred to the CPT Editorial Panel to update the descriptors to remove the phrase "with or without dilation", to describe the work more clearly in current practice. In September 2021, the CPT Editorial Panel revised CPT codes 50080 and 50081 to describe percutaneous nephrostolithotomy by removing "with or without dilation" nomenclature, to differentiate simple and complex services more clearly and to bundle the work of nephrostomy tube placement and image guidance, when performed. In January 2022, CPT codes 50080 and 50081 were surveyed for the RUC meeting. It is important to note that both codes 50080 and 50081 are currently Harvard-valued.

50080 ***Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; simple (eg, stone[s] up to 2 cm in a single location of kidney or renal pelvis, nonbranching stones)***
The RUC reviewed the survey results from 276 urologists and recommends a work RVU of 13.50 based on a direct work RVU crosswalk to MPC code 15730 *Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)* (work RVU = 13.50- and 90-minutes intra-service time, 255.5 minutes total time), which maintains relativity within the family and has identical intra-service time and similar intensity and total time. The RUC recommends 36 minutes of pre-service evaluation time, 3 minute positioning time, 10 minutes scrub/dress/wait time, 90 minutes intra-service time, and 40 minutes immediate post-service time, 0.5-99238 discharge visit, 2-99213 office visits, and 244 minutes total time. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical.

The RUC also noted that CPT Editorial Panel revised this code to newly bundle in the additional work of nephrostomy tube placement and image-guidance, when performed. Under the previous coding structure, these services were separately reported. In addition, the RUC noted that this code was last reviewed as part of the Harvard study, nearly 30 years ago, and this is the first time it is being valued by the RUC. The RUC recommendation accurately accounts for the site of service, decrease in post-service work, and subsequent decrease in total time from the current value and is appropriately lower than the survey 25th percentile given these changes. Additionally, the RUC discussed the time packages and designation as a difficult patient. It was the consensus that the patient is generally considered difficult due to multiple comorbidities (e.g., obesity, chronic kidney disease, hypertension, diabetes, etc.) which increases the complexity and the level of medical decision making. A patient can have a smaller stone but as the stone increases in size, it becomes an emergent issue that requires immediate intervention. There may be a current or developing infection of the renal collecting system due to the stone or surrounding peri-nephric tissues in addition to the increased possibility of infection, including urosepsis, post-procedure due to stone manipulation. Moreover, the intra-service intensity is quite high as the physician is

handling the scope the entire time and there is potential to perforate the surrounding arteries and blood vessels. It is also important to differentiate this procedure from a transurethral approach which is typically reserved for less complex cases with smaller stones. As the stone size increases, the complexity increases, and the patient becomes a candidate for this procedure.

For further support, the RUC compared CPT code 50080 to MPC code 53440 *Sling operation for correction of male urinary incontinence (eg, fascia or synthetic)* (work RVU = 13.36, 90 minutes intra-service time and 248 minutes total time) and noted that this MPC code appropriately supports the survey code recommendation with identical intra-service time and similar value, total time, intensity, and post-service work. **Therefore, the RUC recommends a work RVU of 13.50 for CPT code 50080.**

50081 Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; complex (eg, stone[s] > 2 cm, branching stones, stones in multiple locations, ureter stones, complicated anatomy)
The RUC reviewed the survey results from 277 urologists and recommends a work RVU of 22.00 based on the survey 25th percentile which maintains relativity within the family. The RUC recommends 40 minutes of pre-service evaluation time, 3-minute positioning time, 10 minutes scrub/dress/wait time, 140 minutes intra-service time, and 44 minutes immediate post-service time, 0.5-99238 discharge visit, 2-99213 office visits, and 302 minutes total time. Survey respondents indicated, and the RUC concurred, that an overnight stay and a same-day post-operative hospital visit are typical.

The RUC also noted that CPT Editorial Panel revised this code to newly bundle in the additional work of nephrostomy tube placement and image-guidance, when performed. Under the previous coding structure, these services were separately reported. In addition, the RUC noted that this code was last reviewed as part of the Harvard study, nearly 30 years ago, and this is the first time being valued by the RUC. Over the years, the physician work to perform this service has evolved and become more efficient, although much more intense given new approaches and technology. Therefore, any comparison to the intensity of the current valuation is unreliable, as the work is significantly different from the Harvard-valuation. Throughout the discussion of the code family, the RUC agreed that this procedure is performed on a difficult patient population. The urologists familiar with performing this procedure would describe a difficult patient as one with multiple comorbidities that have the potential to lead to complications. As discussed in the previous recommendation for CPT code 50080, there is considerable complexity that is added as the size of the stone increases. For this procedure, the patient becomes a candidate when the stone or stone(s) are greater than 2 cm, therefore adding a significant opportunity for possible complications such as infections and/or perforations of surrounding anatomy. The additional intensity and medical decision making far exceeds that of CPT code 50080 as there could be multiple stones in multiple locations and/or branching stones making the removal more anatomically difficult.

For additional support, the RUC compared CPT code 50081 to codes 58573 *Laparoscopy, surgical, with total hysterectomy, for uterus greater than 250 g; with removal of tube(s) and/or ovary(s)* (work RVU = 20.79, 130 minutes intra-service time and 281 minutes total time) and 92987 *Percutaneous balloon valvuloplasty; mitral* valve (work RVU = 23.38, 150 minutes intra-service time and 329 minutes total time) which appropriately bracket the survey code recommendation. The RUC concluded the survey was robust and the 25th percentile appropriately accounts for the physician work required to perform this service. **The RUC recommends a work RVU of 22.00 for CPT code 50081.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs.
The RUC recommends the direct practice expense inputs as submitted by the specialty society.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Urinary System **Kidney**				
~~Nephrolithotomy is the surgical removal of stones from the kidney, and pyelolithotomy is the surgical removal of stones from the renal pelvis. This section refers to the removal of stones from the kidney or renal pelvis from using a percutaneous antegrade approach. The work of b~~Breaking and removing stones is separate from the work of accessing the kidney (ie, 50040, 50432, 50433, 52334), accessing the kidney with dilation of the tract to a size large enough to accommodate an endoscope for used in an endourologic procedure (ie, 50437), or dilation of a previously established tract to a size large enough to accommodate an endoscope for used in an endourologic procedure (ie, 50436). These procedures include work for the antegrade removal of stones in the calyces, renal pelvis, and/or ureter along with the antegrade placement of catheters, stents, and tubes, but does not include work retrograde placement of catheters, stents, and tubes, performed in a retrograde manner.			
Incision				
Nephrolithotomy is the surgical removal of stones from the kidney, and pyelolithotomy is the surgical removal of stones from the renal pelvis. This section refers to the removal of stones from the kidney or renal pelvis ~~from~~ using a percutaneous antegrade approach. ~~The work of b~~Breaking and removing stones is separate from ~~the work of~~ accessing the kidney (ie, 50040, 50432, 50433, 52334), accessing the kidney with dilation of the tract ~~to a size large enough~~ to accommodate an endoscope ~~for~~ used in an endourologic procedure (ie, 50437), or dilation~~g~~ of a previously established tract to ~~a size large enough to~~ accommodate an endoscope ~~for~~ used in an endourologic procedure (ie, 50436). These procedures include ~~work for~~ the antegrade removal of stones in the calyces, renal pelvis, and/or ureter along with the antegrade placement of catheters, stents, and tubes, but do~~es~~ not include ~~work~~ retrograde placement of catheters, stents, and tubes~~, performed in a retrograde manner~~.			
Code 50080 describes nephrolithotomy or pyelolithotomy using a percutaneous antegrade approach using endoscopic instruments to break and remove kidney stones 2 cm or smaller.				
Code 50081 includes the elements of 50080, but is reported for stones larger than 2 cm, branching, stones in multiple locations, ureteral stones, or in patients with complicated anatomy.				
~~Codes 50080, 50081 do not include c~~Creation of percutaneous access or dilation~~ng~~ of the tract to ~~a large enough size to~~ accommodate ~~the~~ large endoscopic instruments used in ~~the~~ stone removal (50436, 50437) ~~procedure~~ are not included in 50080, 50081~~, as the work for performing those procedures should~~ and may be reported separately, if performed. Codes 50080, 50081 include placement of any stents or drainage catheters that remain indwelling after the procedure.				
Report ~~O~~one unit of 50080 or 50081 per side (ie, per kidney) regardless of the number of stones broken and/or removed or locations of the stones. ~~If 50080 is performed~~ For bilateral~~ly~~ procedure, report 50080 or 50081 ~~is performed bilaterally then append~~ with modifier 50.~~; if~~ When				

50080 is performed on one side and 50081 is performed on the ~~other~~ contralateral side, modifier ~~-~~50 is not applicable. ~~The additional work of p~~Placement~~ing~~ of additional accesses into the kidney, if needed, and ~~the work of removing~~ removal~~ing~~ of stones through other approach~~(es)~~ (eg, ~~such as~~ open or retrograde)~~, can~~ may be reported separately, if performed.

		additional new access into the kidney, use 50437 for each new access that is then dilated for endourologic procedure) (For removal of stone without lithotripsy, use 50561) (For cystoscopy with insertion of ureteral guidewire through kidney to establish a percutaneous nephrostomy, retrograde, use 52334)		

Introduction
Renal Pelvis Catheter Procedures
Other Introduction (Injection/Change/Removal) Procedures

#50436 *Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, with postprocedure tube placement, when performed;*

 # 50437 *including new access into the renal collecting system*

(For dilation of an existing percutaneous access for endourologic procedure with a new access into the collecting system, use 50437; for additional new access into the kidney, use 50437 for each new access that is then dilated for endourologic procedure)

(For nephrolithotomy ~~nephrostolithotomy~~, see 50080, 50081)

(For retrograde percutaneous nephrostomy, use 52334)

(For endoscopic surgery, see 50551-50561)

(Do not report 50436, 50437 in conjunction with ~~50080, 50081,~~ 50382, 50384, 50430, 50431, 50432, 50433, 52334, 74485)

Bladder
Transurethral Surgery
Ureter and Pelvis

52334 *Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde*

(For percutaneous nephrolithotomy ~~nephrostolithotomy~~, see 50080, 50081; for establishment of percutaneous nephrostomy, see 50432, 50433)

(For cystourethroscopy, with ureteroscopy and/or pyeloscopy, see 52351-52356)

(For cystourethroscopy with incision, fulguration, or resection of congenital posterior urethral valves or obstructive hypertrophic mucosal folds, use 52400)

(Do not report 52334 in conjunction with 50437, 52000, 52351)

Diagnostic Radiology (Diagnostic Imaging)
Vascular Procedures
Transcatheter Procedures

75984 *Change of percutaneous tube or drainage catheter with contrast monitoring (eg, genitourinary system, abscess), radiological supervision and interpretation*

(For percutaneous replacement of gastrostomy, duodenostomy, jejunostomy, gastro-jejunostomy, or cecostomy [or other colonic] tube including fluoroscopic imaging guidance, see 49450-49452)

(To report exchange of a percutaneous nephrostomy catheter, use 50435)

(For percutaneous cholecystostomy, use 47490)

(For percutaneous biliary procedures, including radiological supervision and interpretation, see 47531- 47544)

(For percutaneous nephrolithotomy ~~nephrostolithotomy~~ or pyelolithotomy ~~pyelostolithotomy~~, see 50080, 50081)

(For removal and/or replacement of an internally dwelling ureteral stent via a transurethral approach, see 50385- 50386)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:50080 Tracking Number U1 Original Specialty Recommended RVU: **16.00**
Presented Recommended RVU: **16.00**
Global Period: 090 Current Work RVU: **15.74** RUC Recommended RVU: **13.50**

CPT Descriptor: Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy, stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; simple (eg, stone[s] up to 2 cm in single location of kidney or renal pelvis, nonbranching stones)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old male with a 1.8 cm calculus in the lower pole of the kidney undergoes a percutaneous nephrolithotomy (initial access and dilation are reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 96% , In the ASC 4%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 8% , Overnight stay-less than 24 hours 70% , Overnight stay-more than 24 hours 22%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 90%

Description of Pre-Service Work: The surgeon will review results of preadmission testing including laboratory tests and urologic imaging; review and update H&P; write orders for preoperative medications including antibiotics and prophylactic DVT medication, and meet with anesthesiologist, radiology technician and other qualified health care professionals to review planned procedure. The surgeon will also meet with patient and family to review the procedure and postoperative management, explain operative risks and benefits, and obtain informed consent. Required equipment, instruments and supplies are confirmed as available and operational. After induction of anesthesia in the supine position, the surgeon assists with repositioning the patient prone for the procedure; including padding of bony prominences, adjusting the head and extremities as needed, and positioning the equipment and instruments. The patient will be marked for incision and prepped and draped. The surgeon will scrub and gown and perform a surgical time out with operating surgical team.

Description of Intra-Service Work: A rigid nephroscope is inserted in through the previously placed Amplatz sheath and the stone is identified. The hand-held lithotripter is inserted through the nephroscope and the stone is fragmented as much as possible. Fragments are extracted with grasping forceps and/or suction. Once the limits of rigid nephroscopy have been reached (due to angulation) a flexible nephroscope is inserted to access calyces inaccessible with the rigid nephroscope. Calyceal stones are removed with a stone basket or fragmented with a laser and then the fragments are removed with a stone basket. Antegrade ureteroscopy is performed to ascertain there are no fragments is the ureter. The flexible ureteroscope is passed through the access sheath into the calyx and into the renal pelvis. The ureteropelvic junction is identified and the ureteroscope is passed through it into the ureter. The entire length of the ureter is assessed for injury from passage of guide wires/catheters. The ureteroscope is subsequently withdrawn. At the completion of the nephrolithotomy the nephroscope is removed. During the entire procedure the operating surgeon tracks the use of fluids and pressures in real time to ensure no fluid mismatch. The Amplatz sheath is removed. Fluoroscopic images are obtained over the ipsilateral lung to ascertain that there is no evidence of a pneumothorax or hydrothorax. A nephrostomy tube is place. A nephrostogram is performed to ascertain proper positioning of the nephrostomy tube.

Description of Post-Service Work: Immediate Postop work: Surgical drapes are removed, and the patient is returned to supine position. The surgeon waits for the anesthesiologist to awaken the patient. The patient is transferred from the operating table to a stretcher. The patient is accompanied to the recovery area, and assistance is provided in moving the

patient to the recovery area bed. The procedure and expected care are reviewed with the recovery room nursing staff. The procedure is discussed with the patient in the recovery room when awake. Procedure and outcome are discussed with family in waiting area. A brief operative note is written. A postoperative note is written in recovery room. An operative report is dictated, and a copy is sent to the referring physician(s). The patient is discharged from the recovery room. Patient-care orders are written for care of the nephrostomy tube, pain management, dietary restrictions, lab tests, and imaging. Floor care is discussed with nursing staff. The patient is seen the day of surgery. Their nephrostomy tube drainage is assessed for the degree of gross hematuria. The patient is assessed for bleeding for the incision around the nephrostomy tube. Pain control is assessed and appropriate orders to adjust pain medications and antispasmodics are written. Post-operative chest X-Ray as well as post-operative labs are reviewed. The operation is reviewed with the patient and expected course of recovery reviewed.

Postop Day 1 Facility: Interval chart notes are reviewed. Interval labs and imaging is reviewed. The surgeon examines the patient and nephrostomy tube. The need for DVT prophylaxis and beta blocker is assessed and ordered as required. The need for antibiotics and pain medication is assessed and ordered as required. Orders for patient activity and diet are written. Patient progress notes are charted. Patient and family questions are answered. Nursing and/or other staff questions are answered.
Postop Day 2 Facility Discharge Management: Interval chart notes are reviewed. The patient is examined. Patient and family questions are answered. Pain score is assessed. Home restrictions (e.g., diet, activity, bathing) are discussed with patient and family members. Education on nephrostomy tube care is reviewed... Medications are reconciled, and orders for discharge medications are written. All appropriate medical records are completed, including day-of-discharge progress notes, discharge summary, discharge instructions, and insurance forms.
Postop Office Visit 1: The patient is questioned about postoperative course, including query of fever, nausea, vomiting, pain, bleeding, and bladder function, and bowel function, shortness of breath, lower extremity edema, and neurologic dysfunction. The patient is examined. The nephrostomy tube is removed if appropriate. Lab results are reviewed and discussed with the patient. Voiding activity is thoroughly reviewed, with emphasis on completion of micturition, frequency, urgency, hematuria, nocturia, and dysuria. Defecatory function is reviewed. The patient is counseled regarding progression of activities and diet.

Postop Office Visit 2: The patient is questioned about postoperative course, including query of fever, nausea, vomiting, pain, bleeding, and bladder function, and bowel function, shortness of breath, lower extremity edema, and neurologic dysfunction. The patient is examined including nephrostomy tube site. Voiding activity is thoroughly reviewed, with emphasis on completion of micturition, frequency, urgency, hematuria, nocturia, and dysuria. Defecatory function is reviewed. The patient is counseled regarding progression of activities and diet. Pathology and lab results are reviewed and discussed with the patient. Stone prevention strategies are viewed in detail. Laboratory orders for metabolic evaluation are ordered. Imaging studies for future visit are ordered.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richards, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	50080					
Sample Size:	5000	**Resp N:**	276			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	15%	57%	28%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 276 urologists and determined that the survey 25th percentile work RVU of 16.00 was appropriate given the physician work associated with the procedure. AUA's RUC advisors determined that the survey intra-service time of 90 minutes is appropriate for this procedure.

CPT code 50080 has never been valued by the RUC and is currently Harvard valued. Therefore, the AUA's advisors determined that it is appropriate to recommend a work RVU value slightly higher than the current work RVU value of 15.74 despite a reduction in total time and intra-service time given the previous flawed valuation methodology which likely also did not take into account factors such as a complex patient population and the intensity of the procedure. The society added 20 minutes of intra-service time associated with a 99232 subsequent hospital visit to the immediate post-service time per CMS' 23-hour stay outpatient surgical services with subsequent hospital visits policy. This procedure is typically performed in the outpatient setting but generally requires an overnight stay and subsequent hospital visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 50080

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 9800
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare utilization data extrapolated using National Health Expenditures breakdown of payer breakdown for hospital care.

Specialty Urology Frequency 9800 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,750
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare utilization.

Specialty Urology Frequency 2750 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:50081 Tracking Number U2 Original Specialty Recommended RVU: **22.00**
Presented Recommended RVU: **22.00**
Global Period: 090 Current Work RVU: **23.50** RUC Recommended RVU: **22.00**

CPT Descriptor: Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy, stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; complex (eg, stone[s] > 2 cm, branching stones, stones in multiple locations, ureter stones, complicated anatomy)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 66-year-old male with a staghorn (branched) calculus filling the entire renal pelvis and most calyces undergoes a percutaneous nephrolithotomy (Initial access and dilation are reported separately).

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 98% , In the ASC 1%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 3% , Overnight stay-less than 24 hours 52% , Overnight stay-more than 24 hours 46%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 90%

Description of Pre-Service Work: The surgeon will review results of preadmission testing including laboratory tests and urologic imaging; review and update H&P; write orders for preoperative medications including antibiotics and prophylactic DVT medication, and meet with anesthesiologist, radiology technician and other qualified health care professionals to review planned procedure. The surgeon will also meet with patient and family to review the procedure and postoperative management, explain operative risks and benefits, and obtain informed consent. Required equipment, instruments and supplies are confirmed as available and operational. After induction of anesthesia in the supine position, the surgeon assists with repositioning the patient prone for the procedure; including padding of bony prominences, adjusting the head and extremities as needed, and positioning the equipment and instruments. The patient will be marked for incision and prepped and draped. The surgeon will scrub and gown and perform a surgical time out with operating surgical team.

Description of Intra-Service Work: A rigid nephroscope is inserted in through the previously placed sheath and the large stone is identified. The hand-held lithotripter is inserted through the nephroscope and the stone is fragmented as much as possible. Fragments are extracted with grasping forceps and/or suction. Once the limits of rigid nephroscopy have been reached (due to angulation) the additional nephrostomy access into the kidney is utilized in a similar fashion. Rigid nephroscopy of calyceal and remaining renal pelvis stone is again carried out. Once this is complete a flexible a nephroscope is inserted to access calyces inaccessible with the rigid nephroscope. Calyceal stones are removed with a stone basket or fragmented with a laser and then the fragments are removed with a stone basket. Antegrade ureteroscopy is performed to ascertain there are no fragments is the ureter. The flexible ureteroscope is passed through the access sheath into the calyx and into the renal pelvis. The ureteropelvic junction is identified and the ureteroscope is passed through it into the ureter. The entire length of the ureter is assessed for injury from passage of guide wires/catheters. The ureter is assessed for primary stones or stone fragments. Small fragments are removed with a stone basket. For larger stones a laser fiber is passed and the stone(s) are fragmented. Small fragments are irrigated down the length of the ureter or removed with a stone basket. Once the ureter is deemed to be free of stone fragments the ureteroscope is withdrawn. The ureteroscope is subsequently withdrawn. At the completion of the nephrolithotomy the nephroscope is removed. During the entire procedure the operating surgeon tracks the use of fluids and pressures a real time to ensure no fluid mismatch. The Amplatz sheath is removed. Fluoroscopic images are obtained over the ipsilateral lung to ascertain that there is no evidence of a

pneumothorax or hydrothorax. A nephrostomy tube is placed in each access. A nephrostogram is performed to ascertain proper positioning of the nephrostomy tube(s).

Description of Post-Service Work: Immediate Postop work: Surgical drapes are removed, and the patient is returned to supine position. The surgeon waits for the anesthesiologist to awaken the patient. The patient is transferred from the operating table to a stretcher. The patient is accompanied to the recovery area, and assistance is provided in moving the patient to the recovery area bed. The procedure and expected care are reviewed with the recovery room nursing staff. The procedure is discussed with the patient in the recovery room when awake. Procedure and outcome are discussed with family in waiting area. A brief operative note is written. A postoperative note is written in recovery room. An operative report is dictated, and a copy is sent to the referring physician(s). The patient is discharged from the recovery room. Patient-care orders are written for care of the nephrostomy tube, pain management, dietary restrictions, lab tests, and imaging. Floor care is discussed with nursing staff. The patient is the seen the day of surgery. Their nephrostomy tube drainage is assessed for the degree of gross hematuria. The patient is assessed for bleeding for the incision around the nephrostomy tube. Pain control is assessed and appropriate orders to adjust pain medications and antispasmodics are written. Post-operative chest X-Ray as well as post-operative labs are reviewed. The operation is reviewed with the patient and expected course of recovery reviewed.

Postop Day 1 Facility: Interval chart notes are reviewed. Interval labs and imaging is reviewed. The surgeon examines the patient and nephrostomy tube. The need for DVT prophylaxis and beta blocker is assessed and ordered as required. The need for antibiotics and pain medication is assessed and ordered as required. Orders for patient activity and diet are written. Patient progress notes are charted. Patient and family questions are answered. Nursing and/or other staff questions are answered.
Postop Day 2 Facility Discharge Management: Interval chart notes are reviewed. The patient is examined. Patient and family questions are answered. Pain score is assessed. Home restrictions (eg, diet, activity, bathing) are discussed with patient and family members. Education on nephrostomy tube care is reviewed. Medications are reconciled, and orders for discharge medications are written. All appropriate medical records are completed, including day-of-discharge progress notes, discharge summary, discharge instructions, and insurance forms.
Postop Office Visit 1: The patient is questioned about postoperative course, including query of fever, nausea, vomiting, pain, bleeding, bladder function, bowel function, shortness of breath, lower extremity edema, and neurologic dysfunction. The patient is examined. The nephrostomy tube is removed if appropriate. Lab results are reviewed and discussed with the patient. Voiding activity is thoroughly reviewed, with emphasis on completion of micturition, frequency, urgency, hematuria, nocturia, and dysuria. Defecatory function is reviewed. The patient is counseled regarding progression of activities and diet.

Postop Office Visit 2: The patient is questioned about postoperative course, including query of fever, nausea, vomiting, pain, bleeding, bladder function, bowel function, shortness of breath, lower extremity edema, and neurologic dysfunction. The patient is examined including nephrostomy tube site. Voiding activity is thoroughly reviewed, with emphasis on completion of micturition, frequency, urgency, hematuria, nocturia, and dysuria. Defecatory function is reviewed. The patient is counseled regarding progression of activities and diet. Pathology and lab results are reviewed and discussed with the patient. Stone prevention strategies are viewed in detail. Laboratory orders for metabolic evaluation are ordered. Imaging studies for future visit are ordered.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richards, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	50081					
Sample Size:	5000	**Resp N:**	277			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

Physical effort required	7%	23%	70%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	45%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 277 urologists and determined that the survey 25th percentile work RVU of 22.00 is appropriate given the physician work associated with the procedure. The AUA's advisors noted that CPT code 50081 is Harvard valued and that this flawed methodology likely does not take into account variables such as a complex patient population or the intensity of the procedure. The society added 20 minutes of intra-service time associated with a 99232 subsequent hospital visit to the immediate post-service time per CMS' 23-hour stay outpatient surgical services with subsequent hospital visits policy. This procedure is typically performed in the outpatient setting but generally requires an overnight stay and subsequent hospital visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
50080	Percutaneous nephrolithotomy or pyelolithotomy, lithotripsy, stone extraction, antegrade ureteroscopy, antegrade stent placement and nephrostomy tube placement, when performed, including imaging guidance; simple (eg, stone[s] up to 2 cm in single location of kidney or renal pelvis, nonbranching stones)	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
50080	A 68-year-old male with a 1.8 cm calculus in the lower pole of the kidney undergoes a percutaneous nephrolithotomy (Initial access and dilation are reported separately).

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA's RVS Committee Expert Panel reviewed the survey data and time recommendations for CPT code 50080 and updated the direct PE inputs accordingly using standard 090-day global period clinical staff time inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   50080

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

   b. Service period (includes pre, intra and post):

   c. Post-service period:

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes – SA048 and SA054

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

SA048 – Pack, Minimum Specialty Visit (Unit price $5.02): Paper, exam table (7 feet); Gloves, non-sterile (2 pair); gown, patient (1 item); pillow case (1 item); cover, thermometer probe (1 item).

SA054 – Pack, Post-op Incision Care (Unit price $4.62): Kit, suture removal (1 kit); Betadine (10 ml); gauze, sterile, 4in X 4in (2 items); gloves, sterile (1 pair); steri-strip (6 strip uou) (2 items); swab-pad, alcohol (2 items); tape, surgical paper 1in (Micropore) (12 inches); tincture of benzoin, swab (1 item).

SA031 – Kit, suture removal (Purchase price $1.64)

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

EQ168 light, exam; and EF023 table, exam

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

20. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

21. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition to those revisions, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

January 2022

Laparoscopic Simple Prostatectomy – Tab 9

In October 2021, the CPT Editorial Panel added CPT code 558XX *Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed,* to describe laparoscopic simple prostatectomy. The family of four codes pertaining to surgical prostatectomy and laparoscopy were surveyed for the January 2022 RUC meeting.

55821 ***Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages***
The RUC reviewed the survey results from 144 urologists and recommends a work RVU of 15.18 for CPT code 55821. The specialty society indicated that the survey 25th percentile work RVU of 20.00 overestimated the typical physician work for this procedure and, therefore, recommends a direct crosswalk to 54410 *Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session* (work RVU = 15.18, 120 minutes of intra-service time, and 329 minutes of total time). These servivces have the same intra-service time, as well as similar total time and intensity of physician work. The RUC recommends 33 minutes of pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub/dress/wait time, 120 minutes of intra-service time, 25 minutes of immediate post-service time, 1-99232, 1-99238, and 2-99213 post-operative visits. This major surgery, which involves an open approach, is typically performed in the inpatient setting (70% inpatient for 2020 Medicare claims).

For additional support, the RUC referenced MPC codes 52649 *Laser enucleation of the prostate with morcellation, including control of postoperative bleeding, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, internal urethrotomy and transurethral resection of prostate are included if performed)* (work RVU = 14.56, 120 minutes intra-service time, and 279 minutes total time) which requires slightly less total time than the surveyed code and 60500 *Parathyroidectomy or exploration of parathyroid(s);* (work RVU = 15.60, 120 minutes of intra-service time, and 313 minutes of total time) which is somewhat more intense to perfrom. The RUC concluded that these codes accurately bracket the surveyed code and support the recommended work RVU of 15.18. **The RUC recommends a work RVU of 15.18 for CPT code 55821.**

55831 ***Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); retropubic, subtotal***
The RUC reviewed the survey results from 139 urologists and recommends a work RVU of 15.60 for CPT code 55831. The specialty society indicated that the survey 25th percentile work RVU of 20.00 overestimated the typical physician work for this procedure, and therefore recommends a direct crosswalk to MPC code 60500 *Parathyroidectomy or exploration of parathyroid(s);* (work RVU = 15.60, 120 minutes of intra-service time, and 313 minutes of total time). These services have the same intra-service time, with similar total time and intensity.

The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes positioning time, 10 minutes scrub/dress/wait time, 120 minutes of intra-service time, 25 minutes of immediate post-service time, 1-99232, 1-99238, and 2-99213 post-operative visits. Differences in operative approach and technique add to the complexity and intensity of the procedure for CPT code 55831. This procedure involves a retropubic approach (behind the pubis) where an incision is made on top of the prostate and the enlarged center portion of the prostate is removed without opening the bladder, which is anatomically more difficult to perform than the suprapubic approach (over the pubis) used in CPT code 55821. The retropubic approach in CPT code 55831 requires primary ligation of a major complex of blood vessels near the prostate, including the dorsal vascular complex (DVC); the blood vessels are controlled in a more technically difficult manner, and thus an increased work RVU for the retropubic approach is appropriate. This major surgery, which involves an open approach, is typically performed in the inpatient setting (80% inpatient for 2020 Medicare claims).

For additional support, the RUC referenced MPC code 54410 *Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session* (work RVU = 15.18, 120 minutes of intra-service time, and 329 minutes of total time) and CPT code 49653 *Muscle, myocutaneous, or fasciocutaneous flap; head and neck with named vascular pedicle (ie, buccinators, genioglossus, temporalis, masseter, sternocleidomastoid, levator scapulae)* (work RVU = 15.68, 120 minutes of intra-sevice time, and 305 minutes total time). The RUC recognized that these two codes have an identical amount of intra-service time when compared to the surveyed code and appropriately bracket the RVU recommendation of 15.60, further supporting the relativity among similar services in the MFS. **The RUC recommends a work RVU of 15.60 for CPT code 55831.**

55866 ***Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed***
The RUC reviewed the survey results from 190 urologists and recommends a work RVU of 22.46 for CPT code 55866. The RUC determined that the survey 25th percentile work RVU of 25.18 somewhat overestimated the typical physician work for this procedure, and therefore, recommends a direct crosswalk to CPT code 35606 *Bypass graft, with other than vein; carotid-subclavian* (work RVU = 22.46, 145 minutes of intra-service time, and 414 minutes of total time). The RUC recommends 40 minutes of pre-service evaluation time, 15 minutes positioning time, 12 minutes scrub/dress/wait time, 180 minutes of intra-service time, 50 minutes of immediate post-service time, 1/2-99238 and 2-99213 post-operative visits. This service is typically provided in the outpatient hospital setting. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical.

The typical patient for this service is a 48-year-old male diagnosed with prostate cancer who elects robotic-assisted laparoscopic radical prostatectomy. CPT code 55866 requires more time and physician work than CPT codes 55821 and 55831 due to more complex preoperative positioning for a retropubic radical prostatectomy, set-up for laparoscopic robotic assistance, and increased intra-service work related to nerve sparing and urethral reconstruction to prevent long-term complications for cancer patients (such as incontinence and erectile dysfunction). During the procedure, the nonautonomous robotic assistance requires constant surgical input at the hand of the surgeon, which increases technical difficulty. Given the enlarged prostate, it is imperative for the surgeon to carefully spare the surrounding nerves and urethral sphincter muscles when removing the entire prostate and related tissue. Moreover, the significant reconstructive component associated with this service is the reconnection of the bladder neck to the urethra, which needs to be conducted carefully and completely to ensure proper healing and long-term function. Removing the entire prostate with robotic assistance, and the complexity of nerve sparing when operating with a cancerous prostate, increases the medical complexity and intensity of this procedure compared to the other surgical prostatectomy codes in this family.

The RUC compared the surveyed code to CPT code 35304 *Thromboendarterectomy, including patch graft, if performed; tibioperoneal trunk artery* (work RVU = 24.60, intra-service time of 180 minutes, total time of 422 minutes) and noted that both services have an identical amount of intra-service time, whereas the reference code typically involves more total time. The RUC also compared the surveyed code to the second top key reference service 50543 *Laparoscopy, surgical; partial nephrectomy* (work RVU = 27.41, 240 minutes of intra-service time, and 557 minutes total time) which requires much more phyisican work and time to perform.

For additional support, the RUC referenced CPT code 43279 *Laparoscopy, surgical, esophagomyotomy (Heller type), with fundoplasty, when performed* (work RVU = 22.10, intra-service time of 150 minutes, total time of 404 minutes) and noted that the survey code typically involves 30 more minutes of intra-service time, whereas the reference code involves more total time. The RUC determined that CPT code 55866 is appropriately bracketed by these codes and maintains relativity within the code family and MFS. **The RUC recommends a work RVU of 22.46 for CPT code 55866.**

558XX *Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed*

The RUC reviewed the survey results from 166 urologists and recommends a work RVU of 19.53 for CPT code 558XX. The RUC determined that the survey 25th percentile work RVU of 22.00 was too high compared to the radical laparoscopic prostatectomy, CPT code 55866. The RUC recommends a direct crosswalk to CPT code 42420 *Excision of parotid tumor or parotid gland; total, with dissection and preservation of facial nerve* (work RVU = 19.53, 180 minutes of intra-service time, and 383 minutes of total time). The RUC recommends 40 minutes of pre-service evaluation time, 8 minutes positioning time, 11 minutes scrub/dress/wait time, 180 minutes of intra-service time, 50 minutes of immediate post-service time, 1/2-99238 and 2-99213 post-operative visits. This service is typically provided in the outpatient hospital. Survey respondents indicated, and the RUC concurred, that an overnight stay and same-day post-operative hospital visit are typical.

The typical patient for this service is a 65-year-old male who is symptomatic due to obstruction enlargement and elects to undergo laparoscopic simple suprapubic prostatectomy. Like CPT code 55866, additional pre-service, intra-service, and post-service time is required for CPT code 558XX when compared to family codes 55821 and 55831. For this procedure, the increased pre-service time is attributable to more complex preoperative work wherein the arms are tucked (identical to CPT codes 55821 and 55831), which requires careful padding to avoid compression injuries or neuropathies); additionally, the legs are placed in stirrups for dorsal lithotomy positioning. More intra-service time, along with a longer postoperative recovery time, is required for the set-up and utilization of laparoscopic robotic assistance. However, when compared to CPT code 55866, the surveyed procedure requires slightly less pre-service time, as it is a simple subtotal laparoscopic prostatectomy as opposed to a retropubic radical approach. The RUC determined that the physician work and time maintain relativity within the surgical prostatectomy code family.

For additional support, the RUC referenced MPC code 55880 *Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (HIFU), including ultrasound guidance* (work RVU = 17.73, 180 minutes of intra-service time, and 373 minutes total time) and CPT code 60650 *Laparoscopy, surgical, with adrenalectomy, partial or complete, or exploration of adrenal gland with or without biopsy, transabdominal, lumbar or dorsal* (work RVU = 20.73, 180 minutes of intra-service time, and 384 minutes of total time). The RUC determined that CPT code 558XX is appropriately bracketed by these codes and maintains relativiety within the code family and MFS. **The RUC recommends a work RVU of 19.53 for CPT code 558XX.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made minor modifications as presented by the specialty. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Work Neutrality
The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Prostate Excision				
(f)55821	Y1	Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages	090	15.18
(f)55831	Y2	retropubic, subtotal (For laparoscopy, surgical prostatectomy, simple subtotal, use 558XX)	090	15.60
Laparoscopy				
(f)55866	Y3	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed (For open procedure, use 55840) (For laparoscopy, surgical prostatectomy, simple subtotal, use 558XX)	090	22.46
●558XX	Y4	Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed (For open subtotal prostatectomy, see 55821, 55831)	090	19.53

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55821 Tracking Number Y1 Original Specialty Recommended RVU: **15.18**
Presented Recommended RVU: **15.18**
Global Period: 090 Current Work RVU: **15.76** RUC Recommended RVU: **15.18**

CPT Descriptor: Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement undergoes subtotal suprapubic prostatectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 98% , In the ASC 1%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 2% , Overnight stay-less than 24 hours 27% , Overnight stay-more than 24 hours 71%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 93%

Description of Pre-Service Work: On the day before the surgery, the patient's medical record, preoperative lab results, prostate imaging and urodynamic reports are reviewed. Preoperative orders are written and sent electronically to the hospital. A preoperative H&P is dictated. On the day of surgery, the surgeon scrubs and gowns. The surgical procedure and postoperative recovery in and out of the hospital are reviewed with the patient and/or the patient's family. Questions from the patient and/or the patient's family are answered, and informed consent is obtained. The expected length of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) are discussed with the anesthesiologist. The availability of all necessary instruments is verified. The anesthesiologist places the endotracheal tube followed by the orogastric tube and general anesthesia is induced. The patient's wrists, elbows, shoulders, and legs are padded, and sequential compression devices are placed and tested. The patient is then placed in the moderate Trendelenburg position, and all pressure points are padded and adjusted as needed. The abdomen, genitalia, and perineum are prepared and draped in standard fashion. A urinary catheter is placed into the bladder and the balloon is inflated.

Description of Intra-Service Work: A low midline incision is made and the fascia is opened in the midline. The space of Retzius is developed and a self retaining retractor is placed to allow exposure of the bladder and prostate. An incision is made in the anterior bladder wall. Several stay sutures are placed in the bladder wall to expose the base of the bladder. The ureteral orifices are identified and the prostate anatomy is surveyed to assess for median lobe location and relational anatomy to the bladder. An incision is made at the junction of the prostate and the bladder neck. The incision is carried cirumferentially along the capsule of the prostate out laterally and distally. The prostate is rocked back and forth and dissection is continued along the lateral pedicle plane to define the apex of the prostate posteriorly. The final attachments are unfastened, and the specimen is released completely and passed off the field for pathologic processing. Bleeding may be significant at this time and various measures are utilized to control the bleeding including packing for 10 minutes, cautery, and suture ligation of bleeders. Once hemostasis is assured, the bladder neck is advanced to the urethral mucosa using fine monofilament suture. The anterior bladder wall is closed with suture. A catheter is passed into the bladder, and the closure is tested by placing 200 ml of saline into the bladder to distend it. A drain is placed through a separate counterincision in the abdomen. The rectus fascia is closed using suture, local anesthetic is injected, and the incision is closed with staples. Sterile dressings are placed over the incision, and the catheter is secured to the thigh with a catheter strap.

Description of Post-Service Work: The patient is transferred from the operating table to the postoperative stretcher. The patient is accompanied to the recovery area and transferred to the recovery area bed. Postoperative orders are written, and recovery area care and medications are reviewed with the recovery staff. The results of the procedure, expected outcome, and planned postoperative care in the hospital and out of the hospital are discussed with the patient's family. After the patient is awake, the outcome of the surgery is discussed with the patient. The referring physician is notified of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). A detailed operative report is dictated for the patient's medical record. After discharge from recovery, the patient is examined and the wound and patient's progress are checked. Hospital notes (ie, nursing, pharmacy, dietary, discharge planner) are reviewed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. A progress note is written for the patient's medical record. During the patient's stay in the hospital, laboratory results and vital signs are checked. The patient is examined. Urine output and output from the drain are checked and the drain is removed if appropriate. Wounds and dressings are checked, and the patient's progress is discussed with the patient and/or the patient's family. The patient's hospital medical records are reviewed. Postoperative care of the wound at home is discussed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. Progress notes are written for the patient's medical record. On day of discharge, the patient is examined. The wounds and the patient's progress are checked. All patient hospital medical records are reviewed, and questions from the patient and/or the patient's family are answered. Orders for postdischarge care and prescriptions for postoperative medications are written. Postoperative care of the wound is discussed with the patient and/or the patient's family. A detailed hospital discharge summary is dictated. During office visits, the patient is examined. Vital signs are checked and all surgical incisions are inspected. The final pathology report, implications, follow-up plan, and the possible need for additional treatments are reviewed in detail. Expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises are discussed. The urinary catheter and staples are removed during the first office visit. Prior to removal of the Foley catheter, the bladder is filled with 250 mL of sterile saline with a Toomey syringe. Penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, is discussed and prescriptions of chosen medications are written. Bladder control exercises are reviewed after the catheter is removed. Questions from the patient and/or the patient's family are answered. The next office visit is scheduled. The second office visit is to ensure the patient's voiding has improved, check their post-void residual, and wean any medications they were on pre-operatively for their BPH. The appropriate diagnosis and Current Procedural Terminology (CPT) code are marked on the encounter form (superbill). Patient progress notes for the office medical record and a letter to the referring physician are dictated.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richards, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	55821					
Sample Size:	5000	**Resp N:**	144			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	52%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	38%	52%	10%
Physical effort required	14%	62%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	52%	14%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 144 urologists (69 of whom indicated a performance rate of 1 or greater in the past year) and determined that the survey 25th percentile work RVU of 20.00 was too high with respect to the physician work associated with this procedure. The AUA's RUC advisors agreed that a direct work RVU crosswalk of 15.18 to CPT code 54410 *Removal and replacement of all component(s) of a multi-component, inflatable penile prosthesis at the same operative session* (work RVU = 15.18, IST = 120 minutes, total time = 329 minutes) is appropriate given the physician work associated with the procedure.

AUA's RUC advisors determined that the survey intra-service time of 120 minutes is appropriate for this procedure. However, CPT code 55821 has never been reviewed by the RUC and is currently Harvard valued. Therefore, the AUA's advisors determined that it is appropriate to recommend this slightly lower direct crosswalk work RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55821

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4325
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare utilization data extrapolated using National Health Expenditures breakdown of payer breakdown for hospital care.

Specialty Urology Frequency 4325 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare Utilization data

Specialty Urology Frequency 1200 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:55831 Tracking Number Y2 Original Specialty Recommended RVU: **15.60**
Presented Recommended RVU: **15.60**
Global Period: 090 Current Work RVU: **17.19** RUC Recommended RVU: **15.60**

CPT Descriptor: Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); retropubic, subtotal

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement undergoes subtotal retropubic prostatectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 99% , In the ASC 1%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 3% , Overnight stay-less than 24 hours 24% , Overnight stay-more than 24 hours 73%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 92%

Description of Pre-Service Work: On the day before the surgery, the patient's medical record, preoperative lab results, prostate imaging and urodynamic reports are reviewed. Preoperative orders are written and sent electronically to the hospital. A preoperative H&P is dictated. On the day of surgery, the surgeon scrubs and gowns. The surgical procedure and postoperative recovery in and out of the hospital are reviewed with the patient and/or the patient's family. Questions from the patient and/or the patient's family are answered, and informed consent is obtained. The expected length of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) are discussed with the anesthesiologist. The availability of all necessary instruments is verified. The anesthesiologist places the endotracheal tube followed by the orogastric tube and general anesthesia is induced. The patient's wrists, elbows, shoulders, and legs are padded, and sequential compression devices are placed and tested. The patient is then placed in the moderate Trendelenburg position, and all pressure points are padded and adjusted as needed. The abdomen, genitalia, and perineum are prepared and draped in standard fashion. A urinary catheter is placed into the bladder and the balloon is inflated.

Description of Intra-Service Work: A low midline incision is made and the fascia is opened in the midline. The space of Retzius is developed and a self retaining retractor is placed to allow exposure of the bladder and prostate. The anterior surface of the prostate is exposed. The periprostatic fat is removed to expose the pubuprostatic ligaments and superficial dorsal vein of the prostate. The endopelvic fascia is incised and the puboprostatic ligaments are partially incised. The dorsal vascular complex and lateral prostatic pedicles are ligated to control the blood supply to the prostate. A transverse capsulotomy is made just distal to the bladder neck. This incision is deepened to the adenoma and extended laterally. A plane is established to enucleate the adenoma bluntly and sharply. The anterior commisure is sharply divided. All 3 lobes are removed in this fashion sequentially. Bleeding may be significant at this time and various measures are utilized to control the bleeding including packing for 10 minutes, cautery, and suture ligation of bleeders. Once hemostasis is assured, the capsule is closed with suture. A catheter is passed into the bladder, and the closure is tested by placing 200 ml of saline into the bladder to distend it. A drain is placed through a separate counterincision in the abdomen. The rectus fascia is closed using suture, local anesthetic is injected, and the incision is closed with staples. Sterile dressings are placed over the incision, and the catheter is secured to the thigh with a catheter strap.

Description of Post-Service Work: The patient is transferred from the operating table to the postoperative stretcher. The patient is accompanied to the recovery area and transferred to the recovery area bed. Postoperative orders are written, and

recovery area care and medications are reviewed with the recovery staff. The results of the procedure, expected outcome, and planned postoperative care in the hospital and out of the hospital are discussed with the patient's family. After the patient is awake, the outcome of the surgery is discussed with the patient. The referring physician is notified of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). A detailed operative report is dictated for the patient's medical record. After discharge from recovery, the patient is examined and the wound and patient's progress are checked. Hospital notes (ie, nursing, pharmacy, dietary, discharge planner) are reviewed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. A progress note is written for the patient's medical record. During the patient's stay in the hospital, laboratory results and vital signs are checked. The patient is examined. Urine output and output from the drain are checked and the drain is removed if appropriate. Wounds and dressings are checked, and the patient's progress is discussed with the patient and/or the patient's family. The patient's hospital medical records are reviewed. Postoperative care of the wound at home is discussed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. Progress notes are written for the patient's medical record. On day of discharge, the patient is examined. The wounds and the patient's progress are checked. All patient hospital medical records are reviewed, and questions from the patient and/or the patient's family are answered. Orders for postdischarge care and prescriptions for postoperative medications are written. Postoperative care of the wound is discussed with the patient and/or the patient's family. A detailed hospital discharge summary is dictated. During office visits, the patient is examined. Vital signs are checked and all surgical incisions are inspected. The final pathology report, implications, follow-up plan, and the possible need for additional treatments are reviewed in detail. Expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises are discussed. The urinary catheter and staples are removed during the first office visit. Prior to removal of the Foley catheter, the bladder is filled with 250 mL of sterile saline with a Toomey syringe. Penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, is discussed and prescriptions of chosen medications are written. Bladder control exercises are reviewed after the catheter is removed. Questions from the patient and/or the patient's family are answered. The next office visit is scheduled. The second office visit is to ensure the patient's voiding has improved, check their post-void residual, and wean any medications they were on pre-operatively for their BPH. The appropriate diagnosis and Current Procedural Terminology (CPT) code are marked on the encounter form (superbill). Patient progress notes for the office medical record and a letter to the referring physician are dictated.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richard, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	55831					
Sample Size:	5000	**Resp N:**	139			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	30%	50%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 139 urologists (53 of whom indicated a performance rate of 1 or greater in the past year) and determined that the survey 25th percentile work RVU of 20.00 was too high with respect to the physician work associated with this procedure. The AUA's RUC advisors agreed that a direct work RVU crosswalk of 15.60 to CPT code 60500 *Parathyroidectomy or exploration of parathyroid(s);* (work RVU = 15.60, IST = 120 minutes, total time = 313 minutes) is appropriate given the physician work associated with the procedure.

AUA's RUC advisors determined that the survey intra-service time of 120 minutes is appropriate for this procedure. However, CPT code 55831 has never been reviewed by the RUC and is currently Harvard valued. Therefore, the AUA's advisors determined that it is appropriate to recommend this slightly lower direct crosswalk work RVU value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55831

CPT Descriptor: Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old male with a PSA level of 3.5 undergoes a prostate biopsy that reveals adenocarcinoma with a Gleason score of 7 in both lobes. He is counseled on the risks and benefits of surgery versus radiation and has chosen robotic-assisted laparoscopic radical prostatectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 99% , In the ASC 0%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 4% , Overnight stay-less than 24 hours 61% , Overnight stay-more than 24 hours 34%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 92%

Description of Pre-Service Work: On the day before the surgery, the patient's medical record, preoperative lab results, and transrectal ultrasound images and pathology reports are reviewed. Preoperative orders are written and sent electronically to the hospital. A preoperative H&P is dictated. On the day of surgery, the surgeon scrubs and gowns. The surgical procedure and postoperative recovery in and out of the hospital are reviewed with the patient and/or the patient's family. Questions from the patient and/or the patient's family are answered, and informed consent is obtained. The expected length of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) are discussed with the anesthesiologist. The availability of all necessary instruments is verified. The position of the robotic arms, surgical console pedals, and hand controls are reviewed and adjusted as necessary. The anesthesiologist places the endotracheal tube followed by the orogastric tube and general anesthesia is induced. The patient's wrists, elbows, shoulders, and legs are padded, and sequential compression devices are placed and tested. Both legs are placed in stirrups, which are adjusted to assure proper positioning, and both arms are tucked under sheets. The patient is then placed in the maximal Trendelenburg position, and all pressure points are padded and adjusted as needed. Once the patient's position is satisfactory, the table is leveled.

Description of Intra-Service Work: The abdomen, genitalia, and perineum are prepared and draped in standard fashion. A urinary catheter is placed into the bladder and the balloon is inflated. A suprapubic incision is made and a needle is introduced. An intraperitoneal position is confirmed, and a pneumoperitoneum is created. A midline trocar is placed, and a zero-degree lens camera is inserted. The abdomen and pelvis are inspected for visceral injury or abnormal anatomy. Four additional incisions are made after appropriate measurements, and four additional trocars are placed under direct vision. The table is adjusted to place the patient in a steep Trendelenburg position, and the robot is advanced. The four robotic arms are individually docked and pressure points are checked. Appropriate adjustments to the robotic arms are made at the surgical console. Next, the laparoscope is introduced and the seminal vesicles and vas deferens are dissected. The peritoneum is incised at the reflection point of the anterior rectum and the posterior bladder. The vas deferens is identified on each side and then divided. The seminal vesicles are carefully dissected using the harmonic scalpel to divide all bleeding vessels until the structures are completely freed. The space just posterior to the seminal vesicles is dissected to open Denonvilliers' fascia to reveal a prerectal fat plane. Attention is turned to complete mobilization of the opening of the peritoneum and mobilization of the bladder. The median umbilical ligaments and urachus are divided close to the umbilicus. Careful blunt

dissection is used to reflect the bladder away from the abdominal wall and expose the endopelvic fascia. The fat overlying the endopelvic fascia is cleared away and the endopelvic fascia is incised bilaterally to free the prostate away from the lateral pelvic side wall. The superficial dorsal vein complex is circumscribed, cauterized, and divided, and the apex of the prostate is identified and dissected. The deep dorsal vein complex is ligated with sutures or divided with an endoscopic stapling device. The bladder neck-prostate junction is identified using a variety of maneuvers, and then the bladder is separated from the prostate on both sides. The bladder neck is identified and opened. The catheter is brought through the bladder neck and held anteriorly, exposing the posterior bladder neck, which is then divided. The remainder of the prostate is carefully separated off of the bladder posteriorly, and the tissue overlying the seminal vesicles is opened. These structures are withdrawn into the area of dissection and used as traction. The lateral vascular pedicles are isolated, cauterized, or clipped to the base of the prostate and bladder and then divided. Both neurovascular bundles are identified and meticulously and carefully dissected off of the prostate surface from the base to the apex of the gland. The dorsal vein complex is divided using sharp dissection around the apex of the prostate. The prostate is rocked back and forth and dissection is continued along the lateral pedicle plane to define the apex of the prostate posteriorly. The urethra is identified and sharp dissection is used to divide the anterior and posterior urethra and the rectourethralis muscle. The final attachments are unfastened, and the specimen is put into the endosac and placed out of the surgical field. The pneumoperitoneum is decreased, and the entire surgical field is inspected for evidence of bleeding. Once hemostasis is assured, the bladder neck is reconstructed with multiple interrupted sutures, and the vesicourethral anastomosis is performed using interrupted sutures. A catheter is passed into the bladder, and the anastomosis is tested by placing 200 ml of saline into the bladder to distend it. A drain is placed through one of the abdominal side ports. All four trocar sites and all surgical sites are inspected at 5 mm Hg pressure before the trocars are removed under direct vision. The specimen is extracted by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. The rectus fascia is closed using suture, local anesthetic is injected in all five of the trocar incisions, and the trocar incisions are closed with interrupted 2-0 nylon sutures. Sterile dressings are placed over each incision, and the catheter is secured to the thigh with a catheter strap.

Description of Post-Service Work: Dressings are applied. The patient is transferred from the operating table to the postoperative stretcher. The patient is accompanied to the recovery area and transferred to the recovery area bed. Postoperative orders are written, and recovery area care and medications are reviewed with the recovery staff. The results of the procedure, expected outcome, and planned postoperative care in the hospital and out of the hospital are discussed with the patient's family. After the patient is awake, the outcome of the surgery is discussed with the patient. The referring physician is notified of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). A detailed operative report is dictated for the patient's medical record. After discharge from recovery, the patient is examined and the wound and patient's progress are checked. Hospital notes (ie, nursing, pharmacy, dietary, discharge planner) are reviewed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. A progress note is written for the patient's medical record. During the patient's stay in the hospital, laboratory results and vital signs are checked. The patient is examined. Urine output and output from the drain are checked and the drain is removed if appropriate. Wounds and dressings are checked, and the patient's progress is discussed with the patient and/or the patient's family. The patient's hospital medical records are reviewed. Postoperative care of the wound at home is discussed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. Progress notes are written for the patient's medical record. On day of discharge, the patient is examined. The wounds and the patient's progress are checked. All patient hospital medical records are reviewed, and questions from the patient and/or the patient's family are answered. Orders for postdischarge care and prescriptions for postoperative medications are written. Postoperative care of the wound is discussed with the patient and/or the patient's family. A detailed hospital discharge summary is dictated. During office visits, the patient is examined. Vital signs are checked and all surgical incisions are inspected. The final pathology report, implications, follow-up plan, and the possible need for additional therapy are reviewed in detail. Expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises are discussed. Prior to removal of the Foley catheter, the bladder is filled with 250 mL of sterile saline with a Toomey syringe. The urinary catheter is then removed. Penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, is discussed and prescriptions of chosen medications are written. Bladder control exercises are reviewed after the catheter is removed. Questions from the patient and/or the patient's family are answered. Sutures are removed. The next office visit is scheduled. The appropriate diagnosis and Current Procedural Terminology (CPT«) code are marked on the encounter form (superbill). Patient progress notes for the office medical record and a letter to the referring physician are dictated.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richards, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	55866					
Sample Size:	5000	**Resp N:**	190			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	1%	45%	37%	17%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	61%	34%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	3%	37%	60%
Physical effort required	23%	50%	27%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	56%	41%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	37%	42%	19%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	43%	51%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	2%	42%	56%
Physical effort required	0%	52%	48%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	56%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 190 urologists and determined that the survey 25th percentile work RVU of 25.18 was appropriate given the physician work associated with this procedure. AUA's advisors noted that the main difference between the survey values and the current values (the RUC recently reviewed this 55866 in 2015) is one fewer 99214 visit in the global period; this does not, however, change the work associated with the procedure.

The specialty society added five minutes to the pre-service positioning time for pre-time package U1 Dorsal Lithotomy.

The society added 20 minutes of intra-service time associated with a 99232 subsequent hospital visit to the immediate post-service time per CMS' 23-hour stay outpatient surgical services with subsequent hospital visits policy. This procedure is typically performed in the outpatient setting but generally requires an overnight stay and subsequent hospital visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55866

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 75000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare utilization data extrapolated using National Health Expenditures breakdown of payer breakdown for hospital care.

Specialty Urology Frequency 75000 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 21,000
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare claims data

Specialty Urology Frequency 21000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55866

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Laparoscopy, surgical prostatectomy, simple subtotal (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy), includes robotic assistance, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement chose to undergo laparoscopic simple suprapubic prostatectomy.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 99% , In the ASC 1%, In the office 1%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 2% , Overnight stay-less than 24 hours 48% , Overnight stay-more than 24 hours 51%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 93%

Description of Pre-Service Work: On the day before the surgery, the patient's medical record, preoperative lab results, prostate imaging and urodynamic reports are reviewed. Preoperative orders are written and sent electronically to the hospital. A preoperative H&P is dictated. On the day of surgery, the surgeon scrubs and gowns. The surgical procedure and postoperative recovery in and out of the hospital are reviewed with the patient and/or the patient's family. Questions from the patient and/or the patient's family are answered, and informed consent is obtained. The expected length of the procedure and any special concerns about this particular patient (eg, teeth, positioning, unusual medical problems) are discussed with the anesthesiologist. The availability of all necessary instruments is verified. The position of the robotic arms, surgical console pedals, and hand controls are reviewed and adjusted as necessary. The anesthesiologist places the endotracheal tube followed by the orogastric tube and general anesthesia is induced. The patient's wrists, elbows, shoulders, and legs are padded, and sequential compression devices are placed and tested. Both legs are placed in stirrups, which are adjusted to assure proper positioning, and both arms are tucked under sheets. The patient is then placed in the maximal Trendelenburg position, and all pressure points are padded and adjusted as needed. Once the patient's position is satisfactory, the table is leveled. The abdomen, genitalia, and perineum are prepared and draped in standard fashion. A urinary catheter is placed into the bladder and the balloon is inflated.

Description of Intra-Service Work: A suprapubic incision is made and a needle is introduced. An intraperitoneal position is confirmed, and a pneumoperitoneum is created. A midline trocar is placed, and a zero-degree lens camera is inserted. The abdomen and pelvis are inspected for visceral injury or abnormal anatomy. Five additional incisions are made after appropriate measurements, and five additional trocars are placed under direct vision. The table is adjusted to place the patient in a steep Trendelenburg position, and the robot is advanced. The four robotic arms are individually docked and pressure points are checked. Appropriate adjustments to the robotic arms are made at the surgical console. Next, the laparoscope is introduced and the colon is mobilized so it is away from the bladder. An incision is made in the posterior bladder wall. Several stay sutures are placed in the bladder wall to expose the base of the bladder. The ureteral orifices are identified and the prostate anatomy is surveyed to assess for median lobe location and relational anatomy to the bladder. An incision is made at the junction of the prostate and the bladder neck. The incision is carried cirumferentially along the capsule of the prostate out laterally and distally. The prostate is rocked back and forth and dissection is continued along the

lateral pedicle plane to define the apex of the prostate posteriorly. The final attachments are unfastened, and the specimen is put into the endosac and placed out of the surgical field. The pneumoperitoneum is decreased, and the entire surgical field is inspected for evidence of bleeding. Once hemostasis is assured, the bladder neck is advanced to the urethral mucosa using fine monofilament suture. Hemostasis is also achieved using cautery and suture. The posterior bladder wall is closed with suture. A catheter is passed into the bladder, and the closure is tested by placing 200 ml of saline into the bladder to distend it. A drain is placed through one of the abdominal side ports. All six trocar sites and all surgical sites are inspected at 5 mm Hg pressure before the trocars are removed under direct vision. The specimen is extracted by enlarging the midline incision and transferring the endosac bag to this area, where it is removed. The rectus fascia is closed using suture, local anesthetic is injected in all five of the trocar incisions, and the trocar incisions are closed with interrupted 2-0 nylon sutures. Sterile dressings are placed over each incision, and the catheter is secured to the thigh with a catheter strap.

Description of Post-Service Work: The patient is transferred from the operating table to the postoperative stretcher. The patient is accompanied to the recovery area and transferred to the recovery area bed. Postoperative orders are written, and recovery area care and medications are reviewed with the recovery staff. The results of the procedure, expected outcome, and planned postoperative care in the hospital and out of the hospital are discussed with the patient's family. After the patient is awake, the outcome of the surgery is discussed with the patient. The referring physician is notified of the outcome of the procedure and of any unusual aspects of postoperative care (eg, cardiac disease, diabetes management). A detailed operative report is dictated for the patient's medical record. After discharge from recovery, the patient is examined and the wound and patient's progress are checked. Hospital notes (ie, nursing, pharmacy, dietary, discharge planner) are reviewed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. A progress note is written for the patient's medical record. During the patient's stay in the hospital, laboratory results and vital signs are checked. The patient is examined. Urine output and output from the drain are checked and the drain is removed if appropriate. Wounds and dressings are checked, and the patient's progress is discussed with the patient and/or the patient's family. The patient's hospital medical records are reviewed. Postoperative care of the wound at home is discussed. Questions from the patient, the patient's family, and the nursing and other staff are answered. Orders are written as necessary. Progress notes are written for the patient's medical record. On day of discharge, the patient is examined. The wounds and the patient's progress are checked. All patient hospital medical records are reviewed, and questions from the patient and/or the patient's family are answered. Orders for postdischarge care and prescriptions for postoperative medications are written. Postoperative care of the wound is discussed with the patient and/or the patient's family. A detailed hospital discharge summary is dictated. During office visits, the patient is examined. Vital signs are checked and all surgical incisions are inspected. The final pathology report, implications, follow-up plan, and the possible need for additional treatments are reviewed in detail. Expectations for the return of bladder control following the removal of the catheter and proper performance of Kegel exercises are discussed. Prior to removal of the Foley catheter, the bladder is filled with 250 mL of sterile saline with a Toomey syringe. The urinary catheter is then removed during the first office visit. Penile rehabilitation therapy, including timing, options of oral therapies, injections, and vacuum pump, is discussed and prescriptions of chosen medications are written. Bladder control exercises are reviewed after the catheter is removed. Questions from the patient and/or the patient's family are answered. Sutures are removed. The next office visit is scheduled. The second office visit is to ensure the patient's voiding has improved, check their post-void residual, and wean any medications they were on pre-operatively for their BPH. The appropriate diagnosis and Current Procedural Terminology (CPT) code are marked on the encounter form (superbill). Patient progress notes for the office medical record and a letter to the referring physician are dictated.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Thomas M.T. Turk, MD and Kyle A. Richards, MD					
Specialty Society(ies):	American Urological Association					
CPT Code:	558XX					
Sample Size:	5000	**Resp N:**	166			
Description of Sample:	The American Urological Association (AUA) selected a simple random sample of 5000 urologists from AUA's Active/Associate members. This sample was chosen based on previous response rates to AUA surveys to ensure an adequate response rate to each survey code. AUA initially proposed to survey several different surgical subspecialties within AUA's Active/Associate membership but determined that taking a simple random sample of these surgical subspecialties would produce an inadequate number of responses to achieve valid survey results.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
55840	090	21.36	**RUC Time**

CPT Descriptor Prostatectomy, retropubic radical, with or without nerve sparing;

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
55845	090	25.18	**RUC Time**

CPT Descriptor Prostatectomy, retropubic radical, with or without nerve sparing; with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
35301	090	21.16	**RUC Time**	35,904

CPT Descriptor 1 Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
32669	090	23.53	**RUC Time**	1,894

CPT Descriptor 2 Thoracoscopy, surgical; with removal of a single lung segment (segmentectomy)

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 62 **% of respondents:** 37.3 **%**

Number of respondents who choose 2nd Key Reference Code: 49 **% of respondents:** 29.5 **%**

TIME ESTIMATES (Median)

	CPT Code: 558XX	Top Key Reference CPT Code: 55840	2nd Key Reference CPT Code: **55845**
Median Pre-Service Time	59.00	51.00	51.00
Median Intra-Service Time	180.00	180.00	198.00
Median Immediate Post-service Time	50.00	33.00	33.00

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	21%	47%	29%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	31%	47%	23%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	21%	34%	45%
Physical effort required	26%	46%	28%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	27%	50%	23%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	8%	33%	43%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	27%	37%	37%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	18%	24%	57%
Physical effort required	15%	44%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	16%	39%	45%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The AUA reviewed the survey results from 166 urologists and determined that the survey 25th percentile work RVU value of 22.00 is an appropriate value with respect to the physician work associated with this procedure. AUA's advisors also noted that this work RVU value is appropriate relative to the value of CPT code 55866 *Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed*.

The specialty society added five minutes to the pre-service positioning time for pre-time package U1 Dorsal Lithotomy.

The society added 20 minutes of intra-service time associated with a 99232 subsequent hospital visit to the immediate post-service time per CMS' 23-hour stay outpatient surgical services with subsequent hospital visits policy. This procedure is typically performed in the outpatient setting but generally requires an overnight stay and subsequent hospital visit.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 55899

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 3519
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on analysis using Premier Healthcare Databse (PHD) data as described in the CCA for 558XX.

Specialty Urology Frequency 3519 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,300
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2019 Medicare utilization and estimated current coding of this procedure.

Specialty Urology Frequency 2300 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 55866

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

FACILITY DIRECT PE INPUTS

CPT CODE(S): 55821____
SPECIALTY SOCIETY(IES): AUA_____
PRESENTER(S):Thomas M.T. Turk, MD and Kyle A. Richards, MD_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
55821	Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); suprapubic, subtotal, 1 or 2 stages	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55821	A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement undergoes subtotal suprapubic prostatectomy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA's RVS Committee Expert Panel reviewed the survey data and time recommendations for CPT code 55821 and updated the direct PE inputs accordingly using standard 090-day global period clinical staff time inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   55821

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

   b. Service period (includes pre, intra and post):

   c. Post-service period:

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes – SA048 and SA052

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

SA048 – Pack, Minimum Specialty Visit (Unit price $5.02): Paper, exam table (7 feet); Gloves, non-sterile (2 pair); gown, patient (1 item); pillow case (1 item); cover, thermometer probe (1 item).

SA052 – Pack, Post-op Incision Care (Staple) (Unit price $4.80): Kit, staple removal (1 kit); Betadine (10 ml); gauze, sterile, 4in X 4in (2 items); gloves, sterile (1 pair); steri-strip (6 strip uou) (2 items); swab-pad, alcohol (2 items); tape, surgical paper 1in (Micropore) (12 inches); tincture of benzoin, swab (1 item).

16. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time)*. If you have selected "other formula" for any of the equipment please explain here:

EQ168 light, exam; and EF023 table, exam

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition to those revisions, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

1) For current value: Current PE inputs were updated to reflect the inputs in the RUC database: removed 2.5-92213 visits and updated to 0-99213 visits.
2) For recommended value: Reduced the recommended number of SA048 packs from 3 to 2 to reflect the post-operative office visit recommendation.
3) For recommended value: Reduced the recommended number of SM021 sanitizing cloth-wipes from 3 to 1 to reflect their typical use only in the first post-operative office visit.

PRESENTER(S):Thomas M.T. Turk, MD and Kyle A. Richards, MD_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
55831	Prostatectomy (including control of postoperative bleeding, vasectomy, meatotomy, urethral calibration and/or dilation, and internal urethrotomy); retropubic, subtotal	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
55831	A 65-year-old male who is symptomatic due to obstruction from prostatic enlargement undergoes subtotal retropubic prostatectomy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   AUA's RVS Committee Expert Panel reviewed the survey data and time recommendations for CPT code 55831 and updated the direct PE inputs accordingly using standard 090-day global period clinical staff time inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

   55831

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

   N/A

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

   b. Service period (includes pre, intra and post):

   c. Post-service period:

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Transcutaneous Passive Implant-Temporal Bone – Tab 10

In October 2020, the CPT Editorial Panel revised codes 69714 and 69716 to replace "temporal bone" with "skull" and delete "or transcutaneous" and "cochlear stimulator: without mastoidectomy" from the descriptors. The Panel also replaced two codes for mastoidectomy with new codes for magnetic transcutaneous attachment to external speech processor. Additional revisions and codes were added to differentiate implantation, removal, and replacement of the implants.

At the January 2021 RUC meeting, following an initial survey, the RUC reviewed this family of services and determined that they needed to be resurveyed for the April 2021 RUC meeting with a revised Reference Service List (RSL) to encompass a larger range of relative values, specifically to include the lower end of the RVU spectrum. The RUC submitted interim recommendations to CMS for CY 2022. The specialty society submitted a letter to the RUC requesting that this code family be referred to the CPT Editorial Panel in May 2021 to clarify the percutaneous implant removal by describing the procedure as removal of the entire implant and adding a parenthetical.

At the April 2021 RUC meeting, the RUC recommended temporarily affirming the January 2021 interim RUC recommendations for work and practice expense inputs for CPT codes 69714, 69716, 69717, 69719, 69726, and 69727 and resurveying these codes for the October 2021 RUC meeting following revisions at the May 2021 CPT Editorial Panel meeting. In May 2021, for CPT 2023, the CPT Editorial Panel established three new codes 69XX0, 69XX1, 69XX2 and added a parenthetical note reporting transcutaneous, passive bone anchored implants for bone conduction hearing appliances. The coding structure was changed to describe the different techniques more appropriately for transcutaneous passive implant procedures that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, the specialties proposed, and the CPT Editorial Panel had agreed, to make coding changes to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex.

The specialty society surveyed the codes for the October 2021 RUC meeting. However, prior to the meeting, it was discovered that one of the survey codes was inadvertently listed on the RSL and was selected as the top Key Reference Service (KRS) code for every code surveyed. After discussion at the October 2021 RUC meeting, the specialty society indicated, and the RUC agreed, that the survey results were invalid and that the codes should be resurveyed for the January 2022 RUC meeting with a revised RSL to be approved by the Research Subcommittee. The Research Subcommittee approved the RSL and a survey was successfully administered for the January 2022 RUC meeting.

Osseointegrated Implant – Description of Family

Within this code family, the least intense services are the removal procedures, the next most intense are the implantation procedures and the most intense are the revision/replacement procedures. To describe the three levels of intensity, the specialty provided the RUC with a detailed explanation about how hearing sensation occurs, what bone anchored hearing aids do to treat patients with certain types of hearing loss and the intensity and risk involved in performing these procedures. Hearing sensation occurs by sound coming into the ear and entering the ear canal; the ear drum vibrates which sends those vibrations to three bones in the middle ear. Those bones increase the vibrations and transmit them to the cochlea, a small snail shaped structure filled with fluid. The fluid in the cochlea moves, activating hair cells, causes stereocilia to bend, which leads to an electrical signal which then is carried by the auditory nerve to the brain, which turns into sound.

When people have hearing loss, it is either conductive hearing loss, which is an issue up to that electric stimulation of the nerve or it iss sensory-neural hearing loss, which involves a nerve issue. Hearing loss could also be related to a combination of both conductive and sensory-neural hearing loss. These bone anchored hearing aids treat the conductive portion of hearing loss. Whether it's exclusively conductive or mixed, these devices bypass the external auditory meatus to deliver sound vibrations directly to the inner ear, so it's useful for patients who have conditions such as malformed outer middle ears. For percutaneous bone anchored hearing aids, the patient has a titanium bone implant that is anchored into the skull and is protruding through the skin from the skull. It is then attached to an external microphone and a processor, so these patients have a screw projecting out from their head all the time, through the skin. For transcutaneous bone anchored hearing aids, everything is implanted under the skin within the cranium. That is secured and the skin is closed, and then it eventually attaches to a processor via a magnet which the patient can take on and off, so they do not have anything sticking out through the skin.

Osseointegrated Implant – Implantation

69714 ***Implantation, osseointegrated implant, skull; with percutaneous attachment to external speech processor***
The RUC reviewed the survey results from 45 physicians and determined the survey 25th percentile work RVU of 8.00 appropriately accounts for the physician work required to perform this service. The RUC recommends 25 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 8 minutes of pre-service scrub/dress/wait time, 30 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty society noted, and the RUC concurred, that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time of standard time package. The RUC noted that the recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the Medicare Physician Payment Schedule (MFS). It was noted that the current CY 2022 CMS times and RVUs in place were based on a flawed survey and interim RUC recommendations from January 2021. The RUC noted that the survey only from one year ago included 10 more minutes of intra-service time and one more post-operative visit.

The RUC noted that the recommended work RVU of 8.00 is almost half that of the 2021 work RVU (14.45). For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep, then it would mistakenly enter the cerebrospinal fluid (CSF), breaching the intracranial space. All these attributes make these procedures very intense and complex to perform.

While reviewing reference codes, the RUC noted the dearth of reference codes for 090-day global procedures with relatively low skin-to-skin times. To justify a work value of 8.00, the RUC compared the surveyed code to CPT code 67312 *Strabismus surgery, recession or resection procedure; 2 horizontal muscles* (work RVU= 9.50, intra-service time of 45 minutes, total time of 159 minutes) and noted that reference code involves 13 more minutes of total time and supports the proposed value of the survey code. The RUC also compared the surveyed code to CPT code 49013 *Preperitoneal pelvic packing for hemorrhage associated with pelvic trauma, including local exploration* (work RVU= 8.35, intra-service time of 45 minutes, total time of 155 minutes) and noted that the surveyed code involves 9 fewer minutes of total time though is more intense than the reference code. **The RUC recommends a work RVU of 8.00 for CPT code 69714.**

69716 ***Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor within the mastoid and/or resulting in removal of less than 100 mm2 surface area of bone deep to the outer cranial cortex***
The RUC reviewed the survey results from 41 physicians and determined the survey 25th percentile work RVU of 9.03 appropriately accounts for the physician work required to perform this service. The RUC recommends 25 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 50 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted and the RUC concurred that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation maintains appropriate relativity both within the family and across the RBRVS.

The implantation procedure described by CPT code 69716 requires more work than CPT code 69714, as it often requires removal of a portion of the cranium. These cases are technically more difficult, time consuming, and risky. For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep, then it would mistakenly enter the CSF, breaching the intracranial space. All these attributes make these procedures very intense and complex to perform.

While reviewing reference codes, the RUC noted the dearth of reference codes for 090-day global procedures with relatively lower skin-to-skin times. To justify a work value of 9.03, the RUC compared the survey code to CPT code 67312 *Strabismus surgery, recession or resection procedure; 2 horizontal muscles* (work RVU= 9.50, intra-service time of 45, total time of 159), and noted that the survey code involves more intra-service and total

time, though the reference codes is a slightly more intense service to perform. The RUC also compared the survey code to CPT code 49013 *Preperitoneal pelvic packing for hemorrhage associated with pelvic trauma, including local exploration* (work RVU= 8.35, intra-service time of 45 minutes, total time of 155 minutes) and noted that the survey code involves somewhat more intra-service and total time relative to the reference code and is also a more intense service to perform. **The RUC recommends a work RVU of 9.03 for CPT code 69716.**

69XX0 ***Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of bone deep to the outer cranial cortex***
The RUC reviewed the survey results from 40 physicians and determined the survey 25th percentile work RVU of 9.97 appropriately accounts for the physician work required to perform this service. The RUC recommends 29 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 9 minutes of pre-service scrub/dress/wait time, 60 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted and the RUC concurred that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All this requires additional time above the positioning time of standard time package.

This service requires more work than the other two implantation procedures in the code family as it requires removal of a significant amount of cranium down to, or sometimes beyond, the inner cortex in the retrosigmoid area or temporal squama. These cases are more technically difficult, time consuming, and risky. For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep then it would mistakenly enter the CSF, breaching the intracranial space. All these attributes make this procedure the most intense and complex to perform when compared to the codes describing implantation of an osseointegrated implant.

To justify a work value of 9.97, the RUC compared the survey code to CPT code 49520 *Repair recurrent inguinal hernia, any age; reducible* (work RVU= 9.99, intra-service time of 60 minutes, total time of 185.5 minutes) and noted that both services involve an identical amount of intra-service time and a similar amount of total time. The RUC also compared the survey code to MPC code 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU= 9.23, intra-service time of 60 minutes, total time of 183 minutes) and noted that both services have identical intra-service times and very similar total times, though the survey code is a more intense procedure to perform. **The RUC recommends a work RVU of 9.97 for CPT code 69XX0.**

Osseointegrated Implant – Revision/Replacement

69717 ***Revision/replacement (including removal of existing device), osseointegrated implant, skull; with percutaneous attachment to external speech processor***
The RUC reviewed the survey results from 42 physicians and determined the survey 25th percentile work RVU of 8.48 appropriately accounts for the physician work required to perform this service. The RUC recommends 25 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 7 minutes of pre-service scrub/dress/wait time, 44 minutes of intra-service time, 15 minutes of immediate post-service time, ½

discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted and the RUC concurred that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the RBRVS.

The RUC noted that the recommended work RVU of 8.48 is almost half that of the 2021 work RVU (15.43). For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep, then it would mistakenly enter the CSF, breaching the intracranial space. All these attributes make these procedures very intense and complex to perform. The specialty noted and the RUC agreed that the revision/replacement procedures are the most intense and complex procedures in this code family

While reviewing reference codes, the RUC noted the dearth of reference codes for 090-day global procedures with relatively lower skin-to-skin times. To justify a work value of 8.48, the RUC compared the survey code to CPT code 67312 *Strabismus surgery, recession or resection procedure; 2 horizontal muscles* (work RVU= 9.50, intra-service time of 45, total time of 159) and noted that both services involve a very similar amount of intra-service time and an identical amount of total time, though the reference code is a slightly intense service to perform. The RUC also compared the survey code to CPT code 49013 *Preperitoneal pelvic packing for hemorrhage associated with pelvic trauma, including local exploration* (work RVU= 8.35, intra-service time of 45 minutes, total time of 155 minutes) and noted that both services involve very similar intra-service times), though the survey code involves 4 more minutes of total time. **The RUC recommends a work RVU of 8.48 for CPT code 69717.**

69719 ***Revision/replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 mm^2 surface area of bone deep to the outer cranial cortex***

The RUC reviewed the survey results from 38 physicians and determined the survey 25th percentile work RVU of 9.46 appropriately accounts for the physician work required to perform this service. The RUC recommends 27 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 9 minutes of pre-service scrub/dress/wait time, 55 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted and the RUC concurred that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation maintains appropriate relativity both within the family and across the RBRVS.

For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep, then it would mistakenly enter the CSF, breaching the intracranial space. All these attributes make these procedures very intense and complex to perform. The specialty noted and the RUC agreed that the revision/replacement procedures are the most intense and complex procedures in this code family.

To justify a work value of 9.46, the RUC compared the survey code to CPT code 49520 *Repair recurrent inguinal hernia, any age; reducible* (work RVU= 9.99, intra-service time of 60 minutes, total time of 185.5 minutes) and noted that the survey code involves 5 more minutes of intra-service time and somewhat less total time. The RUC also compared the survey code to MPC code 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU= 9.23, intra-service time of 60 minutes, total time of 183 minutes) and that although the survey code involves somewhat less intra-service and total time, it is also a more intense procedure to perform. **The RUC recommends a work RVU of 9.46 for CPT code 69719.**

69XX1 ***Revision/replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 mm2 surface area of bone deep to the outer cranial cortex***

The RUC reviewed the survey results from 39 physicians and determined the survey 25th percentile work RVU of 10.25 appropriately accounts for the physician work required to perform this service. The RUC recommends 33 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 60 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted, and the RUC concurred, that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the RBRVS.

This service requires more work than the other two revision/replacement procedures in the code family as it requires work outside the mastoid and the added complexity of involvement of a bony defect. For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being placed in the cranium at the lateral base of the skull and if the procedure is too deep, then it would mistakenly enter the CSF, breaching the intracranial space. All these attributes make this procedure the most intense and complex to perform within the revision/replacement procedures. The specialty noted, and the RUC agreed, that the revision/replacement procedures are the most intense and complex procedures in this code family.

To justify a work value of 10.25, the RUC compared the survey code to CPT code 49520 *Repair recurrent inguinal hernia, any age; reducible* (work RVU= 9.99, intra-service time of 60 minutes, total time of 185.5 minutes) and noted that both services involve an identical amount of intra-service time and very similar total time, though the survey code is slightly more intense to perform. The RUC also compared the survey code to

MPC code 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU= 9.23, intra-service time of 60 minutes, total time of 183 minutes) and noted that both services have identical intra-service times, the survey code involves 5 more minutes of total time and is a more intense procedure to perform. **The RUC recommends a work RVU of 10.25 for CPT code 69XX1.**

Osseointegrated Implant – Removal

69726 *Removal, entire osseointegrated implant, skull; with percutaneous attachment to external speech processor*
The RUC reviewed the survey results from 39 physicians and determined the survey 25th percentile work RVU of 7.50 appropriately accounts for the physician work required to perform this service. The RUC recommends 25 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 7 minutes of pre-service scrub/dress/wait time, 35 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted, and the RUC concurred, that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the RBRVS. For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being removed from the cranium at the lateral base of the skull. All these attributes make these procedures very intense and complex to perform.

The specialty society asserted that two incorrect assumptions were made for the January 2021 interim value for this procedure: first, that a flawed crosswalk was chosen in the previous valuation of this code, and second, that the January 2021 survey was flawed in that a rank order anomaly existed between the value of 69726 and the other codes in the family. Due to the dearth of potential crosswalks, the RUC chose to crosswalk the interim value for CPT code 69726 to CPT code 53852 *Transurethral destruction of prostate tissue; by radiofrequency thermotherapy* (work RVU = 5.93, intra-service time of 30 minutes and total time of 142 minutes). The service did have an identical intra time and similar total time; however, surveyed code 69726 is more intense than the code used for crosswalk. In the latest survey for the January 2022 RUC meeting, there was an increase of 5 minute of intra-service time when compared to the January 2021 survey.

While reviewing reference codes, the RUC noted the dearth of reference codes for 090-day global procedures with relatively lower skin-to-skin times. To justify a work value of 7.50, the RUC compared the surveyed code to CPT code 67312 *Strabismus surgery, recession or resection procedure; 2 horizontal muscles* (work RVU= 9.50, intra-service time of 45, total time of 159), and noted that reference code involves 10 more minutes of intra-service time and supports the proposed value of the survey code. Within this code family, the least intense services are the removal procedures. **The RUC recommends a work RVU of 7.50 for CPT code 69726.**

69727 ***Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 mm^2 surface area of bone deep to the outer cranial cortex***
The RUC reviewed the survey results from 39 physicians and determined the survey 25th percentile work RVU of 7.38 appropriately accounts for the physician work required to perform this service. The RUC recommends 27 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 10 minutes of pre-service scrub/dress/wait time, 50 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted, and the RUC concurred, that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the RBRVS.

For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being removed from the cranium at the lateral base of the skull. All these attributes make these procedures very intense and complex to perform. While still complex, the removal procedures are the least intense services within this code family.

While reviewing reference codes, the RUC noted the dearth of reference codes for 090-day global procedures with relatively lower skin-to-skin times. To justify a work value of 7.38, the RUC compared the survey code to CPT code 67312 *Strabismus surgery, recession or resection procedure; 2 horizontal muscles* (work RVU= 9.50, intra-service time of 45, total time of 159), and noted that reference code involves less intra-service and total time, though is a more intense service than the survey code, supporting the survey code's proposed value. The RUC also compared the survey code to CPT code 67911 *Correction of lid retraction* (work RVU= 7.50, intra-service time of 50 minutes, total time of 183 minutes) and noted that both services have identical intra-service times and similar total times. **The RUC recommends a work RVU of 7.38 for CPT code 69727.**

69XX2 ***Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 mm^2 surface area of bone deep to the outer cranial cortex***
The RUC reviewed the survey results from 39 physicians and determined the survey 25th percentile work RVU of 8.50 appropriately accounts for the physician work required to perform this service. The RUC recommends 27 minutes of pre-service evaluation time, 10 minutes of pre-service positioning time, 8 minutes of pre-service scrub/dress/wait time, 60 minutes of intra-service time, 15 minutes of immediate post-service time, ½ discharge day management visit (99238) and two post-operative office visits (1x99213 and 1x99212). The specialty noted and the RUC concurred that 10 minutes of positioning time is required to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, wires and anesthetic tubing that inevitably needs to be properly positioned to complete the turn. The patient's head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed to maintain a fixed position for the duration of surgery. All this requires additional time above the positioning time of standard time package. The RUC noted that their recommendation fully accounts for the large reduction in time relative to the initial valuation of this service and maintains appropriate relativity both within the family and across the RBRVS.

This service requires more work than the other two removal procedures in the code family as it requires work outside the mastoid and the added complexity of involvement of a bony defect. For these procedures, the physician must work with a variety of delicate structures in a very small space just behind the ear. The facial nerve and the large sigmoid sinus blood vessel are both in this area. The bone anchored hearing aid is being removed from the cranium at the lateral base of the skull. All these attributes make this procedure very intense and complex to perform. While still complex, the removal procedures are the least intense services within this code family.

To justify a work value of 8.50, the RUC compared the survey code to CPT code 49520 *Repair recurrent inguinal hernia, any age; reducible* (work RVU= 9.99, intra-service time of 60 minutes, total time of 185.5 minutes) and noted that both services involve an identical amount of intra-service time and similar total time, though the reference code is slightly more intense to perform. The RUC also compared the survey code to MPC code 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU= 9.23, intra-service time of 60 minutes, total time of 183 minutes) and noted that both services have identical intra-service times and similar total times. **The RUC recommends a work RVU of 8.50 for CPT code 69XX2.**

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. The RUC noted that the proposed clinical labor times are based on the standard 090-day global packages. For CA026 *clean surgical instrument package*, which was recommended at 20 minutes, this is twice the standard of 10 minutes because the surgical instrument package is used for both post-operative office visits and the instruments are cleaned after each visit. The PE Subcommittee had confirmed that the two post-operative offices typically require the operating microscope and a set of instruments. The operating microscope is used during each post-operative office visit and is present in the room the entire time during each visit. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

Work Neutrality
The RUC's recommendation for this family of codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Surgery **Auditory System** **Middle Ear** ***Osseointegrated Implants*** *The following codes are for implantation of an osseointegrated implant into the skull. These devices treat hearing loss through surgical placement of an abutment or device into the skull that facilitates transduction of acoustic energy to be received by the better-hearing inner ear or both inner ears when the implant is coupled to a speech processor and vibratory element. This coupling may occur in a percutaneous or a transcutaneous fashion. Other reparative middle ear and mastoid procedures (69501-69676) may be performed for different indications and may be reported separately when performed.*

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69714 Tracking Number Original Specialty Recommended RVU: **8.00**
Presented Recommended RVU: **8.00**
Global Period: 090 Current Work RVU: **8.69** RUC Recommended RVU: **8.00**

CPT Descriptor: Implantation, osseointegrated implant, skull; with percutaneous attachment to external speech processor

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old male suffers from chronic otitis media resulting in otorrhea and mixed hearing loss. He is unable to wear traditional hearing aids. Implantation of an osseointegrated bone anchored device with a percutaneous attachment to an external speech processor is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 56% , In the ASC 44%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection to the pericranium. A dissection is performed and the pericranium is incised and dissected away from the cranial bone to expose an area for implant placement. A pilot guide hole through the cranium is drilled, and the deep portion of the guide hole is instrumented to ascertain the possible presence of dural contact and lack of sigmoid sinus exposure. Depending on this deep instrumentation, the pilot hole is possibly deepened. The final guide hole is then widened with spiral drilling to achieve a larger opening to receive the implant. The implanted fixture is installed in the cranial bone to very specific torque settings. This implanted fixture is then secured to the transcutaneous abutment. The overlying flap and surrounding soft tissues are thinned to a maximal thickness to allow for transcutaneous attachment to the processor. A separate incision is made in the overlying skin of the flap to allow the percutaneous abutment to extend through the soft tissue flap. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion. A small bolster is created immediately surrounding the abutment and a locking cap is fixed to the abutment to keep the bolster in place and with appropriate pressure.

Description of Post-Service Work: The prepped area of the recipient site is cleaned. A compression dressing is fashioned and is wrapped around the head to compress the recipient site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications.There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Discharge Management / Post-Operative Visits
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The patient's convalescence to that point is reviewed and discussed. The sutures are removed. The neurological status is assessed. The wound is inspected and palpated. Flap viability is assessed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The small abutment bolster and associated locking cap device are removed. The area around the percutaneous abutment is vigorously cleaned and possibly debrided. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing and long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
21013	090	5.42	**RUC Time**

CPT Descriptor Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2 cm

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
14040	090	8.60	**RUC Time**

CPT Descriptor Adjacent tissue transfer or rearrangement, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; defect 10 sq cm or less

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
67904	000	7.97	**RUC Time**	54,853

CPT Descriptor 1 Repair of blepharoptosis; (tarso) levator resection or advancement, external approach

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
26615	090	7.07	**RUC Time**	2,079

CPT Descriptor 2 Open treatment of metacarpal fracture, single, includes internal fixation, when performed, each bone

Other Reference CPT Code	Global	Work RVU	Time Source
52400	090	8.69	**RUC Time**

CPT Descriptor Cystourethroscopy with incision, fulguration, or resection of congenital posterior urethral valves, or congenital obstructive hypertrophic mucosal folds

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 5 **% of respondents:** 11.1 **%**

Number of respondents who choose 2nd Key Reference Code: 4 **% of respondents:** 8.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 69714	Top Key Reference CPT Code: 21013	2nd Key Reference CPT Code: **14040**

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	40%	60%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	40%	40%
Physical effort required	40%	40%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	60%	20%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	75%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	75%	25%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	25%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated

implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters

during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the ANS (American Neurotology Society), and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 21013 Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2cm valued at 5.42 RVUs with a pre time of 56 / intra time of 45 / post time of 15, totaling 174 minutes. 5 respondents selected this as their primary KRS.

The second KRS selected was CPT 14040 Adjacent tissue transfer or rearrangement, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; defect 10 sq cm or less valued at 8.60 RVUs with a pre time of 30 / intra time of 90 / post time of 25, totaling 223 minutes. 4 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **8.00 and 30 minutes of intra service time**. Our expert panel felt this value, which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We recognize that our total time has decreased, due to respondents indicating less intra service time and one less post operative visit, however, we feel our RVU reduction in our recommendation takes that time modification into account.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 25 minutes of evaluation time which less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees,

which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 8 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 43 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A General Anesthesia or Complex Regional Block/ Straightforward Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Discharge Management / Post-Operative Visits
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although not indicated for the this particular code by survey respondents. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure. The survey respondents also indicated two post-operative office visits occur following the initial procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The patient's convalescence to that point is reviewed and discussed. The sutures are removed. The neurological status is assessed. The wound is inspected and palpated. Flap viability is assessed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The small abutment bolster and associated locking cap device are removed. The area around the percutaneous abutment is vigorously cleaned and possibly debrided. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing and long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Supporting Reference Codes for the Recommended Value
It is worth noting that while there are many codes in the fee schedule to support our requested value. The MPC codes provided in the required section of the SOR above do not have identical intra time, as there are no 090 globals in the database with 30 minutes intra time on the MPC list. Therefore, to offer supporting MPC codes, we utilized codes with slightly longer intra times from the MPC list.

CPT Code	Long Desc	Global	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review	IWPUT

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69714

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 223
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 223 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 74 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new

transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 74 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 59% , In the ASC 41%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 96% , Overnight stay-less than 24 hours 4% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness in the area of the actuator and coil to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and a subpericranial pocket for the implant coil and magnet are created. The area for the transducer is then identified using the template and marked on the outer table of the skull in the region of the sinodural angle. Surgical guide and fixation holes are then drilled taking care not to penetrate the sigmoid sinus or the dura overlying the temporal lobe of the brain. This area is measured for appropriate depth to accommodate the fixation screw. The skull overlying the sinodural angle, less than or equal to 100 sq mm, is then drilled to create a well in the bone to accommodate the transducer device, again staying just superficial to the dura and sigmoid sinus. The entire device including the coil, magnet, and transducer portions are then placed. The device is then fixed to the skull using the fixation screw to a specific torque setting. The thickness of the flap overlying the magnet and coil portion of the device is then

carefully measure and precisely trimmed to a specific thickness to allow for transcutaneous transmission. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped area of the recipient sites is cleaned. A dressing is applied to the recipient site. A compression dressing is fashioned and is wrapped around the head to compress the recipient site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The wound is inspected and palpated for full incisional healing prior to fitting the sound processor. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	R. Peter Manes, MD, Ari Wirtschafter, MD

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	40%	40%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	25%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	80%	20%	0%

Physical effort required	60%	40%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	60%	40%	0%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	25%	50%	25%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	25%	50%	25%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	25%	75%	0%
Physical effort required	0%	100%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU

range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 5 respondents selected this as their primary KRS.

The second KRS selected was CPT 30410 Rhinoplasty, primary; complete, external parts including bony pyramid, lateral and alar cartilages, and/or elevation of nasal tip valued at 14.00 RVUs with a pre time of 45 / intra time of 120 / post time of 53, totaling 362 minutes. 4 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **9.03 and 50 minutes of intra service time.** Our expert panel felt this value which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We recognize that our total time has decreased, due to respondents indicating less intraservice time, however, we feel our RVU reduction in our recommendation takes that time modification into account.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 25 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 45 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The wound is inspected and palpated for full incisional healing prior to fitting the sound processor. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review	MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69714

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2532
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume

For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 2532 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 844 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 844 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 69716

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69XX0 Tracking Number Original Specialty Recommended RVU: **9.97**
Presented Recommended RVU: **9.97**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **9.97**

CPT Descriptor: Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside of the mastoid and resulting in removal of greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 59-year-old female with a right mixed hearing loss from chronic ear disease and its surgical treatment seeks intervention for improved quality of life at work and socially. A magnetic transcutaneous bone anchored hearing device is placed in the right retrosigmoid location because the right mastoid is contracted and inflamed.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 58% , In the ASC 42%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 91% , Overnight stay-less than 24 hours 9% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness in the area of the actuator and coil to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and a subpericranial pocket for the implant coil and magnet are created. The area for the transducer is then identified using the template and marked on the outer table of the skull in the region of the sinodural angle. Surgical guide and fixation holes are then drilled taking care not to penetrate the sigmoid sinus or the dura overlying the temporal lobe of the brain. This area is measured for appropriate depth to accommodate the fixation screw. The skull overlying the sinodural angle, greater than or equal to 100 sq mm, is then drilled to create a well in the bone to accommodate the transducer device, again staying just superficial to the dura and sigmoid sinus. The entire device including the coil, magnet, and transducer portions are then placed. The device is then fixed to the skull using the fixation screw to a specific torque setting. The thickness of the flap overlying the magnet and coil portion of the device is then

carefully measured and precisely trimmed to a specific thickness to allow for transcutaneous transmission. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped area of the surgical site is cleaned. A dressing is applied to the surgical site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Post-Operative Visits

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	11%	11%	56%	22%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	63%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	44%	34%	22%
Physical effort required	33%	56%	11%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	44%	34%	22%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	0%	60%	20%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	40%	20%
Physical effort required	0%	80%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated

implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters

during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 9 respondents selected this as their primary KRS.

The second KRS selected was CPT 21199 Osteotomy, mandible, segmental; with genioglossus advancement valued at 16.73 RVUs with a pre time of 30 / intra time of 90 / post time of 30, totaling 283 minutes. 5 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **9.97 and 60 minutes of intra service time**. Our expert panel felt this value which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 29 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide

tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 9 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 48 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review	MPC
49590	Repair spigelian hernia	090	0.0855	8.90	45			60	30	58	193	2000-08

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69714

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 223
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 223 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 74 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year

69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 74 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69717 Tracking Number Original Specialty Recommended RVU: **8.48**
Presented Recommended RVU: **8.48**
Global Period: 090 Current Work RVU: **8.80** RUC Recommended RVU: **8.48**

CPT Descriptor: Replacement (including removal of existing device), osseointegrated implant, skull; with percutaneous attachment to external speech processor

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 16-year-old female with chronic otitis media and conductive hearing loss who previously received a percutaneous bone anchored implant has chronic inflammation at the abutment site that has been unresponsive to medical therapy. The device is removed and a new device is placed at a different site.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 57% , In the ASC 43%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection to the pericranium. A subpericranial dissection is performed and the previous implant abutment is removed. The cranial bone surrounding the osseointegrated titanium fixture in the patient's skull is drilled around the implant. The fixture is removed. The wound is thoroughly inspected for the cause of the patient's original complication related to the implant. The area for the new placement of the implant is then identified, templated, and marked on the outer table of the skull. A dissection is performed and the pericranium is incised and dissected away from the cranial bone to expose an area for implant placement. A new pilot guide hole through the cranium is drilled, and the deep portion of the guide hole is instrumented to ascertain the possible presence of dural contact and lack of sigmoid sinus exposure. Depending on this deep instrumentation, the pilot hole is possibly deepened. The final guide hole is then widened with spiral drilling to achieve a larger opening to receive the implant. The implanted fixture is installed in the cranial bone to very specific torque settings. This implanted fixture is

then secured to the transcutaneous abutment. The overlying flap and surrounding soft tissues are thinned to a maximal thickness to allow for transcutaneous attachment to the processor. A separate incision is made in the overlying skin of the flap to allow the percutaneous abutment to extend through the soft tissue flap. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion. A small bolster is created immediately surrounding the abutment and a locking cap is fixed to the abutment to keep the small abutment bolster in place and with appropriate pressure.

Description of Post-Service Work: The prepped area of the recipient site is cleaned. A compression dressing is fashioned and is wrapped around the head to compress the recipient site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Discharge Management / Post-Operative Visits
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The patient's convalescence to that point is reviewed and discussed. The sutures are removed. The neurological status is assessed. The wound is inspected and palpated. Flap viability is assessed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The small abutment bolster and associated locking cap device are removed. The area around the percutaneous abutment is vigorously cleaned and possibly debrided. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing and long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	50%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU

range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 42120 Resection of palate or extensive resection of lesion valued at 11.86 RVUs with a pre time of 60 / intra time of 80 / post time of 30, totaling 306 minutes. 4 respondents selected this as their primary KRS.

The second KRS selected was CPT 21013 Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2cm valued at 5.42 RVUs with a pre time of 56 / intra time of 45 / post time of 15, totaling 174 minutes. 4 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **8.48 and 44 minutes of intra service time.** Our expert panel felt this value, which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We recognize that our total time has decreased, due to respondents indicating one less post operative visit, however, we feel our RVU reduction in our recommendation takes that time modification into account.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 25 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides."

Scrub, Dress, Wait Time – We are recommending 7 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 42 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A General Anesthesia or Complex Regional Block/ Straightforward Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Discharge Management / Post-Operative Visits
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although not indicated for the this particular code by survey respondents. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure. The survey respondents also indicated two post-operative office visits occur following the initial procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The patient's convalescence to that point is reviewed and discussed. The sutures are removed. The neurological status is assessed. The wound is inspected and palpated. Flap viability is assessed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The small abutment bolster and associated locking cap device are removed. The area around the percutaneous abutment is vigorously cleaned and possibly debrided. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing and long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69717

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 13 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 4 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 sq mm surface area of bone deep to the outer cranial cortex

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 59-year-old female with a right conductive hearing loss previously had placement of a right magnetic transcutaneous bone anchored hearing device that has malfunctioned. She undergoes removal and replacement of the device.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 63% , In the ASC 37%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness in the area of the actuator and coil to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and the previous implant is removed. The wound is thoroughly inspected for the cause of the patient's original complication related to the implant. A subpericranial pocket for the implant coil and magnet are created. The area for the new placement of the transducer is then identified using the template and marked on the outer table of the skull. Surgical guide and fixation holes are then drilled taking care not to penetrate the dura overlying the temporal lobe of the brain. This area is measured for appropriate depth to accommodate the fixation screw. The skull is then drilled, less than 100 sq mm, to create a well in the bone to accommodate the transducer device, again staying just superficial to the dura. The entire device including the coil, magnet, and transducer portions are then placed. The device is then fixed to the skull using the fixation screw to a specific torque setting. The thickness of the flap overlying the magnet

and coil portion of the device is then carefully measure and precisely trimmed to a specific thickness to allow for transcutaneous transmission. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped area of the surgical site is cleaned. A dressing is applied to the surgical site. A compression dressing is fashioned and is wrapped around the head to compress the surgical site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Post-Operative Visits

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
50590	090	9.77	**RUC Time**	54,658

CPT Descriptor 1 Lithotripsy, extracorporeal shock wave

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
14060	090	9.23	**RUC Time**	90,113

CPT Descriptor 2 Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less

Other Reference CPT Code	Global	Work RVU	Time Source
28003	090	9.06	**RUC Time**

CPT Descriptor Incision and drainage below fascia, with or without tendon sheath involvement, foot; multiple areas

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 5 **% of respondents:** 13.1 **%**

Number of respondents who choose 2nd Key Reference Code: 3 **% of respondents:** 7.8 **%**

TIME ESTIMATES (Median)

	CPT Code: 69719	Top Key Reference CPT Code: 69930	2nd Key Reference CPT Code: **31587**
Median Pre-Service Time	46.00	95.00	58.00
Median Intra-Service Time	55.00	180.00	95.00

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	20%	40%	20%	20%	0%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	75%	0%	25%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	80%	20%	0%
Physical effort required	80%	0%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	60%	20%	20%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	67%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	67%	0%	33%
Physical effort required	67%	33%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	33%	67%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated

implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters

during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 5 respondents selected this as their primary KRS.

The second KRS selected was CPT 31587 Laryngoplasty, cricoid split, without graft placement valued at 15.27 RVUs with a pre time of 58 / intra time of 95 / post time of 30, totaling 445 minutes. 3 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **9.46 and 55 minutes of intra service time.** Our expert panel felt this value which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We recognize that our total time has decreased, due to respondents indicating less intraservice time, however, we feel our RVU reduction in our recommendation takes that time modification into account.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 27 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be

properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 9 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 46 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review	MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69714

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 25
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year

69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 25 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 8 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69XX1 Tracking Number Original Specialty Recommended RVU: **10.25**
Presented Recommended RVU: **10.25**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **10.25**

CPT Descriptor: Replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 49-year-old female with a right mixed hearing loss and history of right therapeutic mastoidectomy with tympanoplasty previously had placement of a magnetic transcutaneous bone anchored hearing device in the right retrosigmoid region that has malfunctioned. She undergoes removal and replacement of the device.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 56% , In the ASC 44%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 87% , Overnight stay-less than 24 hours 13% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness in the area of the actuator and coil to avoid potential repeat post-surgical skin breakdown, pain, and possible implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed NEW implant recipient site is precisely measured and then marked using the implant template. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and the previous implant is removed. The wound is thoroughly inspected for the cause of the patient's original complication related to the implant. A subpericranial pocket for the implant coil and magnet are created. The area for the new placement of the transducer is then identified using the template and marked on the outer table of the skull. Surgical guide and fixation holes are then drilled taking care not to penetrate the dura overlying the temporal lobe of the brain. This area is measured for appropriate depth to accommodate the fixation screw. The skull is then drilled, greater than or equal to 100 sq mm, to create a well in the bone to accommodate the transducer device, again staying just superficial to the dura. The entire device including the coil, magnet, and transducer portions are then placed. The device is then fixed to the skull using the fixation screw to a specific torque setting. The thickness of the flap overlying

the magnet and coil portion of the device is then carefully measure and precisely trimmed to a specific thickness to allow for transcutaneous transmission. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped area of the surgical site is cleaned. A dressing is applied to the surgical site. A compression dressing is fashioned and is wrapped around the head to compress the surgical site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Post-Operative Visits

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	8%	17%	33%	42%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	27%	46%	27%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	17%	33%

Physical effort required	42%	33%	25%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	50%	25%

2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	0%	60%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	60%	40%
Physical effort required	20%	80%	0%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	40%	20%	40%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU

range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 12 respondents selected this as their primary KRS.

The second KRS selected was CPT 21199 Osteotomy, mandible, segmental; with genioglossus advancement valued at 16.73 RVUs with a pre time of 30 / intra time of 90 / post time of 30, totaling 283 minutes. 5 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **10.25 and 60 minutes of intra service time**. Our expert panel felt this value which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 33 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the

patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 53 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The dressing is removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. Flap viability overlying the coil is assessed. The sutures are removed. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. Antibiotic ointment is placed on the surgical wound.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Long term care, strategies to maximize function, and expected outcomes are discussed in detail. Counseling regarding the device, its function, and signs and symptoms of trouble with the device are discussed with the patient and family.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Time Package	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69717

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 2 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69717 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 1 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69726 Tracking Number Original Specialty Recommended RVU: **7.50**
Presented Recommended RVU: **7.50**
Global Period: 090 Current Work RVU: **5.93** RUC Recommended RVU: **7.50**

CPT Descriptor: Removal, entire osseointegrated implant, skull; with percutaneous attachment to external speech processor

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 48-year-old female with a left single sided deafness previously had placement of a percutaneous bone anchored implant. It worked well but has now developed discomfort at the device site. The device is removed in its entirety.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 54% , In the ASC 44%, In the office 2%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 95% , Overnight stay-less than 24 hours 5% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Perform a current physical exam paying special attention to the patient's skin condition adequacy for closure following implant removal. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the incision is marked in the region of the previous incision. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and the previous implant is exposed. The cranial bone surrounding the osseo-integrated titanium fixture in the patient's skull is drilled around the implant. The wound is thoroughly inspected for the cause of the patient's original complication related to the implant. The wound is irrigated and hemostasis is obtained. The wound where the external abutment of the implant is debrided then closed followed by closure of the linear incision anterior to the implant site in a layered fashion.

Description of Post-Service Work: The prepped area of the surgical site is cleaned. A dressing is applied to the surgical site. A compression dressing is fashioned and is wrapped around the head to compress the surgical site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is

reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Discharge Management / Post-Operative Visits
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The incisions and wound are inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	20%	20%	40%	20%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	20%	60%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	20%	40%	40%
Physical effort required	20%	40%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	40%	40%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	33%	34%	33%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	100%	0%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated

implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters

during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 21013 Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2cm valued at 5.42 RVUs with a pre time of 56 / intra time of 45 / post time of 15, totaling 174 minutes. 5 respondents selected this as their second KRS.

The second KRS selected was CPT 42120 Resection of palate or extensive resection of lesion valued at 11.86 RVUs with a pre time of 60 / intra time of 80 / post time of 30, totaling 306 minutes. 3 respondents selected this as their primary KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **7.50 and 35 minutes of intra service time**. Our expert panel felt this value, which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We also feel the increase in intra time justifies an increase in RVW. Additionally, our specialty felt this was a poorly chosen crosswalk at the January 2021 RUC meeting and was not in agreement that this value was appropriate for the work involved.

Compelling Evidence:
As referenced above, we believe compelling evidence exists to support an increase in RVW for this code. Specifically, evidence that incorrect assumptions were made in the previous valuation of the service. We believe two incorrect assumptions were made: first, that a flawed crosswalk was chosen in the previous valuation of this code, and second, that the January 2021 survey was flawed in that a rank order anomaly existed between the value of 69726 and the remainder of the family of codes.

Regarding the flawed crosswalk, the RUC chose to crosswalk this code to 53852 Transurethral destruction of prostate tissue; by radiofrequency thermotherapy (work RVU = 5.93, intra-service time of 30 minutes and total time of 142 minutes). They justified this saying it had identical intra time and similar total time. It was also noted that our service, 69726, was more intense than the crosswalk code. We agree that 69726 is more intense than the code used for crosswalk,

indicating 69726 should have a higher value. There were a dearth of codes with similar total and intraservice times, and the crosswalk chosen does not reflect the intensity and complexity of 69726. In our new survey, we also now see an increase of 5 minute of intratime when compared to our January 2021 survey. Based on the increase in intra time from the survey data being presented today, as well as the fact that the increase complexity and intensity of 69726 was not accounted for previously, we believe this crosswalk is no longer appropriate and compelling evidence exists to modify the work value.

Regarding the flaw in a previous survey, this was documented by our specialty's request to take the family back to CPT after the January 2021 meeting and request three additional codes to better, and more clearly, define the work involved in each procedure. We believe this also supports compelling evidence to revisit the value of this procedure.

Time package selection: We have selected pre-time package 3 and post-time package 9A due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 25 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides

Scrub, Dress, Wait Time – We are recommending 7 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 42 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9A General Anesthesia or Complex Regional Block/ Straightforward Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 15 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Discharge Management / Post-Operative Visits
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although not indicated for the this particular code by survey respondents. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure. The survey respondents also indicated two post-operative office visits occur following the initial procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The incisions and wound are inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69714

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 25
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 25 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 8 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:69727 Tracking Number Original Specialty Recommended RVU: **7.38**
Presented Recommended RVU: **7.38**
Global Period: 090 Current Work RVU: **7.13** RUC Recommended RVU: **7.38**

CPT Descriptor: Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 sq mm surface area of bone deep to the outer cranial cortex

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male with a right mixed hearing loss previously had placement of a magnetic transcutaneous bone anchored implant which worked well but has now become infected. The device is removed.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 61% , In the ASC 39%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 95% , Overnight stay-less than 24 hours 5% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Review the CT scan to ensure that there is adequate bone quality and quantity in the area of implantation to support a successful implantation. Perform a current physical exam paying special attention to the patient's skin condition and skin thickness in the area of the actuator and coil to avoid potential post-surgical skin breakdown and implant extrusion. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the proposed implant recipient site is precisely measured and then marked using the implant template. The location of the implant transducer is marked using a hypodermic needle inserted down to the bone with marking ink, such as Methylene blue. The incision is injected with local anesthetic.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and the previous implant is exposed. The cranial bone surrounding the osseo-integrated titanium transducer and the respective fixture screws in the patient's skull is drilled out to free the implant. The wound is thoroughly inspected for the cause of the patient's original complication related to the implant. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped area of the surgical site is cleaned. A dressing is applied to the surgical site. A compression dressing is fashioned and is wrapped around the head to compress the surgical site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are

discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Post-Operative Visits

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

INTENSITY/COMPLEXITY MEASURES

(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	17%	17%	50%	16%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	60%	20%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	50%	0%
Physical effort required	50%	50%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	67%	17%	16%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	25%	25%	5000%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	50%	25%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	25%	50%
Physical effort required	25%	25%	50%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	25%	50%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated

implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters

during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 6 respondents selected this as their primary KRS.

The second KRS selected was CPT 42440 Excision of submandibular (submaxillary) gland valued at 6.14 RVUs with a pre time of 55 / intra time of 60 / post time of 25, totaling 198 minutes. 4 respondents selected this as their second KRS.

Compelling Evidence:
As referenced above, we believe compelling evidence exists to support an increase in RVW for this code. Specifically, evidence that incorrect assumptions were made in the previous valuation of the service. We believe two incorrect assumptions were made: first, that a flawed crosswalk was chosen in the previous valuation of this code, and second, that the January 2021 survey was flawed in that a rank order anomaly existed between the value of 69726 and the remainder of the family of codes.

Regarding the flawed crosswalk, the RUC chose to crosswalk this code to 37718 Ligation, division, and stripping, short saphenous vein (work RVU = 7.13, intra-service time of 45 minutes and total time of 178 minutes). They justified this saying it had identical intra time and similar total time. It was also noted that our service, 69726, was more intense than the crosswalk code. We agree that 69726 is more intense than the code used for crosswalk, indicating 69726 should have a higher value. There were a dearth of codes with similar total and intraservice times, and the crosswalk chosen does not reflect the intensity and complexity of 69726. In our new survey, we also now see an increase of 5 minutes of intratime when compared to our January 2021 survey. Based on the increase in intra time from the survey data being presented today, as well as the fact that the increase complexity and intensity of 69726 was not accounted for previously, we believe this crosswalk is no longer appropriate and compelling evidence exists to modify the work value.

Regarding the flaw in a previous survey, this was documented by our specialty's request to take the family back to CPT after the January 2021 meeting and request three additional codes to better, and more clearly, define the work involved in

each procedure. We believe this also supports compelling evidence to revisit the value of this procedure.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **7.38 and 50 minutes of intra service time.** Our expert panel felt this value, which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule. We also feel the increase in intra time justifies an increase in RVW. Additionally, our specialty felt this was a poorly chosen crosswalk at the January 2021 RUC meeting and was not in agreement that this value was appropriate for the work involved.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 27 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 10 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 46 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. The ear is examined, and the wound is cleaned, inspected, and palpated for full healing prior to fitting the sound processor. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review	MPC

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69717

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 13
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 13 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume
Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 4 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:69XX2 Tracking Number Original Specialty Recommended RVU: **8.50**
Presented Recommended RVU: **8.50**
Global Period: 090 Current Work RVU: RUC Recommended RVU: **8.50**

CPT Descriptor: Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex

---

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old female with a left mixed hearing loss previously had placement of a magnetic transcutaneous bone anchored implant in the retrosigmoid cranium which worked well but has now become infected. The device is removed.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 57% , In the ASC 43%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 86% , Overnight stay-less than 24 hours 14% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Meet with the patient and family to describe and discuss in detail the planned procedure. Review and update the medical history. Perform a current physical exam paying special attention to the patient's skin condition adequacy for closure following implant removal. Reconcile medications and allergies. Address NPO status and timing. Discuss preoperative home medications and postoperative prescriptions and check the prescription drug monitoring database, discuss. Plan the patient's expected convalescence and educate the patient and caregivers regarding the signs and symptoms of the most common and serious complications. There is confirmation and marking of site of proposed insertion, and a detailed description is given of the postoperative changes in wound and incision and the expected cosmetic and functional results. Review and obtain informed consent. Verify that all required instruments and supplies are available. Following induction of anesthesia, the patient is positioned and prepped for the procedure. A timeout is performed with entire surgical team, including confirmation of the procedure, locations, allergies, antibiotic prophylaxis, anesthesia and fire risks, expected duration, and any concerns related to the procedure. The postauricular hair is shaved and the incision is marked.

Description of Intra-Service Work: An incision is performed followed by a meticulous dissection through the pericranium. A subpericranial dissection is performed and the previous implant is exposed. The cranial bone surrounding the osseo-integrated titanium transducer and the respective fixture screws in the patient’s skull is drilled out to free the implant. The wound is thoroughly inspected for the cause of the patient’s original complication related to the implant. The wound is irrigated and hemostasis is obtained. The wound is closed in a layered fashion.

Description of Post-Service Work: The prepped areas of the respective donor and recipient sites are cleaned. A dressing is applied to the donor site. A compression dressing is fashioned and is wrapped around the head to compress the recipient site. The patient is observed during emergence from anesthesia. Dictation and postoperative orders are performed. Discharge medications are reconciled and prescriptions are written. Instructions, appropriate discharge timing, follow up, and precautions are discussed with the postoperative nursing team. Communication with the referring physician is then performed. There is a discussion with the family regarding the procedure and findings. The patient is then seen after

emergence from general anesthesia to check the patient's neurologic status, wound for signs of hematoma, or other complications. There is reiteration of the convalescence, precautions, follow up appointments, expected postoperative course, and signs and symptoms of complication. The written postoperative instructions are reviewed.

Post-Operative Visits

Discharge Management
These patients are typically discharged same day from the hospital. As a 90 day global, the standard .5 discharge management visit has been included. This visit is required given that general anesthesia sedation is utilized, and patients must be monitored closely following the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background:

In October 2020, the Academy brought forward a Code Change Application requesting the revision of two existing codes, 69714 and 69717, as well as the addition of four new codes 69X50-X53 (now 69716-69727). Those codes

represented implantation, revision/replacement, and removal of a transcutaneous and percutaneous osseointegrated implants, respectively. The Panel approved the CCA and the codes were subsequently valued at the January 2021 RUC meeting. During that review, several issues were identified by our reviewers, facilitation committee, and the broader RUC panel. This included concerns that for at least one code in the family, there were rank order anomalies with the intraservice time. In response, the RUC assigned interim values for the codes, and requested that the family be resurveyed for the April 2021 RUC meeting.

The Academy agreed with this recommendation and indicated our intent to resurvey for the April meeting in the recently released LOIs. After discussing the possible issues with the survey responses with Academy leadership, as well as our otology colleagues and sister-societies, we believed there were problems with the way the code family was revised at CPT in October 2020, resulting in the anomalous survey responses. Specifically, the 69726 code survey, removal of the percutaneous device, created a rank order anomaly. We discussed this dilemma with representatives from American Otological Society (AOS)/American Neurotology Society (ANS) and determined that the variation in the removal of the percutaneous device, 69726, was likely due to misinterpretation of the descriptor.

A frequent clinical scenario that occurs in removing the percutaneous device is that the implant is not truly removed. Very commonly with percutaneous implant wound problems, an appendage to the implant, known as the bone anchored implant abutment, which is the component that traverses the scalp, is simply uncoupled from the implant in the office setting. The resulting wound is subsequently left to heal by primary intention. The intent of CPT 69726 is for total removal of the implant and abutment which requires an operative environment and, most commonly, an otologic drill. Therefore, the Academy requested the RUC's permission to return to the CPT Editorial Panel to further clarify and revise the code set. That request was approved by the RUC in April 2021, and the Academy submitted a revised CCA for the May 2021 meeting which clarified the percutaneous implant removal by describing the procedure as removal of the entire implant. We also added a parenthetical to report removal of the abutment alone to be an included component of the evaluation and management visit.

During our preparation of this CCA, we also noticed there was variation in the method of transcutaneous implant placement and noted problems with the distribution of the intraservice times with the previous 69716 code that was intended to report this procedure. Discussion with the AOS/ANS leadership revealed that there are different techniques that vary in time and intensity depending on the indication for the procedure, device chosen, and patient anatomy. A patient with chronic ear infection and resulting mixed or conductive hearing loss will often require placement of the device outside the mastoid to allow for adequate physical space for the device as well as mitigating infection risk. In these cases, some transcutaneous implants require removal of a significant amount of cranium down to or sometimes beyond the inner cortex in the retrosigmoid area or temporal squama. These cases are technically more difficult, time consuming, and risky. In other cases, such as single-sided deafness, conductive, or mixed hearing loss not resulting from chronic ear inflammatory disease, when the mastoid is well pneumatized, placement of a transcutaneous device in the mastoid is the preferred, less time consuming and less risky location for device placement. Thus, we chose to bifurcate the transcutaneous codes into placement within the mastoid and/or resulting in removal of less than 100 mm2 surface area of cranium beyond its outer cortex versus those that are placed outside of the mastoid and resulting in removal of greater than or equal to 100 mm2 surface area of cranium beyond its outer cortex as an effort to clarify the intraservice work for CPT 69716. Mirroring replacement and removal codes were also proposed and approved by the CPT panel.

In preparation for the October 2021 resurvey of this revised family, we worked diligently to incorporate all the feedback from the January 2021 review. Namely, to add in RSL codes the facilitation committee felt were more appropriate, to only include Otolaryngology procedures that were RUC reviewed (even in cases where that created larger gaps in the RSL work values, or where the RUC reviews were done quite some time ago), and to include a much broader span of values, starting in the 5 RVU range and extending up into the 16 RVU range (another request of our facilitation committee). This required a repull of all available reference codes

from the RUC database. Regrettably, one of our survey codes, 69714, was captured within the parameters during that repull, and was not flagged for removal during any of our six rounds of internal review. Additionally, it was not flagged after submission of survey materials by the AMA.

Upon review of our survey responses that error was identified. Our society immediately contacted AMA staff and discussed the best options moving forward. It was agreed that our specialty should flag the issue at the onset of review by the RUC and proceed with presentation of our survey for this large family of codes. During prefacilitation of the family at the October 2021 meeting, the RUC determined that the survey was invalid, and required resurvey for the January 2022 meeting. The data from the most recent survey is being presented at this meeting, however, we believe survey fatigue played a significant factor in our ability to elicit responses. It was extremely difficult to get sufficient response rates exceeding the 30 minimum threshold, and while we acknowledge not every code has over 30 responses from those with experience in the past 12 months, we assure the RUC we did everything possible to maximize the response rate, including leaving the survey open until December 6th, just over a week before the RUC submission deadline. We feel confident that, although some codes in the family have responses predominantly from those without experience in the past 12 months, those respondents are adequately able to value these procedures. There is a significant amount of crossover between these procedures and other otologic procedures, allowing respondents to use their clinical expertise to adequately describe the time and value of this family of procedures.

The new family of codes is now being re-presented to the RUC for valuation. The result is the trios of codes, one for implantation, replacement, and removal of each procedure (e.g., percutaneous, transcutaneous greater than 100 sq cm, transcutaneous less than 100 sq cm). ***A simplified summary spreadsheet of the family has also been supplied, for ease of review.***

Survey Sample and Process:

A survey request was sent to a targeted, random selection of 3268 members from the AAO-HNS, the (ANS) American Neurotology Society, and the AOS (American Otological Society).

Discussion of Key Reference Codes

The first KRS selected was CPT 69930 Cochlear device implantation, with or without mastoidectomy valued at 17.73 RVUs with a pre time of 95 / intra time of 180 / post time of 30, totaling 387 minutes. 10 respondents selected this as their primary KRS.

The second KRS selected was CPT 21013 Excision, tumor, soft tissue of face and scalp, subfascial (eg, subgaleal, intramuscular); less than 2 cm valued at 16.73 RVUs with a pre time of 56 / intra time of 45 / post time of 15, totaling 174 minutes. 3 respondents selected this as their second KRS.

Recommendation (Work and Intra Time):

We are recommending a work RVU of **8.50 and 60 minutes of intra service time**. Our expert panel felt this value which is our survey's 25th percentile, maintains relativity throughout the family and fits well in terms of the fee schedule.

Time package selection: We have selected pre-time package 3 and post-time package 9B due to this procedure currently being done predominantly in the hospital outpatient setting under general anesthesia.

Pre-time Package 3 Straightforward Patient/Difficult Procedure

Evaluation Time – We are recommending 27 minutes of evaluation time which is less than the pre-service package time, based on our survey median.

Positioning Time – We are recommending 10 minutes of positioning time which is more than the preservice package, but mirrors our survey median time. We feel this additional time is justified based on the actual time needed to position the

patient for this procedure, as indicated by our survey respondents. We need to turn the operating room table 180 degrees, which adds complexity and time given all the EKG leads, CO2 sensor, SCD wires and anesthetic tubing that inevitably needs to be properly positioned in order to complete the turn. The head then needs to be turned and placed in position. Wide tape is used to tape the head to the operating room bed in order to maintain a fixed position for the duration of surgery. All of this requires additional time above the positioning time the package provides.

Scrub, Dress, Wait Time – We are recommending 8 minutes of scrub, dress and wait time which is less than the pre-service package time, based on our survey median.

This results in a total recommended pre time of 45 minutes, taking the lesser of surveyed time or the pre-service package time.

Post-time Package 9B General Anesthesia or Complex Regional Block/ Complex Procedure
Recommended time has been reduced to 15 minutes which is a decrease of 18 minutes from the post package time selected to match our survey time. ***This results in a total recommended post time of 15 minutes, taking the lesser of surveyed time or the pre-service package time.***

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post-Operative Visits

Discharge Management
Survey respondents also indicated that these patients are typically discharged same day from the hospital. As a 90 day global, the **standard .5 discharge management visit** has been included, although survey respondents indicated for this particular code that a full discharge management visit occurs. This visit is required based on the complexity and inherent risk of the procedure itself, as well as the post-operative care needed. It is also standard for 90 global procedures where discharge occurs on the same day as the procedure.

Post op visit 1: 99212
The mastoid dressing is removed. The sutures are removed. The patient's convalescence to that point is reviewed and discussed. The neurological status is assessed. The wound is inspected and palpated. The middle ear is inspected. Tuning forks are utilized to evaluate the patients hearing. Antibiotic ointment is placed on the wound. Patient and family questions and concerns are addressed. Ongoing care is reiterated.

Post op visit 2: 99213
The patient's convalescence to that point is reviewed. The ear is examined, and the wound is cleaned, inspected, and palpated. Tuning forks are utilized to evaluate the patients hearing. Patient and family questions and concerns are addressed. Ongoing care is reiterated. A discussion occurs regarding different hearing options now that the previous osseointegrated implant has been removed and not replaced.

Supporting Reference Codes for the Recommended Value

CPT Code	Long Desc	Global	IWPUT	Work RVU	Pre Time Package	Pre Eval Time	Pre Positioning Time	Pre Scrub, Dress, Wait Time	Intra Time	Immediate Post Time	Post-op Visit Time	Total Time	Most Recent RUC Review

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 69717

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Otolaryngology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National volume
For national volume predictions, we typically multiply Medicare volume by three (2979 cases anticipated across all codes annually). See the Medicare methodology below which was used to generate the national recommendations. Of the percutaneous cases, 6% get revised or removed. For the transcutaneous codes, 1% is anticipated to get revised or removed annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 223 cases per year
69717 perc revision - 6% of 223 69714 cases = 13 cases per year
69726 perc removal - 6% of 223 69714 cases = 13 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 2532 cases per year
69719 trans less than 100 sq cm revision - 1% of 2532 69X51 cases = 25 cases per year
69727 trans less than 100 sq cm removal - 1% of 2532 69x52 cases = 25 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 223 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 223 69xx0 cases = 2 cases per year
69xx2 trans greater than 100 sq cm removal - 1% of 223 69xx0 cases = 2 cases per year

Specialty Otolaryngology Frequency 2 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare volume

Current Medicare volume for 69714 (perc implantation) is 993 cases. Of those, 6% get revised under 69717, annually. With the creation of the new transcutaneous codes, experts anticipate that 85% of cases will now be reported under the new transcutaneous less than 100 sq cm codes. The remaining 15% will be reported evenly between the percutaneous codes and the transcutaneous greater than 100 sq cm codes. The transcutaneous codes are anticipated to be revised or removed 1% of the time. Thus, the math follows for each code trio:

69714 perc implantation - 7.5% of existing volume = 74 cases per year
69717 perc revision - 6% of 74 69714 cases = 4 cases per year
69726 perc removal - 6% of 74 69714 cases = 4 cases per year

69716 trans less than 100 sq cm implantation - 85% of existing volume = 844 cases per year
69719 trans less than 100 sq cm revision - 1% of 844 69X51 cases = 8 cases per year
69727 trans less than 100 sq cm removal - 1% of 844 69x52 cases = 8 cases per year

69xx0 trans greater than 100 sq cm implantation - 7.5% of existing volume = 74 cases per year
69xx1 trans greater than 100 sq cm revision - 1% of 74 69xx0 cases = 1 case per year
69xx2 trans greater than 100 sq cm removal - 1% of 74 69xx0 cases = 1 case per year

Specialty Otolaryngology Frequency 1 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

PRESENTER(S):_R. Peter Manes, MD_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

CPT Code	Long Descriptor	Global Period
69714	Implantation, osseointegrated implant, skull; with percutaneous attachment to external speech processor	090
CPT Code	**Long Descriptor**	**Global Period**
69717	Replacement (including removal of existing device), osseointegrated implant, skull; with percutaneous attachment to external speech processor	090
CPT Code	**Long Descriptor**	**Global Period**
69726	Removal, entire osseointegrated implant, skull; with percutaneous attachment to external speech processor	090
CPT Code	**Long Descriptor**	**Global Period**
69716	Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor within the mastoid and/or resulting in removal of less than 100 sq mm surface area of bone deep to the outer cranial cortex	090
CPT Code	**Long Descriptor**	**Global Period**
69719	Replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 sq mm surface area of bone deep to the outer cranial cortex	090
CPT Code	**Long Descriptor**	**Global Period**
69727	Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 sq mm surface area of bone deep to the outer cranial cortex	090
CPT Code	**Long Descriptor**	**Global Period**
69XX0	Implantation, osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside of the mastoid and resulting in removal of greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex	090
CPT Code	**Long Descriptor**	**Global Period**
69XX1	Replacement (including removal of existing device), osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor,	090

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	outside the mastoid and involving a bony defect greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex	
CPT Code	**Long Descriptor**	**Global Period**
69XX2	Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, outside the mastoid and involving a bony defect greater than or equal to 100 sq mm surface area of bone deep to the outer cranial cortex	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	**Vignette**
69714	a 56-year-old male suffers from chronic otitis media resulting in otorrhea and mixed hearing loss. he is unable to wear traditional hearing aids. implantation of an osseointegrated bone anchored device with a percutaneous attachment to an external speech processor is performed.
CPT Code	**Vignette**
69717	a 16-year-old female with chronic otitis media and conductive hearing loss who previously received a percutaneous bone anchored implant has chronic inflammation at the abutment site that has been unresponsive to medical therapy. the device is removed and a new device is placed at a different site.
CPT Code	**Vignette**
69726	a 48-year-old female with a left single sided deafness previously had placement of a percutaneous bone anchored implant. it worked well but has now developed discomfort at the device site. the device is removed in its entirety.
CPT Code	**Vignette**
69716	a 48-year-old male with a congenital left conductive hearing loss seeks intervention for improved quality of life at work and socially. a magnetic transcutaneous bone anchored hearing device is placed behind the left ear.
CPT Code	**Vignette**
69719	a 59-year-old female with a right conductive hearing loss previously had placement of a right magnetic transcutaneous bone anchored hearing device that has malfunctioned. she undergoes removal and replacement of the device.
CPT Code	**Vignette**
69727	a 62-year-old male with a right mixed hearing loss previously had placement of a magnetic transcutaneous bone anchored implant which worked well but has now become infected. the device is removed.
CPT Code	**Vignette**
69XX0	a 59-year-old female with a right mixed hearing loss from chronic ear disease and its surgical treatment seeks intervention for improved quality of life at work and socially. a magnetic

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	transcutaneous bone anchored hearing device is placed in the right retrosigmoid location because the right mastoid is contracted and inflamed.
CPT Code	**Vignette**
69XX1	a 49-year-old female with a right mixed hearing loss and history of right therapeutic mastoidectomy with tympanoplasty previously had placement of a magnetic transcutaneous bone anchored hearing device in the right retrosigmoid region that has malfunctioned. she undergoes removal and replacement of the device.
CPT Code	**Vignette**
69XX2	a 52-year-old female with a left mixed hearing loss previously had placement of a magnetic transcutaneous bone anchored implant in the retrosigmoid cranium which worked well but has now become infected. the device is removed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Our specialty formed a panel of experts to develop practice expense recommendations for this family of codes. The panel was comprised of our RUC Advisor and multiple clinical experts who practice in the areas of general otolaryngology, sleep medicine, and otology. The expert panel members also practice across in settings that vary by size, geography, and represent both private and academic settings.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

   The RUC and CMS approved values from January 2021 for codes 69714, 69717, and 69726 were utilized as comparison codes for all new codes in the family.

3. Is this code(s) typically reported with an E/M service?

   No

4. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   N/A

5. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   n/a

6. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

7. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

During the pre-service clinical staff are completing pre-service diagnostic and referral forms, coordinating pre-surgery services including test results, scheduling space and equipment in the facility, providing pre-service education and obtaining consent from the patient, and completing pre-procedure phone calls and prescriptions.

   b. Service period (includes pre, intra and post):

During the service period the clinical staff assist with a half discharge management visit for the patient. This includes post-procedure care instructions. They also clean the instruments used during each post operative visit.

   c. Post-service period:

During post operative visits the patient is checked in via front-desk staff. Clinical staff collects vitals from the patient. An exam chair/table and light are required with paper covering for the exam furniture. A postoperative wound kit for removal of sutures/staples is required. The clinical staff assists the physician with removal of the sutures.

8. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

N/A

9. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

INVOICES

10. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

11. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

12. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

N/A

13. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	**SA048**	**pack**		**4.0507**

paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

DESCRIPTION	**Code**	**Unit**	**Item Qty**	**Unit price**
pack, cleaning, surgical instruments	**SA043**	**pack**	1	**10.7922**
gloves, non-sterile		pair	2	
gown, staff, impervious		item	1	
face shield, splash protection		item	1	
autoclave bag		item	1	
autoclave tape		yd	0.33	
enzymatic detergent		oz	1	
cleaning brush, instruments		item	1	

DESCRIPTION	**Code**	**Unit**
pack, post-op incision care (suture)	**SA054**	**pack**
kit, suture removal		kit
povidone soln (Betadine)		ml
gauze, sterile 4in x 4in		item
gloves, sterile		pair
steri-strip (6 strip uou)		item
swab-pad, alcohol		item
tape, surgical paper 1in (Micropore)		inch
tincture of benzoin, swab		item

14. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

15. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

16. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

EQ234 suction and pressure cabinet, ENT (SMR)
EQ183 microscope, operating
EQ170 light, fiberoptic headlight w-source
EF008 chair with headrest, exam, reclining

The office visit formula was used for all these pieces of equipment.

EQ137 basic instrument pack

The instrument pack formula was used for this item.

17. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

N/A

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

18. If this is a PE only code please select a crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

FACILITY DIRECT PE INPUTS **CPT CODE(S):_69714, 69716, 69717, 69719, 69XX0-69XX2_____**
SPECIALTY SOCIETY(IES):_AAO-HNS_____
PRESENTER(S):_R. Peter Manes, MD_____

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Clinical staff time in the preservice period remains unchanged for all codes in the family. All codes have cleaning time in the intra service time period to allocate time to cleaning the instruments used at each post op visit. Post-operative time has changed, commensurate with the survey data and recommended post op visits. All codes in the family have 2 post op visits.

In January 2021, some supplies were reduced commensurate with reducing the post-operative visits per our survey data. Additionally, we added a minimum multi-specialty pack for each post op visit and reduced individual, unnecessary line items. We also added a basic instrument pack and cleaning pack for the instruments which will be used at each post op visit. The instrument pack includes a tuning fork, Frasier tip suctions, and ear curettes. We removed the suture/staple pack and replaced it with just a suture pack. Our January 2022 recommendations are identical except in cases where respondents indicated LESS post-op visits overall, or a different level of post-op visit.

Equipment times were modified accordingly with changes to office visit frequency and level.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Screen: New Technology/New Services*

January 2022

Neuromuscular Ultrasound – Tab 11

CPT codes 76881 and 76882 were reviewed as New Technology/New Services by the Relativity Assessment Workgroup (RAW) in January 2015. The RAW recommended that the specialty societies develop a *CPT Assistant* article to define the proper coding of extremity ultrasound, particularly as it applies to the elements necessary to report a complete study and that the RAW should review in October 2016 after additional Medicare utilization data are available. This coding clarification was published in the September 2016 *CPT Assistant*.

In October 2016, the RAW re-reviewed these codes and agreed with the specialty that the dominant specialties providing the complete versus the limited ultrasound of extremity services were different causing variation in the typical practice expense inputs. The RAW recommended to 1) Refer CPT codes 76881 and 76882 to the Practice Expense Subcommittee for review of the direct practice expense inputs for January 2017; 2) Refer to the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound; and 3) Review again in 3 years (October 2019).

At the January 2017 RUC meeting, the Practice Expense Subcommittee reviewed the direct practice expense inputs for 76881 and 76882 and adjusted the clinical staff time. In June 2017, the CPT Editorial Panel editorially revised ultrasound of extremity codes 76881 and 76882 to clarify the distinction between complete and limited studies and revised the introductory guidelines to clarify reference to one joint in the complete ultrasound procedure.

In October 2019, the RAW reviewed and recommended to again review in two years after additional data are available (January 2022). However, in October 2021, the CPT Editorial Panel approved the addition of code 76XX0 for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity and the revision of 76882 to add focal evaluation. CPT code 76881 is included as part of this family, therefore, review by the RAW was no longer necessary.

CPT codes 76881 and 76882 were identified as part of the neuromuscular ultrasound code family with CPT code 76XX0 and surveyed for the January 2022 RUC meeting.

Compelling Evidence
The RUC agreed with the specialty societies that there is compelling evidence to support a change in physician work for the code family based on a documented change in technique and physician time, as supported by the survey. In 2009, CPT code 76880 was deleted, and two new codes were created to distinguish between the comprehensive diagnostic ultrasound and the focused anatomic-specific ultrasound. When CPT code 76881 was created and surveyed in 2010, radiology was expected to be the dominant provider. This would have typically included initial scanning by a diagnostic medical sonographer and subsequent scanning by a radiologist. When 76882 was created and surveyed in 2010, podiatry was expected to be the dominant provider. This would have typically included scanning performed only by the podiatrist. In 2016, the RUC PE Subcommittee

noted that the "dominant specialties providing the complete versus the limited ultrasound of extremity services are different, causing variation in PE" leading to revised PE direct inputs in January 2017. The physician work was not reviewed at that time. In 2022, rheumatology is the top provider for 76881 (25.7% of Medicare claims across all sites) and that specialty did not participate in the original survey. For rheumatology, physicians typically scan the patients with portable ultrasound devices rather than utilizing sonographers as originally described in the 2010 survey. Therefore, the physician work has changed. In 2022, radiology is the dominant physician provider for 76882 (57.3% of Medicare claims across all sites) and typically performs examinations with preliminary ultrasound scanning by a sonographer and additional imaging performed by the physician. Since radiologists do not use portable ultrasound devices as originally described in the 2010 survey or in the 2017 practice expense update, the physician work has changed due to supervision of the sonographer in addition to the radiologist performing the scanning.

In addition, ultrasound technology has evolved immensely since 2010, including proliferation of high-frequency ultrasound probes dedicated to musculoskeletal imaging, as well as producing images with higher fidelity and more detail. This modality is increasingly used for a greater range of musculoskeletal injuries and has replaced MRI as the first line investigation for many pathologies. Furthermore, ultrasound can also be used to troubleshoot difficult cases that are inconclusive on either clinical evaluation or other imaging modalities which supports a change in overall physician time and work. **The RUC concurred that there is compelling evidence that the physician work for these services has changed due to change in physician time and technique/technology.**

76881 ***Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation***
The RUC reviewed the survey results from 88 physicians and determined that the survey 25th percentile work RVU of 0.90 appropriately accounts for the work involved in this service. CPT code 76881 represents a complete evaluation of a specific joint in an extremity. This service requires ultrasound examination of all the following joint elements: joint space (e.g., effusion), peri-articular soft-tissue structures that surround the joint (i.e., muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be performed as part of the complete evaluation. Code 76881 also requires permanently recorded images and a written report containing a description of each of the required elements or reason that an element(s) could not be visualized (e.g., absent secondary to surgery or trauma). The RUC recommends 5 minutes of pre-service time, 20 minutes of intra-service time and 5 minutes of post-service time as supported by the survey. The RUC discussed the change in intra-service time and determined that the increase relates to the compelling evidence argument, as previously there was 15 minutes of intra-service time for the radiologist to scan and/or review the sonographer-obtained images. Whereas now, the rheumatologist is performing the scanning and it typically takes 20 minutes in the current patient population. The RUC noted that this code is reported with an office Evaluation and Management (E/M) visit 58.9% and a non-facility office E/M visit 66.3%; however, the code is imaging-specific so the physician work described would not overlap with the E/M service.

The RUC compared CPT code 76881 to the top key reference service MPC code 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81, 11 minutes intra-service time and 21 minutes total time) which is a clinically similar ultrasound code and noted that the reference code has identical pre and post-service time but less intra-service time than the surveyed code. The RUC noted that 76881 has 9 minutes more intra-service and total time than the reference code, which appropriately reflects the evaluation of multiple surrounding structures in addition to the joint, and therefore is appropriately valued higher. In addition, for the reference code, the physician is typically supervising a sonographer and performing additional scanning, as needed instead of directly performing the entire image acquisition potion of the ultrasound study. The RUC also compared the surveyed code to the second highest key reference service MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination*

and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter (work RVU = 1.92, 47 minutes total time) and noted that the surveyed code has far less physician time than the reference code and therefore is appropriately valued lower.

For additional support, the RUC compared CPT code 76881 to MPC code 74246 *Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (e.g., high-density barium and effervescent agent) study, including glucagon, when administered* (work RVU = 0.90, 15 minutes intra-service time and 22 minutes total time) and noted that the comparator code has less intra-service and total time compared to the surveyed code but is more intense. MPC code 74246 involves examination of a much larger anatomic area compared to the typical anatomic area examined for the surveyed code. The RUC concluded that CPT code 76881 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.90 for CPT code 76881.**

76882 ***Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation***
The RUC reviewed the survey results from 100 physicians and determined that the survey 25th percentile work RVU of 0.69 appropriately accounts for the work involved in this service. CPT code 76882 represents a limited evaluation of a joint or focal evaluation of a structure(s) in an extremity other than a joint (e.g., soft-tissue mass, fluid collection, or nerve[s]). This evaluation includes assessment of a specific anatomic structure(s) (e.g., joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all the elements included in CPT code 76881, although it does include all surrounding anatomy and any associated pathology or contralateral comparison as indicated. Code 76882 also requires permanently recorded images and a written report containing a description of each of the elements evaluated. The CPT Editorial Panel revised the CPT descriptor for this service in October 2021 to include focal evaluation of a nerve. The RUC recommends 5 minutes of pre-service time, 15 minutes of intra-service time and 5 minutes of post-service time as supported by the survey. The RUC discussed the change in intra-service time given that this limited code is performed with a sonographer and determined that the increase relates to the compelling evidence argument, as previously there was 11 minutes of intra-service time, whereas now the radiologist is working with the sonographer to obtain and interpret the images in addition to the physician performing additional scanning as needed. Therefore, it takes 15 minutes. The change in physician time is also due to the enhancement of the ultrasound technology whereby the number and quality of images that can be reviewed and the pathology to evaluate have greatly increased since 2010.

The RUC compared CPT code 76882 to the top key reference service code 76705 *Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)* (work RVU = 0.59, 8 minutes intra-service time and 18 minutes total time) which is a clinically similar ultrasound code and noted that the reference code has identical pre and post-service time but less intra-service time than the surveyed code. The RUC noted that CPT code 76882 has 7 minutes more intra-service and total time than the reference code, which appropriately reflects that the limited ultrasound examination of a musculoskeletal structure typically involves evaluation of more adjacent structures and tissues compared to the limited abdominal examination of a single structure, and therefore is appropriately valued higher. The RUC also compared the surveyed code to the second highest key reference service MPC code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter* (work RVU = 1.30, 30 minutes total time) and noted that the surveyed code has less intra-service and total time than the reference code and therefore is appropriately valued lower.

For additional support, the RUC compared CPT code 76882 to MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70, 15 minutes intra-service time and 20 minutes total time) and noted that the codes have identical intra-service time and a similar amount and type of physician work including analysis, interpretation and report of clinical data. The RUC concluded that CPT code 76882 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.69 for CPT code 76882.**

76XX0 ***Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity***

The RUC reviewed the survey results from 66 physicians and determined that the survey 25th percentile work RVU of 1.21 appropriately accounts for the work involved in this service. CPT code 76XX0 is for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity. This code will examine a nerve throughout its length, within one extremity, including evaluation of multiple areas for potential nerve compression, measurement of cross-sectional areas, evaluation of echogenicity, vascularity, mobility including dynamic maneuvers when indicated, evaluation for any associated muscular denervation, with comparison to unaffected muscles or nerves within that extremity as needed. CPT code 76XX0 also requires permanently recorded images and cine loop and a written report containing a description of each of the elements evaluated. The RUC recommends 7 minutes of pre-service time, 25 minutes of intra-service time and 7 minutes of post-service time as supported by the survey. The RUC clarified that this service would not typically be reported with an office E/M visit.

The RUC compared CPT code 76XX0 to the second highest key reference service MPC code 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54, 29 minutes intra-service time and 49 minutes total time) and noted that the surveyed code has less intra-service and total time than the reference code and therefore is appropriately valued lower. For additional support, the RUC compared CPT code 76XX0 to MPC code 95805 *Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness* (work RVU = 1.20, 20 minutes intra-service time and 50 minutes total time) and noted that the comparator code has less intra-service time and lower intensity than the surveyed code and an almost identical amount of physician work. The RUC concluded that CPT code 76XX0 should be valued at the 25th percentile work RVU as supported by the survey. Moreover, the RUC noted that consistency of intensity measures is demonstrated across the range of codes ascending from the limited code to this newest, most complex 76XX0 code and the recommendations maintain relatively both among the neuromuscular ultrasound family as well as the larger family of ultrasound imaging codes. **The RUC recommends a work RVU of 1.21 for CPT code 76XX0.**

Practice Expense

The Practice Expense Subcommittee reviewed the direct practice expense inputs and made updates to reflect the appropriate specialty providing the service in the global and technical component reporting only in the *non-facility setting*: rheumatology (76881), podiatry (76882), and neurology (76XX0). For the physician work component for CPT code 76882, the radiologist is the dominant provider for physician work at all sites of service; however, for the non-facility global and technical component utilization which determines the top specialty for non-facility practice expense inputs, Podiatry is the dominant specialty. Thus, the radiology inputs were removed from the PE for code 76882 because podiatry is dominant, and there is no sonographer or ultrasound room included in the PE spreadsheet as the physician performs the image acquisition with a portable ultrasound machine instead. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

New Technology/New Service
The RUC recommends that CPT code 76XX0 be placed on the New Technology list to be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Radiology **Diagnostic Ultrasound** **Extremities** *Code 76881 represents a complete evaluation of a specific joint in an extremity. Code 76881 requires ultrasound examination of all of the following joint elements: joint space (eg, effusion), peri-articular soft-tissue structures that surround the joint (ie, muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be performed as part of the complete evaluation. Code 76881 also requires permanently recorded images and a written report containing a description of each of the required elements or reason that an element(s) could not be visualized (eg, absent secondary to surgery or trauma).* *When fewer than all of the required elements for a "complete" exam (76881) are performed, report the "limited" code (76882).* Code 76882 represents a limited evaluation of a joint or ~~an~~ focal evaluation of a structure(s) in an extremity other than a joint (eg, soft-tissue mass, fluid collection, or nerve[s]). Limited evaluation of a joint includes assessment of a specific anatomic structure(s) (eg, joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all of the required elements included in 76881. Code 76882 also requires permanently recorded images and a written report containing a description of each of the elements evaluated. Comprehensive evaluation of a nerve is defined as evaluation of the nerve throughout its course in an extremity. Documentation of the entire course of a nerve throughout an extremity includes the acquisition and permanent archive of cine clips and static images to demonstrate the anatomy. *For spectral and color Doppler evaluation of the extremities, use 93925, 93926, 93930, 93931, 93970, or 93971 as appropriate.*

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male presents with sore, swollen ankle, which developed gradually over a period of several weeks. He is an avid basketball player but can no longer play because of the pain. Plain radiographs were negative for fracture. The decision is made to perform a diagnostic ultrasound examination.

Percentage of Survey Respondents who found Vignette to be Typical: 57%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review pertinent clinical information. Review any prior applicable imaging studies.

Description of Intra-Service Work: Perform the examination by scanning the patient, including perform dynamic maneuvers as needed. Interpret real-time and stored images of the ankle including: muscles, tendons, joint, other soft tissue structures, and any identifiable abnormality. Evaluate the lateral structures of the ankle, including: (1) The peroneus longus and peroneus brevis tendons for tears, tendinosis, or tenosynovitis. Also perform dynamic imaging with circumduction of the ankle to assess for peroneal subluxation in real time; and (2) The anterior talofibular ligament, calcaneofibular ligament, and anterior inferior tibiofibular ligament for tears or scarring. Perform stress maneuvers to evaluate for ligamentous laxity and anterolateral ankle impingement. Evaluate the medial structures of the ankle, including: (1) The posterior tibial, flexor digitorum longus and flexor hallucis longus tendons for tears, tendinosis, or tenosynovitis; (2) The deltoid ligament for tears or scarring; and (3) The neurovascular bundle for signs of nerve swelling or compression. Evaluate the anterior structures of the ankle, including: (1) The tibialis anterior tendon for tears, tendinosis, or tenosynovitis; and (2) The ankle joint for effusions, synovitis, arthritic changes, and adjacent ganglion cysts. Evaluate the posterior structures of the ankle, including: (1) The Achilles' tendon for tears, tendinosis, or peritendinitis; and (2) The retrocalcaneal and retroachilles bursa for fluid collections or inflammation. Compare the exam and correlate findings to any prior studies. Dictate a report for the medical record.

Description of Post-Service Work: Discuss and explain findings to the patient as needed. Review and sign final report. Communicate findings to referring clinician as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Andy Moriarity, MD; Carlo Milani, MD; David Reece, DO; Andrea Boon, MD; Fredrica Smith, MD; Marianna V. Spanaki, MD, PhD; Brooke Bisbee, DPM					
Specialty Society(ies):	ACR, AAN, AANEM, AAPM&R, ACRh, APMA					
CPT Code:	76881					
Sample Size:	7339	**Resp N:**	88			
Description of Sample:	The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community. The ACRh surveyed a random sample of 1000 current US members. The APMA surveyed a random sample of 1500 current US members.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	68%	32%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	74%	21%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	63%	37%
Physical effort required	0%	74%	26%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	21%	68%	11%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	45%	45%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	9%	55%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	9%	91%
Physical effort required	0%	18%	82%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	18%	27%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Neuromuscular Ultrasound code family consists of the following three codes:

- CPT code 76881: *Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation*
- CPT code 76882: *Ultrasound, limited, joint or other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*
- CPT code 76XX0: *Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*

The Neuromuscular Ultrasound code family was brought forth to the RUC due to the addition of CPT code 76XX0, a code for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity. This code will examine a nerve throughout its length, within one extremity, including evaluation of multiple areas for potential nerve compression, measurement of cross-sectional areas, evaluation of echogenicity, vascularity, mobility including dynamic maneuvers when indicated, evaluate for any associated muscular denervation, with comparison to unaffected muscles or nerves within that extremity as needed. Code 76XX0 also requires permanently recorded images and cine loop, and a written report containing a description of each of the elements evaluated. Additionally, the CPT Panel revised the CPT descriptor of code 76882 to include focal evaluation clarifying language.

CPT code 76881 represents a complete evaluation of a specific joint in an extremity. CPT code 76881 requires ultrasound examination of all the following joint elements: joint space (e.g., effusion), peri-articular soft-tissue structures that surround the joint (i.e., muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be performed as part of the complete evaluation. In addition, CPT code 76881 requires permanently recorded images and a written report containing a description of each of the required elements or reason that an element(s) could not be visualized (e.g., absent secondary to surgery or trauma).

CPT code 76882 represents a limited evaluation of a joint or focal evaluation of a structure(s) in an extremity other than a joint (e.g., soft-tissue mass, fluid collection, or nerve[s]). This evaluation includes assessment of a specific anatomic structure(s) (e.g., joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all the elements included in 76881 although does include all surrounding anatomy and any associated pathology or contralateral comparison as indicated. Code 76882 also requires permanently recorded images and a written report containing a description of each of the elements evaluated.

The American College of Radiology (ACR), American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), American Academy of Physical Medicine and Rehabilitation (AAPM&R), American College of Rheumatology (ACRh), and American Podiatric Medical Association (APMA) convened an expert panel familiar with these services to provide value and time recommendations for the January 2022 RUC meeting.

Survey Process
The ACR, AAN, AANEM, and AAPM&R surveyed for CPT codes 76881, 76882 and 76XX0. The ACRh and APMA surveyed only CPT codes 76881 and 76882.

The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community. The ACRh surveyed a random sample of 1000 current US members. The APMA surveyed a random sample of 1500 current US members.

Compelling Evidence
We believe that there is compelling evidence to consider an increase in the value for CPT code 76881 based on a documented change in the physician work due to differences in technique and physician time, which is supported by the survey respondent times. In 2022, a different specialty is dominant than the original survey of the previously approved RUC values which necessarily results in different physician work. In 2009, CPT code 76880 *(Ultrasound, extremity, nonvascular, real time with image documentation)* was deleted and two new codes were created to distinguish between the comprehensive diagnostic ultrasound and the focused anatomic-specific ultrasound. When 76881 was created and surveyed in 2010, radiology was expected to be the dominant provider and formed the basis for RUC valuation. This would have typically included initial scanning by a diagnostic medical sonographer and subsequent scanning by a radiologist. In 2016, the RUC PE Subcommittee noted that the "dominant specialties providing the complete versus the limited ultrasound of extremity services are different causing variation in PE" leading to revised PE direct inputs in January 2017. The physician work was not reviewed at that time. In 2021, rheumatology is now the dominant provider for 76881 and that specialty did not participate in the original survey. For rheumatology, physicians typically scan the patients themselves with portable US devices rather than the use of sonographers as originally described in the 2010 survey. Therefore, the physician work must be different. Additionally, since 2010, ultrasound is increasingly used for a greater range of musculoskeletal injuries and has replaced MRI as the first line investigation for many pathologies. Furthermore, ultrasound can also be used to troubleshoot difficult cases that are inconclusive on either clinical evaluation or other imaging modalities which supports a change in overall physician time and work.

Work RVU and Time Recommendations
The expert panel recommends the survey 25th percentile value at 0.90 work RVU and a survey median time of 20 minutes intra-service. Additionally, we are recommending maintaining the current times of 5 minutes pre-service and 5 minutes post-service.

Key Reference Services
Our recommended work RVU of 0.90 compares favorably to the most commonly chosen key reference service, CPT code 76700 *(Ultrasound, abdominal, real time with image documentation; complete),* which is a clinically similar ultrasound code and on the MPC list. CPT code 76700 has times of 5 minutes pre-service and 5 minutes post-service time but includes less intra-service time at 11 minutes compared to the surveyed code. CPT code 76881 has a survey median time of 20 minutes, which appropriately reflects the increased complexity of the service as the code involves evaluation of multiple surrounding structures in addition to the joint. Additionally, the recommended 0.90 work RVU is appropriately higher than that of key reference code 76700 at 0.81 work RVU. Similarly, survey respondents reported that the surveyed code was more intense overall than key reference code 76700.

The second key reference service code, CPT code 99214 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.)* supports the recommendation as well and is also an MPC code. Service times (7 minutes pre-service, 30 minutes intra-service, and 5 minutes post-service time) are higher for the reference code, 99214, than those recommended for the surveyed code (5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service time). Additionally, the recommended 0.90 work RVU for the surveyed code is appropriately lower than that of key reference code 99214 at 1.92 work RVU and has an appropriately lower IWPUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039
76881	**Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation**	**0.90**	**5**	**20**	**5**	**30**	**0.034**	**0.030**
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.	1.92	7	30	10	47	0.051	0.041

MPC Codes

Our recommendation for surveyed code 76881 compares favorably to the MPC codes depicted in the table below. This includes the most commonly chosen key reference service, CPT code 76700 *(Ultrasound, abdominal, real time with image documentation; complete),* which is a clinically similar ultrasound code. In addition, the value recommendation is identical to MPC code 74246 *(Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered)*, which is another radiology code. MPC code 74246 has 5 minutes less intra-service time at 15 minutes compared to the surveyed code; however this results in an appropriately higher IWPUT. MPC code 74246 involves examination of a much larger anatomic area as well as multiple patient dynamic maneuvers including changes in positioning compared to the typical anatomic area and fixed position for scanning performed for the surveyed code. Finally, MPC code 85097 *(Bone marrow, smear interpretation)* is a pathology code that has a slightly higher RVU and an appropriately higher IWPUT compared to the surveyed code as the pathology code has 5 minutes greater intra-service time which is more intense during service performance.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039
76881	**Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation**	**0.90**	**5**	**20**	**5**	**30**	**0.034**	**0.030**
74246	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	0.90	4	15	3	22	0.050	0.041
85097	Bone marrow, smear interpretation	0.94	0	25	0	25	0.038	0.038

Neuromuscular Ultrasound Family

The recommendations maintain relatively both among the neuromuscular ultrasound family, as well as the larger family of ultrasound imaging codes as indicated by the top key reference services. These relationships are summarized in the following table demonstrating the consistency of the IWPUT measurements across the range of codes at the recommended values ascending from the limited code to the newest, most complex 76XX0 code. The table below is sorted by IWPUT for reference.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76882	**Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation**	**0.69**	**5**	**15**	**5**	**25**	**0.031**	**0.028**
76881	**Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation**	**0.90**	**5**	**20**	**5**	**30**	**0.034**	**0.030**
76XX0	**Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-**	**1.21**	**7**	**25**	**7**	**39**	**0.036**	**0.031**

	time cine imaging with image documentation, per extremity							
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	5	8	5	18	0.046	0.033
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039

Summary

In summary, our expert panel recommends the survey 25th percentile value at 0.90 work RVU and a survey median time of 20 minutes intra-service. Additionally, we are recommending maintaining the current times of 5 minutes pre-service and 5 minutes post-service. The recommended value compares favorably with the key reference services, 76700 and 99214, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☒ Other reason (please explain) CPT code 76881 is billed with office E/M 58.9% of the time.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. According to the RUC database, 76881 is billed with: a) 99213 (Office outpatient visit 15 minutes) at 21.1% b) 99214 (Office outpatient visit 25 minutes) at 17.4%, c) 99203 (Office outpatient new 30 minutes) at 8%, and d) 99204 (Office outpatient new 45 minutes) at 6% of the time.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76881

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Radiology How often? Commonly

Specialty Rheumatology How often? Commonly

Specialty Podiatry How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 561000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 76881 is estimated to be provided 561000 times nationally in a one-year period.

Specialty Radiology	Frequency 78540	Percentage 14.00 %
Specialty Rheumatology	Frequency 151470	Percentage 27.00 %
Specialty Podiatry	Frequency 84150	Percentage 15.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 187,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 76881 is estimated to be provided 187000 times in a one-year period to Medicare patients.

Specialty Radiology	Frequency 26180	Percentage 14.00 %
Specialty Rheumatology	Frequency 50490	Percentage 27.00 %
Specialty Podiatry	Frequency 28050	Percentage 15.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76881

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation

(Do not report 76882 in conjunction with 76XX0)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 36-year-old male presents with an acute injury to his Achilles tendon, sustained while playing soccer. No open wounds are noted. X-rays are negative for osseous pathology. Mild erythema and edema are noted at the posterior lower leg. Ultrasound is performed to evaluate the Achilles tendon

Percentage of Survey Respondents who found Vignette to be Typical: 64%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review pertinent clinical information. Review any prior applicable imaging studies.

Description of Intra-Service Work: Supervise the sonographer performing the examination, as well as personally scanning the patient to perform dynamic maneuvers and/or confirm the sonographer's impression as needed. This includes obtain images in multiple planes through the specific area of concern (i.e., Achilles' tendon) and evaluate for abnormalities of a specific structure or any pathology in the area. Document normal anatomic structure and assess any pathologic findings including evidence of tendinosis, tendon tear, or paratenonitis. Perform measurements of tendon thinning and tear seperation to assist in determining patient management options. Compare to the contralateral side as needed. Dictate a report for the patient's chart.

Description of Post-Service Work: Discuss and explain findings to the patient as needed. Review and sign final report. Communicate findings to referring clinician as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022					
Presenter(s):	Andy Moriarity, MD; Carlo Milani, MD; David Reece, DO; Andrea Boon, MD; Fredrica Smith, MD; Marianna V. Spanaki, MD, PhD; Brooke Bisbee, DPM					
Specialty Society(ies):	ACR, AAN, AANEM, AAPM&R, ACRh, APMA					
CPT Code:	76882					
Sample Size:	7339	**Resp N:**	100			
Description of Sample:	The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community. The ACRh surveyed a random sample of 1000 current US members. The APMA surveyed a random sample of 1500 current US members.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	81%	10%	5%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	76%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	5%	86%	10%
Physical effort required	5%	90%	5%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	19%	76%	5%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	43%	43%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	21%	36%	43%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	7%	93%
Physical effort required	7%	7%	86%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	36%	57%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Neuromuscular Ultrasound code family consists of the following three codes:

- CPT code 76881: *Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation*
- CPT code 76882: *Ultrasound, limited, joint or other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*
- CPT code 76XX0: *Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*

The Neuromuscular Ultrasound code family was brought forth to the RUC due to the addition of CPT code 76XX0, a code for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity. This code will examine a nerve throughout its length, within one extremity, including evaluation of multiple areas for potential nerve compression, measurement of cross-sectional areas, evaluation of echogenicity, vascularity, mobility including dynamic maneuvers when indicated, evaluate for any associated muscular denervation, with comparison to unaffected muscles or nerves within that extremity as needed. Code 76XX0 also requires permanently recorded images and cine loop, and a written report containing a description of each of the elements evaluated. Additionally, the CPT Panel revised the CPT descriptor of code 76882 to include focal evaluation *of a nerve*.

CPT code 76881 represents a complete evaluation of a specific joint in an extremity. Code 76881 requires ultrasound examination of all the following joint elements: joint space (e.g., effusion), peri-articular soft-tissue structures that surround the joint (i.e., muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be performed as part of the complete evaluation. In addition, CPT code 76881 also requires permanently recorded images and a written report containing a description of each of the required elements or reason that an element(s) could not be visualized (e.g., absent secondary to surgery or trauma).

CPT code 76882 represents a limited evaluation of a joint or focal evaluation of a structure(s) in an extremity other than a joint (e.g., soft-tissue mass, fluid collection, or nerve[s]). This evaluation includes assessment of a specific anatomic structure(s) (e.g., joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all the elements included in 76881 although does include all surrounding anatomy and any associated pathology or contralateral comparison as indicated. Code 76882 also requires permanently recorded images and a written report containing a description of each of the elements evaluated.

The American College of Radiology (ACR), American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), American Academy of Physical Medicine and Rehabilitation (AAPM&R), American College of Rheumatology (ACRh), and American Podiatric Medical Association (APMA) convened an expert panel familiar with these services to provide value and time recommendations for the January 2022 RUC meeting.

Survey Process
The ACR, AAN, AANEM, and AAPM&R surveyed for CPT codes 76881, 76882 and 76XX0. The ACRh and APMA surveyed only CPT codes 76881 and 76882.

The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community. The ACRh surveyed a random sample of 1000 current US members. The APMA surveyed a random sample of 1500 current US members.

Compelling Evidence
We believe that there is compelling evidence to consider an increase in the value for CPT code 76882 based on a documented change in the physician work due to differences in technique and physician time, which is supported by the survey respondent times. In 2022, a different specialty is dominant than the original survey of the previously approved RUC values which necessarily results in different physician work. In 2009, CPT code 76880 *(Ultrasound, extremity, nonvascular, real time with image documentation)* was deleted and two new codes were created to distinguish between the comprehensive diagnostic ultrasound and the focused anatomic-specific ultrasound. When 76882 was created and surveyed in 2010, podiatry was expected to be the dominant provider and formed the basis for RUC valuation. In 2016, the RUC PE Subcommittee noted that the "dominant specialties providing the complete versus the limited ultrasound of extremity services are different causing variation in PE" leading to revised PE direct inputs in January 2017. The physician work was not reviewed at that time, and since radiologists do not use portable US devices as originally described in the 2010 survey or in the 2017 PE update, the physician work must be different. In 2022, radiology is the dominant physician provider and typically performs examinations with preliminary ultrasound scanning by a sonographer and additional imaging performed by the physician. Additionally, since 2010, ultrasound is increasingly used for a greater range of musculoskeletal injuries and has replaced MRI as the first line investigation for many pathologies. Furthermore, ultrasound can also be used to troubleshoot difficult cases that are inconclusive on either clinical evaluation or other imaging modalities which supports a change in overall physician time and work.

Work RVU and Time Recommendations
The expert panel recommends the survey 25th percentile value at 0.69 work RVU and a survey median time of 15 minutes intra-service. Additionally, we are recommending maintaining the current times of 5 minutes pre-service and 5 minutes post-service.

Key Reference Services
Our recommended work RVU of 0.69 compares favorably to the most commonly chosen key reference service, CPT code 76705 *(Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)),* which is a clinically similar ultrasound code. CPT code 76705 has times of 5 minutes pre-service and 5 minutes post-service time but includes less intra-service time at 8 minutes compared to the surveyed code. CPT code 76882 has a survey median time of 15 minutes which appropriately reflects the increased complexity of the service, as the limited ultrasound examination of a musculoskeletal structure will typically involve evaluation of more adjacent structures and tissues compared to the limited abdominal

examination of a single structure. Additionally, the recommended 0.69 work RVU is appropriately higher than that of key reference code 76705 at 0.59 work RVU.

The second key reference service code, CPT code 99213 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.)* supports the recommendation and is an MPC code as well. Service times (5 minutes pre-service, 20 minutes intra-service, and 5 minutes post-service time) are higher for the reference code 99213 than those for the surveyed code (5 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service time). Additionally, the recommended 0.69 work RVU for the surveyed code is appropriately lower than that of key reference code 99213 at 1.30 work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	5	8	5	18	0.046	0.033
76882	**Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation**	**0.69**	**5**	**15**	**5**	**25**	**0.031**	**0.028**
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.	1.30	5	20	5	30	0.054	0.043

MPC Codes

Our recommendation for surveyed code 76882 compares favorably to the MPC codes depicted in the table below. The surveyed code has 5 minutes more intra-service time compared to MPC code 74220 *(Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study)* although it also has an appropriately lower IWPUT when considering how MPC code 74220 involves a greater area of patient anatomy and real time repositioning to obtain optimal views. This results in greater intensity of the intra-service time relative to the RVU. The second MPC code, 76830 *(Ultrasound, transvaginal),* is also an ultrasound code which is performed by multiple specialties and has an

identical work RVU of 0.69 compared to the surveyed code. However, code 76830 involves evaluation of a larger number of structures in the pelvis via a transvaginal (endoluminal) approach compared to the surveyed code, resulting in greater intensity and IWPUT despite similar total service times. Finally, the surveyed code compares well to MPC code 95251 *(Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report)* which has 0.01 greater RVU with an identical intra-service time compared to 76882. MPC code 95251 has a similar type of work compared to 76882 including analysis, interpretation and report of clinical data.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	3	10	3	16	0.047	0.038
76882	**Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation**	**0.69**	**5**	**15**	**5**	**25**	**0.031**	**0.028**
76830	Ultrasound, transvaginal	0.69	5	10	8	23	0.040	0.030
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	2	15	3	20	0.039	0.035

Neuromuscular Ultrasound Family

The recommendations maintain relatively both among the neuromuscular ultrasound family, as well as the larger family of ultrasound imaging codes as indicated by the top key reference services. These relationships are summarized in the following table demonstrating the consistency of the IWPUT measurements across the range of codes at the recommended values ascending from the limited code to the newest, most complex 76XX0 code. The table below is sorted by IWPUT for reference.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76882	**Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue**	**0.69**	**5**	**15**	**5**	**25**	**0.031**	**0.028**

	mass[es]), real-time with image documentation							
76881	**Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation**	**0.90**	**5**	**20**	**5**	**30**	**0.034**	**0.030**
76XX0	**Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity**	**1.21**	**7**	**25**	**7**	**39**	**0.036**	**0.031**
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	5	8	5	18	0.046	0.033
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039

Summary

In summary, our expert panel recommends the survey 25th percentile value at 0.69 work RVU and a survey median time of 15 minutes intra-service. Additionally, we are recommending maintaining the current times of 5 minutes pre-service and 5 minutes post-service. The recommended value compares favorably with the key reference services, 76705 and 99213, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76882

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Podiatry How often? Commonly

Specialty Rheumatology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 821000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 76882 is estimated to be provided 821000 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 114940 Percentage 14.00 %

Specialty Podiatry Frequency 123150 Percentage 15.00 %

Specialty Rheumatology Frequency 213460 Percentage 26.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 274,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 76882 is estimated to be provided 274000 times in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 38360 Percentage 14.00 %

Specialty Podiatry Frequency 41100 Percentage 15.00 %

Specialty Rheumatology Frequency 71240 Percentage 26.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:76XX0 Tracking Number Z3 Original Specialty Recommended RVU: **1.21**
Presented Recommended RVU: **1.21**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **1.21**

CPT Descriptor: Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with progressive atrophy and weakness of the intrinsic muscles on the left hand, associated with altered sensation on the medial aspect of the hand. An ultrasound of the left ulnar nerve and accompanying structures is ordered to assess for a disorder involving the ulnar nerve.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review available clinical data, including x-rays, MRI, and/or EMG if available. Consider the potential anatomic lesions that could cause the clinical manifestations and consider the questions posed by the referring physician. The nerve course and surrounding structures to be studied are considered.

Description of Intra-Service Work: The physician takes a focused history and physical examination, positions the patient for the procedure and instructs them to report any pain or paresthesiae felt during the examination from the ultrasound probe as this may reflect nerve entrapment. A high frequency linear transducer is used, and the nerve of interest is first identified distally, inspecting the nerve itself and any pertinent surrounding structures such as a ganglion cyst, anomalous muscle, bone spur, or tenosynovitis. The nerve is then followed proximally, throughout the entire length of the limb, making measurements of cross-sectional area and quantifying vascularity, mobility and echogenicity of the nerve at potential sites of entrapment, as well as taking long axis views to evaluate for changes in morphology. For the ulnar nerve, this would include Guyon's canal in the wrist, the cubital tunnel distal to the elbow, the retrocondylar groove at the elbow, the upper arm (ligament of Struthers), and the axilla. At areas of enlargement, the underlying joint is assessed for osteophytes or effusions, and the affected muscles are examined for signs of denervation (in the case of the ulnar nerve, atrophy and increased echogenicity of the first dorsal interosseous, abductor digiti minimi, flexor digitorum profundus and flexor carpi ulnaris muscles), with comparison to unaffected muscles as clinically indicated. Comparison of suspected abnormalities will also be made to the contralateral side. Record cine loops of any identified areas of entrapment or pathology. Dictate a report for the patient's chart.

Description of Post-Service Work: Discuss and explain findings to the patient as needed. Review and sign final report. Communicate findings to referring clinician as needed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	01/2022		
Presenter(s):	Andy Moriarity, MD; Carlo Milani, MD; David Reece, DO; Andrea Boon, MD; Marianna V. Spanaki, MD, PhD		
Specialty Society(ies):	ACR, AAN, AANEM, AAPM&R		
CPT Code:	76XX0		
Sample Size:	4839	**Resp N:**	66
Description of Sample:	The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community. The ACRh surveyed a random sample of 1000 current US members. The APMA surveyed a random sample of 1500 current US members.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	9%	55%	36%

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	0%	55%	45%

• Urgency of medical decision making	

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	9%	91%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	36%	64%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	63%	25%	13%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	88%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	50%	50%
Physical effort required	0%	75%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	38%	38%	25%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Neuromuscular Ultrasound code family consists of the following three codes:

- CPT code 76881: *Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation*
- CPT code 76882: *Ultrasound, limited, joint or other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*
- CPT code 76XX0: *Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*

The Neuromuscular Ultrasound code family was brought forth to the RUC due to the addition of CPT code 76XX0, a code for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity. This code will examine a nerve throughout its length, within one extremity, including evaluation of multiple areas for potential nerve compression, measurement of cross-sectional areas, evaluation of echogenicity, vascularity, mobility including dynamic maneuvers when indicated, evaluate for any associated muscular denervation, with comparison to unaffected muscles or nerves within that extremity as needed. Additionally, the CPT Panel revised the CPT descriptor of code 76882 to include focal evaluation of a nerve. Code 76XX0 also requires permanently recorded images and cine loop, and a written report containing a description of each of the elements evaluated.

CPT code 76881 represents a complete evaluation of a specific joint in an extremity. Code 76881 requires ultrasound examination of all the following joint elements: joint space (e.g., effusion), peri-articular soft-tissue structures that surround the joint (i.e., muscles, tendons, other soft-tissue structures), and any identifiable abnormality. In some circumstances, additional evaluations such as dynamic imaging or stress maneuvers may be performed as part of the complete evaluation. Code 76881 also requires permanently recorded images and a written report containing a description of each of the required elements or reason that an element(s) could not be visualized (e.g., absent secondary to surgery or trauma).

CPT code 76882 represents a limited evaluation of a joint or focal evaluation of a structure(s) in an extremity other than a joint (e.g., soft-tissue mass, fluid collection, or nerve[s]). This evaluation includes assessment of a specific anatomic structure(s) (e.g., joint space only [effusion] or tendon, muscle, and/or other soft-tissue structure[s] that surround the joint) that does not assess all the elements included in 76881 although does include all surrounding anatomy and any associated pathology or contralateral comparison as indicated. Code 76882 also requires permanently recorded images and a written report containing a description of each of the elements evaluated.

The American College of Radiology (ACR), American Academy of Neurology (AAN), American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM), American Academy of Physical Medicine and Rehabilitation (AAPM&R), American College of Rheumatology (ACRh), and American Podiatric Medical Association (APMA) convened an expert panel familiar with these services to provide value and time recommendations for the January 2022 RUC meeting.

Survey Process

The ACR, AAN, AANEM, and AAPM&R surveyed for CPT codes 76881, 76882 and 76XX0. The ACRh and APMA surveyed only CPT codes 76881 and 76882.

The ACR surveyed a random sample of 1000 individuals from its membership as well as a random subset of 1000 members who indicated that they perform ultrasound, musculoskeletal, and neuro imaging procedures (total of 2000). The AAN surveyed a sample of 1000 current US members from the Neuromuscular Section and Clinical Neurophysiology Sections. The AANEM surveyed a random sample of 811 current US members, and 83 current US members with neuromuscular subspecialty designation (total of 894). The AAPM&R surveyed a random sample of 945 members who selected musculoskeletal medicine as an area of interest as well as our sports medicine community and our neuromuscular medicine community.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile value at 1.21 work RVU and survey median times of 7 minutes pre-service, 25 minutes intra-service, and 7 minutes post-service.

Key Reference Services

Our recommended work RVU of 1.21 compares favorably to the most commonly chosen key reference service, CPT code 99215 *(Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.)*. CPT code 76XX0 has a survey median time of 25 minutes intra service which appropriately reflects the lower complexity of the service compared to key reference code 99215, which has a substantially higher intra service time of 45 minutes. Additionally, the work RVU of the key reference code is appropriately higher than that of the surveyed code at 2.80 work RVU.

The second key reference service code, CPT code 95861 *(Needle electromyography; 2 extremities with or without related paraspinal areas),* supports the recommendation favorably. CPT codes 76XX0 and 95861 has slightly higher intra service, pre service and post service times than CPT code 76XX0 with similar intensity, and the work RVU of the reference code is appropriately higher than that of the surveyed code at 1.54 work RVU (compared to 1.21 work RVU for 76XX0).

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76XX0	**Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity**	**1.21**	**7**	**25**	**7**	**39**	**0.036**	**0.031**
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	10	29	10	49	0.038	0.031
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.	2.80	10	45	15	70	0.050	0.040

MPC Codes

Our recommendation for surveyed code 76XX0 compares favorably to the MPC codes depicted in the table below. MPC code 95805 *(Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness)* has 5 minutes less intra service time and lower intensity than the surveyed code and an almost identical work RVU. We therefore feel the recommended 25th percentile work RVU for 76XX0 is appropriate.

The second MPC code, 95861 *(Needle electromyography; 2 extremities with or without related paraspinal areas),* is also commonly reported by the anticipated dominant specialty and was the key reference service selected by survey respondents. Code 95861 supports the surveyed code, as it has a near identical IWPUT and WPUT. 95861 has 10 more minutes of total time and an appropriately higher work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness	1.20	15	20	15	50	0.026	0.024
76XX0	**Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity**	**1.21**	**7**	**25**	**7**	**39**	**0.036**	**0.031**
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	10	29	10	49	0.038	0.031

Neuromuscular Ultrasound Family

The recommendations maintain relatively both among the neuromuscular ultrasound family, as well as the larger family of ultrasound imaging codes as indicated by the top key reference services. These relationships are summarized in the following table demonstrating the consistency of the IWPUT measurements across the range of codes at the recommended values ascending from the limited code to the newest, most complex 76XX0 code. The table below is sorted by IWPUT for reference.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76882	**Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation**	**0.69**	**5**	**15**	**5**	**25**	**0.031**	**0.028**

76881	**Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation**	**0.90**	**5**	**20**	**5**	**30**	**0.034**	**0.030**
76XX0	**Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity**	**1.21**	**7**	**25**	**7**	**39**	**0.036**	**0.031**
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	5	8	5	18	0.046	0.033
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039

Summary

In summary, our expert panel recommends the survey 25th percentile value at 1.21 work RVU and survey median times of 7 minutes pre-service, 25 minutes intra-service, and 7 minutes post-service. The recommended value compares favorably with the key reference services, 95861 and 99215, and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76881

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Neurology How often? Commonly

Specialty Physical Medicine and Rehabilitation How often? Commonly

Specialty Diagnostic Radiology How often? Commonly

Estimate the number of times this service might be provided nationally in a one-year period? 71400
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This service described by CPT code 76XX0 is estimated to be provided 71400 times nationally in a one-year period. The national estimate is the product of the estimated Medicare patient utilization (seen below) multiplied by 3.

Specialty Neurology Frequency 49980 Percentage 70.00 %

Specialty Physical Medicine and Rahabilitation Frequency 17850 Percentage 25.00 %

Specialty Diagnostic Radiology Frequency 3570 Percentage 5.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 23,800
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 76XX0 is estimated to be provided 23800 times in a one-year period to Medicare patients. This estimate is the sum of 5% of CPT code 76881's Medicare utilization and 5% of CPT code 76882's Medicare's utilization. This estimation formula was derived from the Neuromuscular Ultrasound CCP.

Specialty Neurology Frequency 17850 Percentage 75.00 %

Specialty Physical Medicine & Rebilitation Frequency 5950 Percentage 25.00 %

Specialty Diagnostic Radiology Frequency 1190 Percentage 5.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Imaging

BETOS Sub-classification:
Echography/ultrasonography

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 95860

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Andy Moriarity, MD; Carlo Milani, MD; David Reece, DO; Andrea Boon, MD; Fredrica Smith, MD; Marianna V. Spanaki, MD, PhD; Brooke Bisbee, DPM

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2022

Surveyed CPT Code	**76881**	**Global Period: XXX**
CPT Code Descriptor	Ultrasound, complete joint (ie, joint space and periarticular soft-tissue structures), real-time with image documentation	
Typical Patient/Service	A 45-year-old male presents with sore, swollen ankle, which developed gradually over a period of several weeks. He is an avid basketball player but can no longer play because of the pain. Plain radiographs were negative for fracture. The decision is made to perform a diagnostic ultrasound examination.	

Surveyed CPT Code	**76882**	**Global Period: XXX**
CPT Code Descriptor	Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft tissue mass[es]), real-time with image documentation (Do not report 76882 in conjunction with 76XX0)	
Typical Patient/Service	A 36-year-old male presents with an acute injury to his Achilles tendon, sustained while playing soccer. No open wounds are noted. X-rays are negative for osseous pathology. Mild erythema and edema are noted at the posterior lower leg. Ultrasound is performed to evaluate the Achilles tendon.	

Surveyed CPT Code	**76XX0**	**Global Period: XXX**
CPT Code Descriptor	Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity	
Typical Patient/Service	A 45-year-old female presents with progressive atrophy and weakness of the intrinsic muscles on the left hand, associated with altered sensation on the medial aspect of the hand. An ultrasound of the left ulnar nerve and accompanying structures is ordered to assess for a disorder involving the ulnar nerve.	

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The American College of Radiology, American Academy of Neurology, American Association of Neuromuscular and Electrodiagnostic Medicine, American Academy of Physical Medicine and Rehabilitation, American College of Rheumatology, and American Podiatric Medical Association convened a panel that included a number of experts familiar with these services to evaluate the direct practice expense inputs for neuromuscular ultrasound.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for

the selection of reference code(s) here (NOTE: *For services reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your reference codes*):

For our reference codes, the societies are providing the current codes for CPT codes 76881 and 76882. We are also providing CPT code 76706 as our reference code to CPT code 76XX0 because it is a recently valued ultrasound code with a similar amount of expected clinical staff and physician time to the newly created code.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see the *Billed Together* tab in the RUC Database)

CPT code 76881 is typically reported with an E/M service at 58.9%.
CPT code 76881 is typically reported with an E/M service in the nonfacility at 66.3%.

CPT code 76882 is typically reported with an E/M service at 26.9%.
CPT code 76882 is typically reported with an E/M service in the nonfacility at 53.2%.

For CPT code 76XX0, the societies do not expect 76XX0 to be billed with an E/M based on expert panel consensus.

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see the *Billed Together* tab in the RUC Database)

According to the RUC database in the non-facility (Global & 26), Rheumatology is the dominant provider at 27.3% for 76881. Podiatry is the dominant provider at 28.2% for 76882.

For 76XX0, the expert panel believes that the dominant provider will be Neurology.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence. (Please see *PE compelling evidence guidelines* on Collaboration). Please explain if the increase can be entirely accounted for because of an increase in physician time:

For CPT code 76881, we are requesting an increase over the aggregate current cost for clinical activities pertaining to the addition of minutes for CA011 (Provide education/obtain consent) and CA014 (Confirm order, protocol exam). These values are standard for ultrasound codes. Additionally, we are allocating 20 minutes for both EF031 and EQ250 based on the recommended physician work intra service time of 20 minutes as these equipment items remain in the room when the patient is being cared for during the intra service period.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If

the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

No time is currently allocated to "obtain vital signs". The specialties are recommending 2 minutes of this clinical activity for CPT code 76XX0 for height and weight, which can impact nerve size.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

• Confirm availability of prior images – Staff ensures that prior imaging is available prior to starting the examination. • Review clinical history and questionnaire – Staff ensures that all needed patient information is available prior to the examination.

    b. Service period (includes pre, intra and post):

• Greet patient, provide gowning, ensure appropriate medical records are available. • Provide education and obtain consent for the examination – Staff discusses the examination with the patient, answers any questions, and confirms consent. • Prepare room, equipment, and supplies – Staff ensures that all needed supplies are available and organized. • Confirm order and protocol exam. • Initial positioning and monitoring of patient – Staff positions the patient for optimal technique and comfort. • Clean room/equipment by clinical staff – after the patient has left the room. • Technologist QC's images in PACS, checking for al images, reformats, and dose page.

- Review examination with interpreting provider. Scan documents into PACS. Complete exam in RIS system – These steps ensure that the examination can be reviewed and completed by the physician.

c. Post-service period:

N/A.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

- The clinical staff works directly with the physician during the entire physician scanning.
- Position patient on the exam table. Apply ultrasound gel. Set appropriate scan parameters on the ultrasound machine.
- Reposition patient and assist in adjusting scanning parameters throughout the examination as needed.
- Clean gel from patient's skin.
- Clean the room and equipment

Note: the physician typically performs the ultrasound scanning for CPT codes 76881, 76882, and 76XX0.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet*):

N/A.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A.

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

17. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the supply input and invoice here:

N/A.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

N/A.

20. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet*) please provide a paid invoice. Identify and explain the equipment input and invoice here:

N/A.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet*):

N/A.

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A.

23. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

• **Table, power (EF031) =** Default formula • **Ultrasound unit, portable (EQ250)** = Highly technical formula Note: For codes 76881, 76882, and 76XX0, we did not use equipment formulas for equipment items EF031 and EQ250. We allocated minutes to EF031 and EQ250 as both of those items remain in the room and are not used for other patients during the entire intraservice time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

24. If this is a PE only code please select a crosswalk based on a similar specialty mix:

N/A.

ADDITIONAL INFORMATION

25. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The virtual meetings have provided for real-time updates to the PE spreadsheets. PE SORs must still be updated after the meeting and resubmitted asap.

During and immediately following the review of this tab at the PE Subcommittee meeting, please revise the summary of recommendation (PE SOR) based on modifications made during the meeting. Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org immediately following the close of business. In addition, please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2022

Cognitive Behavioral Therapy Monitoring – Tab 12

In October 2020, the CPT Editorial Panel created five new CPT codes (98975, 98976, 98977, 98980, 98981) to report remote therapeutic monitoring (RTM) services. Remote therapeutic monitoring treatment management services are provided when a physician or a licensed qualified health care professional (QHP), and/or clinical staff use the results of remote therapeutic monitoring to manage a patient under a specific treatment plan. This family of RTM codes was established to monitor services (e.g., musculoskeletal system status, respiratory system status, therapy adherence, and therapy response) that represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. The RUC reviewed these five services at the January 2021 meeting, and CMS implemented the services for the 2022 Medicare Physician Payment Schedule.

In October 2021, the CPT Editorial Panel replaced Category III codes 0702T *Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; supply and technical support, per 30 days* and 0703T *Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; management services by physician or other qualified health care professional, per calendar month*) with Category I code 989X6 *Remote therapeutic monitoring (eg, respiratory system status, musculoskeletal system status, cognitive behavioral therapy, therapy adherence, therapy response); initial set-up and patient education on use of equipment; device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days.* The CPT Editorial Panel created 989X6 for 2023. Codes 0702T and 0703T have been deleted.

989X6 *Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*
CPT code 989X6 is a practice expense only code. The specialty societies indicated that the technology for this service is still evolving. The RUC agreed that due to its emerging and varying technology, CPT code 989X6 should be contactor priced to accommodate the wide variability in supplies, equipment and conditions monitored. **The RUC recommends that CPT code 989X6 be contractor priced.**

Affirmation of RUC Recommendations
The RUC reviewed the specialty societies' request to affirm the RUC valuations for the recently reviewed CPT codes 98975, 98976, 98977, 98980 and 98981. In October 2021, the CPT Editorial Panel revised the code descriptors for 98975, 98976 and 98977 to include "cognitive behavioral therapy" and created 989X6 to report this service. The RUC confirmed that this editorial revision would not change the typical patient most commonly receiving these procedures, which would continue to be patients requiring respiratory and musculoskeletal monitoring. The RUC agreed with the specialty societies that the changes to 98975, 98976, and 98977 are editorial only and do not result in a change in work or the typical patient most commonly receiving these procedures. Additionally, AMA Staff have noted a point of confusion in in regard to the "eg" parenthetical in the parent code 98975 as it impacts all subsequent codes (i.e., 98976, 98977, and 989X6). Any potential change is editorial and

does not require a change in work but would provide clarity for reporting purposes. These codes are part of the additional items for review from the September 2021 CPT Panel meeting at the February 2022 CPT Panel meeting.

The RUC recommends affirming the following recent RUC recommendations:

0.00 for CPT code 98975 (PE only)
0.00 for CPT code 98976 (PE only)
0.00 for CPT code 98977 (PE only)
0.62 for CPT code 98980
0.61 for CPT code 98981

Practice Expense
The PE Subcommittee reviewed the practice expense recommendations for this code and affirmed the inputs from the January 2021 RUC meeting. However, the spreadsheet required minor editorial updates to the CPT descriptors to represent the 2023 CPT approved coding changes. The PE Subcommittee agreed with the request to contractor price CPT code 989X6 and requested that the RUC place this service on the New Technology list to be re-reviewed in three years to ensure correct valuation and utilization assumptions.

The RUC requested that those that provide CPT code 98977 provide a paid invoice for the *Remote musculoskeletal therapy system* "device" cost. For 2022, CMS cross-walked this cost to the equipment cost for EQ392 *heart failure patient physiologic monitoring equip*, resulting in a Medicare national payment of $56 per month. However, the RUC understands that the monthly rental cost is estimated to be $25 per month and the CMS crosswalk is not based on the actual resource cost. The RUC notes that this problem is mirrored with CPT code 98976, where CMS used a crosswalk not based on resource cost as a proxy for the device equipment, rather than the invoice provided that illustrated the $25 per month rental cost. CMS should use the actual device cost to determine valuation for each of these codes.

New Technology/New Service
The RUC recommends that CPT codes 98975, 98976, 98977, 98980, and 98981 stay on the New Technology list and recommends that 989X6 will be added to the list.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Medicine
Non-Face-to-Face Nonphysician Services

Remote Therapeutic Monitoring Services

Remote therapeutic monitoring services (eg, musculoskeletal system status, respiratory system status, cognitive behavioral therapy, *therapy adherence, therapy response) represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These data may represent objective device-generated integrated data or subjective inputs reported by a patient. These data are reflective of therapeutic responses that provide a functionally integrative representation of patient status.*

Codes 98976, 98977, 989X6 *are used to report Remote Therapeutic Monitoring Services during a 30-day period. To report 98975, 98976, 98977,* 989X6 *the service must be ordered by a physician, other qualified health care professional, or qualified nonphysician healthcare professional. Code 98975 may be used to report the set-up and patient education on use of any device(s) used for data collection. Codes 98976, 98977,* 989X6 *may be used to report supply of the device for daily recording or programmed alert transmissions. To report 98975, 98976, 98977,* 989X6 *the device used must be a medical device as defined by the FDA. Codes 98975, 98976, 98977,* 989X6 *are not reported if monitoring is less than 16 days. Do not report 98975, 98976, 98977,* 989X6 *with other physiologic monitoring services (eg, 95250 for continuous glucose monitoring requires a minimum of 72 hours of monitoring or 99453, 99454 for remote monitoring of physiologic parameter(s)).*

Code 98975 is reported for each episode of care. For coding remote therapeutic monitoring parameters, an episode of care is defined as beginning when the remote therapeutic monitoring service is initiated, and ends with attainment of targeted treatment goals.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
▲98975	AA1	Remote therapeutic monitoring (eg, ~~respiratory system status, musculoskeletal system status, cognitive behavioral therapy,~~ therapy adherence, therapy response); initial set-up and patient education on use of equipment (Do not report 98975 more than once per episode of care) (Do not report 98975 for monitoring of less than 16 days)	XXX	0.00 (PE Only) Affirmed January 2021 RUC Recommendation 0.00

▲98977	AA3	device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days	XXX	0.00 (PE Only) Affirmed January 2021 RUC Recommendation
●989X6	AA4	device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days (Do not report 98975, 98976, 98977, 989X6 in conjunction with codes for more specific physiologic parameters [93296, 94760, 99453, 99454]) (Do not report 98976, 98977, 989X6 for monitoring of less than 16 days) (For therapeutic monitoring treatment management services, use 98980) (For remote physiologic monitoring, see 99453, 99454) (For physiologic monitoring treatment management services, use 99457) (For self-measured blood pressure monitoring, see 99473, 99474)	XXX	Contractor Price (PE Only)
(f)98980	AA5	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes (Report 98980 once each 30 days, regardless of the number of therapeutic parameters monitored)	XXX	0.62 (Affirmed January 2021 RUC recommendation)

		(Do not report 98980 for services of less than 20 minutes) (Do not report 98980 in conjunction with 93264, 99091, 99457, 99458) (Do not report 98980 in the same calendar month as 99473, 99474)		
+(f)98981	AA6	each additional 20 minutes (List separately in addition to code for primary procedure) (Use 98981 in conjunction with 98980) (Do not report 98981 for services of less than an additional increment of 20 minutes)	ZZZ	0.61 (Affirmed January 2021 RUC recommendation)

Remote Therapeutic Monitoring Treatment Management Services

Remote therapeutic monitoring treatment management services are provided when a physician or other qualified health care professional uses the results of remote therapeutic monitoring to manage a patient under a specific treatment plan. To report remote therapeutic monitoring, the service must be ordered by a physician or other qualified health care professional. To report 98980, 98981, any device used must be a medical device as defined by the FDA. Do not use 98980, 98981 for time that can be reported using codes for more specific monitoring services. Codes 98980, 98981 may be reported during the same service period as chronic care management services (99439, 99487, 99489, 99490, 99491), transitional care management services (99495, 99496), principal care management services (99424, 99425, 99426, 99427), and behavioral health integration services (99484), and psychiatric collaborative care services (99492, 99493, 99494). *However, time spent performing these services should remain separate and no time should be counted toward the required time for both services in a single month. Codes 98980, 98981 require at least one interactive communication with the patient or caregiver. The interactive communication contributes to the total time, but it does not need to represent the entire cumulative reported time of the treatment management service. For the first completed 20 minutes of physician or other qualified health care professional time in a calendar month report 98980, and report 98981 for each additional completed 20 minutes. Do not report 98980, 98981 for services of less than 20 minutes. Report 98980 once regardless of the number of therapeutic monitoring modalities performed in a given calendar month.*

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services [99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215], domiciliary, ~~rest home services [99324, 99325, 99326, 99327, 99328~~, ~~99334, 99335, 99336, 99337~~], home services [99341, 99342, ~~99343~~, 99344, 99345, 99347, 99348, 99349, 99350], inpatient services [99221, 99222, 99223, 99231, 99232, 99233, ~~99251~~, 99252, 99253, 99254, 99255]).

Do not count any time related to other reported services (eg, psychotherapy services [90832, 90833, 90834, 90836, 90837, 90838], interrogation device evaluation services [93290], anticoagulant management services [93793], respiratory monitoring services [94774, 94775, 94776, 94777], health behavior assessment and intervention services [96156, 96158, 96159, 96160, 96161, 96164, 96165, 96167, 96168, 96170, 96171], therapeutic interventions that focus on cognitive function services [97129, 97130], adaptive behavior treatment services [97153, 97154, 97155, 97156, 97157, 97158], therapeutic procedures [97110, 97112, 97116, 97530, 97535], tests and measurements [97750, 97755], physical therapy evaluation services [97161, 97162, 97163, 97164], occupational therapy evaluations [97165, 97166, 97167, 97168], orthotic management and training and prosthetic training services [97760, 97661, 97763], medical nutrition therapy services [97802, 97803,

97804], medication therapy management services [99605, 99606, 99607], critical care services [99291, 99292], principal care management services [99424, 99425, 99426, 99427]) in the cumulative time of the remote therapeutic monitoring treatment management service during the calendar month of reporting.

Category III Codes

~~●*0702T Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; supply and technical support, per 30 days*~~

~~●*0703T management services by physician or other qualified health care professional, per calendar month*~~

~~(Do not report 0702T, 0703T in conjunction with 96158, 96159, *98975, 98976, 98977,* 99091, *99424, 99425, 99426, 99427, 99437,* 99453, 99454, 99457, 99458, 99484, 99492, 99493, 99494)~~

(0702T, 0703T have been deleted)

(For remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program, use 989X6)

CPT Code	Vignette
98975	A 65-year-old male presents to the physician's or other qualified health care professional's office with exacerbation of a chronic condition. Following the visit, the

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	physician initiates a remote therapeutic monitoring program to enable data collection and monitoring to support therapeutic management.
98976	An 8-year-old female presents to the physician's or other qualified health care professional's office with cough and wheezing. She is diagnosed with a respiratory condition exacerbated by environmental factors. Following the visit, the physician or other qualified health care professional initiates a remote therapeutic monitoring program to enable data collection and monitoring to support therapeutic management of her respiratory condition.
98977	A 66-year-old female who has limited mobility caused by osteoarthritis of her knees is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support treatment management of her musculoskeletal condition.
989X6	A 43-year-old female presents to the physician's or other qualified health care professional's office and is diagnosed with substance use disorder. Following the visit, the physician or other qualified health care professional initiates a cognitive behavioral therapy-based digital remote therapeutic monitoring program as an adjunct to outpatient treatment for a specified duration to enable data collection, monitoring, and support therapeutic management of her behavioral condition.
98980	An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring.
98981	An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring. Note: This is an add-on service. Only consider the additional work related to the additional physician or QHP staff time beyond the 20 minutes reported with 98980.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

APA-Psychology and APA-Psychiatry expressed interest in the Cognitive Behavioral Therapy Monitoring (98975, 98976, 98977, 989X6, 98980, 98981) Tab (12). Level 1 interest to developing practice expense (PE) recommendations for CPT code 989X6 and Level 2 interest to reaffirm the values for the existing remote therapy monitoring (RTM) family of codes (98975, 98976, 98977, 98980, 98981). The societies conducted several interviews with industry representatives as well as current CBT providers to better understand how the service is currently rendered.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for

the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

CPT Code 989X6 – N/A

CPT Code 98975 used CPT Code 99453 *Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), intial; set-up and patient education on use of equipment* as the Reference Service Code

CPT Codes 98976 & 98977 used CPT Code 99454 *Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, oximetry, respiratory flow rate), device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days* as the Reference Service Code

CPT Code 98980 used CPT Code 99457 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the first month; first 20 minutes* as a Reference Service Code

CPT Code 98981 used CPT Code 99458 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the first month; each additional 20 minutes* as a Reference Service Code

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New code

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New code

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   Not applicable

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Not applicable

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

Not applicable

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

From January 2021 RUC Submission to CMS: Not applicable as vital signs are not taken for this code.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

   b. Service period (includes pre, intra and post):

From January 2021 RUC Submission to CMS: 98975 - Clinical staff greets the patient and reviews medical records to confirm service. Clinical staff conducts set up of the technology and educates the patient regarding its use. 98980 and 98981 – Clinical staff reviews therapeutic monitoring data with the physician. Data outside of expected norms

   c. Post-service period:

From January 2021 RUC Submission to CMS: 98975 - Clinical staff contacts the patient following the encounter to ensure the technology is working and that the patient is on track to complete their daily tasks related to therapeutic monitoring. 98980 and 98981 – Clinical staff conducts patient communications throughout the month to improve therapy adherence, address lack of improvement/control of condition, and resolve any technology or data transmission concerns.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

From January 2021 RUC Submission to CMS: 98975 - Clinical staff walks the patient through set up of the therapeutic monitoring technology. The patient is educated regarding how to use the technology and related daily tasks. For respiratory therapy monitoring, this includes introduction to the device as well as mobile app. For musculoskeletal therapy monitoring, this includes set up of the device, review of the 3D

motion capture technology, and review of the specific exercises as prescribed by the physician/QHP. The patient is given the opportunity to ask questions.

98980 and 98981 – Clinical staff reviews the therapeutic monitoring data with the physician/QHP. Areas in which data reflects poor control of condition or deviation from expected treatment adherence are identified. This data review is typically done on a weekly basis throughout the 30 days.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
Not applicable.

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):
Not applicable.

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
Not applicable

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:
From January 2021 RUC Submission to CMS:
Propeller Health invoice for $300 documenting the leasing of the Bluetooth sensors (2 provided in each rental) placed on top of the patient's inhalers (typically 1 daily use inhaler and 1 rescue inhaler) as well as use of the app technology for tracking. This is included in line 102 of the spreadsheet as a monthly rental price of $25. The useful life of this technology is 1 year as the sensors are replaced after 1 year.

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

From January 2021 RUC Submission to CMS:
The only supply used is the new supply described in question 16.

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

As of February 2022:
Invoice not submitted for Remote musculoskeletal therapy system

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

From January 2021 RUC Submission to CMS:
Line 113 – Remote musculoskeletal therapy system uses the monitoring equipment formula, however no staff time is associated with this code.

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

At the October 2020 CPT Editorial Panel meeting the Panel accepted as part of Tab 12 five CPT codes (98975-98981) to report remote monitoring of non-physiologic parameters. These codes were created to be analogous to the remote physiologic monitoring (RPM) codes 99453, 99454, 99457, 99458. The new remote therapeutic monitoring (RTM) codes (98975-98981) are intended to monitor services (eg, musculoskeletal system status, respiratory system status, therapy adherence, therapy response) representing the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response.

In May 2021, as part of tabs 47, Cat III - Validated Digital Behavioral Therapy for Substance Use and 48, Cat III - Remote Cognitive Behavioral Therapy Services, the Panel accepted the addition of two new Category III codes. The first code, 0702T; *Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; supply and technical support, per 30 days*, is intended to be reported for the supply and technical support for each 30 days, and the second child code, 0703T; *Remote therapeutic monitoring of a standardized online digital cognitive*

behavioral therapy program ordered by a physician or other qualified health care professional; management services by physician or other qualified health care professional, per calendar month, for reporting the management services by physician or other qualified health care professional per calendar month.

The services described by 0702T and 0703T represent online computer-based cognitive behavioral therapy that can be used for a range of disorders, including substance use. This coding structure was designed as a parent/child approach, such that both the technical supply, as well as the clinician monitoring work component must relate to the overriding defining clinical service specific to online remote cognitive behavioral therapy.

In October 2021, a proposal was submitted to replace those recently created Category III codes (0702T and 0703T) with a Category I code 989X6; *Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with daily recording(s) or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*, *added* to the RTM code set. The application noted that the professional work described by Category III codes 0702T, 0703T was not distinguishable from the recently added Category I code family for Remote Therapeutic Monitoring and Remote Therapeutic Monitoring Treatment Management Services. The CPT Editorial Panel accepted the proposal to create a practice expense only CPT code (989X6) and deleted the category III codes 0702T and 0703T.

This code represents new and evolving technology. The resource costs associated with CBT products vary under current distribution models depending on how these products are accessed and used by patients. The attached document includes highlights from the interviews conducted to gather resource cost information. During the interviews, it became apparent that CBT products might fit better as separately payable supplies or in a different benefit category. In addition, modifications to the coding structure should also be considered to more appropriately capture the expenses associated with CBT. Based on the information gathered, APA-Psychology and APA-Psychiatry recommend Carrier Pricing for CPT 989X6, which will accommodate the wide variability in practice patterns and pricing.

Also important to note, in the CMS Final Rule for 2022, CMS established values for 98975 by crosswalking to the PE RVU for RPM code 99453 upon which the new RTM code was based. CMS established values for 98976 and 98976 by crosswalking to the PE RVU for RPM code 99454, a code that includes payment for the medical device used to collect and transmit data. CMS noted that the only input to CPT code 98976 was a monthly fee of $25, which would not be paid as a direct cost under the PFS. Historically, they have considered most computer software and associated licensing fees to be indirect costs. However, as CMS noted in section II.B. of the CY2022 final rule (the PE section), stakeholders routinely expressed concern with this policy, especially for evolving technologies that rely primarily on software and licensing

fees with minimal costs in equipment or hardware. As noted in that section of this rule, CMS continues to consider how best to reflect such costs under our current PE methodology.

Finally, CMS hopes to continue to engage in dialogue with stakeholders, including the AMA CPT, in the immediate future on how best to refine the coding for the RTM services to address some of the specific concerns raised by stakeholders. CMS noted that as general medicine codes, these codes can be billed by physicians and other qualified health care professionals. They also note that the five RTM codes will be designated as "sometimes therapy" codes, which means that the services can be billed outside a therapy plan of care by a physician and certain NPPs, but only when appropriate. While therapists' services must always be provided under therapy plans of care, RTM services that relate to devices specific to therapy services, such as the ARIA Physical Therapy device (CPT code 98977), should always be furnished under a therapy plan of care. CMS also clarified that the two device codes, CPT codes 98976 and 98977, are not subject to the de minimis standard that establishes the threshold for the statutorily required payment adjustment that applies to therapy services provided in whole or in part by therapy assistants. However, the initial set-up and patient education services represented by CPT code 98975 is subject to the de minimis policy.

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

23. If this is a PE only code please select a crosswalk based on a similar specialty mix:

CPT Code 989X6 – N/A (Carrier Pricing)

From January 2021 RUC Submission to CMS:
Crosswalk for 98975 is 99453 - Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), intial; set-up and patient education on use of equipment

Crosswalk for 98976 and 98977 is 99454 - Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, oximetry, respiratory flow rate), device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes

from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Re: Tab 12 Cognitive Behavioral Therapy Monitoring

Dear Dr. Silva:

APA-Psychology and APA-Psychiatry expressed interest in the Cognitive Behavioral Therapy Monitoring (98975, 98976, 98977, 989X6, 98980, 98981) Tab (12) for the upcoming January 2022 RUC meeting. Level 1 interest to developing practice expense (PE) recommendations for CPT code 989X6 and Level 2 interest to reaffirm the values for the existing remote therapy monitoring (RTM) family of codes (98975, 98976, 98977, 98980, 98981). The societies conducted several interviews with industry representatives as well as current CBT providers to better understand how the service is currently rendered.

Background

At the October 2020 CPT Editorial Panel meeting the Panel accepted as part of Tab 12 five CPT codes (98975-98981) to report remote monitoring of non-physiologic parameters. These codes were created to be analogous to the remote physiologic monitoring (RPM) codes 99453, 99454, 99457, 99458. The new remote therapeutic monitoring (RTM) codes (98975-98981) are intended to monitor services (e.g., musculoskeletal system status, respiratory system status, therapy adherence, therapy response) representing the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response.

In May 2021, as part of tabs 47, Cat III - Validated Digital Behavioral Therapy for Substance Use and 48, Cat III - Remote Cognitive Behavioral Therapy Services, the Panel accepted the addition of two new Category III codes. The first code, 0702T; *Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; supply and technical support, per 30 days*, is intended to be reported for the supply and technical support for each 30 days, and the second child code, 0703T; *Remote therapeutic monitoring of a standardized online digital cognitive behavioral therapy program ordered by a physician or other qualified health care professional; management services by physician or other qualified health care professional, per calendar month*, for reporting the management services by physician or other qualified health care professional per calendar month.

The services described by 0702T and 0703T represent online computer-based cognitive behavioral therapy that can be used for a range of disorders, including substance use. This coding structure was designed as a parent/child approach, such that both the technical supply, as well as the clinician monitoring work component must relate to the overriding defining clinical service specific to online remote cognitive behavioral therapy.

In October 2021, a proposal was submitted to replace those recently created Category III codes (0702T and 0703T) with a Category I code 989X6; *Remote therapeutic monitoring (e.g., respiratory system status, musculoskeletal system status, cognitive behavioral therapy, therapy adherence, therapy response); device(s) supply with daily recording(s) or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*, added to the RTM code set. The application noted that the professional work described by Category III codes 0702T, 0703T was not distinguishable from the recently added Category I code family for Remote Therapeutic Monitoring and Remote Therapeutic Monitoring Treatment Management Services. The CPT Editorial Panel accepted the proposal to create a practice expense only CPT code (989X6) and deleted the category III codes 0702T and 0703T.

Recommendations

This code represents new and evolving technology. The resource costs associated with CBT products vary under current distribution models depending on how these products are accessed and used by patients. The attached document includes highlights from the interviews conducted to gather resource cost information. During the interviews, it became apparent that CBT products might fit better as separately payable supplies or in a different benefit category. In addition, modifications to the coding structure should also be considered to more appropriately capture the expenses associated with CBT. Based on the information gathered, APA-Psychology and APA-Psychiatry recommend Carrier Pricing for CPT 989X6, which will accommodate the wide variability in practice patterns and pricing.

Also included in Tab 12 are the recently reviewed remote therapeutic monitoring (RTM) codes (98975-98981). APA-Psychology and APA-Psychiatry request reaffirmation of the January 2021 RUC and Practice Expense recommendations. Please see attached.

We look forward to being part of future discussions on this issue. We thank you in advance for your time and consideration of our comments. Should you have questions or require additional information, please contact our CPT and RUC Staff, Meghann Dugan-Haas, APA-Psychology at mdugan-haas@apa.org and Becky Yowell, APA-Psychiatry at byowell@psych.org.

Sincerely,

Stephen Gillaspy, PhD

CBT4 CBT	CBT4CBT	Clients/purchasers are varied and are primarily state/local governments, health plans, behavioral health facilities.	Yes
PEAR Connect TM	reSET reSET-O	Pear's current products are not sold or distributed in a way where the physician practice is incurring a charge.	Yes

			Responded to RFI
Orexo	VORVIDA ® DEPREXIS ®	There is a great deal of variability in the level and type of interaction between the DTx and the clinician, with some DTx relying solely on communication between the clinician and the patient to convey information on treatment adherence and response, and others offering options for patient to enable clinician access to information on DTx use. CBT DTx can be offered in relatively simple, linear formats with patient progression through modules in a manner similar to moving through the chapters of an e-book. The patient gains the benefit of the information presented, but the DTx cannot generate data or present information that responds to the patient or their therapeutic response. Orexo´s digital therapies build on the artificial intelligence (AI) software broca® and simulates interaction between the patient and an empathetic physician or therapist. CPT Code 989X6 would include devices that offer "tracking" for clinician monitoring purposes and "therapeutic" devices. There is, therefore, no single payment amount that would appropriately capture the cost associated with use of the divergent set of devices that fit within the language of the code descriptor.	Yes
BigHealth	Sleepio Daylight	The coding structure does not fully or clearly describe the CBT products offered by BigHealth. As drafted, code 989XX describes only the supply of device(s) to monitor cognitive behavioral therapy and does not explain how the supply of the cognitive behavioral therapy program itself would be coded--i.e., whether it would be included under the code or reported separately (e.g., using a supply code). The CBT software as a medical device products offered by BigHealth are currently under enforcement discretion by FDA related to the Public Health Emergency. Big Health intends to pursue the appropriate FDA premarket review pathway following the PHE pursuant to pending transition guidance from FDA. The resource costs associated with the BigHealth products vary under current distribution models depending on how these products are accessed and used by patients. The BigHealth products might fit better as separately payable supplies associated with a healthcare practitioner service or in different benefit category.	Yes

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2021

Remote Therapeutic Monitoring – Tab 24

In October 2020, the CPT Editorial Panel created five new CPT codes to report remote therapeutic monitoring services. Remote physiologic monitoring treatment management services are provided when a physician or qualified health care professional (QHP) and/or clinical staff use the results of remote physiological monitoring to manage a patient under a specific treatment plan.

98980 ***Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes***
The RUC reviewed the survey results from 50 physicians and qualified health care professionals (QHPs) for CPT code 98980 and determined that the survey 25th percentile work RVU of 0.62 appropriately accounts for the work required to perform this service. The RUC recommends 20 minutes of intra-service time. The RUC noted that a physician/QHP would not be permitted to report this code if that physician/QHP spent less than 20 minutes performing these services across a given calendar month and that this work would include 2-3 minutes of data review every few days and an interactive communication with the patient once per month. The RUC also discussed the vignette and the fact that the typical patient is an 8-year-old with asthma. The specialty societies noted that only 46 percent of survey respondents found the vignette to be typical. The respondents and the specialty noted the typical patient to be older and have complex medical conditions and co-morbidities, particularly following surgical procedures after which these treatment/monitoring devices would be provided.

The RUC compared CPT code 98980 to the top key reference service CPT code 99457 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes* (work RVU = 0.61, 20 minutes total time) and determined that both services require nearly identical physician work, time and intensity, which supports the RUC recommended work RVU valuation of 98980. The RUC also compared 98980 to CPT code 99422 *Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes* (work RVU = 0.50, 15 minutes total time) and noted that 98980 requires 5 minutes of additional time because there is considerably more data review and collection associated with 98980 across a period of 30 days, compared with a period of 7 days for 99422. **The RUC recommends a work RVU of 0.62 for CPT code 98980.**

98981 ***Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 46 physicians and qualified health care professionals (QHPs) for CPT code 98981 and determined that the survey 25th percentile work RVU of 0.61 appropriately accounts for the work required to perform this service. The RUC recommends 20 minutes of intra-service time. The RUC compared CPT code 98981 to the top key reference service CPT code 99458 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)* (work RVU = 0.61, total time 20 minutes) and determined that both services require the same physician work, time and intensity.

The RUC discussed the valuation of key reference services 99457 (work RVU = 0.61) and 99458 (work RVU =0.61) and noted that these key reference services have identical work RVU values. This supports the same relativity between CPT codes 98980 and 98981 being nearly identical. The specialty societies also noted that a typical patient for 98981 is inherently complex and needs additional evaluation and information gathering and that the work associated with this would essentially be identical to that of the base code. **The RUC recommends a work RVU of 0.61 for CPT code 98981.**

New Technology/New Services
CPT codes 98975, 98976, 98977, 98980 and 98981 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Practice Expense
The Practice Expense Subcommittee adjusted the CA021 clinical staff time to reflect the typical musculoskeletal patient for CPT code 98975; discussed the leasing/rental fee for the new supply item associated with CPT code 98976; and noted the need for the specialty societies to obtain a paid invoice for the new equipment item for CPT code 98977. **The RUC recommends the direct practice expense inputs as modified** by the Practice Expense Subcommittee. The RUC notes that the specialty societies were unable to obtain a paid invoice for the new equipment item by the date of submission and **recommends that CMS work directly with the specialty societies and others to determine the acquisition costs for the new equipment item *Remote musculoskeletal therapy system.*** CMS has experience with a similar situation where the Agency worked directly with a cardiac device manufacturer to attain the manufacturing costs and other proprietary information for a separate cardiac device.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Non-Face-to-Face Services** **Digitally Stored Data Services/Remote Physiologic Monitoring** *Codes 99453 and 99454 are used to report remote physiologic monitoring services (eg, weight, blood pressure, pulse oximetry) during a 30-day period. To report 99453, 99454, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Code 99453 may be used to report the setup and patient education on use of the device(s). Code 99454 may be used to report supply of the device for daily recording or programmed alert transmissions. Codes 99453, 99454 are not reported if monitoring is less than 16 days. Do not report 99453, 99454 when these services are included in other codes for the duration of time of the physiologic monitoring service (eg, 95250 for continuous glucose monitoring requires a minimum of 72 hours of monitoring).* *Code 99091 should be reported no more than once in a 30-day period to include the physician or other qualified health care professional time involved with data accession, review and interpretation, modification of care plan as necessary (including communication to patient and/or caregiver), and associated documentation.* *If the services described by 99091 or 99474 are provided on the same day the patient presents for an evaluation and management (E/M) service to the same provider, these services should be considered part of the E/M service and not reported separately.* *Do not report 99091 for time in the same calendar month when used to meet the criteria for care plan oversight services (99374, 99375, 99377, 99378, 99379, 99380), home, domiciliary, or rest home care plan oversight services (99339, 99340), remote physiologic monitoring services (99457, 99458), or personally performed chronic or principal care management (99491, 99437, 99424, 99425,99426, 99427). Do not report 99091 if other more specific codes exist (eg, 93227, 93272 for cardiographic services; 95250 for continuous glucose monitoring). Do not report 99091 for transfer and interpretation of data from hospital or clinical laboratory computers.* *Code 99453 is reported for each episode of care. For coding remote monitoring of physiologic parameters, an episode of care is defined as beginning when the remote monitoring physiologic service is initiated, and ends with attainment of targeted treatment goals.* *#99453 Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*				

(Do not report 99453 more than once per episode of care)

(Do not report 99453 for monitoring of less than 16 days)

#99454 *device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*

(For physiologic monitoring treatment management services, use 99457)

(Do not report 99454 for monitoring of less than 16 days)

(Do not report 99453, 99454 in conjunction with codes for more specific physiologic parameters [eg, 93296, 94760])

(For self-measured blood pressure monitoring, see 99473, 99474)

(For remote therapeutic monitoring, see 98975, 98976, 98977)

#99091 *Collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days*

(Do not report 99091 in conjunction with 99457, 99458)

(Do not report 99091 ~~if it occurs within 30 days of~~ for time in a calendar month when used to meet the criteria for 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99457, 99487, 99491, 99437, 99424, 99425)

Remote Physiologic Monitoring Treatment Management Services

Remote physiologic monitoring treatment management services are provided when clinical staff/physician/other qualified health care professional use the results of remote physiological monitoring to manage a patient under a specific treatment plan. To report remote physiological monitoring, the device used must be a medical device as defined by the FDA, and the service must be ordered by a physician or other qualified health care professional. Do not use 99457, 99458 for time that can be reported using more specific monitoring services ~~(eg, for the patient that requires reevaluation of medication regimen and/or changes in treatment)~~. Codes 99457, 99458 may be reported during the same service period as chronic care management services (99437, 99439, 99487, 99489, 99490, 99491), principal care management services (99424, 99425, 99426, 99427), transitional care management services (99495, 99496), and behavioral health integration services (99484, 99492, 99493, 99494)~~;~~, ~~h~~However, time spent performing these services should remain separate and no time should be counted twice toward the required time for any~~both~~ services in a single month. Codes 99457, 99458 require a live, interactive communication with the patient/caregiver. For the first completed 20 minutes of clinical staff/physician/other qualified health care professional time in a calendar month report 99457, and report 99458 for each additional completed 20 minutes. Do not report 99457, 99458 for services of less than 20 minutes. Report 99457 one time regardless of the number of physiologic monitoring modalities performed in a given calendar month.

To report remote therapeutic monitoring treatment management services provided by physician/other qualified health care professional, see 98980, 98981.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, inpatient services 99221, 99222, 99223, 99231, 99232, 99233, 99251, 99252, 99253, 99254, 99255). Do not count any time related to other reported services (eg, 93290, 93793, 99291, 99292).

#99457 *Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes*

(Report 99457 once each 30 days, regardless of the number of parameters monitored)

(Do not report 99457 for services of less than 20 minutes)

(Do not report 99457 in conjunction with 93264, 99091)

(Do not report 99457 in the same month as 99473, 99474)

+#99458 *each additional 20 minutes (List separately in addition to code for primary procedure)*

(Use 99458 in conjunction with 99457)

(For remote therapeutic monitoring treatment management services, see 98980, 98981)

~~*(Report only 99457 if you have not completed 20 minutes of additional treatment regardless of time spent)*~~

(Do not report 99458 for services of less than an additional increment of 20 minutes)

Medicine
Non-Face-to-Face Nonphysician Services
Qualified Nonphysician Health Care Professional Online Digital Assessment and Management Service

Qualified nonphysician health care professional online digital assessment and management services are…

98970 *Qualified nonphysician health care professional online digital assessment and management, for an established patient, for up to 7 days, cumulative time during the 7 days; 5-10 minutes*

98971 *11-20 minutes*

98972 *21 or more minutes*

(Report 98970, 98971, 98972 once per 7-day period)

(Do not report online digital E/M services for cumulative visit time less than 5 minutes)

(Do not count 98970, 98971, 98972 time otherwise reported with other services)

(Do not report 98970, 98971, 98972 for home and outpatient INR monitoring when reporting 93792, 93793)

(Do not report 98970, 98971, 98972 when using 99091, 99339, 99340, 99374, 99375, 99377, 99378, 99379, 99380, 99487, 99489, 99490, 99491, 99426, 99427 for the same communication[s])

Remote Therapeutic Monitoring Services

Remote therapeutic monitoring services (eg, musculoskeletal system status, respiratory system status, therapy adherence, therapy response) represent the review and monitoring of data related to signs, symptoms, and functions of a therapeutic response. These data may represent objective device-generated integrated data or subjective inputs reported by a patient. These data are reflective of therapeutic responses that provide a functionally integrative representation of patient status.

Codes 98975, 98976, 98977 are used to report remote therapeutic monitoring services during a 30-day period. To report 98975, 98976, 98977 the service must be ordered by a physician or other qualified health care professional. Code 98975 may be used to report the set-up and patient education on use of any device(s) used for therapeutic data collection. Codes 98976, 98977 may be used to report supply of the device for scheduled (eg, daily) recording(s) and/or programmed alert(s) transmissions. To report 98975, 98976, 98977, the device used must be a medical device as defined by the FDA. Codes 98975, 98976, 98977 are not reported if monitoring is less than 16 days. Do not report 98975, 98976, 98977 with other physiologic monitoring services (eg, 95250 for continuous glucose monitoring requires a minimum of 72 hours of monitoring or 99453, 99454 for remote monitoring of physiologic parameter[s]).

Code 98975 is reported for each episode of care. For reporting remote therapeutic monitoring parameters, an episode of care is defined as beginning when the remote therapeutic monitoring service is initiated and ends with attainment of targeted treatment goals.

● 98975	AA1	Remote therapeutic monitoring (eg, respiratory system status, musculoskeletal system status, therapy adherence, therapy response); initial set-up and patient education on use of equipment (Do not report 98975 more than once per episode of care) (Do not report 98975 for monitoring of less than 16 days)	XXX	0.00 (PE Only)
● 98976	AA2	device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days	XXX	0.00 (PE Only)
● 98977	AA3	device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days (For therapeutic monitoring treatment management services, use 98980) (For physiologic monitoring treatment management services, use 99457) (Do not report 98976, 98977 for monitoring of less than 16 days) (Do not report 98975, 98976, 98977 in conjunction with codes for more specific physiologic parameters [93296, 94760, 99453, 99454]) (For remote physiologic monitoring, see 99453, 99454) (For self-measured blood pressure monitoring, see 99473, 99474)	XXX	0.00 (PE Only)

Remote Therapeutic Monitoring Treatment Management Services

Remote therapeutic monitoring treatment management services are provided when a physician/other qualified health care professional uses the results of remote therapeutic monitoring to manage a patient under a specific treatment plan. To report remote therapeutic monitoring, the service must be ordered by a physician or other qualified health care professional. To report 98980, 98981, any device used must be a medical device as defined by the FDA. Do not use 98980, 98981 for time that can be reported using more specific monitoring services. Codes 98980, 98981 may be reported during the same service period as chronic care management services (99439, 99487, 99489, 99490, 99491), transitional care management services (99495, 99496), *principal care management services (99424, 99425, 99426, 99427)* and behavioral health integration services (99484, 99492, 99493, 99494); however, time spent performing these services should remain separate and no time should

be counted toward the required time for both services in a single month. Codes 98980, 98981 require at least one interactive communication with the patient/caregiver. The interactive communication contributes to the total time but need not represent cumulative reported time of the treatment management service. For the first completed 20 minutes of physician/other qualified health care professional time in a calendar month report 98980, and report 98981 for each additional completed 20 minutes. Do not report 98980, 98981 for services of less than 20 minutes. Report 98980 one time regardless of the number of therapeutic monitoring modalities performed in a given calendar month.

Do not count any time on a day when the physician or other qualified health care professional reports an E/M service (office or other outpatient services 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, domiciliary, rest home services 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, home services 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, inpatient services 99221, 99222, 99223, 99231, 99232, 99233, 99251, 99252, 99253, 99254, 99255).

Do not count any time related to other reported services (eg, psychotherapy services 90832, 90833, 90834, 90836, 90837, 90838, interrogation device evaluation services 93290, anticoagulant management services 93793, respiratory monitoring services 94774, 94775, 94776, 94777, health behavior assessment and intervention services 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96160, 96161, 96170, 96171, therapeutic interventions that focus on cognitive function services 97129, 97130, adaptive behavior treatment services 97153, 97154, 97155, 97156, 97157, 97158, therapeutic activities 97530, physical therapy evaluation services 97161, 97162, 97163, 97164, occupational therapy evaluations 97165, 97166, 97167, 97168, orthotic management and training and prosthetic training services 97760, 97661, 97763, medical nutrition therapy services 97802, 97803, 97804, medication therapy management services 99605, 99606, 99607, critical care services 99291, 99292, *principal care management services 99424, 99425, 99426, 99427*) in the cumulative time of the remote therapeutic monitoring treatment management service during the calendar month of reporting.

● 98980	AA4	Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes (Report 98980 once each 30 days, regardless of the number of therapeutic parameters monitored) (Do not report 98980 for services of less than 20 minutes) (Do not report 98980 in conjunction with 93264, 99091, 99457, 99458) (Do not report 98980 in the same calendar month as 99473, 99474)	XXX	0.62
✚● 98981	AA5	each additional 20 minutes (List separately in addition to code for primary procedure)	ZZZ	0.61

		(Use 98981 in conjunction with 98980) (Do not report 98981 for services of less than an additional increment of 20 minutes)		

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:98980 Tracking Number AA4 Original Specialty Recommended RVU: **0.62**
Presented Recommended RVU: **0.62**
Global Period: XXX Current Work RVU: RUC Recommended RVU: **0.62**

CPT Descriptor: Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring.

Percentage of Survey Respondents who found Vignette to be Typical: 46%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Physician or QHP analyzes and interprets the data. Based on the interpreted data, the physician/QHP uses medical/clinical decision making to assess the patient's condition, communicate with the patient, and oversee, coordinate, and/or modify the patient's care through shared decision making in order to achieve established outcomes/goals of care.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? Yes

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99457	XXX	0.61	**RUC Time**

CPT Descriptor Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99442	XXX	0.97	**RUC Time**

CPT Descriptor Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion (Note: the Work RVU listed is the 2020 Work RVU value).

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
95251	XXX	0.70	**RUC Time**	248,288

CPT Descriptor 1 Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99212	XXX	0.48	**RUC Time**	10,729,531

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	58%	42%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required		67%	33%
Physical effort required	8%	67%	25%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	58%	34%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	50%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	42%	33%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	59%	33%
Physical effort required	33%	50%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	58%	42%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

An expert panel of providers from each of the participating specialty societies (ie, AAPM&R, ANA, APTA, AAP) reviewed and discussed survey results for the Remote Therapeutic Monitoring (RTM) codes (98980 and 98981).

98980
We are recommending the **median intraservice time** (20 minutes). This code is reported for the first completed 20 minutes of physician/other qualified health care professional time in a calendar month. The expert panel agreed that the median time of 20 minutes was appropriate and properly aligned with the intraservice/total time for 99457 (20 minutes) which was one of the two key reference services.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.62. This value places this code in proper rank order to 99457 as well as to the key reference services.

98981
We are recommending the **median intraservice time** (20 minutes). This code is reported for each additional completed 20 minutes in a calendar month. The expert panel agreed that the median time of 20 minutes was appropriate and properly aligned with the intraservice/total time for 99458 (20 minutes) which was the top key reference service.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.61. This value places this code in proper rank order to 99458 as well as to the key reference services.

While the median Service Performance Rate for this code was zero, we believe that the number of responses received and the data for both codes was sufficient to support making a recommendation to the RUC.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A This is a new service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Medicine & Rehabilitation How often? Sometimes

Specialty Nurse Practitioner How often? Commonly

Specialty Physical Therapy How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 60000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare claims for 99457

Specialty Physical Medicine & Rehabilitation Frequency 20000 Percentage 33.33 %

Specialty Nurse Practitioner Frequency 20000 Percentage 33.33 %

Specialty Physical Therapy Frequency 20000 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 50,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2019 Medicare claims for 99457

Specialty Physical Medicine & Rehabilitation Frequency 16500 Percentage 33.00 %

Specialty Nurse Practitioner Frequency 16500 Percentage 33.00 %

Specialty Physical Therapy Frequency 16500 Percentage 33.00 %

Do many physicians perform this service across the United States? No

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:98981 Tracking Number AA5 Original Specialty Recommended RVU: **0.61**
Presented Recommended RVU: **0.61**
Global Period: ZZZ Current Work RVU: RUC Recommended RVU: **0.61**

CPT Descriptor: Remote therapeutic monitoring treatment management services, physician/other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month;each additional 20 minutes (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring. Note: This is an add-on service. Only consider the additional work related to the additional physician or QHP staff time beyond the 20 minutes reported with 98980.

Percentage of Survey Respondents who found Vignette to be Typical: 48%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Physician or QHP analyzes and interprets the data. Based on the interpreted data, the physician/QHP uses medical/clinical decision making to assess the patient's condition, communicate with the patient, and oversee, coordinate, and/or modify the patient's care through shared decision making in order to achieve established outcomes/goals of care. Additional time is needed due to the specific needs of the patient's medical condition(s).

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	4%	64%	29%	3%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	50%	36%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	68%	21%
Physical effort required	29%	57%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	11%	53%	36%

2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	42%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	42%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	50%	42%
Physical effort required	33%	50%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	33%	59%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

An expert panel of providers from each of the participating specialty societies (ie, AAPM&R, ANA, APTA, AAP) reviewed and discussed survey results for the Remote Therapeutic Monitoring (RTM) codes (989 and 98981).

98980
We are recommending the **median intraservice time** (20 minutes). This code is reported for the first completed 20 minutes of physician/other qualified health care professional time in a calendar month. The expert panel agreed that the

median time of 20 minutes was appropriate and properly aligned with the intraservice/total time for 99457 (20 minutes) which was one of the two key reference services.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.62. This value places this code in proper rank order to 99457 as well as to the key reference services.

98981
We are recommending the **median intraservice time** (20 minutes). This code is reported for each additional completed 20 minutes in a calendar month. The expert panel agreed that the median time of 20 minutes was appropriate and properly aligned with the intraservice/total time for 99458 (20 minutes) which was the top key reference service.

We also are recommending the survey **25th percentile work relative value units** (wRVU) of 0.61. This value places this code in proper rank order to 99458 as well as to the key reference services.

While the median Service Performance Rate for this code was zero, we believe that the number of responses received and the data for both codes was sufficient to support making a recommendation to the RUC.

Key Reference Services
Service Performance Rates

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A This is a new service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Medicine & Rehabilitation How often? Sometimes

Specialty Nurse Practitioner How often? Commonly

Specialty Physical Therapy How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 40000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Two-thirds of the estimate for 98980

Specialty Physical Medicine & Rehabilitation Frequency 13333 Percentage 33.33 %

Specialty Nurse Practitioner Frequency 13333 Percentage 33.33 %

Specialty Physical Therapy Frequency 13333 Percentage 33.33 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 33,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Two-thirds of the estimate for 98980

Specialty Physical Medicine & Rehabilitation Frequency 11000 Percentage 33.33 %

Specialty Nurse Practitioner Frequency 11000 Percentage 33.33 %

Specialty Physical Therapy Frequency 11000 Percentage 33.33 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Tests

BETOS Sub-classification:
Other tests

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 20553

98981	Remote therapeutic monitoring treatment management services, physician/ other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; each additional 20 minutes	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
98975	A 65-year-old male presents to the physician's or other qualified health care professional's office with exacerbation of a chronic condition. Following the visit, the physician initiates a remote therapeutic monitoring program to enable data collection and monitoring to support therapeutic management.
98976	An 8-year-old female presents to the physician's or other qualified health care professional's office with cough and wheezing. She is diagnosed with a respiratory condition exacerbated by environmental factors. Following the visit, the physician or other qualified health care professional initiates a remote therapeutic monitoring program to enable data collection and monitoring to support therapeutic management of her respiratory condition.
98977	A 66-year-old female who has limited mobility caused by osteoarthritis of her knees is enrolled in a remote therapeutic monitoring program to enable data collection and monitoring to support treatment management of her musculoskeletal condition.
98980	An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

98981	An 8-year-old presents to the physician's or other qualified health care professional's office with exacerbation of asthma. The physician or other qualified health care professional initiates a remote therapeutic monitoring program to support therapeutic management through data collection and monitoring. Note: This is an add-on service. Only consider the additional work related to the additional physician or QHP staff time beyond the 20 minutes reported with 98980.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The practice expense recommendations for codes 98975 were determined through email dialogue amongst our Specialty Society RVS Committee Expert Panel. Our panel was comprised of the advisors and alternate advisors from the participating specialties. The panel reviewed existing practice expense inputs the remote physiological monitoring codes (99453, 99454, 99457 and 99458). Further, the societies contacted representatives from two remote therapeutic monitoring technology companies: specifically, Aria (formerly VERA), which produces a musculoskeletal system monitoring device and Propeller Health which produces a respiratory system monitoring device. Both companies provided receipt information as well as insights into staff time related to their technologies. This information was taken into consideration as recommendations were developed.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code, but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here (*for service reviewed prior to the implementation of clinical activity codes, detail is not provided in the RUC database, please contact Samantha Ashley at samantha.ashley@ama-assn.org for PE spreadsheets for your reference codes*):

Reference for 98975 - 99453 - Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), intial; set-up and patient education on use of equipment

Reference for 98976 and 98977 – Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, oximetry, respiratory flow rate), device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days

Reference for 98980 – Remote physiologic monitoring treatment management services, clinical staff/ physician/ other qualified health professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes

Reference for 98981 – Remote physiologic monitoring treatment management services, clinical staff/ physician/ other qualified health professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes

The remote physiologic monitoring (RPM) code family was used as a reference in the development of our recommendations for this code family. This was due to the remote therapeutic codes being modeled, with some variations, after the RPM codes in structure. The RPM codes are reflective of similar staff work though the specific equipment is different.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New code

4. What specialty is the dominant provider in the nonfacility?
   What percent of the time does the dominant provider provide the service(s) in the nonfacility?
   Is the dominant provider in the nonfacility different than for the global?
   (Please see provided data titled *Medicare Same Day NF EM Billed Together - NF Dom Spec* in the RUC Review Resource Materials)

   New code

5. If you are recommending more minutes than the PE Subcommittee standards for clinical activities you must provide rationale to justify the time:

   Not applicable

6. If you are requesting an increase over the aggregate current cost for clinical staff time, equipment and supplies for the **code family**, please provide compelling evidence (please see *PE compelling evidence guidelines*) Please explain if the increase can be entirely accounted for because of an increase in physician time:

   Not applicable

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see second worksheet in PE spreadsheet workbook*), please explain the difference here:

   Not applicable

8. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

   Not applicable as vital signs are not taken for this code.

9. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

   b. Service period (includes pre, intra and post):

   98975 - Clinical staff greets the patient and reviews medical records to confirm service. Clinical staff conducts set up of the technology and educates the patient regarding its use.

   98980 and 98981 – Clinical staff reviews therapeutic monitoring data with the physician. Data outside of expected norms

   c. Post-service period:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

98975 - Clinical staff contacts the patient following the encounter to ensure the technology is working and that the patient is on track to complete their daily tasks related to therapeutic monitoring.

98980 and 98981 – Clinical staff conducts patient communications throughout the month to improve therapy adherence, address lack of improvement/control of condition, and resolve any technology or data transmission concerns.

10. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

98975 - Clinical staff walks the patient through set up of the therapeutic monitoring technology. The patient is educated regarding how to use the technology and related daily tasks. For respiratory therapy monitoring, this includes introduction to the device as well as mobile app. For musculoskeletal therapy monitoring, this includes set up of the device, review of the 3D motion capture technology, and review of the specific exercises as prescribed by the physician/QHP. The patient is given the opportunity to ask questions.

98980 and 98981 – Clinical staff reviews the therapeutic monitoring data with the physician/QHP. Areas in which data reflects poor control of condition or deviation from expected treatment adherence are identified. This data review is typically done on a weekly basis throughout the 30 days.

11. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Not applicable.

12. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see second worksheet in PE spreadsheet workbook*):

Not applicable.

13. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

Not applicable

INVOICES

14. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

15. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. If you wish to include a supply that is not on the list (*please see fourth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

Propeller Health invoice for $300 documenting the leasing of the Bluetooth sensors (2 provided in each rental) placed on top of the patient's inhalers (typically 1 daily use inhaler and 1 rescue inhaler) as well as use of the app technology for tracking. This is included in line 102 of the spreadsheet as a monthly rental price of $25. The useful life of this technology is 1 year as the sensors are replaced after 1 year.

17. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation. Please include the description, CMS supply code, unit, item quantity and unit price (if available). See documents two and three under PE reference materials on the RUC Collaboration Website for information on the contents of kits, packs and trays.

The only supply used is the new supply described in question 16.

18. If you wish to include an equipment item that is not on the list (*please see fifth worksheet in PE spreadsheet workbook*) please provide a paid invoice. Identify and explain the invoice here:

19. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute (*please see fifth worksheet in PE spreadsheet workbook*):

20. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

21. List all the equipment included in your recommendation and the equipment formula chosen *(*please see document titled *Calculating equipment time).* If you have selected "other formula" for any of the equipment please explain here:

Line 113 – remote musculoskeletal therapy system uses the monitoring equipment formula, however no staff time is associated with this code.

22. If there is any other item(s) on your spreadsheet not covered in the categories above that require greater detail/explanation, please include here:

PROFESSIONAL LIABILITY INSURANCE (PLI) INFORMATION

23. If this is a PE only code please select a crosswalk based on a similar specialty mix:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Crosswalk for 98975 is 99453 - Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), intial; set-up and patient education on use of equipment

Crosswalk for 98976 and 98977 is 99454 - Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, oximetry, respiratory flow rate), device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING

During and immediately following the review of this tab at the PE Subcommittee meeting please revise the PE spreadsheet and summary of recommendation (PE SOR) documents based on modifications made during the meeting. Please submit the revised documents electronically to Samantha Ashley at samantha.ashley@ama-assn.org immediately following the close of business the same day that the tab is reviewed. On the PE spreadsheet, please highlight the cells and/or use red font to show the changes made during the PE Subcommittee meeting (if you have provided any of this highlighting based on changes from the reference code prior to the PE Subcommittee meeting please remove it, so not to be confused with changes made during the meeting). In addition to those revisions please also provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

American Occupational Therapy Association

December 21, 2020

Peter K. Smith, MD
Chair, AMA/Specialty Society RVS Update committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

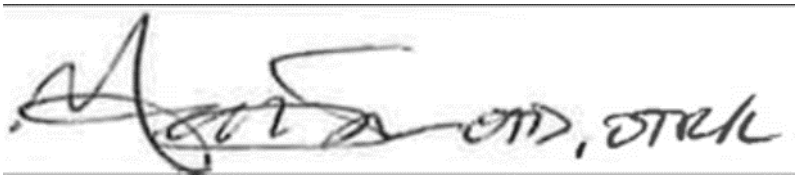
Dear Dr. Smith,

The American Occupational Therapy Association is interested in the new CPT codes for remote therapeutic monitoring as it was surveyed by a related specialty and has relevance to our membership. AOTA's RUC advisors met, reviewed the recommendation, and respectfully submit the following comments.

AOTA is generally supportive of the Remote Therapeutic Monitoring submission. We agree with the selection of key reference services used in the survey. AOTA agrees with the practice expense inputs, but wonders if a valid purchase invoice should be submitted. AOTA noticed that respondents appeared to be lacking experience with the service.

Thank you for the opportunity to comment.

Sincerely,



Katie Jordan, OTD, OTR/L, FAOTA
Primary RUC Advisor

ASHA
American
Speech-Language-Hearing
Association

Chicago, IL 60611

Re: Tab 24 – Remote Therapeutic Monitoring (98975, 98980, and 98981)

Dear Dr. Smith:

On behalf of the American Speech-Language-Hearing Association, I write to offer comments on the specialty society recommendations for codes **98975**, *remote therapeutic monitoring (eg, respiratory system status, musculoskeletal system status, therapy adherence, therapy response); initial set-up and patient education on use of equipment***; 98980**, *remote therapeutic monitoring treatment management services, physician/ other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient/caregiver during the calendar month; first 20 minutes*; and **98981**, *each additional 20 minutes.*

The American Speech-Language-Hearing Association (ASHA) is the national professional, scientific, and credentialing association for 211,000 members and affiliates who are audiologists; speech-language pathologists; speech, language, and hearing scientists; audiology and speech-language pathology support personnel; and students.

A small subset of audiologists and speech-language pathologists may report codes 98975, 98980, and 98981, to remotely monitor the progress of treatment for certain hearing, communication, and swallowing disorders, such as tinnitus and dysphagia. As such, ASHA's advisors and Health Care Economics Committee reviewed the recommendations put forth by the submitting specialty societies. For codes **98980 and 98981,** we agree the 25th percentile work RVU and median intra-service times are appropriate and align well with the key reference service codes. ASHA also agrees with the practice expense inputs for **98975**, **98980, and 98981**. The recommended clinical staff times align with the remote physiologic monitoring reference codes, which were also used as a model for the structure of the new codes. **Therefore, ASHA fully supports the work and practice expense recommendations for codes 98975, 98980, and 98981**

Thank you for the opportunity to offer comments on the recommendations for remote therapeutic monitoring. If you or AMA staff have any questions, please contact Neela Swanson, ASHA's director of health care policy for coding and reimbursement, at nswanson@ash.org.

Sincerely,

Leisha R Eiten

Leisha R. Eiten, AuD, CCC-A
ASHA RUC HCPAC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations

October 2021

Inpatient and Observation Care Services – Tab 13

Following the implementation of the revisions to the Evaluation and Management (E/M) office visits (99201-99215) for the CPT 2021 code set, the CPT/RUC Workgroup on E/M met twelve times in 2020 and early 2021 to standardize the rest of the E/M sections in the CPT code set. The CPT/RUC Workgroup on E/M was committed to changing the current coding and documentation requirements for E/M visits to simplify the work of the health care provider and improve the health of the patient. To achieve these goals, the Workgroup set forth the following guiding principles related to the group's ongoing work product:

1. To decrease administrative burden of documentation and coding and align CPT and CMS whenever possible
2. To decrease the need for audits
3. To decrease unnecessary documentation in the medical record that is not needed for patient care
4. To ensure that payment for E/M is resource-based and that there is no direct goal for payment redistribution between specialties.

In February 2021, the CPT Editorial Panel deleted seven observation care codes and revised eleven codes to merge inpatient and observation care and to align with the principles included in the office or other outpatient E/M services (99202-99215) by documenting and selecting level of service based on total time or medical decision making (MDM). Most of the utilization for each service is expected to be inpatient and not observation.

Similar to the office visits, beginning in 2023, when total time on the date of encounter is used to select the appropriate level of an inpatient hospital or observation care visit code, both the face-to-face and non-face-to-face time personally spent by the physician (or other qualified health care professional that is reporting the office visit) assessing and managing the patient are summed to select the appropriate code. The inpatient and observation care services were surveyed for the October 2021 RUC meeting. The survey time captured the total time on the date of encounter by calendar date.

In October 2021, the RUC referred these services to be resurveyed because the survey did not include a request for distinct time before and after floor/unit time, therefore the survey respondents may not have captured the correct total time on the date of encounter. The specialty societies revised their survey instrument by working with the Research Subcommittee. The RUC reviewed the inpatient and observation care services (99221-99223, 99231-99236 and 99238-99239) at the January 2022 RUC meeting.

COMPELLING EVIDENCE

The specialty societies presented three points for compelling evidence that the work of providing inpatient hospital and observation care visits for the evaluation and management of patients may have changed. First, a change in the patient population, the distillation down to sicker patients who are in the hospital for a shorter period; second, a change in technology due to the widespread implementation of institutional electronic health records (EHR), which are data intensive and therefore more intense for the patient encounters; and third, a change in the providers of these services with the recent emergence of hospitalists and intensivists.

Change in Patient Population

The number of diagnoses that appear in the Medicare claims for inpatient visits (based on the 5% Medicare claims file) has increased in the last 16 years since these codes were last reviewed. The largest changes are occurring at the higher-level services. Since 2006, the number of diagnoses has increased by more than 30% for all the codes except 99221 and 99222 which have gone up 25%. For example, for 99223 the number has increased by 31% and for 99233, the increase is 41%. Physicians are experiencing more complicated patients, with more clinical indications to review and consider, while balancing moving these more complicated patients to the next setting of care, such as a skilled nursing facility.

Data from the Chronic Conditions Data Warehouse also support the assertion that Medicare patients have increasing rates of comorbidities that in turn increase the complexity of hospitalizations. In addition to high prevalence of diabetes, hypertension and COPD among Medicare beneficiaries, there has been marked increase between 2010 and 2019 in rates of chronic kidney disease (15% to 26%), depression (14% to 19%), and rheumatoid arthritis/osteoarthritis (29% to 35%).

Change in Technology

EHRs have significantly changed since 2006. Some of the most obvious differences are requirements for pharmacy potential interactions to be overridden by the physician, as necessary. Additionally, flags in the EHR are frequent, as they are put in place for safety reasons, however, these flags require the physician/QHP rather than clinical staff to review and override any modifications to treatment, such as a medication change, before the clinical staff can continue with care of the patient. The American Hospital Association reported that in 2017[1] 95% of hospitals had some form of EHR implemented. As reported in 2006 by the Healthcare Financial Management Association, only 13% of hospitals had an EHR for health outcomes; 13% for clinical decision support; and 2% for patient access.

Change in Provider

Hospitalists are a new and growing specialty that were not fully organized as a specialty in 2006 when the codes were last surveyed. The term "hospitalist" was coined in 1996 to describe a trend of primary care physicians choosing to practice exclusively in the hospital[2] and the field began to organize in earnest in the early 2000s. Hospitalists are predominantly internal medicine trained, but there are also a significant number of hospitalists with the specialties of family medicine, pediatrics, and medical subspecialties. In 2011, there were 25,787 adult hospitalists identified

[1] SOURCE: ONC/American Hospital Association (AHA), AHA Annual Survey Information Technology Supplement: 2015-2017.
Note: The sample consists of 3,599 non-federal acute care hospitals. “There was a 7 percent increase between 2015 and 2016 in the percent of hospitals that use their EHR data.” ONC Data Brief No. 46 April 2019

[2] Wachter RM, Goldman L. The emerging role of “hospitalists” in the American health care system. N Engl J Med. 1996;335(7):514–517.

using a 90% threshold of Medicare billing claims associated with hospitalizations.[3] In 2012, there were 28,473 hospitalists identified using a nearly identical 90% threshold.[4] New analyses using the same data and methodology suggest the field has continued to grow at a similar rate through 2019, with approximately 44,000 hospitalists identified.[5] As the field grows, the model and systems of care associated with hospitalists continues to spread. In 2006, the impact of hospitalists on the care of hospitalized patients would not have been as pronounced as it is today.

Hospitalist practice diverges from the typical model of outpatient primary care (e.g., rounding in the hospital on their patients) in several important ways. First, hospitalists provide 24-hour coverage of patients in the hospital using a shift-based model. Shifts are typically 12 (~64% of groups) or 10 (~20% of groups) hours long.[6] Shift-based coverage makes at least one handoff between physicians during a 24-hour period, a ubiquitous practice. About 50% of hospitalist groups use a daytime admitter model or a hybrid for admissions,[7] meaning patients who enter the hospital overnight are admitted by one clinician and then dedicated staff the following morning continue the care. These handoffs make assessments of time spent with the patient on a calendar day difficult, but reflect the reality of team-based care in many hospitals.

Finally, using 90% threshold-identified hospitalists to examine trends in Medicare billing data shows that, in 2019, hospitalists are billing the plurality of charges for nearly all the hospital visit E/M codes. For example, in 2019, hospitalists accounted for 10.2% of 99221, 15.1% of 99222 and 31.9% of 99223 of the total volume of Medicare bills for each of these codes.[8]

The RUC acknowledges that the existing Medicare data attributes a much smaller proportion of claims to hospitalists as this includes only the small proportion of hospitalists who voluntarily identified in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) using a Medicare specialty billing code (C6) that was just recently established in 2017. The Medicare claims data greatly underrepresent the proportion of hospitalists who perform these services. Given the demonstrated growth in the number of hospitalists, the 2006 valuations reflected a provider mix that is no longer representative of the healthcare system today.

The RUC agrees that there is compelling evidence based on a change in patient population, change in technology, and change in the provider of these services.

SURVEY PROCESS AND DATA ANALYSIS

The customized survey, vignettes and reference service lists (RSL) were developed and approved by the Research Subcommittee in conjunction with the CPT/RUC Workgroup on E/M and input from medical specialties. The RSLs were specifically developed in an objective manner to represent relativity within the Medicare Physician Payment Schedule (MFS). The Research Subcommittee considered requests from the surveying specialties to add or remove codes from the initial lists originally developed by the Workgroup. The vignettes were developed by the CPT/RUC Workgroup on E/M and approved by the CPT Editorial Panel and the RUC's Research Subcommittee. Approximately 90 percent of respondents agreed that the vignettes described their typical patient.

The survey was the concerted effort of 24 specialty societies and other health care professional organizations. The RUC analyzed the responses and noted that the number of survey responses received per specialty correlated with those who perform inpatient hospital and observation care visits in the MFS. These data were summarized by categories of specialties (hospital, surgical, primary care and medicine/other). The number of respondents by category were also representative of Medicare allowed charges for inpatient hospital and observation care visits for those same categories.

To ensure that survey respondents understood the new CPT guidelines and descriptors and the impact that these changes may have on their work, the RUC asked that each respondent carefully read the new descriptors/guidelines and attest that they had read the information. The survey respondents understood that code selection will be based on either MDM or time on the date of the patient encounter. While the history and physical is no longer required for purposes of documentation, it is expected that a clinically appropriate history and physical exam is performed during the visit.

For the initial and subsequent hospital inpatient or observation care codes (CPT codes 99221-99233) all time is on the date of encounter, thus intra-service time only. The survey instrument was revised to specify that "unit/floor time" is no longer the basis of time when selecting a code level based upon time. It is total time on the date of the encounter, whether on or off the "unit/floor". The survey asked about the different components of time to ensure that the respondents considered all appropriate time for these services before floor time, floor time and after floor time. The respondents then needed to confirm that the summed time of the components was the accurate total time on the date of encounter for each service to proceed with the survey. Additional details on the survey tool questions and responses are provided in the letter from the specialty societies.

The hospital inpatient or observation services with admission and discharge on the same date (CPT codes 99234-99236) and the discharge management services (99238 and 99239) include **post-service time** because these services include discharge activities where there is contact with the patient and/or family member or further work after the patient had left the hospital. Post-service activities do not occur in the initial or subsequent hospital inpatient or observation care codes because these will be captured when discharged, using CPT codes 99238 and 99239. CPT codes 99234-99236 are based upon total time on the date of encounter if selecting a code level based upon time. The discharge management services are time-based codes only; 30 minutes or less or more than 30 minutes.

INITIAL HOSPITAL INPATIENT OR OBSERVATION CARE

99221 ***Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.***

The RUC reviewed the survey results from 230 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 1.63, which is lower than the current work RVU, appropriately accounts for the work required to perform this service. The RUC recommends 40 minutes of intra-service/total time.

The RUC compared the surveyed code to the top key reference service 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter* (work RVU = 1.60 and 35 minutes total time) and determined that both services require similar medical decision making, intensity/complexity, time and physician work to perform. Additionally, of the survey respondents who chose 99203 as the key reference service, 64% indicated that CPT code 99221 is somewhat more to much more intense. Thus, the work RVU of 1.63 is appropriate.

For additional support, the RUC referenced MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter* (work RVU = 1.92 and 47 minutes total time) and determined that 99221 requires a lower level of medical decision making, is slightly less intense/complex and requires less physician time and work to perform. Therefore, supports a lower work RVU for 99221 compared to CPT code 99204.

The RUC also referenced CPT code 99395 *Periodic comprehensive preventive medicine reevaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, established patient; 18-39 years* (work RVU = 1.75 and 45 minutes total time), which requires similar physician time and work to perform as CPT code 99221. **The RUC recommends a work RVU of 1.63 for CPT code 99221.**

99222 ***Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.***

The RUC reviewed the survey results from 250 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 2.60 appropriately accounts for the work required to perform this service. The RUC recommends 55 minutes of intra-service/total time.

The RUC compared the surveyed code to the top key reference service 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.* (work RVU = 2.60 and 60 minutes total time) and determined that both services require the same level of medical decision making, similar physician time and the same physician work.

The RUC also compared the surveyed code to the second top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.* (work RVU = 3.50 and 88 minutes of total time) and determined that CPT code 99222 is appropriately valued lower as it requires a lower level of medical decision making and less physician time. **The RUC recommends a work RVU of 2.60 for CPT code 99222.**

99223 ***Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level medical decision making. When using total time on the date of the encounter for code selection, 75 minutes must be met or exceeded.***

The RUC reviewed the survey results from 257 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 3.50 appropriately accounts for the work required to perform this service. The RUC recommends 74 minutes of intra-service/total time.

The RUC compared the surveyed code to the top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.* (work RVU = 3.50 and 88 minutes total time) and determined that both services require the same level of medical decision making and the same physician work. The RUC noted that of the survey respondents who chose 99205 as the key reference service, 82% indicated that CPT code 99223 is somewhat more to much more intense.

The RUC compared the surveyed code to the second top key reference service 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes.* (work RVU = 4.50 and 70 minutes of total time) and determined that 99223 is less intense, thus valued lower than CPT code 99291.

For additional support the RUC referenced CPT code 95720 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG)* (work RVU = 3.86 and 75 minutes total time). **The RUC recommends a work RVU of 3.50 for CPT code 99223.**

SUBSEQUENT HOSPITAL INPATIENT OR OBSERVATION CARE

99231 ***Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.***

The RUC reviewed the survey results from 234 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 1.00 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes of intra-service/total time, an increase from the current time.

The RUC compared the surveyed code to the top key reference services 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.* (work RVU = 1.30 and 30 minutes of total time) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.* (work RVU = 0.70 and 16 minutes of total time) and determined that the medical decision making, intensity/complexity, physician time and physician work for 99231 are appropriately bracketed by these two services.

For additional support, the RUC referenced MPC code 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter.* (work RVU = 0.93 and 20 minutes of total time), which requires only straightforward medical decision making for a new patient and slightly less physician work and time to perform than 99231. **The RUC recommends a work RVU of 1.00 for CPT code 99231.**

99232 ***Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.***

The RUC reviewed the survey results from 252 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 1.59 appropriately accounts for the work required to perform this service. The RUC recommends 36 minutes of intra-service/total time.

The RUC compared the surveyed code to the top key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.* (work RVU = 1.92 and 47 minutes total

time) and determined that 99232 is slightly more intense/complex but requires less physician time and work to perform. Additionally, of the survey respondents who chose 99214 as the key reference service, 64% indicated that CPT code 99232 is somewhat more to much more intense. Therefore, supports a lower work RVU for 99232 compared to CPT code 99214.

The RUC compared the surveyed code to the second top key reference service 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.* (work RVU = 1.30 and 30 minutes of total time) and determined CPT code 99232 requires a higher level of medical decision making, is slightly more intense and complex and requires more physician time and work to perform. Additionally, of the survey respondents who chose 99213 as the key reference service, 62% indicated that CPT code 99232 is somewhat more to much more intense.

The RUC noted that the recommended work RVU for 99232 maintains the appropriate relativity with the initial inpatient hospital visit with straightforward or low MDM recommendation 99221 *Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (recommended work RVU = 1.63 and 40 minutes intra-service time).

For additional support, the RUC referenced MPC code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter* (work RVU = 1.60 and 35 minutes total time), which requires similar physician work and time to perform. **The RUC recommends a work RVU of 1.59 for CPT code 99232.**

99233 *Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.*

The RUC reviewed the survey results from 258 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 2.40 appropriately accounts for the work required to perform this service. The RUC recommends 52 minutes of intra-service/total time.

The RUC compared the surveyed code to the top key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.* (work RVU = 2.80 and 70 minutes total time) and determined that CPT code 99233 requires the same level of medical decision making but less physician time and work to perform. Additionally, of the survey respondents who chose 99215 as the key reference service, 76% indicated that CPT code 99233 is somewhat more to much more intense.

The RUC also compared the surveyed code to the second top key reference service 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.* (work RVU = 1.92 and 47 minutes total time) and determined that CPT code 99233 requires a higher level of medical decision making, is more intense/complex, and requires more physician time and work to perform. Additionally, of the survey respondents who chose 99214 as the key reference service, 81% indicated that CPT code 99233 is somewhat more to much more intense. **The RUC recommends a work RVU of 2.40 for CPT code 99233.**

ADMISSION AND DISCHARGE ON THE SAME DATE

99234 ***Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making.-When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.***

The RUC reviewed the survey results from 58 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 2.00 appropriately accounts for the work required to perform this service. The RUC recommends 45 minutes of intra-service and 5 minutes post-service time.

The RUC compared the surveyed code to the top key reference service 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.* (work RVU = 2.60 and 60 minutes total time) and determined that CPT code 99234 has a lower level of medical decision making, is slightly less intense and requires less physician work and time to perform.

The RUC also compared the surveyed code to the second top key reference service 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter.* (work RVU = 1.60 and 35 minutes total time) and determined that CPT code 99234 requires more physician work and time to perform. Additionally, of the survey respondents who chose 99203 as the key reference service, 71% indicated that CPT code 99234 is somewhat more to much more intense. **The RUC recommends a work RVU of 2.00 for CPT code 99234.**

99235 ***Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate of medical decision making.-When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.***

The RUC reviewed the survey results from 59 physicians and other qualified healthcare professionals and determined that the current work RVU of 3.24 appropriately accounts for the work required to perform this service. The RUC recommends 68 minutes of intra-service and 8 minutes post-service time.

The RUC compared the surveyed code to the top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.* (work RVU = 3.50 and 88 minutes total time) and determined that CPT code 99235 requires a lower level of medical decision making, and less physician work and time to perform. However, of the survey respondents who chose 99205 as the key reference service, 71% indicated that CPT code 99235 is somewhat more to much more intense.

The RUC also compared the surveyed code to the second top key reference service 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.* (work RVU = 2.60 and 60 minutes total time) and determined that CPT code 99235 requires more physician work and time to perform. Given the higher intensity of the hospital care and the added work of discharge, the RUC agreed that the current value of 3.24 places 99235 in proper rank order to the key reference services. Additionally, of the survey respondents who chose 99204 as the key reference service, 84% indicated that CPT code 99235 is somewhat more to much more intense. **The RUC recommends a work RVU of 3.24 for CPT code 99235.**

99236 ***Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making.-When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded.***

The RUC reviewed the survey results from 59 physicians and other qualified healthcare professionals and determined that the survey median work RVU of 4.30 appropriately accounts for the work required to perform this service. The RUC recommends 85 minutes of intra-service and 12 minutes post-service time. The RUC noted that the total time has increased slightly, since this survey captured total time on the date of encounter, which is all indicated in the intra-service time. The RUC noted this was a reallocation of time but not necessarily an increase of 30 minutes intra-service time from what it was previously.

The RUC compared the surveyed code to the top key reference service 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter.* (work RVU = 3.50 and 88 minutes total time) and determined that although both codes require the same level of medical decision making, CPT code 99236 is more intense and complex and requires more physician time and work to perform. Additionally, of the survey respondents who chose 99205 as the key reference service, 85% indicated that CPT code 99236 is somewhat more to much more intense.

The RUC also compared the surveyed code to the second top key reference service 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes.* (work RVU = 4.50 and 70 minutes total time) and determined that although CPT code 99236 requires more time to perform, it is much less intense. **The RUC recommends a work RVU of 4.30 for CPT code 99236.**

DISCHARGE DAY MANAGEMENT

99238 ***Hospital inpatient or observation discharge day management; 30 minutes or less***
The RUC reviewed the survey results from 167 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC recommends 28 minutes of intra-service and 10 minutes post-service time.

The RUC compared the surveyed code to the top key reference services 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.* (work RVU = 1.30 and 30 minutes total time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.* (work RVU = 1.92 and 47 minutes total time) and determined that since 99238 is a time-based code that it is appropriately valued higher than 99213 since it requires more physician time and work and is appropriately valued lower than 99214 since it requires less physician time and work. Additionally, of the survey respondents who chose 99213 as the key reference service, 75% indicated that CPT code 99238 is somewhat more to much more intense and for those who chose 99214 as the second top key reference service, 69% indicated that CPT code 99238 is somewhat more to much more intense.

For additional support, the RUC referenced MPC code 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter* (work RVU = 1.60 and 35 minutes total time) since it requires similar physician work and time to perform. **The RUC recommends a work RVU of 1.50 for CPT code 99238.**

99239 ***Hospital inpatient or observation discharge day management; more than 30 minutes***
The RUC reviewed the survey results from 171 physicians and other qualified healthcare professionals and determined that the survey 25th percentile work RVU of 2.15 appropriately accounts for the work required to perform this service. The RUC recommends 45 minutes of intra-service and 19 minutes post-service time.

The RUC compared the surveyed code to the top key reference services 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter*. (work RVU = 2.80 and 70 minutes total time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.* (work RVU = 1.92 and 47 minutes total time) and determined that since 99239 is a time-based code that it is appropriately valued higher than 99214 since it requires more physician time and work and is appropriately valued lower than 99215 since it requires less physician time and work. Additionally, of the survey respondents who chose 99215 as the key reference service, 76% indicated that CPT code 99238 is somewhat more to much more intense.

For additional support, the RUC referenced MPC code 95810 *Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist* (work RVU = 2.50 and 36.5 minutes intra-service time, 66.5 minutes total time). **The RUC recommends a work RVU of 2.15 for CPT code 99239.**

CPT DESCRIPTOR TIME

The RUC recommends the following times for the CPT descriptors based on the survey medians. The time in the CPT descriptors is rounded or incremental between this family of services for the ease of those who may report these services based on time.

CPT Code	Descriptor	Time on the Date of Encounter Rec to CPT
99221	Initial hospital inpatient or observation care per day, straightforward or low MDM	**40**
99222	Initial hospital inpatient or observation care per day, moderate MDM	**55**
99223	Initial hospital inpatient or observation care per day, high MDM	**75**
99231	Subsequent hospital inpatient or observation care per day, straightforward or low MDM	**25**
99232	Subsequent hospital inpatient or observation care per day, moderate MDM	**35**
99233	Subsequent hospital inpatient or observation care per day, high MDM	**50**
99234	Hospital inpatient or observation care, admission and discharge on the same date, straightforward or low MDM	**45**
99235	Hospital inpatient or observation care, admission and discharge on the same date, moderate MDM	**70**
99236	Hospital inpatient or observation care, admission and discharge on the same date, high MDM	**85**

PRACTICE EXPENSE

The Practice Expense (PE) Subcommittee affirmed the PE recommendations for CPT codes 99238 and 99239 as approved without modification in October 2021. The other inpatient and observation care codes are facility-only and have no direct PE inputs. The only direct practice expense inputs are for CA036 *Discharge Day Management*, with 12 minutes for CPT code 99238 and 15 minutes for CPT code 99239. The RUC noted that the discharge services have always included and continue to include these clinical activities. Time is allocated for office clinical staff to perform coordination of care activities during a hospitalization including phone calls that office based clinical staff have with family members who have clinical questions regarding care about a hospitalized patient and phone calls with hospital clinical staff to exchange clinical data between the office and the hospital. These could be calls initiated by the hospital staff or by the office staff. These activities are in support of hospitalized patients and are necessary to provide patient care. In addition to time for clinical staff work during a hospitalization, there are clinical staff activities associated with discharge day management services. Typically, there will be discharge management related calls to the patient/family/pharmacy/other providers. This work has not changed. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

GLOBAL SURGICAL PERIOD

The RUC recommends that the full increase of work and physician time for the inpatient hospital and observation care visits (99231-99233, 99238 and 99239) be incorporated into the surgical global periods for each CPT code with a global of 010-day, 090-day, MMM (maternity) codes and other codes that have hospital visits included in the valuation. The RUC recommends that the practice expense inputs should be modified for the inpatient hospital and observation care visits (99231-99233, 99238 and 99239) within the global periods. The RUC agrees that inpatient hospital and observation care work is equivalent and a crosswalk of 100% of the inpatient hospital and observation care visit valuations should be bundled into the codes with global periods of 010-days, 090-days, MMM and other codes that have hospital visits included in the valuation. A spreadsheet itemizing these changes is included in the attached supporting material.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

Evaluation and Management

Office or Other Outpatient Services

Established Patient

▲99211 **Office or other outpatient visit** for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. ~~Usually, the presenting problem(s) are minimal~~

Hospital Observation Services

~~The following codes are used to report evaluation and management services provided to patients designated/ admitted as "observation status" in a hospital. It is not necessary that the patient be located in an observation area designated by the hospital.~~

~~If such an area does exist in a hospital (as a separate unit in the hospital, in the emergency department, etc.), these codes are to be utilized if the patient is placed in such an area.~~

~~For definitions of key components and commonly used terms, please see **Evaluation and Management Services Guidelines.**~~

~~***Coding Tip***~~

~~**The Significance of Time as a Factor in Selection of an Evaluation and Management Code**~~

~~The inclusion of time as an explicit factor beginning in CPT 1992 was done to assist in selecting the most appropriate level of E/M services included in codes in this section. Beginning with CPT 2021, except for 99211, time alone may be used to select the appropriate code level for the office or other outpatient E/M services codes (99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215). Different categories of services use time differently. It is important to review the instructions for each category.~~

~~**Unit/floor time (hospital observation services [99218, 99219, 99220, 99224, 99225, 99226, 99234, 99235, 99236], hospital inpatient services [99221, 99222, 99223, 99231, 99232, 99233], inpatient consultations [99251, 99252, 99253, 99254, 99255], nursing facility services [99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316, 99318]):**~~

~~For coding purposes, time for these services is defined as unit/floor time, which includes the time present on the patient's hospital unit and at the bedside rendering services for that patient. This includes the time to establish and/or review the patient's chart, examine the patient, write notes, and communicate with other professionals and the patient's family.~~

~~CPT Coding Guidelines, Evaluation and Management, Guidelines Common to All E/M Services, Time~~

Observation Care Discharge Services

~~Observation care discharge of a patient from "observation status" includes final examination of the patient, discussion of the hospital stay, instructions for continuing care, and preparation of discharge records. For observation or inpatient hospital care including the admission and discharge of the patient on the same date, see codes 99234-99236 as appropriate.~~

~~99217~~	-	~~**Observation care discharge** day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital "observation status" if the discharge is on other than the initial date of "observation status." To report services to a patient designated as "observation status" or "inpatient status" and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234-99236 as appropriate.])~~ (99217 has been deleted. To report observation care discharge services, see 99238, 99239)	~~XXX~~	~~N/A~~

Initial Observation Care
New or Established Patient

~~The following codes are used to report the encounter(s) by the supervising physician or other qualified health care professional with the patient when designated as outpatient hospital "observation status." This refers to the initiation of observation status, supervision of the care plan for observation and performance of periodic reassessments. For observation encounters by other physicians, see office or other outpatient consultation codes (99241-99245) or subsequent observation care codes (99224-99226) as appropriate.~~

~~To report services provided to a patient who is admitted to the hospital after receiving hospital observation care services on the same date, see the notes for initial hospital inpatient care (page 15). For observation care services on other than the initial or discharge date, see subsequent observation services codes (99224-99226). For a patient admitted to the hospital on a date subsequent to the date of observation status, the hospital admission would be reported with the appropriate initial hospital care code (99221-99223). For a patient admitted and discharged from observation or inpatient status on the same date, the services should be reported with codes 99234-99236 as appropriate. Do not report observation discharge (99217) in conjunction with a hospital admission (99221-99223).~~

~~When "observation status" is initiated in the course of an encounter in another site of service (eg, hospital emergency department, office, nursing facility) all evaluation and management services provided by the supervising physician or other qualified health care professional in conjunction with initiating "observation status" are considered part of the initial observation care when performed on the same date. The observation care level of service reported by the supervising physician or other qualified health care professional should include the services related to initiating "observation status" provided in the other sites of service as well as in the observation setting.~~

~~Evaluation and management services including new or established patient office or other outpatient services (99201-99215), emergency department services (99281- 99285), nursing facility services (99304-99318), domiciliary, rest home, or custodial care services (99324- 99337), home services (99341-99350), and preventive medicine services (99381-99429) on the same date related to the admission to "observation status" should not be reported separately.~~

~~These codes may not be utilized for post-operative recovery if the procedure is considered part of the surgical "package." These codes apply to all evaluation and management services that are provided on the same date of initiating "observation status."~~

~~99218~~	-	~~**Initial observation care**, per day, for the evaluation and management of a patient which requires these 3 key components:~~ ~~• **A detailed or comprehensive history;**~~ ~~• **A detailed or comprehensive examination; and**~~ ~~• **Medical decision making that is straightforward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.~~	~~XXX~~	~~N/A~~
~~99219~~	-	~~**Initial observation care**, per day, for the evaluation and management of a patient which requires these 3 key components:~~ ~~• **A comprehensive history;**~~ ~~• **A comprehensive examination; and**~~ ~~• **Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.~~	~~XXX~~	~~N/A~~

~~99220~~	-	~~**Initial observation care**, per day, for the evaluation and management of a patient which requires these 3 key components:~~ ~~• **A comprehensive history;**~~ ~~• **A comprehensive examination; and**~~ ~~• **Medical decision making of high complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ (99218, 99219, 99220 have been deleted. To report initial observation care, new or established patient, see 99221, 99222, 99223)	~~XXX~~	~~N/A~~
Subsequent Observation Care ~~All levels of subsequent observation care include reviewing the medical record and reviewing the results of diagnostic studies and changes in the patient's status (ie, changes in history, physical condition, and response to management) since the last assessment.~~				
~~99224~~	-	~~**Subsequent observation care,** per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components:~~ ~~• **Problem focused interval history;**~~ ~~• **Problem focused examination;**~~ ~~• **Medical decision making that is straightforward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.~~	~~XXX~~	~~N/A~~

~~99225~~	-	~~**Subsequent observation care,** per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components:~~ ~~• **An expanded problem focused interval history;**~~ ~~• **An expanded problem focused examination;**~~ ~~• **Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.~~	~~XXX~~	~~N/A~~
~~99226~~	-	~~**Subsequent observation care,** per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components:~~ ~~• **A detailed interval history;**~~ ~~• **A detailed examination;**~~ ~~• **Medical decision making of high complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ (99224, 99225, 99226 have been deleted. To report subsequent observation care, see 99231, 99232, 99233)	~~XXX~~	~~N/A~~

Hospital Inpatient and Observation Care Services

The following codes are used to report initial and subsequent evaluation and management services provided to hospital inpatients and to patients designated as hospital outpatient "observation status". ~~Hospital inpatient services include those services provided to patients in a "partial hospital" setting.~~ Hospital inpatient or observation care codes are to be used to report partial hospitalization services. ~~For definition of partial hospitalization, see **Psychiatry** [90785-90899]. These are to be used to report these partial hospitalization services. See also **psychiatry** notes in the full text of the CPT code set~~.

For patients designated/admitted as "observation status" in a hospital, it is not necessary that the patient be located in an observation area designated by the hospital. If such an area does exist in a hospital (as a separate unit in the hospital, in the emergency department, etc), these codes may be utilized if the patient is placed in such an area.

~~For definitions of key components and commonly used terms, see **Evaluation and Management Services Guidelines.** For Hospital Observation Services, see 99218-99220, 99224-99226.~~ For a patient admitted and discharged from ~~observation or~~ hospital inpatient or observation status on the same calendar date, ~~the services should be~~ reported ~~with codes~~ 99234, 99235, 99236 as appropriate.

~~**Coding Tip**~~

~~**The Significance of Time as a Factor in Selection of an Evaluation and Management Code**~~

~~The inclusion of time as an explicit factor beginning in CPT 1992 was done to assist in selecting the most appropriate level of E/M services included in codes in this section. Beginning with CPT 2021, except for 99211, time alone may be used to select the appropriate code level for the office or other outpatient E/M services codes (99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215). Different categories of services use time differently. It is important to review the instructions for each category.~~

~~**Unit/floor time (hospital observation services [99218, 99219, 99220, 99224, 99225, 99226, 99234, 99235, 99236], hospital inpatient services [99221, 99222, 99223, 99231, 99232, 99233], inpatient consultations [99251, 99252, 99253, 99254, 99255], nursing facility services [99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316, 99318]):**~~

~~For coding purposes, time for these services is defined as unit/floor time, which includes the time present on the patient's hospital unit and at the bedside rendering services for that patient. This includes the time to establish and/or review the patient's chart, examine the patient, write notes, and communicate with other professionals and the patient's family.~~

~~CPT Coding Guidelines, Evaluation and Management, Guidelines Common to All E/M Services, Time~~

Total time on the date of the encounter is by calendar date. When using MDM or time for code selection, a continuous service that spans the transition of two calendar dates is a single service and is reported on one date. If the service is continuous before and through midnight, all the time may be applied to the reported date of the service.

Initial Hospital Inpatient or Observation Care
New or Established Patient

The following codes are used to report the first hospital inpatient or observation status encounter with the patient ~~by the admitting physician~~.

~~For initial inpatient encounters by physicians other than the admitting physician, see initial inpatient consultation codes (99251-99255) or subsequent hospital care codes (99231-99233) as appropriate.~~

An initial service may be reported when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice during the stay. When advanced practice nurses and physician assistants are working with physicians they are considered as working in the exact same specialty and subspecialty as the physician.

For admission services…

When the patient is admitted to the hospital as an inpatient or to observation status in the course of an encounter in another site of service (eg, hospital emergency department, ~~observation status in a hospital,~~ office, nursing facility), the services in the initial site may be separately reported. Modifier 25 may be added to the other evaluation and management service to indicate a significant, separately identifiable service by the same physician or qualified health care professional was performed on the same calendar date. ~~all evaluation and management services provided by that physician in conjunction with that admission are considered part of the initial hospital care when performed on the same date as the admission. The inpatient care level of service reported by the admitting physician should include the services related to the admission he/she provided in the other sites of service as well as in the inpatient setting.~~

In the case when the services in a separate site are reported and the initial inpatient or observation care service is a consultation service, do not report 99221, 99222, 99223, 99252, 99253, 99254, or 99255. The consultant reports the subsequent hospital inpatient or observation care codes 99231, 99232, 99233 for the second service on the same calendar date.

~~Evaluation and management services including new or established patient office or other outpatient services (99201-99215), emergency department services (99281-99285), nursing facility services (99304-99318), domiciliary, rest home, or custodial care services (99324-99337), home services (99341-99350), and preventive medicine services (99381-99397) on the same date related to the admission to "observation status" should **not** be reported separately.~~

~~For a patient admitted and discharged from observation or inpatient status on the same date, the services should be reported with codes 99234-99236 as appropriate.~~

If a consultation is performed in anticipation of, or related to, an admission by another physician or other qualified health care professional, and then the same consultant performs an encounter once the patient is admitted by the other physician or qualified health care professional, report the consultant's inpatient encounter with the appropriate subsequent care code (99231, 99232, 99233). This instruction applies whether the consultation occurred on the date of the admission or a date previous to the admission. It also applies for consultations reported with any appropriate code (eg, office or other outpatient visit or office or other outpatient consultation).

For a patient admitted and discharged from hospital inpatient or observation ~~or inpatient~~ status on the same calendar date, report 99234, 99235, 99236 as appropriate.

For the purposes of reporting an initial hospital or observation care service a transition from observation level to inpatient does not constitute a new stay.

▲99221	F1	**Initial hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. ~~these 3 key components:~~ • ~~**A detailed or comprehensive history;**~~ • ~~**A detailed or comprehensive examination; and**~~ • ~~**Medical decision making that is straightforward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	XXX	1.63
▲99222	F2	**Initial hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. ~~these 3 key components:~~ • ~~**A comprehensive history;**~~ • ~~**A comprehensive examination; and**~~ • ~~**Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.	XXX	2.60

▲99223	F3	**Initial hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. ~~these 3 key components:~~ • ~~**A comprehensive history;**~~ • ~~**A comprehensive examination; and**~~ • ~~**Medical decision making of high complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 75 minutes must be met or exceeded. (For services of 90 minutes or longer, use prolonged services code 993X0)	XXX	3.50

Subsequent Hospital Inpatient or Observation Care ~~All levels of subsequent hospital care include reviewing the medical record and reviewing the results of diagnostic studies and changes in the patient's status (ie, changes in history, physical condition and response to management) since the last assessment.~~				
▲99231	F4	**Subsequent hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**A problem focused interval history;**~~ • ~~**A problem focused examination;**~~ • ~~**Medical decision making that is straight forward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.	XXX	1.00

▲99232	F5	**Subsequent hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**An expanded problem focused interval history;**~~ • ~~**An expanded problem focused examination;**~~ • ~~**Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.	XXX	1.59
▲99233	F6	**Subsequent hospital inpatient or observation care,** per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. ~~at least 2 of these 3 key components:~~ • ~~**A detailed interval history;**~~ • ~~**A detailed examination;**~~ • ~~**Medical decision making of high complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded. (For services of 65 minutes or longer, use prolonged services code 993X0)	XXX	2.40

Hospital Inpatient or Observation ~~or Inpatient~~ Care Services (Including Admission and Discharge Services)

The following codes are used to report ~~observation or inpatient~~ hospital inpatient or observation care services provided to patients admitted and discharged on the same date of service.

~~When a patient is admitted to the hospital from observation status on the same date, only the initial hospital care code should be reported. The initial hospital care code reported by the admitting physician or other qualified health care professional should include the services related to the observation status services he/she provided on the same date of inpatient admission.~~

~~When "observation status" is initiated in the course of an encounter in another site of service (eg, hospital emergency department, office, nursing facility) all evaluation and management services provided by the supervising physician or other qualified health care professional in conjunction with initiating "observation status" are considered part of the initial observation care when performed on the same date. The observation care level of service should include the services related to initiating "observation status" provided in the other sites of service as well as in the observation setting when provided by the same individual.~~

For patients admitted to hospital inpatient or observation ~~or inpatient~~ care and discharged on a different date, see ~~codes 99217, 99218-99220, 99224-99226, or~~ 99221, 99222, ~~-~~99223, 99231, 99232, 99233, 99238, ~~and~~ 99239.

Codes 99234, 99235, 99236 require two or more encounters on the same calendar date of which one of these encounters is an initial admission encounter and another encounter being a discharge encounter. For a patient admitted and discharged at the same encounter, see 99221, 99222, 99223. Do not report 99238, 99239 in conjunction with 99221, 99222, 99223 for admission and discharge services performed ~~at~~ on the same calendar date.

(For discharge services provided to newborns admitted and discharged on the same calendar date, use 99463)

▲99234	F7	**Hospital inpatient or ~~O~~observation ~~or inpatient hospital~~ care,** for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. ~~these 3 key components:~~ • ~~**A detailed or comprehensive history;**~~ • ~~**A detailed or comprehensive examination; and**~~ • ~~**Medical decision making that is straightforward or of low complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~	XXX	2.00

		~~Usually the presenting problem(s) requiring admission are of low severity. Typically, 40 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.		
▲99235	F8	**Hospital inpatient or ~~O~~observation ~~or inpatient hospital~~ care,** for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. ~~these 3 key components:~~ • ~~**A comprehensive history;**~~ • ~~**A comprehensive examination; and**~~ • ~~**Medical decision making of moderate complexity.**~~ ~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually the presenting problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.	XXX	3.24
▲99236	F9	**Hospital inpatient or ~~O~~observation ~~or inpatient hospital~~ care,** for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. ~~these 3 key components:~~ • ~~**A comprehensive history;**~~ • ~~**A comprehensive examination; and**~~ • ~~**Medical decision making of high complexity.**~~	XXX	4.30

		~~Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs.~~ ~~Usually the presenting problem(s) requiring admission are of high severity. Typically, 55 minutes are spent at the bedside and on the patient's hospital floor or unit.~~ When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded. (For services of 100 minutes or longer, use prolonged services code 993X0)		
Hospital Inpatient or Observation Discharge Services The hospital inpatient or observation discharge day management codes are to be used to report the total duration of time on the date of the encounter spent by a physician or other qualified health care professional for final hospital or observation discharge of a patient, even if the time spent by the physician or other qualified health care professional on that date is not continuous. The codes include, as appropriate, final examination of the patient, discussion of the hospital stay, ~~even if the time spent by the physician on that date is not continuous,~~ instructions for continuing care to all relevant caregivers, and preparation of discharge records, prescriptions and referral forms. These codes are to be utilized to report all services provided to a patient on the date of discharge, if other than the initial date of inpatient or observation status. For a patient admitted and discharged from hospital inpatient or observation ~~or inpatient~~ status on the same calendar date, ~~the services should be~~ report~~ed with codes~~ 99234, 99235, -99236 as appropriate. Codes 99238, 99239 are to be used by the physician or other qualified health care professional who is responsible for discharge services. Services by other physicians or other qualified health care professionals that may include instructions to the patient and/or family and coordination of post discharge services may be reported with 99231, 99232, 99233.				
▲99238	F10	**Hospital inpatient or observation discharge day management;** 30 minutes or less on the date of the encounter	XXX	1.50
▲99239	F11	more than 30 minutes on the date of the encounter ~~(These codes are to be utilized to report all services provided to a patient on the date of discharge, if other than the initial date of inpatient or observation status. To report services to a patient who is admitted as an inpatient and discharged on the same date, see codes 99234, 99235, 99236 for observation or inpatient hospital care including the admission and discharge of the patient on the same date. To report concurrent care services provided by an individual other than the physician or qualified health care professional performing the~~	XXX	2.15

		~~discharge day management service, use subsequent hospital care codes [99231-99233] on the day of discharge.)~~ ~~(For Observation Care Discharge, use 99217)~~ (For hospital inpatient or observation ~~or inpatient hospital~~ care including the admission and discharge of the patient on the same calendar date, see 99234-99236) ~~(For Nursing Facility Care Discharge, see 99315, 99316)~~ (For discharge services provided to newborns admitted and discharged on the same calendar date, use 99463)		

CPT 2023 E/M Guidelines

Category I
Evaluation and Management (E/M) Services Guidelines

In addition to the information presented in the Introduction, several other items unique to this section are defined or identified here.

E/M Guidelines Overview

The E/M guidelines have sections that are common to all E/M categories and sections that are category specific. Most of the categories and many of the subcategories of service have special guidelines or instructions unique to that category or subcategory. Where these are indicated, eg, "Hospital Inpatient and Observation Care," special instructions are presented before the listing of the specific E/M services codes. It is important to review the instructions for each category or subcategory. These guidelines are to be used by the reporting physician or other qualified health care professional to select the appropriate level of service. These guidelines do not establish documentation requirements or standards of care. The main purpose of documentation is to support care of the patient by current and future health care team(s). These guidelines are for services that require a face-to-face encounter. (For 99211 and 99281 the face-to-face services may be performed by clinical staff).

In the **Evaluation and Management** section (99202-99499) there are many code categories. Each category may have specific guidelines, or the codes may include specific details. These E/M guidelines are written for the following categories:

- Office or Other Outpatient Services
- Hospital Inpatient and Observation Care Services
- Consultations
- Emergency Department Services
- Nursing Facility Services
- Home and Residence Services
- Prolonged Service With or Without Direct Contact on the Date of an Evaluation and Management Service

Classification of Evaluation and Management (E/M) Services

The E/M section is divided into broad categories such as office visits, hospital inpatient or observation care visits, and consultations. Most of the categories are further divided into two or more subcategories of E/M services. For example, there are two subcategories of office visits (new patient and established patient) and there are two subcategories of hospital inpatient and observation care visits (initial and subsequent). The subcategories of E/M services are further classified into levels of E/M services that are identified by specific codes.

The basic format of codes with levels of E/M services based on medical decision making (MDM) or time is the same. First, a unique code number is listed. Second, the place and/or type of service is specified, eg, office or other outpatient visit. Third, the content of the service is defined. Fourth, time is specified. (A detailed discussion of time is provided following the Decision Tree for New vs Established Patients.)

The place of service and service type is defined by the location where the face-to-face encounter occurs. For example, service provided to a nursing facility resident brought to the office is reported with an office or other outpatient code.

New and Established Patients

Solely for the purposes of distinguishing between new and established patients, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. A new patient is one who has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years.

An established patient is one who has received professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past three years. See Decision Tree for New vs Established Patients.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

No distinction is made between new and established patients in the emergency department. E/M services in the emergency department category may be reported for any new or established patient who presents for treatment in the emergency department.

The Decision Tree for New vs Established Patients is provided to aid in determining whether to report the E/M service provided as a new or an established patient encounter.

Coding Tip

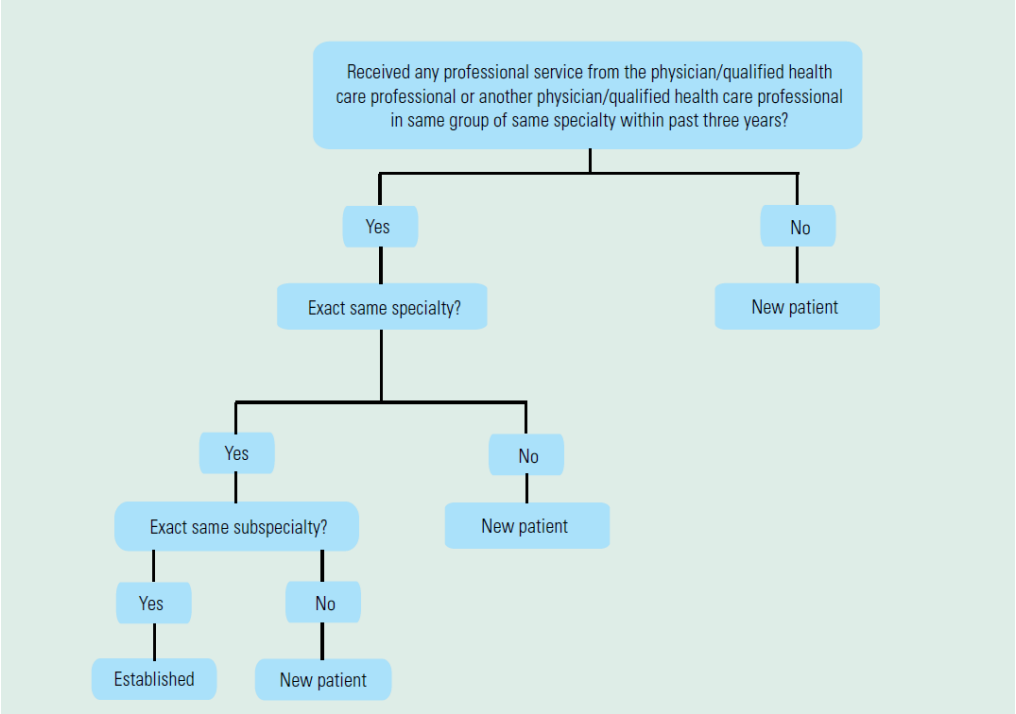
Instructions for Use of the CPT Codebook

When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and exact same subspecialty as the physician. A "physician or other qualified health care professional" is an individual who is qualified by education, training, licensure/regulation (when applicable), and facility privileging (when applicable) who performs a professional service within his or her scope of practice and independently reports that professional service. These professionals are distinct from "clinical staff." A clinical staff member is a person who works under the supervision of a physician or other qualified health care professional, and who is allowed by law, regulation and facility policy to perform or assist in the performance of a specific professional service but does not individually report that professional service. Other policies may also affect who may report specific services.

CPT Coding Guidelines, Introduction, Instructions for Use of the CPT Codebook

---

Decision Tree for New vs Established Patients



Initial and Subsequent Services

Some categories apply to both new and established patients (eg, hospital inpatient or observation care). These categories differentiate services by whether the service is the initial service or a subsequent service. For the purpose of distinguishing between initial or subsequent visits, professional services are those face-to-face services rendered by physicians and other qualified health care professionals who may report evaluation and management services. An initial service is when the patient has not received any professional services from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the inpatient or observation or nursing facility admission and stay.

A subsequent service is when the patient has received professional service(s) from the physician or other qualified health care professional or another physician or other qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, during the admission and stay.

In the instance where a physician or other qualified health care professional is on call for or covering for another physician or other qualified health care professional, the patient's encounter will be classified as it would have been by the physician or other qualified health care professional who is not available. When advanced practice nurses and physician assistants are working with physicians, they are considered as working in the exact same specialty and subspecialty as the physician.

For reporting hospital inpatient or observation care services, a stay that includes a transition from observation to inpatient is a single stay. For reporting nursing facility services, a stay that includes transition(s) between skilled nursing facility and nursing facility level of care is the same stay.

Services Reported Separately

Any specifically identifiable procedure or service (ie, identified with a specific CPT code) performed on the date of E/M services may be reported separately.

The ordering and actual performance and/or interpretation of diagnostic tests/studies during a patient encounter are not included in determining the levels of E/M services when the professional interpretation

of those tests/studies is reported separately by the physician or other qualified health care professional reporting the E/M service. Tests that do not require separate interpretation (eg, tests that are results only) and are analyzed as part of MDM do not count as an independent interpretation and may be counted as ordered or reviewed for selecting an MDM level.

The performance of diagnostic tests/studies for which specific CPT codes are available may be reported separately, in addition to the appropriate E/M code. The interpretation of the results of diagnostic tests/studies (ie, professional component) with preparation of a separate distinctly identifiable signed written report may also be reported separately, using the appropriate CPT code and, if required, with modifier 26 appended.

See Instructions for Selecting a Level Based on MDM or Time.

The physician or other qualified health care professional may need to indicate that on the day a procedure or service identified by a CPT code was performed, the patient's condition required a significant separately identifiable E/M service. The E/M service may be caused or prompted by the symptoms or condition for which the procedure and/or service was provided. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service. As such, different diagnoses are not required for reporting of the procedure and the E/M services on the same date.

History and/or Examination

These E/M services include a medically appropriate history and/or physical examination, when performed. The nature and extent of the history and/or physical examination are determined by the treating physician or other qualified health care professional reporting the service. The care team may collect information, and the patient or caregiver may supply information directly (eg, by electronic health record [EHR] portal or questionnaire) that is reviewed by the reporting physician or other qualified health care professional. The extent of history and physical examination is not an element in selection of the level of these E/M service codes.

Levels of E/M Services

Select the appropriate level of E/M services based on the following:

1. The level of the MDM as defined for each service, **or**

2. The total time for E/M services performed on the date of the encounter.

Within each category or subcategory of E/M service based on MDM or time, there are three to five levels of E/M services available for reporting purposes. Levels of E/M services are **not** interchangeable among the different categories or subcategories of service. For example, the first level of E/M services in the subcategory of office visit, new patient, does not have the same definition as the first level of E/M services in the subcategory of office visit, established patient. Each level of E/M services may be used by all physicians or other qualified health care professionals.

Guidelines for Selecting a level service based on Medical Decision Making

Four types of MDM are recognized: straightforward, low, moderate, and high. The concept of the level of MDM does not apply to 99211 or 99281.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. MDM is defined by three elements. The elements are:

- ***The number and complexity of problem(s) that are addressed during the encounter***.
- ***The amount and/or complexity of data to be reviewed and analyzed.*** These data include medical records, tests, and/or other information that must be obtained, ordered, reviewed, and analyzed for the encounter. This includes information obtained from multiple sources or interprofessional communications that are not reported separately and interpretation of tests that are not reported

separately. Ordering a test is included in the category of test result(s) and the review of the test result is part of the encounter and not a subsequent encounter. Ordering a test may include those considered, but not selected after shared decision making. For example, a patient may request diagnostic imaging that is not necessary for their condition and discussion of the lack of benefit may be required. Alternatively, a test may normally be performed, but due to risk for a specific patient is not ordered. These considerations must be documented. Data are divided into three categories:

- Tests, documents, orders, or independent historian(s). (Each unique test, order, or document is counted to meet a threshold number.)
- Independent interpretation of tests (not separately reported)
- Discussion of management or test interpretation with external physician or other qualified health care professional or appropriate source (not separately reported)

- **The risk of complications and/or morbidity or mortality of patient management:** This includes decisions made at the encounter associated with the diagnostic procedure(s) and treatment(s). This includes the possible management options selected and those considered but not selected, after shared decision making with the patient and/or family. For example, a decision about hospitalization includes consideration of alternative levels of care. Examples may include a psychiatric patient with a sufficient degree of support in the outpatient setting or the decision to not hospitalize a patient with advanced dementia with an acute condition that would generally warrant inpatient care, but for whom the goal is palliative treatment.

Shared decision making involves eliciting patient and/or family preferences, patient and/or family education, and explaining risks and benefits of management options.

MDM may be impacted by role and management responsibility.

When the physician or other qualified health care professional is reporting a separate CPT code that includes interpretation and/or report, the interpretation and/or report is not counted toward the MDM when selecting a level of E/M services.

When the physician or other qualified health care professional is reporting a separate service for discussion of management with a physician or another qualified health care professional, the discussion is not counted toward the MDM when selecting a level of E/M services.

The Levels of Medical Decision Making (MDM) table (Table 2) is a guide to assist in selecting the level of MDM for reporting an E/M services code. The table includes the four levels of MDM (ie, straightforward, low, moderate, high) and the three elements of MDM (ie, number and complexity of problems addressed at the encounter, amount and/or complexity of data reviewed and analyzed, and risk of complications and/or morbidity or mortality of patient management). To qualify for a particular level of MDM, two of the three elements for that level of MDM must be met or exceeded.

Examples in the table may be more or less applicable to specific settings of care. For example, the decision to hospitalize applies to the outpatient or nursing facility encounters, whereas the decision to escalate hospital level of care (eg, transfer to ICU) applies to the hospitalized or observation care patient.

See also the introductory guidelines of each code family section.

Table 2: Levels of Medical Decision Making (MDM)

Level of MDM (Based on 2 out of 3 Elements of MDM)	Elements of Medical Decision Making		
	Number and Complexity of Problems Addressed at the Encounter	Amount and/or Complexity of Data to be Reviewed and Analyzed **Each unique test, order, or document contributes to the combination of 2 or combination of 3 in Category 1 below.*	Risk of Complications and/or Morbidity or Mortality of Patient Management
N/A	N/A	N/A	N/A
Straightforward	Minimal • 1 self-limited or minor problem	Minimal or none	Minimal risk of morbidity from additional diagnostic testing or treatment
Low	Low • 2 or more self-limited or minor problems; or • 1 stable, chronic illness; or • 1 acute, uncomplicated illness or injury or • 1 stable acute illness or • 1 acute, uncomplicated illness or injury requiring hospital inpatient or observation level of care	Limited *(Must meet the requirements of at least 1 of the 2 categories*) Category 1: Tests and documents • Any combination of 2 from the following: ○ Review of prior external note(s) from each unique source*; ○ Review of the result(s) of each unique test*; ○ Ordering of each unique test* or Category 2: Assessment requiring an independent historian(s) *(For the categories of independent interpretation of tests and discussion of management or test interpretation, see moderate or high)*	Low risk of morbidity from additional diagnostic testing or treatment

Moderate	Moderate
	• 1 or more chronic illnesses with exacerbation, progression, or side effects of treatment;
	or
	• 2 or more stable, chronic illnesses;
	or
	• 1 undiagnosed new problem with uncertain prognosis;
	or
	• 1 acute illness with systemic symptoms;
	or
	• 1 acute, complicated injury
		Moderate
		(Must meet the requirements of at least 1 out of 3 categories)
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			Moderate risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Prescription drug management
			• Decision regarding minor surgery with identified patient or procedure risk factors
			• Decision regarding elective major surgery without identified patient or procedure risk factors
			• Diagnosis or treatment significantly limited by social determinants of health

High	High
	• 1 or more chronic illnesses with severe exacerbation, progression, or side effects of treatment;
	or
	• 1 acute or chronic illness or injury that poses a threat to life or bodily function
		Extensive
		(Must meet the requirements of at least 2 out of 3 categories)
		
		Category 1: Tests, documents, or independent historian(s)
		• Any combination of 3 from the following:
		  ○ Review of prior external note(s) from each unique source*;
		  ○ Review of the result(s) of each unique test*;
		  ○ Ordering of each unique test*;
		  ○ Assessment requiring an independent historian(s)
		or
		Category 2: Independent interpretation of tests
		• Independent interpretation of a test performed by another physician/other qualified health care professional (not separately reported);
		or
		Category 3: Discussion of management or test interpretation
		• Discussion of management or test interpretation with external physician/other qualified health care professional/appropriate source (not separately reported)
			High risk of morbidity from additional diagnostic testing or treatment
			
			Examples only:
			• Drug therapy requiring intensive monitoring for toxicity
			• Decision regarding elective major surgery with identified patient or procedure risk factors
			• Decision regarding emergency major surgery
			• Decision regarding hospitalization or escalation of hospital-level of care
			• Decision not to resuscitate or to de-escalate care because of poor prognosis
			• Parenteral controlled substances

Number and Complexity of Problems Addressed at the Encounter

One element used in selecting the level of services is the number and complexity of the problems that are addressed at the encounter. Multiple new or established conditions may be addressed at the same time and may affect MDM. Symptoms may cluster around a specific diagnosis and each symptom is not necessarily a unique condition. Comorbidities and underlying diseases, in and of themselves, are not considered in selecting a level of E/M services **unless** they are addressed, and their presence increases the amount and/or complexity of data to be reviewed and analyzed or the risk of complications and/or morbidity or mortality of patient management. The final diagnosis for a condition does not, in and of itself, determine the complexity or risk, as extensive evaluation may be required to reach the conclusion that the signs or symptoms do not represent a highly morbid condition. Therefore, presenting symptoms which are likely to represent a highly morbid condition may drive MDM even when the ultimate diagnosis is not highly morbid. The evaluation and /or treatment should be consistent with the likely nature of the condition. Multiple problems of a lower severity may, in the aggregate, create higher risk due to interaction.

The term "risk" as used in these definitions relates to risk from the condition. While condition risk and management risk may often correlate, the risk from the condition is distinct from the risk of the management.

Definitions for the elements of MDM (see Table 2, Levels of Medical Decision Making) are:

Problem: *A problem is a disease, condition, illness, injury, symptom, sign, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter.*

Problem addressed: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified health care professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in the patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified health care professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or qualified health care professional and may not be the cause of admission or continued stay.

Minimal problem: A problem that may not require the presence of the physician or other qualified health care professional, but the service is provided under the physician's or other qualified health care professional's supervision (see 99211, 99281).

Self-limited or minor problem: *A problem that runs a definite and prescribed course, is transient in nature, and is not likely to permanently alter health status.*

Stable, chronic illness: A problem with an expected duration of at least one year or until the death of the patient. For the purpose of defining chronicity, conditions are treated as chronic whether or not stage or severity changes (eg, uncontrolled diabetes and controlled diabetes are a single chronic condition). "Stable" for the purposes of categorizing MDM is defined by the specific treatment goals for an individual patient. A patient who is not at his or her treatment goal is not stable, even if the condition has not changed and there is no short-term threat to life or function. For example, a patient with persistently poorly controlled blood pressure for whom better control is a goal is not stable, even if the pressures are not changing and the patient is asymptomatic. The risk of morbidity **without** treatment is significant.

Acute, uncomplicated illness or injury: A recent or new short-term problem with low risk of morbidity for which treatment is considered. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. A problem that is normally self-limited or minor but is not resolving consistent with a definite and prescribed course is an acute, uncomplicated illness.

Acute, uncomplicated illness or injury requiring hospital inpatient or observation level care: A recent or new short-term problem with low risk of morbidity for which treatment is required. There is little to no risk of mortality with treatment, and full recovery without functional impairment is expected. The treatment required is delivered in a hospital inpatient or observation level setting.

Stable, acute illness: A problem that is new or recent for which treatment has been initiated. The patient is improved and while resolution may not be complete is stable with respect to this condition.

Chronic illness with exacerbation, progression, or side effects of treatment: A chronic illness that is acutely worsening, poorly controlled, or progressing with an intent to control progression and requiring additional supportive care or requiring attention to treatment for side effects.

Undiagnosed new problem with uncertain prognosis: A problem in the differential diagnosis that represents a condition likely to result in a high risk of morbidity without treatment.

Acute illness with systemic symptoms: An illness that causes systemic symptoms and has a high risk of morbidity without treatment. For systemic general symptoms, such as fever, body aches, or fatigue in a minor illness that may be treated to alleviate symptoms, see the definitions for **self-limited or minor problem** or **acute, uncomplicated illness or injury.** Systemic symptoms may not be general but may be single system.

Acute, complicated injury: An injury which requires treatment that includes evaluation of body systems that are not directly part of the injured organ, the injury is extensive, or the treatment options are multiple and/or associated with risk of morbidity.

Chronic illness with severe exacerbation, progression, or side effects of treatment: The severe exacerbation or progression of a chronic illness or severe side effects of treatment that have significant risk of morbidity and may require escalation in level of care.

Acute or chronic illness or injury that poses a threat to life or bodily function: An acute illness with systemic symptoms, an acute complicated injury, or a chronic illness or injury with exacerbation and/or progression or side effects of treatment, that poses a threat to life or bodily function in the near term without treatment. Some symptoms may represent a condition that is significantly probable and poses a potential threat to life or bodily function. These may be included in this category when the evaluation and treatment is consistent with this degree of potential severity.

Amount and/or Complexity of Data to be Reviewed and Analyzed

One element used in selecting the level of services is the amount and/or complexity of data to be reviewed or analyzed at an encounter.

Analyzed: Analyzed is a term describing the process of using the data as part of the MDM. The data element itself may not be subject to analysis (eg, glucose), but it is instead included in the thought processes for diagnosis, evaluation, or treatment. Tests ordered are presumed to be analyzed when the results are reported. Therefore, when they are ordered during an encounter, they are counted in that encounter. Tests that are ordered outside of an encounter may be counted in the encounter where they are analyzed. In the case of a recurring order, each new result may be counted in the encounter at which it is analyzed. For example, an encounter that includes an order for monthly prothrombin times would count for one prothrombin time ordered and reviewed. Additional future results, if analyzed in a subsequent encounter, may be counted as a single test in that subsequent encounter. Any service for which the professional component is separately reported by the physician or other qualified health care professional

reporting the E/M services is not counted as a data element ordered, reviewed, analyzed, or independently interpreted for the purposes of determining the level of MDM.

Test: Tests are imaging, laboratory, psychometric, or physiologic data. A clinical laboratory panel (eg, basic metabolic panel [80047]) is a single test. The differentiation between single or multiple tests is defined in accordance with the CPT code set. For the purposes of data reviewed and analyzed, pulse oximetry is not a test.

Unique: A unique test is defined by the CPT code set. When multiple results of the same unique test (eg, serial blood glucose values) are compared during an E/M service, only count one unique test. Tests that have overlapping elements are not unique, even if they are identified with distinct CPT codes. For example, a CBC with differential would incorporate the set of hemoglobin, CBC without differential, and platelet count. A unique source is defined as a physician or qualified heath care professional in a distinct group or different specialty or subspecialty, or a unique entity. Review of all materials from any unique source counts as one element towards MDM.

Combination of Data Elements: A combination of different data elements, for example a combination of notes reviewed, tests ordered, tests reviewed, or independent historian, allows these elements to be summed. It does not require each item type or category to be represented. A unique test ordered, plus a note reviewed and an independent historian would be a combination of three elements.

External: *External records, communications and/or test results are from an external physician, other qualified health care professional, facility, or health care organization.*

External physician or other qualified health care professional: *An external physician or other qualified health care professional who is not in the same group practice or is of a different specialty or subspecialty. This includes licensed professionals who are practicing independently. The individual may also be a facility or organizational provider such as from a hospital, nursing facility, or home health care agency.*

Discussion: Discussion requires an interactive exchange. The exchange must be direct and not through intermediaries (eg, clinical staff or trainees). Sending chart notes or written exchanges that are within progress notes does not qualify as an interactive exchange. The discussion does not need to be on the date of the encounter but is counted only once and only when it is used in the decision making of the encounter. It may be asynchronous (ie, does not need to be in person), but it must be initiated and completed within a short time period (eg, within a day or two).

Independent historian(s): An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary. In the case where there may be conflict or poor communication between multiple historians and more than one historian is needed, the independent historian requirement is met. It does not include translation services. The independent history does not need to be obtained in person but does need to be obtained directly from the historian providing the independent information.

Independent interpretation: The interpretation of a test for which there is a CPT code, and an interpretation or report is customary. This does not apply when the physician or other qualified health care professional who reports the E/M service is reporting or has previously reported the test. A form of interpretation should be documented but need not conform to the usual standards of a complete report for the test.

Appropriate source: *For the purpose of the* ***discussion of management*** *data element (see Table 2, Levels of Medical Decision Making), an appropriate source includes professionals who are not health care professionals but may be involved in the management of the patient (eg, lawyer, parole officer, case manager, teacher). It does not include discussion with family or informal caregivers.*

Risk of Complications and/or Morbidity or Mortality of Patient Management

One element used in selecting the level of services is the risk of complications and/or morbidity or mortality of patient management at an encounter. This is distinct from the risk of the condition itself.

Risk: The probability and/or consequences of an event. The assessment of the level of risk is affected by the nature of the event under consideration. For example, a low probability of death may be high risk, whereas a high chance of a minor, self-limited adverse effect of treatment may be low risk. Definitions of risk are based upon the usual behavior and thought processes of a physician or other qualified health care professional in the same specialty. Trained clinicians apply common language usage meanings to terms such as high, medium, low, or minimal risk and do not require quantification for these definitions (though quantification may be provided when evidence-based medicine has established probabilities). For the purposes of MDM, level of risk is based upon consequences of the problem(s) addressed at the encounter when appropriately treated. Risk also includes MDM related to the need to initiate or forego further testing, treatment, and/or hospitalization. The risk of patient management criteria applies to the patient management decisions made by the reporting physician or other qualified health care professional as part of the reported encounter.

Morbidity: *A state of illness or functional impairment that is expected to be of substantial duration during which function is limited, quality of life is impaired, or there is organ damage that may not be transient despite treatment.*

Social determinants of health: *Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.*

Surgery (minor or major, elective, emergency, procedure or patient risk):

> ***Surgery-Minor or Major:*** The classification of surgery into minor or major is based upon the common meaning of such terms when used by trained clinicians, similar to the use of the term "risk". These terms are not defined by a surgical package classification.
>
> ***Surgery-Elective or Emergency:*** Elective procedures and emergent or urgent procedures describe the timing of a procedure when the timing is related to the patient's condition. An elective procedure is typically planned in advance (eg, scheduled for weeks later), while an emergent procedure is typically performed immediately or with minimal delay to allow for patient stabilization. Both elective and emergent procedures may be minor or major procedures.
>
> ***Surgery-Risk Factors, Patient or Procedure:*** Risk factors are those that are relevant to the patient and procedure. Evidence-based risk calculators may be used, but are not required, in assessing patient and procedure risk.

Drug therapy requiring intensive monitoring for toxicity: A drug that requires intensive monitoring is a therapeutic agent that has the potential to cause serious morbidity or death. The monitoring is performed for assessment of these adverse effects and not primarily for assessment of therapeutic efficacy. The monitoring should be that which is generally accepted practice for the agent but may be patient-specific in some cases. Intensive monitoring may be long-term or short-term. Long-term intensive monitoring is not performed less than quarterly. The monitoring may be performed with a laboratory test, a physiologic test, or imaging. Monitoring by history or examination does not qualify. The monitoring affects the level of MDM in an encounter in which it is considered in the management of the patient. An example may be monitoring for cytopenia in the use of an antineoplastic agent between dose cycles. Examples of monitoring that do not qualify include monitoring glucose levels during insulin therapy, as the primary reason is the therapeutic effect (unless severe hypoglycemia is a current, significant concern); or annual electrolytes and renal function for a patient on a diuretic, as the frequency does not meet the threshold.

Guidelines for Selecting Level of Service Based on Time

Certain categories of time-based E/M codes that do not have levels of services based on MDM (eg, Critical Care Services) in the E/M section use time differently. It is important to review the instructions for each category.

Time is **not** a descriptive component for the emergency department levels of E/M services because emergency department services are typically provided on a variable intensity basis, often involving multiple encounters with several patients over an extended period of time.

When time is used for reporting E/M services codes, the time defined in the service descriptors is used for selecting the appropriate level of services. The E/M services for which these guidelines apply require a face-to-face encounter with the physician or other qualified health care professional. For office or other outpatient services, if the physician's or other qualified health care professional's time is spent in the supervision of clinical staff who perform the face-to-face services of the encounter, use 99211.

For coding purposes, time for these services is the total time on the date of the encounter. It includes both the face-to-face and non-face-to-face time personally spent by the physician and/or other qualified health care professional(s) on the day of the encounter (includes time in activities that require the physician or other qualified health care professional and does not include time in activities normally performed by clinical staff). It does not include any time spent in the performance of other separately reported service(s).

A shared or split visit is defined as a visit in which a physician and other qualified health care professional(s) both provide the face-to-face and non-face-to-face work related to the visit. When time is being used to select the appropriate level of services for which time-based reporting of shared or split visits is allowed, the time personally spent by the physician and other qualified health care professional(s) assessing and managing the patient on the date of the encounter is summed to define total time. Only distinct time should be summed for shared or split visits (ie, when two or more individuals jointly meet with or discuss the patient, only the time of one individual should be counted).

When prolonged time occurs, the appropriate prolonged services code may be reported. The total time on the date of the encounter spent caring for the patient should be documented in the medical record when it is used as the basis for code selection.

Physician or other other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (when not separately reported) and communicating results to the patient family/caregiver
- care coordination (when not separately reported)

Do not count time spent on the following:

- the performance of other services reported separately

- travel
- teaching that is general and not limited to discussion that is required for the management of the specific patient

Unlisted Service

An E/M service may be provided that is not listed in this section of the CPT codebook. When reporting such a service, the appropriate unlisted code may be used to indicate the service, identifying it by "Special Report," as discussed in the following paragraph. The "Unlisted Services" and accompanying codes for the E/M section are as follows:

***99429 Unlisted preventive** medicine service*

***99499 Unlisted evaluation and management** service*

Special Report

An unlisted service or one that is unusual, variable, or new may require a special report demonstrating the medical appropriateness of the service. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure and the time, effort, and equipment necessary to provide the service. Additional items that may be included are complexity of symptoms, final diagnosis, pertinent physical findings, diagnostic and therapeutic procedures, concurrent problems, and follow-up care.

December 14, 2021

To: Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVU Update Committee (RUC)

From: Surveying Societies for Inpatient-Obs Codes 99221-99239

Re: Tab 13, Supplemental Information

When compared with the prior October 2021 survey, additional text and questions were added to the survey instrument by the Research Subcommittee. On behalf of the surveying societies, a discussion of these survey revisions and additional questions is provided below, along with additional survey statistic for information.

Supplemental Information 1: *(The 11 surveyed codes have this additional information for Tab 13.)*
