## *RUC Referrals to CPT Editorial Panel - Outstanding Issues*

0042T <b>Cerebral perfusion analysis using computed tomography with contrast administration, including post-processing of parametric maps with determination of cerebral blood flow, cerebral blood volume, and mean transit time</b>	<a href="#"><u>Screen</u></a> High Volume Category III Codes 2022	<a href="#"><u>RUC Meeting</u></a> September 2022	<a href="#"><u>Specialty Society:</u></a> ACR, ASNR	<a href="#"><u>CPT Meeting</u></a> May 2024
---	--	--	--	--

**Background:** In April 2022, the Relativity Assessment Workgroup identified this Category III code with 2020 Medicare utilization over 1,000. The Workgroup requested an action plan for September 2022. In September 2022, the specialty societies indicated and the RUC supports a submission of a coding application for CPT May 2023. The specialty societies submitted a coding application for May 2023, but it was subsequently withdrawn. The specialty societies should address the CPT Editorial Panel concerns and submit a new CCA for the September 2023 meeting. At the September 2023 CPT meeting, this issue was withdrawn as the Panel determined that the scope was too large and went beyond the RUC request. The specialty societies should revise and resubmit a CCA for February 2024.

0394T <b>High dose rate electronic brachytherapy, skin surface application, per fraction, includes basic dosimetry, when performed</b>	<a href="#"><u>Screen</u></a> High Volume Category III Codes 2019	<a href="#"><u>RUC Meeting</u></a> September 2023	<a href="#"><u>Specialty Society:</u></a> ASTRO	<a href="#"><u>CPT Meeting</u></a> May 2024
--	--	--	--	--

**Background:** In October 2019, this service was identified via the high volume category III codes based on 2021 Medicare utilization data over 1,000. These services are identified to notify and get feedback from specialty societies whether a Category I code should be created. The Workgroup requests an action plan for September 2023. In September 2023, the Workgroup recommended that this service be referred to CPT May 2024 to create a Category I code.

0421T <b>Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed)</b>	<a href="#"><u>Screen</u></a> High Volume Category III Codes 2023	<a href="#"><u>RUC Meeting</u></a> September 2023	<a href="#"><u>Specialty Society:</u></a> AUA	<a href="#"><u>CPT Meeting</u></a> May 2024
---	--	--	--	--

These services are identified to notify and get feedback from specialty societies whether a Category I code should be created. The Workgroup requests an action plan for September 2023. In September 2023, the Workgroup recommended that this service be referred to CPT May 2024 to create a Category I code.

36557 <b>Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; younger than 5 years of age</b>	<a href="#"><u>Screen</u></a> Site of Service Anomaly - 2023	<a href="#"><u>RUC Meeting</u></a> January 2024	<a href="#"><u>Specialty Society:</u></a> ACR, ACS, APSA, OEIS, SIR, SVS	<a href="#"><u>CPT Meeting</u></a> May 2024
---	---	--	---	--

**Background:** In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). The RAW reviewed the action plan in September 2023, and agreed with the specialty societies that the entire family of services (36557-36566) be surveyed for the January 2024 RUC meeting. The specialty societies also requested changing the global period from a 010-day to a 000-day to account for variability in site of service based on the patient presentation and specialty performing the procedure. However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the codes through the CPT process prior to surveying. The specialty societies noted that the ages listed within some of the current code descriptors do not accurately reflect the variation of physician work (e.g., babies versus infants versus children versus adults). Additionally, some of the code descriptors are antiquated and include outdated practices and techniques technology that no longer exist or are incorrectly described, which may cause incorrect reporting. For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions. The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision.

For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions. The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision.

-------	--	---	---	---	---

**Background:** In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than \$500. The RUC requested an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. The specialty societies worked with the CPT Editorial Panel and have submitted multiple coding change proposals. In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. The specialty societies worked with the CPT Editorial Panel and have submitted multiple coding change proposals. In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

<b>38571</b> <b>Laparoscopy, surgical; with bilateral total pelvic lymphadenectomy</b>	<u>Screen</u> CMS Fastest Growing / 010-Day Global Post-Operative Visits / Site of Service Anomaly - 2023 / Codes Reported Together 75% or More-Part6	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AUA	<u>CPT Meeting</u> May 2024
--	--	--------------------------------------	----------------------------------	--------------------------------

**Background:** In April 2023, the RAW identified codes 38571 and 55866 as typically reported together 75% or more based on 2021 Medicare claims data. In September 2023, the RUC recommended that 38571 and 55866 be referred to CPT to develop a code bundling solution. (May 2024).

		CMS Request - Practice Expense Review / CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes1 / High Volume Growth3	September 2023	ASTRO, ACR	May 2024

**Background:** In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services. The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

**Background:** In April 2023, the RAW identified codes 91120 and 91122 as reported together 75% or more based on 2021 Medicare claims data. The RUC noted that these services are reported together 95% of the time and a code bundling solution should be developed. Refer to CPT May 2024 to bundle.

<b>92284 Diagnostic dark adaptation examination with interpretation and report</b>	<a href="#"><u>Screen</u></a> Harvard Valued - Utilization over 30,000-Part5	<a href="#"><u>RUC Meeting</u></a> September 2023	<a href="#"><u>Specialty Society:</u></a> AAO, AOA (optometry), ASRS	<a href="#"><u>CPT Meeting</u></a> February 2024
--	---	--	---	---

**Background:** In October 2020, CPT code 92284 was identified via the Harvard valued screen. This service was surveyed and reviewed by the RUC in April 2021. At that time, the RUC recommended that CPT code 92284 be referred to CPT to editorially revise and include the word "diagnostic" in the code descriptor. "Diagnostic dark adaptation examination with interpretation and report.", which occurred at the May 2021 CPT meeting (Tab EC-M). The RUC also indicated it reviewed the typical technology used to perform this service, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology. This was flagged for review in three years. In September 2023, the specialty societies indicated and the Workgroup recommends that this issue be referred to the CPT February 2024 meeting to create a Category III CPT code for screening dark adaptation testing, followed by a re-survey of diagnostic dark adaptation examination CPT 92284 and develop a CPT Assistant article with coding guidance on correct reporting of these two services.

<b>95921 Testing of autonomic nervous system function; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded R-R interval, Valsalva ratio, and 30:15 ratio</b>	<b><u>Screen</u></b> Different Performing Specialty from Survey / Codes Reported Together 75% or More-Part1 / Different Performing Specialty from Survey3	<b><u>RUC Meeting</u></b> September 2023	<b><u>Specialty Society:</u></b> AAFP, AAN, AANEM, ACNS, ACP	<b><u>CPT Meeting</u></b> September 2024
--	--	---	---	---

**Background:** For code pair 95921/95922, the Relativity Assessment Workgroup acknowledged that the rationale for increased utilization remains unclear. Thus, the dominant specialties for these two codes (Family Medicine and Internal Medicine) were requested to provide the following information regarding 95921 and 95922: What are the clinically appropriate scenarios for reporting each service? What is the description of service? What are the clinically appropriate scenarios when these services are performed? AAFP and ACP indicated that they do not have an explanation for the increased utilization as their physicians indicated that they do not typically perform these services. In 2008, a CPT Assistant article was published to correct inappropriate reporting by clarifying that a tilt table is required in the provision of the service. However, Medicare claims data indicate that the attempted coding education was not effective. In April 2011, the RUC recommended this code be referred to CPT to revise the descriptor to include the use of a tilt table and refer those who do not use a tilt table in autonomic testing to use an unlisted code, which was addressed at the February 2012 (Tab 17) CPT meeting. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in 3 years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The RUC noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

<b>95924 Testing of autonomic nervous system function; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt</b>	<a href="#"><u>Screen</u></a> Codes Reported Together 75% or More-Part1	<a href="#"><u>RUC Meeting</u></a> September 2023	<a href="#"><u>Specialty Society:</u></a> AAFP, AAN, AANEM, ACNS, ACP	<a href="#"><u>CPT Meeting</u></a> September 2024
---	--	--	--	--

**Background:** CPT Feb 2012 the CPT Editorial Panel established two new codes with instructional guidelines to report autonomic function testing. In April 2012, The RUC determined that the survey results for 95924 was too low (26 responses). There was also confusion about what is described in 95924 which may have resulted in invalid physician time for this service. The RUC recommended an interim value for 95924. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in 3 years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

<b>99183 Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session</b>	<a href="#"><u>Screen</u></a> CMS-Other - Utilization over 250,000	<a href="#"><u>RUC Meeting</u></a> January 2024	<a href="#"><u>Specialty Society:</u></a> AAFP, UHMS	<a href="#"><u>CPT Meeting</u></a> May 2024
---	---	--	---	--

**Background:** In January 2023, the RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183. In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. Stakeholders pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183, the descriptor describes only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment is reported using separate treatment code C1300 Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval. Therefore, CMS created code G0277 to report the treatment delivery and to maintain consistency with the OPPS coding. CMS used a timed 30-minute code, which can be used across settings. To value G0277, CMS used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30-minute treatment interval. The RUC recommends that CPT code 99183 be referred to CPT by the June 2023 deadline for the September 2023 CPT meeting, for revision to be time-based as well as modified to appropriately describe the treatment delivery, attendance and supervision. Then, subsequently, allow for the deletion of G0277. In September 2023, the specialties indicated they did not intend to submit a CPT code change application (CCA). Therefore, this issue was placed on the January 2024 Relativity Assessment Workgroup agenda to address. In January 2024, the specialty societies indicated that they believe the current separate coding of the G code and the CPT code are clear and work appropriately. The Workgroup indicated that one clear and consistent coding structure should exist and the specialty society should submit a CPT code change application. The specialties should revise 99183 to be time-based well as modified to appropriately describe the treatment delivery, attendance and supervision or develop a coding change creating a practice expense only code to capture the service appropriately and eliminate the need for G0277.

<b>G0396</b>	<b>Alcohol and/or substance (other than tobacco) misuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes</b>	<a href="#"><u>Screen</u></a> CMS-Other - Utilization over 30,000	<a href="#"><u>RUC Meeting</u></a> January 2018	<a href="#"><u>Specialty Society:</u></a> AAFP, ASA, ASAM	<a href="#"><u>CPT Meeting</u></a> Time Uncertain
--------------	--	--	--	--	--

**Background:** In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. This list resulted in 34 services and the RAW requested action plans to be reviewed at the January 2018 meeting. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening" from 99408 and 99409 to "assessment" to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel's additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services.

<b>G6001</b>	<b>Ultrasonic guidance for placement of radiation therapy fields</b>	<a href="#"><u>Screen</u></a> CMS-Other - Utilization over 20,000 Part2	<a href="#"><u>RUC Meeting</u></a> September 2023	<a href="#"><u>Specialty Society:</u></a> AADA, ASTRO	<a href="#"><u>CPT Meeting</u></a> May 2024
--------------	--	--	--	--	--

**Background:** In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services.

The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

<b>G6007</b>	<b>Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks: up to 5 mev</b>	<u><a href="#">Screen</a></u> CMS-Other - Utilization over 20,000 Part2	<u><a href="#">RUC Meeting</a></u> September 2023	<u><a href="#">Specialty Society:</a></u> ACRO, ASTRO	<u><a href="#">CPT Meeting</a></u> May 2024
--------------	--	--	--	--	--

**Background:** In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services. The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

## *RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues*

<b>0509T Electroretinography (ERG) with interpretation and report, pattern (PERG)</b>	<u>Screen:</u> Work Neutrality 2019	<u>RUC Meeting:</u> January 2024	<u>RUC Rec:</u> Refer to CPT Assistant	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Asst Status:</u>
---	--	-------------------------------------	---	--	-------------------------

**Background:** In October 2020, the RUC identified one code family, Electroretinography (CPT codes 92273, 92274 and 0509T) that were reviewed in April 2017, October 2017 and January 2018 and have increased more than 10% in work RVUs from what was projected. In 2015, CPT code 92275 Electroretinography with interpretation and report was identified via the CMS High Expenditure screen. In January 2016, the specialty society noted that they became aware of inappropriate use of CPT code 92275 for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. The utilization of CPT code 92275 was appropriately low until 2013 when it suddenly increased by 300%. CPT changes were necessary to ensure that the service for which 92275 was intended was clearly described as well as an accurate vignette and work descriptor were developed. The RUC recommended CPT code 92275 be referred to the CPT Editorial Panel. In September 2017, the CPT Editorial Panel replaced electroretinography code 92275 with two new codes to describe electroretinography full field and multi focal. A category III code was retained for pattern electroretinography. In January 2018, the RUC reviewed these services and recommended lower work RVUs for the two new codes than code 92275 that was deleted. CMS also assigned a work RVU to code 0509T. However, in reviewing the utilization assumptions and 2019e Medicare utilization, there was a 38% increase in work RVUs. Since both the source volume from deleted code 92275 and the new volume for the three new codes all have assigned RVUs and are Medicare status A, it is a like comparison between previous reporting and current reporting (unlike when category III codes are not assigned an RVU). The Workgroup requests that the specialty societies submit an action plan for January 2021 to address this issue. In January 2021, the RUC recommended that codes 92273, 92274 and 0509T be reviewed in 3 years (January 2024) to review utilization. Despite no work neutrality issues, the Workgroup still had concerns about the volume growth and the unexpected distribution among the three new codes. In January 2024, the Workgroup reviewed the action plan in which the specialty societies note that the increased claims volume is explained by expansion of the use of fERG (CPT 92273) in disorders other than retinal dystrophies, along with a decrease in 0509T claims. Only 4% of 2021 claims for CPT 92273 were associated with diagnoses consistent with retinal dystrophies, while 31% were associated with a diagnosis of macular degeneration, 20% with optic nerve disorders, 13% with glaucoma, and 13% with diabetes. Although fERG changes have been described in patients with these disorders, the test is not widely considered to be clinically useful in their management. Published data suggest it is still in development or used as a research tool for the study of macular degeneration, diabetic retinopathy, and glaucoma. Additionally, only two Medicare Administrator Contractors (MACs) cover electroretinography (ERG), but it depends on the diagnosis and what is being treated. Lastly, use of pattern ERG (0506T) for diagnosis and management of glaucoma has some support in the literature, but it has not been widely adopted considering the prevalence of the disease. Likewise, Medicare utilization continues to decrease. The Workgroup discussed how best to address this issue, noting that an immediate resurvey would not address the incorrect reporting of these services. The Relativity Assessment Workgroup recommends referral to CPT Assistant to create an article to address proper reporting of CPT 92273, 92274, and 0506T, accompanied by AAO and AOA educational outreach to providers. In addition, the specialty societies encourage the MACs to develop LCDs and LCAs for these services. The RAW will review after publication of the CPT Assistant article.

<b>22310 Closed treatment of vertebral body fracture(s), without manipulation, requiring and including casting or bracing</b>	<u>Screen:</u> Negative IWPUT / Site of Service Anomaly - 2019	<u>RUC Meeting:</u> September 2023	<u>RUC Rec:</u> Refer to CPT Assistant. 3.45.	<u>Specialty Society:</u> AANS, AAOS, CNS, ISASS, NASS	<u>CPT Asst Status:</u> Apr 2024
---	---	---------------------------------------	--	---	-------------------------------------

**Background:** A RUC member requested that the Relativity Assessment Workgroup review services with low or negative intra-service work per unit of time (IWPUT) as a possible screen. AMA Staff gathered 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes with a negative IWPUT, which resulted in 23 services identified. The RUC recommended that all these codes be placed on the level of interest for action plans to review at the October 2017 meeting. The RUC recommended to survey this service for April 2018. In October 2019, this service was identified via the site of service anomaly screen with 2018e Medicare utilization over 5,000 and performed less than 50% of the time in the inpatient setting but includes inpatient hospital E/M services within the global period based on 2016-2018e Medicare data. Survey for January 2020. The RUC questioned the plan for education on the use of CPT code 22310. The specialty societies explained that this code is used for several different sites of service. By defining the vignette and educating their members, they will be able to better identify where to use the code whether its office, ER, or inpatient. The plan is for education internally within the specialty, but it was evident that a CPT Assistant article may be warranted in the future as the code becomes implemented more widely. The RUC recommends that the Relativity Assessment Workgroup review this service in three years to examine the site of service and ensure that education has been effective. In September 2023, the RAW reviewed the action plan for CPT code 22310 and recommended it be referred to CPT Assistant to clarify correct reporting of this service and to review after 3 years of additional data post CPT Assistant article are available.

## *RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues*

<b>51728</b> <b>Complex cystometrogram (ie, calibrated electronic equipment); with voiding pressure studies (ie, bladder voiding pressure), any technique</b>	<b><u>Screen:</u></b> Codes Reported Together 95% or More / Codes Reported Together 75% or More-Part5	<b><u>RUC Meeting:</u></b> September 2022	<b><u>RUC Rec:</u></b> Refer to CPT Assistant. 2.11	<b><u>Specialty Society:</u></b> AUA, ACOG	<b><u>CPT Asst Status:</u></b>
---	--	--	--	---	--------------------------------

**Background:** Deleted 51772 and 51795 and added three new codes to combine the services. Revised at the February 2009 CPT Meeting. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51728/51741 and 51728/51784. In September 2022, the Workgroup recommended that this issue be referred to CPT Assistant to educate providers about the coding and use of complex uroflowmetry. Some providers may believe that 51741 is part of the “pressure-flow” study of 51728 or 51729, but it is not. CPT code 51741 should only be reported if done separately from urodynamic studies, on a separate machine and only in certain circumstances or when indicated. Refer to CPT Assistant (51728/51784) to educate how EMG studies should only be used in certain circumstances.

<b>64590 Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver</b>	<u>Screen:</u> Harvard-Valued Annual Allowed Charges Greater than \$10 million / Different Performing Specialty from Survey/ RUC recommendation process, not part of RAW screens / PE Skin Adhesives / Different Performing Specialty from Survey5	<u>RUC Meeting:</u> April 2023	<u>RUC Rec:</u> New PE Inputs. CPT Assistant Article	<u>Specialty Society:</u> ACOG, AUA	<u>CPT Asst Status:</u>
---	---	-----------------------------------	---	--	-------------------------

**Background:** CMS identified this service but it did not meet the screen criteria, allowed charges are ~\$1 million. In October 2017, this service was identified as being performed by a different specialty than who originally surveyed this service. The RAW requests an action plan to review at the January 2018 meeting. In January 2018, the RUC recommended that refer to CPT for revision to properly describe the service as performed by urology. The specialty societies indicated that they do not intend on submitting a coding change application to somehow change the descriptor to describe implantation of a generator by urologists as different from implantation of a generator by gynecologists or general surgeons. It is the same work - make an incision, create a subcutaneous pocket, insert (an almost identical) medtronic generator, and close. Additionally noting, this service was never surveyed (previous 2006 change was editorial) and should not have been on this screen. Removed from screen. In February 2022, the CPT Editorial Panel created several new integrated neurostimulator Category I and Category III codes, the descriptors, guidelines and parentheticals for codes 64590 and 64595 were concurrently revised to clarify that 64590 and 64595 are only to be used for neurostimulator pulse generators or receivers that require pocket creation and include a detachable connection to a separate electrode array (non-integrated systems). In April 2022, the PE Subcommittee discussion culminated in a request for a CPT Assistant article to clarify several issues involving the use of the EQ209 programmer, neurostimulator (w-printer) and to provide clear and consistent instruction to all users of the programming and insertion codes. The stimulator is used to check the impedance of the device once placed for the initial code 64590 and is present for the entire procedure. To the extent there is additional stimulation and programming, then an additional code would be reported. An article is needed to ensure that individuals are appropriately reporting the stimulation and programming with code 95972 and not just merely checking the impedance. The RUC recommends that a CPT Assistant article be developed to clarify the appropriate use of CPT codes 64590 and 64595 as reported with other codes. In January 2023, the PE Skin Adhesives Workgroup focused on wound closure and agreed that there are multiple skin adhesive products at different price points that work similar to Dermabond. The RUC recommended that the PE Subcommittee review the six codes on the Medicare Payment Schedule with Dermabond to identify justification for its use versus the generic version and present its findings to the RUC for approval. As part of this review, the specialty should submit a letter to the RUC regarding any corrections to the vignettes for CPT codes 64590 and 64595. In April 2023, this service was identified on the different performing specialty from survey screen. In September 2023, the specialty societies indicated CPT code 64590 was revised at CPT and reviewed by the RUC for CPT 2024 and secondly the practice expense was again recently revised for the Dermabond issue for 2025. The Workgroup recommends that code 64590 be removed from the different performing specialty from survey screen.

<b>92273</b>	<b>Electroretinography (ERG), with interpretation and report; full field (ie, ffERG, flash ERG, Ganzfeld ERG)</b>	<u>Screen:</u> CMS High Expenditure Procedural Codes2 / Work Neutrality 2019	<u>RUC Meeting:</u> January 2024	<u>RUC Rec:</u> Refer to CPT Assistant. 0.80	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Asst Status:</u>
--------------	---	---	-------------------------------------	---	---	-------------------------

**Background:** In October 2020, the RUC identified one code family, Electroretinography (CPT codes 92273, 92274 and 0509T) that were reviewed in April 2017, October 2017 and January 2018 and have increased more than 10% in work RVUs from what was projected. In 2015, CPT code 92275 Electroretinography with interpretation and report was identified via the CMS High Expenditure screen. In January 2016, the specialty society noted that they became aware of inappropriate use of CPT code 92275 for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. The utilization of CPT code 92275 was appropriately low until 2013 when it suddenly increased by 300%. CPT changes were necessary to ensure that the service for which 92275 was intended was clearly described as well as an accurate vignette and work descriptor were developed. The RUC recommended CPT code 92275 be referred to the CPT Editorial Panel. In September 2017, the CPT Editorial Panel replaced electroretinography code 92275 with two new codes to describe electroretinography full field and multi focal. A category III code was retained for pattern electroretinography. In January 2018, the RUC reviewed these services and recommended lower work RVUs for the two new codes than code 92275 that was deleted. CMS also assigned a work RVU to code 0509T. However, in reviewing the utilization assumptions and 2019e Medicare utilization, there was a 38% increase in work RVUs. Since both the source volume from deleted code 92275 and the new volume for the three new codes all have assigned RVUs and are Medicare status A, it is a like comparison between previous reporting and current reporting (unlike when category III codes are not assigned an RVU). The Workgroup requests that the specialty societies submit an action plan for January 2021 to address this issue. In January 2021, the RUC recommended that codes 92273, 92274 and 0509T be reviewed in 3 years (January 2024) to review utilization. Despite no work neutrality issues, the Workgroup still had concerns about the volume growth and the unexpected distribution among the three new codes. In January 2024, the Workgroup reviewed the action plan in which the specialty societies note that the increased claims volume is explained by expansion of the use of ffERG (CPT 92273) in disorders other than retinal dystrophies, along with a decrease in 0509T claims. Only 4% of 2021 claims for CPT 92273 were associated with diagnoses consistent with retinal dystrophies, while 31% were associated with a diagnosis of macular degeneration, 20% with optic nerve disorders, 13% with glaucoma, and 13% with diabetes. Although ffERG changes have been described in patients with these disorders, the test is not widely considered to be clinically useful in their management. Published data suggest it is still in development or used as a research tool for the study of macular degeneration, diabetic retinopathy, and glaucoma. Additionally, only two Medicare Administrator Contractors (MACs) cover electroretinography (ERG), but it depends on the diagnosis and what is being treated. Lastly, use of pattern ERG (0506T) for diagnosis and management of glaucoma has some support in the literature, but it has not been widely adopted considering the prevalence of the disease. Likewise, Medicare utilization continues to decrease. The Workgroup discussed how best to address this issue, noting that an immediate resurvey would not address the incorrect reporting of these services. The Relativity Assessment Workgroup recommends referral to CPT Assistant to create an article to address proper reporting of CPT 92273, 92274, and 0506T, accompanied by AAO and AOA educational outreach to providers. In addition, the specialty societies encourage the MACs to develop LCDs and LCAs for these services. The RAW will review after publication of the CPT Assistant article.

## *RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues*

<b>92274 Electroretinography (ERG), with interpretation and report; multifocal (mfERG)</b>	<u>Screen:</u> CMS High Expenditure Procedural Codes2 / Work Neutrality 2019	<u>RUC Meeting:</u> January 2024	<u>RUC Rec:</u> Refer to CPT Assistant. 0.72	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Asst Status:</u>
--	---	-------------------------------------	--	--	-------------------------

**Background:** In October 2020, the RUC identified one code family, Electroretinography (CPT codes 92273, 92274 and 0509T) that were reviewed in April 2017, October 2017 and January 2018 and have increased more than 10% in work RVUs from what was projected. In 2015, CPT code 92275 Electroretinography with interpretation and report was identified via the CMS High Expenditure screen. In January 2016, the specialty society noted that they became aware of inappropriate use of CPT code 92275 for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. The utilization of CPT code 92275 was appropriately low until 2013 when it suddenly increased by 300%. CPT changes were necessary to ensure that the service for which 92275 was intended was clearly described as well as an accurate vignette and work descriptor were developed. The RUC recommended CPT code 92275 be referred to the CPT Editorial Panel. In September 2017, the CPT Editorial Panel replaced electroretinography code 92275 with two new codes to describe electroretinography full field and multi focal. A category III code was retained for pattern electroretinography. In January 2018, the RUC reviewed these services and recommended lower work RVUs for the two new codes than code 92275 that was deleted. CMS also assigned a work RVU to code 0509T. However, in reviewing the utilization assumptions and 2019e Medicare utilization, there was a 38% increase in work RVUs. Since both the source volume from deleted code 92275 and the new volume for the three new codes all have assigned RVUs and are Medicare status A, it is a like comparison between previous reporting and current reporting (unlike when category III codes are not assigned an RVU). The Workgroup requests that the specialty societies submit an action plan for January 2021 to address this issue. Despite no work neutrality issues, the Workgroup still had concerns about the volume growth and the unexpected distribution among the three new codes. In January 2024, the Workgroup reviewed the action plan in which the specialty societies note that the increased claims volume is explained by expansion of the use of mfERG (CPT 92273) in disorders other than retinal dystrophies, along with a decrease in 0509T claims. Only 4% of 2021 claims for CPT 92273 were associated with diagnoses consistent with retinal dystrophies, while 31% were associated with a diagnosis of macular degeneration, 20% with optic nerve disorders, 13% with glaucoma, and 13% with diabetes. Although mfERG changes have been described in patients with these disorders, the test is not widely considered to be clinically useful in their management. Published data suggest it is still in development or used as a research tool for the study of macular degeneration, diabetic retinopathy, and glaucoma. Additionally, only two Medicare Administrator Contractors (MACs) cover electroretinography (ERG), but it depends on the diagnosis and what is being treated. Lastly, use of pattern ERG (0506T) for diagnosis and management of glaucoma has some support in the literature, but it has not been widely adopted considering the prevalence of the disease. Likewise, Medicare utilization continues to decrease. The Workgroup discussed how best to address this issue, noting that an immediate resurvey would not address the incorrect reporting of these services. The Relativity Assessment Workgroup recommends referral to CPT Assistant to create an article to address proper reporting of CPT 92273, 92274, and 0506T, accompanied by AAO and AOA educational outreach to providers. In addition, the specialty societies encourage the MACs to develop LCDs and LCAs for these services. The RAW will review after publication of the CPT Assistant article.

<b>92284 Diagnostic dark adaptation examination with interpretation and report</b>	<u>Screen:</u> Harvard Valued - Utilization over 30,000-Part5	<u>RUC Meeting:</u> September 2023	<u>RUC Rec:</u> Refer to CPT and CPT Assistant.	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Asst Status:</u>
--	---	---------------------------------------	---	--	-------------------------

**Background:** The Workgroup identified CPT code 92284 via the 2019e Medicare utilization over 30,000 screen. The Workgroup requests that the specialty societies submit an action plan addressing CPT code 92284 for January 2021. In January 2021, the RUC agreed with the specialty society that this service be surveyed for the April 2021 RUC meeting. The family of services should be identified on the level of interest (LOI). In April 2021, the RUC recommended that CPT code 92284 be referred to CPT to editorially revise and include the word “diagnostic” in the code descriptor. “Diagnostic dark adaptation examination with interpretation and report.” The RUC also indicated it review the typical technology used to perform this service, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology. In September 2023, the specialty societies indicated and the Workgroup recommended that this issue be referred to the CPT February 2024 meeting to create a Category III CPT code for screening dark adaptation testing, followed by a re-survey of diagnostic dark adaptation examination CPT 92284 and develop a CPT Assistant article with coding guidance on correct reporting of these two services.

## *RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues*

92523	<b>Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)</b>	<u>Screen:</u> CMS Request/Speech Language Pathology Request/ High Volume Growth9	<u>RUC Meeting:</u> April 2023	<u>RUC Rec:</u> Refer to CPT Assistant. 3.36	<u>Specialty Society:</u> ASHA	<u>CPT Asst Status:</u> Apr 2024
-------	--	--	-----------------------------------	--	-----------------------------------	-------------------------------------

**Background:** October 2012 CPT deleted 92506 and created 4 new codes to more accurately describe and differentiate speech evaluation services. In April 2023, this service was identified via the high volume growth screen with 2021 Medicare utilization of 10,000 or more that increased by at least 100% from 2016 through 2021. In September 2023, the Workgroup reviewed the action plan for 92523 and noted that the specialty societies indicated that this service has not changed but is not being reported appropriately. The specialty society indicated it intends to educate its members on correct reporting via various channels. The RUC agreed with the specialty and recommends that CPT code 92523 be referred to CPT Assistant for re-education to report the most specific procedure code for the procedure provided. Specifically, for speech-language pathologists, to compare evaluation procedure CPT 92523 versus 96125 and for the Workgroup to review in 3 years.

---

67516	Suprachoroidal space injection of pharmacologic agent (separate procedure)	Jan 2023	Suprachoroidal Injection	10	CPT 2024	April 2028	There is currently only one FDA-approved medication for this procedure, triamcinolone acetonide, and it is approved for only one indication: macular edema associated with uveitis. The relevant HCPCS code is J-3299. Medicare claims volume for this indication is expected to be low. However, if other drugs for more common indications obtain FDA approval, claims volume may grow substantially. Thus, CPT code 6X000 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. The RUC recommended that if there are new drugs that have an associated J-code that these also be considered by the Relativity Assessment Workgroup as part of the New Technology screen.	<input type="checkbox"/>

78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (spect)	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an	<input checked="" type="checkbox"/>

81264	Igk@ (immunoglobulin kappa light chain locus) (eg, leukemia and lymphoma, b-cell), gene rearrangement analysis, evaluation to detect abnormal clonal population(s)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81265	Comparative analysis using short tandem repeat (str) markers; patient and comparative specimen (eg, pre-transplant recipient and donor germline testing, post-transplant non-hematopoietic recipient germline [eg, buccal swab or other germline tissue sample] and donor testing, twin zygosity testing, or maternal cell contamination of fetal cells)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81266	Comparative analysis using short tandem repeat (str) markers; each additional specimen (eg, additional cord blood donor, additional fetal samples from different cultures, or additional zygosity in multiple birth pregnancies) (list separately in addition to code for primary procedure)	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81267	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; without cell selection	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81268	Chimerism (engraftment) analysis, post transplantation specimen (eg, hematopoietic stem cell), includes comparison to previously performed baseline analyses; with cell selection (eg, cd3, cd33), each cell type	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81270	Jak2 (janus kinase 2) (eg, myeloproliferative disorder) gene analysis, p.val617phe (v617f) variant	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81275	Kras (kirsten rat sarcoma viral oncogene homolog) (eg, carcinoma) gene analysis; variants in exon 2 (eg, codons 12 and 13)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81291	Mthfr (5,10-methylenetetrahydrofolate reductase) (eg, hereditary hypercoagulability) gene analysis, common variants (eg, 677t, 1298c)	Apr 2011	Molecular Pathology - Tier 1	15	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81292	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81293	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81294	Mlh1 (mutl homolog 1, colon cancer, nonpolyposis type 2) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81295	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81296	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
81297	Msh2 (muts homolog 2, colon cancer, nonpolyposis type 1) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81298	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81299	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; known familial variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81300	Msh6 (muts homolog 6 [e. coli]) (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) gene analysis; duplication/deletion variants	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012	October 2015	Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81301	Microsatellite instability analysis (eg, hereditary non-polyposis colorectal cancer, lynch syndrome) of markers for mismatch repair deficiency (eg, bat25, bat26), includes comparison of neoplastic and normal tissue, if performed	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81302	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; full sequence analysis	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑
81303	Mecp2 (methyl cpg binding protein 2) (eg, rett syndrome) gene analysis; known familial variant	Sep 2011	Molecular Pathology Test - Tier 1	05	CPT 2012		Removed. Final Rule for 2013 stated molecular pathology services will be paid for under CLFS not MFS.	☑

99490	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	Jan 2021	Principal Care Management (PCM) & Chronic Care Management (CCM)	25	CPT 2015	April 2026	Was surveyed for January 2021 with the principal care management codes. The RUC noted that the CCM codes should also be re-reviewed at that time, primarily because the clinical staff time survey responses were not obtained for the 2021 review.	<input type="checkbox"/>
99491	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month.	Jan 2021	Principal Care Management (PCM) & Chronic Care Management (CCM)	25	CPT 2022	April 2026	Was surveyed for January 2021 with the principal care management codes. The RUC noted that the CCM codes should also be re-reviewed at that time, primarily because the clinical staff time survey responses were not obtained for the 2021 review.	<input type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	April 2023	In January 2020, the RUC identified Psychiatric Collaborative Care Management Services via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommended that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. However, due to the incorrect reporting of these services by one specific provider, the referral for a CPT Assistant article was removed. This family is on the new technology/new services screen and is scheduled for review at the April 2023	<input checked="" type="checkbox"/>

G2066	Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, implantable loop recorder system, or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results	Jan 2023	Remote Interrogation Device Evaluation - Cardiovascular (PE Only)	20		April 2027	Codes 93297 and 93298 were first flagged at the April 2008 meeting, Tab 23 Cardiac Device Monitoring, for CPT 2009 and reviewed at the RAW in September 2012. An Ad Hoc Workgroup was developed to determine how to address the work neutrality failure and establish guidelines for further RAW review of retrospective work neutrality. In October 2018, 93297 and 93298 were reviewed and placed on the new technology/new services list for April 2024. CMS did not accept the practice expense for these services and instead created G2066 to report the practice expense associated with these services. In January 2023, the RUC affirmed the work RVUs and recommended direct PE inputs for 93297, 93298 and G2066. These services were placed back on the new technology/new services list to assess the work and PE in 3 years (April 2027).	<input type="checkbox"/>

## New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

### **Skin Cell Suspension Autograft – Tab 4**

In September 2023, the CPT Editorial Panel approved the creation of eight new CPT codes to describe skin cell suspension autograft (SCSA) procedures. The CPT Editorial Panel also revised the introductory guidelines for Skin Replacement Surgery to account for these new services.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) describing the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) describing the preparation component of the procedure, and two 090-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

SCSA procedures enable surgeons to treat a much larger area of burn wound with a significantly smaller amount of harvested skin and involve performing complex calculations to determine the harvest size needed. The surgeon harvests the appropriately sized epidermal layer and a very thin dermal layer of skin. The harvested graft is then processed into a suspension using enzymatic digestion and manual disaggregation of the cells. Following processing, the expansion ratio of the SCSA graft which describes the area harvested and treated can be up to 1:80 harvest to expansion, unlike existing epidermal autograft and split-thickness skin graft procedures where the expansion ratio of the graft is typically 1:2. Per the CPT Introductory Guidelines, “The expansion ratio of harvested skin to prepare a skin cell suspension autograft is typically 1:80 and, for example, 25 sq cm of harvested skin will produce a quantity of skin cells sufficient to cover a defect measuring up to 2000 sq cm.” Next, a primary dressing is partially affixed to the wound bed. The SCSA graft is then applied to the prepared burn wound, and the primary dressing is fully affixed to the wound. Secondary and tertiary dressings are then applied. The autograft requires diligent post-operative care due to its fragile, thin nature while it undergoes maturation.

The RUC evaluated the new SCSA codes and recommended applying the median intra-service survey times and physician work values across the family of codes, as supported by the survey; removing duplicative pre-service time; and supporting the number and intensity of inpatient and outpatient post-operative visits.

#### ***15XX1 Harvest of skin for skin cell suspension autograft; first 25 sq cm or less***

The RUC reviewed the survey results from 33 burn surgeons and determined that the survey median work RVU of 3.00 appropriately accounts for the work typically required to perform this service. The RUC recommends 55 minutes pre-service evaluation time, 15 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 40 minutes intra-service time, and 20 minutes immediate post-service time, totaling 140 minutes of total time. The pre-service time includes time that was moved from CPT codes 15XX5 and 15XX7 to address any duplication. This move is appropriate as the harvest base code will always be paired with one of the two base application codes, and therefore CPT code 15XX1 now includes all the pre-service time for this episode of care and 15XX5 and 15XX7 have no pre-service time. The RUC agreed this change

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

supports the flow of work and noted that it includes distinct pre-operative education for patients specific to the graft preparation and application components of the procedure.

To support the median value for CPT code 15XX1, the RUC compared the surveyed code to the top key reference service 15040 *Harvest of skin for tissue cultured skin autograft, 100 sq cm or less* (work RVU = 2.00, 15 minutes intra-service time and 60 minutes total time) and noted that the reference service involves much less intra-service and total time and is therefore appropriately valued lower than the surveyed code. The new CPT codes 15XX1-15XX2 for the harvest procedures are necessary as the reference code does not accurately describe the harvest procedure performed for SCSA, as this new technology requires more physician time and is more intense than 15040.

For additional support, the RUC compared the surveyed code to MPC code 31628 *Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial lung biopsy(s), single lobe* (work RVU = 3.55, 40 minutes intra-service time and 78 minutes total time) and noted that the comparator code requires more physician work in less total time than the surveyed code and therefore is appropriately valued higher. The RUC also referenced CPT code 32408 *Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed* (work RVU = 3.18, 40 minutes intra-service time and 101 minutes total time) and noted the identical intra-service time and similar amount of physician work as the surveyed code. **The RUC recommends a work RVU of 3.00 for CPT code 15XX1.**

***15XX2 Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 33 burn surgeons and determined that the survey median work RVU of 2.00 appropriately accounts for the work involved in this add-on service to capture additional harvesting beyond the initial 25 sq cm. The RUC recommends 40 minutes intra-service time as supported by the survey.

To support the median value for CPT code 15XX2, the RUC compared the surveyed code to the top key reference service 15101 *Split-thickness autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 1.72, 29 minutes intra-service time and total time) and noted that the reference service involves much less intra-service time and is therefore appropriately valued lower than the surveyed code. For 15XX2, depending on the patient's condition, the size of the burn wound and the harvest needed, the surgeon will harvest the first 25 sq cm (15XX1). Next, the surgeon will harvest the remaining 25 sq cm and prepare that harvest (X3). This technique is typical, in that, it is how a surgeon will conserve donor skin and only harvest what is truly needed. Additionally, in the typical patient, the work can become more complex due to several factors such as device failure, contamination, mis-spray where cells are disposed of accidentally, or miscalculation which all can require re-harvest.

For additional support, the RUC compared the surveyed code to CPT code 20937 *Autograft for spine surgery only (includes harvesting the graft); morselized (through separate skin or fascial incision) (List separately in addition to code for primary procedure)* (work RVU = 2.79, 40 minutes intra-service time and total time) and CPT code 13133 *Repair, complex, forehead, cheeks, chin, mouth, neck, axillae, genitalia, hands and/or feet; each additional 5 cm or less (List separately in addition to code for primary procedure)* (work RVU = 2.19, 35 minutes intra-service time and total time) which require similar physician work and time. **The RUC recommends a work RVU of 2.00 for CPT code 15XX2.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

**15XX3 Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin**

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 2.51 appropriately accounts for the work typically required to perform this service. The RUC recommends 33 minutes intra-service and total time. The Committee removed the pre-service evaluation time from code 15XX3 since all pre-service time is already accounted for in the harvest code 15XX1, which is always reported together for this episode of care.

To support the median value for CPT code 15XX3, the RUC compared the surveyed code to the top key reference service 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60, 60 minutes total time) and noted that the reference code requires more time and is therefore valued slightly higher than the surveyed code. The RUC further noted that the surveyed code is appropriately bracketed by the two key reference service MPC codes, 99204 and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.92, 47 minutes total time), although the survey respondents indicated that 15XX3 is more complex than both 99204 and 99214.

For additional support, the RUC compared the surveyed code to MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time) and CPT codes 74174 *Computed tomographic angiography, abdomen and pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time) and 74183 *Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time) all of which have slightly lower intra-service times, therefore justifying a slightly higher value for the surveyed code. **The RUC recommends a work RVU of 2.51 for CPT code 15XX3.**

**15XX4 Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; each additional 25 sq cm of harvested skin or part thereof (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 2.00 appropriately accounts for the work involved in this add-on service to capture additional preparation beyond the initial 25 sq cm. The RUC recommends 28 minutes intra-service time as supported by the survey.

To support the median value for CPT code 15XX4, the RUC compared the surveyed code to both of the key reference services 15152 *Tissue cultured skin autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 2.50, 20 minutes intra-service time and total time) and 15156 *Tissue cultured skin autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; additional 1 sq cm to 75 sq cm (List separately in addition to code for primary procedure)* (work RVU = 2.75, 20 minutes intra-service time and total time) and noted that the

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

reference services are complex grafting procedures rather than preparation of the harvested skin, thus the reference services are more intense and appropriately valued higher than the surveyed code.

For additional support, the RUC compared the surveyed code to CPT code 44139 *Mobilization (take-down) of splenic flexure performed in conjunction with partial colectomy (List separately in addition to primary procedure)* (work RVU = 2.23, 30 minutes intra-service time and total time) and CPT code 49435 *Insertion of subcutaneous extension to intraperitoneal cannula or catheter with remote chest exit site (List separately in addition to code for primary procedure)* (work RVU = 2.25, 30 minutes intra-service time and total time) which require slightly higher intra-service times that correspond with slightly higher work values. **The RUC recommends a work RVU of 2.00 for CPT code 15XX4.**

***15XX5 Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less***

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 10.97 appropriately accounts for the work typically required to perform this service. The RUC recommends 0 minutes pre-service time, 83 minutes intra-service time, 30 minutes immediate post-service time, 4-99232 subsequent hospital inpatient visits, 1-99238 discharge visit, and 4-99213 post-operative office visits, totaling 403 minutes of total time. The RUC reallocated all pre-service time from the surveyed code to 15XX1 as the harvest base code will always be paired with one of the two base application codes during an episode of care.

In addition to monitoring the patient's stability in the recovery room, writing orders, communicating with the family and other health care professionals (including written and oral reports and orders) as in 15XX1, the 30 minutes of immediate post-operative work includes additional time to account for all hospital visits and services performed by the surgeon in the intensive care unit or on a suitable nursing floor.

Following SCSA procedures, several post-op office visits are required for burn wound patients which include the following:

- Monitoring healing
- Multiple dressing changes
- Managing pain
- Return to work and activity counseling
- Assessing for possible infection
- Concomitant medication management
- Assessing compliance with therapy (PT/OT)
- Monitoring nutritional status and dietary intake

Additionally, all post-discharge office visits for this procedure, including removing sutures, changing dressings, and providing antibiotic and pain medication adjustments, for 90 days after the day of the operation are considered part of the postoperative work for this procedure. Of note, SCSA procedures require more frequent post-operative secondary dressing changes. Following SCSA procedures, secondary dressings are changed 3 times per week (compared to epidermal autograft procedures which are changed 1 time per week) to monitor wound healing status and prevent/treat any infections.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

The RUC expressed concern regarding the negative IWPUR for code 15XX5 (-0.005) and considered adjusting the post-operative visits to resolve this issue. However, the Committee was convinced by the cogent arguments from the specialty that the number and intensity of post-operative visits should be maintained for this critically ill patient population. Both the inpatient and outpatient visits were determined to be appropriate.

To support the median value for CPT code 15XX5, the RUC compared the surveyed code to the top key reference service 15110 *Epidermal autograft, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children* (work RVU = 10.97, 28 minutes intra-service time and 306 minutes total time) and noted that the intra-service times are vastly different and that graft application codes typically use 100 square centimeters for their size which is different than the surveyed code treatment of up to the first 480 square centimeters.

For additional support, the RUC compared the surveyed code to CPT code 34490 *Thrombectomy, direct or with catheter; axillary and subclavian vein, by arm incision* (work RVU = 10.91, 80 minutes intra-service time and 367 minutes total time) and CPT code 32097 *Thoracotomy, with diagnostic biopsy(ies) of lung nodule(s) or mass(es) (eg, wedge, incisional), unilateral* (work RVU = 13.75, 80 minutes intra-service time and 401 minutes total time) which require similar physician work and time. **The RUC recommends a work RVU of 10.97 for CPT code 15XX5.**

**15XX6 *Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)***

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 2.50 appropriately accounts for the work involved in this add-on service to capture the additional graft application component of the procedure for the trunk, arms and legs area of the body. The RUC recommends 25 minutes intra-service time as supported by the survey.

To support the median value for CPT code 15XX6, the RUC compared the surveyed code to the top key reference service 15116 *Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 2.50, 35 minutes intra-service time and total time) and noted there is a similar amount of physician work for the additional grafting procedure despite the differences in size.

For additional support, the RUC compared the surveyed code to CPT code 20702 *Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)* (work RVU = 2.50, 25 minutes intra-service time and 32 minutes total time) noting a strong comparison as the services have the same amount of physician work and intra-service time. The RUC further referenced CPT codes 32506 *Thoracotomy; with therapeutic wedge resection (eg, mass or nodule), each additional resection, ipsilateral (List separately in addition to code for primary procedure)* (work RVU = 3.00, 25 minutes intra-service time and total time) and 36907 *Transluminal balloon angioplasty, central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the angioplasty (List separately in addition to code for primary procedure)* (work RVU = 3.00, 25 minutes intra-service time and total time) which also require the same intra-service time as the surveyed code. **The RUC recommends a work RVU of 2.50 for CPT code 15XX6.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code    s=Revised code    :=Add-on code    H=Modifier 51 exempt    \*=Telemedicine    X=Audio-only    ~=FDA approval pending    #=Resequenced code

**15XX7 Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less**

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 12.50 appropriately accounts for the work required to perform this service. The RUC recommends 0 minutes pre-service time, 75 minutes intra-service time, 30 minutes immediate post-service time, 4-99232 subsequent hospital inpatient visits, 1-99238 discharge visit, and 4-99213 post-operative office visits, totaling 395 minutes of total time. The RUC reallocated all pre-service time from the surveyed code to 15XX1 as the harvest base code will always be paired with one of the two base application codes during an episode of care.

In addition to monitoring the patient's stability in the recovery room, writing orders, communicating with the family and other health care professionals (including written and oral reports and orders) as in 15XX1, the 30 minutes of immediate post-operative work includes additional time to account for all hospital visits and services performed by the surgeon in the intensive care unit or on a suitable nursing floor.

Following SCSA procedures, several post-op office visits are required for burn wound patients which include the following:

- Monitoring healing
- Multiple dressing changes
- Managing pain
- Return to work and activity counseling
- Assessing for possible infection
- Concomitant medication management
- Assessing compliance with therapy (PT/OT)
- Monitoring nutritional status and dietary intake

Additionally, all post-discharge office visits for this procedure, including removing sutures, changing dressings, and providing antibiotic and pain medication adjustments, for 90 days after the day of the operation are considered part of the postoperative work for this procedure. Of note, SCSA procedures require more frequent post-operative secondary dressing changes. Following SCSA procedures, secondary dressings are changed 3 times per week (compared to epidermal autograft procedures which are changed 1 time per week) to monitor wound healing status and prevent/treat any infections.

To support the median value for CPT code 15XX7, the RUC compared the surveyed code to the top key reference service 15115 *Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children* (work RVU = 11.28, 35 minutes intra-service time and 356 minutes total time) and noted that the intra-service times are vastly different and that graft application codes typically use 100 square centimeters for their size which is different than the surveyed code treatment of up to the first 480 square centimeters.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

For additional support, the RUC compared the surveyed code to CPT code 27540 *Open treatment of intercondylar spine(s) and/or tuberosity fracture(s) of the knee, includes internal fixation, when performed* (work RVU = 11.30, 75 minutes intra-service time and 334 minutes total time) and CPT code 50205 *Renal biopsy; by surgical exposure of kidney* (work RVU = 12.29, 75 minutes intra-service time and 324 minutes total time) which require identical intra-service time and similar physician work and total time. **The RUC Committee recommends a work RVU of 12.50 for CPT code 15XX7.**

**15XX8 Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)**

The RUC reviewed the survey results from 30 burn surgeons and determined that the survey median work RVU of 3.00 appropriately accounts for the work involved in this add-on service to capture the additional graft application component of the procedure for the body areas other than the trunk, arms, and legs. The RUC recommends 30 minutes intra-service time as supported by the survey.

To support the median value for CPT code 15XX8, the RUC compared the surveyed code to the top key reference service 15116 *Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 2.50, 35 minutes intra-service time and total time) and noted there are stronger comparisons to several ZZZ codes with identical intra-service time and physician work: 64913 *Nerve repair; with nerve allograft, each additional strand (List separately in addition to code for primary procedure)* (work RVU = 3.00, 30 minutes intra-service time and total time) and 32668 *Thoracoscopy, surgical; with diagnostic wedge resection followed by anatomic lung resection (List separately in addition to code for primary procedure)* (work RVU = 3.00, 30 minutes intra-service time and total time) and 47543 *Endoluminal biopsy(ies) of biliary tree, percutaneous, any method(s) (eg, brush, forceps, and/or needle), including imaging guidance (eg, fluoroscopy), and all associated radiological supervision and interpretation, single or multiple (List separately in addition to code for primary procedure)* (work RVU = 3.00, 30 minutes intra-service time and total time). **The RUC recommends a work RVU of 3.00 for CPT code 15XX8.**

### **Practice Expense**

The RUC considered the recommendations of the Practice Expense (PE) Subcommittee. However, the specialty modified its recommendation to only recommend direct practice inputs for the facility setting and withdrew its non-facility recommendations since the procedure will only be performed in the facility setting at present. Only CPT codes 15XX5 and 15XX7 include facility inputs. For these two codes, the 090-day global standards for the use of clinical staff in the facility are recommended for the pre-service times. Several supplies are recommended for 15XX5 and 15XX7 including one SA031 *kit, suture removal* as sutures are removed at the first post-operative office visit after discharge. Also, SG020 *bandage, Kling, sterile 4in* was added for these two codes that include follow up visits at 40 units each. This is the total amount of sterile Kling bandage used for the first two post-operative visits, or 20 units per visit, for the first two visits. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee for the facility setting only.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

**Do Not Use to Validate for Physician Work**

The RUC recommends that CPT codes 15XX1-15XX8 be flagged in the RUC database to not be used to validate physician work.

**New Technology**

The RUC recommends that CPT codes 15XX1-15XX8 be placed on the New Technology list to be re-reviewed by the RUC and notes that the codes should be reviewed for both work and PE after one year of claims data. The 2025 Medicare claims data will be available for review at either the September 2026 or January 2027 RUC meeting. At that time, the RUC would consider if other specialties are performing the service and if the service is performed in the non-facility setting.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p><b>Surgery</b>  <b>Integumentary System</b>  <b>Repair (Closure)</b>  <b>Skin Replacement Surgery</b></p> <p>Skin replacement surgery consists of <i>surgical preparation</i> and topical placement of an <i>autograft</i> (including tissue cultured autograft and <u>skin cell suspension autograft [SCSA]</u>) or <i>skin substitute graft</i> (ie, homograft, allograft, xenograft). The graft is anchored using the individual's choice of fixation. When services are performed in the office, routine dressing supplies are not reported separately.</p> <p><i>The following definition should be applied to those codes that reference “100 sq cm or 1% of body area of infants and children” when determining the involvement of body size: The measurement of 100 sq cm is applicable to adults and children 10 years of age and older; and percentages of body surface area apply to infants and children younger than 10 years of age. The measurements apply to the size of the recipient area.</i></p> <p><i>Procedures involving wrist and/or ankle are reported with codes that include arm or leg in the descriptor.</i></p> <p><i>When a primary procedure requires a skin substitute or skin autograft for definitive skin closure (eg, orbitectomy, radical mastectomy, deep tumor removal), use 15100- 15278 in conjunction with primary procedure.</i></p> <p><i>For biological implant for soft tissue reinforcement, use 15777 in conjunction with primary procedure.</i></p> <p><i>The supply of skin substitute graft(s) should be reported separately in conjunction with 15271-15278.</i></p> <p><b>Definitions</b></p> <p><i>Surgical preparation codes 15002-15005 for skin replacement surgery describe the initial services related to preparing a clean and viable wound surface for placement of an autograft, flap, skin substitute graft or for negative pressure wound therapy. In some cases, closure may be</i></p>				

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

possible using adjacent tissue transfer (14000-14061) or complex repair (13100-13153). In all cases, appreciable nonviable tissue is removed to treat a burn, traumatic wound or a necrotizing infection. The clean wound bed may also be created by incisional release of a scar contracture resulting in a surface defect from separation of tissues. The intent is to heal the wound by primary intention, or by the use of negative pressure wound therapy. Patient conditions may require the closure or application of graft, flap, or skin substitute to be delayed, but in all cases the intent is to include these treatments or negative pressure wound therapy to heal the wound. Do not report 15002-15005 for removal of nonviable tissue/debris in a chronic wound (eg, venous or diabetic) when the wound is left to heal by secondary intention. See active wound management codes (97597, 97598) and debridement codes (11042-11047) for this service. For necrotizing soft tissue infections in specific anatomic locations, see 11004-11008.

Select the appropriate code from 15002-15005 based upon location and size of the resultant defect. For multiple wounds, sum the surface area of all wounds from all anatomic sites that are grouped together into the same code descriptor. For example, sum the surface area of all wounds on the trunk and arms. Do not sum wounds from different groupings of anatomic sites (eg, face and arms). Use 15002 or 15004, as appropriate, for excisions and incisional releases resulting in wounds up to and including 100 sq cm of surface area. Use 15003 or 15005 for each additional 100 sq cm or part thereof. For example: Surgical preparation of a 20 sq cm wound on the right hand and a 15 sq cm wound on the left hand would be reported with a single code, 15004. Surgical preparation of a 75 sq cm wound on the right thigh and a 75 sq cm wound on the left thigh would be reported with 15002 for the first 100 sq cm and 15003 for the second 50 sq cm. If all four wounds required surgical preparation on the same day, use modifier 59 with 15002, and 15004.

**Skin Cell Suspension Autograft (SCSA)** involves harvesting of skin and preparation of a suspension of autologous skin cells for direct spray-on application for treatment of conditions such as thermal burn wounds, traumatic avulsion (eg, degloving), surgical excision (eg, necrotizing tissue infection), or resection (eg, skin cancer).

Codes 15XX1, 15XX2 are used to report the harvest of epidermal and dermal skin (eg, 0.006-0.008 inch depth). The harvested skin may be divided into smaller portions for processing. The expansion ratio of harvested skin to prepare a skin cell suspension autograft is typically 1:80 and, for example, 25 sq cm of harvested skin will produce a quantity of skin cells sufficient to cover a defect measuring up to 2000 sq cm.

Codes 15XX3, 15XX4 are used to report the preparation of the skin cell suspension autograft, which requires enzymatic processing, manual mechanical disaggregation of skin cells, and filtration of the final suspension.

Codes 15XX3, 15XX4 are not reported if the harvested skin is non-manually processed (ie, using automation).

Codes 15XX5, 15XX6, 15XX7, 15XX8 are used to report the spray-on application of the skin cell suspension autograft to the wound and the donor site when performed. Application of a primary dressing with choice of fixation (eg, surgical glue, sutures, staples) is included in 15XX5, 15XX6, 15XX7, 15XX8.

For surgical preparation of the recipient site prior to application of the skin cell suspension autograft, see 15002, 15003, 15004, 15005.

Placement of a separate additional autograft (eg, split thickness, full thickness autograft) prior to application of skin cell suspension autograft is separately reportable with 15040-15261, as appropriate.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

**Autografts/tissue cultured autografts (other than skin cell suspension autograft [SCSA])** include the harvest and/or application of an autologous skin graft. Repair of donor sites requiring skin graft or local flaps is reported separately. Removal of current graft and/or simple cleansing of the wound is included, when performed. Do not report 97602. Debridement is considered a separate procedure only when gross contamination requires prolonged cleansing, when appreciable amounts of devitalized or contaminated tissue are removed, or when debridement is carried out separately without immediate primary closure.

*Select the appropriate code from 15040-15261 based upon type of autograft and location and size of the defect. The measurements apply to the size of the recipient area. For multiple wounds, sum the surface area of all wounds from all anatomic sites that are grouped together into the same code descriptor. For example, sum the surface area of all wounds on the trunk and arms. Do not sum wounds from different groupings of anatomic sites (eg, face and arms).*

**Skin substitute grafts** include non-autologous human skin (dermal or epidermal, cellular and acellular) grafts (eg, homograft, allograft), non-human skin substitute grafts (ie, xenograft), and biological products that form a sheet scaffolding for skin growth. These codes are not to be reported for application of non-graft wound dressings (eg, gel, powder, ointment, foam, liquid) or injected skin substitutes. Application of non-graft wound dressings is not separately reportable. Removal of current graft and/or simple cleansing of the wound is included, when performed. Do not report 97602. Debridement is considered a separate procedure only when gross contamination requires prolonged cleansing, when appreciable amounts of devitalized or contaminated tissue are removed, or when debridement is carried out separately without immediate primary closure.

*Select the appropriate code from 15271-15278 based upon location and size of the defect. For multiple wounds, sum the surface area of all wounds from all anatomic sites that are grouped together into the same code descriptor. For example, sum the surface area of all wounds on the trunk and arms. Do not sum wounds from different groupings of anatomic sites (eg, face and arms). The supply of skin substitute graft(s) should be reported separately in conjunction with 15271, 15272, 15273, 15274, 15275, 15276, 15277, 15278. For biologic implant for soft tissue reinforcement, use 15777 in conjunction with code for primary procedure.*

### **Surgical Preparation**

- 15002      *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children*  
*(For linear scar revision, see 13100-13153)*
- ✚15003      *each additional 100 sq cm, or part thereof, or each additional 1% of body area of infants and children (List separately in addition to code for primary procedure)*  
*(Use 15003 in conjunction with 15002)*
- 15004      *Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children*

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15XX1	Tracking Number II	Original Specialty Recommended RVU: <b>3.00</b>
		Presented Recommended RVU: <b>3.00</b>
Global Period: 000	Current Work RVU: N/A	RUC Recommended RVU: <b>3.00</b>

CPT Descriptor: Harvest of skin for skin cell suspension autograft; first 25 sq cm or less

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 1800 sq cm. A very thin (0.006 to 0.008 inches thick) 24 sq cm epidermal/dermal skin graft is harvested.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: A targeted history and physical examination (H&P) is performed. Orders for preoperative medications and performance standards are written. The surgical procedure, postoperative recovery in and out of the hospital, and expected outcome(s) are reviewed with the patient (and/or the patient's family) to explain the operative risks and benefits and to obtain informed consent.

Other preoperative services include typing and crossmatching for blood to be administered during the procedure; administering preoperative antibiotics; dressing, scrubbing, and waiting to begin the operation; supervising and assisting with the positioning, prepping, and draping of the patient; and ensuring that the necessary surgical instruments and supplies are present and available in the operative suite.

In addition, the operating room temperature is adjusted upwards (85-105 degrees Fahrenheit) to support patient fluid management and prevent patient hypothermia.

Description of Intra-Service Work: The components of the wound are measured and summed. The surgeon computes the required donor site size needed to prepare a meshed split thickness autograft (reported separately) and, using a complex series of calculations, the surgeon computes the required donor site size and total volume of SCSA, and the donor site is selected. The donor site is prepared and tumesced with serial infiltration of crystalloid solution to ensure even harvest of the very thin and delicate donor skin graft, and the patient is positioned to ensure that the donor area is taut. The physician uses a dermatome to harvest a split thickness graft (0.010 to 0.015 inches deep) from a healthy portion of skin. For SCSA procedures, the physician uses a dermatome to harvest a separate very thin skin graft (0.006 to 0.008 inches deep) from the donor site, taking the epidermis along with a thin dermal layer.

Description of Post-Service Work: Postoperative work begins after the application of the wound dressing in the operating room and includes monitoring the patient's stability in the recovery room, writing orders, communicating with the family and other health care professionals (including written and oral reports and orders) related to the harvesting component of the procedure

Discharge management includes the surgeon's final examination of the patient, instructions for continuing care of the operative sites from the harvesting (separate from the operative sites of the application), and preparation of discharge records.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**15XX1-15XX8 General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 and X3 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X3 and X7 and so we retained time in the immediate post-service for both X1 and X3.

### **15XX1 Rationale**

CPT code 15XX1, Harvest of skin for skin cell suspension autograft, first 25 sq cm or less is a 000-day global for the harvesting component of the procedure. We surveyed members of the ABA and trained surgeons. We received 33 non-conflicted completed surveys for 15XX1. The median number of procedures performed by survey respondents in the past twelve months for 15XX1 was 43.

The survey respondents indicated median pre-times as follows: 30 minutes evaluation prior to the day of surgery, 15 minutes evaluation on the day of surgery, 12 minutes positioning, 20 minutes SDW. The median survey intra-service time was 40 minutes, with 20 minutes immediate post-service time.

The median survey work RVU was 3.00, the 25<sup>th</sup> percentile work RVU was 2.00 and the 75<sup>th</sup> percentile work RVU was 4.00.

The key reference code was 15040, Harvest of skin for tissue cultured skin autograft, 100 sq cm or less which was selected by 22 of the 33 respondents as their key reference code.

We are recommending the median work RVU of 3.00 and the median intra-service time of 40 minutes, with 15 minutes pre-service evaluation, and 20 minutes of immediate post-service time for a total time of 75 minutes. As noted above, we reduced the survey pre-service positioning and SDW to 0 minutes because of overlap with survey codes 15XX5 or 15XX7. This produces an IWPUT of .055 and a WPUT of .040.

CPT code 15040, the key reference service has a work RVU of 2.00 with 15 minutes of intra-service time and a total time of 65 minutes, an IWPUT of .073 and a WPUT of .031. We feel a work RVU of 3.00 with 40 minutes of intra-service time compares well to the key reference service, which has 25 minutes less intra-service time and 10 minutes less total time, and the difference in work RVU of 1.00 between 15040 and 15XX1 is reasonable and appropriate.

### **Additional Information**

- The typical SCSA procedure can be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.

- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

SCSA Standalone Technique
<p>A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.</p>
<ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• SCSA prepared (reported with X3-X4)</li> <li>• SCSA Application (reported with X5-X8): <ul style="list-style-type: none"> <li>○ The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.</li> <li>○ Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.</li> </ul> </li> </ul>
SCSA-STSG Layering Technique
<ul style="list-style-type: none"> <li>• A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).</li> <li>• A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.</li> <li>• STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.</li> </ul>

**STSG**

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

**SCSA**

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

**Differences between 15040 and 15XX1 and why 15XX1-X2 were needed**

New CPT codes for the harvest procedures (15XX1-15XX2) were needed, because the CPT code descriptor for CPT 15040 (Harvest of skin for tissue cultured skin autograft, 100 sq cm or less) does not accurately describe the harvest procedure performed for SCSA. In addition, more physician work is performed, and the complexity is greater for X1-X2)

**15XX1 – Harvest of skin for skin cell suspension autograft, first 25 sq cm or less**

**Typical patient: A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 1800 sq cm. A very thin (0.006 to 0.008 inches thick) 24 sq cm epidermal/dermal skin graft is harvested**

- The work associated with SCSA harvest is much more complex than the work associated with a harvest for STSG (inherent in CPT base code) or CEA (15040)
- Components of the wound are measured and summed.
- Using a complex series of calculations, the surgeon computes the required donor site size and total volume of SCSA needed.
- The physician uses a dermatome to harvest an extremely thin skin graft (0.006 – 0.008 inches thick) from the donor site, taking **the epidermis and a thin dermal layer**.
- This harvest is a much more complicated process and requires additional skill to maintain the thin dermal layer harvest.
- Using our typical patient of 1,800 sq cm burn, the complex calculations are shown below:
  - Determine the **donor harvest area required** to treat burn wound:
    - $1,800 \text{ sq cm burn wound area} / 80:1 \text{ expansion ratio} = 22.5$  (round up to 23) sq cm donor harvest area
    - Then, determine the additional harvest area required to treat the harvest area
    - $23 \text{ sq cm donor harvest area} / 80:1 \text{ expansion ratio} = 0.2875 \text{ sq cm}$  rounded up to 1 sq cm donor harvest area
    - Sum the donor harvest areas to determine the total SCSA donor harvest area needed:
      - 23 sq cm donor harvest area (to treat burn wound area)
      - + 1 sq cm donor harvest area (to treat donor harvest area)
      - = **24 sq cm total SCSA donor harvest area** required to create sufficient skin cell suspension to treat the burn wound and harvest wound site

#### 15040 – Harvest of skin for tissue cultured skin autograft, 100 sq cm or less

- **This code is reported for the harvest of skin used in cultured epidermal autograft procedures.**
- This procedure is part of a staged procedure requiring the transportation of the harvest to an offsite laboratory for culturing the autograft. Following 14-21 days of culturing, the cultured graft is returned to the hospital for application on the patient.
- The physician work is less than X1 and includes:
  - Components of the wound are measured and summed.
  - A straightforward calculation is made to determine the size of the harvest
  - An STSG harvest of 0.010-0.015 inches thick is taken using a dermatome and placed in a medium for transportation to a laboratory to culture the skin graft.
  - A dressing is applied following harvest.

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 269  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. utilization data shows that 13% of claims are for Medicare patients

Specialty Plastic Surgery	Frequency 130	Percentage 48.32 %
---------------------------	---------------	--------------------

Specialty General Surgery	Frequency 130	Percentage 48.32 %
---------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) that has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global
15002	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	1	N/A	3.65	1.83	1.83	75	20	20	000

CPT Descriptor: Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: At the time of the skin cell suspension autograft procedure a 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. An additional very thin (0.006 to 0.008 inches thick) 24 sq cm epidermal/dermal skin graft is harvested. [Note: This is an add-on service. Only consider the additional work related to harvest of skin for skin cell suspension autograft.]

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

---

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A, Add-on Code

Description of Intra-Service Work: The physician uses a dermatome to harvest a split thickness graft (0.010 to 0.015 inches deep) from a healthy portion of skin. For SCSA procedures, the physician uses a dermatome to harvest a very thin skin graft (0.006 to 0.008 inches deep) from the donor site, taking the epidermis along with a thin dermal layer.

Description of Post-Service Work: N/A, Add-on Code

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 and X3 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X3 and X5 and X7 and so we retained time in the immediate post-service for both X1 and X3.

#### *15XX2 Rationale*

CPT code 15XX2, Harvest of skin for skin cell suspension autograft, each additional 25 sq cm or part thereof is a ZZZ-day global for the harvesting component of the procedure to capture additional harvesting beyond the initial 25 sq cm. We surveyed members of the ABA and trained surgeons. We received 33 non-conflicted completed surveys for 15XX2. The median number of procedures performed by survey respondents in the past twelve months for 15XX2 was 15.

The median survey intra-service time was 40 minutes.

The median survey work RVU was 2.00, the 25<sup>th</sup> percentile work RVU was 1.00 and the 75<sup>th</sup> percentile work RVU was 2.50.

The key reference code was 15101, Split-thickness autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 14 of the 33 respondents as their key reference code. 15101 has an intra-service time of 29 minutes and a work RVU of 1.72, and an IWPUT/WPUT of .059.

We are recommending the median work RVU of 2.00 and the median intra-service time of 40 minutes. This produces an IWPUT/WPUT of .050.

We feel a work RVU of 3.00 with 40 minutes of intra-service time compares well to the key reference service, which has 11 minutes less intra-, and the difference in work RVU of 0.38 between 15101 and 15XX2 is reasonable and appropriate.

#### ***Additional Information***

For 15XX2, depending on the patient's condition, the size of the burn wound and the harvest needed, the surgeon will harvest the first 25 sq cm (X1). Next, the surgeon will harvest the remaining 15 sq cm and prepare that harvest (X3). This technique is typical, in that, it is how a surgeon will conserve donor skin and only harvest what is truly needed. Additionally, in the typical patient when their physiology tolerates additional grafting (normothermia and perfusion), device failure, contamination, mis-spray where cells are disposed of accidentally, or miscalculation all can require re-harvest.

- The typical SCSA procedure can be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.

- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

#### SCSA Standalone Technique

A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.

- SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)
- SCSA prepared (reported with X3-X4)
- SCSA Application (reported with X5-X8):
  - The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™ Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
  - Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™ Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

### Key Reference Services

We note that the code 15101, which is a KRS is listed in the RUC database as RUC reviewed in 1998 as is the parent code 15100. As a result, we included them in our RSL. These codes are also clearly the most similar to the survey codes, so we felt that it was important to include them. We note that the 1998 values were based on Harvard codes that were approved at the same time the new parent code 15100 was approved, however they were not surveyed together. However, they still are the most commonly used by burn surgeons and were deemed relevant as a result.

### Differences between 15040 and 15XX1 and why 15XX1-X2 were needed

New CPT codes for the harvest procedures (15XX1-15XX2) were needed, because the CPT code descriptor for CPT 15040 (Harvest of skin for tissue cultured skin autograft, 100 sq cm or less) does not accurately describe the harvest procedure performed for SCSA. In addition, more physician work is performed, and the complexity is greater for X1-X2)

## 15XX2 – Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)

**Typical patient: A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. A very thin (0.006 to 0.008 inches thick) 24 sq cm epidermal/dermal skin graft is harvested**

- The work associated with SCSA harvest is much more complex than the work associated with a harvest for STSG (inherent in CPT base code) or CEA (15040)
- Components of the wound are measured and summed.
- Using a complex series of calculations, the surgeon computes the required donor site size and total volume of SCSA needed.
- The physician uses a dermatome to harvest an extremely thin skin graft (0.006 – 0.008 inches thick) from the donor site, taking **the epidermis and a thin dermal layer**.
- This harvest is a much more complicated process and requires additional skill to maintain the thin dermal layer harvest.
- Using our typical patient of 3,600 sq cm burn, the complex calculations are shown below:
  - Determine the **donor harvest area required** to treat burn wound:
    - 3,600 sq cm burn wound area / 80:1 expansion ratio = 45 sq cm donor harvest area
    - Then, determine the additional harvest area required to treat the harvest area
    - 45 sq cm donor harvest area / 80:1 expansion ratio = 0.6 sq cm rounded up to 1 sq cm donor harvest area
    - Sum the donor harvest areas to determine the total SCSA donor harvest area needed:
      - 45 sq cm donor harvest area (to treat burn wound area)
      - + 1 sq cm donor harvest area (to treat donor harvest area)
      - = **46 sq cm total SCSA donor harvest area required** to create sufficient skin cell suspension to treat the burn wound and harvest wound site

## 15040 – Harvest of skin for tissue cultured skin autograft, 100 sq cm or less

- **This code is reported for the harvest of skin used in cultured epidermal autograft procedures.**
- This procedure is part of a staged procedure requiring the transportation of the harvest to an offsite laboratory for culturing the autograft. Following 14-21 days of culturing, the cultured graft is returned to the hospital for application on the patient.
- The physician work is less than X1 and includes:
  - Components of the wound are measured and summed.

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) that has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global
15002	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	1	N/A	3.65	1.83	1.83	75	20	20	000

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99204	XXX	2.60	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99214	ZZZ	1.92	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
72158	XXX	2.29	RUC Time	216,388

CPT Descriptor 1 Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99204	XXX	2.60	RUC Time	11,933,824

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

### *15XX3 Rationale*

CPT code 15XX3, Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration, first 25 sq cm or less of harvested skin is a XXX global for the preparation component of the procedure. We surveyed members of the ABA and trained surgeons. We received 30 non-conflicted completed surveys for 15XX3. The median number of procedures performed by survey respondents in the past twelve months for 15XX3 was 15.

The survey respondents indicated median pre-time for the day of surgery as 10 minutes. The median survey intra-service time was 33 minutes, with 15 minutes immediate post-service time.

The median survey work RVU was 2.51, the 25<sup>th</sup> percentile work RVU was 2.00 and the 75<sup>th</sup> percentile work RVU was 4.00.

The key reference code was 99204, Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter. 99204 was selected as the key reference service by 5 respondents. The second key reference service was CPT code 99214, Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter which was chosen by 3 of the respondents.

We are recommending the median work RVU of 2.51 and the median intra-service time of 33 minutes, with 10 minutes pre-service evaluation for a total time of 43 minutes. The survey immediate post-service time was removed because of overlap with 15XX5 or 15XX7 in the immediate post-service period. There is distinct pre-operative education for patients specific to the graft preparation component of the procedure and we kept the 10 minutes of survey time. This total time produces a WPUT of .058.

CPT code 99204, the key reference service has a work RVU of 2.60 with 40 minutes of intra-service time and a total time of 60 minutes, and a WPUT of .043. We feel the work RVU difference between 15XX3 and 99204 appropriately accounts for the small difference in time and work. Furthermore, the second key reference service, 99214, with a work RVU of 1.92 and a total time of 47 minutes brackets 15XX3 on the lower end as well given the lower total time and lower work RVU with similar WPUTs.

The survey respondents indicated that 15XX3 is more complex than both 99204 and 99214 and as such a slightly higher WPUT is appropriate.

### ***Additional Information***

- The typical SCSA procedure can be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

SCSA Standalone Technique
<p>A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.</p>
<ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• SCSA prepared (reported with X3-X4)</li> <li>• SCSA Application (reported with X5-X8): <ul style="list-style-type: none"> <li>○ The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.</li> <li>○ Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.</li> </ul> </li> </ul>

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™ Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

#### Work Performed by Surgeon

- The surgeon or a qualified healthcare provider (APP) performs the preparation work described by 15XX3-X4, including:
  - Preparing and placing the harvested skin in the RECELL device.
  - Manually disaggregated the cells
  - Assessing the adequacy of enzymatic digestion
  - Rinsing and filtering
  - Drawing it up into the syringe and applicator

#### Work Performed by Clinical Staff

- The clinical staff may open the packaging of the system and lay it out on the table.
- The clinical staff supports the surgeon by passing various instruments/components to the surgeon.

For X3 and X4, pre- and post-service clinical staff work that overlaps with the application codes (15XX5, 15XX7) has been eliminated, as we believe the clinical staff time assigned in those codes is sufficient.

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) that has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global

CPT Descriptor: Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: At the time of the skin cell suspension autograft procedure, a 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. Four 2cm x 3cm strips of very thin (0.006 to 0.008 inches thick) epidermal/dermal skin graft undergo enzymatic processing, manual mechanical disaggregation of skin cells, and filtration to produce a skin cell suspension. [Note: This is an add-on service. Only consider the additional work related to preparation of skin cell suspension autograft.]

Percentage of Survey Respondents who found Vignette to be Typical: 97%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A, Add-on Code

Description of Intra-Service Work: The SCSA harvested skin is separated into sections measuring 2 x 3 cm. The number of sections needed is dependent upon the size of the area to be treated.

One or two sections of SCSA harvested skin are placed in the SCSA device where the sections are enzymatically incubated for 15-20 minutes each.

Following incubation, the physician removes the treated skin and mechanically disaggregates a small portion of the skin on the scraping tray to confirm that the enzyme has broken down the skin and the cells can be easily separated. If the skin cells do not separate easily, the skin is returned to the enzyme for 10 minutes.

The tissue is then reassessed. After confirming that the cells separate easily, the tissue is rinsed with a buffer solution.

The tissue is then placed dermal side down onto the mechanical scraping tray.

The physician then vigorously scrapes the epidermal cells while altering orientation of the skin to ensure complete disaggregation.

The scraping tray is carefully rinsed with buffer to capture all fully disaggregated skin cells into one area for collection.

The surgeon then carefully draws up the SCSA from the tray into a separate syringe.

The SCSA is dispensed and filtered through the cell strainer.

The filtered SCSA is drawn into a new syringe that is prepared for application.

Description of Post-Service Work: N/A, Add-on Code

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

#### *15XX4 Rationale*

CPT code 15XX4, Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration, each additional 25 sq cm or part thereof is a ZZZ-day global for the preparation component of the procedure to capture additional preparation beyond the initial 25 sq cm. We surveyed members of the ABA and trained surgeons. We received 28 non-conflicted completed surveys for 15XX4. The median number of procedures performed by survey respondents in the past twelve months for 15XX4 was 12.

The median survey intra-service time was 28 minutes.

The median survey work RVU was 2.00, the 25<sup>th</sup> percentile work RVU was 1.36 and the 75<sup>th</sup> percentile work RVU was 3.20.

The key reference code was 15152, Tissue cultured skin autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 5 of the 28 respondents as their key reference code. 15152 has an intra-service time of 20 minutes and a work RVU of 2.50, and an IWPUT/WPUT of .091.

The second key reference code was 15116, Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 3 of the 28 respondents as their key reference code. 15116 has an intra-service time of 35 minutes and a work RVU of 2.50, and an IWPUT/WPUT of .071.

We are recommending the median work RVU of 2.00 and the median intra-service time of 28 minutes. This produces an IWPUT/WPUT of .071.

We feel a work RVU of 2.00 with 28 minutes of intra-service time compares well to the two key reference services. 15XX4 has a lower work RVU than both key reference services which reflects the lower time and has an IWPUT that sits in between the two key reference services. Thus, a work RVU of 2.00 is appropriate for 15XX4.

#### ***Additional Information***

- The typical SCSA procedure can be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.

- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

SCSA Standalone Technique
<p>A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.</p>
<ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• SCSA prepared (reported with X3-X4)</li> <li>• SCSA Application (reported with X5-X8): <ul style="list-style-type: none"> <li>○ The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.</li> <li>○ Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.</li> </ul> </li> </ul>

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™ Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

#### Work Performed by Surgeon

- The surgeon or a qualified healthcare provider (APP) performs the preparation work described by 15XX3-X4, including:
  - Preparing and placing the harvested skin in the RECELL device.
  - Manually disaggregated the cells
  - Assessing the adequacy of enzymatic digestion
  - Rinsing and filtering
  - Drawing it up into the syringe and applicator

#### Work Performed by Clinical Staff

- The clinical staff may open the packaging of the system and lay it out on the table.
- The clinical staff supports the surgeon by passing various instruments/components to the surgeon.

For X3 and X4, pre- and post-service clinical staff work that overlaps with the application codes (15XX5, 15XX7) has been eliminated, as we believe the clinical staff time assigned in those codes is sufficient.

Do many physicians perform this service across the United States? Yes

---

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

---

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) that has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global
15002	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	1	N/A	3.65	1.83	1.83	75	20	20	000

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 15XX5	Tracking Number I5	Original Specialty Recommended RVU: <b>12.75</b>
		Presented Recommended RVU: <b>12.75</b>
Global Period: 090	Current Work RVU: N/A	RUC Recommended RVU: <b>10.97</b>

CPT Descriptor: Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. A skin cell suspension autograft is applied to 480 sq cm of the wound bed

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 93%

Description of Pre-Service Work: N/A, Pre-service time included in 15XX1

Description of Intra-Service Work: The physician applies the meshed STSG [Separately Coded] to the first 480sq cm of the wound bed and secures it using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).

The primary dressing is contoured and partially affixed at the lower aspect of the wound bed without covering the wound using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples). The physician then applies the SCSA, which is layered by aerosolization, over the top of the first 480 sq cm of the STSG and donor sites. The primary dressing is then completely secured over the wound bed using the surgeon's fixation of choice. Secondary dressings are applied in layers over the primary dressing and covered with thick absorbent gauze and elastic bandage.

Description of Post-Service Work: Postoperative work begins after the application of the wound dressing in the operating room and includes monitoring the patient's stability in the recovery room, writing orders, communicating with the family and other health care professionals (including written and oral reports and orders), and all hospital visits and services performed by the surgeon in the intensive care unit or on a suitable nursing floor.

Discharge management includes the surgeon's final examination of the patient, instructions for continuing care of the operative sites, and preparation of discharge records.

Following SCSA procedures, several post-op office visits are required for burn wound patients:

- Monitoring healing
- Multiple dressing changes
- Managing pain
- Return to work and activity counseling
- Assessing for possible infection
- Concomitant medication management
- Assessing compliance with therapy (PT/OT)
- Monitoring nutritional status and dietary intake

Additionally, all post-discharge office visits for this procedure, including removing sutures, changing dressings, and providing antibiotic and pain medication adjustments, for 90 days after the day of the operation are considered part of the postoperative work for this procedure.

Of note, SCSA procedures require more frequent post-operative secondary dressing changes. Following SCSA procedures, secondary dressings are changed 3 times per week (compared to epidermal autograft procedures which are changed 1 time per week) to monitor wound healing status and prevent/treat any infections.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

#### *15XX5 Rationale*

CPT code 15XX5, Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less is a 090-day global for the graft application component of the procedure for the trunk, arms and legs area of the body. We surveyed members of the ABA and trained surgeons. We received 30 non-conflicted completed surveys for 15XX5. The median number of procedures performed by survey respondents in the past twelve months for 15XX5 was 30.

The survey respondents indicated median pre-times as follows: 30 minutes evaluation prior to the day of surgery, 15 minutes evaluation on the day of surgery, 15 minutes positioning, 10 minutes SDW. The median survey intra-service time was 83 minutes, the 75<sup>th</sup> percentile intra-service time was 98 minutes. The immediate post-service time was 30 minutes. Survey respondents indicated that they typically see the patient four times in the inpatient facility after surgery with all four visits indicated at the 99232 level. Survey respondents indicated a 99238 for the discharge day. Survey respondents indicated a total of 4 post-operative office visits, with all four visits indicated at the 99213 level. The total survey time was 473 minutes.

The median survey work RVU was 10.97, the 25<sup>th</sup> percentile work RVU was 10.50 and the 75<sup>th</sup> percentile work RVU was 12.75.

The key reference code was 15110, Epidermal autograft, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children, which was selected by 16 of the 30 respondents as their key reference code. The second key reference code was 15100, Split-thickness autograft, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children (except 15050) which was selected by 9 of the respondents as their key reference service.

We believe that the survey respondents accurately accounted for the pre-operative work of the procedure and the post-operative work. However, we believe they underestimated the intra-service component of the procedure as well as the work RVU. We believe this error was the result of not understanding or having familiarity with the size of the wound application described in 15XX5. Graft application codes typically use 100 square centimeters for their size as is the case in the two key reference services. Given that burn surgeons rarely perform RUC surveys and are not as familiar with CPT descriptor nuances, we believe many survey respondents based their responses on a lower wound size of the reference code and underestimated the intra-service component. We also believe that many survey respondents crosswalked their estimated work RVUs for 15XX5 (treatment of 480 square centimeters) to the work RVUs of their chosen reference code (treatment of 100 square centimeters). This is indicated by the median work RVU response being the same as the primary key reference service, 15110, at 10.97 work RVUs.

The median work RVU of 10.97 with the median times would result in a negative IWPUT/WPUT. Negative IWPUT is commonly understood at the RUC as indicating a misvalued code and it does not make sense to use the median work RVU of 10.97 for 15XX5.

To adjust for this, our expert panel of reviewers and presenters are recommending the 75<sup>th</sup> work RVU of 12.75 and the 75<sup>th</sup> percentile intra-service time of 98 minutes. We believe these are more accurate assessments of the work for 15XX5.

Our recommended times and RVUs are summarized below:

Pre-service: package 4, difficult patient/difficult procedure with adjustments to the survey median time for positioning; evaluation=40 minutes, positioning=15 minutes, SDW=10 minutes

Intra-service time=98 minutes (survey 75<sup>th</sup> percentile)

Immediate post-service: package 9B, general anesthesia/complex procedure with adjustments to the survey median time=30 minutes

Inpatient Visits=4-99232

Discharge Visit=1-99238

Office Visits=4-99213

Work RVU=12.75

Total time=483

IWPUT=0.000, WPUT=0.026

As the IWPUT and WPUTs indicate, the recommended times and work RVUs are still very low compared to most other procedures. For comparison, the primary key reference service 15110 has an IWPUT of 0.091 and the second KRS has an IWPUT of 0.053. However, the 75<sup>th</sup> percentile work RVU is the highest value that aligns with general RUC recommendation expectations. The recommended work RVU of 12.75 also places 15XX5 in appropriate rank order with the recommended work RVU of 15.00 for 15XX7. 15XX7 is a more intense and involved procedure and a higher work RVU for 15XX7 is appropriate.

We also note that the codes will be on the new technology list and reviewed in three years when surgeons have more familiarity with the coding language and structure.

### ***Additional Information***

- The typical SCSA procedure could be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### **SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG**

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

#### **SCSA Standalone Technique**

A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.

- SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)

- SCSA prepared (reported with X3-X4)
- SCSA Application (reported with X5-X8):
  - The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
  - Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

Specialty General Surgery	Frequency 550	Percentage 47.82 %
---------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 135  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare comprises only 13% of total claims for service according to user data

Specialty Plastic Surgery	Frequency 65	Percentage 48.14 %
---------------------------	--------------	--------------------

Specialty General Surgery	Frequency 65	Percentage 48.14 %
---------------------------	--------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes:

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX8.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global
15002	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	1	N/A	3.65	1.83	1.83	75	20	20	000

		RUC Recommended RVU: <b>2.50</b>

CPT Descriptor: Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: At the time of the skin cell suspension autograft procedure, a 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. A skin cell suspension autograft is applied to an additional 480 sq cm of the wound bed. [Note: This is an add-on service. Only consider the additional work related to application of skin cell suspension autograft to wound and donor sites.]

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A, Add-on Code

Description of Intra-Service Work: Following the initial layered split-thickness skin graft (STSG) [Separately coded] and skin cell suspension autograft (SCSA) procedure of 480 sq cm (separately reported with base codes 15XX5), the physician applies the meshed split-thickness skin graft to the additional 480 sq cm of the wound bed and secures it using the surgeon's fixation of choice (e.g., surgical glue, sutures or staples).

The primary dressing is contoured and partially affixed at the lower aspect of the wound bed without covering the wound using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples). The physician applies the SCSA, which is layered by aerosolization over the top of the of the meshed STSG and donor sites. The primary dressing is then completely secured over the wound bed using the surgeon's fixation of choice. Secondary dressings are applied in layers over the primary dressing and covered with thick absorbent gauze and elastic bandage.

Description of Post-Service Work: N/A, Add-on Code

### **Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

### *General Summary*

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

### *15XX6 Rationale*

CPT code 15XX6, Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof is a ZZZ global for the additional graft application component of the procedure for the trunk, arms and legs area of the body. We surveyed members of the ABA and trained surgeons. We received 30 non-conflicted completed surveys for 15XX6. The median number of procedures performed by survey respondents in the past twelve months for 15XX6 was 25.

The median survey intra-service time was 25 minutes, the 75<sup>th</sup> percentile intra-service time was 65 minutes.

The median survey work RVU was 2.50, the 25<sup>th</sup> percentile work RVU was 2.37 and the 75<sup>th</sup> percentile work RVU was 8.88.

The key reference code was 15116, Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 14 of the 30 respondents as their key reference code. The second key reference code was 15101, Split-thickness autograft, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 8 of the respondents as their key reference service. Similar to 15XX5, we believe the survey respondents underestimated the intra-service component of the procedure as well as the work RVU. We believe this error was the result of not understanding or having familiarity with the size of the wound application described in 15XX5. Graft application codes typically use 100 square centimeters for their size as is the case in the two key reference services. Given that burn surgeons rarely perform RUC surveys and are not as familiar with CPT descriptor nuances, we believe many survey respondents based their responses on a lower wound size of the reference code and underestimated the intra-service component, and also crosswalked their estimated work RVUs to the work RVUs for 15XX6 (treatment of each additional 480 square centimeters) of their chosen reference code (treatment of each additional 100 square centimeters). This is indicated by the median work RVU response being the same as the primary key reference service, 15116, at 2.50 work RVUs.

The median work RVU of 2.50 with the median intra-service times would result in an inaccurate valuation of the work involved in 15XX6. The median survey intra-service time of 25 minutes is less than the median intra-service time of the key reference service despite describing application of the autograft to a wound surface area 4.8 times greater than that described in 15116 which clearly does not make sense.

To adjust for this, our expert panel of reviewers and presenters are recommending the 75<sup>th</sup> work RVU of 8.88 and the 75<sup>th</sup> percentile intra-service time of 65 minutes. We believe these are more accurate assessments of the work for 15XX6.

Our recommended times and RVUs are summarized below:

Intra-service time=65 minutes (survey 75<sup>th</sup> percentile)

Work RVU=8.88

Total time=65 minutes

IWPUT=0.137, WPUT=0.137

A work RVU of 8.88 is close to what the work RVU of key reference service code 15116 (2.50 work RVU X 5=10 work RVU) would be if multiplied by 5 to account for the difference in wound size treated by the graft . The recommended work RVU of 8.88 also places 15XX6 in appropriate rank order with the recommended work RVU of 9.50 for 15XX8. 15XX8 is a more intense and involved procedure and a higher work RVU for 15XX8 is appropriate.

We also note that the codes will be on the new technology list and reviewed in three years when surgeons have more familiarity with the coding language and structure.

### ***Additional Information***

- The typical SCSA procedure could be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

## SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

SCSA Standalone Technique
<p>A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.</p>
<ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• SCSA prepared (reported with X3-X4)</li> <li>• SCSA Application (reported with X5-X8): <ul style="list-style-type: none"> <li>○ The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.</li> <li>○ Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>○ Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.</li> </ul> </li> </ul>
SCSA-STSG Layering Technique
<ul style="list-style-type: none"> <li>• A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).</li> <li>• A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.</li> <li>• STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.</li> </ul>
<p><b>STSG</b></p> <ul style="list-style-type: none"> <li>• STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)</li> <li>• Harvested tissue is placed in a mesher and expanded.</li> <li>• The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.</li> <li>• <i>In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.</i></li> </ul> <p><b>SCSA</b></p> <ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• The SCSA is prepared (reported with X3-X4)</li> <li>• The process for applying the dressings with the layered technique is different.</li> <li>• After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).</li> <li>• The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.</li> </ul>

- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

### RVU recommendations

The specialty society believes that for X5-X6, enough survey respondents underestimated intra-service AND work RVUs to make the median intra-service and work RVUs values too low for all four codes. We are recommending for all four codes that the 75<sup>th</sup>% intra-service times and work RVUs be used. We believe this is largely due to the different size described in the new codes of 480cm compared to other established/existing codes that use 100cm and also because the typical patient vignette used yet a different total square cm of 3600 sq cm. The pre- and post-service times would not necessarily be impacted by this because those are more specific to the typical patient and survey respondents would have accurately listed their times in these service periods. The pre- and post-service times, including visits are also consistent with existing codes.

### Key Reference Services

We note that the code 15101, which is a KRS is listed in the RUC database as RUC reviewed in 1998 as is the parent code 15100. As a result, we included them in our RSL. These codes are also clearly the most similar to the survey codes, so we felt that it was important to include them. We note that the reviewer is correct the 1998 values were based on Harvard codes that were approved at the same time the new parent code 15100 was approved, however they were not surveyed together. However, they still are the most commonly used by burn surgeons and were deemed relevant as a result.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

SEE TABLE INCLUDED ON PAGES 12-14

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) that has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global
15002	Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, legs; first 100 sq cm or 1% of body area of infants and children	1	N/A	3.65	1.83	1.83	75	20	20	000

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 15XX7	Tracking Number I7	Original Specialty Recommended RVU: <b>15.00</b>
		Presented Recommended RVU: <b>15.00</b>
Global Period: 090	Current Work RVU: N/A	RUC Recommended RVU: <b>12.50</b>

CPT Descriptor: Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 78-year-old female sustained an acute partial thickness thermal burn on her head measuring 1800 sq cm. A skin cell suspension autograft is applied to 480 sq cm of the wound bed.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

---

Percent of survey respondents who stated they perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 97%

---

Description of Pre-Service Work: N/A, pre-service included in 15XX1.

Description of Intra-Service Work: The physician applies the meshed STSG [Separately coded] to the first 480sq cm of the wound bed and secures it using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).

The primary dressing is contoured and partially affixed at the lower aspect of the wound bed without covering the wound using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples). The physician then applies the SCSA, which is layered by aerosolization, over the top of the first 480 sq cm of the STSG and donor sites. The primary dressing is then completely secured over the wound bed using the surgeon's fixation of choice. Secondary dressings are applied in layers over the primary dressing and covered with thick absorbent gauze and elastic bandage.

Description of Post-Service Work: Postoperative work begins after the application of the wound dressing in the operating room and includes monitoring the patient's stability in the recovery room, writing orders, communicating with the family and other health care professionals (including written and oral reports and orders), and all hospital visits and services performed by the surgeon in the intensive care unit or on a suitable nursing floor.

Discharge management includes the surgeon's final examination of the patient, instructions for continuing care of the operative sites, and preparation of discharge records.

Following SCSA procedures, several post-op office visits are required for burn wound patients:

- Monitoring healing
- Multiple dressing changes
- Managing pain
- Return to work and activity counseling
- Assessing for possible infection
- Concomitant medication management
- Assessing compliance with therapy (PT/OT)

- Monitoring nutritional status and dietary intake. Additionally, all post-discharge office visits for this procedure, including removing sutures, changing dressings, and providing antibiotic and pain medication adjustments, for 90 days after the day of the operation are considered part of the postoperative work for this procedure.

Additionally, all post-discharge office visits for this procedure, including removing sutures, changing dressings, and providing antibiotic and pain medication adjustments, for 90 days after the day of the operation are considered part of the postoperative work for this procedure.

Of note, SCSA procedures require more frequent post-operative secondary dressing changes. Following SCSA procedures, secondary dressings are changed 3 times per week (compared to epidermal autograft procedures which are changed 1 time per week) to monitor wound healing status and prevent/treat any infections

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**General Summary**

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

#### *15XX7 Rationale*

CPT code 15XX7, Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less is a 090-day global for the graft application component of the procedure for the parts of the body besides trunk, arms, legs. We surveyed members of the ABA and trained surgeons. We received 30 non-conflicted completed surveys for 15XX7. The median number of procedures performed by survey respondents in the past twelve months for 15XX7 was 15.

The survey respondents indicated median pre-times as follows: 30 minutes evaluation prior to the day of surgery, 15 minutes evaluation on the day of surgery, 15 minutes positioning, 10 minutes SDW. The median survey intra-service time was 75 minutes, the 75<sup>th</sup> percentile intra-service time was 120 minutes. The immediate post-service time was 30 minutes. Survey respondents indicated that they typically see the patient four times in the inpatient facility after surgery with all four visits indicated at the 99232 level. Survey respondents indicated a 99238 for the discharge day. Survey respondents indicated a total of 4 post-operative office visits, with all four visits indicated at the 99213 level. The total survey time was 465 minutes.

The median survey work RVU was 12.50, the 25<sup>th</sup> percentile work RVU was 11.45 and the 75<sup>th</sup> percentile work RVU was 15.00.

The key reference code was 15115, Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children which was selected by 16 of the 30 respondents as their key reference code. The second key reference code was 15120, Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children (except 15050) which was selected by 10 of the respondents as their KRS.

Similar to 15XX5, we believe that the survey respondents accurately accounted for the pre-operative work of the procedure and the post-operative work. However, we believe they underestimated the intra-service component of the procedure as well as the work RVU. We believe this error was the result of not understanding or having familiarity with the size of the wound application described in 15XX7. Graft application codes typically use 100 square centimeters for their size as is the case in the two key reference services. Given that burn surgeons rarely perform RUC surveys and are not as familiar with CPT descriptor nuances, we believe many survey respondents based their responses on a lower wound size of the key reference service and underestimated the intra-service component, and also crosswalked their estimated work RVUs for 15XX7 (treatment of 480 square centimeters) to the work RVUs of their chosen reference code (treatment of 100 square centimeters).

The median work RVU of 12.00 with the median times would result in a negative IWPUT/WPUT. Negative IWPUT is commonly understood at the RUC as indicating a misvalued code and it does not make sense to use the median work RVU of 12.00 for 15XX7.

To adjust for this, our expert panel of reviewers and presenters are recommending the 75<sup>th</sup> work RVU of 15.00 and the 75<sup>th</sup> percentile intra-service time of 120 minutes. We believe these are more accurate assessments of the work for 15XX7. It also maintains what we believe is rank order with 15XX5 intra-service time by having more intra-service time instead of less as the median intra-service times for 15XX7 is less than the median intra-service time for 15XX5.

Our recommended times and RVUs are summarized below:

Pre-service: package 4, difficult patient/difficult procedure with adjustments to the survey median time for positioning; evaluation=40 minutes, positioning=15 minutes, SDW=10 minutes

Intra-service time=120 minutes (survey 75<sup>th</sup> percentile)

Immediate post-service: package 9B, general anesthesia/complex procedure with adjustments to the survey median time=30 minutes

Inpatient Visits=4-99232

Discharge Visit=1-99238

Office Visits=4-99213

Work RVU=15.00

Total time=467

IWPUT=0.030, WPUT=0.032

The IWPUT and WPUT at the recommended times and work RVUs match well with the primary key reference code which has an IWPUT of 0.044 and a WPUT of 0.032. The recommended work RVU of 15.00 also places 15XX7 in appropriate rank order with the recommended work RVU of 12.75 for 15XX5. 15XX7 is a more intense and involved procedure and a higher work RVU for 15XX7 is appropriate.

We also note that the codes will be on the new technology list and reviewed in three years when surgeons have more familiarity with the coding language and structure.

### ***Additional Information***

- The typical SCSA procedure could be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### **SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG**

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

### SCSA Standalone Technique

A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.

- SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)
- SCSA prepared (reported with X3-X4)
- SCSA Application (reported with X5-X8):
  - The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
  - Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
  - Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).

- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

### RVU recommendations

The specialty society believes that for X5-X6, enough survey respondents underestimated intra-service AND work RVUs to make the median intra-service and work RVUs values too low for all four codes. We are recommending for all four codes that the 75<sup>th</sup> intra-service times and work RVUs be used. We believe this is largely due to the different size described in the new codes of 480cm compared to other established/existing codes that use 100cm and also because the typical patient vignette used yet a different total square cm of 3600 sq cm. The pre- and post-service times would not necessarily be impacted by this because those are more specific to the typical patient and survey respondents would have accurately listed their times in these service periods. The pre- and post-service times, including visits are also consistent with existing codes.

### SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

SEE TABLE ON PAGES 12-14

### FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 17999, Unlisted procedure, skin, mucous membrane and subcutaneous tissue

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Plastic Surgery

How often? Sometimes

Specialty General Surgery

How often? Sometimes

Specialty How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 1150

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Plastic Surgery Frequency 550 Percentage 47.82 %

Specialty General Surgery Frequency 550 Percentage 47.82 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 135

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare comprises only 13% of total claims for service according to user data

Specialty Plastic Surgery Frequency 65 Percentage 48.14 %

Specialty General Surgery Frequency 65 Percentage 48.14 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) who has an 1800 sq cm burn on her head.

CPT Code	Descriptor	# of Units	Specialty Recommended wRVUs	CMS wRVUs	With .50 MPPR applied	Total wRVUs	Pre-service time	Intra-service time	Post-service time	Global

		Presented Recommended RVU: <b>9.50</b>
Global Period: ZZZ	Current Work RVU: N/A	RUC Recommended RVU: <b>3.00</b>

CPT Descriptor: Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: At the time of the skin cell suspension autograft procedure, a 78-year-old female sustained an acute partial thickness thermal burn on her head measuring 1800 sq cm. A skin cell suspension autograft is applied to an additional 480 sq cm of the wound bed. [Note: This is an add-on service. Only consider the additional work related to application of skin cell suspension autograft to wound and donor sites.]

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A, Add-on Code

Description of Intra-Service Work: Following the initial layered split-thickness skin graft (STSG) [Separately coded] and skin cell suspension autograft (SCSA) procedure of 480 sq cm (separately reported with base codes 15XX7), the physician applies the meshed split-thickness skin graft to the additional 480 sq cm of the wound bed and secures it using the surgeon's fixation of choice (e.g., surgical glue, sutures or staples).

The primary dressing is contoured and partially affixed at the lower aspect of the wound bed without covering the wound using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples). The physician applies the SCSA, which is layered by aerosolization over the top of the of the meshed STSG and donor sites. The primary dressing is then completely secured over the wound bed using the surgeon's fixation of choice. Secondary dressings are applied in layers over the primary dressing and covered with thick absorbent gauze and elastic bandage.

Description of Post-Service Work: N/A, Add-on Code

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
15116	<i>ZZZ</i>	2.50	<b>RUC Time</b>

CPT Descriptor Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
15121	<i>ZZZ</i>	2.00	<b>RUC Time</b>

CPT Descriptor Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
22632	<i>ZZZ</i>	5.22	<b>RUC Time</b>	1,744
<u>CPT Descriptor 1</u> Arthrodesis, posterior interbody technique, including laminectomy and/or discectomy to prepare interspace (other than for decompression), single interspace, lumbar; each additional interspace (List separately in addition to code for primary procedure)				
<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
37235	<i>ZZZ</i>	6.50	<b>RUC Time</b>	2,426

CPT Descriptor 2 Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure)

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
22634	<i>ZZZ</i>	7.96	<b>RUC Time</b>

CPT Descriptor Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace, lumbar; each additional interspace (List separately in addition to code for primary procedure)

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

**Number of respondents who choose Top Key Reference Code: 11      % of respondents: 36.6 %**

**Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 11      % of respondents: 36.6 %**

**TIME ESTIMATES (Median)**

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

### *General Summary*

CPT codes 15XX1-15XX8 were approved at the September 2023 CPT Editorial Panel meeting for inclusion in CPT 2025. The American Burn Association (ABA) conducted a random survey of ABA members along with a targeted survey of vendor trained burn surgeons. A total of 510 surveys were sent between the member list and the trained surgeon list.

The code set includes a 000-day global (15XX1) and an add-on code (15XX2) for the harvesting component of the procedure, an XXX global (15XX3) and an add-on code (15XX4) for the preparation component of the procedure, and two 90-day global and add-on codes for the application component to distinguish between body areas (trunk, arms, and legs-15XX5 and 15XX7; face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits-15XX6 and 15XX8).

All the procedures will be performed in the same operative session and will be billed together. The codes are constructed so the intra-service times for each step (harvesting, preparation, and application) are distinct; however, the pre-operative time for X1 for positioning and scrub, dress and wait, is overlapping with the positioning and scrub, dress and wait times for the 090-day global codes-X5 and X7. We removed the positioning and SDW times for X1. We also reduced the pre-operative evaluation times for both X1 to account for overlap with X5 and X7. However, there is distinct pre-operative education from the application codes (X5 and X7) for patients and families for both X1 and X3 as well as distinct consent from X5 and X7 for each of these. Similarly, the post-operative discharge summaries and instructions are distinct from the post-operative discharge summaries for X5 and X7 as related to X1 and X5 and X7 and so we retained time in the immediate post-service for X1.

### *15XX8 Rationale*

CPT code 15XX8, Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 480 sq cm or part thereof is a ZZZ global for the additional graft application component of the procedure for the body areas other than trunk, arms, and legs. We surveyed members of the ABA and trained surgeons. We received 30 non-conflicted completed surveys for 15XX8. The median number of procedures performed by survey respondents in the past twelve months for 15XX8 was 15.

The median survey intra-service time was 30 minutes, the 75<sup>th</sup> percentile intra-service time was 65 minutes.

The median survey work RVU was 3.00, the 25<sup>th</sup> percentile work RVU was 2.50 and the 75<sup>th</sup> percentile work RVU was 9.50.

The key reference code was 15116, Epidermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof which was selected by 11 of the 30 respondents as their key reference code. The second key reference code was 15101, Split-thickness autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure) which was selected by 11 of the respondents as their key reference service.

Similar to 15XX7, we believe survey respondents underestimated the intra-service component of the procedure as well as the work RVU. We believe this error was the result of not understanding or having familiarity with the size of the wound application described in 15XX7. Graft application codes typically use 100 square centimeters for their size as is the case in the two key reference services. Given that burn surgeons rarely perform RUC surveys and are not as familiar with CPT descriptor nuances, we believe many survey respondents based their responses on a lower wound size of the key reference service and underestimated the intra-service component, and also crosswalked their estimated work RVUs for 15XX8 (treatment of 480 square centimeters) to the work RVUs of their chosen reference code (treatment of 100 square centimeters).

The median work RVU of 3.00 with the median intra-service times would result in an inaccurate valuation of the work involved in 15XX8. The median survey intra-service time of 30 minutes is less than the median intra-service time of the key reference service despite describing application of the autograft to a wound surface area 4.8 times greater than that described in 15116 which clearly does not make sense.

To adjust for this, our expert panel of reviewers and presenters are recommending the 75<sup>th</sup> work RVU of 9.50 and the 75<sup>th</sup> percentile intra-service time of 65 minutes. We believe these are more accurate assessments of the work for 15XX8.

Our recommended times and RVUs are summarized below:

Intra-service time=65 minutes (survey 75<sup>th</sup> percentile)

Work RVU=9.50

Total time=65 minutes

IWPUT=0.146, WPUT=0.146

A work RVU of 9.50 is close to what the work RVU of key reference service code 15116 (2.50 work RVU X 5=10 work RVU) would be if multiplied by 5 to account for the difference in wound size treated by the graft. The recommended work RVU of 9.50 also places 15XX8 in appropriate rank order with the recommended work RVU of 8.88 for 15XX6. 15XX8 is a more intense and involved procedure and a higher work RVU for 15XX8 is appropriate.

We also note that the codes will be on the new technology list and reviewed in three years when surgeons have more familiarity with the coding language and structure.

### **Additional Information**

- The typical SCSA procedure could be performed with either SCSA alone or SCSA with STSG. It was recommended by the CPT Advisors and Panel Reviewers that we include the typical patient to include the layered technique (STSG (separately reported) and SCSA) in our CCA.
- A partial-thickness wound can be treated with SCSA alone.
- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- Based on the American Burn Association's National Burn Repository, approximately 90% of burn wounds are less than 20% TBSA (approximately 4,000 sq cm based on an average sized adult). Thus, a burn wound of 4,000 sq cm over a patient's trunks, arms and/or legs would be considered typical.
- SCSA procedures have a primary dressing, a secondary dressing and a tertiary dressing, consisting of additional dry gauze padding and a crepe bandage.
- The RECELL IFU notes that the primary dressing should not be disrupted for 5 days.
- The secondary dressing and outside tertiary dressing of gauze padding/crepe bandage may be changed during post-op office visits.

### **SCSA Standalone Technique Compared to Layered Technique with SCSA and STSG**

Provided below are two tables summarizing and comparing the work in a standalone SCSA technique and a layered technique with SCSA and STSG:

SCSA Standalone Technique
A partial-thickness wound, can be treated with SCSA alone. This scenario may be the case for facial burns and scald burns. It can also be the case for mixed depth wounds, where SCSA can be applied adjacent to a meshed STSG.
<ul style="list-style-type: none"> <li>• SCSA harvest area calculations performed and harvest taken (reported with X1-X2) (requires different depth than STSG)</li> <li>• SCSA prepared (reported with X3-X4)</li> <li>• SCSA Application (reported with X5-X8):</li> </ul>

- The primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with thick absorbent gauze and elastic bandage for additional protection.

### SCSA-STSG Layering Technique

- A full-thickness wound can be treated with a layered technique (meshed STSG and SCSA).
- A mixed-depth wound that has a full-thickness area and a partial-thickness area, can be treated with a layered technique (meshed STSG and SCSA) on the full-thickness area and concomitantly treated with SCSA alone on the partial-thickness area.
- STSG and SCSA have different intra-service work. The only duplicative work is application of secondary dressings.

#### STSG

- STSG harvest is taken (inherent in STSG CPT codes) (requires different depth)
- Harvested tissue is placed in a mesher and expanded.
- The meshed STSG is applied to the burn wound using surgical glue, sutures, or staples.
- *In a standalone STSG technique, the primary dressing and secondary dressings are applied in layers after the STSG is applied.*

#### SCSA

- SCSA harvest area calculations performed and separate harvest taken (reported with X1-X2) (requires different depth than STSG)
- The SCSA is prepared (reported with X3-X4)
- The process for applying the dressings with the layered technique is different.
- After the STSG graft is placed, the primary non-adherent, non-absorbent, small pore dressing (e.g., Telfa™Clear) is contoured to the wound bed using scissors and partially fixed only at the lower aspect of the burn wound (without covering the wound) using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- The SCSA is then applied through aerosolization to ensure even distribution over the prepared wound bed and donor site.
- Following application of the SCSA, the partially affixed primary dressing is then completely secured over the wound bed and along the wound edges using the surgeon's fixation of choice (e.g., surgical glue, sutures, or staples).
- Secondary absorbent and protective dressings are then applied in layers over the primary dressing and then covered with tertiary dressing, consisting of thick absorbent gauze and elastic bandage for additional protection.
- There is some pre- and post-service overlap, which is accounted for in multiple procedure payment reduction (MPPR)

### RVU recommendations

The specialty society believes that for X5-X6, enough survey respondents underestimated intra-service AND work RVUs to make the median intra-service and work RVUs values too low for all four codes. We are recommending for all four

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

Specialty Plastic Surgery	Frequency 4325	Percentage 47.01 %
---------------------------	----------------	--------------------

Specialty General Surgery	Frequency 4325	Percentage 47.01 %
---------------------------	----------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare comprises only 13% of total claims for service according to user data

Specialty Plastic Surgery	Frequency 575	Percentage 47.91 %
---------------------------	---------------	--------------------

Specialty General Surgery	Frequency 575	Percentage 47.91 %
---------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

BETOS Sub-classification Level II:

Musculoskeletal

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 15152

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

The table on the following pages includes the coding for the typical patient (35-year-old male) who has a 3600 sq cm burn on his trunk and arms (CPT codes 15002, 15003, 15110, 15101, 15XX1-15XX6):

- Pre-service, intra-service and post-service time and work RVUs for CPT 15002, 15003, 15110 and 15101 are based on the 2024 CMS Final Rule Physician Work file.
- Specialty recommended pre-service, intra-service and post-service time and work RVUs for 15XX1-15XX6.

If needed, an additional table can be created depicting coding for the typical patient (78-year-old female) who has an 1800 sq cm burn on her head.

Travis, MD, Jeffrey Carter, MD and James Holmes, MD.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: January 2024

CPT Code	Long Descriptor	Global Period
15XX1	Harvest of skin for skin cell suspension autograft, first 25 sq cm or less	000
15XX3	Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin	XXX
15XX5	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less	090
15XX7	Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less	090

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
15XX1	A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 1800 sq cm. A very thin (0.006 to 0.008 inches thick) 24 sq cm epidermal/dermal skin graft is harvested.
15XX3	A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 1800 sq cm. Four 2cm x 3cm strips of very thin (0.006 to 0.008 inches thick) epidermal/dermal skin graft undergo enzymatic processing, manual mechanical disaggregation of skin cells, and filtration to produce a skin cell suspension.
15XX5	A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3600 sq cm. A skin cell suspension autograft is applied to 480 sq cm of the wound bed.
15XX7	A 78-year-old female sustained an acute partial thickness thermal burn on her head measuring 1800 sq cm. A skin cell suspension autograft is applied to 480 sq cm of the wound bed.

- Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Consensus Expert Panel developed all recommendations by reviewing comparable codes PE inputs

- Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

15XX1 KRS: 15040  
15XX3 KRS: 99204  
15XX5 KRS: 15110  
15XX7 KRS: 15115

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

3. Is this code(s) typically reported with an E/M service?

No

See the Billed Together tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Due to this being new technology, some of the new codes have intra-service and post-service clinical and equipment times that vary from the existing comparison codes because these times are matching the increases in physician times from our surveys for the new codes compared to existing codes. As compelling evidence is typically determined for a family/set of codes and not on an individual code basis, these differences in time, however, have been determined as not causing an overall increase for the entire family. Of note, also, is the fact that the new codes describe different sizes of body area for codes 15XX5-15XX8 with 15XX5-15XX8 describing 480sq cm compared to the current codes used at 100sq cm, meaning that the equipment and clinical staff times for 15XX5 for example are not directly comparable to those of 15000.

See the PE compelling evidence guidelines on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (please see 2nd worksheet tab in PE spreadsheet), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

N/A

b. Service period (includes pre, intra and post):

N/A

c. Post-service period:

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

- 9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (please see 2nd worksheet tab in PE spreadsheet):

N/A

- 10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

- 11. [X] Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
12. [X] Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (please see 4th worksheet tab in PE spreadsheet), a paid invoice is required. Identify and explain the supply input and invoice here:

- 14. Are you recommending a PE supply pack for this recommendation? Yes or No. If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes

**FACILITY DIRECT PE INPUTS**

**SPECIALTY SOCIETY(IES):** ABA

**PRESENTER(S):** Taryn

Travis, MD, Jeffrey Carter, MD and James Holmes, MD.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	SA048	pack		5.02
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
  - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - Does the computer include code specific software that is typically used to provide the service(s)?

No

19. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment please explain here:

We used “other formula” for the camera, ED005 and allocated 5 minutes per post-operative encounter for codes 15XX5 and 15XX7 for a total of 20 minutes for each of the two codes. The 5 minutes of digital camera time is spent at each post-operative office visit as part of the tracking and documenting wound healing progress for assessment. The physician reviews the images taken in the first five minutes with the patient and/or caregiver(s) and tracks patient progression and recovery. The key reference codes for 15XX5 and 15XX7 also include 5 minutes per encounter.

**ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

**15XX5 Changes:**

-CA035 was changed to 0 minutes as not performed by clinical staff in the facility setting.

-Supply SA031, Suture removal kit, 1 unit was added. At the first post-op office visit after discharge, sutures are removed. This is only at that visit and only included for the two codes that include follow up visits-15XX5 and 15XX7.

-Supply SG020, Bandage, Kling, Sterile, was added at 40 units each. This is the total amount of sterile Kling bandage used for the first two post-operative visits, or 20 units per visit, for the first two visits.

**15XX7 Changes:**

-CA035 was changed to 0 minutes as not performed by clinical staff in the facility setting.

-Supply SA031, Suture removal kit, 1 unit was added. At the first post-op office visit after discharge, sutures are removed. This is only at that visit and only included for the two codes that include follow up visits-15XX5 and 15XX7.

-Supply SG020, Bandage, Kling, Sterile, was added at 40 units each. This is the total amount of sterile Kling bandage used for the first two post-operative visits, or 20 units per visit, for the first two visits.

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

January 2024

### Bladder Neck and Prostate Procedures – Tab 5

In September 2023, the CPT Editorial Panel created two Category I CPT codes to describe the insertion or removal of a temporary device to remodel the bladder neck and prostate using pressure to create necrosis and relieve lower urinary tract symptoms (LUTS) secondary to benign prostate hyperplasia (BPH).

#### **5XX05 Cystourethroscopy with insertion of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate**

The RUC reviewed the survey results from 60 urologists and determined that a work RVU of 3.10 appropriately accounts for the work required to perform this service. The RUC recommends 28 minutes pre-service evaluation time, 5 minutes positioning time, 8 minutes scrub/dress/wait time, 20 minutes intra-service time and 14 minutes post-service time. During the pre-service period, pre-operative imaging results are reviewed to evaluate the prostate volume and anatomy, blood and urine testing results are reviewed, and the procedure is discussed with the patient and anesthesiologist. During the intra-service period, the remodeling device must be placed precisely in the prostate to avoid the sphincter complex and ensure it will not migrate during the 5–7-day period in which it is left in place.

While the procedure is difficult and intense throughout the 20 minutes of intra-service time, the specialty society indicated that the survey 25<sup>th</sup> percentile work RVU of 3.91 was too high for this procedure compared to other services in the Medicare Physician Payment Schedule with similar intra-service time. Therefore, the specialty society recommended and the RUC agreed, that the recommended work RVU for CPT code 5XX05 should be crosswalked to CPT code 52284 *Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed* (work RVU = 3.10, 20 minutes intra-service time and 71 minutes total time). These procedures are similar in intensity and both require precise placement of an intraurethral device.

The RUC compared the surveyed code to the second top key reference service, 52281 *Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female* (work RVU = 2.75, 20 minutes intra-service time and 46 minutes total time) and noted that 71% of survey respondents indicated that overall, the surveyed code is somewhat more intense than code 52281 and 57% stated that that it would require more technical skill. The surveyed code requires more physician work and time to perform and is more intense and complex, thus appropriately valued higher than CPT code 52281.

For additional support, the RUC referenced MPC code 52441 *Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant* (work RVU = 4.00, 25 minutes intra-service time and 81 minutes total time), which requires more intra-service time and total time, thus places CPT code 5XX05 appropriately lower. **The RUC recommends a work RVU of 3.10 for CPT code 5XX05.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

s=Revised code I=New code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

### **5XX06 Catheterization with removal of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate**

The RUC reviewed the survey results from 60 urologists and determined that a work RVU of 1.48 appropriately accounted for the work required to perform this service. The RUC recommends 17 minutes pre-service evaluation time, 1 minute positioning time, 5 minutes scrub/dress/wait time, 10 minutes intra-service time and 10 minutes post-service time. While the procedure is intense throughout the entirety of the intra-service period, the specialty society indicated that the survey 25<sup>th</sup> percentile work RVU of 2.00 was too high for this procedure compared to other services in the Medicare Physician Payment Schedule with similar intra-service time. Therefore, the specialty society recommended and the RUC agreed, that CPT code 5XX06 should have a direct work RVU crosswalk to CPT code 27096 *Injection procedure for sacroiliac joint, anesthetic/steroid, with image guidance (fluoroscopy or CT) including arthrography when performed* (work RVU = 1.48, 11 minutes intra-service time and 38 minutes total time).

The RUC discussed how much time is required for the pre-service evaluation for code 5XX06, as it closely follows the performance of 5XX05. During the pre-service period for 5XX06, the physician reevaluates the urine culture results and typically orders a different antibiotic, considering that this procedure occurs in a non-facility setting, likely without intravenous access. Once again, the physician engages in a discussion with the patient about the procedure discussing possible hematuria, dysuria and symptoms since device placement, obtains consent for device removal without cystoscopic guidance, and ensures that the necessary equipment is available and properly set up.

Within the intra-service period, 5XX06 involves grasping the previously placed device and suture. These are then brought through a catheter that has been modified to facilitate device removal. The catheter is advanced into the device, and careful manipulation is required to pull the entire device back into the catheter. This maneuver demands significant care to ensure the safe and complete entry of the device into the catheter. Failing to do so may pose a risk of damaging the external urethral sphincter complex and the anterior urethra, particularly as the device is pulled out through the external sphincter in the urethra.

For additional support the RUC referenced codes 52000 *Cystourethroscopy (separate procedure)* (work RVU = 1.53, 10 minutes intra-service time and 40 minutes total time), 45305 *Proctosigmoidoscopy, rigid; with biopsy, single or multiple* (work RVU = 1.15, 10 minutes intra-service time and 40 minutes total time), and 64430 *Removal of nephrostomy tube, requiring fluoroscopic guidance (eg, with concurrent indwelling ureteral stent)* (work RVU = 1.10, 10 minutes intra-service time and 40 minutes total time), which all require similar intra-service time, total time and bracket the valuation for 5XX06. **The RUC recommends a work RVU of 1.48 for CPT code 5XX06.**

### **Practice Expense**

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for CPT codes 5XX05 and 5XX06. The RUC noted that the removal (5XX06) of the temporary device typically occurs 5-7 days after the insertion (5XX05), therefore the phone call in the pre-service period of 5XX06 was removed to eliminate any overlap with the post-service phone call in 5XX05. In addition, several supplies were removed to eliminate duplication with the packs and equipment minutes were adjusted since the specialty society indicated that a rigid cystoscope is used in code 5XX05, not a flexible cystoscope. The PE Subcommittee acknowledged the new high-cost supply input, iTIND device, as recommended for CPT code 5XX05. The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

s=Revised code I=New code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

**New Technology**

CPT codes 5XX05 and 5XX06 will be placed on the New Technology list to be reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

CPT Code:5XX05	Tracking Number J1	Original Specialty Recommended RVU: <b>3.36</b>
		Presented Recommended RVU: <b>3.10</b>
Global Period: 000	Current Work RVU: N/A	RUC Recommended RVU: <b>3.10</b>

CPT Descriptor: Cystourethroscopy with insertion of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68-year-old man has a 6-month history of lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH). The patient has an elevated International Prostate Symptom Score (IPSS), a low peak urinary flow rate (Qmax), and elevated postvoid residual volume. Ultrasound shows the patient's prostate is greater than 25 grams. His symptoms have failed to improve with pharmacologic therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient. Informed consent is reviewed and obtained. The length and type of anesthesia is reviewed with the anesthesiologist. Availability of all required instruments and supplies is verified. Assistance is provided in placing the patient in dorsal-lithotomy position. Padding is placed at elbows, knees, and ankles. Video equipment is checked for white balance. The implant deployment device is set up. The genital (penis, scrotum) and perineal area are prepped and draped. The surgeon scrubs and gowns. A surgical time-out is performed with the operating surgical team and anesthesia team.

Description of Intra-Service Work: A rigid cystoscope is inserted into the meatus and advanced into the bladder to completely assess the lower urinary tract including the anterior urethra, prostatic urethra, and bladder. The cystoscopic sheath is then left in place and the bridge and camera removed. The temporary ischemic remodeling device is then placed through the cystoscopic sheath and deployed into the bladder. The cystoscope is then removed. The cystoscope is again advanced under direct vision into the bladder in parallel to the ischemic remodeling device. The device is then carefully manipulated into appropriate position under direct vision using the device guidewire. Once the device is appropriately positioned with the anchoring leaflet posterior and just distal to the bladder neck, the cystoscope is removed. The guidewire is then removed exposing the anchoring sutures. The sutures are secured to the patient.

Description of Post-Service Work: Drapes are removed and the surgeon assists with transitioning the patient from dorsal-lithotomy to supine. The outcome of the surgery is discussed with the patient and a brief operative note is written. Patient stabilization is monitored in the recovery room. An operative report is dictated, and medical record documentation is completed. Aftercare treatment, including home restrictions (eg, activity, bathing), is discussed with the patient. Medications are reconciled, and orders for discharge medications are written. A discharge summary and instructions are completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

5XX05 represents a new category 1 code to describe the insertion of a temporary device to remodel the bladder neck and prostate using pressure to create necrosis and relieve lower urinary tract symptoms secondary to benign prostate hyperplasia. Prior to creation of this code, there was no code to describe this service and it had been reported with two unlisted CPT codes 55899 and 53899.

**Recommendation:**

We recommend a work RVU of 3.10 based on a crosswalk to CPT code 52284 Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed. 5XX05 had a strong survey with 60 respondents including 51 responses from the random survey. Intra-service times were similar across the targeted and random survey. Given the strength of the survey, the similarity across both surveyed populations, and our experience with the procedure the expert panel feels the intra-service time of 20 minutes is a reasonable estimate of intra-service time for this procedure. However, the survey respondents recommended 25<sup>th</sup> percentile RVW of 3.91 would have been the second highest RVW for a RUC reviewed code since 2011 with an intra-service time between 18 and 22 minutes. While the procedure is difficult and intense throughout the 20 minutes of intra-service time, the expert panel did not feel the survey recommended 25<sup>th</sup> percentile RVW was appropriate for the procedure. Therefore, the expert panel is recommending a crosswalk to code 52284 Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed. CPT code 52284 was RUC reviewed in 2023, with an intra-service time of 20 minutes and a total time of 71 minutes. With a recommended RVW of 3.10 the IWPUT for 5XX05 would be 0.102 which fits between the two key reference service code IWPUT values of 0.112 and 0.116.

Pre-time package 3 straightforward patient, difficult procedure and post-time package 8b iv sedation and complex procedure are selected. The patient is straightforward and the placement procedure is difficult. Care must be taken to ensure that the ischemic remodeling device is appropriately positioned completely within the prostatic urethra to ensure the patient has an acceptable outcome. Appropriate device placement is also required to ensure the patient will be able to tolerate the device being left in place post-operatively. Evaluation time and scrub, dress, wait time are reduced to be consistent with the survey median. The positioning time was increased as the patient will be positioned in dorsal-lithotomy.

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. N/A

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 53899, 55899

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Urology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 558

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. From the CCA submitted, "From June 1, 2022 to May 31, 2023, there were 558 procedures performed nationally, more than double the previous 12-month period."

Specialty Urology Frequency 558 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 350

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on the typical patient vignette and the prevalence of BPH in men 60 and over, we believe that the 350 of the number provided in a year will be in the Medicare population.

Specialty Urology Frequency 350 Percentage 100.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

SUMMARY OF RECOMMENDATION**

---

CPT Code:5XX06	Tracking Number J2	Original Specialty Recommended RVU: <b>1.88</b>
Global Period: 000	Current Work RVU: N/A	Presented Recommended RVU: <b>1.48</b>
		RUC Recommended RVU: <b>1.48</b>

CPT Descriptor: Catheterization with removal of temporary device for ischemic remodeling (ie, pressure necrosis) of bladder neck and prostate

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 68-year-old male previously underwent insertion of a temporary device for ischemic remodeling of the bladder neck and prostate to treat his lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH). The patient is scheduled to have the device removed via catheterization under local anesthetic.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The appropriate antibiotic(s) are selected and ordered. Timing and administration are confirmed. Results of admission testing and imaging are reviewed. The planned procedure and postoperative management are reviewed with the patient. Informed consent is reviewed and obtained. Availability of all required instruments and supplies is verified. The implant retrieval device is set up. The genital (penis, scrotum) and perineal area are prepped and draped. Local anesthetic is delivered to the urethra using lidocaine jelly. The surgeon scrubs and gowns. A surgical time-out is performed with the operating surgical team.

Description of Intra-Service Work: A grasper is placed through a urinary catheter to grip the retrieval suture. The suture is passed through the catheter. The catheter is then advanced over the retrieval suture through the urethra until it contacts the temporary device for ischemic remodeling. Firm, steady pressure is then applied to the retrieval suture until the temporary remodeling device is brought securely into the urinary catheter. The catheter, temporary remodeling device, and retrieval suture are then completely removed.

Description of Post-Service Work: Drapes are removed. The outcome of the procedure is discussed with the patient and an operative note is written. Aftercare treatment, including home restrictions (eg, activity, bathing), is discussed with the patient. Medications are reconciled, and orders for discharge medications are written. Discharge instructions are completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background:**

5XX06 represents a new category 1 code to describe the removal of a temporary device to remodel the bladder neck and prostate using pressure to create necrosis and relieve lower urinary tract symptoms secondary to benign prostate hyperplasia. Prior to creation of this code, there was no code to describe this service and it had been reported with two unlisted CPT codes 55899 and 53899.

**Recommendation:**

CPT Code:

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. From the CCA submitted, "From June 1, 2022 to May 31, 2023, there were 558 procedures performed nationally, more than double the previous 12-month period."

Specialty Urology	Frequency 558	Percentage 100.00 %
Specialty	Frequency	Percentage %
Specialty	Frequency	Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 350  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on the typical patient vignette and the prevalence of BPH in men 60 and over, we believe that the 350 of the number provided in a year will be in the Medicare population.

Specialty Urology	Frequency 350	Percentage 100.00 %
Specialty	Frequency	Percentage %
Specialty	Frequency 0	Percentage %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Procedures

BETOS Sub-classification:  
NA

BETOS Sub-classification Level II:  
NA

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number N/A

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 52441

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2024

CPT Code	Long Descriptor	Global Period
5XX05	Cystourethroscopy with insertion of temporary device for ischemic remodeling (i.e. pressure necrosis) of bladder neck and prostate	000
5XX06	Catheterization with removal of temporary device for ischemic remodeling (i.e. pressure necrosis) of bladder neck and prostate	000

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
5XX05	A 68-year-old man has a 6-month history of lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH). The patient has an elevated International Prostate Symptom Score (IPSS), a low peak urinary flow rate (Qmax), and elevated postvoid residual volume. Ultrasound shows the patient’s prostate is greater than 25 grams. His symptoms have failed to improve with pharmacologic therapy.
5XX06	A 68-year-old male previously underwent insertion of a temporary device for ischemic remodeling of the bladder neck and prostate to treat his lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH). The patient is scheduled to have the device removed via catheterization under local anesthetic.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

AUA advisors reviewed the procedure and required equipment

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

52441; 52310

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- 5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

- 6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

- 7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (please see 2<sup>nd</sup> worksheet tab in PE spreadsheet), please explain the difference here:

N/A

- 8. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

In the pre-service period, clinical staff complete pre-service referrals, coordinate pre-operative testing, schedule the procedure in the facility, provide pre-operative education and complete necessary pre-operative prescriptions.

- b. Service period (includes pre, intra and post):

There is no facility clinical staff time requested.

- c. Post-service period:

In the post-service period clinical staff calls the patient to check on the patient post-procedurally and answer any questions or concerns.

- 9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (please see 2<sup>nd</sup> worksheet tab in PE spreadsheet):

N/A

- 10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- 11.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
- 12.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
- 13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

- 14. Are you recommending a PE supply pack for this recommendation? Yes or No.  
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

N/A

## CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

3. Vital signs including heart rate, respiratory rate, blood pressure, oxygen saturation and temperature are obtained prior to administering anesthesia and performing an invasive procedure.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

Clinical staff arrange pre-operative testing and help schedule necessary pe-operative appointments.  
Clinical staff call the patient to discuss pre-operative instructions.

b. Service period (includes pre, intra and post):

CPT Code 5XX05: Pre-operatively, clinical staff check the patient in, obtain vital signs, start an IV and help prepare the patient in dorsal lymphotomy for the procedure. The patient is anesthetized using both an ultrasound guided prostatic block with injectable lidocaine and intraurethral lidocaine to allow for tolerance of the procedure in the non-facility setting. During the intra-service period, a clinical staff member must directly assist the surgeon to perform the procedure. Following the procedure, clinical staff monitor the patient in the recovery area, clean the room and scope, check the strings attached to the device at the urethral meatus and review post-operative instructions.  
CPT Code 5XX06: Pre-operatively, clinical staff check the patient in, obtain vital signs, start an IV and help prepare the patient for the procedure. The patient is anesthetized using intraurethral lidocaine. During the intra-service period, a clinical staff member must directly assist the surgeon to perform the

AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

**Guided High Intensity Focused Ultrasound – Tab 6**

In September 2023, the CPT Editorial Panel created a new Category I code to describe magnetic resonance image guided high intensity focused ultrasound intracranial ablation for treatment of a severe central tremor that is recalcitrant to other medical treatments. This service is typically performed by a neurosurgeon without the involvement of a separate radiologist. This new code replaces the existing Category III code, 0398T.

***6XX00 Magnetic resonance image guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of target, intracranial, including stereotactic navigation and frame placement, when performed***

The RUC reviewed the survey results from 31 neurosurgeons who specialize in functional neurosurgery and recommends a work RVU of 18.95 based on the survey 25<sup>th</sup> percentile. The RUC recommends 65 minutes of pre-service evaluation time, 30 minutes positioning time, 15 minutes scrub/dress/wait time, 150 minutes intra-service time, and 40 minutes immediate post-service time, and 300 minutes total time. The pre-service evaluation time for this procedure includes additional coordination with multiple healthcare providers for preoperative planning and approach related to the extensive pre-procedure CT and MR scans. The patient history, laboratory results, and procedure plan are reviewed in detail and communicated with the patient. Further, preoperative MRI volumetric planning is performed just prior to the procedure as well as preparing the MRI and accompanying software. The positioning time requires rigid skull fixation to the MRI equipment ensuring no gaps or bubbling between the skin and the rubber membrane of the fixture. Once secured, seamless circulation of the cool water surrounding the skull is assessed. The scrub/dress/wait time is attributed to the work of administering the local anesthesia, observing anesthesia care, in addition to dressing and scrubbing for the procedure. Further, the RUC determined that the total post service time of 40 minutes was appropriate as it includes additional work related to disconnecting the patient from the treatment equipment and removal of hardware. In addition, documentation that includes intraoperative imaging and treatment will require additional time that is not included in the 8b post-time package. Postoperative work on the day of the procedure will also include the evaluation and management services performed after discharge from recovery to observation for critical monitoring of the patient's neurological status later the same day. Separate Evaluation and Management (E/M) services are not typically reported with this service.

For this procedure, the patient is in the MRI suite and the pre-service and intra-service MR and CT images are used to determine the target focal point and determine baseline tremor symptoms. Low intensity sonication is initiated to align the transducer to the anatomic target, raising the tissue temperature, and assessed with real-time MR imaging. This process is repeated until the heat spot coincides with the anatomic target. The tissue temperature is increased, and the physician evaluates the tremor and adjusts the treatment accordingly based on the physiological response. Once the treatment location is precisely identified, sonication is applied to raise the temperature once again while continuous patient monitoring occurs until the desired treatment and resolution of the tremor is achieved.

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 61736 *Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; single trajectory for 1 simple lesion* (work RVU = 19.06, 180 minutes intra-service, and 353 minutes total time) and 61737 *Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; multiple trajectories for multiple or complex lesion(s)* (work RVU = 22.67, 235 minutes intra-service, and 474 minutes total time). The KRS codes require similar intensive pre-service work, however, a portion of the intra-service work of the KRS codes can be attributed to surgical exposure and closure as well as intraoperative patient transport, both of which are less intense activities than the intra-service work of the surveyed code. Specifically, the surveyed code should be valued similarly to KRS code 61736 given the greater complexity and medical decision making involved despite lower intra-service and total time. Survey respondents, who had experience with the key reference codes, indicated that the surveyed code was identical or somewhat more intense than code 61736 further supporting the recommended work RVU.

For additional support, the RUC compared the surveyed code to CPT code 33894 *Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; across major side branches* (work RVU = 18.27, 134 minutes intra-service, and 284 minutes total time). The surveyed code is valued appropriately higher than the comparison code given the longer intra-service and total time despite slightly lower overall intensity and complexity. **The RUC recommends a work RVU of 18.95 for CPT code 6XX00.**

**Practice Expense**

The Practice Expense (PE) Subcommittee reviewed the facility-only service and agreed with the standard inputs for extensive use of clinical staff time during the pre-service period. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

**New Technology**

CPT code 6XX00 will be placed on the New Technology list to be reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Descriptor: Magnetic resonance image guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of target, intracranial, including stereotactic navigation and frame placement, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 73-year-old male with a 21-year history of essential tremor has progressed to disabling action tremor in both upper extremities despite repeated trials of several anti-tremor medications. The patient has age-typical comorbidities with significant disabilities due to essential tremor despite medical treatment. At this stage, he was referred for magnetic resonance guided focused ultrasound for intracranial ablation (thalamotomy).

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review pre-operative work-up, with particular attention to prior CT and MR scans for treatment planning. Select and order the appropriate antibiotic(s) and confirm timing and administration, if required. Assure appropriate selection, timing, and administration of DVT prophylaxis. Determine the need for preprocedure sedative and pain medication. Insert Foley catheter when appropriate. Confirm the therapeutic focused ultrasound system is connected to the diagnostic MRI system and quality assurance testing is performed to ensure the combined MR-guided focused ultrasound equipment is operating correctly. Verification is made that all necessary surgical instruments, supplies, and specialized devices are available in the preprocedure area and MR suite. The need for magnetic field precautions of all staff during portions of the procedure is reviewed with the procedure team. The surgical risks, and expected outcome are reviewed with the patient and family, and informed consent is obtained. The physician discusses the procedure in more detail and instructs the patient on use of the emergency shut off button. The patient's head is shaved and any/all scars are marked on the skin. A stereotactic frame is attached to the head under local anesthesia. To increase the sonicated area, the head pins are fixed as low as possible (approximately 2 cm above the upper edge of the orbit and just above the attachment of the posterior cervical muscles). After the frame is in place, the rubber membrane is fixed tightly around the patient's head to prevent air bubbles between it and the skin. The patient then enters the magnetic resonance imaging suite and is positioned on the treatment table. The frame is affixed to the ultrasound transducer and moved in three dimensions to align the expected target near the center of the ultrasound helmet. The membrane is then affixed and sealed to the ultrasound helmet and the space between the scalp and transducer is filled with degassed water from the circulating water system. The water is checked and managed to remove any air bubbles. A surgical "time out" is performed with the treatment team.

Description of Intra-Service Work: The previous high-resolution MR and CT images are imported to the workstation and reviewed by the treating physician to identify and mark any calcifications within the brain that can interfere with the ultrasound beam paths and must be excluded from treatment. The sinuses are marked and any beams potentially traversing those spaces are also disabled.

Initial planning images of the patient are acquired and pre-treatment CT and real-time MR images are fused. The target is identified on the MR images and compared to the focal point of the transducer. Realignment of the stereotactic frame to the transducer is made to place the target within 5mm of the transducer focal point. The patient's tremor symptoms are evaluated as a baseline for comparison throughout the procedure.

Low intensity (non-treatment level) sonications are initiated to align the focal point of the transducer to the anatomic target. Sonications are applied to raise tissue temperature by 2-5°C. The heat is measured with real time MR imaging and the transducer is re-aimed to align the actual heat spot in the patient with the intended target. This process is iteratively repeated until the actual heat spot is coincident with the anatomic target.

Next, the energy of the transducer is increased to heat the target by 8-14°C. During this phase, the physician evaluates the response of the patient's tremor and the emergence of any potential unwanted side effects. Based on the patient's physiologic response, the physician evaluates the likely structure being heated and adjusts the treatment accordingly.

The process is repeated as needed and the transducer is re- aimed until the treatment is applied at the proper physiologic location. Once the treatment location is precisely identified, sonication(s) are applied to raise the temperature to approximately 60°C. Continuous patient monitoring evaluates symptom relief and any potential side effects. Sonications are repeated until the desired treatment effect is noted.

Description of Post-Service Work: A final set of MR images is acquired. The water is then drained from the transducer and the patient's headgear is disconnected. The stereotactic frame is removed and sterile dressings are applied. The patient is transferred from the MR room to the recovery room and postoperative recovery care is discussed with nursing staff. The procedure and outcome are discussed with the family in the waiting area. A brief procedure note is written. A procedure report is dictated that includes the documentation of imaging and treatments. The patient's neurological status is assessed. A postoperative progress note is written in the recovery room. The patient is discharged from the recovery room to observation care, as appropriate. Orders for continued monitoring are written and discussed with the nursing staff. Later the same day, the patient is reassessed in the observation area and interval chart notes with an emphasis on neurological monitoring are completed as necessary. The patient's pain score is assessed. Patient and family questions are answered. Discharge orders and progress notes are written and discussed with the patient, family and nursing staff.

**Modifier -51 Exempt Status**

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

**New Technology/Service:**

Is this new/revised procedure considered to be a new technology or service? Yes

**TOP KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
61736	000	19.06	RUC Time

CPT Descriptor Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; single trajectory for 1 simple lesion

**SECOND HIGHEST KEY REFERENCE SERVICE:**

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
61737	000	22.67	RUC Time

CPT Descriptor Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; multiple trajectories for multiple or complex lesion(s)

**KEY MPC COMPARISON CODES:**

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
37244	000	13.75	RUC Time	13,555

CPT Descriptor 1 Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>

CPT Descriptor 2

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
33894	000	18.27	RUC Time

CPT Descriptor Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; across major side branches

**RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:**

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 23      % of respondents: 74.1 %

Number of respondents who choose 2<sup>nd</sup> Key Reference Code: 7      % of respondents: 22.5 %

**TIME ESTIMATES (Median)**

	CPT Code: <u>6XX00</u>	Top Key Reference CPT Code: <u>61736</u>	2nd Key Reference CPT Code: <u>61737</u>

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

## Background

For CPT 2025, the CPT Editorial Panel approved deletion of Category III code 0398T and establishment of new Category I code 6XX00 for reporting magnetic resonance image-guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of and intracranial target to treat patients who have essential tremor that has progressed to disabling action tremor that is refractory to anti-tremor medications. The new code includes stereotactic navigation (61781) and head frame placement (61800). In addition, MRA and MRI imaging (70540, 70542, 70543, 70544, 70545, 70546, 70551, 70552, 70553) may not be separately reported when performed during the same session.

## Survey Process

A standard 0-day global survey was sent to the AANS/CNS section of neurosurgeons who self-identified as providing stereotactic and functional neurosurgery. Nearly all of the survey's 31 participating surgeons indicated recent experience, either in the past 12 months or within the last five years, in performing the survey code. Furthermore, a majority of the respondents had also performed their chosen reference code within the past 12 months, reinforcing their capability to evaluate the new code 6XX00 in comparison to the reference code.

## Recommendation

We recommend the survey 25<sup>th</sup> pctl work RVU of 18.95 for code 6XX00.

## Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Package time of 40 minutes plus an additional 25 minutes (total = 65 minutes). This operation includes atypical additional coordination with multiple healthcare providers, not only for preoperative planning, but also regarding postoperative care. Preoperative MRI volumetric planning is performed just prior to the procedure. Planning for the procedure and coordination with the healthcare delivery team add a significant amount of time to the work typically assigned to Package 4 – as described in the preoperative work description. In support of 65 minutes (survey median time), please see similar codes 61736 (*Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; single trajectory for 1 simple lesion*) and code 61566 (*Craniotomy with elevation of bone flap; for selective amygdalohippocampectomy*) that include 75 minutes of preoperative evaluation time. These codes similarly include extensive evaluation and planning for the surgical approach in addition to coordination with other health care providers. In addition, the recommended evaluation time of 65 minutes is similar to the evaluation time for code 33889 (*Open subclavian to carotid artery transposition performed in conjunction with endovascular repair of descending thoracic aorta, by neck incision, unilateral*) which involves similar preoperative evaluation and planning to review MR, CT and CT with 3D reconstructions, along with many other imaging studies. A majority of major procedures do not include the atypical extensive imaging, imaging review, multi-provider involvement, and preoperative planning required in 6XX00. The additional 25 minutes is more than justified.

Positioning time: Package time of 3 minutes plus an additional 27 minutes (total = 30 minutes).

The additional time includes positioning the patient relative to the imaging and high intensity ultrasound equipment, along with application of devices to affix the head to the equipment and to the operating table. After the patient's head is shaved and any/all scars are marked on the skin. A stereotactic frame is attached to the head under local anesthesia. This is not separately reportable. To increase the sonicated area, the head pins are fixed as low as possible (approximately 2 cm above the upper edge of the orbit and just above the attachment of the posterior cervical muscles). This special positioning of the frame takes additional time. After the frame is in place, a rubber membrane is fixed tightly around the patient's head to prevent air bubbles between it and the skin. The patient then enters the MRI suite and is positioned on the treatment table. A frame is affixed to the ultrasound transducer and moved in three dimensions to align the expected target near the center of the ultrasound helmet. The membrane is then affixed and sealed to the ultrasound helmet and the

space between the scalp and transducer is filled with degassed water from the circulating water system. The water is checked and managed to remove any air bubbles. In support of a total of 30 minutes (survey median time), please see similar codes 61736 (*Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; single trajectory for 1 simple lesion*), 61737 (*Laser interstitial thermal therapy (LITT) of lesion, intracranial, including burr hole(s), with magnetic resonance imaging guidance, when performed; multiple trajectories for multiple or complex lesion(s)*), 61697 (*Surgery of complex intracranial aneurysm, intracranial approach; carotid circulation*), and code 61700 (*Surgery of simple intracranial aneurysm, intracranial approach; carotid circulation*) that include 30 minutes of preoperative positioning. In addition, the recommended positioning time of 30 minutes compares well with many other codes that have 25-35 minutes, such as laparoscopy procedures and procedures that include extensive equipment in the surgical field or require intraoperative repositioning.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

### Post-time

Package 8b (IV Sedation/ Complex Procedure) is selected with the following modifications:

Package time of 28 minutes plus an additional 12 minutes (total = 40 minutes) is recommended, consistent with the survey median time. Package 8b includes 1 minutes for transfer of a supine patient off the table, but does not include the additional work related to disconnecting the patient from the treatment equipment and removal of hardware. In addition, documentation that includes intraoperative imaging and treatment will require time that is not included in the basic 8b package. Postoperative work on the day of the procedure will also include the evaluation and management services performed after discharge from recovery to observation or floor for monitoring the patient's neurological status later the same. The total time of 40 minutes for these services is supported

### Comparison to Key Reference Services (KRS)

Both KRS codes emphasize the extended time required for pre- and post-operative tasks, which are notably similar to 6XX00. The IWPUT for the KRS procedures is lower than that of 6XX00, as some of the KRS intraservice time is allocated to exposure and closure, as well as intraoperative patient transport, which is demanding but not as intense as the actual intraoperative treatment that is comparable to the survey code 6XX00.

### MPC Code Comparison

There are many MPC codes that have a 0-day global assignment, but none that approach the work required of 6XX00. This makes finding appropriate MPC codes with similar total work difficult. MPC code 37244 is performed in a cath lab to embolize or occlude vessel hemorrhage or lymphatic extravasation. Code 37244 requires significantly less total time and intratime and appropriately has a significantly lower RVW. However, the relative intensity of 37244 is comparable to 6XX00.

CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	Eval	POSIT	SDW	INTRA	IMM POST
<b>37244</b>	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation	13.75	0.135	166	23	3	5	90	45
<b>6XX00</b>	Magnetic resonance image guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of target, intracranial, including stereotactic navigation and frame placement, when performed	18.95	0.105	300	65	30	15	150	40

**Additional Code Comparison that Bracket the Recommendation**

RUC Review	CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	EVAL	POSIT	SDW	INTRA	IMM POST
2021	33894	Endovascular stent repair of coarctation of the ascending, transverse, or descending thoracic or abdominal aorta, involving stent placement; across major side branches	18.27	0.113	284	60	15	15	134	60
2021	49596	Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated	18.67	0.103	270	40	15	15	160	40
	<b>6XX00</b>	Magnetic resonance image guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of target, intracranial, including stereotactic navigation and frame placement, when performed	18.95	0.105	300	65	30	15	150	40
2016	93590	Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, mitral valve	21.70	0.148	223	40	3	15	135	30

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0398T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty neurosurgery                      How often? Sometimes

Specialty                                      How often?

Specialty                                      How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Per the code change application, "For the time period June 1, 2022-May 31, 2023 the service was performed commercially 2,002 times in the US."

Specialty neurosurgery                      Frequency 2000                      Percentage 100.00 %

Specialty                                      Frequency                                      Percentage                                      %

Specialty                                      Frequency                                      Percentage                                      %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Specialty estimate of 50% of the recent national utilization

Specialty neurosurgery                      Frequency 1000                                      Percentage 100.00 %

Specialty                                      Frequency                                      Percentage                                      %

Specialty                                      Frequency 0                                      Percentage                                      %

Do many physicians perform this service across the United States? No

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Major procedure

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 61720

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 01/2024

CPT Code	Long Descriptor	Global Period
6XX00	Magnetic resonance image guided high intensity focused ultrasound (MRgFUS), stereotactic ablation of target, intracranial, including stereotactic navigation and frame placement, when performed	000

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
6XX00	A 73-year-old male with a 21-year history of essential tremor has progressed to disabling action tremor in both upper extremities despite repeated trials of several anti-tremor medications. The patient has age-typical comorbidities with significant disabilities due to essential tremor despite medical treatment. At this stage, he was referred for magnetic resonance guided focused ultrasound for intracranial ablation (thalamotomy).

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

A joint RVS Committee representing the societies utilized a consensus panel to develop recommended inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The key reference code 61736 is used as a reference service.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- 5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

- 6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

The society is requesting Facility “extensive use of clinical staff” for this 0-day service (30 minutes). Although this is not an invasive procedure (except for attaching a head frame to the patient's skull), it is still a major procedure and will require clinical staff activities as described in question 8 below.

- 7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (please see 2<sup>nd</sup> worksheet tab in PE spreadsheet), please explain the difference here:

n/a

- 8. Please provide a brief description of the clinical staff work for the following:  
a. Pre-Service period:

CA001 The clinical staff will complete pre-service diagnostic and referral forms, including scheduling preoperative clearance and securing insurance prior authorization.

CA002 Clinical staff coordinates communications between the multidisciplinary team caring for this patient in preparation for the procedure. Preoperative labs and imaging and historical imaging are collected for preoperative planning by the neurosurgeon.

CA003 The specialized supplies, devices, and equipment are coordinated and scheduled.

CA004 The patient and family will be educated about the procedure including the details of affixing the head frame and cooling device and being affixed to the MR for treatment.

CA005 The patient and family are reminded of the scheduled procedure, given last minute instructions for prep and reporting for the procedure and confirmation of any required adjustments to medications.

- b. Service period (includes pre, intra and post):

n/a

- c. Post-service period:

n/a

- 9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (please see 2<sup>nd</sup> worksheet tab in PE spreadsheet):

n/a

- 10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

n/a

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
12.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

n/a

14. Are you recommending a PE supply pack for this recommendation? Yes or No.  
 If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

n/a

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

n/a

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

n/a

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

n/a

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
  - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - Does the computer include code specific software that is typically used to provide the service(s)?

n/a

19. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment please explain here:

n/a

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

*The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.*

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

### Percutaneous Radiofrequency Ablation of Thyroid – Tab 7

At the September 2023 CPT Editorial Panel meeting, CPT codes 6XX01 and 6XX02 were created to report percutaneous radiofrequency ablation of one or more thyroid nodule(s). This service is typically performed on patients presenting with dysphagia with certain thyroid conditions, most commonly benign nodules located in one lobe or the isthmus. Employing a minimally invasive surgical technique, a physician will target and remove abnormal or overactive thyroid tissue as a form of treatment for symptom relief. CPT code 6XX01 represents the ablation of a thyroid nodule(s) in one lobe of the thyroid or the isthmus, and CPT code 6XX02 is its corresponding add-on code for each additional thyroid nodule in the contralateral lobe. Both codes in this family were surveyed for the January 2024 RUC meeting.

#### **6XX01 Ablation of 1 or more thyroid nodule(s), one lobe or the isthmus, percutaneous, including imaging guidance, radiofrequency**

The RUC reviewed the results from 156 respondents from a multi-disciplinary survey and determined that a work RVU of 5.75 appropriately accounted for the physician work required to perform this service. The RUC recommends 33 minutes pre-service evaluation time, 10 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 40 minutes intra-service time and 20 minutes immediate post-service time, equaling 113 minutes total time. Based on the discussion at pre-facilitation, the RUC indicated that the survey 25<sup>th</sup> percentile work RVU of 6.00 was too high for the physician work involved with this procedure. Therefore, the specialty societies recommended that CPT code 6XX01 be valued based on a direct work RVU crosswalk to CPT code 52351 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic* (work RVU = 5.75, 45 minutes intra-service time and 118 minutes total time). These procedures have similar intensity, similar intra-service time, and comparable physician work.

During the pre-service time period, results of pre-operative imaging are reviewed to evaluate the chosen nodule(s) for treatment, the patient is positioned supine on the procedure table, and ultrasound guidance is performed to ensure the patient's neck has been properly extended and rotated at an oblique angle to identify the target nodule(s) and establish an appropriate window for treatment. During the intra-service time period, an ablation probe is advanced into the target lesion(s) under ultrasound guidance using an in-plane oblique angle. The probe is intermittently repositioned while treating the lesion(s) using a thyroid-specific ablation technique.

The specialty society selected pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *8B IV Sedation/Complex Procedure*. Both standard time packages were modified to more accurately reflect pre- and post-service time involved with this service. Seven minutes of pre-service positioning time were added to the pre-service time package in accordance with the median survey time of ten minutes. Additional time is necessary to safely position the patient, extended and rotated in a manner such that the lesion is appropriately positioned within the treatment window. The extra time also accounts for the re-positioning of the patient and their neck during the procedure.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

requiring additional ultrasound scanning. Five minutes of pre-service scrub/dress/wait time were removed from the pre-service time package in accordance with the median survey time of ten minutes. Eight minutes were removed from the immediate post-service time package in accordance with the median survey time of twenty minutes. The RUC agreed with all modifications to both the pre-service and post-service time packages.

To support the recommended work RVU value of 5.75, the RUC compared the surveyed code to the top key reference service and MPC code 36475 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated* (work RVU = 5.30, 45 minutes intra-service time and 94 minutes total time). The RUC noted that CPT code 6XX01 requires more total time overall and is more intense and complex to perform than CPT code 36475, thus appropriately valued higher. Though both services involve radiofrequency ablation, the RUC noted that the surveyed code employs a complex in-plane oblique approach to identify and treat the target nodule(s) and recognized that intermittent probe repositioning is necessary when conducting repetitive small-volume overlapping ablations involved with this more intense thyroid-specific ablation technique. For additional support, the RUC referenced CPT codes, 31255 *Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior)* (work RVU = 5.75, 45 minutes intra-service time and 98 minutes total time) and 28003 *Incision and drainage below fascia, with or without tendon sheath involvement, foot; multiple areas* (work RVU = 5.28, 45 minutes intra-service time and 130 minutes total time). Both referenced services have similar total time and similar intra-service time as the surveyed code and therefore the surveyed code should be valued similarly. **The RUC recommends a work RVU of 5.75 for CPT code 6XX01.**

***6XX02 Ablation of 1 or more thyroid nodule(s), additional lobe, percutaneous, with imaging guidance, radiofrequency (List separately in addition to code for primary service)***

The RUC reviewed the results from 145 respondents from the multi-disciplinary survey and determined that a work RVU of 4.25 appropriately accounted for the physician work required to perform this service. CPT code 6XX02 is an add-on code describing the radiofrequency of each additional thyroid nodule in the contralateral lobe or isthmus. The RUC recommends 45 minutes of intra-service time, which also represents the total time. Based on the discussion at pre-facilitation, the RUC indicated that the survey 25<sup>th</sup> percentile work RVU of 4.92 was too high for the physician work involved with this procedure. Therefore, the specialty societies recommended that CPT code 6XX02 should be valued based on a direct work RVU crosswalk to CPT code 37223 *Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* (work RVU = 4.25, 45 minutes of intra-service and 47 minutes total time). These procedures have similar intensity, identical intra-service time, and comparable physician work.

During the intra-service time period, an ultrasound evaluation of the contralateral lobe is performed to locate the new benign target lesion(s). There is typically increased difficulty in locating a second lesion due to an obstructed view resulting from overlying gas bubbles from the prior ablation. CPT code 6XX01, an ablation probe is advanced into the target lesion(s) under ultrasound guidance using an in-plane oblique angle. The probe is intermittently repositioned while treating the lesion(s) using the same thyroid-specific ablation technique as CPT code 6XX01.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

To support the recommended work RVU value of 4.25, the RUC compared the surveyed code to the top key reference service 37186 *Secondary percutaneous transluminal thrombectomy (eg, nonprimary mechanical, snare basket, suction technique), noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injections, provided in conjunction with another percutaneous intervention other than primary mechanical thrombectomy (List separately in addition to code for primary procedure)* (work RVU = 4.92, 60 minutes intra-service and total time). The RUC agreed with survey respondents and recognized that while CPT code 6XX02 involves greater complexity and intensity than CPT code 37186, the surveyed code requires less total time and physician work to perform overall than the top key reference service, and thus is appropriately valued lower to maintain relativity. **The RUC recommends a work RVU of 4.25 for CPT code 6XX02.**

### Practice Expense

The Practice Expense (PE) Subcommittee reviewed CPT codes 6XX01 and 6XX02 and made modifications to several supply inputs to appropriately account for the physician and three clinical staff performing the procedure during the intra-service of the service period (L041A *Vascular Interventional Technologist*, L042B *RN/LPN*, and L050B *Diagnostic Medical Sonographer*). The PE Subcommittee acknowledged the new equipment input, *RF Ablation System V1000 and RF Pump*, for the two codes and the new high-cost supply input, *RF Electrodes, 18 Gauge, 70mm Length*, as recommended for code 6XX01. The specialty societies clarified that this is a one-time use supply item utilized to ablate the node(s) in the thyroid. The RUC continues to call on CMS to separately identify and pay for high cost disposable supplies using appropriate HCPCS codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

### New Technology

CPT codes 6XX01 and 6XX02 will be placed on the New Technology list to be reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:6XX01	Tracking Number L1	Original Specialty Recommended RVU: <b>6.00</b>
		Presented Recommended RVU: <b>5.75</b>
Global Period: 000	Current Work RVU:	RUC Recommended RVU: <b>5.75</b>

CPT Descriptor: Ablation of 1 or more thyroid nodule(s), one lobe or the isthmus, percutaneous, including imaging guidance, radiofrequency

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old female presents with dysphagia and has a benign thyroid nodule in the lower pole of the right lobe. The patient is seeking treatment for symptom relief.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical history, physical exam, prior thyroid biopsy report and laboratory studies, are reviewed. The patient presents for an outpatient procedure and consent is obtained. Relevant preoperative diagnostic imaging studies are retrieved and reviewed for the chosen nodule for treatment, with site marking. The patient is positioned supine on the procedure table. Ultrasound guidance is performed by the physician with dynamic movement of the patient to achieve the necessary level of neck extension, rotation, and oblique angle in order to identify the target nodule(s) and adequately obtain an appropriate window for treatment. Any repositioning of the patient will require additional ultrasound guidance to reidentify the appropriate window for treatment. A time out is performed. The skin over the neck of the intended site is prepared and draped in sterile fashion and local anesthetic is administered subcutaneously over the intended site.

Description of Intra-Service Work: Using an in-plane oblique approach, the ablation probe is advanced into the target lesion under continuous ultrasound guidance. Using a thyroid-specific ablation technique, repetitive small volume overlapping ablations, with intermittent probe repositioning, are performed. This technique is performed with continuous monitoring by ultrasound by leaving the probe in place until the surrounding tissue is hyperechoic by ultrasound and then the probe is moved into a new position for further ablation. This is continued from deep to superficial until the lesion is treated, preserving an untreated margin of 3-5mm to avoid damage to other neck structures. The probe is then removed, and hemostasis is achieved with light manual compression for an extended period of time. Post ablation ultrasound is performed by the physician to evaluate for color Doppler signal in the treated nodule to evaluate for complete treatment, there is no undertreatment or complicating feature, and permanent ultrasound images are recorded.

**Description of Post-Service Work:**

Following confirmation the treatment is complete for the lobe(s) treated, sterile dressings are applied, and the patient is transported to the recovery room for hemodynamic monitoring and pain control. Post procedure wound control is discussed with the patient and caregiver. Post-procedural orders are placed. Procedural documentation and reports are created for the medical record and copies of the reports are sent to the patient's referring physician. Ultrasound results and patient status are communicated to the patient's next of kin/healthcare proxy.

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

## **Background**

The prevalence of diseases affecting the thyroid reflects that thyroid nodules are widely prevalent, found in over 50% of the general population by ultrasound. The prevalence of thyroid nodules in the U.S. general population is estimated to be 16 million individuals with a palpable nodule and up to 219 million with an ultrasound-detectable nodule. These include those causing (or are at risk of causing) compressive symptoms (5%) or thyroid dysfunction (5%). Additionally, 15% of thyroid nodules will undergo continuous enlargement and may become symptomatic. Palpable nodules are 5 times more prevalent in females than males. 5-10% of thyroid nodules are autonomously functioning and therefore can result in hyperthyroidism (subclinical or overt).

At the September 2023 CPT Editorial Panel, multiple societies requested the creation of CPT codes to report percutaneous radiofrequency ablation of 1 or more thyroid nodule(s). Two new CPT codes (6XX01 and 6XX02) were approved. CPT 6XX01 represents the percutaneous radiofrequency ablation of 1 or more thyroid nodule(s) in one lobe of the thyroid or the isthmus, including imaging guidance. The second code, CPT 6XX02 is an add-on code to 6XX01 and represents the percutaneous radiofrequency ablation of 1 or more thyroid nodule(s) in the contralateral lobe, including the isthmus, including imaging guidance.

The procedure for percutaneous radiofrequency ablation of the thyroid is considered new technology and site of service can include either the facility or nonfacility setting.

## **Methodology**

A multi-disciplinary survey conducted by AACE, ACR, AAO-HNS, ASNR, ES, OEIS, and SIR was distributed to randomly selected members of the representative societies. A few days prior to the start of the survey SIR was notified by a society member of receipt of a letter distributed to members of the North American Society of Interventional Thyroidology (NASIT) alerting members to the upcoming AMA RUC survey. None of the societies who indicated an LOI 1 for this survey were aware of this communication until it was received. The language contained within the letter may have appeared to coach members who may be selected by the respective societies participating in the survey, to ensure they valued appropriately the codes for percutaneous radiofrequency ablation of the thyroid.

AMA Staff were notified immediately regarding the letter from NASIT, and notification was sent to NASIT requesting they cease communication to members regarding the RUC survey for percutaneous radiofrequency ablation of the thyroid. The decision by AMA Staff and SIR Staff was to add a question to the survey asking respondents if they were also members of NASIT. Those who completed the survey and indicated they were a member of NASIT were not excluded from completing the survey, but their survey responses were separated from the random survey results by members who indicated they were not members. Of the total responses received, 16 surveys were completed by those who indicated they were members of NASIT.

The results within the summary file and within this SOR reflect the outcomes of the total survey responses (156), but the summary file does separately reflect the 16 responses from NASIT members from the 140 responses from non-NASIT members.

## **Work RVU Recommendation for 6XX01**

We are recommending a value of 5.75 RVW, which is lower than the 25<sup>th</sup> percentile survey value, based on crosswalk to CPT 52351.

## **Pre- and Post-Service Time Packages**

The specialties have selected pre-package 3 (Straightforward Patient/Difficult Procedure) with a pre-service evaluation of 33 minutes, pre-service positioning time of 3 minutes, and pre-service scrub, dress, wait time of 15 minutes. We also selected a post-service package 8B (IV Sedation/ Complex Procedure) with a time of 28 minutes.

1. Evaluation: We recommend the pre-package time of 33 minutes; this is 7 minutes less than the median survey time. We believe this decrease in time from the survey will still allow the

physician to thoroughly review prior diagnostic imaging, pathology or cytology results and images from the biopsy, thus allowing for more accurate treatment of the lesion.

2. Positioning: We recommend the median survey time of 10 minutes; this is 7 minutes more than the prepackage time. We believe the extra time is needed to safely position the patient with neck extended and rotated in a manner such that the lesion is appropriately positioned within the treatment window. This additional time also accounts for re-positioning of the patient and their neck during the procedure requiring additional ultrasound scanning.
3. Scrub, dress, and wait: We recommend the median survey time of 10 minutes; this is 5 minutes less than the prepackage time. We believe the 10 minutes per the survey is appropriate for the scrub, dress, wait for this procedure.
4. Post: We recommend the median survey time of 20 minutes; this is 8 minutes less than the prepackage time. We believe the 20 minutes per the survey is appropriate for the post service time.

### **Comparison with Key Reference Services**

The key reference codes chosen by the majority of the survey respondents were 36475 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated* (22%) and 36253 *Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; unilateral* (14%). The surveyed code and the two KRS codes have very similar IWP/UT, and the total time incrementally increases with the corresponding increase in wRVU.

<b>CPT</b>	<b>RVU</b>	<b>IWP/UT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>IM-post</b>
<b>36475 Key Ref</b>	5.30	0.097	94	20	4	10	45	15
<b>6XX01 Survey</b>	5.75	0.106	113	33	10	10	40	20
<b>36253 Key Ref</b>	7.30	0.100	121	23	3	5	60	30

Our recommendation is 5.75 work RVU for 6XX01 based on a crosswalk to code 52351.

### **Comparison to MPC codes**

The top key reference code for this surveyed code, 000 day global, is also an MPC code 36475 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated* with value of 5.30 wRVUs as outlined above. A crosswalk to CPT 52351 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic* was recommended after multispecialty discussions and reviewer comments. The recommended RVW for CPT 52351 is 5.75.

<b>CPT</b>	<b>RVW</b>	<b>IWP/UT</b>	<b>Total Time</b>	<b>Eval</b>	<b>Posit</b>	<b>SDW</b>	<b>INTRA</b>	<b>IM-post</b>

### **Conclusion**

Specialty Otolaryngology                      Frequency 800                      Percentage 16.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,000  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2020 data, the Thyroid Nodule Radiofrequency Ablation (RFA) procedure was performed approximately 750 times. In 2021, approximately 1,500 times; in 2022, approximately 3,000 times; and in Q1 of 2023, approximately 800 times in the US. Following these statistics it would be expected to continue to rise with the new codes and experience. Of the 5,000 patients estimated for ablation in the initial lobe of thyroid, the estimated Medicare population is 20%.

Specialty Interventional Radiology                      Frequency 550                      Percentage 55.00 %

Specialty Otolaryngology                      Frequency 230                      Percentage 23.00 %

Specialty Endocrinology                      Frequency 160                      Percentage 16.00 %

Do many physicians perform this service across the United States? No

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 10005

Global Period: ZZZ	Current Work RVU:	RUC Recommended RVU: <b>4.25</b>

CPT Descriptor: Ablation of 1 or more thyroid nodule(s), additional lobe, percutaneous, with imaging guidance, radiofrequency (List separately in addition to code for primary service)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old female presents with dysphagia and has a benign thyroid nodule in the lower pole of the right lobe and a benign thyroid nodule in the mid pole of the left lobe. The patient is seeking treatment for symptom relief. [Note: This is an add-on code for the additional work related to ablating an additional nodule in the additional thyroid lobe. The work related to the first ablation is reported separately as the primary procedure and not included in the work of this add-on code.]

Percentage of Survey Respondents who found Vignette to be Typical: 92%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Following ablation of a known benign thyroid nodule in one lobe, ultrasound evaluation of the contralateral lobe is performed to locate the new benign target lesion. Overlying gas from the prior ablation may obstruct the view of the lesion, which may make locating the second lesion more difficult. The overlying soft tissues are anesthetized with local anesthesia. Using an in-plane oblique approach, the ablation probe is advanced into the lesion under continuous ultrasound guidance. Using a thyroid-specific ablation technique, repetitive small volume overlapping ablations, with intermittent electrode repositioning, are performed. This technique is performed with continuous monitoring by ultrasound by leaving the probe in place until the surrounding tissue is hyperechoic by ultrasound and then the probe is moved into a new position for further ablation. This is continued from deep to superficial until the lesion is treated, preserving an untreated margin of 3-5mm to avoid damage to other structures. Post ablation ultrasound is performed by the physician to evaluate for color Doppler signal in the additionally treated nodule to ensure the treatment is complete and there is no undertreatment or complicating feature and the permanent ultrasound images are recorded.

Description of Post-Service Work: N/A

### Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

### **Background**

The prevalence of diseases affecting the thyroid reflects that thyroid nodules are widely prevalent, found in over 50% of the general population by ultrasound. The prevalence of thyroid nodules in the U.S. general population is estimated to be 16 million individuals with a palpable nodule and up to 219 million with an ultrasound-detectable nodule. These include those causing (or are at risk of causing) compressive symptoms (5%) or thyroid dysfunction (5%). Additionally, 15% of thyroid nodules will undergo continuous enlargement and may become symptomatic. Palpable nodules are 5 times more prevalent in females than males. 5-10% of thyroid nodules are autonomously functioning and therefore can result in hyperthyroidism (subclinical or overt).

At the September 2023 CPT Editorial Panel meeting a request by multiple societies was made to establish CPT codes to report percutaneous radiofrequency ablation of 1 or more thyroid nodule(s). Two new CPT codes (6XX01 and 6XX02) were approved. CPT 6XX01 represents the percutaneous radiofrequency ablation of 1 or more thyroid nodule(s) in one lobe of the thyroid or the isthmus, including imaging guidance. The second code, CPT 6XX02 is an add-on code to 6XX01 and represents the percutaneous radiofrequency ablation of 1 or more thyroid nodule(s) in the contralateral lobe, including the isthmus, including imaging guidance.

The procedure for percutaneous radiofrequency ablation of the thyroid is considered new technology and site of service can include either the facility or nonfacility setting.

### **Methodology**

A multi-disciplinary survey conducted by AACE, ACR, AAO-HNS, ASNR, ES, OEIS, and SIR was distributed to randomly selected members of the representative societies. A few days prior to the start of the survey SIR was notified by a society member of receipt of a letter distributed to members of the North American Society of Interventional Thyroidology (NASIT) alerting members to the upcoming AMA RUC survey. None of the societies who indicated an LOI 1 for this survey were aware of this communication until it was received. The language contained within the letter may have appeared to coach members who may be selected by the respective societies participating in the survey, to ensure they valued appropriately the codes for percutaneous radiofrequency ablation of the thyroid.

AMA Staff were notified immediately regarding the letter from NASIT, and notification was sent to NASIT requesting they cease any and all communication to members regarding the RUC survey for percutaneous radiofrequency ablation of the thyroid. The decision by AMA Staff and agreed to by SIR Staff was made to add a question to the survey asking respondents if they were also members of NASIT. Those who completed the survey and indicated they were a member of NASIT were not excluded from completing the survey, but their survey responses were separated from the random survey results by members who indicated they were not members. Of the total responses received (145), 15 surveys were completed by those who indicated they were members of NASIT.

The results within the summary file and within this SOR reflect the outcomes of the total survey responses (145), but the summary file does separately reflect the 15 responses from NASIT members from the 130 responses from non-NASIT members.

### **Work RVU Recommendation for 6XX02**

We are recommending a value of 4.25 RVW, which is lower than the 25<sup>th</sup> percentile survey value, based on crosswalk to CPT 37223.

### **Pre- and Post-Service Time Packages**

As a ZZZ global code, there are no pre or post time packages for this code.

### Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 37186 *Secondary percutaneous transluminal thrombectomy (eg, nonprimary mechanical, snare basket, suction technique), noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injections, provided in conjunction with another percutaneous intervention other than primary mechanical thrombectomy (List separately in addition to code for primary procedure)* (31%) and 33257 *Operative tissue ablation and reconstruction of atria, performed at the time of other cardiac procedure(s), limited (eg, modified maze procedure) (List separately in addition to code for primary procedure)* (14%). Survey responses indicate CPT code 37186 is a less intense procedure because it is less complex and requires less mental effort and judgement than the ablation of the contralateral lobe of the thyroid in relation to the surrounding anatomy, therefore it has an appropriately lower IWP/UT relative to the surveyed code. Accounting for the differences in intensity, the time and value compares well to the surveyed code. CPT code 35572 is comparable in intensity to the surveyed code as survey responses indicated the complexity and mental judgment and effort were similar in nature to the ablation of the contralateral thyroid nodule which is reflected in the increased time and equivalently increased wRVU.

After additional discussions it was determined a crosswalk was more appropriate in establishing value for survey code 6XX02. The selected CPT code 37223 *Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* has an intraservice time of 45 minutes, work RVU 4.25 and IWP/UT 0.093.

CPT	RVW	IWP/UT	Total Time	Eval	Posit	SDW	INTRA	IM-post
<b>37223 Crosswalk</b>	4.25	0.093	47	1			45	1
<b>6XX02 Survey</b>	4.25	0.094	45				45	
<b>37186 Key Ref</b>	4.92	0.082	60				60	
<b>33257 Key Ref</b>	9.63	0.108	180	15			30	15

Our recommendation is 4.25 work RVU for 6XX02 based on a crosswalk to CPT 37223.

### Comparison to MPC codes

There are a limited number of MPC codes for ZZZ global surgical. Two reference codes included for this RSL originally compared well with the recommended wRVUs for the survey code, 34715 *Open axillary/subclavian artery exposure for delivery of endovascular prosthesis by infraclavicular or supraclavicular incision, unilateral (List separately in addition to code for primary procedure)*, 6.00 wRVUs and 34709 *Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure)* 6.50 wRVUs. After additional discussions it was determined a crosswalk was more appropriate in establishing value for survey code 6XX02. The selected CPT 37223 *Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed (List separately in addition to code for primary procedure)* has an intraservice time of 45 minutes, work RVU 4.25 and IWP/UT 0.093.

CPT	RVW	IWP/UT	Total	Eval	Posit	SDW	INTRA	IM-post
-----	-----	--------	-------	------	-------	-----	-------	---------

of 2023, approximately 800 times in the US for the ablation of nodule(s) in the initial lobe. It is estimated of those approximatley 10% may require ablation in the contralateral lobe of the thyroid.

Specialty Interventional Radiology	Frequency 275	Percentage 55.00 %
------------------------------------	---------------	--------------------

Specialty Otolaryngology	Frequency 115	Percentage 23.00 %
--------------------------	---------------	--------------------

Specialty Endocrinology	Frequency 80	Percentage 16.00 %
-------------------------	--------------	--------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 100  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2020 data, the Thyroid Nodule Radiofrequency Ablation (RFA) procedure was performed approximately 750 times. In 2021, approximately 1,500 times; in 2022, approximately 3,000 times; and in Q1 of 2023, approximately 800 times in the US for the ablation of nodule(s) in the initial lobe. It is estimated of those approximatley 10% may require ablation in the contralateral lobe of the thyroid. Of the 500 patients estimated for ablation in the contralateral lobe of thyroid, the estimated Medicare population is 20%.

Specialty Interventional Radiology	Frequency 55	Percentage 55.00 %
------------------------------------	--------------	--------------------

Specialty Otolaryngology	Frequency 23	Percentage 23.00 %
--------------------------	--------------	--------------------

Specialty Endocrinology	Frequency 16	Percentage 16.00 %
-------------------------	--------------	--------------------

Do many physicians perform this service across the United States? No

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Procedures

BETOS Sub-classification:  
Minor procedure

BETOS Sub-classification Level II:  
Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 10005

Khaja, MD, Lauren Nicola, MD, R. Peter Manes, MD, Jacob Ormsby, MD, MBA, Jerry Niedzwiecki, MD, William C. Biggs, MD FACE, Chase Hendrickson, MD, MPH, Curtis Anderson, MD, PhD, Robert Kennedy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

**Meeting Date:** 1/2024

CPT Code	Long Descriptor	Global Period
6XX01	Ablation of 1 or more thyroid nodule(s) in one lobe, or the isthmus, percutaneous, including imaging guidance, radiofrequency	000
6XX02	Ablation of 1 or more thyroid nodule(s) in contralateral additional lobe, including the isthmus, percutaneous, with imaging guidance, radiofrequency (List separately in addition to code for primary service)	ZZZ

**Vignette(s)** (*vignette required even if PE only code(s)*):

CPT Code	Vignette
6XX01	A 45-year-old female presents with dysphagia and has a benign thyroid nodule in the lower pole of the right lobe. The patient is seeking treatment for symptom relief.
6XX02	A 45-year-old female presents with dysphagia and has a benign thyroid nodule in the lower pole of the right lobe and a benign thyroid nodule in the mid pole of the left lobe. The patient is seeking treatment for symptom relief. [Note: This is an add-on code for the additional work related to ablating an additional nodule in the additional thyroid lobe. The work related to the first ablation is reported separately as the primary procedure and not included in the work of this add-on code.]

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The societies of AACE, ACR, AAO-HNS, ASNR, ES, OEIS, SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for two new Percutaneous Radiofrequency (RF) Thyroid Ablation codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

Tab 7 Percutaneous Radiofrequency (RF) Thyroid Ablation includes 2 new procedures. We have included codes 36475 and 36476 as comparison codes for the practice expense. Both codes provide the closest match to the survey codes in regard to the inputs and clinical staff.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

**FACILITY DIRECT PE INPUTS**

**CPT CODE(S): 6XX01 & 6XX02**

**SPECIALTY SOCIETY(IES):** AACE, ACR, AAO-HNS, ASNR, ES, OEIS, SIR

**PRESENTER(S):** Minhajuddin

Khaja, MD, Lauren Nicola, MD, R. Peter Manes, MD, Jacob Ormsby, MD, MBA, Jerry Niedzwiecki, MD, William C. Biggs, MD FACE, Chase Hendrickson, MD, MPH, Curtis Anderson, MD, PhD, Robert Kennedy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

**CLINICAL STAFF ACTIVITIES**

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- 5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, new CPT codes

- 6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Extensive Use of Clinical Staff for 000 and 010 Day Global Pre-Service Clinical Staff Time Packages  
We are requesting the pre-service clinical staff times established for this 000 day global code for:  
CA001 Complete pre-service diagnostic and referral forms = 5 minutes  
CA002 Coordinate pre-surgery services (including test results) = 3 minutes  
CA003 Schedule space and equipment in facility = 5 minutes  
CA004 Provide pre-service education/obtain consent = 7 minutes  
CA005 Complete pre-procedure phone calls and prescription = 3 minutes  
CA008 Perform regulatory mandated quality assurance activity (pre-service) = 0- minutes  
  
There is extensive staff time during the pre-service time to ensure the necessary pre-diagnostic imaging and tests related to the thyroid disease of the patient have been completed and reviewed prior to the ablation procedure. In addition to the consent and education process for the ablation, ensuring the patient has no issues which may not meet the necessary guidelines for ablation therapy. Due to this, we believe the established times for extensive clinical staff for a 000-day global code are supported. Review patient clinical extant information and questionnaire

- 7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

- 8. Please provide a brief description of the clinical staff work for the following:  
a. Pre-Service period:

**FACILITY DIRECT PE INPUTS**

**CPT CODE(S): 6XX01 & 6XX02**

**SPECIALTY SOCIETY(IES):** AACE, ACR, AAO-HNS, ASNR, ES, OEIS, SIR

**PRESENTER(S):** Minhajuddin

Khaja, MD, Lauren Nicola, MD, R. Peter Manes, MD, Jacob Ormsby, MD, MBA, Jerry Niedzwiecki, MD, William C. Biggs, MD FACE, Chase Hendrickson, MD, MPH, Curtis Anderson, MD, PhD, Robert Kennedy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.
- Coordinate pre-surgery services (including test results) (10) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating US suite availability.
- Schedule space and equipment in facility (5) – RN/LPN/MTA will schedule time for the US suite for the ablation procedure.
- Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, and obtaining any consent not yet completed.
- Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.
- Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.
- Review patient clinical extant information and questionnaire (1) - RN/LPN/MTA discuss with the patient the procedure and confirm patient information

b. Service period (includes pre, intra and post):

c. Post-service period:

- Conduct patient communications – Nurse will follow-up with patient and conduct any post communication for additional visits

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

this, we believe the established times for extensive clinical staff for a 000-day global code are supported. Review patient clinical extant information and questionnaire.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs (CA010)* prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We are requesting 5 minutes for vital signs to measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature, and blood pressure before these procedures.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

- Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.
- Coordinate pre-surgery services (including test results) (3) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating US suite availability.
- Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, and obtaining any consent not yet completed.
- Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.
- Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.
- Review patient clinical extant information and questionnaire (1) – RN/LPN/MTA discuss with the patient the procedure and confirm patient information.

b. Service period (includes pre, intra and post):

- Greet patient, provide gowning, ensure appropriate medical records are available (3)
- Obtain vital signs (5) - vital signs to measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure performed
- Prepare room, equipment and supplies (2) Vascular Interventional Technologist will prepare the equipment and supplies for the procedure

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S): 6XX01 & 6XX02**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Prepare, set-up and start IV, initial positioning and monitoring of patient (2) RN/LPN (L042A)
- Assist Physician – all staff at 100% assistance, RN/LPN (L042A) monitoring the patient throughout the procedure. A Vascular Interventional Technologist (L041A) the physician during the procedure and circulating the room to opens supplies, adjusts and connecting equipment. A Diagnostic Medical Sonographer (L050B) providing US assistance to the physician, managing the images acquired and adjusting imaging to assist in visualizing and defining the treatment window.
- Monitor patient following procedure/service, multitasking 1:4 - Nurse monitors patients vital signs and pain post procedure as well as monitors for signs of bleeding.
- Clean room/equipment by clinical staff (3) RN/LPN/MTA (L037D)
- Check dressings, catheters, wounds – Nurse will check catheter and manage as necessary
- Technologist QC's images in PACS – Diagnostic Medical Sonographer (L050B) will review images and ensure transfer to PACs is performed
- Review examination with interpreting MD/DO – Vascular Interventional Technologist (L041A) will review the images and documentation of the treatment planning to ensure complete
- Scan exam documents into PACS - Diagnostic Medical Sonographer (L050B) will scan documents into PACs

**c. Post-service period:**

- Conduct patient communications – Nurse will follow-up with patient and conduct any post communication for additional visits

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Assist Physician – all staff at 100% assistance.  
 RN/LPN (L042A): monitoring the patient throughout the procedure.  
 Vascular Interventional Technologist (L041A): assists the physician during the procedure and circulating the room to opens supplies, adjusts and connecting equipment.  
 Diagnostic Medical Sonographer (L050B): providing US assistance to the physician, managing the images acquired and adjusting imaging to assist in visualizing and defining the treatment window.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

**MEDICAL SUPPLIES & EQUIPMENT/INVOICES**

15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Radiofrequency (RF) Electrodes 18 Gauge 70 mm length (7 or 10 mm exposure) which is a one-time use supply item used to ablate the node(s) in the thyroid.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.  
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty
<b>pack, minimum multi-specialty visit</b>	<b>SA048</b>	<b>pack</b>	
paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

RF Ablation System V1000 and RF Pump  
Specification and Software  
-Compatible with Various Electrodes  
- 7" TFT LCD Touch Screen with Smart UI  
- Advanced Self Test Function Startup  
- Instant Delivery of Energy To The Tissue Adjacent To The Electrode  
- Dual Controlling System  
- Input Power Voltage - AC 110V  
- Input Power Frequency - 60 Hz  
- Maximum Input Power - 300 VA  
- Output RF Power - 140W  
- One Year Warranty

The RF Pump is a separate equipment piece, but no separate cost, as it is included in the price of the RF ablation system generator.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

5 years

**NONFACILITY DIRECT PE INPUTS**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- a. If yes, please explain how the computer is used for this service(s).
  - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

		LOCATION	Non Fac		6XX01	6XX02
		GLOBAL PERIOD	000			
TOTAL COST OF EQUIPMENT TIME x COST PER MINUTE					\$87.04	\$81.18
EL015	room, ultrasound, general	410303.322	Highly Technical	1.554647144	47	45
EF019	stretcher chair	6438.644	Default	0.0170864	56	45
EF015	mayo stand	522.804	Default	0.001162922	56	45
NEW	RF Ablation System V1000 and RF Pump	49950	Default	0.193562602	56	45

**To calculate the equipment minutes for code 6XX02, which is a ZZZ global code, this code only has an intra time value of 45 minutes.** The formula was set to only represent the intra-time of the procedure for the use of the US room, stretcher chair, mayo stand, and the new equipment items specific to this procedure, RF Ablation System V1000 and RF Pump.

**PE-ONLY CODES ADDITIONAL INFORMATION**

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?  
 (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

**ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon’s office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

1/15/24 Based on pre-facilitation and initial reviewer comments the following changes were made  
-CA022 was adjusted from 7 to 15 minutes for monitoring of patient following the procedure/service for 1 hour recovery for 6XX01.  
-CA028 was adjusted to remove the 3 minutes from the RN/LPN/MTA, this value is now 0 for 6XX01.  
-SF033 was adjusted to remove the scalpel from 6XX02.

1/17/24 Adjustments per PE Meeting  
SB001 surgical cap quantity adjusted from 3 to 4  
SB027 gown, surgical, sterile adjusted from 3 to 2  
SB034 mask, surgical, with face shield adjusted from 3 to 4  
SB039 shoe covers, surgical adjusted from 3 to 4  
NEW Minisono Linear equipment was deleted from the PE for these procedures

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

### Fascial Plane Blocks – Tab 8

In September 2023, the CPT Editorial Panel created six new Category I CPT codes to report thoracic or lower extremity fascial plane blocks, typically used for post-operative pain management. Four existing CPT codes describing transversus abdominis plane (TAP) blocks were included as part of this code family for RUC review in January 2024. The physician work for this family of services varies based on the anatomic region of the fascial plane block, whether the service is unilateral or bilateral and whether the service involves continuous infusion by catheter. Image guidance, when performed, is also included in each of the 10 procedures for this code family, and therefore, cannot be separately reported.

#### **Regional Anesthesia and Acute Pain Teams**

The specialties noted that in current clinical practice and based on the experience of their expert panel, fascial plane blocks are typically provided by a separate acute pain management physician who works within a dedicated acute pain team that is separate from the operating room anesthesiologist and anesthetic team. It is typical for a separate acute pain management physician to place the fascial plane block. Most anesthesiologists in the United States are not currently experienced in performing fascial plane blocks. Placing a fascial plane block requires specialized training and experience to recognize the ultrasound anatomy and achieve reliable results. Therefore, it is typical for an acute pain management fellowship trained physician, who works within a dedicated acute pain team that is separate from the operating room anesthesiologist and anesthetic team that is providing their care during surgery, to perform fascial plane blocks.

Regional anesthesia has undergone and continues to undergo changes related to techniques and targets for plane blocks. This is attributable to the use of ultrasound guidance that has allowed visualization of nerve bundles and in more recent years the development and performance of fascial plane blocks. Fascial plane blocks were not a part of the training for the majority of practicing anesthesiologists. In recognizing the changing nature of regional anesthesia and the growth of acute pain services requiring more specialized skills, training and experiences, residency programs created one-year subspecialty regional anesthesiology clinical fellowships. In 2016, individual training programs in regional anesthesiology and acute pain medicine became eligible for accreditation by the Accreditation Council for Graduate Medical Education. This has created more uniform program requirements and educational experiences. The graduates of these programs are contributing to more widespread adoption of dedicated regional anesthesia and acute pain medicine programs and acute pain. Teams perform blocks and improve care in a variety of settings, including academic centers and community hospitals. Based on the information provided by the specialties about acute pain teams and changes in regional anesthesia, the RUC concurred that the pre-service and post-service time proposed by the specialties was warranted for each of the 10 codes.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

### **Fascial Plane Blocks by Anatomic Region**

Fascial plane block procedures are more intense than many other types of blocking procedures (ie a femoral nerve blocks), because during a fascial plane block procedure, the acute pain management physician must first identify the fascial plane, then separate the bordering muscles by hydro-dissection before passing the needle or catheter. The intensity and complexity of fascial plane block procedures vary by anatomic region. The specialties and RUC agreed on the following order of intensity based on anatomic region: Thoracic > Extremity > Abdomen.

The injection plane for thoracic blocks is deeper than the injection plane for lower extremity and abdominal blocks and involves more complicated anatomy. The proximity of vulnerable structures adjacent to the injection site, such as veins, pleura, and the intercostal arteries increases the risks associated with placing a thoracic block, even when using ultrasound guidance. While the pectoral nerve (PECS) block is more superficial compared to other types of thoracic blocks, the PECS block is no longer the most common thoracic block that is used in clinical practice. The other more typical thoracic blocks (e.g. Serratus block) are deeper. An ultrasound-guided thoracic fascial plane block also requires more specialized training and experience to recognize the ultrasound anatomy and achieve reliable results. A linear transducer is scanned at the sagittal plane along the midaxillary line to orient the 3<sup>rd</sup> and 4<sup>th</sup> ribs while visualizing the pleura, serratus anterior muscle, and path of the needle by the acute pain management physician who is placing a serratus anterior plane block.

The lower extremity fascial plane blocks are also more complex and intense than abdominal blocks. The specialties also noted that techniques for lower extremity fascial plane blocks are technically challenging. For example, with the suprainguinal fascia iliaca blocks, which have evolved as an effective means to provide analgesia to the hip, the sensory innervation of the hip is complex, involving multiple nerves from both lumbar and sacral plexi. Placing this block requires specialized training and significant experience and understanding of ultrasound anatomy to encourage the adequate spread of the local anesthesia.

### **Unilateral Versus Bilateral; Single Injection Versus Continuous Infusion**

The society presented information about expected differentiation in physician work for bilateral procedures and infusions. In each case this further supported the recommended values (by survey or crosswalk). The RUC agreed the survey should be used so long as the values were consistent with the expected differential. The RUC further agreed that use of intensity was of diminished value in short intra-service time procedures, but that the pattern of intensity did not substantially deviate from the expected intensities. Finally, the RUC assessed any physician time changes for the existing codes and concluded that the recommended RVUs were reasonably proportional, based on surveys. Overall, a consistent pattern was created across the services considered.

### ***6XX07 Thoracic fascial plane block, unilateral; by injection(s), including imaging guidance, when performed***

The RUC reviewed the survey results from 51 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.50 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

To justify a work RVU of 1.50, the RUC compared the surveyed code to second key reference code 64415 *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed* (work RVU = 1.50, intra-service time = 10 minutes, total time = 35 minutes) and noted that both procedures involve identical intra-service time and that 6XX07 was slightly more intense and complex to perform. As an additional reference, the RUC compared this service to CPT code 31579 *Laryngoscopy, flexible or rigid telescopic, with stroboscopy* (work RVU = 1.88, intra-service time = 10 minutes, total time = 34 minutes). **The RUC recommends a work RVU of 1.50 for CPT code 6XX07.**

***6XX08 Thoracic fascial plane block, unilateral; by continuous infusion(s), including imaging guidance, when performed***

The RUC reviewed the survey results from 32 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.74 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 15 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the additional 5 minutes of post-service time for the continuous infusion codes (compared to the injection codes) is intended to address the initial work to program the infusion pumps, including entering appropriate orders, programming, dosing, and locking the infusion pump. It also accounts for the time spent educating the patient on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process for catheter removal. This work is typically performed by the acute pain management physician and acute pain team that is responsible for placing the fascial plane block.

To justify a work RVU of 1.74, the RUC compared the survey code to top key reference code 64416 *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU= 1.80, intra-service time= 15 minutes, total time= 44 minutes) and 2<sup>nd</sup> key reference code 64461 *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)* (work RVU= 1.75, intra-service time= 15 minutes, total time= 44 minutes). The RUC noted that all three services involve identical intra-service and total time, and both reference codes support the recommendation. **The RUC recommends a work RVU of 1.74 for CPT code 6XX08.**

***6XX09 Thoracic fascial plane block, bilateral; by injection(s), including imaging guidance, when performed***

The RUC reviewed the survey results from 49 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.67 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 14 minutes of intra-service time and 5 minutes of immediate post-service time. The specialties noted that bilateral blocks do not require twice as much intra-service time compared to unilateral blocks. The majority of the intra-service work is related to ultrasound imaging and identifying the appropriate fascial plane and the adjustment of the ultrasound machine to appropriately view the correct plane. Once the physician has performed the first side, the correct depth has been identified and the appropriate needle angle and trajectory has already been determined, thus allowing the physician to perform the second side more efficiently.

To justify a work RVU of 1.67, the RUC compared the surveyed code to 2<sup>nd</sup> key reference code 64415 *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed* (work RVU = 1.50, intra-service time = 10 minutes, total time = 35 minutes) and noted that the surveyed code involves 4 more minutes of intra-service time and 2 more minutes of total time, thus is appropriately

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

valued higher. The RUC also compared the surveyed code to CPT code 64448 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU = 1.68, intra-service time = 15 minutes, total time = 43 minutes) and noted that although the surveyed code involves slightly less time, it is more intense as described in the introductory paragraph. **The RUC recommends a work RVU of 1.67 for CPT code 6XX09.**

**6XX10 Thoracic fascial plane block, bilateral; by continuous infusion(s), including imaging guidance, when performed**

The RUC reviewed the survey results from 30 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.83 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 6 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the additional 5 minutes of post-service time for the continuous infusion codes (compared to the injection codes) is intended to address the initial work to program the infusion pumps, including entering appropriate orders, programming, dosing, and locking the infusion pump. It also accounts for the time spent educating the patient on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process for catheter removal. This work is typically performed by the acute pain management physician and acute pain team that is responsible for placing the fascial plane block.

The specialties noted that bilateral blocks do not require twice as much intra-service time compared to unilateral blocks. The majority of the intra-service work is related to ultrasound imaging and identifying the appropriate fascial plane and the adjustment of the ultrasound machine to appropriately view the correct plane. Once the physician has performed the first side, the correct depth has been identified and the appropriate needle angle and trajectory has already been determined, thus allowing the physician to perform the second side more efficiently.

To justify a work RVU of 1.83, the RUC compared the surveyed code to top key reference code 64416 *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU = 1.80, intra-service time = 15 minutes, total time = 44 minutes) and 2<sup>nd</sup> key reference code 64461 *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)* (work RVU = 1.75, intra-service time = 15 minutes, total time = 44 minutes). The RUC noted that the surveyed code involves 5 more minutes of intra-service time and 6 more minutes of total time relative to these two reference codes, therefore, is appropriately valued higher. **The RUC recommends a work RVU of 1.83 for CPT code 6XX10.**

**6XX11 Lower extremity fascial plane block, unilateral; by injection(s), including imaging guidance, when performed**

The RUC reviewed the survey results from 51 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.34 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 3 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time.

To justify a work RVU of 1.34, the RUC compared the survey code to top key reference code 64447 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed* (work RVU = 1.34, intra-service time = 8 minutes, total time = 29 minutes) and noted that the surveyed code requires similar physician time to perform, therefore supports the recommended value. The RUC also compared

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

the surveyed code to 2<sup>nd</sup> key reference code 64415 *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed* (work RVU = 1.50, intra-service time = 10 minutes, total time = 35 minutes) and noted that both services involve identical intra-service time, whereas the reference code involves somewhat more total time, justifying a somewhat lower valuation for the surveyed code. **The RUC recommends a work RVU of 1.34 for CPT code 6XX11.**

***6XX12 Lower extremity fascial plane block, unilateral; by continuous infusion(s), including imaging guidance, when performed***

The RUC reviewed the survey results from 36 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.67 appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 15 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the additional 5 minutes of post-service time for the continuous infusion codes (compared to the injection codes) is intended to address the initial work to program the infusion pumps, including entering appropriate orders, programming, dosing, and locking the infusion pump. It also accounts for the time spent educating the patient on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process for catheter removal. This work is typically performed by the acute pain management physician and acute pain team that is responsible for placing the fascial plane block.

To justify a work RVU of 1.67, the RUC compared the surveyed code to top key reference code 64448 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU = 1.68, intra-service time = 15 minutes, total time = 43 minutes) and note that both codes require an identical amount of intra-service time and the surveyed code typically requires 1 more minutes of total time. The RUC also compared the surveyed code to second key reference code 64446 *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU = 1.75, intra-service = 15 minutes, total time = 44 minutes) and noted that both services involve identical intra-service and total time, supporting the recommended value for the surveyed code. **The RUC recommends a work RVU of 1.67 for CPT code 6XX12.**

***64486 Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)***

The RUC reviewed the survey results from 64 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.20, lower than the current work RVU, appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 10 minutes of intra-service time and 5 minutes of immediate post-service time. The specialty societies noted that there has been dramatic growth in the number of acute pain teams across the country since the RUC reviewed the TAP block codes in 2014. At that time, fewer physicians had the specialized training to perform fascial plane blocks and adoption was therefore more limited. A decade later, that is no longer the case. The specialty societies noted and the RUC concurred that, since the work of the acute pain management physician and acute pain team that perform the fascial plane block is wholly separate from the work of the anesthesiologist and anesthetic team that is providing patient care in the operating room during surgery, there is no duplication in pre-service evaluation time and pre-service positioning time.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

To justify a work RVU of 1.20, the RUC compared the surveyed code to 2<sup>nd</sup> key reference code 64447 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed* (work RVU= 1.34, intra-service time= 8 minutes, total time= 29 minutes) and noted that the surveyed code requires slightly more time though is slightly less intense to perform, thus appropriately valued lower. The RUC also reference CPT code 36584 *Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement* (work RVU = 1.20, intra-service time = 12 minutes, total time = 34 minutes) and noted that although the surveyed code requires slightly less time, it is somewhat more intense to perform and overall both services require the same physician work to perform. **The RUC recommends a work RVU of 1.20 for CPT code 64486.**

**64487 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by continuous infusion(s) (includes imaging guidance, when performed)***

The RUC reviewed the survey results from 40 anesthesiologists and pain medicine physicians and determined that a work RVU of 1.39, lower than the current work RVU, appropriately accounts for the work required to perform this service. The RUC noted that the survey 25<sup>th</sup> percentile work RVU overestimated the work required to perform this service. Therefore, the RUC recommended a direct work RVU crosswalk to CPT Code 64445 *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed* (work RVU = 1.39, intra-service time =10 minutes, total time = 24 minutes). The RUC recommends the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 12 minutes of intra-service time and 10 minutes of immediate post-service time. The specialties noted that the additional 5 minutes of post-service time for the continuous infusion codes (compared to the injection codes) is intended to address the initial work to program the infusion pumps, including entering appropriate orders, programming, dosing, and locking the infusion pump. It also accounts for the time spent educating the patient on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process for catheter removal.

The RUC also compared the surveyed code to top key reference code 64448 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU=1.68, intra-service time = 15 minutes, total time = 43 minutes) and noted that the surveyed code involves slightly less intra-service and total time. **The RUC recommends a work RVU of 1.39 for CPT code 64487.**

**64488 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)***

The RUC reviewed the survey results from 62 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.40, lower than the current work RVU, appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 12 minutes of pre-service evaluation, 1 minute of pre-service positioning, 4 minutes of pre-service scrub/dress/wait, 12 minutes of intra-service time and 5 minutes of immediate post-service time. The specialties noted that bilateral blocks do not require twice as much intra-service time compared to unilateral blocks. The majority of the intra-service work is related to ultrasound imaging and identifying the appropriate fascial plane and the adjustment of the ultrasound machine to appropriately view the correct plane. Once the physician has performed the first side, the correct depth has been identified and the appropriate needle angle and trajectory has already been determined, thus allowing the physician to perform the second side more efficiently.

I=New code    s=Revised code    :=Add-on code    H=Modifier 51 exempt    \*=Telemedicine    X=Audio-only    ~=FDA approval pending    #=Resequenced code

To justify a work RVU of 1.40, the RUC compared the survey code to top key reference code 64461 *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)* (work RVU = 1.75, intra-service time = 15 minutes, total time = 44 minutes) and noted that the surveyed code requires less intra-service time and total time, therefore is appropriately valued lower. The RUC also compared the surveyed code to CPT code 27096 *Injection procedure for sacroiliac joint, anesthetic/steroid, with image guidance (fluoroscopy or CT) including arthrography when performed* (work RVU = 1.48, intra-service time = 11 minutes, total time = 38 minutes) and noted that the surveyed code requires 1 more minute of intra-service time but less lower total time and therefore is appropriately valued lower. **The RUC recommends a work RVU of 1.40 for CPT code 64488.**

**64489 *Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by continuous infusions (includes imaging guidance, when performed)***

The RUC reviewed the survey results from 40 anesthesiologists and pain medicine physicians and determined the survey 25<sup>th</sup> percentile work RVU of 1.75, lower than the current work RVU, appropriately accounts for the work required to perform this service. The RUC recommends the following physician time components: 13 minutes of pre-service evaluation, 1 minute of pre-service positioning, 5 minutes of pre-service scrub/dress/wait, 20 minutes of intra-service time and 10 minutes of immediate post-service time. The specialty societies noted that the additional 5 minutes of post-service time for the continuous infusion codes (compared to the injection codes) is intended to address the initial work to program the infusion pumps, including entering appropriate orders, programming, dosing, and locking the infusion pump. It also accounts for the time spent educating the patient on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process for catheter removal. This work is typically performed by the acute pain management physician and acute pain team that is responsible for placing the fascial plane block.

The specialty societies noted that bilateral blocks do not require twice as much intra-service time compared to unilateral blocks. The majority of the intra-service work is related to ultrasound imaging and identifying the appropriate fascial plane and the adjustment of the ultrasound machine to appropriately view the correct plane. Once the physician has performed the first side, the correct depth has been identified and the appropriate needle angle and trajectory has already been determined, thus allowing the physician to perform the second side more efficiently.

To justify a work RVU of 1.75, the RUC compared the survey code to 2<sup>nd</sup> key reference code 64448 *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed* (work RVU =1.68, intra-service time = 15 minutes, total time = 43 minutes) and noted that the surveyed code involves 5 more minutes of intra-service time and 6 more minutes of total time, supporting a higher valuation. The RUC also compared the surveyed code to CPT code 64463 *Paravertebral block (PVB) (paraspinous block), thoracic; continuous infusion by catheter (includes imaging guidance, when performed)* (work RVU = 1.90, intra-service time = 20 minutes, total time = 54 minutes) and noted that both services involve identical intra-service time, whereas the reference code involves 5 more minutes of total time, therefore is appropriately valued higher. **The RUC recommends a work RVU of 1.75 for CPT code 64489.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code    s=Revised code    :=Add-on code    H=Modifier 51 exempt    \*=Telemedicine    X=Audio-only    ~=FDA approval pending    #=Resequenced code

## Practice Expense

The Practice Expense Subcommittee discussed and approved compelling evidence based on error made in 2014 which inadvertently omitted supply SB019 *drape-towel sterile 18in x 26in* (quantity = 4) from unilateral codes 64486 and 64487. This supply is necessary in order to create a quadrant to block out the whole procedural field during all fascial plane block services, not just bilateral services. This supply item is currently included as a direct PE supply input (quantity = 4) for the bilateral single injection and continuous infusion TAP block codes (64488, 64489). The specialty societies recommended, and the Practice Expense Subcommittee agreed, that SB019 (quantity = 4) be included as a direct PE supply input for all 10 fascial plane block codes. The Practice Expense Subcommittee also adjusted the equipment minute formulas to properly compute for the code family and made minor adjustments to CA019 *Assist physician or other qualified healthcare professional--directly related to physician work time (67%)* for three of the unilateral codes (6XX07, 6XX11, and 64486). **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:6XX07	Tracking Number	Original Specialty Recommended RVU: <b>1.50</b>
		Presented Recommended RVU: <b>1.50</b>
Global Period: 000	Current Work RVU:	RUC Recommended RVU: <b>1.50</b>

CPT Descriptor: Thoracic fascial plane block, unilateral; by injection(s), including imaging guidance, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old female undergoes breast surgery under general anesthesia. To provide post operative pain control and minimize opioid usage, a thoracic fascial plane block is placed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's thoracic region is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the thoracic fascial plane block. Using continuous ultrasound guidance, the layers of the thoracic wall are identified. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a needle is advanced into the interfascial plane. Local anesthetic (e.g., 0.25% bupivacaine) is injected.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the thoracic block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. If the patient is stable, she may be discharged home after meeting all appropriate discharge criteria. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Survey**

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and PE inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 6XX07

#### *Pre-Service Package*

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend a 1 minute decrease in the pre-service evaluation time from the pre-service package time of 13 minutes to the survey median time of 12 minutes. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for positioning time. While this is below the survey median time of 4 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 2 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 4 minutes.

The total pre-service time based on the adjusted pre-service evaluation and pre-service SDW time is 17 minutes, which is a 3 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 6XX07

#### *Post-Service Package*

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect a 13 minute decrease from 18 minutes to the survey median time of 5 minutes.

### 6XX07

#### *Work RVU*

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.50 based on the following rationale:

- The recommended wRVU of 1.50 is appropriate relative to the recommended wRVU of 1.34 for the unilateral single injection lower extremity fascial plane block code (6XX11) and the recommended wRVU of 1.20 for the unilateral single injection TAP block code (64486).
- While the median intra-service time (10 minutes) is the same for all unilateral single injection codes (6XX07, 6XX11, 64486), the increased wRVU for 6XX07 is appropriate due to the increased intensity, complexity, and risk required to place a block in the thoracic region compared to the abdominal or lower extremity regions. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**

### 6XX07

#### *KRS Codes*

- The first KRS, which was chosen by 61% of respondents, was 64461, *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)*, which has a wRVU of 1.75 and times of 19/15/10.
- The second KRS, which was chosen by 14% of respondents, was, 64415, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*, which has a wRVU 1.50 of and times of 18/10/7.

**Summary:** For code 6XX07, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.50 and 17 minutes of pre-service time, 10 minutes of intra-service time and 5 minutes of post-service time.

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,108  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that unilateral single injection thoracic blocks will account for 5% of the 2021 utilization of code 64999, as published in the RUC database. This estimate was based on input from the Expert Panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology	Frequency 754	Percentage 68.00 %
Specialty Pain Management	Frequency 44	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 22	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Procedures

BETOS Sub-classification:  
 Minor procedure

BETOS Sub-classification Level II:  
 Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64486

---

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's thoracic region is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the thoracic fascial plane block. Using continuous ultrasound guidance, the layers of the thoracic wall are identified. The placement needle is then inserted deep to the erector spinae muscle. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a catheter is inserted through the placement needle and the needle is removed. The catheter is secured and then a sterile occlusive dressing is applied. Local anesthetic (e.g., 0.25% bupivacaine) is infused unilaterally into the fascial plane.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the thoracic block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. The patient is educated on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process of catheter removal. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and PE inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 6XX08

#### Pre-Service Package

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend no adjustment to the pre-service package time of 13 minutes for the pre-service evaluation time. While this is below the survey median time of 16 minutes, the societies believe 13 minutes is appropriate. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 5 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 1 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 5 minutes.

The total pre-service time based on the adjusted pre-service evaluation and pre-service SDW time is 19 minutes, which is a 1 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 6XX08

#### Post-Service Package

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect an 8 minute decrease from 18 minutes to the survey median time of 10 minutes. **For additional information to support the recommended post-service time for the continuous infusion fascial plane block codes, please see the handout for Tab 8.**

### 6XX08

#### Work RVU

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.74 based on the following rationale:

- The recommended wRVU of 1.74 is appropriate relative to the recommended wRVU of 1.67 for the unilateral continuous infusion lower extremity fascial plane block code (6XX12) and the recommended wRVU of 1.66 for the unilateral continuous infusion TAP block code (64487).
- While the median intra-service time (15 minutes) is the same for the thoracic and lower extremity unilateral continuous infusion fascial plane block codes, the increased wRVU for 6XX08 is appropriate due to the increased intensity, complexity, and risk required to place a block in the thoracic region compared to the lower extremity region. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**
- An incremental increase of 0.24 wRVUs compared to unilateral single injection thoracic fascial plane block code (6XX07) splits the difference between the incremental difference for other single injection and continuous infusion codes, including 0.15 for 64461 and 64463, 0.23 for 62322 and 62326, 0.30 for 64415 and 64416, and 0.34 for 64447 and 64448. This is consistent with the approach the RUC took in 2014. **For additional information to support the recommended incremental increases between the single injection and continuous infusion fascial plane block codes, please see the handout for Tab 8.**

### 6XX08

#### KRS Codes

- The first KRS, which was chosen by 35% of respondents, was 64416, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has a wRVU of 1.80 and times of 19/15/10.
- The second KRS was a tie between two codes, each of which was chosen by 4 of respondents.
  - 64461, *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)*, has an wRVU of 1.75, and times of 19/15/10.
  - 64448, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, has an wRVU of 1.68, and times of 19/15/9.
- The recommendation for 6XX08 is well supported by the 1<sup>st</sup> and two 2<sup>nd</sup> KRS codes. A majority of survey respondents said 6XX08 was either identical, somewhat or much more intense compared all three KRS codes on each metric evaluated with the exception of psychological stress for which one of the 2<sup>nd</sup> KRS codes (64461) was a 50/50 split.

**Summary:** For 6X008, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.74 and 19 minutes of pre-service time, 15 minutes of intra-service time, and 10 minutes of post-service time.

	6XX08 (survey median)	6XX08 (recommended)	1st KRS (64416)
Pre-Service Evaluation Time	16	13	13

			CPT Code: 6XX08
Pre-Service SDW Time	5	5	5
Intra-Service Time	15	15	15
Immediate Post-Service Time	10	10	10
TOTAL TIME	51	44	44
Work RVU	1.80	1.74	1.80

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999, Unlisted procedure, nervous system. Medicare frequency for 64999 was reviewed by the Expert Panel of RUC advisors that reviewed the survey data.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,108

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that unilateral continuous infusion thoracic blocks would account for

5% of the 2021 utilization of code 64999, as published in the RUC database. This estimate was based on input from the Expert Panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology	Frequency 754	Percentage 68.00 %
Specialty Pain Management	Frequency 44	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 22	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Procedures

BETOS Sub-classification:  
Minor procedure

BETOS Sub-classification Level II:  
Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64486

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 6XX09	Tracking Number	Original Specialty Recommended RVU: <b>1.67</b>
		Presented Recommended RVU: <b>1.67</b>
Global Period: 000	Current Work RVU:	RUC Recommended RVU: <b>1.67</b>

CPT Descriptor: Thoracic fascial plane block, bilateral; by injection(s), including imaging guidance, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 65-year-old female undergoes bilateral breast surgery under general anesthesia. To provide post operative pain control and minimize opioid usage, a bilateral thoracic fascial plane block is placed.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's thoracic region is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the thoracic fascial plane block. Using continuous ultrasound guidance, the layers of the thoracic wall are identified. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a needle is advanced into the interfascial plane. Local anesthetic (e.g., 0.25% bupivacaine) is injected. A repeat procedure is then carried out in an identical fashion on the opposite side.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the thoracic block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. If the patient is stable, she may be discharged home after meeting all appropriate discharge criteria. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Survey**

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and PE inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 6XX09

#### Pre-Service Package

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend a 1 minute decrease in the pre-service evaluation time from the pre-service package time of 13 minutes to the survey median time of 12 minutes. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 4 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 2 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 4 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 17 minutes, which is a 3 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 6XX09

#### Post-Service Package

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect a 13 minute decrease from 18 minutes to the survey median time of 5 minutes.

### 6XX09

#### Work RVU

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.67 based on the following rationale:

- The recommended wRVU of 1.67 is appropriate relative to the recommended wRVU of 1.40 for the bilateral single injection TAP block code (64488). This is appropriate due to the increased intensity, complexity, and risk required to place a block in the thoracic region compared to the abdominal region. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**
- An incremental increase of 0.17 wRVUs compared to the unilateral single injection thoracic block code (6XX07) is appropriate based on the additional 4 minutes of intra-service time observed in the survey data, which appropriately reflects the additional time needed to place a second block during a bilateral service.

### 6XX09

#### KRS Codes

- The first KRS, which was chosen by 44% of respondents, was 64461, *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)*, which has an RVW of 1.75, and times of 19/15/10.
- The second KRS, which was chosen by 13% of respondents was 64415, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*, which has an RVW of 1.50, and times of 18/10/7.

**Summary:** For 6X009, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.67 and 17 minutes of pre-service time, 14 minutes of intra-service time, and 5 minutes of post-service time.

	6XX09 (survey median)	6XX09 (recommended)	64461 (1 <sup>st</sup> KRS)
Pre-Service Evaluation Time	12	12	13
Pre-Service Positioning Time	4	1	1
Pre-Service SDW Time	4	4	5
Intra-Service Time	14	14	15
Immediate Post-Service Time	5	5	10
TOTAL TIME	39	36	44
Work RVU	1.90	1.67	1.75

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999, Unlisted procedure, nervous system. Medicare frequency for 64999 was reviewed by the Expert Panel of RUC advisors that reviewed the survey data.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

- Specialty Anesthesiology How often? Sometimes
- Specialty Pain Management How often? Sometimes
- Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Anesthesiology	Frequency	Percentage	%
Specialty Pain Management	Frequency	Percentage	%
Specialty Interventional Pain Management	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,108  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that bilateral single injection thoracic blocks would account for 5% of the 2021 utilization of code 64999, as published in the RUC database. This estimate was based on input from the Expert Panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology	Frequency 754	Percentage 68.00 %
Specialty Pain Management	Frequency 44	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 22	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Procedures

BETOS Sub-classification:  
 Minor procedure

BETOS Sub-classification Level II:  
 Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 64486

SUMMARY OF RECOMMENDATION**

---

CPT Code:6XX10	Tracking Number	Original Specialty Recommended RVU: <b>1.83</b>
		Presented Recommended RVU: <b>1.83</b>
Global Period: 000	Current Work RVU:	RUC Recommended RVU: <b>1.83</b>

CPT Descriptor: Thoracic fascial plane block, bilateral; by continuous infusion(s), including imaging guidance, when performed

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 75-year-old female undergoes cardiac surgery by median sternotomy under general anesthesia. To provide post operative pain control and minimize opioid usage, a bilateral thoracic fascial plane block with catheter placement for continuous infusion is placed.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's thoracic region is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the thoracic fascial plane block. Using continuous ultrasound guidance, the layers of the thoracic wall are identified. The placement needle is then inserted deep to the erector spinae muscle. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a catheter is inserted through the placement needle and the needle is removed. The catheter is secured and then a sterile occlusive dressing is applied. A repeat procedure is then carried out in an identical fashion on the opposite side. Local anesthetic (e.g., 0.25% bupivacaine) is delivered via 2 separate infusion pumps.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the thoracic block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. The patient is educated on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process of catheter removal. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Survey**

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and PE inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 6XX10

#### Pre-Service Package

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with no adjustments, based on the following rationale:

- The societies recommend no adjustment to the pre-service package time of 13 minutes for the pre-service evaluation time. While this is below the survey median time of 16 minutes, the societies believe 13 minutes is appropriate. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 5 minutes, the societies believe 1 minute is appropriate.
- The societies recommend no adjustment to the pre-service scrub, dress and wait time of 6 minutes, which is the same as the survey median time.

The societies recommend a total pre-service time of 20 minutes, which is the same as the pre-service package 1 total time.

### 6XX10

#### Post-Service Package

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect an 8 minute decrease from 18 minutes to the survey median time of 10 minutes. **For additional information to support the recommended post-service time for the continuous infusion fascial plane block codes, please see the handout for Tab 8.**

### 6XX10

#### Work RVU

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.83 based on the following rationale:

- The recommended wRVU of 1.83 is appropriate relative to the recommended wRVU of 1.75 for the bilateral continuous infusion TAP block code (64489). **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**
- An incremental increase of 0.17 wRVU compared to the bilateral single injection thoracic block code splits the difference between the incremental difference for other single injection and continuous infusion codes, including 0.15 for 64461 and 64463, 0.23 for 62322 and 62326, 0.30 for 64415 and 64416, and 0.34 for 64447 and 64448. This is consistent with the approach the RUC took in 2014. **For additional information to support the recommended incremental increases between the single injection and continuous infusion fascial plane block codes, please see the handout for Tab 8.**
- An incremental increase of 0.09 wRVUs compared to the unilateral continuous infusion thoracic block code (6XX09) is appropriate based on the additional 5 minutes of intra-service time observed in the survey data, which appropriately reflects the additional time needed to place a second block during a bilateral service.

### 6XX10

#### KRS Codes

- The KRS, which was chosen by 27% of respondents, was 64416, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.80, and times of 19/15/10.
- The second KRS was a tie between two services, each of which was chosen by 6 of respondents.
  - 62325, *Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (eg, anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, interlaminar epidural or subarachnoid, cervical or thoracic; with imaging guidance (ie, fluoroscopy or CT)*, has an RVW of 2.20, and times of 20/15/10
  - 64461, *Paravertebral block (PVB) (paraspinal block), thoracic; single injection site (includes imaging guidance, when performed)*, has an RVW of 1.75, and times of 19/15/10.
- The recommendation for 6XX10 is well supported by the 1<sup>st</sup> and two 2<sup>nd</sup> KRS codes. A majority of survey respondents said 6XX10 was either identical, somewhat or much more intense compared all three KRS codes on each metric evaluated with the exception of technical skill for which one of the 2<sup>nd</sup> KRS codes (64416) was a 50/50 split.

**Summary:** For 6X010, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.83 and 20 minutes of pre-service time, 20 minutes of intra-service time, and 10 minutes of post-service time.

	6XX10 (survey median)	6XX10 (recommended)	64416 (1 <sup>st</sup> KRS)
Pre-Service Evaluation Time	16	13	13
Pre-Service Positioning Time	5	1	1

			CPT Code: 6XX10
Pre-Service SDW Time	6	6	5
Intra-Service Time	20	20	15
Immediate Post-Service Time	10	10	10
TOTAL TIME	57	50	44
Work RVU	2.20	1.83	1.80

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999, Unlisted procedure, nervous system. Medicare frequency for 64999 was reviewed by the expert panel of RUC advisors that reviewed the survey data.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Anesthesiology Frequency Percentage %

Specialty Pain Management Frequency Percentage %

Specialty Interventional Pain Management Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,108

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that bilateral continuous infusion thoracic blocks would account for 5%

of the 2021 utilization of code 64999, as published in the RUC database. This estimate was based on input from the expert panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology	Frequency 754	Percentage 68.00 %
Specialty Pain Management	Frequency 44	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 22	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:6XX11	Tracking Number	Original Specialty Recommended RVU: <b>1.34</b>
Global Period: 000	Current Work RVU:	Presented Recommended RVU: <b>1.34</b>
		RUC Recommended RVU: <b>1.34</b>

CPT Descriptor: Lower extremity fascial plane block, unilateral; by injection(s), including imaging guidance, when performed

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old female undergoes elective total hip arthroplasty under general anesthesia. To provide post operative pain control and minimize opioid usage, a lower extremity fascial plane block is placed.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's lower extremity is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the lower extremity fascial plane block. Using continuous ultrasound guidance, the appropriate tissue plane for the fascia iliaca block is identified. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a needle is then inserted between the fascia iliaca and iliacus muscle. Local anesthetic (e.g., 0.25% bupivacaine) is injected.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the lower extremity block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. If the patient is stable, she may be discharged home after meeting all appropriate discharge criteria. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an expert panel to develop the practice expense (PE) recommendations. The expert panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

**Society Recommendations****6XX11***Pre-Service Package*

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend a 1 minute decrease in the pre-service evaluation time from the pre-service package time of 13 minutes to the survey median time of 12 minutes. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 3 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 3 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 3 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 16 minutes, which is a 4 minute decrease compared to the pre-service package 1 total time of 20 minutes.

**6XX11***Post-Service Package*

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect a 13 minute decrease from 18 minutes to the survey median time of 5 minutes.

**6XX11***Work RVU*

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.34 based on the following rationale:

- The recommended wRVU of 1.34 is appropriate relative to the recommended wRVU of 1.5 for the unilateral single injection thoracic fascial plane block code (6XX07) and the recommended wRVU of 1.20 for the unilateral single injection TAP block code (64486).
- While the median intra-service time (10 minutes) is the same for all unilateral single injection codes (6XX07, 6XX11, 64486), the increase in wRVU (0.14) for the unilateral lower extremity single injection code (6XX11) relative to the unilateral TAP single injection code (64486) is appropriate due to the more intense physician work next to the femoral artery as opposed to the abdominis plane. In 2021, the RUC reviewed 64447, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed*, (the first key reference service for 6XX11) and noted that an injection site next to a major vessel and nerve, as opposed to the abdominis plane, involves more intense physician work. The decrease in wRVU (-0.16) for the lower extremity single injection code (6XX11) relative to the thoracic single injection code (6XX07) is appropriate due to the more intense physician work of placing a thoracic block. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**
- While the IWPUT for 6XX11 (0.0912) is at the higher end of the range compared to the other fascial plane block codes, it is lower than the 1<sup>st</sup> and 2<sup>nd</sup> KRS codes, which have IWPUTs ranging of 0.1141 (1<sup>st</sup> KRS, 64447), 0.1091 (tie for 2<sup>nd</sup> KRS, 6445), and 0.0997 (tie for 2<sup>nd</sup> KRS, 64415). Given that this is a low IST code, the IWPUT of 0.0912 is appropriate.

**6XX11***KRS Codes*

- The first key reference services, which was chosen by 56% of respondents, was 64447, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed*, which has an RVW of 1.34, and times of 16/8/5.
- The second key reference service was a tie between two services, each of which was chosen by 5 of respondents.
  - 64415, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*, has an RVW of 1.50, and times of 18/10/7.
  - 64445, *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed*, has an RVW of 1.39, and times of 9/10/5.
- The recommendation for 6XX11 is well supported by the 1<sup>st</sup> and two 2<sup>nd</sup> KRS codes. A majority of survey respondents said 6XX11 was either identical, somewhat or much more intense compared all three KRS codes on each metric evaluated.

**Summary:** For 6XX11, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.34 and 16 minutes of pre-service time, 10 minutes of intra-service time, and 5 minutes of post-service time.

	6XX11 (survey median)	6XX11 (recommended)	64447 (1 <sup>st</sup> KRS)
Pre-Service Evaluation Time	12	12	12
Pre-Service Positioning Time	3	1	1
Pre-Service SDW Time	3	3	3
Intra-Service Time	10	10	8
Immediate Post-Service Time	5	5	5
TOTAL TIME	33	31	29
Work RVU	1.40	1.34	1.34

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999, Unlisted procedure, nervous system. Medicare frequency for 64999 was reviewed by the expert panel of RUC advisors that reviewed the survey data.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Anesthesiology Frequency Percentage %

Specialty Pain Management Frequency Percentage %

Specialty Interventional Pain Management                      Frequency                      CPT Code: 6XX11  
Percentage                      %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 4,433  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that single injection lower extremity blocks would account for 20% of current utilization of code 64999. This estimate was based on input from the expert panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology                      Frequency 3015                      Percentage 68.00 %

Specialty Pain Management                      Frequency 177                      Percentage 4.00 %

Specialty Interventional Pain Management                      Frequency 89                      Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

---

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patients lower extremity is prepped with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed in an axial (transverse) plane over the target area for the lower extremity fascial plane block. Using continuous ultrasound guidance, the appropriate tissue plane for the fascia iliaca block is identified. The placement needle is then inserted between the fascia iliaca and iliacus muscle. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a catheter is inserted through the placement needle and the needle is removed. The catheter is secured and then a sterile occlusive dressing is applied. Local anesthetic (e.g., 0.25% bupivacaine) is infused unilaterally into the fascial plane.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the lower extremity block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. The patient is educated on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process of catheter removal. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 6XX12

#### Pre-Service Package

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend no adjustment to the pre-service package time of 13 minutes for the pre-service evaluation time. While this is below the survey median time of 15 minutes, the societies believe 13 minutes is appropriate. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 4 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 1 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 5 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 19 minutes, which is a 1 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 6XX12

#### Post-Service Package

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect an 8 minute decrease from 18 minutes to the survey median time of 10 minutes. **For additional information to support the recommended post-service time for the continuous infusion fascial plane block codes, please see the handout for Tab 8.**

### 6XX12

#### Work RVU

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.67 based on the following rationale:

- The recommended wRVU of 1.67 is appropriate relative to the recommended wRVU of 1.74 for the unilateral continuous infusion thoracic fascial plane block code (6XX08) and the recommended wRVU of 1.39 for the unilateral continuous infusion TAP block code (64487).
- While the median intra-service time (15 minutes) is the same for the unilateral continuous infusion thoracic and lower extremity codes (6XX08, 6XX12), the decrease in wRVU (-0.07) for the unilateral continuous infusion lower extremity code (6XX12) relative to the unilateral continuous infusion thoracic code (6XX08) is appropriate due to the more intense physician work of placing a thoracic block. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**
- The 3 minute increase in median intra-service time for the unilateral lower extremity continuous infusion code (6XX12) compared to the unilateral continuous infusion TAP code (64487) and the more intense physician work next to the femoral artery as opposed to the abdominis plane supports the increase in wRVU (0.28) for the unilateral continuous infusion lower extremity code (6XX12) relative to the unilateral continuous infusion TAP code (64487). In 2021, the RUC reviewed 64447, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed*, and noted that an injection site next to a major vessel and nerve, as opposed to the abdominis plane, involves more intense physician work.

### 6XX12

#### KRS Codes

- The 1<sup>st</sup> KRS code, which was chosen by 56% of respondents, was 64448, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.68, and times of 19/15/9.
- The 2<sup>nd</sup> KRS code, which was chosen by 17% of respondents, was 64446, *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.75, and times of 19/15/10.

**Summary:** For 6XX12, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.67 and 19 minutes of pre-service time, 15 minutes of intra-service time, and 10 minutes of post-service time.

	6XX12 (survey median)	6XX12 (recommended)	1st KRS (64448)
Pre-Service Evaluation Time	15	13	13
Pre-Service Positioning Time	5	1	1
Pre-Service SDW Time	5	5	5
Intra-Service Time	15	15	15

			CPT Code: 6XX12
Immediate Post-Service Time	10	10	9
TOTAL TIME	50	44	43
Work RVU	1.70	1.67	1.68

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 64999, Unlisted procedure, nervous system. Medicare frequency for 64999 was reviewed by the Expert Panel of RUC advisors that reviewed the survey data.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Anesthesiology Frequency Percentage %

Specialty Pain Management Frequency Percentage %

Specialty Interventional Pain Management Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,217  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that continuous infusion lower extremity blocks would account for 10% of current utilization of code 64999. This estimate was based on input from the Expert Panel of RUC advisors that reviewed the survey data.

Specialty Anesthesiology	Frequency 1507	CPT Code: 6XX12 Percentage 68.00 %
Specialty Pain Management	Frequency 89	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 44	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
Procedures

BETOS Sub-classification:  
Minor procedure

BETOS Sub-classification Level II:  
Other

CPT Descriptor: Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 25-year-old male undergoes open appendectomy under general anesthesia. He is at risk for postoperative pain. In order to provide postoperative pain control, a transversus abdominis plane (TAP) block is placed at the request of the surgeon.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patient's abdomen is prepped from the costal margin to the iliac crest with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the abdominal fascial plane block. Using continuous ultrasound guidance, the layers of the abdominal wall are identified. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a needle is then inserted deep to the between the internal oblique and the transversus abdominis muscles. Local anesthetic (e.g., 0.25% bupivacaine) is injected.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the TAP block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. If the patient is stable, he may be discharged home after meeting all appropriate discharge criteria. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 64486

#### *Pre-Service Package*

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend a 1 minute decrease in the pre-service evaluation time from the pre-service package time of 13 minutes to the survey median time of 12 minutes. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 3 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 2 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 4 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 17 minutes, which is a 3 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 64486

#### *Post-Service Package*

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect a 13 minute decrease from 18 minutes to the survey median time of 5 minutes.

### 64486

#### *Work RVU*

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.20 based on the following rationale:

- The recommended wRVU of 1.20 is appropriate relative to the recommended wRVU of 1.50 for the unilateral single injection thoracic fascial plane block code (6XX07) and the recommended wRVU of 1.34 for the unilateral single injection lower extremity fascial plane block code (6XX11).
- While the median intra-service time (10 minutes) is the same for all unilateral single injection codes (6XX07, 6XX11, 64486), the decreased wRVU for the unilateral single injection TAP code (64486) relative to the unilateral single injection thoracic and lower extremity codes (6XX07, 6XX11) is appropriate. The injection plane for the thoracic blocks is deeper compared to the injection plane for the TAP blocks, and involves more complicated anatomy. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**

### 64486

#### *KRS Codes*

- The 1<sup>st</sup> KRS code was a tie between two services, each of which was chosen by 23% of respondents.
  - 64447, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed*, has an RVW of 1.34, and times of 16/8/5.
  - 64425, *Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves*, has an RVW of 1.00, and times of 9/11/5.
- The recommendation for 64486 is well supported by the two 1<sup>st</sup> KRS codes. A majority of survey respondents said 64486 was either identical, somewhat or much more intense compared all three KRS codes on each metric evaluated.

**Summary:** For 64486, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.20 and 17 minutes of pre-service time, 10 minutes of intra-service time, and 5 minutes of post-service time.

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 8,204  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that single injection TAP blocks would account for 100% of current utilization of code 64486 as published in the RUC database. We do not anticipate any changes from how this service is currently reported.

Specialty Anesthesiology	Frequency 6481	Percentage 79.00 %
Specialty Pain Management	Frequency 328	Percentage 4.00 %
Specialty Interventional Pain Management	Frequency 82	Percentage 1 %

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Procedures

BETOS Sub-classification:  
 Minor procedure

BETOS Sub-classification Level II:  
 Other

---

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 64486

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

		Presented Recommended RVU: <b>1.39</b>
Global Period: 000	Current Work RVU: <b>1.48</b>	RUC Recommended RVU: <b>1.39</b>

CPT Descriptor: Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by continuous infusion(s) (includes imaging guidance, when performed)

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 58-year-old male undergoes partial nephrectomy under general anesthesia for renal cell carcinoma. In order to provide postoperative pain control, a transversus abdominis plane (TAP) block with catheter placement for continuous infusion is placed at the request of the surgeon.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patients abdomen is prepped from the costal margin to the iliac crest with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the thoracic fascial plane block. Using continuous ultrasound guidance, the layers of the thoracic wall are identified. The placement needle is then inserted deep to the erector spinae muscle. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a catheter is inserted through the placement needle and the needle is removed. The catheter is secured and then a sterile occlusive dressing is applied. Local anesthetic (e.g., 0.25% bupivacaine) is infused unilaterally into the fascial plane.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the TAP block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. The patient is educated on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process of catheter removal. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

-----	-----	-----

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

**Society Recommendations****64487***Pre-Service Package*

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend no adjustment to the pre-service package time of 13 minutes for the pre-service evaluation time. While this is below the survey median time of 15 minutes, the societies believe 13 minutes is appropriate. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 4 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 1 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 5 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 19 minutes, which is a 1 minute decrease compared to the pre-service package 1 total time of 20 minutes.

**64487***Post-Service Package*

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect an 8 minute decrease from 18 minutes to the survey median time of 10 minutes. **For additional information to support the recommended post-service time for the continuous infusion fascial plane block codes, please see the handout for Tab 8.**

**64487***Work RVU*

The societies recommend a wRVU of 1.39 based on a crosswalk to 64445, *Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, including imaging guidance, when performed*, based on the following rationale:

- The survey 25<sup>th</sup> percentile wRVU is 1.66 and the median intra-service time is 12 minutes. The survey 25<sup>th</sup> percentile wRVU is a 0.18 increase compared to the current wRVU of 1.48. The survey median intra-service time is a 3 minute decrease compared to the current intra-service time of 15. Based on 3 minute decrease in median intra-service time, the societies believe a crosswalk is appropriate.
- The societies selected code 64445 as a good crosswalk for 64887. 64445 has a global period of 000, a wRVU of 1.39, and times of 9/10/5. 64445 is a RUC Time code that was reviewed by the RUC in October 2021.
- A crosswalk to 64445 maintains an incremental increase of 0.19 compared to the unilateral single injection TAP block code (64486). This is consistent with the approach the RUC took in 2014 when it recommended an incremental increase of 0.21 between the unilateral single injection and continuous infusion TAP block codes (64488, 64487), and an incremental increase of 0.2 between the bilateral single injection and continuous infusion TAP block codes (64488, 64489). According to the RUC's rationale in 2014, this is consistent with the incremental difference for other single injection and continuous infusion codes, including 0.15 for 64461 and 64463, 0.23 for 62322 and 62326, 0.30 for 64415 and 64416, and 0.34 for 64447 and 64448. **For additional information to support the recommended incremental increases between the single injection and continuous infusion fascial plane block codes, please see the handout for Tab 8.**
- A crosswalk to 64445 with a wRVU of 1.39 is appropriate relative to the recommended wRVU of 1.74 for the unilateral continuous infusion thoracic fascial plane block code (6XX08) and the recommended wRVU of 1.67 for the unilateral continuous infusion lower extremity fascial plane block code (6XX12).

**64487***KRS Codes*

- The 1<sup>st</sup> KRS code, which was chosen by 31% of respondents, was 64448, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.68, and times of 19/15/9.
- The 2<sup>nd</sup> KRS code, which was chosen by 26% of respondents, was 64416, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.80, and times of 19/15/10.

**Summary:** For code 64487, the societies recommend a wRVU of 1.39 and 19 minutes of pre-service time, 12 minutes of intra-service time, and 10 minutes of post-service time.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code:64488	Tracking Number	Original Specialty Recommended RVU: <b>1.40</b>
		Presented Recommended RVU: <b>1.40</b>
Global Period: 000	Current Work RVU: <b>1.60</b>	RUC Recommended RVU: <b>1.40</b>

CPT Descriptor: Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 45-year-old female undergoes laparoscopy cholecystectomy under general anesthesia. She is at risk for postoperative pain. In order to provide postoperative pain control, bilateral transversus abdominis plane (TAP) blocks are placed at the request of the surgeon.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patients abdomen is prepped from the costal margin to the iliac crest with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: An ultrasound transducer is placed over the target area for the abdominal fascial plane block. Using continuous ultrasound guidance, the layers of the abdominal wall are identified. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a needle is then inserted deep to the between the internal oblique and the transversus abdominis muscles. Local anesthetic (e.g., 0.25% bupivacaine) is injected. A repeat procedure is then carried out in an identical fashion on the opposite side.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the TAP block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. If the patient is stable, she may be discharged home after meeting all appropriate discharge criteria. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Survey**

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

**Society Recommendations****64488***Pre-Service Package*

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend a 1 minute decrease in the pre-service evaluation time from the pre-service package time of 13 minutes to the survey median time of 12 minutes. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 3 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 2 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 4 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 17 minutes, which is a 3 minute decrease compared to the pre-service package 1 total time of 20 minutes.

**64488***Post-Service Package*

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect a 13 minute decrease from 18 minutes to the survey median time of 5 minutes.

**64488***Work RVU*

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.40 based on the following rationale:

- The recommended wRVU of 1.40 is appropriate relative to the recommended wRVU of 1.20 for the unilateral single injection TAP block code (64486). It is also appropriate relative to the recommended wRVU of 1.67 for the bilateral single injection thoracic block code (6XX09). The physician work to place a block in the abdominis plane is less intense compared to the thoracic plane since the thoracic plane contains more complex anatomy and proximity to vulnerable structures. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**

**64488***KRS Codes*

- The 1<sup>st</sup> KRS code, which was chosen by 24% of respondents, was 64461, *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)*, which has an RVW of 1.75, and times of 19/15/10.
- The 2<sup>nd</sup> KRS code, which was chosen by 19% of respondents, was 64415, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, including imaging guidance, when performed*, which has an RVW of 1.50, and times of 18/10/7.

**Summary:** For 64488, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.40 and 17 minutes of pre-service time, 12 minutes of intra-service time, and 5 minutes of post-service time.

	64488 (survey median)	64488 (recommended)	64488 (current)	1st KRS (64461)

TOTAL TIME	36	34	40	44
Work RVU	1.66	1.40	1.60	1.75

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) The AMA RUC Database Billed Together Percentages for 2022 shows that CPT code 64488 is billed with a non-facility office E/M code 77.8%.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) There have been no changes to how this service is currently reported.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Anesthesiology How often? Sometimes

Specialty Pain Management How often? Sometimes

Specialty Interventional Pain Management How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. National data not available.

Specialty Anesthesiology	Frequency	Percentage	%
Specialty Pain Management	Frequency	Percentage	%
Specialty Interventional Pain Management	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 63,110 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. We estimate that bilateral single injection TAP blocks would account for 100% of current utilization of this code, as published in the RUC database. We do not anticipate any changes from how this service is currently reported.

Specialty Anesthesiology	Frequency 54275	Percentage 86.00 %
Specialty Pain Management	Frequency 5680	Percentage 9.00 %
Specialty Interventional Pain Management	Frequency 1262	Percentage 2.00 %

Do many physicians perform this service across the United States? Yes

Description of Pre-Service Work: The patient's medical record is reviewed, the patient is interviewed and examined and informed consent is obtained. Particular attention is paid to history of seizure disorder, evidence of infection, anticoagulation and bleeding disorders as these increase the risk of complication from the procedure. In the pre-operative holding area, the patient is placed in the supine position. Blood pressure cuff, pulse oximeter, supplemental oxygen and electrocardiographic monitors are applied. The provider performs appropriate hand hygiene and dons appropriate barrier. The patients abdomen is prepped from the costal margin to the iliac crest with a chlorhexidine-alcohol solution and draped in a sterile fashion.

Description of Intra-Service Work: Using continuous ultrasound guidance, the layers of the abdominal wall are identified. The placement needle is then inserted between the internal oblique and the transversus abdominis muscles. Correct needle location is visualized by hydrodissection. After identifying the appropriate anatomic structures, a catheter is inserted through the placement needle and the needle is removed. The catheter is secured and then a sterile occlusive dressing is applied. A repeat procedure is then carried out in an identical fashion on the opposite side. Local anesthetic (e.g., 0.25% bupivacaine) is delivered via 2 separate infusion pumps.

Description of Post-Service Work: The procedure is documented in the medical record, providing a detailed description of the placement of the TAP block and the patient's responses. After an appropriate period of monitoring for hemodynamic stability, mental orientation, and the vascular status of extremity the patient is reexamined to confirm successful block and adequate pain relief. The patient is educated on expectations related to the catheter infusion, including potential numbness, pump functions, signs of infection and the process of catheter removal. Prior to discharge, the patient is reminded of signs and symptoms of potential complications and given contact information should such signs or symptoms develop.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

*Survey*

Two societies (ASA and ASRA) indicated an interest in surveying all 10 fascial plane block codes. Both of the surveying societies sent a single survey instrument containing all 10 fascial plane block codes to 5000 randomly selected members. The societies established an Expert Panel to develop the practice expense (PE) recommendations. The Expert Panel also reviewed the survey data and the existing RVUs and inputs and previous RUC survey of TAP block codes data to inform their recommendations.

## Society Recommendations

### 64489

#### Pre-Service Package

The societies recommend pre-service package 1, straightforward patient/straightforward procedure, with the following adjustments:

- The societies recommend no adjustment to the pre-service package time of 13 minutes for the pre-service evaluation time. While this is below the survey median time of 16 minutes, the societies believe 13 minutes is appropriate. **For additional information to support the recommended pre-service times for all 10 fascial plane block codes, please see the handout for Tab 8.**
- The societies recommend no adjustment to the pre-service package time of 1 minute for pre-service positioning time. While this is below the survey median time of 4.5 minutes, the societies believe 1 minute is appropriate.
- The societies recommend a 1 minute decrease in the pre-service scrub, dress and wait time from the pre-service package time of 6 minutes to the survey median time of 5 minutes.

The total pre-service time based on the adjusted pre-service evaluation, and pre-service SDW time is 19 minutes, which is a 1 minute decrease compared to the pre-service package 1 total time of 20 minutes.

### 64489

#### Post-Service Package

The societies recommend immediate post-service package 7a, local anesthesia/ straightforward procedure adjusted to reflect an 8 minute decrease from 18 minutes to the survey median time of 10 minutes. **For additional information to support the recommended post-service time for the continuous infusion fascial plane block codes, please see the handout for Tab 8.**

### 64489

#### Work RVU

The societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.75 based on the following rationale:

- The recommended wRVU of 1.75 is appropriate relative to the recommended wRVU of 1.40 for the bilateral single injection TAP block code (64488). An incremental increase of 0.35 wRVU between the bilateral single injection and continuous infusion TAP block codes is higher than the incremental increase between other single injection and continuous infusion codes but supported by robust survey data.
- The recommended wRVU of 1.75 is also appropriate relative to the recommended wRVU of 1.83 for the bilateral continuous infusion thoracic block code (6XX10). The median intra-service time (20 minutes) is the same for the bilateral continuous infusion thoracic fascial plane block (6XX10) and TAP block (64489) codes. The 0.08 difference in wRVU between 6XX10 and 64489 is appropriate because the difference in physician work intensity to place a block in the thoracic plane compared to the abdominal plane. **For additional information to support the recommended increased intensity for all four thoracic fascial plane block codes, please see the handout for Tab 8.**

### 64489

#### KRS Codes

- The 1<sup>st</sup> KRS code, which was chosen by 26% of respondents, was 64416, *Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.80, and times of 19/15/10.
- The 2<sup>nd</sup> KRS code, which was chosen by 23% of respondents, was 64448, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement), including imaging guidance, when performed*, which has an RVW of 1.68, and times of 19/15/9.

**Summary:** For 64489, the societies recommend the survey 25<sup>th</sup> percentile wRVU of 1.75 and 19 minutes of pre-service time, 20 minutes of intra-service time, and 10 minutes of post-service time.

	64489 (survey median)	64489 (recommended)	64489 (current)	1st KRS (64416)

<b>Meeting Date:</b> January 2024
-----------------------------------

<b>CPT Code</b>	<b>Long Descriptor</b>	<b>Global Period</b>
6XX07	Thoracic fascial plane block, unilateral; by injection(s), including imaging guidance, when performed	000
6XX08	Thoracic fascial plane block, unilateral; by continuous infusion(s), including imaging guidance, when performed	000
6XX09	Thoracic fascial plane block, bilateral; by injection(s), including imaging guidance, when performed	000
6XX10	Thoracic fascial plane block, bilateral; by continuous infusion(s), including imaging guidance, when performed	000
6XX11	Lower extremity fascial plane block, unilateral; by injection(s), including imaging guidance, when performed	000
6XX12	Lower extremity fascial plane block, unilateral; by continuous infusion(s), including imaging guidance, when performed	000
64486	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by injection(s) (includes imaging guidance, when performed)	000
64487	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) unilateral; by continuous infusion(s) (includes imaging guidance, when performed)	000
64488	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by injections (includes imaging guidance, when performed)	000
64489	Transversus abdominis plane (TAP) block (abdominal plane block, rectus sheath block) bilateral; by continuous infusions (includes imaging guidance, when performed)	000

**Vignette(s)** (*vignette required even if PE only code(s)*):

<b>CPT Code</b>	<b>Vignette</b>
6XX07	A 45-year-old female undergoes breast surgery under general anesthesia. To provide post operative pain control and minimize opioid usage, a thoracic fascial plane block is placed.
6XX08	A 59-year-old female undergoes cardiac surgery via a minimally invasive approach and limited right thoracotomy under general anesthesia. To provide post operative pain control and minimize opioid usage, a thoracic fascial plane block with catheter placement for continuous infusion is placed.
6XX09	A 65-year-old female undergoes bilateral breast surgery under general anesthesia. To provide post operative pain control and minimize opioid usage, a bilateral thoracic fascial plane block is placed.
6XX10	A 75-year-old female undergoes cardiac surgery by median sternotomy under general anesthesia. To provide post operative pain control and minimize opioid usage, a bilateral thoracic fascial plane block with catheter placement for continuous infusion is placed.
6XX11	A 55-year-old female undergoes elective total hip arthroplasty under general anesthesia. To provide post operative pain control and minimize opioid usage, a lower extremity fascial plane block is placed.
6XX12	An 81-year-old female undergoes hip fracture repair under general anesthesia. To provide post operative pain control and minimize opioid usage, a lower extremity fascial plane block with catheter placement for continuous infusion is placed.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

64486	A 25-year-old male undergoes open appendectomy under general anesthesia. He is at risk for postoperative pain. In order to provide postoperative pain control, a transversus abdominis plane (TAP) block is placed at the request of the surgeon.
64487	A 58-year-old male undergoes partial nephrectomy under general anesthesia for renal cell carcinoma. In order to provide postoperative pain control, a transversus abdominis plane (TAP) block with catheter placement for continuous infusion is placed at the request of the surgeon.
64488	A 45-year-old female undergoes laparoscopy cholecystectomy under general anesthesia. She is at risk for postoperative pain. In order to provide postoperative pain control, bilateral transversus abdominis plane (TAP) blocks are placed at the request of the surgeon.
64489	A 64-year-old female undergoes hysterectomy under general anesthesia for uterine cancer. In order to provide postoperative pain control, bilateral transversus abdominis plane (TAP) blocks with catheter placement for continuous infusion are placed at the request of the surgeon.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

An Expert Panel consisting of RUC advisors and subject matter experts from the surveying societies communicated via email and zoom to develop the practice expense recommendations. The consensus panel reviewed the (1) survey times, (2) existing inputs for the key reference service codes, (3) existing inputs for the current codes, (5) PE standards.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The current direct PE inputs for the TAP block codes (64486-64489) are included on the PE spreadsheet as 'Current'. The Expert Panel recommends maintaining the current direct PE inputs for the TAP block codes with updates to reflect a 3 minute decrease in median intra-service time for 64487 and 64488.

The Expert Panel recommends using the current direct PE inputs for the TAP block codes as a reference for the recommended direct PE inputs for the new thoracic and lower extremity block codes. Specifically:

- The unilateral single injection TAP block code (64486) is recommended as a reference code for the unilateral single injection thoracic (6XX07) and lower extremity (6XX11) block codes.
- The unilateral continuous infusion TAP block code (64487) is recommended as a reference code for the unilateral continuous infusion thoracic (6XX08) and lower extremity (6XX12) block codes.
- The bilateral single injection TAP block code (64488) is recommended as a reference code for the bilateral single injection thoracic block code (6XX09).

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- The bilateral continuous infusion TAP block code (64489) is recommended as a reference code for the bilateral continuous infusion thoracic block code (6XX10).

For all 10 codes surveyed, the Expert Panel also reviewed current direct PE inputs for the KRS codes that were selected by survey respondents. Specifically:

- 64461, *Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed)*, was the 1<sup>st</sup> KRS for 6XX07, 6XX09, and 64488, and the 2<sup>nd</sup> KRS for 6XX10 (the 1<sup>st</sup> KRS for 6XX10 was 64416 which does not have nonfacility direct PE inputs).
- 64447, *Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, including imaging guidance, when performed*, was the 1<sup>st</sup> KRS for 6XX11.
- 64425, *Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves*, was the 1<sup>st</sup> KRS for 64486.
- Neither the 1<sup>st</sup> nor 2<sup>nd</sup> KRS codes selected for 6XX08, 6XX12, 64487, and 64489 include nonfacility direct PE inputs. Accordingly, the corresponding TAP block code is the only reference codes included for these codes.

After reviewing the current direct PE inputs for each of the KRS codes, the Expert Panel reaffirmed that the current direct PE inputs for the TAP block codes (64486-64489) are the most appropriate reference for the new thoracic and lower extremity block codes (6XX07-6XX12). The TAP block codes appropriately capture the bupivacaine 0.25% inj (SH021) supply item compared to the KRS codes which include bupivacaine 0.5% inj (SH022), additional supplies required for bilateral services, and additional supplies required for continuous infusion services. The TAP block codes are also a more appropriate reference with respect to the pre-, intra-, and post-service times included in the equipment cost per minute formula. Accordingly, the Expert Panel recommends using the current direct PE inputs for the TAP block codes as a reference for the recommended direct PE inputs for the new thoracic and lower extremity block codes.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

No, these codes are not typically reported with an E/M service.  
No, these codes are not typically reported with an E/M service in the nonfacility setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Anesthesiology, pain management and interventional pain management are the dominant specialties in the nonfacility setting for 64486, 64488, 64489, and 64999 (64999 is an unlisted code that is currently used to report thoracic and lower extremity fascial plane block services). Physical medicine and rehabilitation the dominant specialty in the nonfacility setting for 64487.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The Expert Panel recommendations include SB019, drape-towel sterile 18in x 26in (quantity = 4) as a direct PE supply input for the unilateral single injection and continuous infusion thoracic, lower extremity, and TAP block codes (6XX07, 6XX08, 6XX11, 6XX12, 64486, 64487). This supply item is currently included as a direct PE supply input (quantity = 4) for the bilateral single injection and continuous infusion TAP block codes (64488, 64489). The Expert Panel recommends that SB019 (quantity = 4) be included as a direct PE supply input for all 10 fascial plane block codes.

4 sterile drape towels are currently accepted PE input for the bilateral abdominal codes but were not included as a supply input for the unilateral codes when reviewed in 2014. We believe this was an error and the request to add the 4 additional sterile drape towels for the unilateral codes is intended to correct that error since this supply item is necessary for both unilateral and bilateral fascial plane block codes, regardless of anatomic region or method of administration. The 4 sterile drapes have also been included as PE supply inputs for each of the new codes as the PE recommendations for the new codes are a crosswalk to the existing codes.

This supply is necessary in order to create a quadrant to block out the whole procedural field during all fascial plane block services, not just bilateral services as is currently the case for the TAP codes. A single barrier—like the one drape included in the basic injection pack—will not allow ultrasound imaging or a needle to be passed through it. In the majority of cases, a fenestrated drape is not appropriate for a single block as the small orifice does not allow sufficient room to scan to identify relevant anatomy for the block. In the case of bilateral blocks, the fenestration is far too small to allow the performance of two anatomically distant blocks.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

## CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

No

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

3 minutes of clinical staff time was allocated to clinical activity, *obtain vital signs* (CA010) when the TAP block codes (64486-64489) were surveyed in 2014. 5 minutes of clinical staff time is currently allocated to clinical activity, *obtain vital signs* (CA010) for TAP block codes, according to the RUC database.

The Expert Panel recommends maintaining the currently accepted 5 minutes allocated to clinical activity, *obtain vital signs* (CA010) for the TAP block codes and the new thoracic and lower extremity block codes.

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

- b. Service period (includes pre, intra and post):

Pre Time  
During the pre-time service period the clinical staff greets patient, provides gowning and ensures appropriate medical records are available; obtains vital signs; prepares room, equipment and supplies; and prepares room setup, initial positioning and monitors patient (standard times are requested)

Intra Time  
Staff (RN/LPN/MTA) is present and assisting physician during the entire procedure. Staff supports the physician throughout the procedure by handing over the necessary supplies (syringes, gauzes etc.), acts as a second pair of hands during the procedure assisting with supplies/equipment or directly with the patient as needed, helps to make sure patient is comfortable and monitors the patient throughout the procedure. (67% of physician time)

Post Time  
During the post-time the clinical staff monitors the patient, cleans the room, and checks dressings, catheter, wounds.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

c. Post-service period:

During the post-service period the clinical staff conducts patient communications.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:

The RN/LPN/MTA is present 67% of the physician work time for assisting with the injection and imaging guided portion of the procedure.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

No

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

No

**MEDICAL SUPPLIES & EQUIPMENT/INVOICES**

15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

No

18. Are you recommending a PE supply pack for this recommendation? **Yes**

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes. The Expert Panel recommends the following two supply packs for all 10 codes:

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- SA048 pack, minimum multi-specialty visit
- SA041 pack, basic injection

These packs are both currently accepted direct PE supply inputs for the TAP block codes (64486-64498).

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit Price
<b>pack, basic injection</b>	<b>SA041</b>	<b>pack</b>		<b>\$10.45</b>
applicator, sponge-tipped		item	3	
bandage, strip 0.75in x 3in		item	1	
cap, surgical		item	1	
drape, sterile barrier 16in x 29in		item	1	
drape, sterile, for Mayo stand		item	1	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	2	
gown, staff, impervious		item	1	
gown, surgical, sterile		item	1	
lidocaine 1%-2% inj (Xylocaine)		ml	5	
mask, surgical		item	1	
needle, 18-27g		item	2	
povidone soln (Betadine)		ml	10	
syringe 3ml		item	1	
underpad 2ftx3ft (Chux)		item	1	
DESCRIPTION	Code	Unit	Item Qty	Unit Price
<b>pack, minimum multi-specialty visit</b>	<b>SA048</b>	<b>pack</b>		<b>\$5.02</b>
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
  - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

The Expert Panel recommends the following equipment items for all 10 codes:

- EF018 stretcher
- EQ250 ultrasound unit, portable
- EQ011 ECG, 3-channel (with SpO2, NIBP, temp, resp)

These equipment items are all currently accepted direct PE equipment inputs for the TAP block codes (64486-64498). We are recommending the “Default” equipment formula for the stretcher and ECG for all 10 codes. However, we are recommending intra time for the portable ultrasound for all codes.

**PE-ONLY CODES ADDITIONAL INFORMATION**

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?  
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

**ADDITIONAL INFORMATION**

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Yes. The Expert Panel recommendations include SB019, drape-towel sterile 18in x 26in (quantity = 4) as a direct PE supply input for the unilateral single injection and continuous infusion thoracic, lower extremity, and TAP block codes (6XX07, 6XX08, 6XX11, 6XX12, 64486, 64487). This supply item is currently included as a direct PE supply input (quantity = 4) for the bilateral single injection and continuous infusion TAP block codes (64488, 64489). The Expert Panel recommends that SB019 (quantity = 4) be included as a direct PE supply input for all 10 fascial plane block codes. This supply is necessary in order to create a quadrant to block out the whole procedural field during all fascial plane block services, not just bilateral services as is currently the case for the TAP codes.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

During the PE Subcommittee meeting, we made the following modifications the PE spreadsheet:  
  
For all three unilateral single injection fascial plane block codes (6XX07, 6XX11, 64486), we updated the recommended number of minutes for clinical labor activity CA019 from 7 minutes to 7.5 minutes to correct a rounding error.

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

### Magnetic Resonance Examination Safety Procedures – Tab 9

At the September 2023 CPT Editorial Panel meeting, a new code family was created to describe magnetic resonance (MR) examination safety procedures and capture the physician work involving patients with implanted medical devices that require access to MR diagnostic procedures. Implanted medical devices or foreign bodies can increase the risk of injury or death for a patient entering the MR environment, either for diagnostic procedures or for procedures utilizing MR imaging guidance. Technological advancements in both the MR imaging (MRI) scanner and the design and testing of electronic implanted medical devices have expanded access to patients who were previously contraindicated for MR diagnostic and interventional procedures. CPT code 7XX02 describes MR safety planning services performed in advance of the date of the MR procedure, while 7XX03, 7XX04 and 7XX05 describe MR safety planning services performed on the day of the MR examination under the supervision of a physician or other qualified health care professional (QHP). This code family was surveyed for the January 2024 RUC meeting.

Due to the wide range of implanted devices to consider with these safety procedures before an MR examination, the CPT Editorial Panel designed this code family to reflect the wide breadth of implanted device heterogeneity. In the preliminary discussion of this tab, the specialty societies explained that the complex structure of this code family is attributable to the codes being modular, in that each service is distinctly independent and completed separately from one another. The relationship of relative value within this code family is determined by the complexity of work, not its clinical description. The RUC agreed with this clarification and accounted for there not being a typical rank order within this code family in their analysis and valuation of each service.

The CPT Editorial Panel designated 7XX03, 7XX04 and 7XX05 to be Modifier -51 Exempt, as these procedures protect the patient from harm associated with the presence of an implanted device and are independent of the work associated with the performed MR examination. Likewise, the modular design of 7XX03, 7XX04 and 7XX05 ensures there is no duplicated work between the three codes in the occasional instances multiple codes might be required for a particular implanted device. The valuation, time and PE recommendations are above and beyond the MR service; any reduction for multiple procedures would be inappropriate. Furthermore, the RUC determined it most appropriate to break out the pre-, intra- and post-service times for all four surveyed codes in this family using the RUC survey results. The RUC recognized that this decision would help align the work RVU recommendations of physician work with the detailed descriptions of pre-, intra- and post-service work provided by the specialty societies.

***7XX00 MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; initial 15 minutes***

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

***7XX01 MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes (List separately in addition to code for primary procedure)***

CPT codes 7XX00 and 7XX01 are practice expense only services that represent the preparatory research and review completed by clinical staff (i.e., MRI technologist and/or a medical physicist) that will be utilized by the physician or QHP for the other four services in this code family.

***7XX02 MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report***

The RUC reviewed the results from 57 radiologists and neuroradiologists and determined the survey 25<sup>th</sup> percentile work RVU of 0.60 appropriately accounted for the physician work required to perform this service. The RUC recommends 15 minutes pre-service evaluation time, 5 minutes intra-service time and 5 minutes post-service, equaling 25 minutes total time.

This procedure involves MR safety determination by a physician or QHP responsible for the appropriateness and safety of the MR procedure. During the pre-service time period, preparation for the MR safety determination will occur. The MR technologist or MR Safety Officer will obtain the patient's clinical history, relevant implanted device details/instructions, and MR conditional labeling. The radiologist and medical physicist will conduct a comprehensive risk analysis assessing the potential risk to the patient versus clinical benefit using these materials based on several factors including but not limited to (1) information prepared in the pre-service time related to the implanted device limitations; (2) proximity of the implanted device/foreign body to sensitive tissues and; (3) evaluation of the potential clinical risk to the patient in the event of device malfunction or injury during the procedure. During the intra-service time period, the MR exam parameters are reviewed for conformance with the implanted device safety instructions, a decision regarding whether informed consent should be obtained before the MR exam is made and alternative recommendations or testing are considered that would utilize accessory equipment to safely perform the MR exam. During the post-service time period, communication with the patient and completion of a technical report will detail the recommendations, special precautions, and expectations for the MR exam as specified by the radiologist and medical physicist.

To support the recommended work RVU value of 0.60, the RUC compared the surveyed code to the top key reference service 93286 *Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system* (work RVU = 0.30, 10 minutes intra-service time and 22 minutes total time) and second key reference service 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93, 15 minutes intra-service time and 20 minutes total time). While the surveyed code is like CPT code 93286 in that there is an assessment of a device before the procedure, the assessment required in 7XX02 is more complex due to the risk/benefit analysis and

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

overall breadth of medical decision-making. In comparison to CPT code 99202, the surveyed code is less intense but similar in that the physician will be reviewing the medical record for prior imaging, clinical history, and reason for study, which will lead to a decision regarding the risk/benefit of performing the MR scan. Thus, the work RVU valuation of CPT code 7XX02 is appropriately bracketed by the top two chosen key reference services, CPT codes 93286 and 99202.

The RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 76830 *Ultrasound, transvaginal* (work RVU = 0.69, 10 minutes intra-service time and 23 minutes total time) and determined that these services require a similar amount of physician work and time to perform, thus support the recommended value of 0.60 for CPT code 7XX02. **The RUC recommends a work RVU of 0.60 for CPT code 7XX02.**

***7XX03 MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report***

The RUC reviewed the results from 38 radiologists and neuroradiologists and determined the survey 25<sup>th</sup> percentile work RVU of 0.76 appropriately accounted for the physician work required to perform this service. The RUC recommends 14 minutes pre-service evaluation time, 10 minutes intra-service time and 5 minutes post-service, equaling 29 minutes total time.

This procedure involves MR safety medical physics examination customization, preparatory planning, and intra-service performance monitoring. During the pre-service time period, a review of the implant-related MR exam constraints will take place between the radiologist and medical physicist or MR Safety Officer. In reviewing what the radiologist has protocolled, the medical physicist or MR safety expert will develop examination customization based on several factors including but not limited to (1) identification of potentially problematic imaging sequences that have too high of radiofrequency (RF) energy levels being deposited; (2) prioritization of select views and imaging sequences to ensure diagnostic quality and anatomical coverage and; (3) modification of customization mid-procedure based on back-and-forth feedback from the radiologist regarding image contrast or the patient's total scan time restrictions. During the intra-service time period, the radiologist will review imaging in real-time during the MRI acquisition, which has been customized and tailored to restrictive requirements based on the patient's condition and implant-related limitations as determined during the pre-service work. Scan parameter adjustments are conducted as necessary. During the post-service time period, the technical report from the medical physicist or MR safety expert will be recorded.

The RUC compared the surveyed code to MPC codes 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time) and 88305 *Level IV - Surgical pathology, gross and microscopic examination...* (work RVU = 0.75, 25 minutes intra-service and total time). The RUC recognized that these services require similar physician work and time, thus supporting the recommended value of 0.76 for 7XX03. In comparison to the surveyed code, the RUC noted that both MPC reference services

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

involve similar examination and assessment of a patient's clinical history and diagnostic studies when making case-specific medical decisions about the next steps in imaging or treatment.

For additional support, the RUC referenced the second key reference service 72125 *Computed tomography, cervical spine; without contrast material*. (work RVU = 1.00, 12 minutes intra-service time and 22 minutes total time). This reference service describes physician work that involves modification of MR imaging parameters and prioritization of the order of MR sequences to ensure a quality diagnostic exam. The RUC acknowledged that CPT code 72125 requires slightly less total time than the surveyed code, however, it is more intense since the typical patient is an emergency room (ER) patient with concern for neck injury. **The RUC recommends a work RVU of 0.76 for CPT code 7XX03.**

***7XX04 MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report***

The RUC reviewed the results from 38 radiologists and neuroradiologists and determined that a work RVU of 0.75 appropriately accounted for the physician work required to perform this service. The RUC recommends 12 minutes pre-service evaluation time, 8 minutes intra-service time and 5 minutes post-service, equaling 25 minutes total time.

This procedure involves MR safety implant electronics preparation, including MR-specific programming of a pulse generator and/or transmitter. During the pre-service time period, confirmation of the type, necessary configuration, and programming instructions for the patient's active electronic implanted device occurs. The MR-specific programming considers the risks of programming modes, implant malfunction, and interruption of therapy regarding patient tolerance. During the intra-service time period, real-time monitoring of the patient's tolerance and side effects of the modified therapies will occur to determine whether or not it is appropriate to proceed with the MR exam. During the post-service time period, the technical report from the medical physicist or MR Safety Officer will be recorded and follow-up with the patient's treating physician will be requested if the implanted device does not return to the status observed before the MR exam.

To support the recommended work RVU value of 0.75, the RUC compared the surveyed code to the top key reference service 93287 *Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system* (work RVU = 0.45, 10 minutes intra-service time and 25 minutes total time) and second key reference service 93289 *Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements*. (work RVU = 0.75, 10 minutes intra-service time and 23.5 minutes total time). While the surveyed code is like CPT code 93287 in that there is an assessment of a device before the procedure, there is a greater complexity and intensity of work involved with 7XX04 as an implanted device will be exposed to MRI rather than only a device check in pre- or post-procedure. In comparison to CPT code 93289, the surveyed code has the same work RVU valuation and requires similar time and almost identical intensity. Notably, 7XX04 is slightly more complex due to its interrogation of a device under normal conditions versus taking care of a device in a conditional mode inside a magnet

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

that could potentially impact the device and the patient's condition. Thus, the work RVU valuation of CPT 7XX04 code is appropriately bracketed by the top two key reference services, CPT codes 93287 and 93289.

For additional support, the RUC referenced MPC codes 88305 *Level IV - Surgical pathology, gross and microscopic examination...* (work RVU = 0.75, 25 minutes intra-service and total time) and 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time), which require the same physician work and time to perform. **The RUC recommends a work RVU of 0.75 for CPT code 7XX04.**

***7XX05 MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report***

The RUC reviewed the results from 32 radiologists and neuroradiologists and determined that a work RVU of 0.60 appropriately accounted for the physician work required to perform this service. The RUC recommends 15 minutes pre-service evaluation time, 10 minutes intra-service time and 5 minutes post-service, equaling 30 minutes total time.

This procedure involves MR safety implant positioning and immobilization under the supervision of a physician or QHP. During the pre-service time period, the physician or QHP will assess the risks and benefits associated with immobilization and if determined appropriate. Other preparatory actions are completed, notably, the physical location of the affected implant will be identified and/or marked on the patient's skin. During the intra-service time period, the application of physical protections to secure the implanted medical device from MR-induced translational or vibrational forces, magnetically induced changes, and/or prevent potential radiofrequency burns from inadvertent tissue contact while the MR room occurs. Assessing the patient's pain tolerance and discomfort at the site of the implant will determine MR exam discontinuation or completion. An inspection for evidence of implant migration, malfunction or tissue damage is conducted upon exiting of the MR scan room. During the post-service time period, the technical report from the medical physicist or MR Safety Officer will be recorded and follow-up with the patient's treating physician will be requested if the implanted device does not return to the status observed before the MR exam.

To support the recommended work RVU value of 0.60, the RUC compared the surveyed code to the second key reference service 93286 *Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system* (work RVU = 0.30, 10 minutes intra-service time and 22 minutes total time) and CPT code 93287 *Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system* (work RVU = 0.45, 10 minutes intra-service time and 25 minutes total time). The RUC recognized that the surveyed code requires more physician work than CPT code 93286 attributable to preparing the patient and their implantable device before entering the magnet, ensuring appropriate patient positioning while

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

in the magnet, and monitoring the safety of the implantable device during the scan. While the surveyed code is like CPT code 93287 in that there is an assessment of a device before the procedure, there is a greater complexity and intensity of work involved with 7XX05 as an implanted device will be exposed to MRI rather than there just being a device check pre- or post-procedure.

The RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 76830 *Ultrasound, transvaginal* (work RVU = 0.69, 10 minutes intra-service time and 23 minutes total time) and determined that these services require similar physician work and time to perform, thus support the recommended value of 0.60 for CPT code 7XX05. **The RUC recommends a work RVU of 0.60 for CPT code 7XX05.**

### **Practice Expense**

The Practice Expense (PE) Subcommittee reviewed the practice expense inputs for CPT codes 7XX00–7XX05 and made one modification to adjust the clinical staff time involved with code 7XX01. For this code, CA021 *Perform procedure/service---NOT directly related to physician work time* has two clinical staff types, L047A *MRI Technologist* and L152A *Medical Physicist*. L047A increased from 26 to 27 minutes, resulting in 45 minutes of total clinical staff time for CA021. The specialty societies confirmed that both the technologist and the medical physicist are reviewing existing imaging on the technologist PACS workstation, sometimes sequentially on the same tech PACS workstation and sometimes in parallel at two separate PACS workstations. The PE Subcommittee also acknowledged the new equipment input, *Vitals monitoring system (MR Conditional)*, and the two new supply inputs, *Thermoplastic splint material 6"x9" (MR Safe)* and *Disposable oximeter probe and clip (MR Conditional)*, as recommended for codes 7XX04 and 7XX05. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Committee.**

### **New Technology**

CPT codes 7XX00, 7XX01, 7XX02, 7XX03, 7XX04 and 7XX05 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

### **Modifier -51 Exempt**

The RUC recommends that CPT codes 7XX03, 7XX04 and 7XX05 be added to the Modifier -51 Exempt list. These procedures are typically performed with another procedure but may be stand-alone procedures and not always performed with other specified procedures. The valuation, time and PE recommendations provided by the specialty societies distinguished the work associated with these three codes from the work of the MR service and focused the work of each code on the distinct requirements of an implanted device. There are currently no identified implanted devices with FDA-approved labeling requiring both 7XX04 and 7XX05 procedures to be performed before an MRI.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<b>Radiology</b>				
<b>Diagnostic Radiology (Diagnostic Imaging)</b>				
75989		<i>Radiological guidance (ie, fluoroscopy, ultrasound, or computed tomography), for percutaneous drainage (eg, abscess, specimen collection), with placement of catheter, radiological supervision and interpretation</i>  <i>(Do not report 75989 in conjunction with 10030, 32554, 32555, 32556, 32557, 33017, 33018, 33019, 47490, 49405, 49406, 49407)</i>		
<b><u>Magnetic Resonance Safety Implant/Foreign Body Procedures (Red Heading)</u></b>				
<u>Implanted medical devices or foreign bodies can increase the risk of injury or death for a patient entering the magnetic resonance (MR) environment, either for diagnostic MR procedures or for procedures performed under MR imaging guidance.</u>				
<u>Implants may have FDA-approved labeling specifying conditions under which an MR exam could be safely performed. These conditions can specify the type of MR equipment to use, preparation of the implant before the MR procedure, anatomical regions that should be excluded from MR examination, limitations on MR scan time and energy deposition, and/or implant components that may contraindicate MR examination.</u>				
<u>Codes 7XX00, 7XX01, 7XX02 describe MR safety planning services performed in advance of the date of the MR procedure. For 7XX00, implant-safety conditions and additional procedures required to safely perform the requested MR examination are documented for inclusion in the medical record by a technologist or other MR safety-trained clinical staff. Contraindications to MR are also documented. For patients with complex, multiple, or incompletely documented implants, use 7XX01 to report prolonged MR safety implant/foreign body assessment by clinical staff. For an implant and/or foreign body that lacks MR conditional labeling, is contraindicated for MR, or may result in a “limited” MR exam, use 7XX02 to report the performance of an MR safety determination by a physician or other qualified health care professional (QHP) responsible for the safe performance of the MR procedure, with a written report.</u>				
<u>Codes 7XX03, 7XX04, 7XX05 describe MR safety services performed on the day of the MR examination under supervision of the physician or other QHP responsible for the safe performance of the MR procedure. The need for these services depends on the design of the medical implant, and the MR conditional labeling of the implant, if available. Use 7XX03 to report medical physics services provided during the MR exam, with a written report. Use 7XX04 to report the preparation and documentation of an electronic implant into an MR-protective mode. Use 7XX05 to report specified positioning or immobilization of an implant during the MR exam, with documentation for inclusion in the medical record.</u>				
<u>Cardiac devices (eg, pacemakers and defibrillators) may require interrogation or programming services before or after performance of the MR examination to put them in a mode safe for the MR scan. For cardiac device interrogation or programming, see the appropriate cardiac device evaluation code. Similarly, neurostimulation devices may require analysis-programming before being placed into an MR-protective mode, or</u>

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 7XX02	Tracking Number N3	Original Specialty Recommended RVU: <b>0.60</b>
		Presented Recommended RVU: <b>0.60</b>
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: <b>0.60</b>

CPT Descriptor: MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 70-year-old male on anticoagulation with a pacemaker presents with elevated prostate-specific antigen and suspected prostate cancer. 3 tesla prostate MRI or 1.5 tesla prostate MRI with an endorectal coil is considered as an alternative to standard prostate biopsy. Magnetic resonance (MR) safety assessment demonstrates a pacemaker that is not a complete MR conditional pacemaker system, lacking MR conditional labeling and programming modes.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Review the request for appropriateness, review the clinical history and any prior applicable studies. Implant details and MR conditional labeling, if available, are obtained from the MR technologist or MR Safety Officer. Location(s) and description(s) of foreign bodies are identified. The radiologist then reviews the implant instructions for MR exam restrictions or contraindications. The requested MR procedure is analyzed for expected diagnostic quality and feasibility when performed according to implant instructions.

The radiologist and medical physicist discuss the implanted device limitations and potential risk to the patient. The medical physicist provides information on the feasibility of mitigating the risk and provides recommendations for special equipment to perform the MR exam. The radiologist assesses proximity of the implanted device/foreign body to sensitive tissues and evaluates clinical risk to the patient in the event device malfunction, thermal injury, or displacement forces are induced by the MR exam procedure.

Description of Intra-Service Work: The MR exam parameters are reviewed for conformance with implanted device safety instructions, and if not, the radiologist decides whether informed consent should be obtained prior to the MR exam. Alternative diagnostic tests are considered for appropriateness and relative risk. The radiologist may make recommendations for alternate diagnostic tests or procedures, or MR requirements including MR equipment, accessory equipment, and the required expertise of qualified health care providers or clinical staff supervising the preparations or execution of the MR exam are provided in a written report.

Description of Post-Service Work: Recommendations, special precautions, and expectations for the MR exam are communicated to the patient. A report is finalized, signed, and placed in the medical record. Follow-up with the patient's treating physician is ensured.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

The CPT Editorial Panel recently approved the creation of six new codes to describe MR Safety protocols. These new CPT codes:

- **7XX00** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report.
- **7XX01+** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes.
- **7XX02** MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report.
- **7XX03** MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report.
- **7XX04** MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report.
- **7XX05** MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.

are designed to capture the work for patients with implanted medical devices that require access to magnetic resonance (MR) diagnostic procedures. Codes 7XX00, 7XX01, 7XX02 describe MR safety planning services performed in advance of the date of the magnetic resonance procedure. Codes 7XX03, 7XX04, 7XX05 describe MR safety services performed on the day of the MR examination under supervision of the physician or other qualified health care professional responsible for the safe performance of the MR procedure. The need for these services depends on the design of the medical implant, and (if available) the MR conditional labeling of the implant.

Implanted medical devices or foreign bodies can increase risk of injury or death for a patient entering the magnetic resonance environment, either for diagnostic magnetic resonance procedures or for procedures performed under magnetic resonance imaging guidance.

Patients with implanted medical devices now have expanded access to magnetic resonance (MR) diagnostic and interventional procedures due to recent developments of international test methods and standards for MR safety and MR conditional labeling. The MR conditions of an implanted device can limit anatomical regions eligible for magnetic resonance imaging (MRI) or impose strict energy deposition requirements or total MRI exam time. Additionally, foreign bodies or implanted medical devices without MR conditional labeling (including abandoned, incomplete, or non-functional devices) need to be evaluated for suitability of an MR procedure. All of the current MRI codes have safety screening built in (such as for implants, joint replacements, clips, permanent eyeliner, tattoos, etc.), but that screening is intended to determine from the patient if they have anything in their body which would preclude MRI. At the time the MRI codes were designed, a positive answer to any of these screening questions was a hard stop, and the procedure was not performed. With technological advancements in both the MRI scanner and in the design and testing of

implants it has become possible to perform an MRI examination in the presence of some of these devices and implants. These codes capture the work performed once a potential contraindication is discovered and the exam is modified, or additional steps are required to safely get the patient through the exam.

CPT codes 7XX00 and 7XX01 are PE-only codes. The specialties surveyed the remaining four codes, 7XX02-7XX05.

## Survey Process

The American College of Radiology and the American Society of Neuroradiology conducted a combined total random sample of 7,318 society members. Both societies assembled an expert panel to review the data and develop the following recommendations.

## Work RVU Recommendation

We recommend a work RVU of 0.60, which is the survey 25<sup>th</sup> percentile value.

## Time Recommendation

The expert panel recommends the median survey times: pre-service time of 15 mins, intra-service time of 5 mins, and post-service time of 5 minutes, for a total of 25 minutes.

## Key Reference Services

Our recommendation is bracketed by our top two chosen key reference services (KRS), CPT codes **93286** (*Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system*) and CPT code **99202** (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*). The service is similar to CPT code **93286** in that there is assessment of a device prior to a procedure. However, the assessment required in our code is somewhat more complex because the physician will need to assess the risk / benefit of performing the procedure given that the device has non conditional components. In addition, the physician will assess what the limitations of scanning the device will be and consider whether the parameters of the MRI scan required to answer the diagnostic question will fit within the limitations. The service is similar to CPT code **99202** in that the physician will be reviewing the medical record for prior imaging, clinical history and reason for the study, and make a decision regarding risk/benefit of performing the MRI scan.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
93286	Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.30	22	5	10	7	0.0031
<b>7XX02</b>	<b>MR safety determination by a physician or other qualified health care professional</b>	<b>0.60</b>	<b>25</b>	<b>15</b>	<b>5</b>	<b>5</b>	<b>0.0304</b>

	<b>responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report</b>						
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter.	0.93	20	2	15	3	0.0465

## MPC Codes

CPT code 7XX02 compares well with MPC codes, CPT code **74220** (*Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study*) and CPT code **76830** (*Ultrasound, transvaginal.*). The codes have a similar total time and are similar in work.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
<b>7XX02</b>	<b>MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report</b>	<b>0.60</b>	<b>25</b>	<b>15</b>	<b>5</b>	<b>5</b>	<b>0.0304</b>
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	16	3	10	3	0.0466
76830	Ultrasound, transvaginal	0.69	23	5	10	8	0.0399

## Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of pre-service time of 15 minutes, intra-service time of 5 minutes, and immediate post service time of 5 minutes, for a total of 25 minutes and 0.60 RVU for CPT code 7XX02.

## Please note:

- Repeat MRs on the same patient with the same implant should not require 7XX00, 7XX01 or 7XX02 if the implanted device has not changed.
- The codes are modular to account for many different types of implants and reflect typical manufacturer instructions to safely perform MR in the presence of the implant.

Example scenarios are included below, although other scenarios exist:

- **Scenario one:** simple implant, research done in 15 mins
  - CPT code 7XX00 – 15 mins implant research
- **Scenario two:** Complex implant, additional 30 mins needed
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX01 – Complicated implant + 30 mins
  - *Examples: patient has multiple electronic implants, implant has undergone surgical revision*
- **Scenario three:** MR contraindicated, risk/benefit analysis ordered
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX02 – Risk/benefit analysis
- **Scenario four:** Implant has risk of thermal injury, RF is restricted
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - *Example: Deep brain stimulators*
- **Scenario five:** Implant requires programming prior to MR
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, vagal nerve stimulators, MR conditional pacemakers*
- **Scenario six:** Implant requires programming prior to MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, nerve stimulators (phrenic, sacral, hypoglossal)*
- **Scenario seven:** Implant requires immobilization for MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX05 – Implant immobilization
  - *Examples: Certain models of Cochlear or Auditory Brainstem Implants (internal magnet that may dislodge, leads that may heat)*

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty    How often?

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 154000  
 If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX02 is estimated to be provided 154,000 times nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 45000                      Percentage 29.22 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 51,300  
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX02 is estimated to be provided 51,300 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology                      Frequency 46179                      Percentage 90.01 %

Specialty                      Frequency                      Percentage                      %

Specialty                      Frequency                      Percentage                      %

Do many physicians perform this service across the United States? Yes

**Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:  
 Imaging

BETOS Sub-classification:  
 Imaging/procedure

BETOS Sub-classification Level II:  
 Other

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 71275

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 7XX03	Tracking Number N4	Original Specialty Recommended RVU: <b>0.76</b>
		Presented Recommended RVU: <b>0.76</b>
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: <b>0.76</b>

CPT Descriptor: MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 67-year-old female with a fully implanted deep brain stimulation (DBS) system for treatment of Parkinson's disease presents with new-onset seizures and right-sided weakness. MRI is ordered. MR safety assessment demonstrates all DBS components are part of a complete MR conditional DBS system, with MR conditions restricting scan time and energy deposition. DBS analysis and programming is performed by the patient's neurologist prior to reporting for the MR exam. Patient's tremor returns with system programmed to MR mode. A medical physicist is scheduled to interactively customize and monitor performance of the MR examination to meet restrictive MR conditions of the DBS system.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Radiologist reviews exam indications and implant-related MR exam constraints with medical physicist or MR safety expert including radiofrequency (RF) energy deposition limits, total active scan time, implant cooling time between sequences, and anticipated artifacts. Prioritize scan order and planes of image acquisition, minimum slice thickness, resolution, and anatomical coverage. Advise on suitability of reduced-RF sequences and RF coil selection for exam indication.

Description of Intra-Service Work: The radiologist reviews images in real-time during exam acquisition for diagnostic quality. Provide feedback to the technologist and medical physicist whether image contrast looks correct, and if scan parameter adjustments or additional views are necessary. Confirm patient compliance with prolonged scan times and scanner idle times for implant cooling, revise technique for patient non-compliance or motion artifact. Radiologist will consider additional views to cut from protocol to avoid exceeding implant total scan time restrictions. Dictate implant-related limitations to diagnostic quality and interpretation of performed exam.

Description of Post-Service Work: Confirm technical report from medical physicist or MR safety expert is in medical record.

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

## Background

The CPT Editorial Panel recently approved the creation of six new codes to describe MR Safety protocols. These new CPT codes:

- **7XX00** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report.
- **7XX01+** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes.
- **7XX02** MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report.
- **7XX03** MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report.
- **7XX04** MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report.
- **7XX05** MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.

are designed to capture the work for patients with implanted medical devices that require access to magnetic resonance (MR) diagnostic procedures. Codes 7XX00, 7XX01, 7XX02 describe MR safety planning services performed in advance of the date of the magnetic resonance procedure. Codes 7XX03, 7XX04, 7XX05 describe MR safety services performed on the day of the MR examination under supervision of the physician or other qualified health care professional responsible for the safe performance of the MR procedure. The need for these services depends on the design of the medical implant, and (if available) the MR conditional labeling of the implant.

Implanted medical devices or foreign bodies can increase risk of injury or death for a patient entering the magnetic resonance environment, either for diagnostic magnetic resonance procedures or for procedures performed under magnetic resonance imaging guidance.

Patients with implanted medical devices now have expanded access to magnetic resonance (MR) diagnostic and interventional procedures due to recent developments of international test methods and standards for MR safety and MR conditional labeling. The MR conditions of an implanted device can limit anatomical regions eligible for magnetic resonance imaging (MRI) or impose strict energy deposition requirements or total MRI exam time. Additionally, foreign bodies or implanted medical devices without MR conditional labeling (including abandoned, incomplete, or non-functional devices) need to be evaluated for suitability of an MR procedure. All of the current MRI codes have safety screening built in (such as for implants, joint replacements, clips, permanent eyeliner, tattoos, etc.), but that screening is intended to determine from the patient if they have anything in their body which would preclude MRI. At the time the MRI codes were designed, a positive answer to any of these screening questions was a hard stop, and the procedure was not performed. With technological advancements in both the MRI scanner and in the design and testing of implants it has become possible to perform an MRI examination in the presence of some of these devices and implants. These codes capture the work performed once a potential contraindication is discovered and the exam is modified, or additional steps are required to safely get the patient through the exam.

CPT codes 7XX00 and 7XX01 are PE-only codes. The specialties surveyed the remaining four codes, 7XX02-7XX05.

### Survey Process

The American College of Radiology and the American Society of Neuroradiology conducted a combined total random sample of 7,318 society members. Both societies assembled an expert panel to review the data and develop the following recommendations.

### Work RVU Recommendation

We recommend a work RVU of 0.76, which is the survey 25<sup>th</sup> percentile value.

### Time Recommendation

The expert panel recommends the median survey times: pre-service time of 14 mins, intra-service time of 10 mins, and post-service time of 5 minutes, for a total of 29 minutes.

### Key Reference Services

Our recommendation compares well to the top two chosen key reference services (KRS), CPT codes **70553** (*Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences*) and CPT code **72125** (*Computed tomography, cervical spine; without contrast material*). MR imaging parameters will be modified based on the patient's clinical history and any prior imaging obtained, alternative sequences will be created, consideration of which sequences are most important and prioritization of the order of sequences that will be obtained to ensure a diagnostic quality exam. This work is overall slightly more in total time to 72125 given the amount of decision making required but may be less intense given that the typical patient for 72125 is an ER patient with concern for neck injury. The technical knowledge required to perform CPT code 70553 is similar to that of our code, which includes the understanding of MR sequences and MR physics. The time required to perform the service is less given that MR images are not being interpreted.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
7XX03	MR safety medical physics examination	0.76	29	14	10	5	0.0334

	<b>customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report</b>						
72125	Computed tomography, cervical spine; without contrast material	1.00	22	5	12	5	0.0647
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	37	5	25	7	0.0808

### MPC Codes

CPT code **7XX03** compares well with the MPC codes including CPT code **93015** (*Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report*) and CPT code **88305** (*Level IV - Surgical pathology, gross and microscopic examination Abortion - spontaneous/missed Artery, biopsy Bone marrow, biopsy Bone exostosis Brain/meninges, other than for tumor resection Breast, biopsy, not requiring microscopic evaluation of surgical margins Breast, reduction mammoplasty Bronchus, biopsy Cell block, any source Cervix, biopsy Colon, biopsy Duodenum, biopsy Endocervix, curettings/biopsy Endometrium, curettings/biopsy Esophagus, biopsy Extremity, amputation, traumatic Fallopian tube, biopsy Fallopian tube, ectopic pregnancy Femoral head, fracture Fingers/toes, amputation, non-traumatic Gingiva/oral mucosa, biopsy Heart valve Joint, resection Kidney, biopsy Larynx, biopsy Leiomyoma(s), uterine myomectomy - without uterus Lip, biopsy/wedge resection Lung, transbronchial biopsy Lymph node, biopsy Muscle, biopsy Nasal mucosa, biopsy Nasopharynx/oropharynx, biopsy Nerve, biopsy Odontogenic/dental cyst Omentum, biopsy Ovary with or without tube, non-neoplastic Ovary, biopsy/wedge resection Parathyroid gland Peritoneum, biopsy Pituitary tumor Placenta, other than third trimester Pleura/pericardium - biopsy/tissue Polyp, cervical/endometrial Polyp, colorectal Polyp, stomach/small intestine Prostate, needle biopsy Prostate, TUR Salivary gland, biopsy Sinus, paranasal biopsy Skin, other than cyst/tag/debridement/plastic repair Small intestine, biopsy Soft tissue, other than tumor/mass/lipoma/debridement Spleen Stomach, biopsy Synovium Testis, other than tumor/biopsy/castration Thyroglossal duct/brachial cleft cyst Tongue, biopsy Tonsil, biopsy Trachea, biopsy Ureter, biopsy Urethra, biopsy Urinary bladder, biopsy Uterus, with or without tubes and ovaries, for prolapse Vagina, biopsy Vulva/labia, biopsy).*

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUP
88305	Level IV - Surgical pathology, gross and microscopic examination.	0.75	25		25		0.0300

--	--	--	--	--	--	--	--

## Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of pre-service time of 14 minutes, intra-service time of 10 minutes, and immediate post service time of 5 minutes, for a total of 29 minutes and 0.76 RVU for CPT code 7XX03.

## Please note:

- Repeat MRs on the same patient with the same implant should not require 7XX00, 7XX01 or 7XX02 if the implanted device has not changed.
- The codes are modular to account for many different types of implants and reflect typical manufacturer instructions to safely perform MR in the presence of the implant.

Example scenarios are included below, although other scenarios exist:

- **Scenario one:** simple implant, research done in 15 mins
  - CPT code 7XX00 – 15 mins implant research
- **Scenario two:** Complex implant, additional 30 mins needed
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX01 – Complicated implant + 30 mins
  - *Examples: patient has multiple electronic implants, implant has undergone surgical revision*
- **Scenario three:** MR contraindicated, risk/benefit analysis ordered
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX02 – Risk/benefit analysis
- **Scenario four:** Implant has risk of thermal injury, RF is restricted
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - *Example: Deep brain stimulators*
- **Scenario five:** Implant requires programming prior to MR
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, vagal nerve stimulators, MR conditional pacemakers*
- **Scenario six:** Implant requires programming prior to MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, nerve stimulators (phrenic, sacral, hypoglossal)*
- **Scenario seven:** Implant requires immobilization for MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX05 – Implant immobilization
  - *Examples: Certain models of Cochlear or Auditory Brainstem Implants (internal magnet that may dislodge, leads that may heat)*

**SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

**FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty    How often?

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 19000  
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX03 is estimated to be provided 19,000 times nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 18100                      Percentage 95.26 %

Specialty                      Frequency 0                      Percentage 0.00 %

Specialty                      Frequency 0                      Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,300  
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX03 is estimated to be provided 6,300 times nationally in a one-year period. For Medicare utilization

Specialty Diagnostic Radiology                      Frequency 6000                      Percentage 95.23 %

Specialty                      Frequency 0                      Percentage %

Specialty                      Frequency 0                      Percentage %

Do many physicians perform this service across the United States?

**Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 74183

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

---

CPT Code: 7XX04	Tracking Number N5	Original Specialty Recommended RVU: <b>0.75</b>
		Presented Recommended RVU: <b>0.75</b>
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: <b>0.75</b>

CPT Descriptor: MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report

---

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 55-year-old female with a neurostimulation system complains of new symptoms of low back pain, with persistent symptoms following 6 weeks of conservative treatment. A diagnostic magnetic resonance (MR) exam of the lumbar spine is ordered. Patient reports to MR department with the fully charged patient controller for her sacral nerve modulation system.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

---

Description of Pre-Service Work: Confirm the active implantable medical device type, configuration, and programming instructions for MR environment. Review implant status and system integrity. Consider risks of programming modes and interruption/discontinuation of therapy. Discuss the nature and risks of implant malfunction and obtain informed consent where applicable. Specify patient vitals monitors to be connected to the patient while implant electronics are prepared for or in the MR environment. Specify duration of patient vitals monitoring.

Description of Intra-Service Work: Supervise MR-specific programming, monitoring patient tolerance and side effects of modified therapies. If available, interrogation results are reviewed for battery voltage and lead impedances. Assess patient condition and whether appropriate to proceed with MR exam. MR conditional status and implant programming is verified prior to patient entrance to the MR scan room.

Confirm lack of complication from implant exposure to MR environment. Evaluate out-of-range parameters.

Description of Post-Service Work: A final report is prepared, signed, and placed in the medical record. If implant does not return to status observed prior to MR exam, follow-up with the patient's treating physician is ensured.

## Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

## Background

The CPT Editorial Panel recently approved the creation of six new codes to describe MR Safety protocols. These new CPT codes:

- **7XX00** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report.
- **7XX01+** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes.
- **7XX02** MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report.
- **7XX03** MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report.
- **7XX04** MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report.
- **7XX05** MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.

are designed to capture the work for patients with implanted medical devices that require access to magnetic resonance (MR) diagnostic procedures. Codes 7XX00, 7XX01, 7XX02 describe MR safety planning services performed in advance of the date of the magnetic resonance procedure. Codes 7XX03, 7XX04, 7XX05 describe MR safety services performed on the day of the MR examination under supervision of the physician or other qualified health care professional responsible for the safe performance of the MR procedure. The need for these services depends on the design of the medical implant, and (if available) the MR conditional labeling of the implant.

Implanted medical devices or foreign bodies can increase risk of injury or death for a patient entering the magnetic resonance environment, either for diagnostic magnetic resonance procedures or for procedures performed under magnetic resonance imaging guidance.

Patients with implanted medical devices now have expanded access to magnetic resonance (MR) diagnostic and interventional procedures due to recent developments of international test methods and standards for MR safety and MR conditional labeling. The MR conditions of an implanted device can limit anatomical regions eligible for magnetic resonance imaging (MRI) or impose strict energy deposition requirements or total MRI exam time. Additionally, foreign bodies or implanted medical devices without MR conditional labeling (including abandoned, incomplete, or non-functional devices) need to be evaluated for suitability of an MR procedure. All of the current MRI codes have safety screening built in (such as for implants, joint replacements, clips, permanent eyeliner, tattoos, etc.), but that screening is intended to determine from the patient if they have anything in their body which would preclude MRI. At the time the MRI codes were designed, a positive answer to any of these screening questions was a hard stop, and the procedure was not performed. With technological advancements in both the MRI scanner and in the design and testing of implants it has become possible to perform an MRI examination in the presence of some of these devices and implants. These codes capture the work performed once a potential contraindication is discovered and the exam is modified, or additional steps are required to safely get the patient through the exam.

CPT codes 7XX00 and 7XX01 are PE-only codes. The specialties surveyed the remaining four codes, 7XX02-7XX05.

### Survey Process

The American College of Radiology and the American Society of Neuroradiology conducted a combined total random sample of 7,318 society members. Both societies assembled an expert panel to review the data and develop the following recommendations.

### Work RVU Recommendation

We recommend a work RVU of 0.75, which is the survey 25<sup>th</sup> percentile value.

### Time Recommendation

The expert panel recommends the median survey times: pre-service time of 12 mins, intra-service time of 8 mins, and post-service time of 5 minutes, for a total of 25 minutes.

### Key Reference Services

Our recommendation is bracketed by our top two chosen key reference services (KRS), CPT codes **93287** (*Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system*) and CPT code **93289** (*Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements*). Compared to CPT code **93287**, our code is more complex and intense because this service occurs when device will be exposed to MRI rather than a device check pre or post procedure. The physician is ensuring that device is in the appropriate safe mode, assessing patient's status and ensuring the patient will be safe while inside the magnet. Our service is also more complex than 93289 which is focused on interrogation of device under normal conditions, versus taking care of a device in a conditional mode inside a magnet that could potentially impact the device and patient's condition.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
93287	Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system	0.45	25	5	10	10	0.0114
<b>7XX04</b>	<b>MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report</b>	<b>0.75</b>	<b>25</b>	<b>12</b>	<b>8</b>	<b>5</b>	<b>0.0462</b>
93289	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements	0.75	23.5	5	10	8.5	0.0448

## MPC Codes

CPT code 7XX04 compares well with CPT code **88305** (*Level IV - Surgical pathology, gross and microscopic examination Abortion - spontaneous/missed Artery, biopsy Bone marrow, biopsy Bone exostosis Brain/meninges, other than for tumor resection Breast, biopsy, not requiring microscopic evaluation of surgical margins Breast, reduction mammoplasty Bronchus, biopsy Cell block, any source Cervix, biopsy Colon, biopsy Duodenum, biopsy Endocervix, curettings/biopsy Endometrium, curettings/biopsy Esophagus, biopsy Extremity, amputation, traumatic Fallopian tube, biopsy Fallopian tube, ectopic pregnancy Femoral head, fracture Fingers/toes, amputation, non-traumatic Gingiva/oral mucosa, biopsy Heart valve Joint, resection Kidney, biopsy Larynx, biopsy Leiomyoma(s), uterine myomectomy - without uterus Lip, biopsy/wedge resection Lung, transbronchial biopsy Lymph node, biopsy Muscle, biopsy Nasal mucosa, biopsy Nasopharynx/oropharynx, biopsy Nerve, biopsy Odontogenic/dental cyst Omentum, biopsy Ovary with or without tube, non-neoplastic Ovary, biopsy/wedge resection Parathyroid gland Peritoneum, biopsy Pituitary tumor Placenta, other than third trimester Pleura/pericardium - biopsy/tissue Polyp, cervical/endometrial Polyp, colorectal Polyp, stomach/small intestine Prostate, needle biopsy Prostate, TUR Salivary gland, biopsy Sinus, paranasal biopsy Skin, other than cyst/tag/debridement/plastic repair Small intestine, biopsy Soft tissue, other than tumor/mass/lipoma/debridement Spleen Stomach, biopsy Synovium Testis, other than tumor/biopsy/castration Thyroglossal duct/brachial cleft cyst Tongue, biopsy Tonsil, biopsy Trachea, biopsy Ureter, biopsy Urethra, biopsy Urinary bladder, biopsy Uterus, with or without tubes and ovaries, for prolapse Vagina, biopsy Vulva/labia, biopsy*) and CPT code **93015** (*Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report.*).

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
88305	Level IV - Surgical pathology, gross and microscopic examination.	0.75	25		25		0.0300
7XX04	<b>MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report</b>	<b>0.75</b>	<b>25</b>	<b>12</b>	<b>8</b>	<b>5</b>	<b>0.0462</b>
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	26	2	20	4	0.0308

## Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of pre-service time of 12 minutes, intra-service time of 8 minutes, and immediate post service time of 5 minutes, for a total of 25 minutes and 0.60 RVU for CPT code 7XX04.

### Please note:

- Repeat MRs on the same patient with the same implant should not require 7XX00, 7XX01 or 7XX02 if the implanted device has not changed.
- The codes are modular to account for many different types of implants and reflect typical manufacturer instructions to safely perform MR in the presence of the implant.

Example scenarios are included below, although other scenarios exist:

- **Scenario one:** simple implant, research done in 15 mins
  - CPT code 7XX00 – 15 mins implant research
- **Scenario two:** Complex implant, additional 30 mins needed
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX01 – Complicated implant + 30 mins
  - *Examples: patient has multiple electronic implants, implant has undergone surgical revision*
- **Scenario three:** MR contraindicated, risk/benefit analysis ordered
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX02 – Risk/benefit analysis
- **Scenario four:** Implant has risk of thermal injury, RF is restricted
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - *Example: Deep brain stimulators*
- **Scenario five:** Implant requires programming prior to MR
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, vagal nerve stimulators, MR conditional pacemakers*
- **Scenario six:** Implant requires programming prior to MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX04 – Implant programming

- *Examples: Certain models of Spinal Cord Stimulators, nerve stimulators (phrenic, sacral, hypoglossal)*
- **Scenario seven:** Implant requires immobilization for MR and has risk of thermal injury
  - **CPT code 7XX00** – 15 mins implant research
  - **CPT code 7XX03** – Exam customization
  - **CPT code 7XX05** – Implant immobilization
  - *Examples: Certain models of Cochlear or Auditory Brainstem Implants (internal magnet that may dislodge, leads that may heat)*

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology                      How often? Commonly

Specialty    How often?

Specialty    How often?

Estimate the number of times this service might be provided nationally in a one-year period? 140000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX04 is estimated to be provided 140,000 times nationally in a one-year period.

Specialty Diagnostic Radiology                      Frequency 91000                      Percentage 65.00 %

Specialty                      Frequency                      Percentage                      %

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 47,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX04 is estimated to be provided 47,000 times nationally in a one-year period. For Medicare utilization.

Specialty Diagnostic Radiology	Frequency 31000	Percentage 65.95 %
--------------------------------	-----------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

---

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 75557

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 7XX05	Tracking Number N6	Original Specialty Recommended RVU: <b>0.60</b>
		Presented Recommended RVU: <b>0.60</b>
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: <b>0.60</b>

CPT Descriptor: MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 26-year-old male diagnosed with neurofibromatosis type II with an auditory brainstem implant (ABI) requires MRI of the brain and entire spine for annual surveillance of CNS tumors. Magnetic resonance (MR) safety assessment demonstrates all internal ABI components are part of a complete MR conditional system, with MR conditions requiring application of a head-wrap immobilization kit to secure an internal magnet within the ABI, or surgical resection of the internal magnet.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Records are reviewed to confirm the need for special implant positioning and/or immobilization for MR procedures. The physician or QHP discusses risks and benefits of the implant positioning and/or immobilization plan and obtains consent from the patient to proceed. Under the supervision of a physician or QHP, the physical location of the affected implant is identified and/or marked on the patient's skin. External components of the implant are detached, and any externalized conductive components of the implant are electrically isolated from the patient's skin, according to clinical guidance or the MR instructions. Earplugs are applied.

Description of Intra-Service Work: For implants requiring immobilization, a secure compression bandage is applied over the implant, with a bracing splint directly over the components, Kerlix bandage, and a self-adherent elastic wrap. The physician or QHP monitors the patient's condition during positioning and introduction to the MR scan room. The patient is positioned on the MR scanner bed outside of the MR scan room, with attention to the implant manufacturer's MR conditional positioning instructions and exclusion zones. The scanner bed is slowly wheeled into the MR scan room, docked to the scanner, and advanced to the imaging volume with slow table speed to reduce translational forces and discomfort at the site of the implant. If the patient cannot tolerate the pain, the patient is slowly removed from the MR scanner on the MR scanner bed and brought back outside the MR scan room. Following exit of the MR scan room, either from MR exam discontinuation or completion, the compression wrap is removed. The implant location is inspected for evidence of implant migration, malfunction, or tissue damage. Patient is provided with educational materials for when to seek follow-up for their implant should pain persist.

Implant positioning and immobilization precautions are documented in a written report along with positioning/immobilization recommendations for future MR exam orders.

Description of Post-Service Work: Report is finalized, signed, and placed in the medical record. If implant does not return to status observed prior to MR exam, follow-up with the patient's treating physician is ensured.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.*

**Background**

The CPT Editorial Panel recently approved the creation of six new codes to describe MR Safety protocols. These new CPT codes:

- **7XX00** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report.
- **7XX01+** MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes.
- **7XX02** MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report.
- **7XX03** MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report.
- **7XX04** MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report.
- **7XX05** MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.

are designed to capture the work for patients with implanted medical devices that require access to magnetic resonance (MR) diagnostic procedures. Codes 7XX00, 7XX01, 7XX02 describe MR safety planning services performed in advance of the date of the magnetic resonance procedure. Codes 7XX03, 7XX04, 7XX05 describe MR safety services performed on the day of the MR examination under supervision of the physician or other qualified health care professional responsible for the safe performance of the MR procedure. The need for these services depends on the design of the medical implant, and (if available) the MR conditional labeling of the implant.

Implanted medical devices or foreign bodies can increase risk of injury or death for a patient entering the magnetic resonance environment, either for diagnostic magnetic resonance procedures or for procedures performed under magnetic resonance imaging guidance.

Patients with implanted medical devices now have expanded access to magnetic resonance (MR) diagnostic and interventional procedures due to recent developments of international test methods and standards for MR safety and MR conditional labeling. The MR conditions of an implanted device can limit anatomical regions eligible for magnetic resonance imaging (MRI) or impose strict energy deposition requirements or total MRI exam time. Additionally, foreign bodies or implanted medical devices without MR conditional labeling (including abandoned, incomplete, or non-functional devices) need to be evaluated for suitability of an MR procedure. All of the current MRI codes have safety screening built in (such as for implants, joint replacements, clips, permanent eyeliner, tattoos, etc.), but that screening is intended to determine from the patient if they have anything in their body which would preclude MRI. At the time the MRI codes were designed, a positive answer to any of these screening questions was a hard stop, and the procedure was not performed. With technological advancements in both the MRI scanner and in the design and testing of

implants it has become possible to perform an MRI examination in the presence of some of these devices and implants. These codes capture the work performed once a potential contraindication is discovered and the exam is modified, or additional steps are required to safely get the patient through the exam.

CPT codes 7XX00 and 7XX01 are PE-only codes. The specialties surveyed the remaining four codes, 7XX02-7XX05.

## Survey Process

The American College of Radiology and the American Society of Neuroradiology conducted a combined total random sample of 7,318 society members. Both societies assembled an expert panel to review the data and develop the following recommendations.

## Work RVU Recommendation

We recommend a work RVU of 0.60, which is the survey 25<sup>th</sup> percentile value.

## Time Recommendation

The expert panel recommends the median survey times: pre-service time of 15 mins, intra-service time of 10 mins, and post-service time of 5 minutes, for a total of 30 minutes.

## Key Reference Services

Our recommendation is bracketed by our top two chosen key reference services (KRS), CPT codes **70553** (*Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences*) and CPT code **93286** (*Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system*). Our code is more complex than 93286 because our procedure involves preparation of a patient and their device prior to entering the magnet, ensuring appropriate patient positioning while in the magnet and safety of device during scanning. CPT code 93286 is related to interrogation of a device in standard setting. The code is less complex and takes less time than CPT code 70553 because 70553 requires evaluation of assessment and evaluation of MR images. All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
93286	Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.30	22	5	10	7	0.0031
<b>7XX05</b>	<b>MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes,</b>	<b>0.60</b>	<b>30</b>	<b>15</b>	<b>10</b>	<b>5</b>	<b>0.0152</b>

	<b>and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.</b>						
70553	Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences	2.29	37	5	25	7	0.0808

## MPC Codes

CPT code 7XX05 compares well with CPT code **74220** (*Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study*) and CPT code **76830** (*Ultrasound, transvaginal.*). The codes have a similar total time and are similar in work.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
74220	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	16	3	10	3	0.0466
<b>7XX05</b>	<b>MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report.</b>	<b>0.60</b>	<b>30</b>	<b>15</b>	<b>10</b>	<b>5</b>	<b>0.0152</b>
76830	Ultrasound, transvaginal	0.69	23	5	10	8	0.0399

## Conclusion

The survey results and comparisons to the KRS and MPC codes support the specialties' recommendation of pre-service time of 15 minutes, intra-service time of 10 minutes, and immediate post service time of 5 minutes, for a total of 30 minutes and 0.60 RVU for CPT code 7XX05.

### Please note:

- Repeat MRs on the same patient with the same implant should not require 7XX00, 7XX01 or 7XX02 if the implanted device has not changed.
- The codes are modular to account for many different types of implants and reflect typical manufacturer instructions to safely perform MR in the presence of the implant.

Example scenarios are included below, although other scenarios exist:

- **Scenario one:** simple implant, research done in 15 mins
  - CPT code **7XX00** – 15 mins implant research
- **Scenario two:** Complex implant, additional 30 mins needed
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX01** – Complicated implant + 30 mins
  - *Examples: patient has multiple electronic implants, implant has undergone surgical revision*

- **Scenario three:** MR contraindicated, risk/benefit analysis ordered
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX02 – Risk/benefit analysis
- **Scenario four:** Implant has risk of thermal injury, RF is restricted
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - *Example: Deep brain stimulators*
- **Scenario five:** Implant requires programming prior to MR
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, vagal nerve stimulators, MR conditional pacemakers*
- **Scenario six:** Implant requires programming prior to MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX04 – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, nerve stimulators (phrenic, sacral, hypoglossal)*
- **Scenario seven:** Implant requires immobilization for MR *and* has risk of thermal injury
  - CPT code 7XX00 – 15 mins implant research
  - CPT code 7XX03 – Exam customization
  - CPT code 7XX05 – Implant immobilization
  - *Examples: Certain models of Cochlear or Auditory Brainstem Implants (internal magnet that may dislodge, leads that may heat)*

## SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

## FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)  
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1200

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX05 is estimated to be provided 1200 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 660 Percentage 55.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 400

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 7XX05 is estimated to be provided 400 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 220 Percentage 55.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

### **Berenson-Eggers Type of Service (BETOS) Assignment**

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Imaging/procedure

BETOS Sub-classification Level II:

Other

### **Professional Liability Insurance Information (PLI)**

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 77001

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

<b>Meeting Date: January 2024</b>
-----------------------------------

<b>Surveyed CPT Code</b>	<b>7XX00</b>	<b>Global Period: XXX</b>
<b>CPT Code Descriptor</b>	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; initial 15 minutes	
<b>Typical Patient/Service</b>	A 36-year-old female with a vagus nerve neurostimulator for control of drug-resistant epilepsy presents with neck pain after a fall. A magnetic resonance (MR) of the cervical spine is ordered. Eligibility for MR examination of the cervical spine depends on implant model.	

<b>Surveyed CPT Code</b>	<b>7XX01</b>	<b>Global Period: ZZZ</b>
<b>CPT Code Descriptor</b>	MR safety implant and/or foreign body assessment by trained clinical staff, including identification and verification of implant components from appropriate sources (eg, surgical reports, imaging reports, medical device databases, device vendors, review of prior imaging), analyzing current MR conditional status of individual components and systems, and consulting published professional guidance with written report; each additional 30 minutes (List separately in addition to code for primary procedure)  (Use 7XX01 in conjunction with 7XX00) (Do not report 7XX01 more than three times per encounter)	
<b>Typical Patient/Service</b>	A 72-year-old male with a spinal cord neurostimulator for pain management presents with radiculopathy. MRI of the lumbar spine is ordered. Model information for implanted leads is missing from the local medical record. Magnetic resonance (MR) conditions for the implant are dependent on lead model, and certain lead models have anatomical exclusion zones over the implant. [ <b>Note:</b> This is an add-on code for the additional prolonged work when multiple implants, implant components, surgical revisions to the implant, or undocumented implants must be assessed for MR conditional status. The work associated with the first 15 minutes of MR safety implant/foreign body assessment is reported separately as the primary procedure and not included in the work of this add-on code. The work associated with each additional 30 minutes of MR safety implant/foreign body assessment is reported with this add-on code.	

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S): 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, 7XX05**  
**SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology**  
**PRESENTER(S): Lauren Nicola, MD, FACR, Melissa Chen, MD, Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

	This add-on code may be reported maximum of three times per encounter.]
--	---

<b>Surveyed CPT Code</b>	<b>7XX02</b>	<b>Global Period: XXX</b>
<b>CPT Code Descriptor</b>	MR safety determination by a physician or other qualified health care professional responsible for the safety of the MR procedure, including review of implant MR conditions for indicated MR exam, analysis of risk versus clinical benefit of performing MR exam, and determination of MR equipment, accessory equipment, and expertise required to perform examination with written report	
<b>Typical Patient/Service</b>	A 70-year-old male on anticoagulation with a pacemaker presents with elevated prostate-specific antigen and suspected prostate cancer. 3 tesla prostate MRI or 1.5 tesla prostate MRI with an endorectal coil is considered as an alternative to standard prostate biopsy. Magnetic resonance (MR) safety assessment demonstrates a pacemaker that is not a complete MR conditional pacemaker system, lacking MR conditional labeling and programming modes.	

<b>Surveyed CPT Code</b>	<b>7XX03</b>	<b>Global Period: XXX</b>
<b>CPT Code Descriptor</b>	MR safety medical physics examination customization, planning and performance monitoring by medical physicist or MR safety expert, with review and analysis by physician or qualified health care professional to prioritize and select views and imaging sequences, to tailor MR acquisition specific to restrictive requirements or artifacts associated with MR conditional implants or to mitigate risk of non-conditional implants or foreign bodies with written report  (Use 7XX03 in conjunction with 7XX04, 7XX05, when implant requires electronics preparation or positioning and/or immobilization prior to MR)	
<b>Typical Patient/Service</b>	A 67-year-old female with a fully implanted deep brain stimulation (DBS) system for treatment of Parkinson’s disease presents with new-onset seizures and right-sided weakness. MRI is ordered. MR safety assessment demonstrates all DBS components are part of a complete MR conditional DBS system, with MR conditions restricting scan time and energy deposition. DBS analysis and programming is performed by the patient’s neurologist prior to reporting for the MR exam. Patient’s tremor returns with system programmed to MR mode. A medical physicist is scheduled to interactively customize and monitor performance of the MR examination to meet restrictive MR conditions of the DBS system.	

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S): 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, 7XX05**  
**SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology**  
**PRESENTER(S): Lauren Nicola, MD, FACR, Melissa Chen, MD, Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

<b>Surveyed CPT Code</b>	<b>7XX04</b>	<b>Global Period: XXX</b>
<b>CPT Code Descriptor</b>	MR safety implant electronics preparation under supervision of physician or other qualified health care professional, including MR-specific programming of pulse generator and/or transmitter to verify device integrity, protection of device internal circuitry from MR electromagnetic fields, and protection of patient from risks of unintended stimulation or heating while in the MR room with written report  (Use 7XX04 in conjunction with 7XX03, when implant also requires medical physics examination customization)	
<b>Typical Patient/Service</b>	A 55-year-old female with a neurostimulation system complains of new symptoms of low back pain, with persistent symptoms following 6 weeks of conservative treatment. A diagnostic magnetic resonance (MR) exam of the lumbar spine is ordered. Patient reports to MR department with the fully charged patient controller for her sacral nerve modulation system.	

<b>Surveyed CPT Code</b>	<b>7XX05</b>	<b>Global Period: XXX</b>
<b>CPT Code Descriptor</b>	MR safety implant positioning and/or immobilization under supervision of physician or qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room with written report  (Use 7XX05 in conjunction with 7XX03, when implant also requires medical physics examination customization)	
<b>Typical Patient/Service</b>	A 26-year-old male diagnosed with neurofibromatosis type II with an auditory brainstem implant (ABI) requires MRI of the brain and entire spine for annual surveillance of CNS tumors. Magnetic resonance (MR) safety assessment demonstrates all internal ABI components are part of a complete MR conditional system, with MR conditions requiring application of a head-wrap immobilization kit to secure an internal magnet within the ABI, or surgical resection of the internal magnet.

**SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology**  
**PRESENTER(S): Lauren Nicola, MD, FACR, Melissa Chen, MD,**  
**Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)**  
**PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and the American Society of Neuroradiology (ASNR) convened a consensus panel to finalize the practice expense for MR Safety codes 7XX00-7XX05.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The specialties have included CPT codes 93286 (*Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system, or leadless pacemaker system*) and 70543 (*Magnetic resonance (eg, proton imaging, orbit, face, and/or neck; without contrast material(s), followed by contrast material(s) and further sequences*) as reference codes.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

No

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For all six codes, Radiology is expected to be the dominant provider of this service. As this is a new service, the percentage of time is unknown.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A. These are new procedures; there are no current costs.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

## NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, 7XX05  
SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology

Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

#### CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A.

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

**7XX00**

*CA007 Review patient clinical extant information and questionnaire*

MRI department receives an order for a MR exam indicating presence of implant and/or foreign body requiring assessment prior to scheduling. The technologist verifies the order is correct for the region of interest ordered. The technologist reviews patient chart for extant implant details including manufacturer, model number, and date of implant.

*CA006 Confirm availability of prior images/studies*

Technologist confirms availability of prior images/studies.

- b. Service period (includes pre, intra and post):

**7XX00**

*CA009 Greet patient, ensure appropriate medical records available*

Technologist contacts patient to obtain implant information cards, manufacturer and/or facility where implanted. Asks if implant(s) are still functional and if implant has ever been modified. The technologist

## NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, 7XX05**  
**SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology**  
**PRESENTER(S): Lauren Nicola, MD, FACR, Melissa Chen, MD,  
Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

### **AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

reviews medical records to identify prior imaging exams on a technologist PACS workstation that document implant location, type, and integrity.

#### *CA021 Perform procedures/service – NOT directly related to physician work time*

Technologist positively identifies relevant implant components from surgical reports, implant manufacturer patient databases, or radiographic identification on a technologist PACS workstation. Technologist investigates MR conditional labeling for each high-risk implant and/or foreign body and documents directly from manufacturer instructions or other MR safety databases. Technologist reviews images or surgical reports for acceptable implant configuration. For implants or foreign bodies lacking MR conditional labeling, technologist assesses against clinical guidelines and proximity to sensitive tissue. Technologist calls patient with special instructions for implant, including components to bring to MR appointment and charging instructions. Technologist communicates special scheduling requirements. Answers patient questions about exam.

#### *CA034 Document procedure*

The technologist's written report will typically include list of evaluated implant components, MR conditions for requested exam, implant programming requirements, special positioning requirements, acceptable radiofrequency coils, and necessary personnel for the exam. The written report will also typically include assessment of eligibility to schedule MR exam including whether exam is declined or requires risk/benefit analysis, with rationale.

#### **7XX01**

##### *CA021 Perform procedures/service – NOT directly related to physician work time*

Additional service time required due to multiple, complex implants, or implants with long history of surgical revision or unknown history. Technologist continues work beyond 7XX00 to positively identify relevant implant components and investigate MR conditional labeling. Medical physicist is engaged to assess probability of interactions between implants and to determine the combination of MR conditional labeling acceptable for all implants within an individual patient. For implants with exclusion zones, medical physicist estimates distance of implant from center of magnet. For abandoned or retained components, medical physicist provides analysis of scenarios presenting negligible risk. **Both the technologist and physicist are reviewing existing imaging on the technologist PACS workstation, sometimes sequentially on the same tech PACS workstation and sometimes at their individual PACS workstations.**

##### *CA034 Document procedure*

Technologist's written report additionally contains entries for multiple or complex implants, reviewed for accuracy by medical physicist, with summary of medical physicist recommendations, if applicable.

#### **7XX02**

##### *CA021 Perform procedure/service – NOT directly related to physician work time*

The medical physicist reviews MR conditional labeling, if available. Medical physicist reviews prior imaging on a technologist PACS workstation for location, configuration, and proximity to other implants, measures distance between implants, measures size of implant, foreign body, or associated artifact. Medical physicist reviews materials used in implant or foreign body.

Medical physicist reviews available types of MR scanners at the site and availability of local transmit/receive coils to limit extent of radiofrequency exposure.

Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

### **AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Medical physicist analyzes expected location of implant or foreign body within the MR scanner and anticipated interactions with 1) strong magnetic field and potential for displacement force or torque, 2) magnetic sensors on active implants that may cause reprogramming or malfunction, 3) electronics that may malfunction due to induced electric fields during MRI, 4) conductive components that may heat and cause thermal injury in the radiofrequency field, or 5) unintended stimulation from induced electric fields or radiofrequency.

The medical physicist discusses the implanted device limitations and potential risks to the patient with the radiologist. The medical physicist provides information on feasibility of mitigating the risk and provides recommendations for special equipment or imaging sequences to perform the MR exam.

#### *CA034 Document procedure*

The technologist updates clinical staff records with results of risk/benefit analysis and eligibility to schedule MR exam, referencing the radiologist risk/benefit written report.

#### **7XX03**

##### *CA012 Review requisition, assess for special needs:*

The medical physicist reviews MR conditional labeling and MR exam constraints for all implants and/or foreign bodies. Medical physicist reviews radiologist protocol for sequences with high radiofrequency (RF) energy deposition and total scan time.

Technologist confirms implant components, MR eligibility, radiofrequency coil, and MR exam constraints with medical physicist on MR safety procedural checklist. Medical physicist and technologist confirm location of RF specific absorption rate (SAR) and B1+rms values displayed on scanner console, and determine whether average head SAR or whole body SAR should be monitored based on radiofrequency coil and location of implant. Auto scan features are turned off to allow cooling time between sequences.

##### *CA021 Perform procedure/service – NOT directly related to physician work time*

Medical physicist and radiologist discuss exam indications and implant-related MR exam constraints including RF energy deposition limits, total active scan time, implant cooling time between sequences, and anticipated artifacts. Radiologist prioritizes scan order and planes of image acquisition, minimum slice thickness, resolution, and anatomical coverage. Medical physicist requests advice on suitability of reduced-RF sequences and RF coil selection. Prior to contrast administration, medical physicist seeks feedback from radiologist on adjusted sequences; checks if motion artifact is problematic, and whether any sequences need to be repeated. Reports remaining active scan time budget for additional views or need to cut views. After post-contrast sequences complete medical physicist checks with radiologist that exam is of sufficient quality prior to ending exam.

A procedural pause with technologist and physicist to verify completion of MR safety procedural checklist is performed. The medical physicist works with the technologist to adjust sequence parameters to meet implant MR exam constraints, which slows down RF deposition and increases the total MR exam scan time. Medical physicist observes power monitor during each sequence to verify predicted SAR matches measured SAR. Medical physicist observes image quality and considers metal artifact reduction techniques if implant hardware is in the field of view. Medical physicist tracks elapsed active scan time and evaluates need for additional cooling time.

##### *CA034 Document procedure*

The medical physicist's written report will typically include description of implant, field strength, RF transmit coil, RF energy deposition limit (SAR or B1+rms) and total active scan time limit. Any other specific

## NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): 7XX00, 7XX01, 7XX02, 7XX03, 7XX04, 7XX05**  
**SPECIALTY SOCIETY(IES): American College of Radiology, American Society of Neuroradiology**  
**PRESENTER(S): Lauren Nicola, MD, FACR, Melissa Chen, MD, Jacob Ormsby, MD, MBA, Heidi Edmonson, PhD**

### **AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

precautions related to implant safety in the MR environment should also be indicated. Finalized after exam completion.

#### **7XX04**

##### *CA011 Provide education/obtain consent*

Technologist reviews implant programming procedure and obtains patient consent to proceed.

##### *CA013 prepare room, equipment and supplies*

Technologist prepares MR conditional patient vitals monitor system and obtains supplies. Technologist undocks MR scanner bed and brings out to control room.

##### *CA019 Assist physician or other qualified healthcare professional ---directly related to physician work time (67%)*

Technologist assists with application of MR conditional monitoring supplies and assists physician with MR-specific programming to MR protective mode.

Technologist moves patient from programming position to scanning position. Procedural pause to verify completion of MR safety procedural checklist for active implant prior to entering MR scan room. Following MR exam, implant is returned to pre-MRI settings. Technologist reports concerns or out-of-range parameters to physician.

##### *CA024 Clean room/equipment by clinical staff*

Technologist cleans MR-conditional patient vitals monitor system.

##### *CA034 Document procedure*

The technologist updates clinical staff records with information about the program settings and outputs used during the MR procedure, and status of implant after the exam.

##### *CA035 Review home care instructions*

Technologist provides educational materials and local resources for follow-up should patient have concerns about implant function following the procedure.

#### **7XX05**

##### *CA011 Provide education/obtain consent*

Technologist discusses communication plan with patient and educates patient on use of patient alarm button/squeezeball to indicate need to stop exam. Technologist describes steps of marking implant location and headwrap procedure, and obtains agreement to begin headwrap procedure prior to removing external speech processor component of cochlear implant.

##### *CA013 prepare room, equipment and supplies*

Technologist prepares MR conditional patient vitals monitor system and obtains compression bandage and splint kit supplies. Technologist undocks MR scanner bed and brings out to control room. A patient chair is moved adjacent to scanner bed for use during head wrap procedure. Additional positioning aids are identified to immobilize the head.

##### *CA019 Assist physician or other qualified healthcare professional ---directly related to physician work time (67%)*

Technologist provides MR safety screening of physician personnel within the MR control room. Patient is positioned in chair for application of the compression bandage. Technologist assists with application of MR

conditional monitoring supplies and assists physician with applying compression bandage; four hands are required. Technologist ensures no MR Unsafe speech processor(s) or miscellaneous supplies are introduced into the MR scan room.

Technologist moves patient from chair position to scanner table outside of the MR scan room. Additional wedges or straps are placed as necessary to avoid head rotation. Procedural pause to verify completion of MR safety procedural checklist for active implant prior to entering MR scan room. Technologist helps remove compression bandage, and returns speech processor(s) to see if they still connect to internal receiver.

*CA024 Clean room/equipment by clinical staff*  
Technologist cleans MR conditional patient vitals monitor system.

*CA034 Document procedure*  
The technologist updates clinical staff records with information regarding patient tolerance of head wrap and implant status post procedure to inform future scheduling of MR procedures.

*CA035 Review home care instructions*  
Technologist provides educational materials and local resources for follow-up should pain persist.

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Please see **Service Period (intra)** language above.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

N/A.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A.

15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

- 1) **Disposable oximeter probe and clip (MR Conditional)** - This is a required pulse oximeter connection from the patient to the MR conditional vitals monitoring system. All components are non-ferrous, safe to reside in the MR magnet room, and designed for application to patient during MR exam.
- 2) **Thermoplastic splint material 6"x9" (MR Safe)** - Provides rigid support to brace and immobilize disk magnet within internal cochlear implant receiver.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.  
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

No.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A.

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

- 1) **Vitals monitoring system (MR Conditional)** - This equipment enables monitoring of patient vitals while the patient is in the MR environment. The Expression MR400 Accessories are designed and MR safety verified for patient application to reduce patient burns from excessive heat generated by the MR system. The Expression 400 Patient Monitor is designed with limited ferrous content to be within the MR scan room and not become a projectile hazard, with alarm if positioned too close to MR scanner; it is designed for wireless communications through the radiofrequency-shielded MR room enclosure with the MR Patient Care Portal to enable monitoring from the remote position at the MR scanner console.

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

5 years

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

- d. If yes, please explain how the computer is used for this service(s).
- e. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
- f. Does the computer include code specific software that is typically used to provide the service(s)?

No.

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

**Technologist PACS Workstation (ED050)** – PACS formula

**Professional PACS Workstation (ED053)** – Other – (1/2 physician pre time) + physician intra time  
**Room, MR (EL008-90)** – Highly Technical formula, except for CPT code 7XX03, where the room time equals the MRI tech CA021 time.

**Vitals Monitoring System (MR-Conditional)** – Other. This equipment is also used to monitor the patient during the MR exam. We used the Highly Technical formula and then added 45 minutes (using the tech assist physician time for reference code 70543).

## PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?  
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

The service described by CPT code 7XX00 is estimated to be provided 154,000 times nationally in a one-year period and 51,000 times to Medicare patients nationally in a one-year period.

The service described by CPT code 7XX01 is estimated to be provided 46,000 times nationally in a one-year period and 15,000 times to Medicare patients nationally in a one-year period.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

70543

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Repeat MRs on the same patient with the same implant should not require 7XX00, 7XX01 or 7XX02 if the implanted device has not changed.
- The codes are modular to account for many different types of implants and reflect typical manufacturer instructions to safely perform MR in the presence of the implant.

Example scenarios are included below, although other scenarios exist:

- **Scenario one:** simple implant, research done in 15 mins
  - CPT code **7XX00** – 15 mins implant research
- **Scenario two:** Complex implant, additional 30 mins needed
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX01** – Complicated implant + 30 mins
  - *Examples: patient has multiple electronic implants, implant has undergone surgical revision*
- **Scenario three:** MR contraindicated, risk/benefit analysis ordered
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX02** – Risk/benefit analysis
- **Scenario four:** Implant has risk of thermal injury, RF is restricted
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX03** – Exam customization
  - *Example: Deep brain stimulators*
- **Scenario five:** Implant requires programming prior to MR
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX04** – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, vagal nerve stimulators, MR conditional pacemakers*
- **Scenario six:** Implant requires programming prior to MR and has risk of thermal injury
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX03** – Exam customization
  - CPT code **7XX04** – Implant programming
  - *Examples: Certain models of Spinal Cord Stimulators, nerve stimulators (phrenic, sacral, hypoglossal)*
- **Scenario seven:** Implant requires immobilization for MR and has risk of thermal injury
  - CPT code **7XX00** – 15 mins implant research
  - CPT code **7XX03** – Exam customization
  - CPT code **7XX05** – Implant immobilization
  - *Examples: Certain models of Cochlear or Auditory Brainstem Implants (internal magnet that may dislodge, leads that may heat)*

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

**ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

CA021 (Perform procedure/service NOT directly related to physician time) for 7XX01 was revised to 27 minutes. This reduced the technologist PACS workstation time to 45 minutes.

The professional PACS workstation times were revised to reflect the updated physician times approved by the RUC.

Additional detail on the supplies was requested at the meeting:

**7XX04:**

- card stock for printed educational materials
- 2 pair of gloves for manipulating device before and after procedure

**7XX05:**

- cardstock for printed educational materials
- 4 pairs of gloves for 2 people wrapping and unwrapping the head
- SG014, SG016, SL042 for wrapping

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

## AMA/Specialty Society RVS Update Committee Summary of Recommendations

January 2024

### Genetic Counseling Services (PE Only) – Tab 10

In September 2023, the CPT Editorial Panel deleted CPT code 96040 and created a new CPT code for medical genetics and genetic counseling services to be provided by the genetic counselor. CPT code 9X100 describes medical genetics and genetic counseling services, each 30 minutes of total time provided by the genetic counselor on the date of the encounter. For CPT code 9X100, the services are provided by trained genetic counselors and may include obtaining a structured family genetic history, pedigree construction, analysis for genetic risk assessment and counseling of the patient and family. A physician or other qualified healthcare professional (QHP) who may report evaluation and management services would not be able to report 9X100. Instead, these physicians and QHPs would use the appropriate evaluation and management code.

Genetic counselors are not recognized as qualified healthcare professionals by CMS and consequently cannot bill Medicare directly. Therefore, 9X100 is a practice expense only code. Practice expense recommendations were developed for the January 2024 RUC meeting accordingly.

#### *Practice Expense Only Custom RUC Survey*

In preparation for the January 2024 RUC meeting, the American College of Medical Genetics, collaborating with the National Society of Genetic Counselors, determined that it would be appropriate to conduct a practice expense survey for 9X100 and submitted a proposal for the Research Subcommittee's consideration. The societies noted that Genetic counselors (GCs) are regularly assisted by genetic counselor assistants (GCAs) and that they wanted to use the survey to help determine whether the use of a GCA is typical.

The Research Subcommittee agreed that the PE-only custom survey template should capture both GC time and GCA time. The custom survey template instructed survey respondents to estimate their time for an entire patient encounter, so the survey respondents would not be asked to prorate their time estimates across multiple units of the code. The custom template also only included clinical activities that the societies believed to be typical. The service period was defined as the entire date of the patient encounter, mirroring other CPT codes that are reported based on time on the date of the patient encounter (i.e. E/M services). The survey results were adjusted to reflect a single unit of 9X100, which is reported for each 30 minutes of total time provided by the genetic counselor on the date of the encounter. These data were also used to help determine the typical number of units for 9X100.

#### *Compelling Evidence*

The Practice Expense (PE) Subcommittee initially agreed with the specialty society that there is compelling evidence to support an increase over the aggregate current cost of the direct inputs for new code 9X100 as compared to deleted code 96040. The PE Subcommittee concurred that the main drivers for compelling evidence are changes in genetic counselor work due to changes in knowledge/technology and patient population. From 2006 to 2023, the predominant genetic counselor practice setting shifted from prenatal to oncology, indicating a change in the patient

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

population. The specialty attested to the modernization of equipment costs since the valuation of code 96040 in 2005. A contributing factor to the change in technology is the utilization of pedigree software; however, the PE Subcommittee removed the software from the recommended inputs as it is considered an overhead/indirect expense.

#### *New Clinical Labor Staff Type*

The PE Subcommittee agreed that CPT code 9X100 represents the increased complexity of genetic counseling, requiring slightly more clinical staff time and a new additional typical clinical staff type. The new staff type, a genetic counseling assistant, performs different activities than the genetic counselor and the genetic counseling assistant's time is not included in the number of units of 9X100 that the genetic counselor will report. The genetic counseling assistant clinical staff type was not typical in 2005 but survey data now support this clinical staff type as part of the typical genetic counseling service with 54% of respondents reporting genetic counseling assistant time. The genetic counselor and the genetic counseling assistant work in tandem with the genetic counseling assistant supporting the genetic counselor practice. Genetic counseling assistant activities may fit in the same clinical activity code as genetic counselor activities, but the level and detail of these tasks are different. For example, the genetic counseling assistant will review medical records to identify missing information, begin summarizing pertinent information and build a patient specific pedigree, while the genetic counselor also reviews records, expands details in the pedigree before, during, and/or after the patient encounter, and documents all findings, observations, risk assessments and plans. The specialty provided supportive documentation for the new clinical labor staff type, and the PE Subcommittee recommends the use of a Genetic Counseling Assistant using L039B *Physical Therapy Assistant* as an appropriate proxy that is listed by the Bureau of Labor Statistics (BLS).

Considering the typical number of units of 9X100 reported per session is three, the PE Subcommittee discussed the direct practice expense inputs with the understanding that the clinical activity minutes will be multiplied by three when the typical number of units is reported. The Subcommittee detailed the clinical activities to determine the exact work of the genetic counselor versus the genetic counseling assistant and to ensure there was no duplication in the standard inputs. Since both staff types are considered "clinical staff," the Subcommittee worked to ensure there is no overlap in clinical staff activities and subsequently made several reductions to the pre-service and post-service times. For example, the number of post-service phone calls was reduced from 6 minutes to 2 minutes given the multiplier of 3 ( $2 \times 3 = 6$  minutes), providing for the equivalent of two standard 3-minute phone calls or one complex call, as described by the specialty, in the post-service period. The intra-service time for the genetic counselor was increased from 14 to 20 minutes such that the total genetic counselor time for the service period would equal 30 minutes. The PE Subcommittee recommends a total clinical staff time of 57 minutes per unit of CPT code 9X100 including 46 minutes of genetic counselor time and 11 total minutes of genetic counseling assistant time.

#### *New Clinical Staff Activities*

The reference code 96040 predated the use of clinical activities (CA) codes. The PE custom survey was mapped to existing CAs; however, there was one clinical activity in the survey instrument that did not map to any existing activity, *Collect/Update personal and family history/pedigree*. The specialty explained that constructing a genetic family history and developing a pedigree is very different from obtaining a regular family history. The PE Subcommittee agreed with the specialty's request that a new CA code be created for this pre-service period activity:

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

- *Collect/Update personal and family history/pedigree*: Collecting a genetic personal and family history is a distinct clinical activity from typical family history collection performed by other specialists. Multiple societies including the American College of Medical Genetics, National Society of Genetic Counselors, and the National Comprehensive Cancer Network have recommendations that include typical family history collection for genetic evaluation extending to 2<sup>nd</sup> & 3<sup>rd</sup>-degree relatives (aunts/uncles, cousins, great aunts/uncles, etc.) which is not common practice amongst non-genetics specialties. Additionally, family history collection performed via pedigree is more detailed, as it involves collection and analysis per-relative instead of per-condition. History collection this way is known to increase the identification of appropriate patients for genetic testing, however, it is time intensive compared to the typical family history taken for non-genetics specialties.

In addition, during the discussion of the post-service activities, it became apparent that two additional new CA codes were needed to delineate the post-service of the service period activities, CA028 *Review/read post-procedure x-ray, lab and pathology reports* and CA034 *Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.)*, from the post-service period activities in this service. The PE Subcommittee agreed to create new CA codes for the following activities in the post-service period and designated 4 minutes for each of these new activities to the genetic counselor:

- *Review Genetic/Follow Up Test Results*: This new clinical activity includes review of genetic and other follow-up test results received after the date of service. Genetic test results typically identify one or more variants, which require further evaluation by the genetic counselor. This includes researching and assessing these findings in clinical databases (e.g. ClinVar, ClinGen, gnomAD) prior to communicating results to the patient, family, and medical team. This review determines the presence or absence of prior reports of the identified variant(s), and when present, also includes the associated classification of such variant(s) as these classifications may vary between laboratories. Critically, this review includes comparison to any other interpretations of identified variant(s) that may differ from that of the patient's report and/or have been previously provided to the patient's family. Variant interpretation and classification directly impact clinical management.
- *Correspondence Regarding Genetic/Follow Up Test Results*: This new clinical activity was created to help clarify that this type of correspondence and documentation is specifically related to that which occurs after genetic testing and other results are completed, received, and reviewed in the post-service period. This includes medical documentation, communicating the results to the healthcare team, and writing patient/family letters to facilitate communication of results amongst at-risk family members. Genetic counseling documentation is noted to be particularly detailed given the comprehensive review occurring in the new clinical activity described above and therefore, requires significant time.

The PE Subcommittee also reviewed the medical supply and equipment inputs and made several modifications. The typical patient was confirmed to be an adult patient, so SK048 *measuring tape, paper* for head circumference was removed as was SA048 *pack, minimum multi-specialty visit* which is not typical for this service in the non-facility office setting. Moreover, the new supply recommendation for *Pedigree Subscription, Cloud Based* software was removed as it is not allocable to a single patient and the Subcommittee concurred that the annual subscription is an

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

overhead/indirect expense like a variety of other licenses, subscriptions, etc. Similarly, equipment input ED038 *notebook (Dell Latitude D600)* was removed as it is deemed an indirect expense that is generically usable for a broad range of services. Equipment item EF023 *table, exam* is also not typical for this counseling service and was deleted.

The specialty society confirmed that genetic counselors often contract with hospitals. Ultimately, the PE Subcommittee determined that the facility inputs should be removed completely from the recommendation for CPT code 9X100 as the genetic counselor/private practice would need to contract with the institution when the service is performed in the facility setting.

**The RUC recommends the non-facility direct practice expense inputs as modified by the Practice Expense Subcommittee including a request for a new clinical labor type, *Genetic Counseling Assistant*.**

**The RUC also approved the creation of the following 3 new clinical staff activity codes:**

*Collect/Update personal and family history/pedigree (pre-service period)*

*Review Genetic/Follow Up Test Results (post-service period)*

*Correspondence Regarding Genetic/Follow Up Test Results (post-service period)*

 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	(For education regarding genetic risks by a nonphysician to a group, see 98961, 98962)	
	(For genetic counseling and education to a group by a physician or other qualified health care professional, use 99078)	

**Vignette(s)** (*vignette required even if PE only code(s)*):

CPT Code	Vignette
9X100	A 31-year-old female presents with a strong family history of both colon cancer and breast cancer. She is interested in discussing genetic testing and the best ways to assess her future cancer risk and inform her personal medical decision making. She also has questions regarding inheritance and genetic information privacy. Individual genetic counseling services are provided.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Medical Genetics (ACMG) and the National Society of Genetic Counselors (NSGC) used a two-tiered approach to determining practice expenses for the Genetic Counseling Services code. The final arbiter for the inputs on the submitted forms was an RVS Work Group of the ACMG Economics Committee and members of the NSGC Access and Service Delivery committee. The work group’s recommendations are derived from two data sources- a RUC Research Committee-approved survey of NSGC membership using a random sample of applicable subset(s) and NSGC’s annual Professional Status Survey.

The AMA research subcommittee-approved survey was sent to 219 actively practicing genetic counselors in patient facing care locations and yielded **56** completed responses for a response rate of **25.6%**. NSGC’s membership represents approximately 85% of all certified genetic counselors in the United States, and the annual professional status survey performed annually by NSGC elicits between a 45-50% response rate year-over-year. The work group used these data to establish and provide documentation of the time required for the various components of the service. The survey respondents were diverse geographically and reflect a breadth of practice settings.

**Survey Response Overview**

- 25.6% survey response rate (56/219 surveyed)
- 1.8% of clinical GCs nationwide
- 94.6% of respondents were from different facilities/systems

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

9X100 will replace existing CPT code 96040 making 96040 the most suitable reference code, it was **last updated in 2005**.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)**  
**PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at *rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?  
 Is this code(s) typically reported with the E/M service in the nonfacility?

No for both.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Genetic counselors are the only provider type who will report this code in the non-facility setting.

Genetic counselors will provide this code 100% of the time in the non-facility setting.

There is no difference in the dominant provider type in the non facility vs. the global.

Genetic counselors do not have specialty certifications. For the purposes of this SoR all genetic counselors were considered in the same provider category.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Code 9X100 is a new code presented for valuation, so there is no 1:1 baseline for this code. However, this code is replacing 96040 for reporting genetic counseling service. This new code shows an increase in aggregate current cost compared to 96040 which we attribute to increased complexity of genetic counseling service requiring additional clinical staff time, additional typical clinical staff type, and modernization of equipment (pedigree software) costs since 96040’s valuation in 2005.

Reviewers asked the Expert Panel to contemplate how the changes in practice may be tied to the RUC compelling evidence guidelines. The main drivers for compelling evidence are changes in genetic counselor work due to knowledge/technology and patient population.

From 2012 to 2023 the NIH Genetic Testing Registry (GTR) shows the following evolution:

**Table 1. NIH Genetic Test Registry Data**

	2012	2023
Genes (#)	966	18,711

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Conditions (#)	785	11,012
----------------	-----	--------

<https://www.ncbi.nlm.nih.gov/gtr/>

From 2005 to 2023 Online Mendelian Inheritance in Man (OMIM) shows the following evolution:

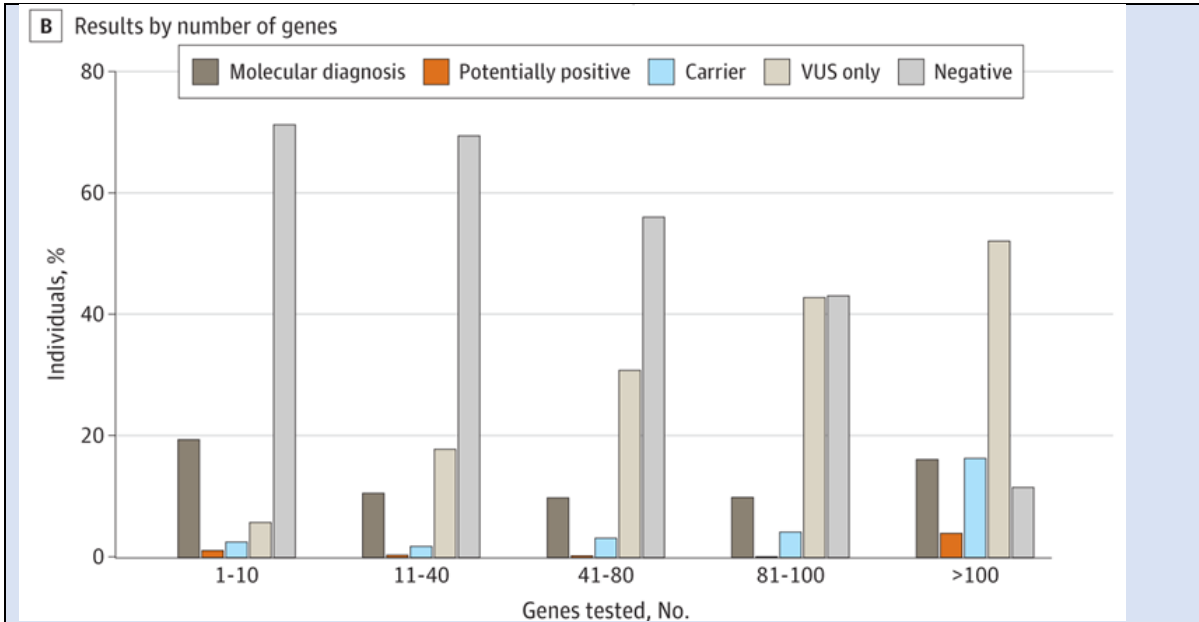

Figure 1. OMIM Gene-Phenotype relationships over time  
**Growth of Gene-Phenotype Relationships**  
January 2024

omim.org

Figure 2. Genetic Testing Results by Number of Genes tested, Chen et al (2023)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Simultaneously genetic testing technology has rapidly evolved to include next generation sequencing, whole genome and exome testing, and a wide variety of supplemental genetic tests that help observe specific parts of the genome (e.g. telomere testing, trinucleotide repeat expansion testing, multiplex ligation-dependent probe amplification). These changes are reflected in current clinical practice. From 2006 to 2023 the predominant genetic counselor practice setting shifted from prenatal to oncology.

In addition to the increased complexity in genetic testing and genetic counseling, the uptake of genetic testing in healthcare is growing rapidly in the United States with genetic testing now existing within nearly every clinical specialty and over 175,000 genetic tests on the market as of 2022. Given the complexity of these tests and implications for patients and family members, genetic counseling is frequently recommended pre- and post- genetic testing. Due to this increase in complexity, the time required in the pre- and post-service period has expanded to collect/evaluate patient data and document/communicate the complexities of the patient’s genetic evaluation.

From 2015 to 2022 Concert Genetics highlighted the following evolution:

**Table 2. Concert Genetics Market Data, Hooker et al. (2021), Concert Genetics (2022)**

	2015	2022
Genetic tests on the market	65,893	over 175,000

Additionally, the RUC data available for review suggests that typical clinical staff time in 2005 was significantly higher than what was adopted by the RUC for the final 96040 valuation. RUC September 2005 Recommendations show the total typical clinical staff time per unit of 96040 was 107 minutes, including 21 minutes pre-service, 30 minutes intra-service, and 56 minutes post-

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

service. Ultimately, only 5 minutes pre-service and 20 minutes post-service of genetic counselor time were captured in 96040 (55 minutes total). This historic data is useful in comparison to the clinical staff time presented for 9X100. Additionally, this data is useful to compare to the 2023 published NSGC society data from the Professional Status Survey in which the 2023 data of 1,960 genetic counselor respondents reported the typical clinical pre-service time was 18.4 minutes and 24.2 minutes of post-service time per 30 minute unit of face-to-face patient interaction. Please see the clinical staff time breakdown below (Table 3).

Since the development and valuation of 96040, genetic counseling assistants have become a part of the typical clinical genetic counseling practice. Genetic counseling assistants support the efficiency of genetic counselors in practice. This clinical staff type was not typical in 2005 but survey (54% of respondents reported genetic counseling assistant time) and NSGC Professional Status Survey data (53%) now support this clinical staff type as part of the typical genetic counseling service.

**Table 3. Clinical Staff Time Breakdown from 2023 AMA Research Subcommittee Practice Expense Survey - Including all Respondents (n=56)**

	Low	25th	Median	Avg.	75th	High
Total Staff Time (GC + GCA)	62	121	159	190	242	550

Note each row represents percentiles/medians and cannot be summed down a column, with the exception of the Avg. column

**Table 5. Clinical Staff Time Breakdown from 2023 AMA Research Subcommittee Practice Expense Survey - Accounting for Respondents who did not Report Using a GCA (n=25)**

	Low	25th	Median	Avg.	75th	High
Total Staff Time (GC)	115	143	200	202	235	365
Pre-Service Time (GC)	0	10	25	24	30	70
Intra-Service Time (GC)	55	100	120	126	153	235
Post-Service Time (GC)	0	32	45	52	62	120

Note each row represents percentiles/medians and cannot be summed down a column, with the exception of the Avg. column

To summarize the calculation of time and unit increments, 9X100 is a 30 minute total time code where the number of units is determined by the total genetic counselor time spent on the day of the encounter. This code has a XXX global period. The numbers provided on the PE Spreadsheet for the RUC have an adjustment factor applied. The adjustment factor/unit modifier is the unit time (30 minutes) over the median total genetic counselor time on the date of service (93 minutes), which equates to an adjustment factor of 0.3225. Applying this adjustment to the times provided on the PE spreadsheet is necessary to prevent double dipping (counting) of clinical activities in a code billed by unit.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

The global period of the code is not transitioning.

- If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A - recommended standards were followed

- If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

The reference code, 96040, predated the use of clinical activities codes. The RUC Research Committee mapped the existing CAs to the clinical activities included in the survey instrument. There was one clinical activity in the survey instrument, approved by the RUC research committee during creation of the survey, that did not map to any existing CAs, "Collect/Update personal and family history/pedigree," for which we are requesting a new CA be created for this activity.

- How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Obtaining vital signs is not a typical part of this procedure/code.

- Please provide a brief description of the clinical staff work for the following:

**Table 6. Clinical Staff Time Breakdown from 2023 AMA Research Subcommittee Approved Genetic Counselor & Genetic Counseling Assistant Practice Expense Survey**

	Low	25th	Median	75th	High
Total Staff Time (GC + GCA)	62	121	159	242	550
Total Staff Time (GC)	62	121	147	200	475
Pre-Service Time (GC)	0	5	18	30	75

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Intra-Service Time (GC)	43	73	93	123	235
Post-Service Time (GC)	0	30	44	54	180
Total Staff Time (GCA)	0	0	12	42	95
Pre-Service Time (GCA)	0	13	20	25	75
Intra-Service Time (GCA)	0	5	9	15	25
Post-Service Time (GCA)	0	0	6	15	36

a. Pre-Service period:

- Reviews the physician referral, and communicates with referring physician and other relevant experts and specialists
- Reviews patient’s medical record for relevant personal medical and family history
- Coordinates collection of familial genetic testing/genetic counseling records as needed
- Reviews relevant medical literature and genetic testing resources\*
- Sends, receives, and records pre-visit patient and family history questionnaires in pedigree software
- Performs preliminary assessment of family history, genetic risk factors and relevant genetics tests\*
- Provides patient/family pre-visit education
- Completes necessary insurance prior authorizations for service and testing, and begins care coordination as needed

\*Denotes work appropriate for completion by GC clinical staff only

b. Service period (includes pre, intra and post):

Pre-service

- Greets patient, establishes expectations for visit and visit agenda

Intra-Service

- Assesses the individual’s psychological, social, environmental factors, lifestyle habits, health literacy, and learning styles;
- Elicits family, medical, developmental, environmental and psychosocial histories
- Constructs and analyzes genetic pedigree of at least three generations
- Performs comprehensive risk assessment and inheritance risk counseling
- Discusses natural history and management, or surveillance and prevention strategies, with regard to genetic diagnosis or risk
- Identifies and offers relevant genetic testing
- Counsels patient/family about risks, benefits, limitations and other nuances of genetic testing, as well as implications of possible test results
- Assesses readiness for testing and facilitates decision making
- Explores psychosocial issues and provides support

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Answers patient’s/family’s questions
  - Makes referrals to relevant health professionals, support groups, etc.
- Post-Service
- Establishes a plan for follow-up evaluation and management, and ongoing assessment of outcomes
  - Documents the counseling provided and describes the plan for follow-up\*
- \*Denotes work appropriate for completion by GC clinical staff only

- c. Post-service period:
- Reviews further medical records on patient and other family members, and laboratory reports as needed
  - Completes final changes and updates to pedigrees based on data collected intra-service.
  - Completes necessary insurance authorizations, approvals, appeals to denials, and follow-up for coverage of testing services
  - Continues coordination of care, facilitation of genetic testing, resource identification
  - Receives, interprets and communicates genetic test results to patient/family and referring physician
  - Engages in other follow-up communication with patient, family, other health professionals as needed for patient management\*
  - Provides psychosocial support as indicated\*
- \*Denotes work appropriate for completion by GC clinical staff only

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

This is a genetic counselor only PE code and will not be reported by physicians or other QHPs. Services performed during this period by a genetic counselor are typical genetic counseling services: taking a personal & family history, developing a pedigree, performing a risk assessment, discussing risk assessment with the patient, discussing genetic testing benefits, limitations, and risk.

While clinical activity CA021 (Perform genetic counseling service) is only performed by the genetic counselor, genetic counseling assistants are still active during the service period. Genetic counseling assistants typically perform CA009, CA013, and CA027. Genetic counseling assistants are utilized for greeting and rooming the patient, preparing medical records for the genetic counselor, and facilitating laboratory orders.

For a granular description of what the clinical staff are doing during the intra-service period, see Table 4 under question 5.

**Table 7. Clinical Staff Time Breakdown by Clinical Activity (CA)**

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)

CA004 Provide pre-service education/obtain consent	n/a	-Answer pre-appt patient clinical questions and pre-education
New* Collect/Update personal and family history/pedigree	<ul style="list-style-type: none"> <li>-Review patient's medical record for relevant personal medical and family history</li> <li>-Perform preliminary assessment of family history, genetic risk factors and relevant genetics tests*</li> </ul>	<ul style="list-style-type: none"> <li>-Coordinate collection of familial genetic testing/genetic counseling records as needed</li> <li>-Begin constructing pedigree in software</li> </ul>
<b>INTRA-SERVICE PERIOD (DAY OF SERVICE)</b>		
CA009 Greet patient, provide gowning, ensure appropriate medical records are available	- Greet and room patient	n/a
CA011 Provide education/obtain consent	-Counsels patient/family about risks, benefits, limitations and other nuances of genetic testing, as well as implications of possible test results	n/a
CA012 Review requisition, assess for special needs	-Assess need for alternate sample types/special sampling needs	n/a
CA013 Prepare room, equipment and supplies	n/a	-Clean & prepare room

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CA021 Perform procedure/service---NOT directly related to physician work time	-Perform genetic counseling & risk assessment	n/a
CA024 Clean/room equipment by clinical staff	n/a	Included with CA013
CA027 Complete post-procedure diagnostic forms, lab and x-ray requisitions	-Review and make determinations on testing criteria, complete letters of medical necessity	-Draft and complete test requisition forms, complete prior-authorizations for genetic testing, communicate clinical data into the laboratory portal
CA028 Review/read post-procedure x-ray, lab and pathology reports (Service Period)	-Review genetic variant databases  -Assess variants of uncertain significance	n/a
CA034 Document procedure (nonPACS) (e.g. mandated reporting, registry) (Service Period)	-Document the encounter  -Run risk models	n/a
<b>POST-SERVICE PERIOD</b>		
CA028 Review/read post-procedure x-ray, lab and pathology reports (Post-Service Period)	- Receive and interprets genetic test results  - Review further medical records on patient and other family members, and laboratory reports as needed	n/a
CA034 Document procedure (nonPACS) (e.g. mandated reporting, registry logs, EEG file, etc.) (Post-Service Period)	- Complete final changes and updates to pedigrees based on additional data collected (i.e. genetic testing results)  - Communicate genetic test results to referring physician  - Establish and document plan for follow-up evaluation and management and ongoing assessment of outcomes	n/a
CA037 Conduct patient communications	-Phone communication of results and variants of uncertain significance	-Draft clinical communications and performing communication

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

	- Write family letters related to genetic testing results and/or risk assessment	of genetic testing results via text/email  - Field patient communications regarding sample follow-up
CA038 Coordinate post-procedure services	- Coordination of care, facilitation of genetic testing, resource identification  - Complete clinical justification for insurance authorizations, approvals, appeals to denials, and follow-up for coverage of testing services	- Facilitate laboratory communications related to sample quality and necessary follow-up

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A - 100% was used.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

The RUC Research Subcommittee approved “pedigree collection/analysis” as a new CA when we developed the survey. The Research Subcommittee felt that this activity was distinct from other CA categories and necessary to accurately describe the clinical activities covered by this code.

Collecting a genetic personal and family history is a distinct clinical activity from typical family history collection performed by other specialists. Multiple societies including NSGC & ACMG and the National Comprehensive Cancer Network (NCCN) have recommendations that include typical family history collection for genetic evaluation extending to 2nd & 3rd-degree relatives (aunts/uncles, cousins, great aunts/uncles, etc) which is not common practice amongst non-genetics specialties. Additionally, family history collection performed via pedigree is more detailed, as it involves collection and analysis per-relative instead of per-condition. History collection this way is known to increase identification of appropriate patients for genetic testing (PMID: 35948032), however is time intensive compared to family history taking typical for non-genetics specialties.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

We are introducing a new staff type- genetic counseling assistants (GCAs). This staff type is not listed by the Bureau of Labor Statistics. GCAs assist genetic counselors in providing genetic counseling and genetic testing services through collecting personal and family history, coordinating genetic test sample collection and ordering, and facilitating communication between patients, laboratories, and the healthcare team. To estimate salary, we identified four actively-recruiting GCA job postings that included salary ranges from multiple regions of the US. This identified low-end salary ranges of \$38,396-\$66,352 to high-end ranges of \$60,923-\$79,581. In reviewing these job postings, there is clear delineation of service provision and scope that is consistent with what we believe a GCA is qualified to provide as part of the genetic counseling team.

The GCA and genetic counselor work in tandem with the GCA supporting the genetic counselor practice. GCAs activities may fit in the same clinical activity code as genetic counselor activities, but the level and detail of these tasks is different. Similarly, the GCA is a clinical (non-administrative) role whose tasks are distinct from office administrative staff. For example, the administrative staff may request medical records while the GCA would review medical records to identify missing information, begin summarizing pertinent information and build pedigree. The genetic counselor also reviews records, expands details in the pedigree during the patient encounter and documents all findings, observations, risk assessment and plan.

We believe that Physical Therapy Assistants (PTAs) is an appropriate proxy for Genetic Counseling Assistants (GCAs). The qualifications, education, and job duties and responsibilities of a PTA align with the GCA. GCA jobs all require Bachelor's degree or equivalent education and experience while the BLS and review of PTA job postings require graduation from an accredited PTA program, which is typically an associate-degree level. The BLS states that PTAs "assist physical therapists in providing physical therapy treatment and procedures." PTAs help patients perform specific exercises as part of the plan of care and educate patients and families about what to do after treatment. Similarly, GCAs collect medical and family history information, disclose negative genetic test results using standardized scripts and engage with patients throughout genetic counseling services provision. PTAs and GCAs duties and responsibilities both involve direct interaction with patients and medical record documentation under the supervision of an advanced practice provider. Both professions require knowledge and skills that are specific to the specialty and not part of standard medical training. For example, PTAs have training to perform physical therapy-specific activities, such as treatment through massage and stretching, as well as the proper use of devices and equipment. Likewise, GCAs have knowledge of the use and application of genetic technologies, understand genetic test results and reports, and have the skills to discuss this information with patients in consultation with the GC and other healthcare professionals. The BLS reports PTA median salary ranges of \$43,340 (10%) to \$85,230 (90%) with a mean annual wage of \$64,510, which directly overlaps with the salary ranges we identified for GCAs. For these reasons, we crosswalked the proposed GCA salary with the PTA salary provided on the Tab 10 - PE Spreadsheet.

Necessary Knowledge for GCA Positions:

- Basic genetic concepts, such as DNA, genes, and chromosomes
- Genetic contributions to disease, such as multifactorial inheritance
- Patterns of Mendelian Inheritance
- Introductory cell biology
- Genetic Information Nondiscrimination Act of 2008 and its protections/limitations

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- Genetic testing methodologies, such as sequencing or microarrays
- Basic information about human subject research protections
- Diversity, inclusion, and sensitivity training
- Roles and responsibilities of genetics team members

Clinical Skills/Tasks for Typical GCA Position

- Collecting family histories
- Constructing pedigrees
- Finding and abstracting relevant clinical information from medical charts
- Identifying relevant clinical information from patients' records from other clinics
- Identifying relevant clinical information from patients' relatives' records
- Triaging patients for visits (e.g., determine how quickly an appointment is needed or to which clinic to assign the patient)
- Making phone calls and leaving messages in accordance with the HIPAA Privacy Rule
- Filling out clinical information on genetic test requisition forms
- Reviewing lab orders (e.g., is the correct test ordered based on clinical information provided?)
- Calling patients with results
- Providing relevant clinical information in letters of medical necessity

**Table 8.** Review of GCA Education/Degree from Publications

Reference	Degree requirements
Gagne C et al. (2023)	Both a majority of clinical ( $n = 63, 86.3\%$ ) and laboratory ( $n = 59, 90.8\%$ ) GCAs indicated their highest level of education was a Bachelor of Science/Arts.
Hnatiuk MJ et al. (2019)	The highest level of education obtained was a bachelor's degree ( $n = 89, 78\%$ )
Krutish A et al. (2023)	The majority of GAs reported an undergraduate degree ( $n = 128, 83\%$ ), most of which were in biology, genetics, or psychology/social science (Table 2). Similarly, the majority of participants who worked with GAs reported that they required GAs to have an undergraduate degree at minimum ( $n = 88, 72\%$ ; Appendix S1).

 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

- 15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
- 16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
- 17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Equipment code (ED040) was previously included in the valuation of 96040 to denote pedigree software. Survey data supports that pedigrees are still routinely utilized in genetic counseling practice (73% of survey respondents), however pedigree collection differs significantly from 2005. We have submitted invoices for current pedigree subscription services and are recommending inclusion of a new supply listing for “Pedigree Subscription, Cloud Based” be included. Current pedigree tools function as cloud-based subscription services with annual licensing requirements and costs. In this format, the cloud-platform is no longer owned by the end user/practice and continued access to the platform/pedigrees requires paying continuing fees. In typical cases this includes updated pricing structure most similar to medical supplies where cost is based on subscription or patient (demonstrated by Pedigree Invoices C & D). We recommend adding a supply category for Pedigree Subscription, Cloud Based and assigning a value of \$12.22 per unit to this supply where a unit would correspond to the price associated with one patient and cover both a genetic counselor and genetic counseling assistant user.

- 18. Are you recommending a PE supply pack for this recommendation? Yes or No.  
 If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes, we are recommending an established package SA048

- 19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10<sup>th</sup> worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

paper, exam table		foot	7
gloves, non-sterile		pair	2
gown, patient		item	1
pillow case		item	1
cover, thermometer probe		item	1

- 20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A
-----

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- 22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
  - a. If yes, please explain how the computer is used for this service(s).
  - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - c. Does the computer include code specific software that is typically used to provide the service(s)?

Yes, we are recommending equipment minutes for a computer for this service. As seen in the 96040 reference code and the 9X100 survey responses, genetic counselors are consistently reporting use of pedigree drawing used for personal and family history collection and genetic risk assessment. These activities are key components of the service, as noted in the code description. This software organizes complex family histories, supports risk analysis, and tracks genetic conditions. In order to run this specialized software, equipment minutes for a computer are needed. Genetic counselors do not routinely report any other CPT codes, so this software/computer would be used specifically for this service only (and specific CPT code).

- 23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

ED038  
EF023

PE-ONLY CODES ADDITIONAL INFORMATION

- 24. (a) Estimate the number of times this service might be provided nationally in a one-year period?  
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(a) This code will be replacing 96040. In our assessment, based on the number of genetic counselors, average patient volume, and percentage of genetic counselors in clinical practice that report 96040, we estimate approximately 910,000 patients will be seen per year nationally.  
(b) Genetic counselors are not recognized providers under Medicare, so this service code would not be reported to Medicare.

- 25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

96040

ADDITIONAL INFORMATION

- 26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

The following staff times, supplies, and equipment were adjusted in the PE Spreadsheet based on recommendations of the PE Subcommittee:

- Row 18 (CA001, Genetic Counselor) changed from 4 to 2 minutes
- Row 19 (CA001, Genetic Counseling Assistant) changed from 3 to 1 minutes
- Row 34 (CA011, Genetic Counselor, Service Period) changed from 4 to 1 minutes
- Row 43 (CA021, Genetic Counselor) changed from 14 to 20 minutes
- Row 52 (CA028, Genetic Counselor) changed from 3 to 0 minutes
- Row 69 (CA037, Genetic Counselor) changed from 6 to 2 minutes
- Row 70 (CA037, Genetic Counseling Assistant) changed from 3 to 0 minutes
- Row 80 (SA048, Supplies) changed from 0.3 to 0 units
- Row 81 (SK048, Supplies) changed from 0.3 to 0 units
- Row 84 (New Supply, Pedigree Subscription, Supplies) changed from 0.3 to 0 units
- Row 91 (ED038, Equipment) changed from 27 to 0 minutes
- Row 92 (EF023, Equipment) changed from 27 to 0 minutes

The PE Subcommittee recommended creation of two new Clinical Activities (CA):

- To replace CA028 in the post service – New: REVIEW GENETIC/FOLLOW UP TEST RESULTS
  - This new clinical activity is a distinct service that includes review of genetic and other follow-up test results received after the date of service. Genetic test results typically identify one or more variants, which require further evaluation by the genetic counselor. This includes researching and assessing these findings in clinical databases (e.g. ClinVar, ClinGen, gnomAD) prior to communicating results to the patient, family, and medical team. This review determines the presence or absence of prior reports of the identified variant(s), and when present, also includes the associated classification of such variant(s) as these classifications may vary between laboratories. Critically, this review includes comparison to any other interpretations of identified variant(s) that may differ from that of the patient's report and/or have been previously provided to the patient's family. Variant interpretation and classification directly impacts clinical management.
- To replace CA034 in the post service – CORRESPONDENCE REGARDING GENETIC/FOLLOW UP TEST RESULTS
  - Based on the recommendation of the PE Subcommittee, this new clinical activity was created to help clarify that this type of correspondence and documentation is specifically related to that which occurs after genetic testing and other results are completed, received, and reviewed in the post-service period. This includes medical documentation, communicating the results to the healthcare team, and writing patient/family letters to facilitate communication of results amongst at risk family

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

members. Genetic counseling documentation is noted to be particularly detailed given the detailed review occurring in the new clinical activity described above and requires significant time for documentation.

Lastly, the PE Subcommittee requested further description of the clinical activity of the GC and GCA under CA027 (lines 50 and 51 of the PE Spreadsheet) in the post-service portion of the service-period. Genetic testing is typically performed on blood or saliva specimens and sent to any of multiple possible external laboratories. Because of this, sample collection, packaging and shipping is performed by the genetic counselor. Genetic counselors typically have International Air Transport Association (IATA) certification to safely and legally handle and package biohazard samples for shipping. Additionally, the training includes specific requirements for sample storage and confinement.

Sample collection involves the genetic counselor verbally describing the collection process, including instructions on combining the saliva and preservative, mixing the solutions by shaking the sample, labeling and capping the sample. The genetic counselor will finish the process by completing the same IATA process as described above. Genetic counselors are additionally responsible for determining if a patient requires a non-saliva or blood sample, as health conditions, such as leukemia, may interfere with the laboratory interpretation of germline genetic testing.

The GCA completes the clinical laboratory requisition forms, which require documentation of extensive and detailed phenotypic information and clinical history. Family history documentation and risk modeling results are completed and included on the laboratory requisition. Determination of the specific data elements to be included on the requisition form requires specialized training, which is included in the scope of practice of a GCA. This detailed clinical information is necessary for robust and accurate interpretation and reporting of the genetic testing results by the laboratory.

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

### Genetic Counseling Assistant

- 540107
- Columbia University Medical Center
- Neurology
- Full Time
- Opening on: Nov 3 2023
- Grade 103

[View favorites](#)

- Job Type: Officer of Administration
- Bargaining Unit:
- Regular/Temporary: Regular
- End Date if Temporary:
- Hours Per Week: 35.00
- Standard Work Schedule: Monday-Friday 9am-5pm
- Building: 710 W. 168th Street, New York, NY
- Salary Range: \$58,500 - \$65,000

The salary of the finalist selected for this role will be set based on a variety of factors, including but not limited to departmental budgets, qualifications, experience, education, licenses, specialty, and training. The above hiring range represents the University's good faith and reasonable estimate of the range of possible compensation at the time of posting.

#### Position Summary

The Department of Neurology at Columbia University is seeking a full-time Genetic Counseling Assistant (GCA) to support the newly launched Neurogenetics Program. This program promotes neurogenetics clinical care, research and education. The role of the GCA will be to provide support to the program, its neurologists and its genetic counselors in various administrative tasks. This work experience will provide invaluable experience for individuals who intend to apply for graduate programs in clinical genetics and genetic counseling or for individuals interested in administrative management. Genetics expertise will develop through this work and is not a prerequisite, and there will be many opportunities for genetic learning and continuing education.

#### Responsibilities

- Manage Neurogenetics referrals by reviewing incoming referrals, coordinating with scheduling staff, responding to referring patients' or providers' basic questions about what to expect from consultations.
- Assist with pre-visit preparation, including collection of relevant medical records and lab reports, medical record review, and coordination of patient intake forms
- Collect information from patients in preparation for their appointment including, but not limited to, a family history
- Provide reminder phone calls for upcoming patient appointments
- Assist in processing, packaging and shipment of specimens for genetic testing in a timely manner
- Obtain and coordinate insurance pre-authorization for specialized laboratory testing as needed
- Maintain database of genetic consultation or other records
- Scan and upload documents into the electronic medical record system
- Coordinate regular educational case conferences and seminars
- Organize, schedule and maintain the Neurogenetics program calendar
- Coordinate with Columbia website development to keep site updated
- Perform other duties as appropriate.

#### Minimum Qualifications

- Bachelor's degree or equivalent in education and experience required.

#### Other Requirements

- 0-2 years experience.
- Extremely organized with a high attention to detail, with specific attention paid to accurately recording data
- Familiar with medical terminology and laboratory testing
- Proficient in Microsoft Outlook, Excel, and Word
- Excellent written and verbal communication skills required
- Must be comfortable working independently and with teams
- Maintains a professional, courteous and helpful demeanor
- Must be dedicated to providing excellent patient care

Equal Opportunity Employer / Disability / Veteran

Columbia University is committed to the hiring of qualified local residents.

#### Commitment to Diversity

Columbia University is dedicated to increasing diversity in its workforce, its student body, and its educational programs. Achieving continued academic excellence and creating a vibrant university community require nothing less. In fulfilling its mission to advance diversity at the University, Columbia seeks to hire, retain, and promote exceptionally talented individuals from diverse backgrounds.

Equal Employment Opportunity : The University of California San Francisco is an Equal Opportunity/Affirmative Action Employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, age, protected veteran or disabled status, or genetic information.

Job Category : Administrative Support

Location : Hybrid  
Mission Bay (SF)  
Mount Zion (SF)

Percentage : 100%

Shift Length : 8 Hours

Shift : Days

Additional Shift : Monday - Friday  
Details :

Please note: The compensation ranges listed online for roles not covered by a bargaining unit agreement are very wide, however a job offer will typically fall in the range of 80% - 120% of the established mid-point. An offer will take into consideration the experience of the final candidate AND the current salary level of individuals working at UCSF in a similar role.

For roles covered by a bargaining unit agreement, there will be specific rules about where a new hire would be placed on the range.

To learn more about the benefits of working at UCSF, including total compensation, please visit:

<https://ucnet.universityofcalifornia.edu/compensation-and-benefits/index.html>

The final salary and offer components are subject to additional approvals based on UC policy.

Department Cancer Genetic Counseling  
Name :

Department The UCSF Helen Diller  
Description : Family Comprehensive  
Cancer Center is an  
accredited National  
Cancer Institute  
Comprehensive Cancer  
Center. The NCI-  
Designation recognizes

the scientific leadership, resources, and the depth and breadth of the research in basic, clinical and population science. As a Comprehensive Cancer Center, we demonstrate the added depth and breadth of research as well as substantial transdisciplinary research that bridges these scientific areas. The clinical services encompass adult and pediatric tumors across three campuses as well as regional satellite locations. The clinical cancer program is one of the largest clinical services at UCSF Medical Center and encompasses roughly 230 non-physician FTEs, 90+ cost center, and dozens of grant and philanthropic funding sources. At the UCSF Helen Diller Family Comprehensive Cancer Center we are truly pioneering care and leaders in all areas of cancer clinical care and research. We are routinely voted a top 10 program by U.S. News and World Report.

Required  
Qualifications :

- Bachelor's degree in a biological/health science or an equivalent combination of education and experience is required.

- Ability to communicate effectively, both over the telephone and in person.  
Ability to deal sensitively and effectively with patients. Excellent organizational skills. Excellent customer service and problem solving skills.  
Ability to work well both independently, with little supervision, and in a team setting.
- Knowledge of genetics and genetic concepts.
- Strong computer skills and experience with Microsoft Office software, including Word, Excel, and PowerPoint required.
- Ability to communicate effectively, both over the telephone and in person.
- Ability to deal sensitively and effectively with patients.
- Excellent organizational skills.
- Ability to work well both independently, with little supervision, and in

a team setting.

Preferred  
Qualifications :

- Experience with patient and or family contact in a community or medical setting.
- Previous experience with clinical projects, either in an administrative or clinical role, preferred.  
Demonstrated knowledge of medical practice terminology an genetic terminology and concepts.
- Experience with Outlook, File Maker Pro and Progeny (or other pedigree drawing software) preferred.
- Bi-lingual or multi-lingual capability (Spanish, Cantonese, Russian) strongly preferred.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS Request – Final Rule for 2024\**

January 2024

**Therapeutic Apheresis and Photopheresis (PE Only) – Tab 11**

In the Final Rule for 2024, CMS received a public nomination that CPT codes 36514, 36516 and 36522 may not include the correct clinical labor type. CMS agreed that there may be a disparity with the clinical labor type for this service and that these codes would benefit from additional review in future rulemaking. Therefore, for CY 2024, CMS finalized CPT codes 36514, 36516, and 36522 as potentially misvalued, resulting in a review of the practice expense clinical labor type at the January 2024 RUC meeting.

**Compelling Evidence**

The Practice Expense (PE) Subcommittee discussed and approved compelling evidence based on a change in the clinical labor type for these services, as the RN/LPN labor category is not adequately equivalent to an Apheresis Nurse Specialist. In the CY 2024 Final Rule, CMS agreed there may be a disparity with the clinical labor type for these services, and the codes would benefit from additional practice expense review. CMS also noted it is likely the RN/LPN labor category is not adequately equivalent to an Apheresis Nurse Specialist. While an apheresis nurse is not currently a category listed in the Medicare Physician Payment Schedule (MFS), there may be existing nurse categories that may be an appropriate substitute, such as an oncology nurse (RN/OCN). **The Practice Expense Subcommittee and RUC accepted compelling evidence based on evidence that there has been a change in the clinical labor type.**

**Clinical Labor Type**

The PE Subcommittee and the RUC agreed with the specialty societies' recommendation to use clinical labor type L056A *RN/OCN* as a proxy to recognize the work of an apheresis nurse. The specialty societies noted that they considered proposing a new clinical staff type for an Apheresis Nurse Specialist, but decided against this, as there is not a Bureau of Labor Statistics labor category for an apheresis nurse, and apheresis nurse wage survey data is not readily available. Instead, the specialties proposed to use the oncology nurse (*RN/OCN*) clinical labor type to recognize the work of an apheresis nurse. The specialty societies reiterated that CMS had expressed support for this crosswalk in the Final Rule, and it is also supported by similar training and experience requirements necessary for an apheresis nurse and an RN/OCN. To become an RN/OCN, a candidate must be an RN with a minimum of 2 years of experience, have a minimum of 2,000 hours (1 year) of adult oncology nursing practice within the past four years and have completed a minimum of 10 contact hours of nursing continuing education in oncology or an academic elective in oncology nursing within the past three years.

Additionally, the Qualification in Apheresis (QIA) was introduced in 2016, the year in which specialties were preparing for the last valuation of these codes at the January 2017 RUC meeting. The American Society for Apheresis (ASFA) in partnership with the American Society for Clinical Pathology (ASCP) Board of Certification, offers a Qualification in Apheresis (QIA). There are multiple pathways for obtaining a QIA, but the primary pathway is an RN, LPN, or licensed vocational nurse (LVN) with a U.S. state license, certificate, or diploma, and three years of full-time acceptable experience in apheresis or five years of part-time acceptable experience in apheresis within the last ten years. **The specialty societies**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

and the Practice Expense Subcommittee agreed to use the oncology nurse (RN/OCN) clinical labor type to recognize the work of an apheresis nurse.

**Service Period Clinical Activities**

The specialty societies recommended an additional correction to the clinical labor current inputs, which would not impact the amount of clinical labor time. The specialty societies noted that the minutes in CA018 *Assist physician or qualified healthcare professional – directly related to physician work time (100%)*, would more appropriately be categorized as CA021 *Perform procedures/service-NOT directly related to physician work time*. The error occurred when the clinical labor tasks were combined into their new categories after 2017.

The PE Subcommittee and the RUC agreed with the specialty societies’ recommendations for CPT codes 36514, 36516 and 36522 to modify the clinical staff labor type to L056A and to shift the intra-service time to CA021. Further, they agree that the other direct PE inputs reviewed in January 2017 are all still appropriate. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
36511 36512 36513	<i>Therapeutic apheresis; for white blood cells for red blood cells (For manual red cell exchange, see 36450, 36455, 36456) (For automated red cell exchange, use 36512) for platelets (Report 36513 only when platelets are removed by apheresis for treatment of the patient. 36522	Photopheresis, extracorporeal	000

**Vignette(s) (vignette required even if PE only code(s)):**

<b>CPT Code</b>	<b>Vignette</b>
36514	A 55-year-old male presents with a 3-month history of progressive, symmetric weakness in both upper and lower extremities involving proximal and distal muscles, sensory loss, and diminished reflexes. A diagnosis of chronic inflammatory demyelinating polyneuropathy is made.
36516	A 35-year-old male with familial hypercholesterolemia has atherosclerosis and elevated low-density lipoprotein cholesterol that has not been satisfactorily controlled with maximum medical therapy.
36522	A 60-year-old woman develops graft-versus-host disease (GVHD) after bone marrow transplantation.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

In the Final Rule for 2024, CMS received a public nomination for CPT codes 36514, 36516 and 36522. The nomination stated the current clinical labor type (RN/LPN) for all three codes may not be correct. CMS agreed there may be a possible disparity with the clinical labor type for these services and the codes would benefit from additional practice expense review. CMS believes it is likely the RN/LPN labor category is not adequately equivalent to an Apheresis Nurse Specialist. While an apheresis nurse is not currently a category clinical labor type used in the PFS, and that there may be existing nurse categories that can act as a substitute, such as an oncology nurse (RN/OCN). Therefore, for CY 2024, CMS finalized CPT codes 36514, 36516, and 36522 as potentially misvalued, resulting in a review of the practice expense clinical labor type by the RUC at the January 2024 meeting (78848 Federal Register / Vol. 88, No. 220 / Thursday, November 16, 2023).

The specialty society stakeholders consulted with their coding and economic committees, therapeutic apheresis experts (individually and as a group), and their RUC advisors for a review of the direct practice expense inputs for CPT codes 36514, 36516, and 36522. Representatives from each society reviewed the typical clinical labor tasks, in practice today.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

For comparison, specialties reviewed the current direct practice expense inputs for the CPT codes.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

These codes are not typically reported with an E/M service in either the facility or non-facility setting.  
See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

The utilization for CPT codes 36514, 36516 and 36522 is too low in the RUC database to display the dominant provider in the NF setting as it does not provide accurate specialty representation. Below is the specialty provider information for the Global Services.

**36514:**

<u>SPECIALITY (ALL SITES)</u>	<u>%</u>
Pathology	40.9%
Nephrology	37.9%

5.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Based on a request by CMS within its CY 2024 PFS Final Rule, the specialties are requesting an increase in the current cost for clinical labor only through a change in the staff type (from an RN/LPN to an RN/OCN) and believe the following compelling evidence warrants the change:

**1) Evidence that there has been a change in clinical staff type.**

The expert panel agrees with CMS’s 2024 PFS final ruling that there may be a disparity with the clinical labor type for this service and these codes would benefit from additional review in future rulemaking. Our expert panel agrees a clinical staff type of an apheresis trained nurse is now typical in both the facility and the non-facility settings for codes 36514, 36516, and 36522. This is also confirmed by several journal articles. Below are recent publications that discuss the importance of a highly trained clinical staff for these procedures:

- 1) **Potok D et al** (2016) The nurse’s role in therapeutic apheresis. *Nursing Times*: online issue 2, 4-6.
- 2) **Apheresis Nursing & Allied Health in North America (Nov 2011)** *Transfusion and Apheresis Science*, vol 60.
- 3) **Neyrinck M, Vrieling H.** (2019) Performance of an apheresis nurse operator and nursing aspects. *Transfusion and Apheresis Science*; vol 58: issue 3, 296-299
- 4) **Howell C.** (2008) The challenging role of the apheresis nurse *Transfusion and Apheresis Science*, vol 38:issue 3, 213-215

Additionally, the Qualification in Apheresis (QIA) was introduced in 2016, the year in which specialties were preparing for the last valuation of these codes (January 2017 AMA RUC meeting).

The American Society for Apheresis (ASFA) in partnership with the American Society for Clinical Pathology (ASCP) Board of Certification offers a Qualification in Apheresis (QIA). There are multiple pathways for obtaining a QIA, but the primary pathway is an RN, LPN, or LVN with U.S. state license, certificate, or diploma, and three years of full-time acceptable experience in apheresis or five years of part-time acceptable experience in apheresis within the last ten years. For QIA information see:

<https://www.apheresis.org/general/custom.asp?page=QIA>. ASFA has a Standard Operating Procedures Manual. [Apheresis Standard Operating Procedures Manual - American Society for Apheresis \(ASFA\)](#)

To be an RN/OCN, a candidate must be an RN with a minimum of 2 years of experience, have a minimum of 2,000 hours (1 year) of adult oncology nursing practice within the past four years, and have completed a minimum of 10 contact hours of nursing continuing education in oncology or an academic elective in oncology nursing within the past three years. For RN/OCN information see: [Oncology Certified Nurse \(OCN®\) | ONCC](#).

## NONFACILITY DIRECT PE INPUTS

CPT CODE(S):36514, 36516, 36522

SPECIALTY SOCIETIES \_ AAFP, ASCO, ASH, ASTCT, CAP, ES  
PRESENTERS: Elizabeth Blanchard, MD, Chase Hendrickson, MD, Elizabeth Godbey, MD,  
Ronald McLawhon PhD MD, Roger McLendon, MD, Amar Kelkar MD

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

## CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

Not applicable

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

The 90-day global period NF PE standard for CA001 *Complete pre-service diagnostic and referral forms* is 5 minutes. The 90-day global period NF PE standard for CA002 *Coordinate pre-surgery services (including test results)* is 10 minutes in the NF setting. CPT codes 36514, 36516 and 36522 are 000 global period services. When last reviewed in 2017 by the AMA RUC, the 90-day standard was agreed upon and approved by the RUC for all of these codes. The specialty societies are again recommending 5 minutes for CA001 and 3 minutes for CA002.

CA001 Complete pre-service diagnostic and referral forms is 5 minutes.

Completion of pre-service diagnostic and referral forms. Patient charts and laboratory reports are reviewed by the apheresis/oncology nurse. Specifically, there is review of the hematocrit, plasma volume and calcium.

The apheresis/oncology nurse reviews the consent form with the patient and provides educational information regarding the procedure. Confirm pre-service education/obtain consent.

CA002 Coordinate pre-surgery services (including test results) is 3 minutes

The apheresis service is called to arrange for patient tunnel catheter (or other vascular access) as necessary. The blood bank is notified to ensure that blood products are available. The pharmacy is called to ensure the availability of albumin and other IV, injectables, and blood is available for the patient. Draw up pre-labs.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

Not applicable

## NONFACILITY DIRECT PE INPUTS

CPT CODE(S):36514, 36516, 36522

SPECIALTY SOCIETIES \_ AAFP, ASCO, ASH, ASTCT, CAP, ES

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

CPT codes 36514, 36516 and 36522 each had 5 minutes allocated to CA010 obtain vital signs prior to CMS increasing the clinical activity to 5 minutes in 2018. The specialty societies are recommending maintaining 5 minutes for CA010 to account for the following vital signs: weight, pulse, blood pressure, resp. rate, O2 sats, and temperature.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

CA001 Complete pre-service diagnostic and referral forms is 5 minutes.

Completion of pre-service diagnostic and referral forms. Patient charts and laboratory reports are reviewed by the apheresis/oncology nurse. Specifically, there is review of the hematocrit, plasma volume and calcium.

The apheresis/oncology nurse reviews the consent form with the patient and provides educational information regarding the procedure. Confirm pre-service education/obtain consent.

CA002 Coordinate pre-surgery services (including test results) is 3 minutes

The apheresis service is called to arrange for patient tunnel catheter (or other vascular access) as necessary. The blood bank is notified to ensure that blood products are available. The pharmacy is called to ensure the availability of albumin and other IV, injectables, and blood is available for the patient. Draw up pre-labs.

b. Service period (includes pre, intra and post):

CA009 Greet patient, provide gowning, ensure appropriate medical records are available.

Patient is greeted by the apheresis/oncology nurse and provided with gown. The apheresis/oncology nurse ensures that patient is properly gowned for procedure. The apheresis/oncology nurse must review and ensure that appropriate medical records, charts, lab reports are available.

CA010 Obtain vital signs

The apheresis/oncology nurse obtains patient vital signs including weight, blood pressure, pulse, temperature, respiration rate, and oxygen saturation.

CA013 Prepare room, equipment and supplies

The apheresis/oncology nurse prepares room, ensuring that correct equipment and necessary supplies are available.

For 36516, the apheresis/oncology nurse prepares adsorption column in preparation for apheresis procedure - approximately 30 minutes plus an additional time for prep of additional equipment/supplies for column.

CA016 Prepare, set-up and start IV, initial positioning and monitoring of patient

The apheresis/oncology nurse inspects the catheter for integrity, sutures and signs of exit-site infection. Patient is properly positioned, and IVs is set up. Confirm education/obtain consent have been achieved.

CA021 Perform procedure/service---NOT directly related to physician work time

The apheresis/oncology nurse assists the physician in performing the procedures including.

- Contiguous assessment and monitoring by nurse who is involved during entire procedure,
- Monitor and change replacement fluids, and
- Monitor equipment

The apheresis/oncology nurse educates the patient on the effects of citrate, including numbness and tingling and advises the patient to notify the nurse if they are experiencing these symptoms.

**SPECIALTY SOCIETIES \_ AAFP, ASCO, ASH, ASTCT, CAP, ES  
PRESENTERS: Elizabeth Blanchard, MD, Chase Hendrickson, MD, Elizabeth Godbey, MD,  
Ronald McLawhon PhD MD, Roger McLendon, MD, Amar Kelkar MD**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The apheresis/oncology nurse must be at bedside the whole time and can only work with one patient at a time typically. The apheresis/oncology nurse will be active the whole time - checking flow rate, monitoring blood rate, talking with patient. Time determined by the specific patient case and is also limited by speed of the machine processing of the blood exchange.

CA022 Monitor patient following procedure/service, multitasking 1:4

At the conclusion of the procedure, patient is closely monitored. This includes checking tubes, monitors, drains, vital signs, and access management. The apheresis/oncology nurse cleans the catheter exit site, applies a sterile dressing and attaches two new catheter caps to the lumens.

CA024 Clean room/equipment by clinical staff

The procedure room is cleaned by physician staff apheresis/oncology nurse. This includes flushing lines, capping tubing, removing disposables from the machine, wiping down the machine with disinfectant and putting supplies back in cart, etc. The apheresis/oncology nurse restocks fluids and blood products. The machine is calibrated and if needed additional maintenance takes place.

CA027 Complete post-procedure diagnostic forms, lab and x-ray requisitions

Immediately after the procedure, nursing staff completes diagnostic forms and lab & X-ray requisitions. The apheresis/oncology nurse also completes documentation and reporting of procedure including plasma process and fluid balance. This information is captured on data flow sheets.

The apheresis/oncology nurse provides home care instructions. In addition, the apheresis/oncology nursing staff interacts directly and through telephone calls to coordinate future care, office visits, and ensures that patient has all the necessary prescriptions and educational material as necessary. The apheresis/oncology nurse ensures that all of the necessary quality assurance tasks are done. The apheresis/oncology nurse develops a patient coordination of care plan and may follow up with patient.

**c. Post-service period:**

Not applicable

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time:*

In reviewing the current clinical staff time assigned to these codes, the specialties noted that the clinical staff time in the intra-service of the service period is assigned to CA018, "Assist physician or other qualified healthcare professional---directly related to physician work time (100%)." We believe this assignment is in error, since the physician time in each case is less than the time assigned to CA018. We believe the times currently assigned to CA018 are more appropriately assigned to CA021, "Perform procedure/service---NOT directly related to physician work time," reflecting that the work of the apheresis nurse in the intra-service of service period is not directly related to the physician work time.

CA021 Perform procedure/service---NOT directly related to physician work time

The apheresis/oncology nurse assists the physician in performing the procedures including;

- Contiguous assessment and monitoring, typically by apheresis/oncology nurse who is involved during entire procedure,
- Monitor and change replacement fluids, and
- Monitor equipment

## NONFACILITY DIRECT PE INPUTS

CPT CODE(S):36514, 36516, 36522

SPECIALTY SOCIETIES \_ AAFP, ASCO, ASH, ASTCT, CAP, ES  
PRESENTERS: Elizabeth Blanchard, MD, Chase Hendrickson, MD, Elizabeth Godbey, MD,  
Ronald McLawhon PhD MD, Roger McLendon, MD, Amar Kelkar MD

### AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The apheresis/oncology nurse educates the patient on the effects of citrate, including numbness and tingling and advises the patient to notify them if they are experiencing these symptoms.

The apheresis/oncology nurse must be at bedside the whole time and can only work with one patient at a time typically. The apheresis/oncology nurse will be active the whole time - checking flow rate, monitoring blood rate, talking with patient. Time determined by the specific patient case and is also limited by speed of the machine processing of the blood exchange.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Not applicable

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

Not applicable

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

We are not proposing a new clinical labor type at this time as there is not a BLS labor category for an apheresis nurse and apheresis nurse wage survey data is not readily available. We are instead proposing to draw from the existing clinical labor types recognized by CMS. In this case, we are proposing to use the oncology nurse (RN/OCN) clinical labor type to recognize the work of an apheresis nurse. This crosswalk is supported and recommended by CMS in the CY 2024 PFS Final Rule. This crosswalk is also supported by the similar training and experience requirements for an apheresis nurse and an RN/OCN.

The American Society for Apheresis (ASFA) in partnership with the American Society for Clinical Pathology (ASCP) Board of Certification offers a Qualification in Apheresis (QIA). There are multiple pathways for obtaining a QIA, but the primary pathway is an RN, LPN, or LVN with U.S. state license, certificate, or diploma, and three years of full-time acceptable experience in apheresis or five years of part-time acceptable experience in apheresis within the last ten years. For QIA information see: <https://www.apheresis.org/general/custom.asp?page=QIA>.

To be an RN/OCN, a candidate must be an RN with a minimum of 2 years of experience, have a minimum of 2,000 hours (1 year) of adult oncology nursing practice within the past four years, and have completed a minimum of 10 contact hours of nursing continuing education in oncology or an academic elective in oncology nursing within the past three years.

## MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

**ADDITIONAL INFORMATION**

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The only change in the inputs that we are recommending, based on CMS' CY2024 PFS Final Rule comments, is to the clinical staff type, from an RN/LPN to RN/OCN.

We are correcting a line in the intra-service period where the time in the current inputs for CA0018 Assist physician or qualified healthcare professional – directly related to physician work time (100%), should actually be categorized as CA021 Perform procedures/service-NOT directly related to physician work time. The error was made when the clinical labor tasks were combined into their new categories after 2017. We are not recommending any changes in the amount of this time. We're only recommending that it be moved from CA018 to CA021, since that time is not directly related to physician work time.

**ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g. Equipment item EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the surgeon's office).

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*Site of Service Anomaly\**

January 2024

**Insertion of Tunneled Centrally Inserted Central Venous Catheter – Tab 12**

In April 2023, the Relativity Assessment Workgroup (RAW) identified CPT code 36558 via the site of service anomaly screen, for services with Medicare utilization over 10,000 in 2019-2021 that are typically performed in the inpatient hospital setting, yet only include a half discharge day management visit (99238). The RAW reviewed the action plan in September 2023, and agreed with the specialty societies that the entire family of services (36557-36566) be surveyed for the January 2024 RUC meeting. The specialty societies also requested changing the global period from a 010-day to a 000-day to account for variability in site of service based on the patient presentation and specialty performing the procedure.

However, when the specialty societies were preparing to survey the services, they determined they could not proceed and instead requested to revise the codes through the CPT process prior to surveying. The specialty societies noted that the ages listed within some of the current code descriptors do not accurately reflect the variation of physician work (e.g., babies versus infants versus children versus adults). Additionally, some of the code descriptors are antiquated and include outdated practices and techniques technology that no longer exist or are incorrectly described, which may cause incorrect reporting. For example, patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. Finding an access location in a patient in which access issues have become harder, takes more time, includes more risk, and potentially requires additional interventions.

**The RUC recommends that CPT codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 be referred to the May 2024 CPT Editorial Panel meeting for revision.**

December 12, 2023

Ezequiel Silva III, MD  
Chair, AMA/Specialty Society RVS Update Committee  
American Medical Association  
330 N. Wabash Avenue, Suite 39300  
Chicago, IL 60611

**Subject:** Tab 12, Insertion of Tunneled Centrally Inserted Central Venous Catheter (36557, 36558, 36560, 36561, 36563, 36565, 36566)

Dear Dr. Silva:

At the September 2023 RUC meeting, the Relativity Assessment Workgroup reviewed and approved an action plan regarding code 36558 as potentially misvalued due to a site of service anomaly. The Action Plan was submitted by the Society of Interventional Radiology (SIR), American College of Radiology (ACR), American College of Surgeons (ACS), American Pediatric Surgical Association (APSA), Outpatient Endovascular and Interventional Society (OEIS), Renal Physicians Association, and Society for Vascular Surgery (SVS), and proposed to survey codes 36557, 36558, 36560, 36561, 36563, 36565, and 36566 with a change from a 10-day to 0-day global period.

Following the RUC meeting, the seven codes were added to the RUC survey level of interest form for presentation to the RUC at the January 2024 meeting. The following societies expressed an interest in one or more codes: ACR, ACS (36557, 36558, 36560, 36561, 36563, 36565), APSA (36557, 36558, 36560, 36561), OEIS, SIR, and SVS.

The level of interest form and any requests to the Research Subcommittee for revised vignettes were due on the same date (10/4/2023), only five days after the conclusion of the September RUC meeting. It was during these five days that societies began more thoroughly reviewing the current vignettes for the entire family in preparation for survey. In many emails, each society provided suggestions for revision with the intent to move forward with a survey. After multiple email discussions and a conference call between the society advisors and staff, it was determined we could not proceed with the scheduled survey of these codes and instead propose to revise the codes through the CPT process prior to survey.

In support of this request, we have identified the following issues that need to be addressed:

1. The ages listed within some of the current code descriptors do not accurately reflect the different amount of physician work; the work required for premature babies versus infants versus children versus adults varies greatly.
2. Some of the code descriptors are antiquated and include technology that no longer exists or is incorrectly described.
3. Utilization for several codes has declined and/or may represent incorrect coding because of poorly worded descriptors.
4. Patients are receiving central lines at multiple points in time with no way to accurately and appropriately capture work based on the current code family structure. For example, finding a

new access location in a patient in which access issues have become harder, take more time, include more risk, and potentially require additional interventions.

Given the numerous issues with this set of codes, we have not conducted a survey and recommend referral of these codes to the CPT Editorial Panel.

Thank you for your consideration of this request. The RUC advisors for the undersigned societies will be happy to respond to questions at the January 2024 RUC meeting.

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS Request – Final Rule for 2024\**

January 2024

**Insertion of Cervical Dilator – Tab 13**

In the Medicare Physician Payment Schedule (MFS) Final Rule for CY 2024, CMS received a public nomination that the physician work and practice expense supply inputs for CPT code 59200 are not aligned with what is typically required to provide this service. CMS agreed with commenters that CPT code 59200 is a potentially misvalued service and warrants a comprehensive review since the code has not been reviewed in 20 years and the current typical practice of this code has evolved since then. CMS believed that CPT code 59200 could benefit from a review of its supply, equipment, and clinical labor items in addition to physician work RVUs and physician work times. Therefore, based on the information provided by commenters regarding the outdated nature of the code and supply input pricing, CMS finalized CPT code 59200 as potentially misvalued for CY 2024. The RUC reviewed the work and practice expense inputs for this service at the January 2024 meeting to allow CMS to consider these recommendations in the Proposed Rule for 2025.

**Compelling Evidence**

The specialty societies presented compelling evidence to support a change in physician work for the insertion of a cervical dilator based on a change in knowledge/technology. Studies have found that there was a significant improvement in maternal and fetal outcomes with elective induction of labor at 39 weeks over expectant management with induction of labor at 41 weeks if no spontaneous labor occurred. The impact of these findings has changed the counseling and management of pregnant women. Prior to this, it was thought that induction of labor (IOL) resulted in more cesarean deliveries and a higher risk of obstetrical comorbidities. In 1990, the induction rate was 9.6% but now stands at 32% and is even higher for first-time pregnancies. With this increase in IOL, most notably being manual dilation of the cervix (ie, cervical ripening), the procedure has moved from the hospital to the outpatient setting prior to admission. Given that several studies demonstrate the effectiveness of outpatient cervical ripening, regardless of method (ie, mechanical or pharmaceutical), the specialty society recommends that this change in patient population has changed the physician work and method in which this service is delivered. **The RUC accepted compelling evidence based on a change in knowledge/technology.**

**59200 Insertion of cervical dilator (eg, laminaria, prostaglandin) (separate procedure)**

The RUC reviewed the survey results from 291 obstetricians and gynecologists and recommends a work RVU of 1.20 based on the survey 25<sup>th</sup> percentile, which maintains relativity within the MFS. The RUC recommends 7 minutes of pre-service evaluation time, 3 minutes positioning time, 1 minute scrub/dress/wait time, 9 minutes intra-service time and 5 minutes immediate post-service time, equaling 25 minutes total time. The majority (68%) of survey respondents agreed that the typical patient for this service is gravida 1 (G1) at 39 weeks gestation who presents for induction of labor, and an insertion of a cervical dilator is performed. A quarter of survey respondents indicated that the typical patient would represent a patient presenting for dilation and evacuation (D&E). The specialties clarified, and the RUC agreed, that for both of these vignettes the procedure is identical and requires the same physician work although the description of the patient may differ.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

For this service, once the patient is in dorsal lithotomy position and draped, a sterile speculum is placed and positioned until the cervix is fully visualized. The cervix is then cleaned with sterile solution and a ring forceps is used to stabilize and manipulate the cervix. The dilator(s) are then carefully placed into and through the cervix such that the entire cervical length is affected, and the dilator is secured into place. Hemostasis is observed and the speculum is removed.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 58100 *Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method (separate procedure)* (work RVU = 1.21, 10 minutes intra-service, and 25 minutes total time) and 11981 *Insertion, drug-delivery implant (ie, bioresorbable, biodegradable, non-biodegradable)* (work RVU = 1.14, 5 minutes intra-service, and 30 minutes total time). The key reference services appropriately bracket the surveyed code work RVU given that the intra-service time is similar to code 58100 and higher than code 11981. Specifically, code 58100 is an excellent comparator given that the physician work is similar to the surveyed code with the procedure being the same except for the pipel and tissue being removed instead of the dilators remaining in place. Therefore, the RUC recommended value supports relativity when compared to similar services.

For additional support, the RUC compared the surveyed code to MPC code 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, 15 minutes intra-service, and 27 minutes total time). The intra-service time and total time are slightly lower when compared to the MPC code, therefore supporting the RUC recommended work RVU value of 1.20. **The RUC recommends a work RVU of 1.20 for CPT code 59200.**

### Practice Expense

The Practice Expense (PE) Subcommittee discussed and accepted compelling evidence based on:

1. Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in the clinical staff time, supplies and equipment due to physician time; and
2. Evidence that there has been a change in equipment or practice expense cost.

For the first compelling evidence argument, the PE Subcommittee agreed with the increase in intra-service time and subsequent increase in physician time and noted that it is the current standard of care to have clinical staff assisting with the procedure 100% of the time for vaginal procedures. For the second argument, the RUC survey instrument included questions regarding the typical cervical dilator type and typical number of dilators used in the non-facility setting. The survey results indicated that the typical dilator type remains laminaria, however, the typical number of dilators used was reported as 5 instead of the current number of 3 dilators.

The PE Subcommittee reviewed the direct practice expense inputs and made one modification to increase CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient* from the standard of 2 minutes to 5 minutes as the patient needs to be in the dorsal lithotomy position. The PE Subcommittee acknowledged the existing supply input SA051 *pack, pelvic exam* which is priced at \$20.16 yet the sum of its four components totals \$2.81. The RUC continues to call on CMS to initiate correction of the packs pricing such that the sum of the individual components matches the price of the corresponding pack. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS  
SUMMARY OF RECOMMENDATION**

CPT Code: 59200	Tracking Number	Original Specialty Recommended RVU: <b>1.20</b>
Global Period: 000	Current Work RVU: <b>0.79</b>	Presented Recommended RVU: <b>1.20</b>
		RUC Recommended RVU: <b>1.20</b>

CPT Descriptor: Insertion of cervical dilator (eg, laminaria, prostaglandin) (separate procedure)

**CLINICAL DESCRIPTION OF SERVICE:**

Vignette Used in Survey: A 36-year-old gravida 1 (G1) at 39 weeks gestation presents for induction of labor. Insertion of cervical dilator(s) is performed.

Percentage of Survey Respondents who found Vignette to be Typical: 68%

**Site of Service (Complete for 010 and 090 Globals Only)**

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: History and physical is reviewed and updated. Relevant admission labs are reviewed and verified. The procedure is described in detail with associated risks and benefits and informed consent is obtained. Once completed, the patient is placed in dorsal lithotomy position.

Description of Intra-Service Work: Once the patient is positioned and draped, a sterile speculum is placed and positioned until the cervix is fully visualized. The cervix is then cleaned with sterile solution. A ring forceps is used to stabilize and manipulate the cervix. The dilator(s) are then carefully placed into and through the cervix such that the entire cervical length is affected. The dilator(s) are secured into place. Hemostasis is observed and the speculum is removed.

Description of Post-Service Work: The patient is assessed for initial stability and counseled on post-procedure signs and symptoms for immediate evaluation. The procedure note is completed.

**Additional Rationale and Comments**

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

*The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC’s rationale, please review the separate RUC recommendation document.*

**Background**

CPT code 59200 was included on the RUC’s CMS Final Rule Level of Interest (LOI) form. The code will be reviewed for work and practice expense inputs at the January 2024 meeting. In the Final Rule for 2024, CMS received a public nomination that CPT code 59200 supply inputs and prices are not applicable for what is required to provide this service currently. CMS agreed with commenters that CPT code 59200 is a potentially misvalued service since the code has not been reviewed in 20 years and the current typical practice of this code has likely evolved since then, warranting a

comprehensive review. CMS believes that CPT code 59200 could benefit from a review of its supply, equipment, and clinical labor items, plus physician work RVUs and physician work times. Therefore, based on the information provided by commenters regarding the outdated nature of the code and supply input pricing, CMS finalized CPT code 59200 as potentially misvalued for CY 2024.

### **Compelling Evidence**

The specialty society is presenting a compelling evidence argument because they believe the existing value is no longer appropriate for CPT code 59200. The specialty believes documentation in the peer-reviewed medical literature demonstrates that there have been changes knowledge.

In 2018, the ARRIVE trial was published. This trial reported that there was a significant improvement in maternal and fetal outcomes with elective induction of labor at 39 weeks over expectant management with induction of labor at 41 weeks if no spontaneous labor. The impact of this research finding has changed the counseling and management of pregnant women. Prior to this, the theory was that induction of labor resulted in more cesarean deliveries at a higher cost to the mother and the baby. The changes to pregnancy care have been swift. In 1990, the induction rate was 9.6%. It now stands at 32% and even higher for first time pregnancies.<sup>1</sup>

However, induction of labor, especially in first time mothers requires cervical ripening. The ARRIVE trial found that the elective IOL at 39 weeks resulted in the time on labor and delivery increasing from 14 hours to 20 hours.<sup>2</sup>

This extra time burden was lessened by the overall improvement in maternal and fetal outcomes, but the desire to find a safe and effective method of outpatient cervical ripening was necessary. The manual dilation (and ripening) of the term cervix for induction of labor via foley balloon catheter, cervical ripening balloons, prostaglandins and/or laminaria has traditionally been done in the hospital. The ripening is typically done on the labor and delivery unit so that continuous monitoring of the fetus can be performed.

The traditional method of placing cervical dilating balloons in the office is hampered by the patient going home with a catheter or tubing of some sort hanging from the vagina. Hygroscopic cervical dilators in women who are not at term have been used for some time, and their use in term pregnancies for in-house cervical dilation was already being studied when the ARRIVE trial was published.

Synthetic hygroscopic cervical dilators were first approved by the FDA in 2015. With the publication of the ARRIVE trial, several trials of the safe outpatient use were started. The use was found to have similar effectiveness as well as risks and benefits to the cervical balloon devices. In addition, these devices do not stimulate contractions directly as oral and vaginal prostaglandin agents do.<sup>3</sup>

Several meta-analyses have shown the overall safety of any cervical ripening agent used in the outpatient setting, thus more and more practices are shifting cervical ripening to the office.<sup>4</sup> As evidenced by the publication dates (since 2018) and the overall lack of research even looking at outpatient cervical ripening prior to the Harvard values show this is all new information.

Who is not a good candidate for outpatient cervical ripening? Those without reliable transportation, those who have some other high risk condition requiring more intense fetal monitoring such as diabetes, hypertensive disorder of pregnancy, abnormal placentation, those with a limited medical knowledge and those who have multiple socioeconomic circumstances that make it safer for them to be in the hospital during cervical ripening/dilation. As this describes the typical Medicaid patient, most of the patients in the database for Medicaid and Medicare, would not be eligible for outpatient cervical ripening.

In conclusion, the specialties are asking for compelling evidence based on new knowledge/information with the FDA approval of synthetic laminaria in 2015 and the ARRIVE trial published in 2018 leading to significant practice change. All of which has occurred since the Harvard valuing of this code.

### **Typical Vignette**

The RUC survey data indicated that:

- 68% of the survey respondents agreed that the surveyed vignette was typical;
- 25% of the survey respondents stated their typical patient for CPT code 59200 was for dilation and evacuation (D&E); and

- 7% of the survey respondents indicated that their typical patient for CPT code 59200 was for a different gestational age, cancer, stenosis, etc.

### **Time**

CPT code 59200 is typically performed on a non-Medicare population. The current RUC database reported 192 claims for the Medicare population. Of those 192, the typical site of service is the office. As such, the specialty society is recommending pre time package 5 (procedure with minimal anesthesia care). The specialty society is recommending the survey positioning time of 3 minutes, to account for dorsal lithotomy positioning. The specialty society is recommending 1 minute for SDW for this procedure.

### **SERVICES REPORTED WITH MULTIPLE CPT CODES**

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

### **FREQUENCY INFORMATION**

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 59200

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty OBSTETRICS/GYNECOLOGY

How often? Commonly

Specialty

How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1191588

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The specialty society referenced the CDC data to estimate the approximate number of dilation insertions placed annually. Abortions that use cervical dilation (ie, surgical abortion) (2021 CDC numbers): 203,548. Live-births that required Induction of Labor (2021 CDC numbers): 1,176,238 (32.1% of all live births in 2021). Induction of Labor that requires cervical ripening (AHRQ): 988,040 (84% as reported by AHRQ).  
203,548+988,040=1,191,588

Specialty OBSTETRICS/GYNECOLOGY	Frequency 1086100	Percentage 91.14 %
---------------------------------	-------------------	--------------------

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Specialty	Frequency	Percentage	%
-----------	-----------	------------	---

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 192

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Current RUC database

Specialty OBSTETRICS/GYNECOLOGY	Frequency 175	Percentage 91.14 %
---------------------------------	---------------	--------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Specialty	Frequency 0	Percentage 0.00 %
-----------	-------------	-------------------

Do many physicians perform this service across the United States? Yes

### Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Procedures

BETOS Sub-classification:

Minor procedure

BETOS Sub-classification Level II:

Other

### Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 59200

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S):** 59200  
**SPECIALTY SOCIETY(IES):** ACOG  
**PRESENTER(S):** Jon Hathaway, MD, PhD & Eilean Attwood, MD, MPH

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

**Meeting Date: January 2024**

<b>CPT Code</b>	<b>Long Descriptor</b>	<b>Global Period</b>
59200	Insertion of cervical dilator (eg, laminaria, prostaglandin) (separate procedure)	'000

**Vignette(s)** (*vignette required even if PE only code(s)*):

<b>CPT Code</b>	<b>Vignette</b>
59200	A 36-year-old gravida 1 (G1) at 39 weeks gestation presents for induction of labor. Insertion of cervical dilator(s) is performed.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

ACOG convened a panel that included physician who perform the procedure. The panel developed the direct practice expense recommendations for CPT Code 59200 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The specialty included the direct practice expense inputs on the PE spreadsheet for CPT Code 59200.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

The specialty does not believe CPT code 59200 is typically reported with an E/M service. The utilization for CPT code 59200 is too low in the RUC database to display billed together data.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

The current version of the RUC database shows OB/GYN as the dominant provider for global reporting of 59200 (92%). The utilization for CPT code 59200 is too low (N=90) in the RUC database to display the dominant provider in the NF setting. The specialty believes OB/GYN would be the dominant provider in the NF setting as well.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

**NONFACILITY DIRECT PE INPUTS**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The specialty society is recommending an increase over the aggregate current cost from \$73.29 to \$80.65. The specialty society believes the following practice expense compelling evidence criterion have been met:

- (1) Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in the clinical staff time, supplies and equipment due to physician time; and
- (2) Evidence that there has been a change in equipment or practice expense cost.

Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in the clinical staff time, supplies and equipment due to physician time.

The specialty society conducted a RUC survey (reliable data source). The specialty society is recommending an increase in physician intra time, which results in an increase in clinical staff time. The PE recommendations for intra time also increase, not just due to the 3 min increase in median physician intra time but also because the PE recommendations include a change from 67% of physician time to 100% physician time. It is current standard of care to have clinical staff assisting with the procedure 100% of the time for vaginal procedures.

Evidence that there has been a change in equipment or practice expense cost.

The specialty society included questions on the RUC survey related to practice expense. Survey respondents were asked to provide the (1) typical cervical dilator type used in the NF setting, as well as the (2) typical number of dilators used in the NF setting. The survey results indicated that the typical dilator type remains laminaria, however, the typical number of dilators used was reported as 5 (not 3, which is currently in the RUC database).

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

**CLINICAL STAFF ACTIVITIES**

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S):** 59200

**SPECIALTY SOCIETY(IES):** ACOG

**PRESENTER(S):** Jon Hathaway, MD, PhD & Eilean Attwood, MD, MPH

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

The NF 90 day PE standard for CA004 *Provide pre-service education/obtain consent* is 10 minutes. CPT code 59200 is a '000 global period service. The specialty is recommending 3 minutes for CA004 for the clinical staff to call the patient and review all pre-procedure education and confirm informed consent if completed prior to date of service. The clinical staff will answer questions related to the insertion of dilators (i.e. bleeding, labor progression, pain, when to call provider, when to present to hospital, etc).

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

CPT Code 59200 was originally allocated 3 minutes for *obtain vital signs*. CPT code 59200 currently has 5 minutes allocated for *obtain vital signs*. The following vital signs are taken for 59200: BP, weight, pulse, respiratory.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

The clinical staff will call the patient and review all pre-procedure education and confirm informed consent if completed prior to date of service. The clinical staff will answer questions related to the insertion of dilators (i.e. bleeding, labor progression, pain, when to call provider, when to present to hospital, etc).

b. Service period (includes pre, intra and post):

On the date of service the clinical staff will prepare the procedure room prior to patient entry. When the patient arrive staff will greet and provide patient with gown and room location. Initial vital signs are obtained, education and consent are reviewed. Staff assist in patient positioning prior to procedure start. One staff member is hip-to-hip with the physician throughout the procedure. Immediately following the procedure, the primary staff member remains in the procedure room with the patient for immediate post-procedure observation. Once the patient is out of lithotomy, clinical staff take post-procedural vital signs, provide post procedure education, and clean the room/equipment.

c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

**NONFACILITY DIRECT PE INPUTS**

**CPT CODE(S):** 59200

**PRESENTER(S):** Jon Hathaway, MD, PhD & Eilean Attwood, MD, MPH

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

For the intra-service period, a clinical staff is in the room with the provider throughout the entire intra-service time. During this time the staff initially aids in positioning of the patient, then provides assistance with and handling of sterile equipment. These activities include speculum placement, instruments required for cleaning of the cervix and passing of the dilator(s). Clinical staff will provide additional instrumentation to assist in bleeding control as needed until hemostasis is confirmed and vaginal speculum is removed.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

Our intra-service (of service period) is equal to 100% of the recommended physician work time.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

**MEDICAL SUPPLIES & EQUIPMENT/INVOICES**

15.  Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16.  Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4<sup>th</sup> worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? **Yes** or No.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

SA048 pack, minimum multi-specialty visit  
SA051 pack, pelvic exam

*\*Both packs are established packs as defined by CMS*

N/A

**ADDITIONAL INFORMATION**

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

**Background**

CPT code 59200 was included on the RUC’s CMS Final Rule Level of Interest (LOI) form. The code will be reviewed for work and practice expense inputs at the January 2024 meeting. In the Final Rule for 2024, CMS received a public nomination that CPT code 59200 supply inputs and prices are not applicable for what is required to provide this service currently. CMS agreed with commenters that CPT code 59200 is a potentially misvalued service since the code has not been reviewed in 20 years and the current typical practice of this code has likely evolved since then, warranting a comprehensive review. CMS believes that CPT code 59200 could benefit from a review of its supply, equipment, and clinical labor items, plus physician work RVUs and physician work times. Therefore, based on the information provided by commenters regarding the outdated nature of the code and supply input pricing, CMS finalized CPT code 59200 as potentially misvalued for CY 2024.

**Product Type and Quantity**

The specialty society included questions on the RUC survey related to practice expense. Survey respondents were asked to provide the (1) typical cervical dilator type used in the NF setting, as well as the (2) typical number of dilators used in the NF setting.

The specialty society recommendations were based on the survey responses. Of the 291 completed RUC surveys, 140 survey respondents said they performed CPT code 59200 in the NF setting. Of those 140 survey respondents, laminaria dilators were typical. For the survey responses that indicated laminaria dilators were typical, the average (4) and median (4.5) were calculated. *\*Note: When a survey respondent provided a range, the midpoint was used for calculation purposes.*

SA051 Pricing

Excerpt from the June 2023 PE Packs Workgroup Report:

*At the April 2023 meeting, the PE Subcommittee formed a workgroup to review the content of the packs to assess if they are still typical and revise as necessary. This was a result of discrepancies found with the packs pricing at the January 2023 RUC meeting. The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. One would expect the pack price to be identical to the total cost of its individual contents. The price of the individual components should be consistent across the supply packs and match the standalone prices of supplies. However, the RUC noted a discrepancy with the SA051 pack, pelvic exam while reviewing CPT code 9X036 Pelvic exam (List separately in addition to code for primary procedure). The SA051 pack is priced at \$20.16 while the four individual items therein total \$2.81 according to the 2023 CMS Direct PE Inputs Medical Supplies Listing. The RUC shared the deconstructed packs document and volume analysis with CMS as part of its May 2023 RUC recommendations stating, "The RUC strongly recommends that CMS resolve these pricing discrepancies in the supply packs during CY2024 rulemaking."*

CMS did not address the RUC's supply pack recommendations in CY2024 rulemaking.

EF031 Time

The original January 2003 PE recommendations included 22 minutes of time for the power table. The CMS practice expense direct input files include 67 minutes for *EF031 table, power*. The 2005 CMS data file include 67 minutes on the power table, with no explanation in the regulatory text for the discrepancy.

Total \$\$ Clinical Time

The total dollar amount on the current PE spreadsheet varies slightly from the RUC database. The clinical labor rates on the PE spreadsheet are based on the CY2024 rates and the RUC database still has the CY2023 clinical labor rates.

**ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)**

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. Please provide a list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below with brief justification for the modification (e.g.

Subject: HCPAC Review Board Recommendations

Dear Administrator Brooks-LaSure:

The RUC Health Care Professionals Advisory Committee (HCPAC) Review Board submits the enclosed recommendation to the Centers for Medicare and Medicaid Services (CMS). At the January 18, 2024 meeting, the following issue was reviewed by the HCPAC:

- Physical Medicine and Rehabilitation (PE Only) (97012, 97014, 97016, 97018, 97022, 97032, 97033, 97034, 97035, 97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542, G0283)

The RUC and HCPAC are fully committed to this ongoing effort to improve relativity in the work, practice expense, and professional liability insurance values. The HCPAC appreciates the opportunity to provide recommendations related to the 2025 Medicare Physician Payment Schedule. If you have any questions regarding this submission, please contact Katlyn Palmer (ph: 312-464-5576; email: [Katlyn.Palmer@ama-assn.org](mailto:Katlyn.Palmer@ama-assn.org)) at the AMA for clarification regarding these recommendations.

Sincerely,

Peter Hollmann, MD  
HCPAC Chair

Richard Rausch, DPT, MBA  
HCPAC Co-Chair

AMA/Specialty Society RVS Update Committee Summary of Recommendations  
*\*CMS Request – Final Rule for 2024\**

January 2024

**Physical Medicine and Rehabilitation (PE Only)**

In February 2017, the RUC HCPAC Review Board submitted recommendations for 19 Physical Medicine and Rehabilitation codes. At the time, the RUC HCPAC considered the typical number of services reported per session, which was 3.5 units based on CMS data, to ensure there was no duplication in the standard inputs for pre and post time. Based on 2022 Medicare data, a mean value of 3.5 codes are reported per session, which is consistent with the 2017 review, and was used to re-review the RUC HCPAC recommendations for this code family. Therefore, the RUC placed the nominated therapy codes on the CMS / Relativity Assessment Workgroup level of interest to review the practice expense inputs at the January 2024 RUC HCPAC meeting.

**Compelling Evidence**

In the Notice of Proposed Rulemaking for 2024, CMS received public nominations on 19 therapy codes as potentially misvalued. An interested party asserted that the direct PE clinical labor minutes, as recommended by RUC HCPAC, reflected inappropriate multiple procedure payment reductions (MPPR), which are duplicative of the CMS MPPR policy implemented in CMS' claims processing systems. CMS reviewed the clinical labor time entries for these 19 therapy codes noting that they did not believe a payment reduction should have been applied in some instances to the 19 nominated therapy codes' clinical labor time entries since the payment valuation reduction would be duplicative of the MPPR applied during claims processing. CMS indicated that the valuation of these services would benefit from additional review through the AMA RUC HCPAC valuation process. **The Practice Expense Subcommittee and HCPAC Review Board accepted compelling evidence that incorrect assumptions may have been made during the previous valuation of these services.**

**Modalities**

For each modality service, the PT/OT Aide greets the patient, provides and, if needed assists with appropriate gowning, and draping for the performance of the procedure. The Aide procures and sets up any necessary space, equipment, and supplies for the procedure. Further, the Aide will prepare and position the patient in preparation for the procedure and provide any additional physical assistance. During the procedure, the Aide will assist the Therapist with supplies and at the end of the procedure the Aide will clean all equipment and dispose of supplies. The modality services CPT codes are always reported with other services that also include clinical labor time for several of the same clinical activities. Therefore, the PE Subcommittee and the HCPAC accounted for the typical number of codes reported on a claim and the impact of the therapy MPPR on applicable clinical activities as follows.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

*Supervised (97012-97022, G0283)*

For the following inputs, the professional organizations and HCPAC agreed that 1.33 minutes is appropriate:

- CA009 *Greet patient, provide gowning, ensure appropriate medical records are available*
- CA013 *Prepare room, equipment and supplies*
- CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient*
- CA024 *Clean room/equipment by clinical staff*

CA010 and CA035 are not applicable to the supervised modalities.

Further, in this circumstance, the MPPR would be applied to avoid overlapping minutes but ensure correct valuation depending on a given session scenario where the typical 3.5 codes are reported. To account for the MPPR, it was determined that 3.5 codes are billed per session and the first is paid at 100% and the second and subsequent units get paid at half and so forth for practice expense (eg,  $1.00+0.5+0.5+0.25 = 2.25$ ). For example, since the standard of clinical staff time for greeting the patient, etc. is 3 minutes, it would be appropriate to take the 3 minutes and divide it by 2.25 which would equal 1.33. Therefore,  $1.33+0.67+0.67+0.34 = 3$  minutes. Further, for the three most common therapy sessions, shown in the table below, the total number of minutes for clinical staff activities, such as greet the patient, would be approximately 3 minutes for CPT codes 97012, 97014/G0283, 97016, 97018, and 97022 when billed with a therapy code. However, for CPT code 97022, the professional organizations and HCPAC agreed that 8 minutes is necessary to clean the entirety of the whirlpool after each patient use.

<b>% of Medicare Claims (CY 2022)</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>Number of CPT/HCPCS Codes on Claim</b>
10%	97110	97110	97140		3
8%	97110	97110	97112	97140	4
8%	97110	97110	97112	97530	4

*\*Please see the full table in the attachments labeled Appendix A.*

The professional organizations and HCPAC agreed that the 2 minutes for the PT Aide for CA020 *Assist physician or other qualified healthcare professional—directly related to physician work time (other%)* instead of CA021 *Perform procedure/service—NOT directly related to physician work time* is appropriate for CPT codes 97012, 97014/G0283, 97016, 97018, and 97022.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

The professional organizations and HCPAC agreed on the existing medical supplies for CPT codes 97012, 97014/G0283, 97016, 97018, and 97022. However, the equipment inputs for each supervised modality code were revised by the HCPAC to be consistent with the intra-service time or the default formula, whichever was higher, to appropriately account for the actual time utilizing the given equipment. For the modalities, the HCPAC determined that in some instances the default formula did not provide enough equipment minutes to ensure the totality of the time the patient spends using the equipment when typically, only 1 modality is reported in a session and there is no overlap in use of the equipment for these services. However, for CPT code 97022, the professional organizations and HCPAC agreed that the equipment minutes should reflect the intra-service time and cleaning time, totaling 20 minutes, since the whirlpool is in use by a single patient for the service and while clinical staff sanitize and clean the whirlpool after use.

**The HCPAC recommends the direct practice expense inputs for CPT codes 97012, 97014, 97016, 97018, 97022 and HCPCS code G0283 as modified by the Practice Expense Subcommittee and HCPAC.**

*Constant Attendance (97032-97035)*

For the following inputs, the professional organizations and HCPAC agreed that 1.33 minutes is appropriate:

- CA009 *Greet patient, provide gowning, ensure appropriate medical records are available*
- CA013 *Prepare room, equipment and supplies*
- CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient*
- CA024 *Clean room/equipment by clinical staff*

CA010 and CA035 are not applicable to the constant attendance modalities.

To account for the MPPR, and given that 3.5 codes are typically billed per session, 1.33 minutes is appropriate for CPT codes 97032, 97033, 97034, and 97035 when billed in any given session. For example, since the standard of clinical staff time for greeting the patient, etc. is 3 minutes, it would be appropriate to take the 3 minutes and divide it by 2.25 which would equal 1.33. Therefore,  $1.33+0.67+0.67+0.34 = 3$  minutes.

For CA029 *Check dressings, catheters, wounds* the professional organizations and HCPAC agreed that 1 minute is appropriate for CPT codes 97033 and 97035 which is consistent with the current and standard input and necessary to assess the integrity of the skin.

The professional organizations and HCPAC agreed on the existing medical supplies for CPT codes 97032, 97033, 97034, and 97035. However, the equipment inputs for each constant attendance modality code were revised by the HCPAC to be consistent with the intra-service time or the default formula, whichever was higher, to appropriately account for the actual time utilizing the given equipment. For the modalities, the HCPAC determined that in some instances the default formula did not provide enough equipment minutes to ensure the totality of the time the patient spends using the equipment when typically, only 1 modality is reported in a session and there is no overlap in use of the equipment for these services.

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code s=Revised code :=Add-on code H=Modifier 51 exempt \*=Telemedicine X=Audio-only ~=FDA approval pending #=Resequenced code

**The HCPAC recommends the direct practice expense inputs for CPT codes 97032, 97033, 97034, and 97035 as modified by the Practice Expense Subcommittee and HCPAC.**

**Therapeutic Procedures (97110-97140) & Activities of Daily Living (ADL) (97530-97542)**

During the Therapeutic Procedures, the PT/OT Assistant often assists the clinician with obtaining and recording measures. This may include recording performance data, physical facilitation with the patient, grading challenges in environment, and other clinical assistance throughout the session. An Assistant provides the clinically appropriate support for the patient as the therapist facilitates the performance in therapeutic exercise, neuromuscular re-education, gait training, aquatic therapy, manual therapy, therapeutic activities, and wheelchair management. The PT/OT Aide assists with re-positioning the patient, adjusting equipment throughout the procedure, cleaning equipment and surfaces as well as providing physical assistance as needed. The PE Subcommittee and the HCPAC accounted for the typical number of codes reported on a claim and the impact of the therapy MPPR on applicable clinical activities as follows.

For the following inputs, the professional organizations and HCPAC agreed that 1.33 minutes is appropriate:

- CA009 *Greet patient, provide gowning, ensure appropriate medical records are available*
- CA010 *Obtain vital signs*
- CA013 *Prepare room, equipment and supplies*
- CA016 *Prepare, set-up and start IV, initial positioning and monitoring of patient*
- CA024 *Clean room/equipment by clinical staff*
- CA035 *Review home care instructions, coordinate visits/prescriptions*

To account for the MPPR, and given that 3.5 codes are billed per session, 1.33 minutes is appropriate for CPT codes CPT codes 97110, 97112, 97116, 97140, 97530, 97533, 97535, 97537, and 97542 when billed in any given session. For example, since the standard of clinical staff time for greeting the patient, etc. is 3 minutes, it would be appropriate to take the 3 minutes and divide it by 2.25 which would equal 1.33. Therefore,  $1.33+0.67+0.67+0.34 = 3$  minutes. Further, for CA010 the professional organizations stated that it is typical for 1-3 vital signs to be recorded during a single therapeutic service.

For CPT code 97113, which is typically reported on the claim with a median of 3 units and not typically reported with other therapy or modality codes, it was determined that 1.5 minutes was appropriate for CA009, CA010, CA016, and CA035 to conduct aquatic therapy. Further, it was determined that 4 minutes is appropriate for CA013 to appropriately prepare the aquatic therapy pool and aquatic exercise kit and 6 minutes for CA024 to clean the aquatic therapy pool and aquatic exercise kit, respectively. For CA018 *Assist physician or other qualified healthcare professional—directly related to physician work time (100%)* 15 minutes is necessary as there must always be two individuals in the pool with the patient for the entire procedure for CPT code 97113.

The professional organizations and HCPAC agreed that 2.5 minutes for the PT Assistant and 5 minutes for the PT Aide for CA020 *Assist physician or other qualified healthcare professional—directly related to physician work time (other%)* instead of CA021 *Perform*

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

I=New code   s=Revised code   :=Add-on code   H=Modifier 51 exempt   \*=Telemedicine   X=Audio-only   ~=FDA approval pending   #=Resequenced code

*procedure/service—NOT directly related to physician work time* is appropriate for CPT codes 97110, 97112, 97116, and 97140. For CPT code 97113, 2 minutes of for the PT Aide for CA020 *Assist physician or other qualified healthcare professional—directly related to physician work time (other%)* instead of CA021 *Perform procedure/service—NOT directly related to physician work time* for both the PT Aide and PT Assistant.

The professional organizations and HCPAC agreed that 3.75 minutes for the PT Assistant and for the PT Aide, respectively, for CA020 *Assist physician or other qualified healthcare professional—directly related to physician work time (other%)* instead of CA021 *Perform procedure/service—NOT directly related to physician work time* is appropriate for CPT codes 97530 and 97542. Further, 7.5 minutes for the PT Assistant for CA020 *Assist physician or other qualified healthcare professional—directly related to physician work time (other%)* instead of CA021 *Perform procedure/service—NOT directly related to physician work time* is appropriate for CPT codes 97533, 97535, and 97537.

For CA029 *Check dressings, catheters, wounds* the professional organizations and HCPAC agreed that 1 minute is appropriate for CPT codes 97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, and 97542 which is consistent with the standard input. This is a reduction based on the current input of 1.5 minutes. Further, the recommended 1 minute is justified given that this time is spent checking the integrity of the skin for each separate procedure performed.

CA033 *Perform regulatory mandated quality assurance activity (service period)* is no longer standard practice for CPT code 97113 and therefore the recommendation of 0 minutes is appropriate.

The professional organizations and HCPAC agreed on the existing medical supply inputs for CPT codes 97113, 97140, 97530, 97533, 97535, 97537, and 97542. However, for CPT codes 97110, 97112, and 97116, it was agreed that 0.9 was appropriate for SJ056 *Thera-bands (6in width)* instead of the existing input. This is because 20 ft of Thera-bands are provided during a normal 10 visit treatment plan, which would equate to a proxy of 2 ft provided per visit. Therefore, 0.9 is appropriate to account for the MPPR reduction ( $0.9 + 0.45 + 0.45 + 0.225 = \sim 2$ ).

For CPT codes 97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, and 97542 the equipment inputs were confirmed by the HCPAC to be consistent with the default formula to appropriately account for the actual time utilizing the given equipment.

**The HCPAC recommends direct practice expense inputs for CPT codes 97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, and 97542 as modified by the Practice Expense Subcommittee and HCPAC.**

*CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.*

CPT Code	Vignette
97012	A patient presents with lumbar radiculopathy. Traction is applied.
97014/G0283	A patient presents with a sprain of the lateral ankle. Electrical stimulation is applied.
97016	A patient presents with a crush injury to the left hand. A vasopneumatic device is applied.
97018	A patient presents status post fracture dislocation of the proximal interphalangeal (PIP) joints of the index and middle fingers. A paraffin wrap is applied.
97022	A patient presents with a right Colles fracture and recent cast removal. Upper extremity whirlpool treatment is applied.
97032	A patient presents after a reconstruction procedure for patellofemoral dysfunction. Electrical stimulation is applied.
97033	A patient presents with non-resolving lateral epicondylitis. Iontophoresis is applied.
97034	A patient presents for conservative management of ongoing carpal tunnel symptoms. Contrast bath is applied.
97035	A patient presents with acute shoulder adhesive capsulitis. Ultrasound is applied.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflected changes in clinical labor consistent with current practice and the standard packages. These inputs were further refined by the individuals who perform these services. An expert panel has reviewed the inputs again and the recommendations have been confirmed based on their clinical experience. Based on a statement by the RUC that codes subject to MPPR should not be adjusted for overlapping inputs and CMS' findings that these codes should not have been subject to MPPR by the RUC, APTA and AOTA are resubmitting the 2017 recommendations for clinical labor consistent with the standard packages and/or expert panel recommendations.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- 2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

These codes are existing codes, therefore the expert panel used the current PE direct inputs as reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

- 3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

No

See the *Billed Together* tab in the RUC Database.

- 4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

97012	Physical Therapist	86.2%
97014	Physical Therapist	92.6% (Based on G0283 crosswalk for data)
97016	Physical Therapist	81.9%
97018	Occupational Therapist	65.6%
97022	Occupational Therapist	57.6%
97032	Physical Therapist	49.6%
97033	Physical Therapist	83.3%
97034	Physical Therapist	83.2%
97035	Physical Therapist	79.6%

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

- 5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

In the final rule CMS stated “As discussed in the proposed rule, we reviewed the clinical labor time entries for these 19 therapy codes. We noted that we did not believe a payment reduction should have been applied to the 19 nominated therapy codes' clinical labor time entries since the payment valuation reduction would be duplicative of the MPPR we apply during claims processing. We proposed to nominate these 19 codes as potentially misvalued for CY 2024, as we believed that the valuation of these services would benefit from additional review through the AMA RUC HCPAC valuation process. After consideration of the public comments for this issue, we are finalizing our proposal to consider the 19 therapy codes as potentially misvalued for CY 2024.”

There is no duplication in the clinical staff activities when multiple procedures are performed with the exception of greeting the patient. For all other clinical staff activities, they are performed for each procedure with no overlapping minutes. For example, supplies and equipment are procedure specific and are set up and cleaned for each procedure. Patient positioning is procedure specific and performed for each procedure. There is an increase

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

in clinical staff time to reflect the applicable standard package and/or expert panel recommendations. The increased times proposed directly reflect times identified in standardized packages set forth by the PE Subcommittee, which did not exist when these codes were first valued. AOTA and APTA believe that our respective therapies meet the standards prescribe by the PE subcommittee in these packages. Additionally, when the codes were last valued prior to 2017, they were not subject to MPPR. Both the RUC and CMS have stated that the PE Subcommittee would not consider overlapping inputs related to multiple units or multiple procedures for codes that are subject to MPPR. These codes have been subject to MPPR since 2011.

APTA and AOTA are requesting the PE Subcommittee accept the recommendations consistent with current practice and the standard package to include the following:

97012, 97014, 97016, 97018, 97022, 97032, 97033, 97034, and 97035 have the recommendation of 1.5 minutes for Greet patient, provide gowning, insure records are available consistent with the procedural codes.

97012, 97014, 97016, 97018, 97032, and 97035 have the recommendations consistent with the standard package for prepare room, equip, supplies of 2 minutes be accepted. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.

97012, 97014, 97016, 97018, 97032, 97033, 97034, 97035 have the recommendations consistent with the standard package for Prepare and position patient of 2 minutes be accepted. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.

97012, 97014, 97018, 97032 have the recommendations of 2 minutes for Clean room/equip by physician staff which is less than the standard package of 3 minutes accepted. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.

97034 have the recommendation of 3 minutes for clean room/equip by physician staff which is consistent with the standard package accepted.

All other recommendations are the same as the current values in the RUC data base.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

**CLINICAL STAFF ACTIVITIES**

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

There are no recommendations greater than the PE Subcommittee Standards.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0 since modalities are never provided as the only procedure.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

No clinical labor activities

b. Service period (includes pre, intra and post):

Aide greets patient, provides and, if needed assists with appropriate gowning, draping for performance of the procedure. The Aide procures and sets up any necessary space, equipment, and supplies for the procedure.. The aide will prepare and position the patient in preparation for the procedure and provide any additional physical assistance. During the procedure the aide will assist the therapist with supplies for 97012, 97014, 97016, 97018, and 97012. At the end of the procedure the aide will clean all equipment and dispose of supplies.

c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly*

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- 22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
  - a. If yes, please explain how the computer is used for this service(s).
  - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
  - c. Does the computer include code specific software that is typically used to provide the service(s)?

No

- 23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7<sup>th</sup> worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

Following the PE subcommittee meeting, it was determined that the inputs for equipment were too low using the standard formula, as this equipment is in use for the entire intraservice period and is not available for use by anyone else during any portion of that intraservice period. As all modality supervised codes are provided in 1 unit in a session and equipment is not shared, there is no duplication in equipment. It was therefore determined to apply the intraservice time as the equipment time for all equipment under each code to allow enough minutes required for time the equipment is used. Equipment formula “Other Formula” was therefore selected.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

***The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.***

Based on the discussion at the PE Subcommittee meeting, the following recommendations were finalized for clinical labor times in the pre and post service of the intra service period:

Modality supervised: 97012, 97014/G0283, 97016, 97018, 97022, have recommendation for 1.33 minutes for CA009 greet patient, CA013 prepare room/equipment/supplies, CA016 prepare patient/provide gowning, ensure records are available consistent with the procedural codes, CA 024 clean room/equipment/supplies. This time adjustment was made based on a Medicare claims data average of 3.5 procedures/units billed per therapy session; minutes were reduced from recommended values to 1.33 minutes to account for multiple procedures/units billed in a session. According to the PE subcommittee discussion, this reduction was necessary to address duplication in service activities when more than 1 procedure/unit is billed in a session. When 1.3 is multiplied by 3.5 units, the total minutes allotted for the total session are slightly below or at the standard package for procedure time for those clinical inputs. 97022, CA024, was maintained at 8 minutes to allow for cleaning of the whirlpool which is only used by one patient at a time and must be properly sanitized. MPPR will result in additional reductions with the total minutes significantly below the standard package.

For equipment on this tab, there were no changes in equipment type, however it was determined by the HCPAC that the inputs for equipment were too low using the standard formula, as this equipment is in use for the entire intraservice period and is not available for use by anyone else during any portion of that intraservice period. As all modality supervised codes are provided in 1 unit in a session and equipment is not shared, there is no duplication in equipment. It was therefore determined to apply the intraservice time as the equipment time for all equipment under each code 97012, 97014/G0283, 97016, 97018, 97022. This resulted in the following recommendations for equipment minutes for Modalities supervised:

97012 10 minutes for EQ241 traction system

97014/G0283 7.3 minutes for EF028 hi/lo table and EQ116 electrotherapy stimulator

97016 8.0 minutes for EF028 hi/lo table and EQ263 vasopneumatic compression system

97018 8.0 minutes for EQ200 parafin bath

97022 20.0 minutes for EF012 lift chair and EF036 whirlpool tank (includes cleaning)

MPPR will result in additional reductions with the total minutes significantly below the standard package.

Modality constant: 97032, 97033, 97034, and 97035 have recommendation for 1.33 minutes for CA009 greet patient, CA013 prepare room/equipment/supplies, CA016 prepare patient/provide gowning, ensure records are available consistent with the procedural codes, CA 024 clean room/equipment/supplies. This time adjustment was made based on a Medicare claims data average of 3.5 procedures/units billed per therapy session; minutes were reduced from recommended values to 1.33 minutes to account for multiple procedures/units billed in a session. According to the PE subcommittee discussion, this reduction was necessary to address duplication in service activities when more than 1 procedure/unit is billed in a session. When 1.3 is multiplied by 3.5 units, the total minutes allotted for the total session are slightly below or at the standard package for procedure time for those clinical inputs. MPPR will result in additional reductions with the total minutes significantly below the standard package.

For equipment on this tab, there were no changes in equipment type, however it was determined by the HCPAC that the inputs for equipment were too low using the standard formula, as this equipment is in use for the entire intraservice period and is not available for use by anyone else during any portion of that intraservice period. As

all modality supervised codes are provided in 1 unit in a session and equipment is not shared, there is no duplication in equipment. It was therefore determined to apply the intraservice time as the equipment time for all equipment under each code to allow enough minutes required for time the equipment is used. This resulted in the following recommendations for equipment minutes for Modalities constant:

97032 15 minutes for EF028 hi-lo table and EQ116 electrotherapy stimulator

97033 12 minutes for EF028 hi-lo table and EQ141 iontophoresis machine

97035 10 minutes for EF028 hi-lo table and EQ251 ultrasound unit

MPPR will result in additional reductions in equipment minutes below the time required to provide the procedure.

There is no equipment over the \$500 threshold for inclusion on the PE spreadsheet for 97034 so no minutes were included or adjusted with this code.

Please submit the revised form electronically to Rebecca Gierhahn at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org).

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

97530	A patient presents with multiple traumatic injuries including bilateral wrist fractures and a left ankle fracture with decreased upper extremity strength and coordination, and poor weight bearing tolerance during task performance. Direct one-on-one dynamic activities are provided.
97533	A patient who startles easily at unexpected noises presents with poor balance and difficulty organizing simple tasks. Direct one-on-one sensory integrative services are provided.
97535	A patient presents with right hemiparesis and visual/perceptual deficits that resulted from a CVA. Direct one-on-one services are provided for self-care management of activities of daily living.
97537	A patient presents post traumatic brain injury that resulted in decreased coordination, weakness, limited endurance, and visual coordination problems. Direct one-on-one services are provided to facilitate community and work activities.
97542	A patient presents with continuing effects from a CVA. Direct one-on-one services are provided to train the patient in the safe operation and management of a new wheelchair.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

In preparation for the January 2017 RUC meeting, the expert panel consisting of physical and occupational therapists, were consulted through a series of conference calls and face-to-face meetings. The expert panel reviewed the existing PE direct input values and compared them to current practice environments. The recommendations reflected changes in clinical labor consistent with current practice and the standard packages. These inputs were further refined by the individuals who perform these services. An expert panel has reviewed the inputs again and the recommendations have been confirmed based on their clinical experience. Based on a statement by the RUC that codes subject to MPPR should not be adjusted for overlapping inputs and CMS' findings that these codes should not have been subject to MPPR by the RUC APTA and AOTA are resubmitting the 2017 recommendations for clinical labor consistent with the standard package and/or expert panel recommendations.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

These codes are existing codes, therefore the expert panel used the current PE direct inputs as reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at [rebecca.gierhahn@ama-assn.org](mailto:rebecca.gierhahn@ama-assn.org) for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?  
Is this code(s) typically reported with the E/M service in the nonfacility?

No

See the *Billed Together* tab in the RUC Database.

**NONFACILITY DIRECT PE INPUTS** **CPT CODE(S):**  
**Therapeutic Procedures** 97110 97112 97113 97116 97140 97530 97533 97535 97537 97542

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

97110	Physical Therapist	90.3%
97112	Physical Therapist	92.1%
97113	Physical Therapist	92.1%
97116	Physical Therapist	98.9%
97140	Physical Therapist	91.8%
97530	Physical therapist	83.9%
97533	Occupational therapist	59.8%
97535	Occupational therapist	62.7%
97537	Occupational therapist	52.8%
97542	Occupational therapist	48.9% Physical therapist 48%

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

In the final rule CMS stated “As discussed in the proposed rule, we reviewed the clinical labor time entries for these 19 therapy codes. We noted that we did not believe a payment reduction should have been applied to the 19 nominated therapy codes' clinical labor time entries since the payment valuation reduction would be duplicative of the MPPR we apply during claims processing. We proposed to nominate these 19 codes as potentially misvalued for CY 2024, as we believed that the valuation of these services would benefit from additional review through the AMA RUC HCPAC valuation process. After consideration of the public comments for this issue, we are finalizing our proposal to consider the 19 therapy codes as potentially misvalued for CY 2024.”

There is no duplication in the clinical staff activities when multiple procedures are performed with the exception of greeting the patient. The majority of these codes are billed only once per visit. For all other clinical staff activities they are performed for each procedure with no overlapping minutes. For example, supplies and equipment are procedure specific and are set up and cleaned for each procedure. Patient positioning is procedure specific and performed for each procedure. There is an increase in clinical staff time to reflect the applicable standard package or when not consistent with the standard based on expert input. The increased times proposed directly reflect times identified in standardized packages set forth by the PE Subcommittee, which did not exist when these codes were first valued. AOTA and APTA believe that our respective therapies meet the standards prescribe by the PE subcommittee in these packages. Additionally, when the codes were last valued prior to 2017, they were not subject to MPPR. Both the RUC and CMS have stated that the PE Subcommittee would not consider overlapping inputs related to multiple units or multiple procedures for codes that are subject to MPPR. These codes have been subject to MPPR since 2011.

APTA and AOTA are requesting the PE Subcommittee accept the recommendations consistent with current practice and the standard package to include the following:

**NONFACILITY DIRECT PE INPUTS** **CPT CODE(S):**  
**Therapeutic Procedures 97110 97112 97113 97116 97140 97530 97533 97535 97537 97542**  
**SPECIALTY SOCIETY(IES):** **American Physical Therapy Association**  
**American Occupational Therapy Association**

**PRESENTER(S):** **Angela**  
**Pennisi**  
**Mary Walsh-Sterup**  
**Randy Boldt**

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)**  
**PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

97113 accept the recommended 1.5 minutes for greet the patient consistent with all therapeutic procedure codes.  
97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 3 minutes for obtain vital signs. APTA and AOTA affirm that 1-3 vital signs are collected throughout treatment.  
97110, 97112, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 2 minutes for prepare room, equip, supplies. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.  
97110, 97112, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 2 minutes for prepare and position patient. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.  
97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 3 minutes for clean room/equipment by physician staff. APTA and AOTA affirm that 3 minutes is required for each separate procedure performed.  
97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 1 minute for check dressing & wound which is a reduction of the current 1.5 minutes. APTA and AOTA affirm that 1 minutes is required for each separate procedure performed. For PT and OT this time is spent checking skin condition.  
97110, 97112, 97113, 97116, 97140, 97530, 97533, 97535, 97537, 97542 accept the recommended standard package of 2 minutes for homecare instructions; coordinate visits/ medications. In 2017 check dressing & wound and review homecare instructions were combined items, and all minutes were moved to check dressing and wound in the RUC database. APTA and AOTA affirm that 2 minutes is required for each separate procedure performed.  
97113 accept the recommendation of 0 minutes for perform regulatory mandated quality assurance activity.

All other recommendations are the same as the current values in the RUC data base.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

PRESENTER(S): Angela  
Pennisi  
Mary Walsh-Sterup

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

There are no recommendations greater than the PE Subcommittee Standards. For code 97113 Prepare Room Equipment and Supplies 4 minutes and Clean room, equipment by clinical staff 6 minutes as increased time is required for size of pool area, dressing room, and equipment.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

1 minute was allotted prior to 2018. 1.33 minutes was approved based on 3.5 procedures/units billed per visit.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

No clinical labor activities

b. Service period (includes pre, intra and post):

PT/OT Aide:  
The PT/OT Aide greets patient, provides and, if needed assists with appropriate gowning, draping for performance of the procedure. The Aide procures and sets up any necessary space, equipment, and supplies for the procedure, makes sure all records are available to the PT/OT for the procedure. The aide will prepare and position the patient in preparation for the procedure and provide any additional physical assistance.

**PRESENTER(S):** Angela  
Pennisi  
Mary Walsh-Sterup  
Randy Boldt

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)  
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The PT/OT Assistant will take and record vital signs and measurements related to underlying impairments and reason for intervention. PT/OT Assistant assists with taking and recording the patient's range of motion and strength or other measures meaningful to the therapeutic procedure. PT/OT Assistant also assists with various transfers, transitions, mobility activities, dynamic activities, and the safe performance of functional activities. The PT/OT Aide helps re-position the patient throughout the procedure and provides assistance with adjusting equipment throughout the procedure. The PT/OT Assistant performs skin inspection/checks. The PT/OT Aide will clean all equipment and surfaces. PT/OT Assistant:  
Before patients leave the office, the clinician will have updated home and community activity programs to facilitate self-management skill development. The Assistant will review the instructions and answer questions with the patients prior to the patient leaving the office.

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

The PT/OT Assistant will assist the clinician with obtaining and recording measures. This may include recording performance data, physical facilitation with the patient, grading challenges in environment, and other clinical assistance throughout the portion of the intervention. An assistant provides the clinically appropriate assistance for the patient as the therapist facilitates the performance in therapeutic exercise, neuromuscular re-education, gait training, aquatic therapy, manual therapy, therapeutic activities, and wheelchair management. The PT/OT Aide assists with re-positioning the patient and provides assistance with adjusting equipment throughout the procedure as well as providing physical assistance as needed.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

For 97113 the percentage is 100% as there must always be two individuals in the pool with the patient for the entire procedure. For the remaining codes the standardized 67% of intra-time is higher than clinically appropriate. For 97110, 97112, 97116, 97140 the total recommended times are 50% with 33% of the time provided by the assistant and 17% of the time consistent with the training of the aide. For 97530 and 97543 25% of the time is provided by the assistant and 25% of the time is consistent with the training of the aide. These percentages were derived based on input from an expert panel of physical therapists and occupational therapists.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2<sup>nd</sup> worksheet tab in PE spreadsheet*):

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

97110, 97112, 97116, 97140, 97530, 97533, 97535, 97537, 97542

CA009 Greet patient, provide gowning, ensure appropriate medical records are available 1.33 minutes.

CA010 Obtain vital signs 1.33 minutes.

CA013 Prepare Room Equipment and Supplies 1.33 minutes.

CA016 Prepare, set-up and start IV, initial positioning and monitoring of patient 1.33 minutes.

CA024 Clean room, equipment by clinical staff 1.33 minutes.

CA035 Review home care instructions, coordinate visits/prescriptions 1.33 minutes.

The PE Subcommittee made these changes based on 3.5 procedures/units billed per visit and their position that all activities are duplicative across all procedures.

MPPR will result in additional reductions with the total minutes significantly below the standard package.

97113

CA009 Greet patient, provide gowning, ensure appropriate medical records are available 1.5 minutes.

CA010 Obtain vital signs 1.5 minutes.

CA013 Prepare Room Equipment and Supplies 4 minutes.

CA016 Prepare, set-up and start IV, initial positioning and monitoring of patient 1.5 minutes.

CA024 Clean room, equipment by clinical staff 6 minutes.

CA029 Check dressings, catheters, wounds 1 minute.

CA035 Review home care instructions, coordinate visits/prescriptions 1.5 minutes.

The PE subcommittee made the CA009, CA010, CA016, CA035 recommendations based on 3 units billed per visit and routinely not billed with any other code and their position that all activities are duplicative across all procedures.

The PE subcommittee made the changes to CA013 and CA024 based on additional time required to prepare and clean pool area, dressing room, and equipment)

**RUC Practice Expense Subcommittee  
Packs Workgroup  
June 2023**

**Workgroup Report**

**Workgroup Members Present:** Donald Selzer, MD (Chair), Michael Booker, MD, Dheeraj Mahajan, MD, Richard Rausch, DPT, MBA, Edward Vates, MD

At the April 2023 meeting, the PE Subcommittee formed a workgroup to review the content of the packs to assess if they are still typical and revise as necessary. This was a result of discrepancies found with the packs pricing at the January 2023 RUC meeting.

The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. One would expect the pack price to be identical to the total cost of its individual contents. The price of the individual components should be consistent across the supply packs and match the standalone prices of supplies. However, the RUC noted a discrepancy with the SA051 *pack, pelvic exam* while reviewing CPT code 9X036 *Pelvic exam (List separately in addition to code for primary procedure)*. The SA051 pack is priced at \$20.16 while the four individual items therein total \$2.81 according to the 2023 CMS Direct PE Inputs Medical Supplies Listing.

AMA Staff prepared a document with the 23 deconstructed packs for consideration by the PE Subcommittee at its April 2023 meeting. Review of the pack pricing uncovered numerous discrepancies between the aggregated cost of a pack and the individual item components. Prior to the meeting, staff reached out to inquire about this issue to the Centers for Medicare & Medicaid Services (CMS) and received the following response:

“We agree that this is an issue that should be fixed, as the price of the individual components should be consistent across the supply packs and match the standalone prices of supplies (like gloves and sterile gauze and such). However, it needs to be tackled in comprehensive fashion to ensure consistency across the dozens of supply packs which will be a sizable undertaking. Resolving these pricing discrepancies in the supply packs is something that we will consider addressing in future rulemaking.”

The RUC shared the deconstructed packs document and volume analysis with CMS as part of its May 2023 RUC recommendations stating, **“The RUC strongly recommends that CMS resolve these pricing discrepancies in the supply packs during CY2024 rulemaking.”**

The Packs Workgroup convened a Teams meeting on June 28, 2023, and completed the following tasks to be included with the RUC comments on the CY2024 Proposed Rule:

I. Incomplete Packs Review

When the 23 supply packs were deconstructed, four packs stood out as containing items that did not have assigned supply codes and were no longer included on the CMS Direct PE Inputs Medical Supplies Listing. The pricing of these packs was clearly incorrect because the individual components could not be properly accounted for or summed. The Workgroup reviewed the contents of these four incomplete packs (SA045, SA046, SA049 and SA082) to ensure they are complete for submission to CMS with the RUC comment letter in August 2023.

AMA Staff searched the RUC database for the codes that used each of the four incomplete supply packs and contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to review the contents of the respective packs to ensure they are correct and to provide invoices for any missing supply items. The attached spreadsheet accounts for all

the packs and details the recommended modifications for the packs as explained below. Invoices are also attached for new supply items.

**SA045** – All the items listed in SA045 *pack, drapes, cystoscopy* were no longer available in the current CMS Direct PE Inputs Medical Supplies Listing, thus the specialties rebuilt the pack to include two new supply items:

- *drape, surgical, legging*
- *drape, surgical, split, impervious, absorbent.*

The specialty clarified that two leggings are typical, one for each leg. They explained that there are three components to the pack, a legging on each leg and the drape in the center. A one piece drape is considerably more expensive and not typical. The Workgroup carefully reviewed the invoices and clarified that the leggings invoice is for a single legging drape (2 cases of 20), thus a quantity of two is appropriate.

**SA046** – The specialties examined the codes which include SA046 *pack, drapes, laparotomy (chest-abdomen)* and recommended alternative supply items to replace the pack as detailed in the attached spreadsheet.

The Workgroup agreed that pack SA046 should be removed for the six CPT codes 19020, 19101, 19110, 19112, 20102, 20101 and replaced with supply item SB011 *drape, sterile, fenestrated 16in x 29in* as recommended by the surgical specialties. The specialties explained that a laparotomy drape-pack is not a typical supply in a surgeon's office. In addition, SA046 duplicates a few items that are separately identified for these codes (eg, SB012 drape, sterile, for Mayo stand). For these 6 procedures, it would be more typical to use a fenestrated drape which is an item commonly stocked in a surgeon's office and not included in the current PE details.

For CPT codes 19000, 60300, 22510, 22511, 22513, 22514, the Workgroup did not immediately accept the recommendation to substitute existing supply items SB014 *drape, sterile, three-quarter sheet* and SB019 *drape, towel, sterile 18in x 26in* for a longer drape but instead requested a brief rationale of what is typically used for the procedures and why, whether it be the existing supplies or a new supply item.

For CPT codes 22510, 22511, 22513, 22514, the specialties submitted a revised recommendation and invoice for a new supply item, *Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in)*, along with existing supply item SB019. They explained that “A laparotomy drape-pack is not a typical supply in a surgeon’s office and that SA046 also includes several items which are unnecessary (e.g., fan-folded drape sheets, Mayo stand cover, suture bag) for these procedures. For these four procedures, it would be more typical to use sterile drape towels (4) and a fenestrated drape, which is an item commonly stocked in a surgeon’s office but not included in the current CMS list of PE supply inputs.”

The specialties submitted a revised recommendation for CPT code 19000 with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that “A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient’s lower chest and abdomen, and two sterile towels folded into triangles to create a sterile field surrounding the targeted area on the breast for puncture. These supply items are currently on the CMS list of PE supply inputs.”

Finally, the specialties submitted a revised recommendation for CPT code 60300 also with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that “A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient, and two sterile towels folded

into triangles to create a sterile field surrounding the targeted area for puncture on the neck. These supply items are currently on the CMS list of PE supply inputs.”

The Workgroup recommends that pack SA046 be eliminated and replaced with the supply items as specified in the attached spreadsheet.

**SA049** – Several items in the existing SA049 pack, *ocular photodynamic therapy* were no longer included on the CMS Direct PE Inputs Medical Supplies Listing, thus the specialty submitted modifications to correct the pack. The Workgroup discussed the specialty recommendation for SA049 and modified it further to include only two items as detailed in the attached spreadsheet. The Workgroup thoroughly discussed the contents of the ocular photodynamic therapy (PDT) kit and noted that a significant portion of the supply items in the existing pack are included in the kit. The specialty confirmed that the kit is correct, and the only additional item needed is the Y-adapter cap. Invoices are attached and include a picture to identify the contents of the kit.

**SA082** – For SA082 pack, *ophthalmology visit (w-dilation)*, the specialty recommended that all the items in the existing pack remain, except for one (rev-eyes 0.5% ophth). They submitted the missing invoice for post-mydriatic spectacles, and the Workgroup clarified that the invoice includes 25 spectacles per box for a total of \$0.328 per item as noted on the attached spreadsheet.

## II. Review of One Supply Item in SA042 pack, *cleaning and disinfecting, endoscope*

The unit of measurement and price for SM018 *glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide)* were highlighted for review by the Packs Workgroup. AMA Staff contacted CMS to inquire about what size bottle was used for pricing SM018. CMS did not have any information on the unit size (bottle or otherwise) which was used to price the SM018 supply during the last supply/equipment pricing update. Given that the old price was 17 cents per ounce and now it is \$3.44 per ounce, there may have been a unit quantity error that took place somewhere during the process.

According to the RUC database, there are 306 codes that utilize SA042 pack, *cleaning and disinfecting, endoscope* in the Non-Facility or the Facility setting. AMA Staff contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to provide invoices for SM018 to ensure that quantity and pricing of this supply item is accurate. Invoices shared by the specialties will be forwarded to CMS.

The specialties were further asked if there were any other discrepancies in the contents of SA042 including alternative scope disinfectants. The specialties determined, and the Workgroup agreed, that glutaraldehyde use is no longer typical. Thus, a non-glutaraldehyde disinfectant, ortho-phthalaldehyde 0.55% (eg, Cidex OPA), is recommended as a new supply item. A specialty explained that Cidex OPA is what is used in the office setting as a replacement to the old version of Cidex (glutaraldehyde). Cidex OPA replaced Cidex several years ago to respond to glutaraldehyde-resistant mycobacteria (eg, *M.chelonae*). Another specialty confirmed that glutaraldehyde has been replaced by safer less toxic alternatives in most centers. The Workgroup clarified the unit of measurement for the new supply item is ounces with the quantity for the pack equal to 32 oz. which is what was used previously with SM018.

In addition, an additional new supply item is recommended to replace SM019 *glutaraldehyde test strips (Cidex, Metrex)* in pack SA042. Invoices were requested for ortho-phthalaldehyde test strips to complete the pack and are shared in the attachments.

III. Supply Pack Affirmation – CMS Mathematical Correction Needed

There are 18 packs in the attached spreadsheet where all content is complete. **The Workgroup affirmed the contents of the complete packs for submission to CMS with the RUC request to ensure accurate packs pricing.** The Workgroup concurred that these packs should be rectified as soon as possible by CMS to ensure that the sum totals from the individual items.

**The PE Subcommittee Packs Workgroup recommends that:**

- 1. The RUC request that the Centers for Medicare & Medicaid Services (CMS) revise packs SA042, SA045, SA046, SA049 and SA082 according to the attached spreadsheet.**
- 2. The RUC request that the Centers for Medicare & Medicaid Services (CMS) immediately initiate correction of the packs pricing such that the sum of the individual components match the price of the corresponding pack.**

## INVOICE TERMS AND CONDITIONS

1. **ACCEPTANCE.** Buyer of goods and services (“Goods”) agrees to be bound by and accept the terms and conditions listed on this Invoice, which supplements but does not change any written agreement between Buyer and Seller, and together, with any other written agreement, constitute the entire agreement between the parties. Orders are not binding on Seller until accepted by Seller.
2. **PRICE.** Pricing is subject to change by Seller without notice and may be higher outside of the continental U.S. Increases in Seller’s operational costs may be invoiced to Buyer separately. Pricing may be adjusted due to changes in Seller’s acquisition cost. Seller may credit and re-invoice Goods invoiced incorrectly. Buyer will reimburse Seller for unpaid chargebacks. Buyer is responsible for any sales, use, gross receipts, excise, privilege, value-added, business and occupation taxes, or any assessments or other charges on Goods, regardless of how labeled (“Tax Liabilities”). Buyer is liable for the full invoice amount.
3. **ORDER AND DELIVERY.** Orders must be electronically transmitted. Delivery is by common carrier FOB destination. Buyer assumes all risk of loss after delivery. Orders may be subject size requirements. Shipping and delivery times are approximate. Buyer will pay replacement cost of totes or materials not returned. Drivers cannot accept payment or verify contents or quantities of packages. A receipt signed by a driver is not evidence of the contents or value of the package. Orders of controlled substances and listed chemicals are subject to Seller’s diversion control program. Seller has no obligation to sell controlled substances or listed chemicals to Buyer and may restrict, prevent, and/or reject any such orders.
4. **FORCE MAJEURE.** Seller is not liable for delays or other failures due to causes beyond its control, including but not limited to, labor disputes, fire, terrorism, pandemic, acts of God, delays or shortages related to supply chain, transportation, fuel, loss of facilities or network, or foregoing a right in order to comply with law or a government orders.
5. **USE OF GOODS.** Buyer warrants it has all required governmental permits, licenses and approvals required to purchase, use, dispense and/or store Goods.
6. **NO WARRANTY.** Seller is not the manufacturer of Goods. SELLER DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THOSE OF MERCHANTABILITY, NON-INFRINGEMENT AND FITNESS FOR A PARTICULAR PURPOSE. THIS SUPERSEDES ALL ORAL WARRANTIES AND REPRESENTATIONS, AND ANY WARRANTIES AND REPRESENTATIONS THAT ARE NOT EXPRESSLY DESIGNATED IN WRITING WILL CREATE ANY SUCH WARRANTY.
7. **LIMITATIONS.** IN NO EVENT WILL SELLER BE LIABLE FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR LOST PROFITS IN CONNECTION WITH OR RELATED TO GOODS SOLD. Seller disclaims all liability in connection with drop shipments from manufacturers to Buyer.
8. **INDEMNIFICATION AND WAIVER.** Buyer will indemnify, defend, and hold harmless Seller, its officers, directors, representatives and affiliates from any loss or claim against Seller arising in whole or in part out of (a) failure of Buyer or customers to follow specifications, warnings or recommendations; (b) failure of Buyer to comply with applicable legal requirements; (c) failure to comply with “own use,” or other manufacturer requirements or misuse of Goods; (d) claims arising out of any act or omission of Buyer; or (e) Tax Liabilities.
9. **CANCELLATION.** Buyer may only cancel Goods by providing written notice to Seller. Cancellation may be subject to charges.
10. **CONFIDENTIALITY.** Buyer may not use or disclose Seller’s trade secrets or confidential information. Pricing terms are strictly confidential and may not be disclosed to any third party or competitor of Seller unless required by law.
11. **SECURITY AGREEMENT.** To secure payment for Goods, Buyer hereby grants a security interest in Goods delivered by the Seller and this invoice is deemed a security agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer’s behalf all documents Seller deems necessary to perfect such security interest.
12. **CREDIT AND COLLECTION.** Payment must be received in Seller’s account during normal business hours on the date due and is not subject to reduction, set-off or counterclaim by Buyer. Prices quoted include a discount in anticipation of payment within terms. If payment is late or dishonored, Seller will invoice Buyer for the unearned discount by recalculating the price of Goods. If payment is delinquent, or Seller believes Buyer’s financial condition or credit worthiness is impaired, Seller may take additional action, including but not limited to, imposing a per-day late payment fee of 1.5% per month (18% per year), or the maximum legal rate.
13. **RETURNS.** All returns of Goods are subject to Seller’s Return Goods Policy.
14. **CLAIMS.** All claims for damages or shortages must be reported to Customer Service within 48 hours of receipt of non-refrigerated Goods and on the same day of receipt of refrigerated Goods.
15. **DISCOUNTS, ADJUSTMENTS AND ALLOWANCES.** The prices on this Invoice may reflect discounts or other reductions in price, and/or may be subject to subsequent rebates or other reductions, adjustments or allowances. Seller shall notify Buyer of any such additional rebates, reductions, adjustments or allowances. Both parties must comply with all applicable laws with respect to Goods, including discounts, adjustments and allowances, and must fully and accurately report and reflect discounts, adjustments and allowances to federal, state and private payors to the extent required and retain this Invoice and related documentation and make them available upon request to authorized federal or state health care program officials.
16. **MISCELLANEOUS.** No waiver by Seller of Buyer’s default will waive any other default. Pennsylvania law governs this Invoice. Arbitration is not applicable to Seller. All provisions of this Invoice are severable.
17. **COMPLIANCE WITH APPLICABLE LAWS.** Both parties will comply with all applicable state and federal laws and regulations applicable to Goods purchased hereunder.
