

# Integrating Generative AI in Clinical Practice

American Medical Association  
IPPS Interim Meeting

Luis A Garcia, MD, FACS, MBA, FACHE  
President RUSH Medical Group

Rush University System for Health | October 2024

**No Disclosures**

# About RUSH

## Quality

*U.S. News & World Report's 2023-2024  
Best Hospitals Honor Roll*

**10** **Nationally  
ranked clinical  
programs**

**#2** **in the  
nation  
for  
quality**

*Vizient quality ranking for inpatient  
and outpatient care*

## Patients

1,133	Licensed Beds
46,868	Admissions
59,090	Surgeries
180,479	ED Visits
963,044	Outpatient Visits

## People

938	Employed Physicians
>500	APPs
14,021	Full-Time Employees

## Learners

2,208	Students (Summer Semester)
-------	-------------------------------

# Generative AI Challenges: Philosophy

Is there a risk of over-reliance on AI technology?

How do we measure if the AI is improving outcomes?

Do people provide the same level of professional scrutiny when using AI vs traditional approaches?

Is it right for an AI vendor to profit from our data?

What is the cost / benefit trade-off of AI?

# Augmented Intelligence | Governance

## AI Incubator

- Defines RUSH's AI Strategy and Vision.
- Identification, evaluation and prioritization of AI opportunities.
- Sponsors AI training, change management, and AI adoption.
- Assesses and evaluates business impacts.

## Center for Bioinformatics, Robotics & Augmented Intelligence (CoBRA)

- Evaluates and maintains data sets for machine learning, large language models, etc.
- Clinical and scientific valuation and verification.
- Protocol monitoring.

## RUSH AI Center of Excellence

## Center for Digital Health Enablement: AI & Automation

- Selects and supports AI and automation platforms.
- Designs, builds, tests, and implements AI solutions.
- Supports integration of solutions within RUSH digital ecosystem.

## Data Governance:

### Office of Responsible AI

- Coordinates cyber, regulatory, medical ethics, compliance, privacy, and legal reviews for AI initiatives.
- Supports agreements with platform and solution vendors.
- Supports standard contract language for vendor agreements.

# Endoscopic Polyp Detection

## Use Case:

- Nearly 1 in 20 adults will be diagnosed with colon cancer in their lifetime and 90% of them can beat it if caught early
- GI Genius is an AI-powered medical device, FDA approved in 2021, used to enhance the ability to detect colorectal polyps of all shapes and sizes in real time

**AI Technology used:** Computer Vision

**Implementation Stage:** Scaling

## Challenges:

- Clinician training
- Patient consent and education

## Desired Outcome:

- Increase in Adenoma Detection Rate (ADR) leading to earlier detection of pre-cancerous lesions
- Vigilant “second observer”: Reduce chance of missed polyps by up to 50%

# Emergency Stroke Treatment Systems

## Use Case:

- 1:6 deaths from CV Disease is from strokes
- Every 40 seconds someone in the US has a stroke

## AI Technology used: AI Mediated Activation

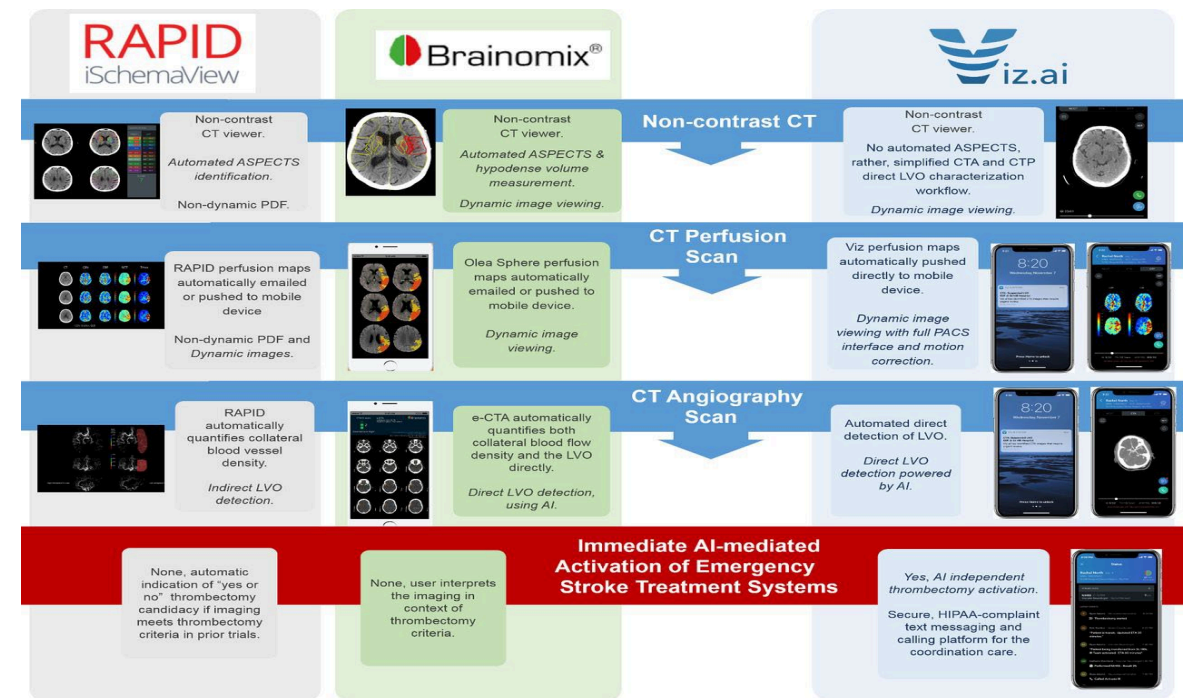

## Implementation Stage: Scaling

## Challenges:

- Clinician training
- Multifacility Interfaces

## Desired Outcome:

- Automated coordination of acute stroke care
- AI mediated activation of Emergency Stroke Treatment Systems

# Rush Becomes First in Chicago To Use Robotic System for Neurovascular Care

Rush University System for Health expands its complement of minimally invasive care with new vascular robotic technology

**Related Doctors**  
 [R. Webster Crowley, MD](#)

# Use of Ultra-High Field MRI for precise surgical planning of neurosurgical procedures

# AI processing of fMRI, EEG, and MRI for mapping of abnormal neural networks in epilepsy

# Radiology AI Platform

## Use Case:

- There is increasing pressures on radiology departments given increased complexity, number of images per scan, and demands on radiologists
- Over 700 FDA approved AI algorithms in Radiology
- Calantic takes previously fragmented AI solutions and coordinates them into a single platform and helps deliver AI technology to the end user on an accelerated timeline

**AI Technology used:** AI platform broker

**Implementation Stage:** Scaling

## Challenges:

- Complex implementation given multiple PAC systems

## Desired Outcome:

- Agile AI algorithm deployments
- Increased provider satisfaction- **SINGLE** viewpoint
- Improved patient outcomes

# Automated Patient “Draft” Replies

## Use Case:

- Increased communication via the In-basket has led to clinician dissatisfaction
- Epic Automated “Draft” Replies reads the patient message and using an AI powered algorithm, drafts a response to the patient to increase speed of response

**AI Technology used:** Generative AI, Large language model

**Implementation Stage:** Scaling

## Challenges:

- Clinician buy-in: Replies may not feel personal
- Consent
- Cost

## Desired Outcome:

- Timely and empathetic responses to patient inquiries
- Decreased clinician in-basket time
- Improved patient and clinician satisfaction
