RUC Referrals to CPT Editoral Panel - Outstanding Issues

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
0042T	**Cerebral perfusion analysis using computed tomography with contrast administration, including post-processing of parametric maps with determination of cerebral blood flow, cerebral blood volume, and mean transit time**	High Volume Category III Codes 2022	September 2022	ACR, ASNR	September 2023

Background: In April 2022, the Relativity Assessment Workgroup identified this Category III code with 2020 Medicare utilization over 1,000. The Workgroup requested an action plan for September 2022. In September 2022, the specialty societies indicated and the RUC supports a submission of a coding application for CPT May 2023. The specialty societies submitted a coding application for May 2023, but it was subsequently withdrawn. The specialty socieites should address the CPT Editorial Panel concerns and submit a new CCA for the September 2023 meeting.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
37220	**Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty**	High Volume Growth1	April 2022	SVS, ACS, SIR, ACR, ACC	February 2024

Background: In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than $500. The RUC requested an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. The specialty societies worked with the CPT Editorial Panel and have submitted multiple coding change proposals. In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. The specialty societies worked with the CPT Editorial Panel and have submitted multiple coding change proposals. In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
37233	**Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy, includes angioplasty within the same vessel, when performed (list separately in addition to code for primary procedure)**	High Volume Growth1	April 2022	SVS, ACS, SIR, ACR, ACC	February 2024

Background: In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than $500. The RUC requested an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. 99183	**Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session**	CMS-Other - Utilization over 250,000	January 2023	AAFP, UHMS	September 2023

Background: In January 2023, the RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183. In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. Stakeholders pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183, the descriptor describes only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment is reported using separate treatment code C1300 Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval. Therefore, CMS created code G0277 to report the treatment delivery and to maintain consistency with the OPPS coding. CMS used a timed 30-minute code, which can be used across settings. To value G0277, CMS used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30-minute treatment interval. The RUC recommends that CPT code 99183 be referred to CPT by the June 2023 deadline for the September 2023 CPT meeting, for revision to be time-based as well as modified to appropriately describe the treatment delivery, attendance and supervision. Then, subsequently, allow for the deletion of G0277.

		Screen	RUC Meeting	Specialty Society:	CPT Meeting
G0277	**Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval**	High Volume Growth8	January 2023	AAFP, UHMS	September 2023

Background: In January 2023, the RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183. In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. G0396	**Alcohol and/or substance (other than tobacco) misuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes**	CMS-Other - Utilization over 30,000	January 2018	AAFP, ASA, ASAM	Time Uncertain

Background: In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. This list resulted in 34 services and the RAW requested action plans to be reviewed at the January 2018 meeting. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening" from 99408 and 99409 to "assessment" to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel's additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services.

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
15769	**Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)**	Site of Service Anomaly - 2017	September 2022	Refer to CPT Assistant. 6.68.	AAOHNS, ASPS	Jul 2023

Background: CPT code 20926 was identified in 2017 as a site of service anomaly, in which the Medicare data from 2013-2016e indicated that it was performed less than 50% of the time in the inpatient setting yet included inpatient hospital Evaluation and Management services within the global period. In May 2018, the CPT Editorial Panel deleted 20926 and created five codes in the Integumentary section to better describe tissue grafting procedures. In October 2018, the RUC flagged CPT code 15769 to be reviewed the after the first year of utilization data is available by the Relativity Assessment Workgroup to evaluate whether the new code is being coded with other codes (ie, closure of donor site) and whether it is being used in non-facility settings. The 2020 Medicare utilization data showed that CPT code 15769 is performed in the inpatient hospital setting 39% of the time, yet includes one hospital discharge visit 99238. The Workgroup noted hat that 20% of these services are being reporting in the office setting by only four individuals. The RUC recommended that a CPT Assistant article be created to clarify that CPT code 15769 should be reported in the facility setting.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
22554	**Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below c2**	Codes Reported Together 95% or More / Codes Reported Together 75% or More-Part5	September 2022	Refer to CPT Assistant. 17.69	AANS, AAOS, CNS, ISASS, NASS	Aug 2023

Background: In February 2008, this issue was referred to the CPT Editorial Panel for development of coding change proposals to condense pairs into a single code and create new coding structures as part of the codes reported together 95% or more. In Oct 2009, CPT added two codes to report arthrodesis including disk space preparation, discectomy, osteophytectomy and decompression of spinal cord below C2 and each additional interspace. In April 2022, the Workgroup identified code pairs for services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for codes 22554 and 63081. In September 2022, the RUC recommends that this issue be referred to CPT Assistant to educate correct coding for 22554 with 63081 versus bundled codes 22551 and 22552.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
51728	**Complex cystometrogram (ie, calibrated electronic equipment); with voiding pressure studies (ie, bladder voiding pressure), any technique**	Codes Reported Together 95% or More / Codes Reported Together 75% or More-Part5	September 2022	Refer to CPT Assistant. 2.11	AUA, ACOG	Aug or Sep 2023

Background: Deleted 51772, and 51795 and added three new codes to combine the services. Revised at the February 2009 CPT Meeting. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51728/51741 and 51728/51784. In September 2022, the Workgroup recommended that this issue be referred to CPT Assistant to educate providers about the coding and use of complex uroflowmetry. Some providers may believe that 51741 is part of the “pressure-flow” study of 51728 or 51729, but it is not. CPT code 51741 should only be reported if done separately from urodynamic studies, on a separate machine and only when medically necessary/indicated. Additionally, to refer to CPT Assistant (51728/51784) to educate how EMG studies should only be used selectively and when medically necessary.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
51729	**Complex cystometrogram (ie, calibrated electronic equipment); with voiding pressure studies (ie, bladder voiding pressure) and urethral pressure profile studies (ie, urethral closure pressure profile), any technique**	Codes Reported Together 95% or More / Codes Reported Together 75% or More-Part5	September 2022	Refer to CPT Assistant. 2.51	AUA, ACOG	Aug or Sep 2023

Background: This service was identified via the codes reported together 95% or more. In February 2009, the CPT Editorial Panel deleted 51772 and 51795, and added three new codes to combine the services. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51729/51741 and 51729/51784. In September 2022, the Workgroup referred this issue to CPT Assistant to educate how EMG studies should only be used selectively and when medically necessary.

		Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
51741	**Complex uroflowmetry (eg, calibrated electronic equipment)**	Harvard Valued - Utilization over 100,000 / Codes Reported Together 75% or More-Part5	September 2022	Refer to CPT Assistant. 0.17	AUA	Aug or Sep 2023

Background: April 2010, the RUC recommended that the PE Subcommittee reivew the direct practice expense inputs for these service at the October 2010 meeting as the technology has changed. Oct 2010 reviewed PE. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51728/51741. In September 2022, the Workgroup recommended that this issue be referred to CPT Assistant to educate providers about the coding and use of complex uroflowmetry. Some providers may believe that 51741 is part of the “pressure-flow” study of 51728 or 51729, but it is not. CPT code 51741 should only be reported if done separately from urodynamic studies, on a separate machine and only when medically necessary/indicated.

51784	**Electromyography studies (emg) of anal or urethral sphincter, other than needle, any technique**	Codes Reported Together 75% or More-Part2 / CMS High Expenditure Procedural Codes2 / CPT Assistant Analysis 2018 / Codes Reported Together 75% or More-Part5	September 2022	Refer to CPT Assistant. 0.75.	AUA	Aug or Sep 2023

Background: In October 2018, the RUC referred to CPT Editorial Panel to add parenthetical and develop CPT assistant article indicating that 51792 and 51784 should not be reported together. In Feb 2014, the CPT Editorial Panel revised the parenthetical notes that follow CPT codes 51784 and 51792 to clarify that these services may not be reported together (editorial only). In the NPRM for 2016 CMS re-ran the high expenditure services across specialties with Medicare allowed charges of $10 million or more. CMS identified the top 20 codes by specialty in terms of allowed charges, excluding 010 and 090-day global services, anesthesia and Evaluation and Management services and services reviewed since CY 2010. In October 2018, the Workgroup reviewed a list of RUC referrals for CPT Assistant articles from 2013-2016, Seventeen (17) codes were identified. The Workgroup requested action plans for January 2019. The Workgroup specifically requests that the specialty societies address the following in their action plans: 1.Explain the issue and background of the code and why a CPT Assistant article was create. 2.What was the expected result 3.Did the article address the issues identified with this service4.Is a re-review in a couple years or further action necessary? In January 2019, the RUC recommended to remove this issue from the CPT Assistant analysis as the article address the issues identified. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of $5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51728/51784 and 51729/51784. In September 2022, the Workgroup referred this issue to CPT Assistant to educate how EMG studies should only be used selectively and when medically necessary.

Harvard-Valued Annual Allowed Charges Greater than $10 million / Different Performing Specialty from Survey/ RUC recommendation process, not part of RAW screens / PE Skin Adhesives / Different Performing Specialty from Survey5	April 2023	Action Plan. New PE Inputs. CPT Assistant Article	ACOG, AUA	

Background: CMS identified this service but it did not meet the screen criteria, allowed charges are ~$1 million. In October 2017, this service was identified as being performed by a different specialty than who originally surveyed this service. The RAW requests an action plan to review at the January 2018 meeting. In January 2018, the RUC recommended to refer to CPT for revision to properly describe the service as performed by urology. The specialty societies indicated that they do not intend on submitting a coding change application to somehow change the descriptor to describe implantation of a generator by urologists as different from implantation of a generator by gynecologists or general surgeons. It is the same work - make an incision, create a subcutaneous pocket, insert (an almost identical) medtronic generator, and close. Additionally noting, this service was never surveyed (previous 2006 change was editorial) and should not have been on this screen. Removed from screen. In February 2022, the CPT Editorial Panel created several new integrated neurostimulator Category I and Category III codes, the descriptors, guidelines and parentheticals for codes 64590 and 64595 were concurrently revised to clarify that 64590 and 64595 are only to be used for neurostimulator pulse generators or receivers that require pocket creation and include a detachable connection to a separate electrode array (non-integrated systems). In April 2022, the PE Subcommittee discussion culminated in a request for a CPT Assistant article to clarify several issues involving the use of the EQ209 programmer, neurostimulator (w-printer) and to provide clear and consistent instruction to all users of the programming and insertion codes. The stimulator is used to check the impedance of the device once placed for the initial code 64590 and is present for the entire procedure. To the extent there is additional stimulation and programming, then an additional code would be reported. An article is needed to ensure that individuals are appropriately reporting the stimulation and programming with code 95972 and not just merely checking the impedance. The RUC recommends that a CPT Assistant article be developed to clarify the appropriate use of CPT codes 64590 and 64595 as reported with other codes. In January 2023, the PE Skin Adhesives Workgroup focused on wound closure and agreed that there are multiple skin adhesive products at different price points that work similar to Dermabond. The RUC recommended that the PE Subcommittee review the six codes on the Medicare Payment Schedule with Dermabond to identify justification for its use versus the generic version and present its findings to the RUC for approval. As part of this review, the specialty should submit a letter to the RUC regarding any corrections to the vignettes for CPT codes 64590 and 64595. In April 2023, this service was identified on the different performing specialty from survey screen.

64595 **Revision or removal of peripheral or gastric neurostimulator pulse generator or receiver**

Screen:	RUC Meeting:	RUC Rec:	Specialty Society:	CPT Asst Status:
RUC recommendation process, not part of RAW screens / PE Skin Adhesives	April 2023	New PE Inputs. CPT Assistant Article	ACOG, AUA	

Background: In February 2022, the CPT Editorial Panel created several new integrated neurostimulator Category I and Category III codes, the descriptors, guidelines and parentheticals for codes 64590 and 64595 were concurrently revised to clarify that 64590 and 64595 are only to be used for neurostimulator pulse generators or receivers that require pocket creation and include a detachable connection to a separate electrode array (non-integrated systems). In April 2022, the PE Subcommittee discussion culminated in a request for a CPT Assistant article to clarify several issues involving the use of the EQ209 programmer, neurostimulator (w-printer) and to provide clear and consistent instruction to all users of the programming and insertion codes. The stimulator is used to check the impedance of the device once placed for the initial code 64590 and is present for the entire procedure. To the extent there is additional stimulation and programming, then an additional code would be reported. An article is needed to ensure that individuals are appropriately reporting the stimulation and programming with code 95972 and not just merely checking the impedance. The RUC recommends that a CPT Assistant article be developed to clarify the appropriate use of CPT codes 64590 and 64595 as reported with other codes. In January 2023, the PE Skin Adhesives Workgroup focused on wound closure and agreed that there are multiple skin adhesive products at different price points that work similar to Dermabond. The RUC recommended that the PE Subcommittee review the six codes on the Medicare Payment Schedule with Dermabond to identify justification for its use versus the generic version and present its findings to the RUC for approval. As part of this review, the specialty should submit a letter to the RUC regarding any corrections to the vignettes for CPT codes 64590 and 64595.

76978	**Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion**	New Technology/New Services List	April 2023	Refer to CPT Assistant		

Background: This service was identified on the New Services/New Technology list for review in April 2023. In April 2023, the RUC recommended to refer to CPT Assistant to educate members about the removal of the bubble contrast agent (SD332) from direct practice expense, effective January 1, 2023. The supply item should be reported separately as a HCPCS Level II supply code such as Q9950. Remove from new technology/new services list, no demonstrated technology diffusion that impacts work or practice expense.

6X000		Jan 2023	Suprachoroidal Injection	10	CPT 2024	April 2028	There is currently only one FDA-approved medication for this procedure, triamcinolone acetonide, and it is approved for only one indication: macular edema associated with uveitis. The relevant HCPCS code is J-3299. Medicare claims volume for this indication is expected to be low. However, if other drugs for more common indications obtain FDA approval, claims volume may grow substantially. Thus, CPT code 6X000 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. The RUC recommended that if there are new drugs that have an associated J-code that these also be considered by the Relativity Assessment Workgroup as part of the New Technology screen.	☐

99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	April 2023	In January 2020, the RUC identified Psychiatric Collaborative Care Management Services via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommended that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. However, due to the incorrect reporting of these services by one specific provider, the referral for a CPT Assistant article was removed. This family is on the new technology/new services screen and is scheduled for review at the April 2023	☑

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2023

Iris Procedures – Tab 4

At the February 2023 CPT Editorial Panel meeting, three Category III codes, 0616T, 0617T and 0618T, were replaced by a single Category I code 6X004. The three former Category III codes each described a separate clinical scenario for intraocular lens implant (IOL) insertion, and the creation of 6X004 simplifies reporting for this family of iris procedure codes. Two other IOL services, CPT codes 66680 and 66682, are in the same family of 090-day global iris repair codes as 6X004. All three codes were reviewed and surveyed for the April 2023 RUC meeting.

Compelling Evidence
The RUC agreed with the specialty societies that there is compelling evidence to support a change in physician work for CPT codes 66680 and 66682 based on a change in operative technique and increased physician surgical time. In their summary of recommendation, the specialty society articulated the evolution of operative technique in detail. The use of micromanipulators, iris retractors, double-armed long-polypropylene sutures, and utilization of a docking needle with a lumen is now typical for these procedures, which assists in conducting a more detailed dissection of the iris from the surrounding tissues, unfurling it to identify the peripheral avulsed edge, and engaging that edge to obtain a more anatomically correct re-apposition of the iris tissue in the anterior chamber angle. **The RUC agrees with the compelling evidence presented that the physician work for these services has changed due to a change in operative technique and increased physician surgical time.**

66680 ***Repair of iris, ciliary body (as for iridodialysis)***
The RUC reviewed the survey results from 35 ophthalmologists and determined that the survey 25th percentile work RVU of 10.25 appropriately accounts for the physician work required to perform CPT code 66680. The RUC recommends 30 minutes pre-service evaluation time, 3 minutes pre-service positioning time, 6 minutes pre-service scrub/dress/wait time, 45 minutes intra-service time, 10 minutes immediate post-service time, 0.5-99238 and 3-99213 post-service visits, which equals 182 minutes of total time. The RUC confirmed that three postoperative visits are typical and include visual acuity and intraocular pressure checks, gonioscopy to assess the status of the anterior chamber angle, and examination of the peripheral retina for breaks.

To support a work RVU value of 10.25, the RUC compared the surveyed code to the top two key reference services CPT codes 66982 *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (work RVU = 10.25, 30 minutes intra-service time, and 175 minutes total time) and 66183 *Insertion of anterior segment aqueous drainage device, without extraocular reservoir, external approach* (work RVU = 13.20, 45 minutes intra-service time, and 257 minutes total time). The RUC determined the surveyed code was comparable to the top key reference service as both require identical physician work and similar time; moreover, the RUC noted that the second key reference service is an accurate comparator to the surveyed code because both require the same intensity and complexity to perform.

For additional support, the RUC referenced MPC code 57250 *Posterior colporrhaphy, repair of rectocele with or without perineorrhaphy* (work RVU = 10.08, 60 minutes intra-service time, and 211 minutes total time) and CPT code 67316 *Strabismus surgery, recession, or resection procedure; 2 or more vertical muscles (excluding superior oblique)* (work RVU = 10.31, 45 minutes intra-service time, and 164 minutes total time). The RUC noted that together these two codes appropriately bracket the survey 25th percentile work RVU, wherein CPT code 67316 has identical intra-service time, though slightly shorter total time, when compared to the surveyed code. **The RUC recommends a work RVU of 10.25 for CPT code 66680.**

66682 ***Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture)***
The RUC reviewed the survey results from 34 ophthalmologists and determined that the survey 25th percentile work RVU of 10.87 appropriately accounts for the physician work required to perform CPT code 66682. The RUC recommends 33 minutes pre-service evaluation time, 3 minutes pre-service positioning time, 7 minutes scrub/dress/wait time, 45 minutes intra-service time, 10 minutes immediate post-service time, 0.5-99238, 3-99213 and 1-99212 post-service visits, which equals 202 minutes of total time. The RUC confirmed that four postoperative visits are typical and include visual acuity and intraocular pressure checks and slit lamp examinations. Three of the visits include dilated examinations of the macula for cystoid edema and the peripheral retina for breaks; an additional visit is typical for continued treatment of inflammation from iris manipulation.

To support a work RVU value of 10.87, the RUC compared the surveyed code to the to the top key reference services 66982 *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (work RVU = 10.25, 30 minutes intra-service time, and 175 minutes total time) and 66170 *Fistulization of sclera for glaucoma; trabeculectomy ab externo in absence of previous surgery* (work RVU = 13.94, 45 minutes intra-service time, and 278 minutes total time). The RUC determined the surveyed code was comparable to the top key reference service as they both require similar physician work and time to perform; moreover, the RUC noted that the second key reference services is an accurate comparator to the surveyed code because both require the same intensity and complexity to perform.

For additional support, the RUC referenced MPC code 54437 *Repair of traumatic corporeal tear(s)* (work RVU = 11.50, 60 minutes intra-service time, and 264 minutes total time) and noted that the intra-service and total time is greater, therefore the reference code is valued higher. The RUC also compared the surveyed code to CPT code 67316 *Strabismus surgery, recession or resection procedure; 2 or more vertical muscles (excluding superior oblique)* (work RVU = 10.31, 45 minutes intra-service time and 164 minutes total time) and noted the identical intra-service time. Furthermore, the 25th percentile work RVU for the surveyed code maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 10.87 for CPT code 66682.**

6X004 ***Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed***
The RUC reviewed the survey results from 31 ophthalmologists and determined that the survey 25th percentile work RVU of 12.80 appropriately accounts for the physician work required to perform CPT code 6X004. The RUC recommends 33 minutes pre-service evaluation time, 3 minutes pre-service positioning time, 7 minutes scrub/dress/wait time, 60 minutes intra-service time, 10 minutes immediate post-service time, 0.5-99238

and 4-99213 post-service visits, which equals 224 minutes of total time. The RUC confirmed that four postoperative visits are typical, and include visual acuity and intraocular pressure checks, slit lamp examinations, gonioscopy to assess the status of the anterior chamber angle, and examination of the peripheral retina for breaks.

To support a work RVU value of 12.80, the RUC compared the surveyed code to the top key reference services 66170 *Fistulization of sclera for glaucoma; trabeculectomy ab externo in absence of previous surgery* (work RVU = 13.94, 45 minutes intra-service time, and 278 minutes total time) and 66982 *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (work RVU = 10.25, 30 minutes intra-service time, and 175 minutes total time). The RUC determined the surveyed code was comparable to the top key reference service in terms of measured complexity and intensity, as well as intra-service and total time; moreover, the RUC noted that the survey 25th percentile work RVU maintains rank order with the other services in this code family.

For additional support, the RUC referenced MPC code 57288 *Sling operation for stress incontinence (eg, fascia or synthetic)* (work RVU = 12.13, 60 minutes intra-service time, and 246 minutes total time) and CPT code 67039 *Vitrectomy, mechanical, pars plana approach; with focal endolaser photocoagulation* (work RVU = 13.20, 60 minutes intra-service time and 260 minutes total time). The RUC determined the surveyed code was equivalent to MPC code 57288 and CPT code 67039 in terms of intra-service time and noted that the referenced services bracket the survey 25th percentile work RVU. **The RUC recommends a work RVU of 12.80 for CPT code 6X004.**

Practice Expense
The Practice Expense Subcommittee reviewed the direct practice expense inputs and made no modifications to the standard 090-day global inputs. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

New Technology
CPT code 6X004 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:66680 Tracking Number A1 Original Specialty Recommended RVU: **10.25**
Presented Recommended RVU: **10.25**
Global Period: 090 Current Work RVU: **6.39** RUC Recommended RVU: **10.25**

CPT Descriptor: Repair of iris, ciliary body (as for iridodialysis).

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 24-year-old man has an iridodialysis following blunt trauma to the right eye. He complains of poor vision and diplopia and is referred for iris repair.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 26% , In the ASC 74%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The preoperative work-up, including the patient's medical history, physical examination findings, and laboratory study results, is reviewed. The operative eye is marked. The patient's questions are answered, and informed consent is obtained. The patient is positioned on the operating room table, and a surgical time-out is performed. Local (peribulbar or retrobulbar) anesthesia is administered. A surgical scrub is performed, and sterile gloves and gown are donned. The eye is prepped and draped in the usual sterile fashion. A plastic adhesive drape is applied and incised. A lid speculum is inserted. The operating microscope is swung into position and adjusted.

Description of Intra-Service Work: A conjunctival peritomy is created adjacent to the iridodialysis and hemostasis is achieved with cautery. A scleral tunnel is created. Paracenteses are created 90 and 180 degrees away from the iris defect. The anterior chamber is filled with viscoelastic. Iris hooks and viscoelastic are used to release posterior and anterior synechiae. Viscoelastic and intraocular micro-graspers are then used to unroll and position the iris in a flat plane. Bleeding is controlled with viscoelastic tamponade.

One arm of a double-armed 10-0 polypropylene suture on long straight needles is passed through the paracentesis 180 degrees from the defect and across the anterior chamber. A micro-grasper is placed through one of the paracenteses 90 degrees from the iris defect and used to guide the needle through the free peripheral edge of the iris. A 27-gauge needle is then passed through the scleral pocket at the level of the scleral spur peripheral to the defect. The 10-0 polypropylene needle is docked within the lumen of the 27-guage needle and withdrawn. The second arm of the 10-0 suture is similarly placed through the paracentesis, the free edge of iris, and the sclera. These maneuvers are repeated with a second and third set of double-armed polypropylene sutures adjacent to the prior suture placement. Micro-graspers are used to bend the needles to facilitate their removal through the sclera without distorting the iris. Additional sutures may be necessary for a large iridodialysis. Bleeding is controlled as needed with additional viscoelastic tamponade.

Once enough sutures have been placed to close the iris defect, the needles are removed, and the sutures are tied with slip knots within the scleral pocket in a mattress fashion. The iris surface is then further smoothed with a cannula and a cholinergic agent placed in the anterior chamber. The sutures tensions are adjusted, the knots are locked and rotated into the sclera.

Remaining viscoelastic is removed from the anterior chamber through the paracenteses using aspiration. The anterior chamber is deepened and the pressure in the eye is adjusted by injection of balanced salt solution. The paracenteses are

tested for watertightness and sutured if necessary. The conjunctiva is closed. The lid speculum and drapes are removed. The eye patched and shielded with antibiotic ointment.

Description of Post-Service Work: The outcome of the procedure is discussed with the patient and the patient's family. Instructions on activity limitations and follow-up are given and explained. A note is placed in the patient's medical record, and an operative report is completed. Correspondence for the referring doctor is prepared. Prescriptions are written for postoperative medications.

Three postoperative visits are typical and include visual acuity and intraocular pressure checks, gonioscopy to assess the status of the anterior chamber angle, and examination of the peripheral retina for breaks.

SURVEY DATA

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	9%	27%	45%	18%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	27%	18%	55%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	45%	55%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	45%	55%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	70%	10%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	40%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	40%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66680, *Repair of iris, ciliary body (as for iridodialysis)* is in a family of 090-day global iris repair codes with the new CPT code 6X004, *Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed*. CPT 66682, *Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture)* is also in the family. All three services are being reviewed at this meeting.

CPT 66680 is performed to surgically repair a torn iris root, typically after surgical or non-surgical trauma. Cases are more common in a younger cohort prone to trauma. Medicare claims volume is very low (363 in 2021) and is not growing. The code is Harvard valued and has never been RUC-reviewed. It is not typically performed in conjunction with other surgical procedures.

The evolution of the existing procedures in this family, CPT 66680 and 66682, as well as the survey data, support an increase in work values.

Compelling Evidence

We present compelling evidence for an increase in value for both existing codes in this family, CPT 66680 and 66682, based on changes in:

- Technique
- Physician time
- Incorrect assumptions made in previous valuation

The change in operative technique alone is sufficient compelling evidence for an increase in value.

Iridodialysis repair technique has changed dramatically from the way the procedure was performed in 1992. [1-6] Long, often blind needle passes were typically made without the advantage of intraocular micro-instrumentation to unroll the iris and dissect adhesions between the iris, the lens, the anterior chamber angle, and the cornea. These simple needle passes were less effective in closing irregular iris defects and left patients at risk for segmental synechial angle closure because it was impossible in most cases to engage the edge of avulsed iris near the iris root with the needle.

With the adoption of micromanipulators, iris retractors, double-armed long-polypropylene sutures, and techniques utilizing a docking needle with a lumen, the procedure began evolving in the mid 1990s and now typically includes careful dissection of the iris from surrounding tissues, unfurling it to identify the peripheral avulsed edge, and engaging that edge to obtain a more anatomically correct re-apposition of the iris tissue in the anterior chamber angle.[1-6] Although the operative techniques have changed, none of the changes represent new technology.

Increased physician surgical time is required to accomplish the detailed dissection, more precise needle placement, and multiple suture passes needed to re-establish a more normal iris anatomy.

Harvard data used for development of the work values in 1992 are so out-of-date that they are regularly demonstrated to be inaccurate when compared to more recent RUC survey data. While the difference usually results in reduced times and work values, in this case the Harvard data fails to recognize the pre-service evaluation time and the intensity and complexity of the procedure as currently performed.

RUC Survey

We surveyed a random sample of members the American Academy of Ophthalmology and the American Society of Cataract and Refractive Surgeons (“AAO/ASCRS” data}. Because iris prosthesis insertion is performed by few ophthalmologists at this time, we also randomly surveyed a list obtained from VEO Ophthalmics, the marketer of the only FDA-approved version of the prosthesis, of all US surgeons who have implanted it (“VEO” data). We present the data from each random survey in addition to the combined data.

We received 35 responses (31 AAO/ASCRS, 4 VEO). The expert panel of members from AAO, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The vignette was considered typical by 86% (87% AAO/ASCRS, 75% VEO). The service performance rates were low, with 23% (8/35) non-performers. This is not unusual for a complex procedure which is infrequently performed and performed by few ophthalmologists. The median performance rate was 2. Nevertheless, based on pre-facilitation discussions, we present the performer and non-performer data separately in the Summary Spreadsheet. The separate analysis did not alter our recommendations.

The current work value of CPT 66680 is 6.39 RUV with an IST of 45 minutes. The survey median work value was 12.13 RVU (12.13 AAO/ASCRS, 11.75 VEO) and the 25th percentile was 10.25 RVU (10.25 AAO/ASCRS, 10.50 VEO). The median IST was 45 minutes (43 AAO/ASCRS, 53 VEO).

The top key reference service (KRS), chosen by 31%, was CPT 66982, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (RUC 2019), with a work value of 10.25 RVU, an IST of 30 minutes, and a total time of 175 minutes. The second reference service for both groups, chosen by 29%, was CPT 66183, *Insertion of anterior segment aqueous drainage device, without extraocular reservoir, external approach* (RUC 2013), with a work value of 13.20 RVU, an IST of 45 minutes, and a total time of 257 minutes.

Respondents rated the surveyed code higher than KRS on overall intensity/complexity and all the submeasures except physical effort, which was rated identical. The surveyed code was rated higher than the second reference service on overall intensity/complexity and all submeasures.

None of the RSL codes was chosen by a majority of respondents. The only other code chosen by greater than 10% of respondents was CPT 66170, Fistulization of sclera for glaucoma; trabeculectomy ab externo in absence of previous surgery (RUC 2015), with a work value of 13.94 RVU, an IST of 45 minutes, and a total time of 278 minutes, substantially greater than the survey median work value and total time.

The survey median IST of 45 minutes is appropriate for the surgical manipulations required to release adhesions to the cornea, anterior chamber angle, and lens, unroll an iris which is typically friable using intraocular micromanipulators and viscoelastic to expose the avulsed peripheral edge, maintain hemostasis, and place multiple mattress sutures via a docking needle to restore normal anatomy. This time is identical to the current Harvard value. This is a marked departure from the significant decrease in ISTs usually seen when Harvard-valued codes are surveyed. A survey median IST identical to the Harvard value is consistent with an increase in intra-operative work.

The survey responses note 3 postoperative visits (3 AAO/ASCRS, 4 VEO), with both groups selecting one level 4 visit and the remainder level 3 visits. The panel agreed with three postoperative visits. We reduced the level 4 visit to a level 3. These are typically performed one day, one week, and four to eight weeks after surgery. The typical patient is post-blunt trauma with significant inflammation, unstable intraocular pressure (IOP), and at risk for retinal detachment and progressive angle closure throughout the postoperative period. Each of the three postoperative visits requires gonioscopy and careful dilated examination of the macula for cystoid edema and the peripheral retina for breaks in addition to the visual acuity and pressure check and slit lamp examination that comprise a typical level 2 postoperative visit. Postoperative medications, including IOP lowering medications, corticosteroids and NSAIDs to manage inflammation, as well as cycloplegics are typically adjusted at each of the postoperative visits.

We chose pre-service package 3 (straightforward patient, difficult procedure). These are complex cases with multiple potential ocular comorbidities requiring extensive pre-operative assessment and discussion with the patient. We reduced the package pre-service evaluation time from 33 minutes to the survey median of 30 minutes. We reduced the survey positioning time of 5 minutes to the package time of 3 minutes. We reduced the package scrub/dress/wait time from 15 minutes to match the survey time of 6 minutes. Profound anesthesia is required for the uveal manipulations in these cases, necessitating a longer wait for the anesthetic injection to take effect than for uncomplicated lens surgery.

We used the survey post-service time median of 10 minutes, which is less than the 18 minutes of post-service time package 7A (local anesthesia, straightforward procedure), and one-half of a 99238 visit for discharge day management as is RUC protocol for outpatient procedures. Although respondents did not report a discharge day management service, we note that ophthalmologists never bill these codes because they don't manage inpatients. Respondents would be unfamiliar with these codes and would not be expected to choose them in the survey. Nevertheless, the work and time are required. Inclusion of half of a discharge day management service is standard across almost all outpatient surgical procedures and has been included even in the absence of survey support. Excluding it would distort the relativity in the database.

Total recommended time for the procedure is 182 minutes, with an IST of 45 minutes.

A RUC database search for 45-minute IST 090-day global codes surveyed within the past 10 years returned 15 results with work values ranging from 5.42 to 13.94 RVU. The only code with the same number and level of postoperative visits, CPT 53850, *Transurethral destruction of prostate tissue; by microwave thermotherapy* (RUC 2018) is a poor match as it has 31 minutes less total time, a much lower IWPUT than is appropriate for an intraocular procedure on a severely traumatized eye, and a work value of 5.42 RVU, which is below the survey low value.

In the absence of an ideal crosswalk, we chose the survey 25th percentile estimate of work value of 10.25 RVU. This value is supported by the KRS, CPT 66982 (complex cataract surgery), which has the identical work value and almost identical total time, but a shorter IST at 30 minutes. It is also supported by CPT 67316, *Strabismus surgery, recession or resection procedure; 2 or more vertical muscles (excluding superior oblique)* (RUC 2020), with a work value of 10.31 RVU, an identical IST of 45 minutes, and a slightly shorter total time of 164 minutes.

We recommend a work value of 10.25 RVU for CPT 66680, the survey 25th percentile, with times of 39/45/10 and a total time of 182 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 66680

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1500
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims data and typical age of patients

Specialty Ophthalmolgy Frequency 1500 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 363
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Medicare claims data

Specialty Ophthalmology Frequency 363 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

SUMMARY OF RECOMMENDATION

CPT Code:66682 Tracking Number A2 Original Specialty Recommended RVU: **10.87**
Presented Recommended RVU: **10.87**
Global Period: 090 Current Work RVU: **7.33** RUC Recommended RVU: **10.87**

CPT Descriptor: Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture).

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old man had complicated cataract surgery with intraocular lens implantation resulting in a decentered lens in the left eye. He complains of monocular diplopia and is referred for iris fixation of the lens with a McCannel suture.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 24% , In the ASC 76%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The preoperative work-up, including the patient's medical history, physical examination findings, and laboratory study results, is reviewed. The operative eye is marked. The potential intraoperative interventions are discussed, the patient's questions are answered, and informed consent is obtained. The patient is positioned on the operating room table, and a surgical time-out is performed. Local (peribulbar or retrobulbar) anesthesia is administered. A surgical scrub is performed, and sterile gloves and gown are donned. The eye is prepped and draped in the usual sterile fashion. A plastic adhesive drape is applied and incised. A lid speculum is inserted. The operating microscope is swung into position and adjusted.

Description of Intra-Service Work: A reverse scleral pocket is created at the limbus adjacent to the location of the planned intraocular suture placement. Two paracenteses are created 90 degrees away. Viscoelastic is placed in the anterior chamber. Hooks and viscoelastic introduced through the paracenteses are used to bluntly dissect posterior and anterior synechiae. Bleeding is controlled with viscoelastic tamponade and as needed, intraocular epinephrine. Hooks are then used to retract the iris and inspect the intraocular lens (IOL)/capsular bag complex for 360 degrees to assess the extent of zonular instability and determine whether more extensive intervention with capsular tension rings is required. A hook passed through one paracentesis is used to retract the iris and is then passed between the intraocular lens (IOL) and the posterior capsule to center and elevate the IOL so that the lens haptic can be visualized through the iris during the placement of the suture. A single-armed 10-0 polypropylene suture on a long, curved needle is advanced through the cornea and iris, behind the lens haptic, back up through the iris, and out through the cornea in a single pass while the IOL is maintained in proper position by hooks or micro-graspers. The needle is removed. The anterior chamber is entered through two adjacent incisions made within the bed of the scleral pocket. A hook or micro-grasper is passed through each incision to retrieve the suture material on each side of the iris. The suture is tied using a slip knot. The knot is gradually tightened and IOL centration monitored until the lens is well-centered. The knot it locked.. The suture ends are trimmed and repositioned back into the anterior chamber. The viscoelastic is removed via the paracenteses using aspiration. The pressure in the eye is adjusted with injection of balanced salt solution into the anterior chamber. The paracenteses are tested for watertightness and sutured if necessary. The lid speculum and drapes are removed. The eye is patched and shielded with antibiotic ointment.

Description of Post-Service Work: The outcome of the procedure is discussed with the patient and the patient's family. Instructions on activity limitations and follow-up are given and explained. A note is placed in the patient's medical record, and an operative report is completed. Correspondence for the referring doctor is prepared. Prescriptions are written for postoperative medications.

Four postoperative visits are typical and include visual acuity and intraocular pressure checks, and slit lamp examinations. Three of the visits include dilated examinations of the macula for cystoid edema and the peripheral retina for breaks.

• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	25%	75%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required	0%	0%	100%
Physical effort required	0%	0%	100%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	12%	25%	62%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 66682, *Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture)* is in a family of 090-day global iris repair codes with the new CPT code 6X004, *Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed*. CPT 66680, *Repair of iris, ciliary body (as for iridodialysis)* is also in the family. All three services are being reviewed at this meeting.

CPT 66682 is most often performed to repair a decentered intraocular lens (IOL) in a pseudophakic patient. Claims volume was 1,362 in 2021 and has not been increasing. The code is Harvard valued and has never been RUC-reviewed. It is typically performed in conjunction with another surgical procedure, either vitrectomy (CPT 67036 or 67010), IOL exchange (CPT 66986), or secondary IOL insertion (CPT 66985). All of these are subject to the 50% multiple procedure payment reduction. CPT 66682 is not performed over 50% of the time with any single one of these procedures.

The evolution of the existing procedures in this family, CPT 66680 and 66682, as well as the survey data, support an increase in work values.

Compelling Evidence

We present compelling evidence for an increase in value for both existing codes in this family, CPT 66680 and 66682, based on changes in:

- Technique
- Physician time
- Incorrect assumptions made in previous valuation

The operative techniques employed in small incision repair of the iris (McCannel suture) have changed dramatically since the procedure was first described in 1976.[1]

The typical case involves re-fixation and centration of a dislocated IOL. More options for repair exist than in 1992, including newer iris and scleral fixation techniques, use of capsular tension rings, the ability to release synechiae that were previously considered inoperable, and newer vitrectomy techniques to remove vitreous that may be present.[2-6] These options need to be considered pre-operatively and discussed with the patient, as the technique chosen is influenced by intra-operative findings. None of these advances in operative technique represent new technology.

During surgery, a single long needle pass made without direct visualization followed by retrieval of the suture has been supplanted with the use of iris hooks and retractors to inspect the lens/capsular bag complex for the extent of zonular instability and presence of vitreous in the anterior or posterior chamber. Viscoelastic and blunt dissection are now used to release anterior and posterior synechiae that were previously left untreated. Hooks and micro-graspers have been refined so that they may now be used to position the IOL and facilitate more precise passage of the needle to capture the IOL haptic, resulting in better lens centration, less lens tilt, and less pupil distortion than in the past. Reverse scleral (Hoffman) pockets are now created to reduce the risk of suture erosion (in comparison to no pockets in the past). Capsular tension rings and scleral fixation techniques are available when needed for cases with more severe zonular or capsular damage requiring additional stability.

Increased physician surgical time is required to accomplish detailed dissection and more precise needle placement used to better center the IOL, restore more normal iris and pupil anatomy, and reduce segmental angle closure due to anterior synechiae. The additional intraocular manipulations lead to better visual outcomes than were typical 30 years ago.

Harvard data used for development of the work values in 1992 are so out-of-date that they are regularly demonstrated to be inaccurate when compared to more recent RUC survey data. While the difference usually results in reduced times and work values, in this case the intra-service time increased. In addition, Harvard data fails to recognize the pre-service evaluation time and the intensity and complexity of the procedure as currently performed.

RUC Survey

We surveyed a random sample of members the American Academy of Ophthalmology and the American Society of Cataract and Refractive Surgeons ("AAO/ASCRS" data}. Because iris prosthesis insertion is performed by few ophthalmologists at this time, we also randomly surveyed a list obtained from VEO Ophthalmics, the marketer of the only FDA-approved version of the prosthesis, of all US surgeons who have implanted it ("VEO" data). We present the data from each random survey in addition to the combined data.

We received 34 responses (30 AAO/ASCRS, 4 VEO). The expert panel of members from AAO, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The vignette was considered typical by 82% (83% AAO/ASCRS, 75% VEO). The service performance rates were low, with 18% (6/34) non-performers. This is not unusual for a complex procedure which is infrequently performed and

performed by few ophthalmologists. The median performance rate was 3. Nevertheless, based on pre-facilitation discussions, we present the performer and non-performer data separately in the Summary Spreadsheet. The separate analysis did not alter our recommendations.

As detailed in the "Services Reported with multiple CPT Codes" section of the SOR, CPT 66682 is typically performed with one or more same-day surgical procedures, most commonly vitrectomy or intraocular lens (IOL) insertion or exchange. This is due to the complex nature of these cases. Ocular comorbidities or inability to adequately recenter an existing IOL often necessitate additional intraoperative interventions. These procedures are all subject to the 50% multiple procedure payment reductions (MPPR). CPT 66682 is not typically performed with a same-day office visit. Therefore, we did not adjust any of our recommendations for same-day procedures.

The current work value of CPT 66682 is 7.33 RUV with an IST of 38 minutes. The survey median work value was 12.30 RVU (12.30 AAO/ASCRS, 12.75 VEO) and the 25th percentile was 10.87 RVU (10.45 AAO/ASCRS, 11.88 VEO). The median IST was 45 minutes (45 AAO/ASCRS, 60 VEO).

The top key reference service (KRS), chosen by 38%, was CPT 66982, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (RUC 2019), with a work value of 10.25 RVU, an IST of 30 minutes, and a total time of 175 minutes. The second reference service for both groups, chosen by 24%, was CPT 66170, *Fistulization of sclera for glaucoma; trabeculectomy ab externo in absence of previous surgery* (RUC 2015), with a work value of 13.94 RVU, an IST of 45 minutes, and a total time of 278 minutes.

Respondents rated the surveyed code higher than the KRS on overall intensity/complexity and all the submeasures except psychological stress, which was rated identical. The surveyed code was rated higher than the second reference service on overall intensity/complexity and all submeasures.

None of the RSL codes was chosen by a majority of respondents. The only other codes chosen by greater than 10% of respondents were CPT 67036, Vitrectomy, mechanical, pars plana approach; (RUC 2013), with a work value of 12.13 RVU, an IST of 50 minutes, and a total time of 250 minutes; and CPT 66183, Insertion of anterior segment aqueous drainage device, without extraocular reservoir, external approach (RUC 2013), with a work value of 13.20 RVU, an IST of 45 minutes, and a total time of 257 minutes. The total times are substantially greater than that of the surveyed code.

The survey median IST of 45 minutes is appropriate for the surgical manipulations required to release adhesions to the cornea, anterior chamber angle, and IOL, capture and center the IOL with hooks or micro-graspers, create the Hoffman pocket, and place the sutures necessary to maintain a well-centered IOL with no tilt. This time is longer than the current Harvard value, which is a marked departure from the significant decrease in ISTs usually seen when Harvard-valued codes are surveyed. This is consistent with the increased intra-operative work compared to the techniques employed in 1992.

The survey responses found four level-3 postoperative visits (AAO/ASCRS: four level 3; VEO: one level 4 and three level 3). The panel agreed with four postoperative visits. We reduced the level of the one-day postoperative visit to level 2. This is a pressure and visual acuity check and slit lamp exam to assess inflammation, gross IOL centration, and wound integrity. Additional postop visits are typically performed one week, one month, and two to three months after surgery. These are level 3 visits including a dilated examination to visualize the edge of the IOL for more precise assessment of centration and stability, and a careful examination of the macula for cystoid edema and the peripheral retinal for breaks. This is in addition to the typical vision and pressure checks and slit lamp exam performed for a level 2 postoperative visit. Inflammation is typically significant due to iris manipulation, requiring management with frequent adjustments of topical NSAID and corticosteroid medications at each visit.

We chose pre-service package 3 (straightforward patient, difficult procedure). These are complex cases with multiple potential ocular comorbidities and multiple potential surgical interventions which must be evaluated and discussed with the patient. We reduced the survey pre-service evaluation time from 34 minutes to the package value of 33 minutes. We reduced the survey positioning time of 5 minutes to the package time of 3 minutes. We reduced the package scrub/dress/wait time from 15 minutes to match the survey time of 7 minutes. Profound anesthesia is required for the uveal manipulations in these cases, necessitating a longer wait for the anesthetic injection to take effect than for uncomplicated lens surgery.

We used the survey post-service time median of 10 minutes, which is less than the 18 minutes of post-service time package 7A (local anesthesia, straightforward procedure), and one-half of a 99238 visit for discharge day management as is RUC protocol for outpatient procedures. Although respondents did not report a discharge day management service, we note that ophthalmologists never bill these codes because they don't manage inpatients. Respondents would be unfamiliar with these codes and would not be expected to choose them in the survey. Nevertheless, the work and time are required. Inclusion of half of a discharge day management service is standard across almost all outpatient surgical procedures and has been included even in the absence of survey support. Excluding it would distort the relativity in the database.

Total recommended time for the procedure is 202 minutes, with an IST of 45 minutes.

A RUC database search for 45-minute IST 090-day global codes surveyed within the past 10 years returned 15 results with work values ranging from 5.42 to 13.94 RVU. None were a match for number and level of postoperative visits. The closest match for total time with 199 minutes is CPT 19328, *Removal of intact breast implant* (RUC 2019), with six postoperative visits, a much shorter evaluation time, and a work value 7.44, well below the survey 25th percentile value. The IWPUT of this code is also well below that of any intraocular procedure, making it a poor comparison.

We recommend the survey 25th percentile estimate of work value of 10.87 RVU. This value is supported by CPT 67316, Strabismus surgery, recession or resection procedure; 2 or more vertical muscles (excluding superior oblique) (RUC 2020), with a work value of 10.31 RVU, an identical IST of 45 minutes, and one less postop visit. This value also maintains the rank order with the other existing service in the family, CPT 66680 (iridodialysis repair).

We recommend a work value of 10.87 RVU for CPT 66682, the survey 25th percentile, with times of 43/45/10 and a total time of 202 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT	Global	RVU	Pre	Intra	Post	Total Time	% Billed Together
3.	67036	090	12.13	51	50	149	250	35.5%
4.	66985	090	9.98	48	40	139	227	27.6%
5.	66986	090	12.26	60	90	110	260	27.6%

6. These are complex cases which may include other significant comorbidities secondary to complications of prior cataract surgery. A pars plana vitrectomy (CPT 67036) is necessary when an intraocular lens is dislocated posteriorly. A secondary IOL (CPT 66985) is needed if no IOL was inserted during the prior cataract procedure. A lens exchange is needed if the existing IOL is damaged or of a type that cannot be fixated with sutures. Each of these procedures is subject to the MPPR

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 66682

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 2700
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims data

Specialty Ophthalmolgy Frequency 2700 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,362
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare claims data

SUMMARY OF RECOMMENDATION

CPT Code:6X004 Tracking Number A3 Original Specialty Recommended RVU: **12.80**
Presented Recommended RVU: **12.80**
Global Period: 090 Current Work RVU: **N/A** RUC Recommended RVU: **12.80**

CPT Descriptor: Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 44-year-old male patient presents with acquired aniridia from a penetrating injury to the left eyelid, cornea, iris, and lens. Emergency treatment at the time of the injury stabilized the left eye, however the patient has persistent debilitating glare from partial aniridia. The surgeon implants an artificial iris in front of the previously implanted intraocular lens.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 23% , In the ASC 77%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The preoperative work-up, including the patient's medical history, physical examination findings, and laboratory study results, is reviewed. The operative eye is marked. The patient's questions are answered, and informed consent is obtained. The patient is positioned on the operating room table, and a surgical time-out is performed. Local (peribulbar or retrobulbar) anesthesia is administered. A surgical scrub is performed, and sterile gloves and gown are donned. The eye is prepped and draped in the usual sterile fashion. A plastic adhesive drape is applied and incised. A lid speculum is inserted. The operating microscope is swung into position and adjusted.

Description of Intra-Service Work: A paracentesis is made into the anterior chamber superiorly. A self-sealing clear corneal incision is made temporally. A vitrectomy handpiece is inserted through the corneal incision and a chamber maintainer is placed in the paracentesis. Vitreous present in the anterior chamber is removed with the high-speed vitreous cutter and aspiration.

A viscoelastic agent is injected to deepen the anterior chamber. Viscoelastic and sharp dissection are used to release synechiae between the remaining iris anteriorly and the lens capsule and intraocular lens posteriorly. Necrotic iris tissue is excised. Bleeding is controlled with intraocular epinephrine and injection of additional viscoelastic. Centration and stability of the intraocular lens (IOL) are tested with hooks. The IOL/capsular bag complex is centered and stabilized with a capsular tension ring. A scleral pocket and polypropylene or Gortex scleral sutures are placed as needed.

Radial incisions are placed in areas of fibrotic anterior capsule to relieve capsular phimosis. A 27-gauge needle attached to a viscoelastic syringe is used to dissect the anterior lens capsule from the surface of the IOL.

Calipers are used to measure the white-to-white distance to size the artificial iris implant. The implant is trephined to the appropriate diameter. Microscissors are used to create 2 peripheral iridotomies in the implant. The implant is loaded into an injection cartridge lined with viscoelastic. The cartridge tip is inserted through the corneal incision and the implant is advanced into the anterior chamber. Hooks are used to position the implant in the capsular bag if the capsule has been fully freed from the IOL surface. Otherwise, the implant is placed in the sulcus anterior to the capsular bag/IOL complex. Polypropylene sutures are used as needed to stabilize the implant when there are peripheral defects in the zonular support system.

Remaining viscoelastic is aspirated with an irrigation/aspiration/cutter handpiece. Any residual vitreous is removed from the anterior chamber with the vitrectomy handpiece. The pressure in the eye is adjusted with the injection of intraocular balanced salt solution. The incisions are tested for integrity and corneoscleral sutures placed as needed. The lid speculum and drapes are removed. The eye is patched and shielded with antibiotic ointment.

Description of Post-Service Work: The outcome of the procedure is discussed with the patient and the patient's family. Instructions on activity limitations and follow-up are given and explained. A note is placed in the patient's medical record, and an operative report is completed. Correspondence for the referring doctor is prepared. Prescriptions are written for postoperative medications.

Four postoperative visits are typical, and include visual acuity and intraocular pressure checks, slit lamp examinations, gonioscopy to assess the status of the anterior chamber angle, and examination of the peripheral retina for breaks.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

6X004, *Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed* is a new 090-day global CPT code which describes insertion of an artificial iris into an eye with a partial or complete iris defect due to a congenital defect or surgical or non-surgical trauma. These patients suffer disabling glare and/or monocular diplopia.

CPT 6X004 replaces three Category III codes, each of which described a separate clinical scenario: stand-alone insertion (0616T), insertion combined with complex or non-complex cataract and IOL surgery (0617T), and insertion combined with

secondary IOL insertion or IOL exchange (0618T). The three Category III codes were replaced with a single Category I code to simplify reporting.

It is expected that CPT 6X004 will typically be reported with one or more same-day surgical procedures. It is not anticipated that any specific code combinations will predominate or come close to the 75% threshold necessitating creation of a combination code. Medicare claims data is sparse, with only 42 claims in 2021. Fifteen cases (36%) were performed without concomitant surgery. Nine (21%) were performed with either complex or standard cataract/IOL surgery, which will now be reported separately with either CPT 66982 or 66984. Eighteen (43%) were performed with either a secondary IOL or IOL exchange, which will now be reported separately with either CPT 66985 or 66986. When 6X004 is reported with any of these other services, it will be subject to the 50% multiple procedure payment reduction. Iris prosthesis insertion is not typically performed with a same-day office visit. Therefore, we did not adjust any of our recommendations for same-day procedures.

The other 090-day global codes in the iris repair family which are being reviewed at this meeting are CPT 66680, *Repair of iris, ciliary body (as for iridodialysis)*, and CPT 66682, *Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture)*.

We surveyed a random sample of members the American Academy of Ophthalmology and the American Society of Cataract and Refractive Surgeons ("AAO/ASCRS" data}. Because iris prosthesis insertion is performed by few ophthalmologists at this time, we also randomly surveyed a list obtained from VEO Ophthalmics, the marketer of the only FDA-approved version of the prosthesis, of all US surgeons who have implanted it ("VEO" data). We present the data from each random survey in addition to the combined data.

We received 31 responses (27 AAO/ASCRS/4 VEO). The expert panel of members from AAO, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The vignette was considered typical by 84% (81% AAO/ASCRS, 100% VEO). The service performance rates were low, with 42% (13/31) non-performers. This is not unusual for a complex procedure which is infrequently performed and performed by few ophthalmologists. The iris prosthesis device was approved by the FDA under the humanitarian device exemption due to its infrequent utilization. The median performance rate was 1. Nevertheless, based on pre-facilitation discussions, we present the performer and non-performer data separately in the Summary Spreadsheet. The separate analysis did not alter our recommendations.

The survey median work value was 14.01 RVU (14.00 AAO/ASCRS, 15.93 VEO) and the 25th percentile was 12.80 RVU (12.55 AAO/ASCRS, 13.89 VEO). The median IST was 60 minutes (60 AAO/ASCRS, 83 VEO).

The top key reference service (KRS) for both groups, chosen by 58%, was CPT 66170, *Fistulization of sclera for glaucoma; trabeculectomy ab externo in absence of previous surgery* (RUC 2015), with a work value of 13.94 RVU, an IST of 45 minutes, and a total time of 278 minutes. The second reference service for both groups, chosen by 19%, was CPT 66982, *Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation* (RUC 2019), with a work value of 10.25 RVU, an IST of 30 minutes, and a total time of 175 minutes.

Respondents ranked the surveyed code much higher than the KRS on the overall intensity/complexity index and on each of the submeasures. They ranked the surveyed code higher than the second reference service on the overall intensity/complexity measure and the submeasures other than physical effort and psychological stress, which they rated identical.

The only other RSL code chosen by greater than 10% of respondents was CPT 66183, Insertion of anterior segment aqueous drainage device, without extraocular reservoir, external approach (RUC 2013), with a work value of 13.20 RVU, an IST of 45 minutes, and a total time of 257 minutes.

The panel agreed with the survey median IST of 60 minutes as necessary for the multiple complex intraocular maneuvers required to prepare the eye for insertion of the iris prosthesis. These typically include micro-dissection of remaining iris tissue, removing adhesions in the angle, to the cornea, and to the lens or intraocular lens and lens capsule, control of

intraocular bleeding, removal of vitreous from the anterior segment, and opening a space in the posterior chamber or within the capsular bag for placement of the prosthesis. These maneuvers are described in greater detail in the description of intra-service work.

The survey respondents reported four postoperative visits (4 AAO/ASCRS, 6 VEO), all level 3. The panel agreed with the number and level of postoperative visits. Postoperative visits typically occur 1 day, 1 week, 2-4 weeks, and 6-12 weeks after surgery. These are very unstable eyes with unstable intraocular pressure (IOP), significant inflammation, and risk of angle closure from development or recurrence of synechiae. In addition to the visual acuity, pressure check and slit lamp examination commensurate with a level 2 visit, examination of the angle with gonioscopy to check for synechia formation and proper sizing and centration of the iris prosthesis is performed at every postoperative visit. An examination of the peripheral retina for breaks is performed at the second, third, and fourth postoperative visits. Examining the peripheral retina is difficult and time-consuming in these patients because they cannot be dilated; the pupil is fixed by the prosthesis. Additionally, frequent medication adjustments to antibiotics, steroids, and nonsteroidal medications are made at each visit.

We chose pre-service package 3 (straightforward patient, difficult procedure). These are typically complex cases with multiple ocular comorbidities requiring extensive pre-operative assessment and discussion with the patient. We reduced the survey pre-service evaluation time of 55 minutes to the package time of 33 minutes. We reduced the survey positioning time of 8 minutes to the package time of 3 minutes. We reduced the package scrub/dress/wait time from 15 minutes to match the survey time of 7 minutes. Profound anesthesia is required for the uveal manipulations in these cases, necessitating a longer wait for the anesthetic injection to take effect than for uncomplicated lens surgery.

We used the survey post-service time median of 10 minutes, which is less than the 18 minutes of post-service time package 7A (local anesthesia, straightforward procedure), and one-half of a 99238 visit for discharge day management as is RUC protocol for outpatient procedures. Although respondents did not report a discharge day management service, we note that ophthalmologists never bill these codes because they don't manage inpatients. Respondents would be unfamiliar with these codes and would not be expected to choose them in the survey. Nevertheless, the work and time are required. Inclusion of half of a discharge day management service is standard across almost all outpatient surgical procedures and has been included even in the absence of survey support. Excluding it would distort the relativity in the database.

Total recommended time for the procedure is 224 minutes, with an IST of 60 minutes.

A RUC database search for 60-minute IST 090-day global codes surveyed within the past 10 years was conducted. There were 33 results with work values ranging from 6.50 to 16.33 RVU. None were a match for number and level of postoperative visits.

We recommend the survey 25th percentile estimate of 12.80 work RVU. This value maintains the rank order in the family. Three 60-minute IST codes in the database bracket the value. At a slightly lower work value of 12.13, there are MPC 57288, *Sling operation for stress incontinence (eg, fascia or synthetic)* (RUC 2010) with an IST of 60 minutes, 4 postoperative visits (three level 3 and one level 2) and a total time of 246 minutes and CPT 27279, *Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device* (RUC 2018) with an IST of 60 minutes, 3 postoperative visits (two level 3, one level 2), and a total time of 241 minutes. At a higher work value of 13.20 RVU is CPT 67039, *Vitrectomy, mechanical, pars plana approach; with focal endolaser photocoagulation* (RUC 2013), with an IST of 60 minutes, five level 3 postoperative visits, and a total time of 260 minutes.

We recommend a work value of 12.80 RVU for CPT 6X004, the survey 25th percentile, with times of 43/60/10 and a total time of 224 minutes. This code should be placed on the New Technology list.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

- ☒ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Although there is no existing Medicare claims data, the expert panel anticipates that stand-alone iris prosthesis insertion will comprise a minority of cases. The majority of cases are likely to be performed in eyes with comorbidities requiring either cataract surgery (CPT 66982 or CPT 66984), secondary intraocular lens insertion (CPT 66985), or intraocular lens exchange (CPT 66986). All of these combinations will be subject to the 50% MPPR. It is unlikely that CPT 6X004 will be billed with any one of these procedures over 75% of the time.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0616T, 0617T, 0618T

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Rarely

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 250
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate

Specialty Ophthalmolgy Frequency 250 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 125
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate. Combined 2021 Medicare claims data for all 3 Category III codes replaced by 6X004 was 42. WIth publication of a Category I code, we estiimate that that may triple.

Specialty Ophthalmology Frequency 125 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

PRESENTER(S):__John Thompson MD, Samuel Masket MD, David Glasser MD (Pre-Facilitation only), Ankoor Shah MD (Pre-facilitation only)__

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2023

CPT Code	Long Descriptor	Global Period
66680	Repair of iris, ciliary body (as for iridodialysis)	090
66682	Suture of iris, ciliary body (separate procedure) with retrieval of suture through small incision (eg, McCannel suture)	090
6X004	Implantation of iris prosthesis, including suture fixation and repair or removal of iris, when performed	090

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
66680	A 24-year-old man has an iridodialysis following blunt trauma to the right eye. He complains of poor vision and diplopia and is referred for iris repair.
66682	A 75-year-old man had complicated cataract surgery with intraocular lens implantation resulting in a decentered lens in the left eye. He complains of monocular diplopia and is referred for iris fixation of the lens with a McCannel suture.
6X004	A 44-year-old male patient presents with acquired aniridia from a penetrating injury to the left eyelid, cornea, iris, and lens. Emergency treatment at the time of the injury stabilized the left eye, however the patient has persistent debilitating glare from partial aniridia. The surgeon implants an artificial iris in front of the previously implanted intraocular lens.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally we use other physicians who have the appropriate expertise as needed. The consensus committee considered the survey data and PE details in order to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether or not any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   66680, 66682 are existing codes and used as references.
   6X004 is a new code which was previously billed as either 0616T, 0617T, or 0618T (category 3 codes). Since all of them have no inputs and one reference codes is requested, we have included code 66982 which is the secondary KRS. We did not choose the primary KRS because lasers are not required in the postop period for this code

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

   No.

   See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A for 66680 and 66682 due to decreases in PE. N/A for 6X004 since this is a new code.

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A.

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
   a. Pre-Service period:

All the iris repair codes are major surgery with a 90-day global. Standard inputs are used during the pre-service period (CA001-CA005) consistent with PEAC recommendations for 90-day global procedures. They have been broken down from the 60 minutes total previously listed into the component parts that match standard inputs for 90-day global procedures.

   b. Service period (includes pre, intra and post):

This time accounts for the standard inputs of ½ same day discharge management.

   c. Post-service period:

This time accounts for staff time during postoperative visits. Standard times were used based on the level of postoperative office visit as determined by the RUC-approved survey data for this code. These would be adjusted if changed by the RUC. **66680:** Standard inputs for three 99213 postop visits are included. **66682:** Standard inputs for three 99213 and one 99212 postop visits are included. **6X004:** Standard inputs for four 99213 postop visits are included.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
   N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

11. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

12. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

14. Are you recommending a PE supply pack for this recommendation? Yes or No.
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    Yes – established ophthalmology packs both with and without dilation.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SA082 Ophthalmology packs w-dilation – These are included for each 99213 postop visits for each of the two codes (66680, 66682) which require dilation. They are excluded for 6X004 (even though these are 99213 level visits), because with an iris prosthesis pharmacologic dilation is not possible. SA050 Ophthalmology packs no dilation – These are included for the 99212 visit for 66682 and all 99213 visits for 6X004 since pharmacological dilation is not possible.

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment please explain here:

EL005 – exam lane – the total time required is based on standard inputs for postoperative follow up visits. This applies for all three codes for the postop visits that require dilation (66680, 66682, 6X004). EL006 – screening lane – the total time for postop visits that don't require a dilated exam have been put in this category

PE-ONLY CODES ADDITIONAL INFORMATION

20. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

21. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations

April 2023

Optical Coherence Tomography – Tab 5

At the February 2023 CPT Editorial Panel meeting, CPT code 9X059 was created in response to new technology which allows imaging of the retina using optical coherence tomography (OCT) with and without non-dye OCT angiography (OCT-A). This new Category I code describes a combined imaging procedure, which was previously reported with CPT code 92134, OCT of the retina. Two other OCT services, 92132 and 92133, are in the same family of XXX global OCT codes as 9X059 and 92134. All four codes were reviewed and surveyed for the April 2023 RUC meeting.

The survey was sent to a random sample of ophthalmologists and optometrists from the three participating specialty societies. In reviewing the 75 survey responses for CPT code 9X059, it was apparent to the specialty societies that the survey instructions were unclear as the collected survey data reflected intra-service time estimates that were far below the physician work specified in the CPT descriptor for 9X059. The specialty societies believed that a significant number of survey respondents failed to understand that 9X059 is a combined study of both standard OCT images(described by 92134) and OCT angiography images. The survey 25th percentile intra-service time for CPT code 92134 was 5 minutes, comparable to the analysis of only the standard OCT images of the retina without angiography. Therefore, the specialty societies believed that the survey median intra-service time of 6 minutes for CPT code 9X059 is an underestimation. The intra-service work associated with CPT code 9X059 involves the same analysis of the standard OCT images as CPT code 92134, but it also includes the OCT angiography component, which is a comprehensive evaluation of the retinal and choroidal vasculature in the posterior segment for evidence of ischemia, microaneurysms and neovascularization. The specialty societies suspected that survey respondents may have only accounted for the OCT angiography component alone and did not appropriately account for the time required to complete the combined study of all the OCT images that are reviewed as part of the physician work within the intra-service time of CPT code 9X059. Being that the median survey intra-service time estimates were identical for CPT codes 92134 and 9X059, the specialty societies determined that 10 minutes (twice the intra time of 92134) of intra-service time was an appropriate estimation to complete the combined study OCT image comparisons.

The RUC agreed with the specialty societies that many of the survey respondents may not have fully understood the differences in intra-service time between CPT codes 92134 and 9X059. To ensure accurate survey results, the specialty societies, and the RUC agreed, that all four services in the OCT code family should be resurveyed for the September 2023 RUC meeting with a targeted survey instrument that has been reviewed and approved by the Research Subcommittee.

The RUC recommends an interim work RVU of 0.31 for CPT code 9X059, which is a direct work RVU crosswalk to CPT code 73523 *Radiologic examination, hips, bilateral, with pelvis when performed; minimum of 5 views* (work RVU = 0.31). The RUC recommends reaffirmation of CPT codes 92132, 92133 and 92134 at their current values as an interim recommendation. **The RUC recommends an interim work RVU of 0.26 for**

CPT code 92132, an interim work RVU of 0.29 for CPT code 92133, an interim work RVU of 0.30 for CPT code 93234, and an interim work RVU of 0.31 for CPT code 9X059. The specialty societies will resurvey CPT codes 92132, 92133, 92134 and 9X059 for the September 2023 RUC meeting in coordination with the Research Subcommittee.

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for the four OCT services in this family and made one modification. An adjustment was made to move the one minute of clinical staff time from CA004 *Provide pre-service education/obtain consent* to CA011 *Provide education/obtain consent* which is the appropriate service period as the patient moves from the screening lane for their first service to the diagnostic room for the OCT service. The PE Subcommittee verified that the typical service for all four OCT services in this family is bilateral even though the CPT descriptors include both unilateral and bilateral. The Subcommittee also reviewed the new equipment item *tomographic device, optical coherence angiography (OCTA)* for CPT code 9X059 and determined that the default formula was appropriate for calculating the equipment minutes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee. The RUC noted that the resurvey of physician work for September 2023 would not impact these practice expense recommendations.**

New Technology
CPT code 9X059 will be placed on the New Technology list to be reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Radiology **Diagnostic Ultrasound** **Head and Neck**

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral .

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male complains of inability to read small print. The patient has temporal narrowing of the anterior chamber angle in the left eye. Imaging is ordered to evaluate the risk of angle closure.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The images and numerical values are analyzed and referenced to normative data. Prior studies are reviewed if available and compared for evaluation of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	8%	38%	46%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	27%	58%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	42%	58%
Physical effort required	0%	88%	12%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	46%	46%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	33%	60%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	53%	33%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	53%	27%
Physical effort required	13%	67%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	40%	53%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92132, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral* is in a family of ophthalmic diagnostic imaging codes based on optical coherence tomography. CPT 92134, OCT of the retina, was identified for claims volume growth, which triggered the review. A new code,

CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with OCT angiography. These codes and CPT 92133, OCT of the optic nerve, are being reviewed at this meeting. The family was last reviewed in October 2015.

OCT of the anterior segment is typically performed on patients with clinical appearance of a shallow anterior chamber or narrow anterior chamber angle to assess the risk of angle closure. It is typically performed once but may be repeated if the patient's clinical presentation changes. Claims volume was 43,316 in 2021, representing a gradual 13% decline since its peak in 2016. The procedure, indications, patient population, and instrumentation are unchanged since it was last valued.

CPT 92132 has been performed in conjunction with a same-day office visit 86% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data are presented separately and combined.

We received 78 responses (58 MD, 20 OD). The vignette was considered typical by 87% of respondents (88% MD, 85% OD).

The current work value is 0.30 RVU with an IST of 8 minutes. The survey median RVU was 0.50 (0.50 MD, 0.48 OD) and the 25th percentile was 0.40 (0.45 MD, 0.40 OD). The median IST was 5 minutes (5 MD, 5 OD).

The top key reference service (KRS) for both groups, chosen by 33%, was CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes. The second reference service, chosen by both groups at 19%, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time.

Respondents rated the surveyed code higher than the KRS on overall intensity/complexity, mental effort and judgment, and technical skill. They rated them identical on physical effort and psychological stress. The surveyed code was ranked higher than the second reference service on overall intensity/complexity and psychological stress, identical on the other metrics. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings.

Both top reference services have ISTs that are twice the survey median for CPT 92132. The KRS work value matches that of the survey 25th percentile but is greater than the procedure's current value. Absent compelling evidence for an increase in work value, and given the mismatched ISTs, the panel rejected the reference services and the survey 25th percentile as means for valuation.

The survey median IST of 5 minutes is a significant reduction from the current value of 8 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and

numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The typical anterior segment OCT readout does not present a list of norms, interval change, or an automated analysis.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 3 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245). Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E/M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

We searched the RUC database for crosswalks and found 21 XXX codes reviewed by the RUC within the past 10 years with 5-minute ISTs and total times of 6-7 minutes. The median work value of these 21 services is 0.25 RVU, with a range of 0.05 to 0.32 RVU.

We chose as a crosswalk CPT 77073, *Bone length studies (orthoroentgenogram, scanogram)* (RUC 2018), with a work value of 0.26 RVU. The IST of 5 minutes and total time of 7 minutes match our recommended values. This value is also supported by CPT 72081, *Radiologic examination, spine, entire thoracic and lumbar, including skull, cervical and sacral spine if performed (eg, scoliosis evaluation); one view* (RUC 2015), with identical work values and times.

The recommended work value of 0.26 RVU is well bracketed by MPC 74019, *Radiologic examination, abdomen; 2 views* (RUC 2016) with a work value of 0.23 RVU, an IST of 4 minutes, and a total time of 6 minutes, and MPC 71111, *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (RUC 2016), with a work value of 0.32 RVU, an IST of 7 minutes, and a total time of 9 minutes.

The recommended value of 0.26 RVU for this code, although it differs by only a few hundredths of an RVU from the others in this review tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, 92134, and 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it can't be quantified by IWPUT or WPUT for services with such short and similar times, the intensity and complexity increase as we go from 92132 to 92133 and then 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss is a consideration for all these services, the risk is greater with optic nerve (92133) and retinal disease (92134, 9X059) than anterior segment disease, and is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which also maintain an appropriate rank order. This is consistent with the prior review in 2015, when CPT 92134 was valued 0.05 RVU higher than CPT 92133 despite identical times.

We recommend a work value of 0.26 RVU for CPT 92132 based on a crosswalk to CPT 77073, with times of 1/5/1 and a total time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic tests related to glaucoma.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT	Global	WRVU	Pre	Intra	Post	Total Time	Billed Together %
3.	92133	XXX	.40	1	10	0	11	33.5%
4.	92083	XXX	.50	3	10	0	13	31.9%
5.	92014	XXX	1.42	5	24	8	37	29.8%
6.	92020	XXX	.37	5	10	5	20	20.8%
7.	92250	XXX	.40	1	10	0	11	19.1%

8. CPT 92132 is frequently performed with one or more other testing services related to glaucoma. These are all subject to the MPPR for testing. The service is also typically provided with a same-day office visit (83%). This has been taken into account in our time and work value recommendations. Providing these services at one visit is more efficient for providers, more convenient for patients, and less costly for both patients and the system after application of the MPPR.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92132

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 85000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims data

Specialty Ophthalmology Frequency 58310 Percentage 68.60 %

Specialty Optometry Frequency 26435 Percentage 31.10 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 43,316 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare claims data

Specialty Ophthalmology Frequency 29715 Percentage 68.60 %

Specialty Optometry Frequency 13471 Percentage 31.09 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:92133 Tracking Number B2 Original Specialty Recommended RVU: **0.29**
Presented Recommended RVU: **0.29**
Global Period: XXX Current Work RVU: **0.40** RUC Recommended RVU: **0.29**

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female presents with elevated levels of intraocular pressure (IOP) in both eyes. Visual-field examinations reveal no evidence of visual-field loss attributable to glaucoma. Examination of the nerve fiber layer by optical coherence tomography in both eyes is indicated to look for evidence of retinal nerve fiber layer damage consistent with glaucoma.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The images and numerical values are analyzed and referenced to normative data. Prior studies are reviewed and compared for evaluation of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	2%	7%	62%	29%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	69%	24%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	67%	20%
Physical effort required	7%	73%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	67%	27%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	41%	52%	7%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	34%	62%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	38%	55%
Physical effort required	0%	76%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	62%	34%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92133, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve* is in a family of ophthalmic diagnostic imaging codes based on optical coherence tomography. CPT 92134, OCT of the retina, was identified for claims volume growth, which triggered the review. A new code, CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with OCT angiography. These codes and

CPT 92132, OCT of the anterior segment, are being reviewed at this meeting. The family was last reviewed in October 2015.

OCT of the optic nerve is typically performed on patients with elevated intraocular pressure (IOP) or glaucoma and is repeated for longitudinal follow-up, typically once a year. Claims volume is high, but stable (2.6 million in 2021). The procedure, indications, patient population, and instrumentation are unchanged since it was last valued.

CPT 92133 has been performed in conjunction with a same-day office visit 92% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 115 responses (89 MD, 26 OD). The vignette was considered typical by 93% of respondents (93% MD, 92% OD).

The current work value is 0.40 RVU with an IST of 10 minutes. The survey median RVU was 0.50 (0.50 MD, 0.55 OD) and the 25th percentile was 0.50 (0.50 MD, 0.50 OD). The median and 25th percentile values are the same because so many respondents chose 0.50 RVU. The median IST was 6 minutes (5 MD, 8 OD).

The top key reference service (KRS) for both groups, chosen by 39%, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time. The second reference service, chosen by both groups at 25%, was CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes.

Respondents rated the surveyed code identical to the KRS on overall intensity/complexity and each sub-measure. They rated them identical on physical effort and psychological stress. The surveyed code was ranked higher than the second reference service on overall intensity/complexity, mental effort, and technical skill, and identical on physical effort and psychological stress. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings.

Both top reference services have ISTs that are almost twice the survey median for CPT 92133. The KRS work value matches that of the survey 25th percentile but is greater than the procedure's current value. Absent compelling evidence for an increase in work value, and given the mismatched ISTs, the panel rejected the reference services selected by respondents and the survey 25th percentile as means for valuation.

The survey median IST of 6 minutes is a significant reduction from the current value of 10 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The panel questioned whether the 1-minute difference in IST between this service and CPT 92132 and 92134, with 5-minute median ISTs, is within the limit of error of the measurement process despite the large number of respondents.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 3 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245). Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E/M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

We searched the RUC database for crosswalks and for XXX codes reviewed by the RUC within the past 10 years with 6-minute ISTs and total times of 7-8 minutes. We found 3 codes with work values of 0.29 to 0.31 RVU. This is in addition to the 21 XXX services with 5-minute ISTs, a median work value of 0.25 RVU, and a range of 0.05 to 0.32 RVU that have been RUC-reviewed within 10 years.

We chose as a crosswalk CPT 71110, *Radiologic examination, ribs, bilateral; 3 views* (RUC 2016), with a work value of 0.29 RVU. The IST of 6 minutes and total time of 8 minutes match our recommended values. This value is also supported by CPT 73523, *Radiologic examination, hips, bilateral, with pelvis when performed; minimum of 5 views)* (RUC 2015), with a work value of 0.31 RVU and identical times.

The recommended work value of 0.29 RVU for CPT 92133 is well bracketed by MPC 74019, *Radiologic examination, abdomen; 2 views* (RUC 2016) with a work value of 0.23 RVU, an IST of 4 minutes, and a total time of 6 minutes, and MPC 71111, *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (RUC 2016), with a work value of 0.32 RVU, an IST of 7 minutes, and a total time of 9 minutes.

The recommended value of 0.29 RVU for this code, although it differs by only a few hundredths of an RVU from the others in the tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, 92134, and 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it can't be quantified by IWPUT or WPUT for services with such short and similar times, the intensity and complexity increase as we go from 92132 to 92133 and then 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss is a consideration for all these services, the risk is greater with optic nerve (92133) and retinal disease (92134, 9X059) than anterior segment disease, and is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which also maintain an appropriate rank order. This is consistent with the prior review in 2015, when CPT 92134 was valued 0.05 RVU higher than CPT 92133 despite identical times.

We recommend a work value of 0.29 RVU for CPT 92133 based on a crosswalk to CPT 71110, with times of 1/6/1 and a total time of 8 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic tests related to glaucoma.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT	Global	WRVU	Pre	Intra	Post	Total Time	% Billed Together
3.								
4.	92083	XXX	.50	3	10	0	13	36.6%
5.	92014	XXX	1.42	5	24	8	37	36.2%
6.	99214	XXX	1.92	7	30	10	47	18.2%
7.	99213	XXX	1.30	5	20	5	30	13.9%
8.	92012	XXX	.92	5	15	5	25	13.3%
9.								

10. CPT 92133 is frequently performed with one or more other testing services related to glaucoma. These are all subject to the MPPR for testing. The service is also typically provided with a same-day office visit (92%). This has been taken into account in our time and work value recommendations. Providing these services at one visit is more efficient for providers, more convenient for patients, and less costly for both patients and the system after application of the MPPR.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92133

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 5250000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims data

Specialty Ophthalmology Frequency 3675000 Percentage 70.00 %

Specialty Optometry Frequency 1559250 Percentage 29.70 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,628,575 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare claims data

Specialty Ophthalmology Frequency 1840003 Percentage 70.00 %

Specialty Optometry Frequency 780687 Percentage 29.70 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:92134 Tracking Number B3 Original Specialty Recommended RVU: **0.30**
Presented Recommended RVU: **0.30**
Global Period: XXX Current Work RVU: **0.45** RUC Recommended RVU: **0.30**

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 75-year-old male presents with exudative age-related macular degeneration with recent history of an intravitreal drug injection. Optical coherence tomography is indicated to evaluate subretinal fluid thickness and intraretinal edema in one eye.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The images and numerical values are analyzed and referenced to normative data. Prior studies are reviewed and compared for evaluation of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

CPT Descriptor Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2).

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
74019	XXX	0.23	**RUC Time**	301,854

CPT Descriptor 1 Radiologic examination, abdomen; 2 views

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
71111	XXX	0.32	**RUC Time**	27,613

CPT Descriptor 2 Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views

Other Reference CPT Code	Global	Work RVU	Time Source
72114	XXX	0.30	**RUC Time**

CPT Descriptor Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views.

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 42 **% of respondents:** 31.8 **%**

Number of respondents who choose 2nd Key Reference Code: 40 **% of respondents:** 30.3 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	2%	33%	52%	12%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	26%	69%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	38%	62%
Physical effort required	2%	74%	24%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	64%	36%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	65%	32%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	5%	65%	30%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	15%	65%	20%
Physical effort required	10%	75%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	68%	32%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92134, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina* was identified for claims volume growth, which triggered a review of the family. A new code, CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with non-dye OCT angiography. These codes and CPT 92132, OCT of the anterior segment, and CPT 92132,

OCT of the optic nerve, are being reviewed at this meeting. The family was last reviewed in October 2015.

OCT of the retina is typically performed on patients with wet macular degeneration, diabetic macular edema, or a retinal vascular occlusion to determine response to intravitreal anti-VEGF therapy and determine the need for and timing of further intravitreal injections. It is frequently repeated, typically multiple times a year, sometimes as often as monthly. Use of OCT allows ophthalmologists to extend the intravitreal anti-VEGF treatment window, often to 2 months, occasionally longer. Without OCT, injections would need to be administered monthly per FDA labeling. Therefore, despite the extremely high claims volume (7.4 million in 2021), frequent use of retinal OCT has saved patients countless thousands of injections and the Medicare program billions of dollars. The claims growth is commensurate with the increasing Medicare population and increasing prevalence of diabetes.

While OCT of the retina has not changed since its last valuation, new technology now allows performance of non-dye angiography in conjunction with OCT. Those combined tests were being billed with CPT 92134, although they entail increased practice expense and require interpretation of more images and more data. A new CPT code, 9X059, was created for reporting this combined test procedure, and is being separately reviewed at this meeting.

CPT 92134 is performed in conjunction with a same-day office visit 78% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 132 responses (106 MD, 26 OD). The vignette was considered typical by 95% of respondents (96% MD, 88% OD).

The current work value is 0.45 RVU with an IST of 10 minutes. The survey median RVU was 0.52 (0.51 MD, 0.55 OD) and the 25th percentile was 0.50 (0.50 MD, 0.50 OD). The median IST was 5 minutes (5 MD, 7 OD).

The top key reference service (KRS) for both groups, chosen by 32%, was CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes. The second reference service, chosen by both groups at 30%, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time.

Respondents rated the surveyed code higher than the KRS on overall intensity/complexity, mental effort, and technical skill, and identical on physical effort and psychological stress. The surveyed code was ranked identical to the second reference service on overall intensity/complexity and every submeasure. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The KRS work value matches the current value of CPT 92134, but its IST is double the survey median. The second reference service work value exceeds the current value of CPT 92134. Given the mismatched ISTs, and absent compelling evidence for an increase in work value, the panel rejected the reference services and the survey 25th percentile as means for valuation.

The survey median IST of 5 minutes is a significant reduction from the current value of 10 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The panel questioned whether the 1-minute difference in IST between this service and CPT 92133, with a 6-minute median IST, is within the limit of error of the measurement process, despite the large number of respondents.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 3 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245). Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E/M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

We searched the RUC database for crosswalks and found 21 XXX codes reviewed by the RUC within the past 10 years with 5-minute ISTs and total times of 6-7 minutes. The median work value of these 21 services is 0.25 RVU, with a range of 0.05 to 0.32 RVU.

We chose as a crosswalk CPT 72114, *Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views* (RUC 2019), with a work value of 0.30 RVU. The IST of 5 minutes and total time of 7 minutes match our recommended values. This value is also

supported by CPT 71048, *Radiologic examination, chest; 4 or more views* (RUC 2016), with a work value of 0.31 RVU and identical times.

The recommended work value of 0.30 RVU for CPT 92134 is well bracketed by MPC 74019, *Radiologic examination, abdomen; 2 views* (RUC 2016) with a work value of 0.23 RVU, an IST of 4 minutes, and a total time of 6 minutes, and MPC 71111, *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (RUC 2016), with a work value of 0.32 RVU, an IST of 7 minutes, and a total time of 9 minutes.

The recommended value of 0.30 RVU for this code, although it differs by only a few hundredths of an RVU from the others in the tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, 92134, and 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it can't be quantified by IWPUT or WPUT for services with such short and similar times, the intensity and complexity increase as we go from 92132 to 92133 and then 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss is a consideration for all these services, the risk is greater with optic nerve (92133) and retinal disease (92134, 9X059) than anterior segment disease, and is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which also maintain an appropriate rank order. This is consistent with the prior review in 2015, when CPT 92134 was valued 0.05 RVU higher than CPT 92133 despite identical times.

We recommend a work value of 0.30 RVU for CPT 92134 based on a crosswalk to CPT 72114, with times of 1/5/1 and a total time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic imaging.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT	Global	WRVU	Pre	Intra	Post	Total Time	% Billed Together
4.	67028	XXX	1.44	20	4	5	29	37.4%
5.	92014	XXX	1.42	5	24	8	37	32.5%
6.	99214	XXX	1.92	7	30	10	47	14.7%
7.	92012	XXX	.92	5	15	5	25	11.7%
8.	99213	XXX	1.30	5	20	5	30	9.8%

10. CPT 92134 is frequently performed with an intravitreal injection because it is used to determine the need for an injection. This allows providers to extend treatment intervals beyond the FDA labelled 1 month, reducing the number of injections for many patients. The service is also typically provided with a same-day office visit (78%), which is often used to determine the status of disease in the fellow eye. The same-day office visit has been taken into account in our time and work value recommendations. Providing these services at one visit is more efficient for providers, more convenient for patients, and less costly for both patients and the system.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92134

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 14000000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims reduced for 5% shift to 9X059

Specialty Ophthalmology Frequency 12390000 Percentage 88.50 %

Specialty Optometry Frequency 1596000 Percentage 11.40 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 7,014,928 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare claims data reduced 5% for shift to 9X059

Specialty Ophthalmology Frequency 6208213 Percentage 88.50 %

Specialty Optometry Frequency 799703 Percentage 11.40 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X059 Tracking Number B4 Original Specialty Recommended RVU: **0.55**
Presented Recommended RVU: **0.55**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **0.31**

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with a history of non-insulin dependent diabetes mellitus notes blurred vision and is found to have diabetic macular edema. OCT and OCT angiography are ordered to examine retinal structure in depth and to determine the cause of the edema and identify any associated foveal ischemia with non-dye angiography.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The OCT images and numerical values are analyzed and referenced to normative data. The images are reformatted for angiography. The OCT angiography images of the vasculature of the posterior segment are evaluated at multiple levels of the retina and choriod for evidence of ischemia, microaneurysms and neovascularization. If available, prior studies are reviewed and a comparison made for assessment of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	39%	45%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	12%	24%	64%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	21%	21%	58%
Physical effort required	12%	52%	36%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	39%	55%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	38%	46%	15%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	38%	54%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	54%	46%
Physical effort required	0%	77%	23%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	69%	31%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 9X059, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography* was created by CPT in response to new technology which allows imaging of the retina using OCT with and without non-dye OCT angiography (OCT-A). The new code describes the combined imaging procedure, which was previously reported with CPT 92134, OCT of the retina. In addition to the two retinal OCT codes, CPT 92132, OCT of the anterior segment, and CPT 92132, OCT of the optic nerve, are being reviewed at this meeting. The family was last reviewed in October 2015.

OCT combined with OCT-A of the retina is typically performed on patients with retinal vascular disease, most often diabetic retinopathy, to allow evaluation of retinal ischemia in addition to retinal thickness and response to intravitreal anti-VEGF therapy. It is also used to evaluate choroidal neovascularization in eyes with possible exudative macular degeneration. Because the combined procedure is currently being reported with CPT 92134, we anticipate that the combined claims volume of CPT 92134 and 9X059 will be no greater than claims volume for CPT 92134 would have been without addition of the new code. There is also the possibility that some providers could switch from CPT 92235, fluorescein angiogram, to CPT 9X059 to eliminate the need for IV access and the risk of an adverse dye reaction.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 73 responses (61 MD, 14 OD). The vignette was considered typical by 93% of respondents (95% MD, 86% OD).

The survey median RVU was 0.68 (0.70 MD, 0.66 OD) and the 25th percentile was 0.55 (0.52 MD, 0.61 OD). The median IST was 6 minutes (5 MD, 7 OD).

The top key reference service (KRS) for both groups, chosen by 44%, was CPT 92235, *Fluorescein angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (RUC 2016), with a work value of 0.75 RVU, an IST of 15 minutes, and a total time of 17 minutes. The second reference service, chosen by both groups at 17%, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time.

Respondents rated the surveyed code higher than the KRS on overall intensity/complexity and each of the submeasures except physical effort, which the majority ranked identical. The surveyed code was ranked higher than the second reference service on overall intensity/complexity and mental effort, identical on the other submeasures. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO and ASRS, which is familiar with the procedure and the RUC process, reviewed the survey findings.

Because CPT 92134, OCT of the retina, is typically performed with a same-day office visit, we assumed that the new combined OCT/OCT angiography service would be as well. We developed pre- and post-work descriptors, time recommendations, and a work value recommendation based on that assumption.

The panel was surprised that the survey median IST of 6 minutes was only 1 minute longer than that for OCT of the retina without angiography (CPT 92134). There are notably many more images and much more data displayed en face for angiography which must be analyzed when the combination study is performed. This is a recognized limitation of surveys when multiple procedures in a family with relatively short intraservice times are evaluated.

The panel is convinced that the survey IST is too low given the considerable amount of data that must be analyzed every time that this service is performed. In addition to the analysis of the standard OCT images, the retinal and choroidal vasculature in the posterior segment is evaluated at 7 different levels for evidence of ischemia, microaneurysms and neovascularization. The traditional OCT non-angiography component of the service is analogous to reading a chest X-ray. The angiography component is analogous to reading a chest CT. Both are performed every time CPT 9X059 is performed. In addition, the angiography imaging technology is new and subject to artefacts. This requires switching back and forth between the legacy OCT and OCT angiography images multiple times – they are not simultaneously displayed – to identify the artefacts and accurately analyze the angiography images.

We suspect that a significant number of respondents failed to understand that this service includes analysis of both the traditional OCT images and the OCT angiography images and answered for the OCT angiography component alone. Median survey ISTs for ophthalmologist respondents were identical for stand-alone OCT (CPT 92134) and the combined service (CPT 9X059). The panel abandoned the survey median and chose an IST of 10 minutes, double that of CPT 92134. This is a conservative choice given that the images and data analyzed for the OCT angiography component are greater than that for the traditional OCT component.

We reduced the survey median pre-service time from 4 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 6 minutes to 2 minutes. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained two minutes of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245).

Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E&M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels. We recommend 2 minutes of post-service time for CPT 9X059 because the report is significantly longer than for most imaging services, requiring more time for final review and sign-off.

We recommend a work value equal to the survey 25th percentile of 0.55 RVU. The 25th percentile could be an underestimate considering that some respondents were valuing the angiography component alone rather than both components.

We recognize that this is well above the value of any code in the RUC database with times equal to the survey IST of 6 minutes. The panel is certain that the physician work required to perform the analysis for the combination code is significantly greater than that for OCT of the retina alone (CPT 92134) and is unable in good conscience to consider a value consistent with an IST of 6 minutes. The panel is confident that a 10-minute IST and the 25th percentile work value of 0.55 RVU are accurate representations of the time and physician work required for this service.

Respondents rated CPT 9X059 higher than the KRS, fluorescein angiography (CPT 92235) on intensity and complexity. An IST 2/3 that of the KRS, a work value slightly greater than 2/3 that of the KRS, and a similar IWPUT and WPUT is consistent with this ranking.

The second reference service chosen, visual field (CPT 92083) has an IST and total time equal to our recommended times and a 0.05 RVU lower work value (0.50 RVU). This is consistent with respondents ranking CPT 9X059 higher on overall intensity and mental effort and identical on the other submeasures.

We searched the RUC database for XXX codes reviewed by the RUC within the past 10 years with 10-minute ISTs and total times of 11 to 15 minutes. We found 16 codes with work values ranging from 0.21 to 0.64 RVU.

Our recommended value is supported by CPT 77075, *Radiologic examination, osseous survey; complete (axial and appendicular skeleton)* (RUC 2018), with a work value of 0.55 RVU, an IST of 10 minutes, and a total time of 15 minutes.

Should the RUC choose to support the expert panel recommendation despite the deviation from survey data, the value would have to be flagged as ineligible for valuation of physician work.

This service will also be placed on the New Technology list. We welcome the opportunity to re-survey this in 3 years when the technology is more mature, and providers will have more experience performing it.

We recommend a work value of 0.55 RVU for CPT 9X059 based on the survey 25th percentile estimate, with times of 1/10/2 and a total time of 13 minutes. We recommend that this code be placed on the new technology list and that it be flagged as ineligible for validation of physician work.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) We assume that this service will typically be performed with a same-day office visit, similar to CPT 92134

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Since this is a new code, there is no claims data. We assume that the pattern will mimic that of CPT 92134, which is commonly billed with an intravitreal injection (CPT 67028). This allows providers to extend treatment intervals beyond the FDA labelled 1 month, reducing the number of injections for many patients. We also assume that the service will typically be provided with a same-day office visit, which is often used to determine the status of disease in the fellow eye. The same-day office visit has been taken into account in our time and work value recommendations. Providing these services at one visit is more efficient for providers, more convenient for patients, and less costly for both patients and the system.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92134

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 590000
If the recommendation is from multiple specialties, please provide the frequency and <u>percentage</u> for each specialty. Please explain the rationale for this estimate. Estimate based on 5% of Medicare claims

Specialty Ophthalmology Frequency 522150 Percentage 88.50 %

Specialty Optometry Frequency 67260 Percentage 11.40 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 369,207 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on 5% of 2021 Medicare claims data

Specialty Ophthalmology Frequency 326750 Percentage 88.50 %

Specialty Optometry Frequency 42090 Percentage 11.40 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

NONFACILITY DIRECT PE INPUTS **CPT CODE(S):_92132, 92133, 92134, 9X059__**

SPECIALTY SOCIETY(IES):_AAO, ASRS, AOA_

PRESENTER(S):_John Thompson MD, Ravi Parikh MD, Charles Fitzpatrick OD, David Glasser MD (Pre-facilitation only), Ankoor Shah MD (Pre-facilitation only)_

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2023

CPT Code	Long Descriptor	Global Period
92132	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral	XXX
92133	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve	XXX
92134	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina	XXX
9X059	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography CPT CODE DESCRIPTOR	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
92132	A 45-year-old male complains of inability to read small print. The patient has temporal narrowing of the anterior chamber angle in the left eye. Imaging is ordered to evaluate the risk of angle closure.
92133	A 65-year-old female presents with elevated levels of intraocular pressure (IOP) in both eyes. Visual-field examinations reveal no evidence of visual-field loss attributable to glaucoma. Examination of the nerve fiber layer by optical coherence tomography in both eyes is indicated to look for evidence of retinal nerve fiber layer damage consistent with glaucoma.
92134	A 75-year-old male presents with exudative age-related macular degeneration with recent history of an intravitreal drug injection. Optical coherence tomography is indicated to evaluate subretinal fluid thickness and intraretinal edema in one eye.
9X059	A 67-year-old male with a history of non-insulin dependent diabetes mellitus notes blurred vision and is found to have diabetic macular edema. OCT and OCT angiography are ordered to examine retinal structure in depth and to determine the cause of the edema and identify any associated foveal ischemia with non-dye angiography.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code and performed time motion studies (two ophthalmic technicians performing 10 of each of these procedures). The consensus committee considered the survey data, PE details, and observations from time motion studies to determine clinical time and applicable standard packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether any changes were needed for the existing supplies and equipment.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   For 92132, 92133, 92134 the current code was used as a reference.

   For the new CPT code 9X059, we believe the best comparator is 92134 (since every 9X059 requires the performance of a 92134 in addition to the more specific angiography testing); however, since 92134 was being re-evaluated we also provided 92083, diagnostic visual field testing the second KRS choice form the survey.

   While the physician work is more comparable to 92235 (the primary KRS), the technician work is more similar to 92083 (the secondary KRS) because there is no injection of dye required for this imaging test; thus, we believe it is the best alternative reference code.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?

   Yes for the code family. Based on how other codes in the family are used we expect 9X059 to also be typically reported with a same day E/M service.
   All codes are performed typically performed in the nonfacility setting.

   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Ophthalmology is the dominant provider for all codes:
   92132 (68.6%), 92133 (70.0%), 92134 (88.5%), 9X059 (88.5%)* (Presumed for the new code based on 92134)

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   92132, 92133, 92134 all have reductions in PE. 9X059 is new.

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

CA004 – Moved to CA011

    b. Service period (includes pre, intra and post):

The total time of 12 minutes for the service period remains the same in the current recommendations as the procedure has not changed. However, due to a shift towards more granular time placement, the times have been broken down into the component times as below for each code. Pre: Line CA011 – 1 minute of time moved from CA004 based on PEAC discussions. Technician performs pre-service education/consent for the patient. The total education and consent time was reduced form 2 minutes previously (at that time listed under CA004) for existing codes to 1 minute (now listed under CA011). The same 1 minute is included for the new code 9X059. Line CA013 – Standard time 2 minutes included. The technician prepares the equipment, room, and supplies. The technician turns on the equipment, registers the patient (if new on the device) or look's up and opens the patient's file (if established) This is required and separate from EHR since each patient has a separate folder file on the imaging device. For established patients the prior photos are also opened prior to bringing the patient back.

Line CA014 – Standard time 1 minute included. The technician confirms the protocol to be used. Multiple protocols are available for each CPT code and needs to be verified and setup.
Intra:
Line CA021– The technician performs the diagnostic imaging test, references the prior images, and uploads images for review. This is a bilateral test, so the procedure is effectively performed twice.
Post:
Line CA024 – Standard time 3 minutes included. The equipment and room are cleaned and sterilized

c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

During the intraservice period, the technician adjusts the height of the diagnostic machine, adjusts the machine for the patient's optical refraction, images the patient's eye, adjusts patient fixation during the exam as needed which is typical since these patients have vision issues, confirm that the images were able to be referenced to prior images (otherwise rescan is performed at this time), and the procedure is repeated for the fellow eye.

For CPT 9X059, there is considerably more image acquisition time (this is approximately a 10-fold increase in the number of scans) as the amount of data required is substantially greater. Additionally uploading the data takes considerably longer. In our time motion studies we found 4 minutes greater time for image acquisition and 1 minute greater time to upload the images so they could be read by the HCP.

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The HCP doesn't perform the procedure – thus the technician time is listed under CA021 because the technician is wholly responsible for image acquisition.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SJ053 Swab-alcohol – used to wipe down the machine between patients (omitted previously in error) SB023 gloves, non-sterile, nitrile – this pair of gloves is for the ophthalmic technician that is typically the designated photographer. This is a separate individual from the technician working the patient up for their exam which is typically done the same day; thus no duplication. Gloves are changed between each patient.

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

New Equipment – OCT Angiography Device: This new equipment only applies to the new code 9X059. This is a considerably more expensive machine required to scan fast enough that minor fluctuations in blood flow are noted between serial scans to identify and reconstruct the retinal and choroidal vasculature. 2 invoices have been provided. The cost for 1 was 164,000, the other was 165,000. We have placed the average 164,500 as the cost of the equipment. The invoices are for the typical device currently in use.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life of OCT angiography devices is expected to be 7 years, consistent with the current useful life of OCT devices. The default formula would be utilized.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EL006 – lane, screening – This time has been eliminated for all codes, as this testing is typically performed in a diagnostic suite rather than the exam lane. EQ237 – OCT – the time is based on the default formula for minutes of used. (CPT 92132, 92133, 92134) NEW OCTA – the time is based on the default formula for the minutes used. (CPT 9X059)

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

PEAC Discussion Based Changes: 1. Shift the 1 minute of CA004 to CA011 because that time occurs on the day of service and is more accurately reflected as pre-service of the service period.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

2. It was noted that 92132 is typically bilateral, image of both eyes, and that is how the PE inputs were made.
3. The discussion regarding the 11 minutes of intraservice time has been updated to highlight the fact that nearly 10-fold more scans are obtained for (9X059)

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Referral: CPT/RUC Telemedicine Office Visits Workgroup

April 2023

Telemedicine Evaluation and Management (E/M) Services – Tab 06

During the COVID-19 public health emergency, there was a need to immediately provide office visits via telemedicine. For Medicare, the office visits, codes 99202-99215, were reported with a -95 modifier *Synchronous Telemedicine Service Rendered via a Real-Time Interactive Audio and Video Telecommunications System* to indicate the encounter was performed via telemedicine. Additionally, telephone codes 99441-99443 were reported for both new and established patients at the same Medicare payment rate as analogous in-person office visits.

In June 2022, the joint CPT/RUC Telemedicine Office Visits Workgroup was formed to assess available data and decide the appropriate next steps to determine accurate coding and valuation, as needed, for E/M office visits performed via audio-visual and audio only modalities. The Workgroup utilized the following guiding principles:

- Allow enhanced patient access and improve care by use of clear service descriptions and use of a resource-based valuation methodology
- Administratively simple
- Reduce the need for audits
- Provide a single recognized source of coding for telemedicine and audio-only office visits
- There is no direct goal for payment redistribution between specialties

The Workgroup gathered feedback via survey from 70 specialty societies on office visits performed via telemedicine to determine the next steps. Most respondents indicated they use clinical staff in the provision of telemedicine services. Another survey was also conducted to gather information about services provided via audio-only. This information allowed the Workgroup to determine that audio-video and audio-only telemedicine services should be developed. The Workgroup submitted a CPT Code Change Application (CCA) for the February 2023 CPT meeting.

In February 2023, the CPT Editorial Panel added a new Evaluation and Management (E/M) subsection for Telemedicine Services (audio/visual, audio only, virtual check-in). The Panel added 17 codes for reporting telemedicine E/M services as well as new guidelines and notes throughout the new Telemedicine Services subsection. The Panel also deleted three codes (99441-99443) to report telephone E/M services and the related guidelines.

Sixteen telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (audio-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the date of the encounter, the same as reporting for the in-person office visit codes. For each set of four codes, there is a code that may be reported for a straightforward, low, moderate and high level of MDM. These codes are patterned after the in-person office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or qualified healthcare provider (QHP) to be meeting with the patient (99211 does not require the presence of a physician).

In addition, the CPT Editorial Panel established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion, not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Survey

The telemedicine E/M services were surveyed by 27 specialty societies whose physicians and QHPs perform these services. The survey results showed no distinctions across all the specialties surveyed. The RUC noted that the 25th percentile and median work RVUs reported in the survey were identical for the audio-video telemedicine services and for some of the audio-only services, indicating a high degree of consistency in the responses.

For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). **These recommendations are interim and a new survey will be conducted for September 2023 that will include the minimum required times in the code descriptors as approved by the CPT Editorial Panel. Also, additional specialties who perform these services are expected to participate.**

Overall, the survey showed that the straightforward and low level of medical decision making across all modalities and types of patients for telemedicine E/M services were equivalent to the in-person office visits. This interim recommendation based on this particular survey reflects that there may be a difference in the moderate and high level of medical decision-making services, which showed less time for audio-video and even less time for the audio-only compared to the in-person office visits.

Physical Exam

The history and physical examination are no longer a required component of service in selection of the level of E/M services. The E/M code level selection is based on the complexity of the problem or problems being addressed, the data points that are considered when making decisions and the risk of the treatment decisions. Most of what a physician or QHP does in terms of chronic management of disease can be accomplished without the traditional physical examination. However, a medically necessary physical exam is often performed remotely, and the same medical decision making is extant on that visit. Some examples of a physical exam performed via telemedicine may be assessing the patient's appearance, gauging if the patient is in any distress, appearance of the patient's skin (pale or well-perfused), clarity of patient's speech, determining if the patient is having trouble breathing, assessing if patient is confused, hearing the patient's cough and viewing the patient's social/living situation. Additionally, a more focused physical exam in which the patient can assist the physician or QHP could be palpation or percussion of certain parts of the body, ranging painful joints, focusing in on any relevant part of the body (e.g., skin lesions, conjunctiva, the back of the throat) and aiding with a neurological exam (e.g. finger to nose testing, or having a family member test the skin sensation of certain body parts).

Audio-Video – New Patient

9X075 ***Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.***

The RUC reviewed the survey results from 84 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.93 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time) and 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99202 as both require the same work and similar intensity and complexity to perform even though the surveyed code requires 5 more minutes of time.

For additional support, the RUC referenced MPC code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time) and noted both services have similar time and intensity. **The RUC recommends an interim work RVU of 0.93 for CPT code 9X075.**

9X076 ***Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.***

The RUC reviewed the survey results from 98 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 1.60 appropriately accounts for the work required to perform this service. The RUC recommends 35 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time) and 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99203, as both require the same work and time.

For additional support, the RUC referenced MPC code 92004 *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits* (work RVU = 1.82, 25 minutes intra-service time and 40 minutes total time) which requires similar work and time to perform. **The RUC recommends an interim work RVU of 1.60 for CPT code 9X076.**

9X077 ***Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.***

The RUC reviewed the survey results from 135 physicians and qualified health care professionals and determined a work RVU of 2.20 appropriately accounts for the work required to perform this service. The RUC recommends 44 minutes total time. The RUC recommends a direct work RVU crosswalk to CPT code 74183 *Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences* (work RVU = 2.20, 30 minutes intra-service time and 40 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 2.60 since the intra-service time was 10 minutes less than the top key reference MPC code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time).

For additional support, the RUC referenced MPC codes 90937 *Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription* (work RVU = 2.11, 40 minutes intra-service time and 60 minutes total time) and 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service and 35 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 2.20 for CPT code 9X077.**

9X078 ***Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)***

The RUC reviewed the survey results from 117 physicians and qualified health care professionals and determined that a work RVU of 3.00 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes total time. The RUC recommends a direct work RVU crosswalk to CPT code 95719 *Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; without video* (work RVU = 3.00 and 40 minutes intra-service time and 60 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 2.60 since the intra-service time was 19 minutes less than the top key reference MPC code 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.* (work RVU = 3.50 and 88 minutes total time).

For additional support, the RUC referenced MPC codes 12052 *Repair, intermediate, wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 2.87, 30 minutes intra-service time and 70 minutes total time) and 52287 *Cystourethroscopy, with injection(s) for chemodenervation of the bladder* (work RVU =3.20, 21 minutes intra-service time and 58 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 3.00 for CPT code 9X078.**

Audio-Video – Established Patient

9X079 ***Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.***

The RUC reviewed the survey results from 151 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.70 appropriately accounts for the work required to perform this service. The RUC recommends 17 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time). The RUC determined that the surveyed code was equivalent to the top key reference code 99212 as both require the same work and similar time, 17 and 16 minutes total time, respectively.

For additional support, the RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 0.70 for CPT code 9X079.**

9X080 ***Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.***

The RUC reviewed the survey results from 189 physicians and qualified health care professionals and determined that a work RVU of 1.22 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes total time. The RUC recommends a direct work RVU crosswalk to CPT codes 72126 *Computed tomography, cervical spine; with contrast material* (work RVU = 1.22 and 25 minutes total time), 72129 *Computed tomography, thoracic spine; with contrast material* (work RVU = 1.22 and 25 minutes total time) and 73702 *Computed tomography, lower extremity; without contrast material, followed by contrast material(s) and further sections* (work RVU 1.22 and 26 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 1.30 since the intra-service time

was 5 minutes less than the top key reference MPC code 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time).

For additional support, the RUC referenced MPC codes 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time) and 70491 *Computed tomography, soft tissue neck; with contrast material(s)* (work RVU = 1.38, 17 minutes intra-service time and 27 minutes total time). **The RUC recommends an interim work RVU of 1.22 for CPT code 9X080.**

9X081 ***Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.***

The RUC reviewed the survey results from 207 physicians and qualified health care professionals and determined that a work RVU of 1.74 appropriately accounts for the work required to perform this service. The RUC recommends 32 minutes total time. The RUC recommends a direct work RVU crosswalk to MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 1.92 since the intra-service time was 9 minutes less than the top key reference MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time).

For additional support, the RUC referenced MPC code 93351 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional* (work RVU = 1.75, 20 minutes intra-service time and 40 minutes total time) which requires similar physician work and time. **The RUC recommends an interim work RVU of 1.74 for CPT code 9X081.**

9X082 ***Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.***

The RUC reviewed the survey results from 171 physicians and qualified health care professionals and determined that a work RVU of 2.40 appropriately accounts for the work required to perform this service. The RUC recommends 50 minutes total time. The RUC recommends a direct work RVU crosswalk to CPT code 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed) (*work RVU = 2.40, 30 minutes intra-service time and 50 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 2.80 since the intra-service time was 15 minutes less

than the top key reference MPC code 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (work RVU = 2.80 and 70 minutes total time).

For additional support, the RUC referenced MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time). **The RUC recommends an interim work RVU of 2.40 for CPT code 9X082.**

Audio-Only – New Patient

9X083 ***Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.***

The RUC reviewed the survey results from 65 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.93 appropriately accounts for the work required to perform this service. The RUC recommends 24 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time) and 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99202 as both require similar intensity and complexity and time to perform.

For additional support, the RUC referenced MPC code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time), which requires similar physician work and time to perform. **The RUC recommends an interim work RVU of 0.93 for CPT code 9X083.**

9X084 ***Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.***

The RUC reviewed the survey results from 70 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.57 appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making.*

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded. (work RVU = 1.60 and 35 minutes total time) and 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99203 as both require similar work even though the surveyed code requires 5 minutes less time.

For additional support, the RUC referenced MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time), which requires similar physician work and time to perform. **The RUC recommends an interim work RVU of 1.57 for CPT code 9X084.**

9X085 ***Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.***

The RUC reviewed the survey results from 79 physicians and qualified health care professionals and determined that a work RVU of 2.01 appropriately accounts for the work required to perform this service. The RUC recommends 39 minutes total time. The RUC recommends a direct work RVU crosswalk to MPC code 74178 *Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions (*work RVU = 2.01, 30 minutes intra-service time and 40 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 2.18 since the intra-service time was 12 minutes less than the top key reference MPC code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time).

For additional support, the RUC referenced MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time). **The RUC recommends an interim work RVU of 2.01 for CPT code 9X085.**

9X086 ***Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)***

The RUC reviewed the survey results from 69 physicians and qualified health care professionals and determined that a work RVU of 2.60 appropriately accounts for the work required to perform this service. The RUC recommends 55 minutes total time. The RUC recommends a direct work RVU crosswalk to second top key reference MPC code 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time). The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 3.00 since the work and time of the survey code is similar to code 99204.

For additional support, the RUC referenced MPC code 12052 *Repair, intermediate, wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 2.87, 30 minutes intra-service time and 70 minutes total time). **The RUC recommends an interim work RVU of 2.60 for CPT code 9X086.**

Audio-Only – Established Patient

9X087 ***Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.***

The RUC reviewed the survey results from 141 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.70 appropriately accounts for the work required to perform this service. The RUC recommends 19 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99212 as both require the same work and similar time.

For additional support, the RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 0.70 for CPT code 9X087.**

9X088 ***Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.***

The RUC reviewed the survey results from 158 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.20 appropriately accounts for the work required to perform this service. The RUC recommends 26 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30 and 30 minutes total time) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a*

medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded. (work RVU = 0.70 and 16 minutes total time). The RUC determined the surveyed code was comparable to the top key reference code 99213 as both require similar work and time.

For additional support, the RUC referenced MPC codes 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time) and 73721 *Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material* (work RVU = 1.35, 20 minutes intra-service time and 30 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 1.20 for CPT code 9X088.**

9X089 ***Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.***

The RUC reviewed the survey results from 144 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.80 appropriately accounts for the work required to perform this service. The RUC recommends 34 minutes total time.

The RUC compared the surveyed code to the top key reference service MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time). The RUC determined the surveyed code is appropriately less than code 99214 because it requires less work and time to perform.

For additional support, the RUC referenced MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time) and 99460 *Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant* (work RVU = 1.92, 30 minutes intra-service time and 50 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 1.80 for CPT code 9X089.**

9X090 ***Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)***

The RUC reviewed the survey results from 120 physicians and qualified health care professionals and determined that a work RVU of 2.40 appropriately accounts for the work required to perform this service. The RUC recommends 47 minutes total time. The RUC recommends a direct work RVU crosswalk to CPT code 75574 *Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function,*

and evaluation of venous structures, if performed) (work RVU = 2.40, 30 minutes intra-service time and 50 minutes total time). The RUC determined a crosswalk of 2.40 was more appropriate than the survey 25th percentile work RVU of 2.49 because it places this service in the proper rank order based on the intensity and complexity and time to perform this service.

For additional support, the RUC referenced MPC code 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time). **The RUC recommends an interim work RVU of 2.40 for CPT code 9X090.**

Virtual Check-In

9X091 ***Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion***

The RUC reviewed the survey results from 112 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 0.29 appropriately accounts for the work required to perform this service. The RUC recommends 3 minutes pre-service time, 10 minutes intra-service time and 2 minutes post-service time.

The RUC compared the surveyed code to the key reference service MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time) and determined that the surveyed code may require a similar amount of time to perform, but it is much less intense and complex, thus valued lower.

For additional support, the RUC referenced MPC codes 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU = 0.17, 3 minutes intra-service time and 6 minutes total time) and 97530 *Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes* (work RVU = 0.44, 15 minutes intra-service time and 19 minutes total time) which appropriately bracket the surveyed code. **The RUC recommends an interim work RVU of 0.29 for CPT code 9X091.**

CPT Descriptor Time
The RUC recommends the following times for the CPT descriptors based on the same time in the office visit descriptors. The time in the CPT descriptors is rounded or incremental between this family of services for the ease of those who may report these services based on time.

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	**15**
9X076	Audio-video, new patient, low MDM	**30**

9X077	Audio-video, new patient, moderate MDM	**45**
9X078	Audio-video, new patient, high MDM	**60**
9X079	Audio-video, established patient, straightforward MDM	**10**
9X080	Audio-video, established patient, low MDM	**20**
9X081	Audio-video, establishes patient, moderate MDM	**30**
9X082	Audio-video, established patient, high MDM	**40**
9X083	Audio-only, new patient, straightforward MDM	**15**
9X084	Audio-only, new patient, low MDM	**30**
9X085	Audio-only, new patient, moderate MDM	**45**
9X086	Audio-only, new patient, high MDM	**60**
9X087	Audio-only, established patient, straightforward MDM	**10 must be exceeded**
9X088	Audio-only, established patient, low MDM	**20**
9X089	Audio-only, establishes patient, moderate MDM	**30**
9X090	Audio-only, established patient, high MDM	**40**

Practice Expense

The specialty societies surveyed the clinical activities for the telemedicine E/M services and received 182 responses in which 60% of the respondents indicated that the use of clinical staff in the provision of telemedicine E/M services was typical (>50%). The survey directed survey respondents to indicate typical clinical time by CPT code and by clinical activity. The survey included the clinical activities currently included in the direct PE inputs for 99202-99215 as well as an opportunity to write in time and specify additional activities for pre-service period, service period and post-service period. For the survey responses that included clinical staff time, the clinical activity medians were computed and then summed to calculate total time.

The Practice Expense Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification. The specialty societies detailed their methodology for making some changes to specific clinical activity codes to adapt them for telemedicine. The specialty societies indicated that only specific clinical activities are applicable and edited CA009 *Greet patient, provide gowning, Ensure appropriate medical records are available*, by deleting "greet patient, provide gowning" and CA013 *Prepare room, equipment and supplies Prepare patient for the visit (i.e., check audio and/or visual),* by deleting "prepare room, equipment and supplies" and adding "prepare patient for the visit (i.e., check audio and/or visual)." The specialty societies explained how they solicited both individual time in each of the clinical activities and total time. The specialty societies also assiduously reviewed each code using the medians for relevant clinical activities and making minor adjustments, so the amount of time for the clinical staff increased appropriately along with the complexity of the medical decision making. In addition, the PE Subcommittee recommends to CMS that a camera and microphone should be considered typical in the computer contained in the indirect overhead expense. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies. The RUC noted that the resurvey of physician work for September 2023 would not impact these practice expense recommendations and affirmation of these practice expense recommendations is expected.**

HCPCS Codes

The RUC recommends deletion of G2012 *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion* as this service may be reported using CPT code 9X091 in 2025. The RUC also recommends deletion of G2252 *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion* as this service may be reported using CPT codes 9X083 or 9X087. **The RUC recommends that CMS delete G2012 and G2252.**

Work Neutrality

The RUC's recommendation for these CPT codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Evaluation and Management **Office or Other Outpatient Services** ... **Telemedicine Services** Telemedicine services are synchronous, real-time, interactive encounters between a physician or other qualified health care professional and a patient utilizing either combined audio-video or audio-only telecommunication. Unless specifically stated in the code descriptor, telemedicine services level selection is based on either the level of MDM or the total time for E/M services performed on the date of the encounter, as defined for each service. Telemedicine services are used in lieu of an in-person service when medically appropriate to address the care of the patient and when the patient and/or family/caregiver agree to this format of care. Telemedicine services are not used to report routine telecommunications related to a previous encounter (eg, to communicate lab results). They may be used for follow-up of a previous encounter when a follow-up E/M service is required in the same manner as in-person E/M services are utilized. For example, telemedicine services may be used for a patient requiring re-assessment for response or complications related to the treatment plan of a previous visit. Except for 9X091, these services do not require a specific time interval from the last in-person or telemedicine visit and may be initiated by a physician or other qualified health care professional as well as by a patient and/or family/caregiver. However, the telemedicine services must be performed on a separate calendar date from another E/M service. When performed on the same date of another E/M service, the elements and time of these services are summed and reported in aggregate, ensuring that any overlapping time is only counted once. For audio-only telemedicine services for established patients with 5-10 minutes of medical discussion, report brief communication technology service (eg, virtual check-in) code 9X091. Code 9X091 is reported for established patients only. The service is patient initiated and intended to				

evaluate whether a more extensive visit type is required (eg, an office or other outpatient E/M service [99212, 92213, 99214, 99215]). Video technology is not required. When the patient-initiated check in leads to an E/M service on the same calendar date, and when time is used to select the level of that E/M service, the time from 9X091 may be added to the time of the E/M service for total time on the day of the encounter.

For services that are asynchronous (ie, not live in real time), see Online Digital Evaluation and Management Services (99421, 99422, 99423). Do not report telemedicine services for oversight of clinical staff (eg, chronic care management). Do not count the time performing telemedicine services towards time performing chronic care management (99437, 99491) or principal care management services (99424, 99425). See Table 2, Telemedicine E/M Office Visits.

For 9X075-9X090, the level of service is selected based on medical decision making (MDM) or total time on the date of the encounter. For audio-only codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, the service must exceed 10 minutes of medical discussion. Code 9X091 describes services for established patients with 5-10 minutes of medical discussion and is based only on the time of medical discussion and not MDM. (See E/M Guidelines). Do not count time establishing the connection or arranging the appointment, even when performed by the physician or other qualified health care professional. Services less than five minutes are not reported.

For audio-only codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, medical discussion is synchronous (real-time) interactive verbal communication and does not include on-line digital communication (except when via a telecommunication technology device for the deaf). MDM has the meaning used in the E/M Guidelines and is a cognitive process by the physician or qualified health care professional.

If during the encounter, audio-video connections are lost and only audio is restored, report the service that accounted for the majority of the time of the interactive portion of the service. Ten minutes of medical discussion or patient observation must be exceeded in order to report the service.

Table 2: Telemedicine E/M Services

Service	New / Established	Synchronous	Level / Unit Reported	Service Period	Other E/M Notations
Synchronous Audio-video (9X075-9X082)	Both	Yes	MDM or total time on the date of the service. No minimum required time unless level selected by time.	Per single calendar date	Do not report with same day in-person E/M
Synchronous Audio-only (9X083-9X090)	Both	Yes	MDM or total time on the date of the service. Must be more than 10 minutes of	Per single calendar date	Do not report with same day in-person E/M

				medical discussion.		
	Brief Synchronous Communication Technology Service (9X091)	Established	Yes	A single 5-10-minute medical discussion	Per single calendar date	Not related to E/M in prior 7 days or leading to E/M next 24 hours
	On-line Digital E/M (99421-99423)	Established	No	Minutes during 7-day period	Per 7 days	Not related to E/M in prior 7 days or leading to E/M next 24 hours
	Interprofessional Telephone/Internet/EHR Consultations (99446-99451)	Both	Not required	Minutes during 7-day period	Per 7 days	No in-person encounter within 14 days.
	Interprofessional Telephone/Internet/EHR Consultations (99452)	Both	Not Required	Minutes during a single day	Per 14 days	No in-person encounter within 14 days.
	Care Management and Remote Treatment Management (99424, 99425, 99437, 99484, 99491)	Established	Not required	Minutes	Per calendar month	Physician or qualified health care professional time excluded on date of other E/M
	All	Same time is not counted twice				

Synchronous Audio-Video Evaluation and Management Services

Codes 9X075, 9X076, 9X077, 9X078, 9X079, 9X080, 9X081, 9X082 may be reported for new or established patients. Synchronous audio and video telecommunication is required. These services may be reported based on total time on the date of the encounter or MDM.

New Patient

#●9X075	C1	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 0.93
#●9X076	C2	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.60
#●9X077	C3	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 2.20
#●9X078	C4	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX	Resurvey for September 2023 Interim Work RVU = 3.00

Established Patient				
#●9X079	C5	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 0.70
#●9X080	C6	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.22
#●9X081	C7	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.74
#●9X082	C8	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)	XXX	Resurvey for September 2023 Interim Work RVU = 2.40

Synchronous Audio-Only Evaluation and Management Services

Codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090 may be reported for new or established patients. They require more than 10 minutes of medical discussion. For services of 5-10 minutes of medical discussion, report 9X091, if appropriate. If 10 minutes of medical discussion is exceeded, total time on the date of the encounter or MDM may be used for code level selection.

New Patient

#●9X083	C9	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 0.93
#●9X084	C10	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.57
#●9X085	C11	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 2.01
#●9X086	C12	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX	Resurvey for September 2023 Interim Work RVU = 2.60

Established Patient				
#●9X087	C13	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 0.70
#●9X088	C14	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.20
#●9X089	C15	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	Resurvey for September 2023 Interim Work RVU = 1.80
#●9X090	C16	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417) (Do not report 9X087, 9X088, 9X089, 9X090 when using 99374, 99375, 99377, 99378, 99379, 99380 for the same call[s]) (Do not report 9X087, 9X088, 9X089, 9X090 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 9X087, 9X088, 9X089, 9X090 during the same month with 99487, 99489)	XXX	Resurvey for September 2023 Interim Work RVU = 2.40

		(Do not report 9X087, 9X088, 9X089, 9X090 when performed during the service time of 99495, 99496)		
Brief Synchronous Communication Technology Service (eg, Virtual Check-In) Code 9X091 is reported for established patients only. The service is patient initiated and intended to evaluate whether a more extensive visit type is required (eg, an office or other outpatient E/M service [99212, 92213, 99214, 99215]). Video technology is not required. It is of shorter duration than the audio-only services and has other restrictions that are related to the intended use as a "virtual check-in" or triage to determine if another E/M service is necessary. When the patient-initiated check in leads to an E/M service on the same calendar date, and when time is used to select the level of that E/M service, the time from 9X091 may be added to the time of the E/M service for total time on the day of the encounter.				
#●9X091	C17	Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion (Do not report 9X091 in conjunction with 9X075-9X090) (Do not report services of less than 5 minutes of medical discussion)	XXX	Resurvey for September 2023 Interim Work RVU = 0.29
DG2012	-	~~Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion~~	~~XXX~~	~~(2023 Work RVU = 0.25)~~
DG2252	-	~~Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the~~	~~XXX~~	~~(2023 Work RVU = 0.50)~~

		~~next 24 hours or soonest available appointment; 11-20 minutes of medical discussion~~		

Non-Face-to-Face Services

Telephone Services

~~Telephone services are non-face-to-face evaluation and management (E/M) services provided to a patient using the telephone by a physician or other qualified health care professional, who may report evaluation and management services. These codes are used to report episodes of patient care initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure, and visit. Likewise, if the telephone call refers to an E/M service performed and reported by that individual within the previous seven days (either requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) is considered part of that previous E/M service or procedure. (Do not report 99441-99443, if 99421, 99422, 99423 have been reported by the same provider in the previous seven days for the same problem.)~~

~~(For telephone services provided by a qualified nonphysician who may not report evaluation and management services [eg, speech-language pathologists, physical therapists, occupational therapists, social workers, dietitians), see 98966-98968)~~

D99441	-	~~Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion~~	~~XXX~~	~~(2023 Work RVU = 0.70)~~
D99442	-	~~11-20 minutes of medical discussion~~	~~XXX~~	~~(2023 Work RVU = 1.30)~~
D99443	-	~~21-30 minutes of medical discussion~~ ~~(Do not report 99441-99443 when using 99374-99380 for the same call[s])~~ ~~(Do not report 99441-99443 for home and outpatient INR monitoring when reporting 93792, 93793)~~ ~~(Do not report 99441-99443 during the same month with 99487-99489)~~	~~XXX~~	~~(2023 Work RVU = 1.92)~~

		~~(Do not report 99441-99443 when performed during the service time of codes 99495 or 99496)~~ (99441, 99442, 99443 have been deleted. To report, see 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, 9X091)		

Interprofessional Telephone/Internet/Electronic Health Record Consultations

The consultant should

…

Telephone/Internet/electronic health record consultations of less than five minutes should not be reported. Consultant communications with the patient and/or family may be reported using 98966, 98967, 98968, 99421, 99422, 99423, ~~99441, 99442, 99443,~~ 9X087, 9X088, 9X089, 9X090, 9X091, and the time related to these services is not used in reporting 99446, 99447, 99448, 99449. Do not report 99358, 99359 for any time within the service period, if reporting 99446, 99447, 99448, 99449, 99451.

Non-Face-to-Face Nonphysician Services
Telephone Services

Telephone services are non-face-to-face assessment and management services provided by a qualified health care professional to a patient using the telephone. These codes are used to report episodes of care by the qualified health care professional initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or the next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent assessment and management service, procedure, and visit. Likewise, if the telephone call refers to a service performed and reported by the qualified health care professional within the previous seven days (either qualified health care professional requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered part of that previous service or procedure. (Do not report 98966-98968 if reporting 98966-98968 performed in the previous seven days.)

(For telephone services provided by a physician, see ~~99441, 99442, 99443,~~ 9X087, 9X088, 9X089, 9X090, 9X091)

98966 *Telephone assessment and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion*

RUC Descriptor Time Recommendations to CPT

Synchronous Audio-Video Evaluation and Management Services **New Patient**	
9X075	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.
9X076	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
9X077	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.
9X078	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Established Patient	
9X079	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.
9X080	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.
9X081	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
9X082	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

Synchronous Audio-Only Evaluation and Management Services New Patient	
9X083	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.
9X084	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
9X085	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.
9X086	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Established Patient	
9X087	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be ~~met or~~ exceeded.
9X088	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.
9X089	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
9X090	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417) (Do not report 9X087, 9X088, 9X089, 9X090 when using 99374, 99375, 99377, 99378, 99379, 99380 for the same call[s]) (Do not report 9X087, 9X088, 9X089, 9X090 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 9X087, 9X088, 9X089, 9X090 during the same month with 99487, 99489) (Do not report 9X087, 9X088, 9X089, 9X090 when performed during the service time of 99495, 99496)

AMERICAN ACADEMY OF FAMILY PHYSICIANS

April 24, 2023

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva:

On behalf of the American Academy of Family Physicians (AAFP) and its 129,600 members, we write to comment on the recommendations in Tab 6 (Telemedicine Evaluation and Management Services) of the April 2023 RUC agenda. Although the AAFP did not participate in the survey of these services, many family physicians provide them as part of their practices. These comments are based on our review of the recommendations.

Synchronous Audio-Video Evaluation and Management Services

We support the recommended values for the synchronous audio-video (AV) evaluation and management (E/M) services. Some telemedicine visits require the same level of work by the physician and incur the same level of liability as in-person visits; therefore, those telemedicine services should be reimbursed at parity with the corresponding in-person visit. This is certainly true for synchronous audio-video E/M services.

The descriptors for codes 9X075-9X082 are already the same as those for the corresponding office/outpatient E/M services (99202-99205 and 99212-99215) in terms of medical decision making (MDM). If, as recommended, the times in the descriptors are the same as those of the corresponding office/outpatient E/M services, then there will be nothing to distinguish the two sets of services other than the delivery modality. We agree with the specialties that this distinction does not merit assigning different work relative value units (RVUs).

Setting the work RVUs for these codes on par with those for office/outpatient E/M services is further supported by the survey results. As noted in the summary of recommendation forms, the survey median and 25th percentile work RVUs for all eight AV codes were identical to the current work RVU for the office/outpatient visit code with the same level of MDM. Most respondents also indicated that the intensity/complexity measures for the survey code were identical to the key reference service, thereby supporting parity in work RVUs.

Synchronous Audio-Only Evaluation and Management Services

We support the specialties' recommended values for 9X083, 9X084, 9X085, 9X087, and 9X088. In each instance, the recommended value appears supported by a time and intensity comparison to the key reference service and/or a search of the RUC database for other RUC-reviewed codes with an XXX global period and comparable intra-service time and total time.

We are less confident in the recommended values for 9X086, 9X089, and 9X090. For each of these three codes, the recommended value appears high based on a time and intensity comparison to the key reference service. Likewise, a search of the RUC database for RUC-reviewed codes with an XXX global period and comparable times did not yield supportive comparators.

In fact, some of the codes we found when searching the RUC database also suggested the recommended values were high. For example, code 9X090 describes an audio-only E/M service which is recommended to have 30 minutes of intra-service time, 47 minutes of total time, and a work RVU of 2.49. By comparison, code 99443 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21-30 minutes of medical discussion), which has the same intra-service time and total time only has a work value of 1.92. Further explanation of the specialties' recommendations for 9X086, 9X089, and 9X090 would be helpful.

Brief Synchronous Communication Technology Service (eg, Virtual Check-In)

In comparing 9X091 to the key reference services based on time and intensity, we found the recommended value of 0.25 to be low. Respondents generally rated 9X091 as identical in intensity to the key reference service that they chose, and the recommended time for 9X091 compared to the times for the key reference services would suggest a value higher than 0.25.

Also, we found seven RUC-reviewed codes an XXX global period that have the same intra-service time and total time. All are valued higher than the 0.25 recommended for this code:

CPT Code	Long Desc	Work RVU
74210	Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study	0.59
74230	Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study	0.53
76511	Ophthalmic ultrasound, diagnostic; quantitative A-scan only	0.64
76513	Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy, unilateral or bilateral	0.60
77075	Radiologic examination, osseous survey; complete (axial and appendicular skeleton)	0.55
92286	Anterior segment imaging with interpretation and report; with specular microscopy and endothelial cell analysis	0.40
96202	Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health	0.43

	care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes	

We were confused by some aspects of the Description of Work on the summary of recommendation for this code. First, the Description of Work uses the term “visit.” There is no “visit” with this service. Second, there is no description of pre-service work or post-service work, but the specialties are recommending 3 minutes of pre-service time and 2 minutes of post-service time. Finally, the entire Description of Work seems out of sync with the code descriptor. Some clarification of the Description of Work would be helpful.

Practice Expenses

We support the practice expense inputs recommended for this family of codes.

Thank you for the opportunity to comment on this tab. Please let us know if you have any questions about these comments.

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva:

On behalf of the American College of Physicians (ACP) and our 161,000 members, we write to comment on the recommendations in Tab 6 (Telemedicine Evaluation and Management Services) of the April 2023 RUC agenda. While ACP did not participate in the survey of these services, internal medicine physicians continue to make up a large portion of clinicians providing them as part of their practices. It is the College's intent that these comments speak to our review of the recommendations.

Synchronous Audio-Video Evaluation and Management Services

ACP supports the recommended values for the synchronous audio-video evaluation and management (E/M) services. The College strongly believes that audio-video telemedicine visits require the same level of work by the physician (and their care team) as in-person visits. Physicians additionally incur the same level of liability as in-person visits, which has its own costs and considerations attributed to it. We further do not believe that the absence of the patient at the facility negates the time nor work involved with these services. Therefore, audio-video telemedicine visits should be reimbursed at parity with the corresponding in-person visit.

Our belief is further supported by the fact that the medical decision making (MDM) for the subject audio-video E/M services (9X075-9X082) is the same as that for the corresponding office/outpatient (O/O) E/M services (99202-99205 and 99212-99215). The surveying societies have also recommended that the times in the descriptors remain the same as those of the corresponding O/O E/M services. If the RUC approves the recommended times, which the College believes are supported by the survey data, there will not exist any *meaningful* distinguishing factor between the two sets of services. The College agrees with the surveying societies that the difference in delivery modality in no way merits assigning different relative work value units (RVUs) as the work is the same. Allocation of the same work RVUs is also supported by the survey data, which is comparable to the work RVUs established for the O/O E/M services with the same level of MDM. The intensity and complexity measures for the subject survey codes were also identical to the corresponding reference service.

Synchronous Audio-Only Evaluation and Management Services

ACP is less confident in the recommended values for the subject audio-only E/M codes, particularly 9X086, 9X089, and 9X090. Unlike the recommended values for 9X083, 9X084, 9X085, 9X097, and 9X088, the College does not believe these codes are supported by survey data, time and intensity comparisons,

nor comparator codes identified via the RUC database. We feel it would be exceptionally rare for high level MDM to occur in an audio-only visit. In our experience, most health systems would not support physician templates with the CPT times of 60-74 minutes for a new patient, as required by 9X086, nor the 40-54 minutes for an established patient, as required by 9X090. Regarding 9X089, ACP feels the data is problematic in a different way. It is highly likely this code will be reported mostly based on MDM. Rarely will the CPT time of 30-39 minutes be invoked. The survey is robust with 144 respondents, and we feel the survey 25th percentile RVU of 1.80 is close enough to the 1.92 RVU for 99214, which is the closest analogous service. The survey time of 34 minutes, while in the middle of the CPT time of 30-39 minutes, seems to be the anomaly, and might be an artifact of how the survey was worded and of the reference services that were provided for comparison. For these reasons, ACP would welcome further explanation from the surveying societies on the subject recommendations.

In establishing the values for these services, the College also strongly recommends the RUC and surveying societies to heed the potential downstream impacts. While the College understands it is not the role of the RUC to disincentivize nor incentivize the provision of any given service, the valuation process does not operate in a vacuum. The reality is that reimbursement rates regularly inform access and coverage decisions, and access to telemedicine services, particularly audio-only E/M visits, is a lifeline for millions of patients across the country and has a positive impact on physicians as well.

Brief Synchronous Communication Technology Service (i.e., Virtual Check-in)

ACP does not support the recommendation for the subject virtual check-in code, 9X091. As compared to the reference service, 99212, the recommended value for 9X091 of 0.25 seems incredibly low. A closer look at the intensity complexity measures reveals that survey respondents found 9X091 identical in intensity when rated against the selected reference service. 99212 includes 16 minutes of total time, and 9X091 includes 15 minutes of total time. It is concerning that a code rated identical in complexity, with similar times, has a recommended wRVU that is *less* 0.45 wRVUs than its comparator. The College has additional concerns with the provided description of work, which does not support the code descriptor. For these reasons, the College would appreciate additional clarification on both the recommended values and information used to inform the description.

Practice Expense

We support the practice expense inputs recommended for this family of codes.

Thank you for the opportunity to comment on this tab. Please let us know if you have any questions regarding the subject comments.

RE: Society comments on Tab 6 Telemedicine E/M services

Dear Dr. Silva:

The AASM appreciates the opportunity to comment on the recommendations for Tab 6, Telemedicine Evaluation and Management Services, in advance of the April RUC meeting. The AASM is dedicated to advancing sleep care and enhancing sleep health to improve lives, and the comments included in this response reflect the needs of more than 9,000 individual AASM members and 2,500 AASM-accredited sleep facilities, providing sleep medicine services to patients with sleep disorders. Members of the AASM Coding & Compliance Committee reviewed the value recommendations, along with the RUC Advisor and Alternate Advisor, to develop these comments submitted on behalf of the AASM.

Synchronous Audio-Video Evaluation and Management Services
The AASM agrees with the recommended values for the audio-video evaluation and management services codes, as these values align with the values for the key reference services. We also agree that the time and intensity for these codes are comparable and encourage the RUC to support these values, which are also being recommended at the 25th percentile, based on survey data.

Synchronous Audio-only Evaluation and Management Services
The AASM also supports the recommended values for the audio-only codes, based on the key reference services and the survey data. We agree that the recommended values for 9X083 – 9X086 should include higher times, which is appropriate for new patients, and are appropriate based on time and intensity. We also agree that 9X084 – 9X090 values should be comparable to the values for 99441 – 99443, as they describe similar services for established patients and align with the survey data.

Brief Synchronous Communications Technology Service
The AASM believes that the description of work for this code, while likely inconsistent due to clerical error, should be revised for consistency with the code descriptor. Additionally, the AASM believes that the recommended value for code 9X091, which will replace G2012, is too low. While the recommended value is comparable to the value for G2012, the survey data shows that a higher value would be more appropriate. We recommend that this service be valued at a minimum of 0.29, which is consistent with the survey data at the 25th percentile.

AASM appreciates the work by the surveying societies to develop these recommendations and the RUC's consideration of these comments. Please feel free to contact Diedra Gray, AASM Director of Health Policy, at dgray@aasm.org or 630-737-9700, for additional information or clarifications.

Sincerely,

Charles Bae, MD
AASM RUC Advisor

Jeremy Weingarten, MD
AASM Alternate RUC Advisor

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X075 Tracking Number C1 Original Specialty Recommended RVU: **0.93**
Presented Recommended RVU: **0.93**
Global Period: XXX Current Work RVU: **0.93** RUC Recommended RVU: **0.93**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of history of present illness (HPI), review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history and visual examination to formulate a differential diagnosis and treatment plan (requiring straightforward medical decision making [MDM]). Discuss treatment plan with patient and family. Provide patient education and respond to questions from patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023
Presenter(s):	Amy Ahasic, MD, MPH, FCCP; Suzanne Berman, MD, FAAP; Lisa B. Price, MD; Edward R. Tuohy, MD; Korinne Van Keuren, DNP, APRN, RNFA; Richard F. Wright, MD, FACC

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	75%	19%	2%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	86%	12%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	69%	20%
Physical effort required	39%	54%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	61%	39%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	80%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	10%	70%	20%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	60%	30%
Physical effort required	30%	60%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	10%	60%	30%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes

- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
9X075	Audio-Video, NEW pt, straightforward MDM, 15 minutes must be met	0.93	15	25	0.037

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X075

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 84 respondents of whom 88% found the vignette to be typical. Both the survey median and 25th percentile RVW are 0.93 and the times are 5/15/5/25.

The first key reference service, which was chosen by 59 of the respondents, was 99202, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*, which has an RVW of 0.93, and times of 2/15/3/20.

When reported based on MDM, both codes require straightforward decision making and the survey total time was 5 minutes longer for 9X075 which supports the 25th percentile RVW. Therefore, the expert panel agreed that the survey

25th percentile RVW was appropriate. The expert panel also agreed that the median intraservice time was appropriate because it was identical to the time for 99202.

For 9X075, the expert panel recommends an RVW of 0.93, preservice time of 5 minutes, intraservice time of 15 minutes, postservice time of 5 minutes, and a total time of 25 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99202-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 71,013 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency 0	Percentage	%

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99202-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X076 Tracking Number C2 Original Specialty Recommended RVU: **1.60**
Presented Recommended RVU: **1.60**
Global Period: XXX Current Work RVU: **1.60** RUC Recommended RVU: **1.60**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated injury.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring low level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	4%	78%	16%	1%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	1%	86%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	68%	24%
Physical effort required	39%	51%	10%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	1%	62%	37%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	20%	80%	0%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	60%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	60%	20%
Physical effort required	20%	80%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes

- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X076

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.
There were 98 respondents of whom 93% found the vignette to be typical. Both the survey median and 25th percentile RVW are 1.60 and the survey times are 5/25/5/35.

The first key reference service, which was chosen by 79 of the respondents, was 99203, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter*, which has an RVW of 1.60 and times of 5/25/5/35.

When reported based on MDM , both codes require low level MDM. The survey 25th percentile RVW and times are a direct crosswalk to 99203. The expert panel also agreed that the median intraservice time of 25 minutes was appropriate because it was identical to the intraservice time for 99203.

For 9X076, the expert panel recommends an RVW of 1.60, preservice time of 5 minutes, intraservice time of 25 minutes, postservice time of 5 minutes, and a total time of 35 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99203-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 241,299 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99203-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X077 Tracking Number C3 Original Specialty Recommended RVU: **2.60**
Presented Recommended RVU: **2.60**
Global Period: XXX Current Work RVU: **2.60** RUC Recommended RVU: **2.20**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring moderate level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	44%	56%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	22%	33%	44%
Physical effort required	33%	44%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	56%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet

- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X077

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 135 respondents of whom 96% found the vignette to be typical. Both the median and 25th percentile RVW are 2.60 and the times are 8/30/6/44.

The first key reference service, which was chosen by 105 of the respondents, was 99204, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter*, which has an RVW of 2.60 and times of 10/40/10/60.

When reported based on MDM both codes require moderate level MDM. The survey median intraservice and total times were less than 99204, however, the expert panel agreed that the survey 25th percentile RVW is appropriate and placed 9X077 in proper rank order with the other AV telemedicine E/M codes and with 99204.

For 9X077, the expert panel recommends an RVW of 2.60, preservice time of 8 minutes, intraservice time of 30 minutes, postservice time of 6 minutes, and total time of 44 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99204-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 330,400 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99204-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X078 Tracking Number C4 Original Specialty Recommended RVU: **3.50**
Presented Recommended RVU: **3.00**
Global Period: XXX Current Work RVU: **N/A** RUC Recommended RVU: **3.00**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring high level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	4%	62%	25%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	72%	26%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	12%	63%	25%
Physical effort required	37%	48%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	46%	52%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	13%	63%	25%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	38%	63%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	25%	50%
Physical effort required	50%	38%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes

- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X078

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 117 respondents of whom 90% found the vignette to be typical. Both the median and 25h percentile RVW are 3.50 and the survey times are 10/40/10/60.

The first key reference service, which was chosen by 92 of the respondents, was 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter*, with an RVW of 3.50 and times of 14/59/15/88.

When reported using MDM, both codes require high level MDM. The survey median intraservice and total times were lower for 9X078 than for 99205, however, the expert panel agreed that the survey 25th percentile RVW of 3.50 is appropriate and placed 9X078 in proper rank order with the other AV E/M telemedicine codes and 99205.

For 9X078, the expert panel recommends an RVW of 3.50, preservice time of 10 minutes, an intraservice time of 40 minutes, a postservice time of 10 minutes, and a total time of 60 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99205-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commerical utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 160,335 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99205-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X079 Tracking Number C5 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **0.70** RUC Recommended RVU: **0.70**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: If necessary, review interval correspondence, referral notes, and medical records generated since the last visit. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history. Update pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history and visual examination to formulate a differential diagnosis and treatment plan (requiring straightforward MDM). Discuss the treatment plan with patient and family. Provide patient education and respond to questions from the patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	1%	11%	76%	11%	1%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	80%	12%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	13%	69%	18%
Physical effort required	51%	43%	6%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	60%	35%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	70%	22%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	15%	67%	19%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	26%	37%	37%
Physical effort required	44%	41%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	48%	44%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X079

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 151 respondents of whom 92% found the vignette to be typical. Both the survey median and 25th percentile RVWs are 0.70 and the survey times are 4/10/3/17.

The first key reference service, which was chosen by 100 of the respondents, was 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter,* with an RVW of 0.70 and times of 2/11/316.

When reported based on MDM, both codes require straightforward level MDM. The expert panel agreed that both the 25th percentile RVW and the survey times were direct crosswalks to 99212. Therefore, the expert panel agreed that the survey 25th percentile RVW is appropriate. The expert panel also agreed that the median intraservice time of 10 minutes is appropriate because it is only 1 minute less than the intraservice time for 99212.

For 9X079, the expert panel recommends an RVW of 0.70, preservice time of 4 minutes, intraservice time of 10 minutes, postservice time of 3 minutes, and a total time of 17 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99212-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization is unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 746,296 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Code:9X080 Tracking Number C6 Original Specialty Recommended RVU: **1.30**
Presented Recommended RVU: **1.30**
Global Period: XXX Current Work RVU: **1.30** RUC Recommended RVU: **1.22**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: PRIOR TO VISIT: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.
DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring low level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	6%	77%	15%	1%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	81%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	64%	22%
Physical effort required	49%	44%	6%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	4%	61%	35%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	15%	62%	23%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	8%	62%	31%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	15%	46%	38%
Physical effort required	38%	46%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	62%	38%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X080

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 189 respondents of whom 97% found the vignette to be typical. Both the survey median and 25th percentile RVWs are 1.30 and the survey times are 5/15/5/25.

The first key reference service, which was chosen by 140 of the respondents, was 99213, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter*, with an RVW of 1.30 and times of 5/20/2/35.

When reported using MDM, both codes require low level MDM. The median intraservice time for 9X080 is 5 minutes less than 99213, however, the expert panel agreed that the survey 25th percentile RVW placed 9X080 in proper rank order with the other AV telemedicine codes and 99213.

For 9X080, the expert panel recommends an RVW of 1.30, preservice time of 5 minutes, intraservice time of 15 minutes, postservice time of 5 minutes, and total time of 25 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.

☐ Historical precedents.
☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99213-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 6,569,884 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Presented Recommended RVU: **1.92**
Global Period: XXX Current Work RVU: **1.92** RUC Recommended RVU: **1.74**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: PRIOR TO VISIT: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.
DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring moderate level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	8%	65%	23%	4%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	3%	76%	21%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	58%	27%
Physical effort required	47%	43%	11%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	3%	50%	47%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	7%	86%	7%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	71%	21%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	36%	43%	21%
Physical effort required	43%	43%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X081

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making.
When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 207 respondents of whom 98% found the vignette to be typical. Both the survey median and 25th percentile RVWs are 1.92 and the survey times are 6/21/5/32.

The first key reference service, which was chosen by 159 of the respondents was 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter*, with an RVW of 1.92 and times of 7/30/10/47.

When reported based on MDM, both codes require moderate level MDM. The survey median intraservice and total times for 9X081 were less than for 99214, however, the expert panel agreed that the survey 25th percentile RVW of 1.92 placed 9X081 in proper rank order with the other AV telemedicine codes and 99214.

For 9X081, the expert panel recommends an RVW of 1.92, preservice time of 6 minutes, intraservice time of 21 minutes, postservice time of 5 minutes, and a total time of 32 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99214-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

SUMMARY OF RECOMMENDATION

CPT Code:9X082 Tracking Number C8 Original Specialty Recommended RVU: **2.80**
Presented Recommended RVU: **2.80**
Global Period: XXX Current Work RVU: **2.80** RUC Recommended RVU: **2.40**

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: PRIOR TO VISIT: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.
DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring high level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	5%	65%	21%	8%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	2%	70%	28%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	60%	30%
Physical effort required	44%	43%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	45%	54%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	60%	40%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	7%	47%	47%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	27%	33%	40%
Physical effort required	40%	53%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	33%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X082

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 171 respondents of whom 88% found the vignette to be typical. Both the survey median and 25th percentile RVWs are 2.80 and the survey times are 10/30/10/50.

The first key reference service, which was chosen by 132 of the respondents, was 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter,* with an RVW of 2.80 and times of 10/45/15/70.

When MDM is used to report these codes, both require high level MDM. The survey median intraservice and total times for 9X082 are lower than those for 99215, however, the expert panel agreed that survey 25th percentile RVW of 2.80 placed 9X082 in proper rank order with the other AV telehealth codes and with 99215.

For 9X082, the expert panel recommends an RVW of 2.90, preservice time of 10 minutes, intraservice time of 30 minutes, postservice time of 10 minutes, and total time of 50 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99215-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization is unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,027,175 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

SUMMARY OF RECOMMENDATION

CPT Code:9X083 Tracking Number C9 Original Specialty Recommended RVU: **0.93**
Presented Recommended RVU: **0.93**
Global Period: XXX Current Work RVU: **0.93** RUC Recommended RVU: **0.93**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchonous audio-only visit for a new patient with a self-limited problem

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of history of present illness (HPI), review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring straightforward medical decision making [MDM]). Discuss treatment plan with patient and family. Provide patient education and respond to questions from patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

Physical effort required	20%	60%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	20%	80%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X083

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 65 respondents of whom 86% found the vignette to be typical. Both the median and 25th percentile RVWs are 0.93 and the survey times are 5/15/4/24.

The first key reference service, which was chosen by 44 of the respondents, was 99202, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*, which has an RVW of 0.93 and times of 2/15/3/20.

When reported using MDM both codes require a straightforward level of MDM. The expert workgroup agreed that the survey median and 25th percentile RVW (which were identical) is appropriate and supported by the 4 additional pre and post service minutes as compared to 99202.

For 9X083, the expert panel recommends an RVW of 0.93, 5 minutes of preservice time, 15 minutes of intraservice time, 4 minutes of postservice time, and a total time of 24 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99202-95, 99442

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 261,067 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Presented Recommended RVU: **1.57**
Global Period: XXX Current Work RVU: **1.60** RUC Recommended RVU: **1.57**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchonous audio-only for a new patient with a stable chronic illness or acute uncomplicated illness or injury

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient’s condition with available information to formulate a differential diagnosis and treatment plan. (requiring low level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	80%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X084

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 70 respondents of whom 91% found the vignette to be typical. The survey median RVW is 1.60, the survey 25th percentile RVW is 1.57, and the survey times are 5/20/5/30.

The first key reference service, which was chosen by 47 of the respondents, was 99203, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter,* which has an RVW of 1.60 and times of 5/25/5/35.

When reported using MDM, both codes require low level MDM. The panel agreed that the 25th percentile RVW was appropriate because the survey median intraservice time was 5 minutes less than the intraservice time for 99203.

For 9X084, the expert panel recommends an RVW of 1.57, a preservice time of 5 minutes, an intraservice time of 20 minutes, a postservice time of 5 minutes, and total time of 30 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99203-95, 99443

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

CPT Code:9X085 Tracking Number C11 Original Specialty Recommended RVU: **2.18**
Presented Recommended RVU: **2.18**
Global Period: XXX Current Work RVU: **2.60** RUC Recommended RVU: **2.01**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient’s condition with available information to formulate a differential diagnosis and treatment plan. (requiring moderate level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	72%	28%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	8%	66%	26%
Physical effort required	34%	60%	6%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	44%	56%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	75%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	38%	38%
Physical effort required	88%	0%	13%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X085

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 79 respondents of whom 94% found the vignette to be typical. The survey median RVW is 2.60 and the 25th percentile RVW is 2.18 and the survey times are 6/28/5/39.

The first key reference service, which was chosen by 50 of the of the respondents, was 99204, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter,* which has an RVW of 2.60 and times of 10/40/10/60.

When reported based on MDM, both codes require moderate level MDM. The median intraservice time was 28 minutes which is 12 minutes less than that for 99204. The expert panel agreed that this time difference supported the 25th percentile RVW of 2.18

For 9X085, the expert panel recommends an RVW of 2.18, preservice time of 6 minutes, intraservice time of 28 minutes, postservice time of 5 minutes, and a total time of 39 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99204-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

CPT Code:9X086 Tracking Number C12 Original Specialty Recommended RVU: **3.00**
Presented Recommended RVU: **3.00**
Global Period: XXX Current Work RVU: **3.50** RUC Recommended RVU: **2.60**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation tha poses an acute threat to life or bodily function, or an accute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.
Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient’s condition with available information to formulate a differential diagnosis and treatment plan. (requiring high level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.
After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	72%	24%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	7%	70%	24%
Physical effort required	30%	63%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	48%	50%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	83%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	50%	17%
Physical effort required	67%	17%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	67%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

Code Level Review

AV Telemedicine E/M Codes

As a general matter, the expert panel observed that the survey respondents appear to agree with the expert panel that the work associated with each code is similar to the work of the in-person OV code with the same level of MDM.

9X086

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 69 respondents of whom 91% found the vignette to be typical. The survey median RVW is 3.50 and the 25th percentile is 3.00 and the survey times are 10/38/7/55.

The first key reference service, which was chosen by 46 of the respondents, was 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter,* with an RVW of 3.50 and times of 14/59/15/88.

When reported based on time, both codes require high level MDM. The expert panel agreed that the median RVW was too high because the median intraservice time of 38 minutes is 21 minutes less than that for 99205. The expert panel agreed that the time supports the 25th percentile RVW of 3.00.

For 9X086, the expert panel recommends an RVW of 3.00, preservice time of 10 minutes, intraservice time of 38 minutes, postservice time of 7 minutes, and total time of 55 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.

☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99205-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99205-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:9X087 Tracking Number C13 Original Specialty Recommended RVU: **0.70**
Presented Recommended RVU: **0.70**
Global Period: XXX Current Work RVU: **0.70** RUC Recommended RVU: **0.70**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: If necessary, review interval correspondence, referral notes, and medical records generated since the last visit. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history. Update pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring straightforward MDM). Discuss the treatment plan with patient and family. Provide patient education and respond to questions from the patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	1%	99%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	13%	73%	13%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	19%	63%	18%
Physical effort required	50%	43%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	57%	36%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	11%	72%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	28%	44%	28%
Physical effort required	44%	50%	6%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	6%	56%	39%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our expert's opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time

Code Level Review

9X087

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 141 respondents, 95% of whom found the vignette to be typical. Both the median and 25th percentile RVW are 0.70 and the survey times are 5/11/3/19.

The key reference service, which was chosen by 90 of the respondents, was 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter,* with an RVW of 0.70 and times of 2/11/3/16.

When reported based on MDM both codes require straightforward MDM. The expert panel noted that the survey 25th and median RVWs are identical to each other and to that of 99212. In addition, the survey median intraservice time is identical to the intraservice time for 99212. The expert panel agreed that the survey supports the 25th percentile RVW.

For 9X087, the expert panel recommends an RVW of 0.70, preservice time of 5 minutes, intraservice time of 11 minutes, postservice time of 3 minutes, and total time of 19 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99212-95, 99442

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty	How often?
Specialty	How often?
Specialty	How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring low level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Physical effort required	50%	35%	15%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	5%	40%	55%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our expert's opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

99X91	EST Pt, tech-based, 5-10 min (virtual check-in)	0.25	10	13	0.019

Code Level Review

9X088

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 158 respondents, 96% of whom found the vignette to be typical. The survey median RVW is 1.30 and the 25th percentile RVW is 1.20 and the survey times are 5/16/5/26.

The first key reference service, which was chosen by 104 of the respondents, was 99213, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter,* with an RVW of 1.30 and times of 5/20/2/35.

The expert panel reviewed the data and agreed that 9X088 should have a lower RVW than 99213 because of the lower times. The expert panel reviewed the 25th percentile RVW of 1.20 and agreed that the survey times support that value, and it places the code in proper rank order to the other AV and A-only codes.

For 9X088, the expert panel recommends an RVW of 1.20, preservice time of 5 minutes, intraservice time of 16 minutes, postservice time of 5 minutes, and total time of 26 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99213-95, 99442

How often do physicians <u>in your specialty</u> perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty	How often?
Specialty	How often?
Specialty	How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,359,399 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Presented Recommended RVU: **1.80**
Global Period: XXX Current Work RVU: **1.92** RUC Recommended RVU: **1.80**

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formuate a differential diagnosis and treatment plan (requiring moderate level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescrib emedications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	4%	70%	26%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	6%	70%	23%
Physical effort required	30%	60%	11%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	2%	49%	49%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	6%	71%	24%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	41%	29%	29%
Physical effort required	65%	18%	18%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	29%	71%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our expert's opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
9X075	Audio-Video, NEW pt, straightforward MDM, 15-29 min day of encounter	0.93	15	25	0.037
9X076	Audio-Video, NEW pt, Low MDM, 30-44 min day of encounter	1.60	25	35	0.046
9X077	Audio-Video, NEW pt, Moderate MDM, 45-59 min day of encounter	2.60	30	44	0.059
9X078	Audio-Video, NEW pt, High MDM, 60-74 min day of encounter	3.50	40	60	0.058
9X079	Audio-Video, EST pt, Straightforward MDM, 10-19 min day of encounter	0.70	10	17	0.041
9X080	Audio-Video, EST pt, Low MDM, 20-29 min day of encounter	1.30	15	25	0.052
9X081	Audio-Video, EST pt, Moderate MDM, 30-39 min day of encounter	1.92	21	32	0.060
9X082	Audio-Video, EST pt, High MDM, 40-54 min day of encounter	2.80	30	50	0.056

RECOMMENDATION BRIEF CHECK-IN FROM 2023 SURVEY

CPT Code	Descriptor	CURRENT Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
99X91	EST Pt, tech-based, 5-10 min (virtual check-in)	0.25	10	13	0.019

Code Level Review

9X089

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 144 respondents, of whom 94% found the vignette to be typical. The survey median survey RVW is 1.92 and the 25th percentile RVW is 1.80 and the survey times are 6/23/5/34.

The first key reference service, which was chosen by 97 of the respondents, was 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter,* with an RVW of 1.92 and times of 7/30/10/47.

The expert panel reviewed the data and agreed that the RVU for 9X089 should be lower than that of 99214 because the times are lower. The expert panel agreed that the times support the 25th percentile RVW of 1.80 which places it in proper rank order to the other AV and A-only codes.

For 9X089, the expert panel recommends an RVW of 1.80, preservice time of 6 minutes, intraservice time of 23 minutes, postservice time of 5 minutes, and total time of 34 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99214-95, 99443

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty	How often?
Specialty	How often?
Specialty	How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,054,258 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417) (Do not report 9X087, 9X088, 9X089, 9X090 when using 99374, 99375, 99377, 99378, 99379, 99380 for the same call[s]) (Do not report 9X087, 9X088, 9X089, 9X090 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 9X087, 9X088, 9X089, 9X090 during the same month with 99487, 99489) (Do not report 9X087, 9X088, 9X089, 9X090 when performed during the service time of 99495, 99496)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring high level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

CPT Code: 9X090

Overall intensity/complexity	0%	0%	0%	0%	100%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	75%	25%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	25%	42%	33%
Physical effort required	75%	17%	8%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	8%	42%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our expert's opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
9X075	Audio-Video, NEW pt, straightforward MDM, 15-29 min day of encounter	0.93	15	25	0.037
9X076	Audio-Video, NEW pt, Low MDM, 30-44 min day of encounter	1.60	25	35	0.046
9X077	Audio-Video, NEW pt, Moderate MDM, 45-59 min day of encounter	2.60	30	44	0.059
9X078	Audio-Video, NEW pt, High MDM, 60-74 min day of encounter	3.50	40	60	0.058
9X079	Audio-Video, EST pt, Straightforward MDM, 10-19 min day of encounter	0.70	10	17	0.041
9X080	Audio-Video, EST pt, Low MDM, 20-29 min day of encounter	1.30	15	25	0.052

RECOMMENDATION BRIEF CHECK-IN FROM 2023 SURVEY

CPT Code	Descriptor	CURRENT Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
99X91	EST Pt, tech-based, 5-10 min (virtual check-in)	0.25	10	13	0.019

Code Level Review

9X090

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, XX minutes must be met or exceeded.

There were 120 respondents of whom 85% found the vignette to be typical. The survey median RVW is 2.80 and the 25th percentile RVW is 2.49 and the survey times are 9/30/8/47.

The first key reference service, which was chosen by 82 of the respondents, was 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter,* with an RVW of 2.80 and times of 10/45/15/70.

The expert panel reviewed the data and agreed that the RVW for 9X090 should be lower than that of 99215 because of the lower survey times. The expert panel also agreed that the 25th percentile RVW of 2.49 is supported by the survey times and places 9X090 in proper rank order to 99215 and 9X082.

For 9X090, the expert panel recommends an RVW of 2.49, preservice time of 9 minutes, intraservice time of 30 minutes, postservice time of 8 minutes, and total time of 47 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99215-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty	How often?
Specialty	How often?
Specialty	How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Physical effort required	30%	63%	7%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	7%	60%	33%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

Both work and practice expense (PE) were surveyed, and the surveying specialties met with the RUC Research Subcommittee who approved the final survey instrument.

A list of the specialty societies who surveyed these codes can be found in the AMA materials (see attached). We note that the American College of Physicians (ACP) and the American Academy of Family Practitioners (AAFP) chose not to survey these codes.

Both work and PE were surveyed in a single survey instrument. All of the surveying societies used a random sample of their members. The societies established an expert panel to review the survey results for both the work and PE components of the survey.

Overarching Comments

The expert panel met via conference call several times to discuss the telemedicine E/M services generally, and the survey data in detail. As a general matter, the expert panel agreed that, based on their experience, and the experience of their colleagues, that typically AV telemedicine services are similar to in-person OVs with respect to selection of the level of code based on MDM. There was also consensus that it is possible to perform an appropriate physical examination and that some institutions are now training practitioners on how to do that using AV technology. In addition, there may be advantages to AV visits in that the physician or QHP is observing the patient, and caregivers, at home. The following were noted specifically:

- Generally: seeing a patient at home provides a lot of clinically actionable information that cannot be obtained in the office;
- Observation of the home generally: clutter, cleanliness, layout, identification of issues related to activities of daily living
- Diet: observe the refrigerator and pantry; determine compliance with diet
- Medications: review of pillboxes
- Alcohol and smoking: can observe presence of ashtrays, bottles
- Patient movement: observe patient's ability to move around at home; potential hazards; falling risk
- Caregivers: more likely to be present and able to provide not only history but useful and actionable information about the patient (e.g., difficulties with activities of daily living)
- History: not only is it possible to obtain a history as would be done in the office, but additional information, not obtainable in the office, is available
- In our experts opinion, patients have embraced these AV visits and accept them as an OV, (expecting the undivided attention of the physician or QHP), coming prepared with questions, medications, and, when needed, vital signs.

It is important to note that the AV and A-only telemedicine E/M codes describe services that are prescheduled, structured like OVs, and are intended to substitute for OVs. A-only telemedicine services typically occur in one of two scenarios: the patient refuses to do an AV visit or AV is not possible because the video fails, or the patient does not have access to video.

The expert panel then turned to the survey data and noted that the survey median and 25th percentile RVWs for all 8 AV codes were identical to the current RVW for the OV with the same level of MDM. The expert panel also noted that the majority of respondents indicated that the intensity/complexity measures for the survey code were identical to the RSL code, thereby supporting the RVW as being identical to the comparable OV code.

For all of the A-only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM, but the 25th percentile RVW was less. The majority of the surveyees stated that the A-only codes were more intense and complex than the key reference service which was typically the comparable OV visit code.

The consensus of the expert panel was that the work of an AV service should be the same as the work of an OV with the same level of MDM. However, the panel also agreed that the work of an A-only code is less than the OV or AV code with the same level of MDM.

Therefore, the consensus of the expert panel was to recommend the survey 25th percentile RVWs for all 16 AV and A-only codes and those recommendations would place these codes in the correct rank order with the in-person OV codes. See code level analysis.

However, the expert panel also understood that these codes may be reported based on total time on the day of encounter instead of MDM. In reviewing the time data for all the codes, the expert panel identified several important issues, as discussed below.

The expert panel noted that most of the respondents chose the OV with the same level of MDM as the survey code and the same patient status (ie, new or established). However, the reference service list (RSL) did not include the time range in the OV code descriptors (e.g., for 99214, the verbiage "When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter" was omitted). The RSL just included the MDM portion of the service (e.g., for 99214, the only verbiage included was: "Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.").

In reviewing the survey median intraservice times for the codes, several of the higher level AV and A-only codes had median intraservice times that were significantly shorter than the intraservice times for the key reference service (e.g., for the AV and A-only codes for established patients requiring moderate level MDM, the median intraservice times were 21 and 23 minutes respectively, while the intraservice time for the comparable in-person office visit code 99214 is 30 minutes).

The expert panel was very concerned that if the survey median intraservice time is included in the CPT code descriptor then it would be possible to report an AV or A-only code based on a shorter time than the comparable OV code that has the same RVW.

The consensus of the expert panel was that the times for in-person OVs, telemedicine AV services, and telemedicine A-only services should be the same to avoid creating incentives to perform AV or A-only visits and to avoid the confusion of having to remember three different times for proper reporting of codes that are substitutes for each other.

Therefore, the consensus of the expert panel is to recommend that the RUC recommend to CPT that the descriptor times for the AV and A-only codes be identical to those for the comparable in-person OV code. The expert panel understands that this means the RUC time could be different from the CPT time but that should not be problematic because we would not want a lower time to select the AV or A-only code as that would likely cause rank order issues. Having different times for choosing a code adds to administrative burden.

In summary, the expert panel agreed that the typical AV telemedicine service is similar to the comparable in-person OV with respect to obtaining an appropriate history and physical examination and level of MDM.

RECOMMENDATIONS AUDIO-VIDEO E/M FROM 2023 SURVEY

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
9X075	Audio-Video, NEW pt, straightforward MDM, 15-29 min day of encounter	0.93	15	25	0.037
9X076	Audio-Video, NEW pt, Low MDM, 30-44 min day of encounter	1.60	25	35	0.046

CPT Code	TIME consistent with OV Descriptor	Survey 25th Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time

RECOMMENDATION BRIEF CHECK-IN FROM 2023 SURVEY

CPT Code	Descriptor	CURRENT Work RVU	Survey Median Intra Time (min)	Survey Median Total Time (min)	Work Per Unit Time
99X91	EST Pt, tech-based, 5-10 min (virtual check-in)	0.25	10	13	0.019

Code Level Review

9X091

Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion

There were 112 respondents of whom 86% found the vignette to be typical. The median survey RVW is 0.70 and the 25th percentile RVW is 0.29 and the survey times are 3/10/2/15.

The first key reference service, which was chosen by 34 of the respondents, was 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter*, with an RVW of 0.70 and times of 2/11/316.

The second key reference service, which was chosen by 30 of the respondents, was 99211, *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional,* with an RVW of 0.18 and times of 0/5/2/7.

This service is currently described by HCPCS code G2012 which has the same descriptor as 9X091. The current RVW is 0.25 and the times are 3/10/2/15. The RVW and times were established by CMS in 2018 by crosswalking from 99441.

The expert panel reviewed the data and, although the times were similar to those for 99212, the panel agreed that comparison to 99212 was inappropriate because 9X091 does not require any MDM and is meant to be used as a triage service to determine whether a patient requires an E/M service. Furthermore, the check-in typically will originate from the patient, and if any MDM is required, or the check-in takes longer than 10 minutes, a different code will be reported. So, the RVW for 9X091 must be less than the RVW for 99212. The expert panel reviewed other codes, including the second key reference service 99211 and concluded that the 99211 RVW of 0.18 was too low because it is based on 5 minutes of physician time and the check-in can last for up to 10 minutes. The expert panel also agreed that there was no compelling evidence to recommend an increase from the CMS assigned RVW of 0.25. The expert panel did a RUC database search for XXX globals with 5-10 minutes of intraservice time that had been reviewed by the RUC since 2012. There were 176 codes with a wide range of RVWs. The expert panel agreed that the code most similar to 9X091 was 99211 but the value for 99211 was not appropriate based on time comparison. Therefore, the expert panel agreed to recommend retaining the current RVW of 0.25 and recommending the survey times.

For 9X091, the expert panel recommends an RVW of 0.25, preservice time of 3 minutes, intraservice time of 10 minutes, postservice time of 2 minutes, and total time of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99441, G2012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization is unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,359,751 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G2012

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: April 2023

CPT Code	Long Descriptor	Global Period
9X075	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX
9X076	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded	XXX
9X077	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX
9X078	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.	XXX
9X079	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	XXX
9X080	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX
9X081	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X082	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making.	XXX

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CPT Code	Long Descriptor	Global Period
	When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	
9X083	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX
9X084	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X085	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX
9X086	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.	XXX
9X087	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.	XXX
9X088	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX
9X089	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X090	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	XXX

9X075	Synchronous audio-video visit for a new patient with a self-limited problem.
9X076	Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.
9X077	Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.
9X078	Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.
9X079	Synchronous audio-video visit for an established patient with a self-limited problem.
9X080	Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.
9X081	Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.
9X082	Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function
9X083	Synchronous audio-only visit for a new patient with a self-limited problem.
9X084	Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.
9X085	Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.
9X086	Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.
9X087	Synchronous audio-only visit for an established patient with a self-limited problem.
9X088	Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.
9X089	Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 9X075-9X091
SPECIALTY SOCIETIES: See Attachment #1
PRESENTER(S): Steve Sentovich, MD, Richard Wright, MD
Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

9X090	Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.
9X091	An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The practice expense survey tool was approved by the AMA research subcommittee. The joint societies listed in Attachment #1 surveyed members totaling 41,334. The survey response totals varied by CPT Code. The breakout of survey responses by code, including specialty breakouts are included in Attachment #2.

A consensus panel consisting of RUC advisors and subject matter experts from the surveying societies met via multiple conference calls to develop the practice expense recommendations. The consensus panel reviewed the (1) survey times, (2) write in information (i.e. additional clinical activities, supplies, equipment), (3) existing inputs for the reference service codes, (4) existing inputs for current codes, (5) PE standards.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The current direct practice expense inputs for CPT Codes 99202-99215, 99441-99443 and G2012 are included on the PE spreadsheet. The current in-person E/M codes were selected as key reference codes on the work portion of the telemedicine recommendations. As such, they are included on the PE spreadsheet as references to the new telemedicine codes. In addition, CPT Codes 99441-99443 and G2012 were included on the PE spreadsheet as 'current' inputs. When G2012 was created by CMS in 2018, they cross walked the physician work, time and direct practice expenses from CPT Code 99441. Although CMS increased 99441 to be paid the same as 99212 during the PHE and included the same direct PE inputs, they did not change the G2012 inputs. CMS initially said G2012 and 99441 were the same. That is how the clinical staff time was assigned to G2012. Also note that CMS implemented G2012 before the PHE at the same time they said 99441-99443 were still bundled services, meaning they were willing to pay for a brief check in, but not pay for phone calls.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

N/A

See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   See Excel file provided by AMA staff titled "2021 Medicare Specialty Mix for Telemedicine"

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   N/A

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

   N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

   N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

   The following clinical staff activities were revised and used as proxies for this telemedicine PE Survey. No change is being requested to the activity descriptors.

   CA009: Greet patient, provide gowning, ensure appropriate medical records are available
   Revised to:
   Ensure appropriate medical record are available

CA013: Prepare room, equipment, supplies
Revised to:
Prepare patient for the visit (i.e. check audio and/or visual)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) have 5 minutes for obtain vital signs. There is no time for obtain vital signs recommended for the new telemedicine codes.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Identify need for imaging, lab or other test result(s) and ensure information has been obtained - *three days prior* (to be used with E/M only)

    b. Service period (includes pre, intra and post):

Pre-Service
- Identify need for imaging, lab or other test result(s) and ensure information has been obtained - *day of* (to be used with E/M only)
- Greet patient, ensure appropriate medical records are available
- Prepare patient for the visit (i.e. check audio and/or visual)
- Review and document history, systems, and medications

Intra-Service (of service period)
- N/A

Post-Service (of service period)
- Coordinate home or outpatient care (to be used with E/M only)

    c. Post-service period:

Conduct patient communications

(For more detail See Question #26)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

N/A

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
    N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
    See response to Question 8.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
    N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
    N/A

18. Are you recommending a PE supply pack for this recommendation? **No**
    If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
    The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) include SA047, pack, E/M visit. No supply pack is recommended for the new telemedicine codes.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
    N/A

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) include three equipment items (EQ189 otoscope-ophthalmoscope (wall unit), EF023 table, exam and EF048). EQ189 and EF023 use the "office visit" equipment formula. EF048 uses the "other" equipment formula, since the scale is portable. No equipment time is recommended for the new telemedicine codes.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

PRESENTER(S): Steve Sentovich, MD, Richard Wright, MD
Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The research subcommittee reviewed and approved telemedicine practice expense survey questions that were added to the survey instrument used to survey for physician/QHP work. The first question asked survey respondents to indicate (Yes/No) whether the use of clinical staff in the provision of telemedicine E/M services was typical (>50%). We received 182 PE responses and 60% indicated the use of clinical staff was typical. Therefore, we are making direct practice expense recommendations for the new telemedicine E/M services.

The survey directed survey respondents to indicate typical clinical time by CPT Code (17 new telemedicine E/M services) and by clinical activity. The survey included the clinical activities currently included in the direct PE inputs for 99202-99215 as well as an opportunity to write in time and specify additional activities for Pre Service Period, Service Period and Post Service Period. There were two modifications to the standard E/M clinical activities, to accommodate the telemedicine aspect of the services:

> CA009: ~~Greet patient, provide gowning, e~~Ensure appropriate medical records are available
> CA013: ~~Prepare room, equipment, supplies~~ Prepare patient for visit (i.e. check audio and/or visual)

For the survey responses that included clinical staff time, the clinical activity medians were computed and then summed to calculate total time. The total survey times are included for each code, on the spreadsheet, in line 3. In addition, the number of survey responses, per code, are also indicated in the PE spreadsheet on line 3.

Survey respondents had the opportunity to write in 'other clinical activities' and include time. Those responses were analyzed, and in cases where survey respondents included activities that were included on the survey in the "DO NOT INCLUDE" section, those times were removed from the data. The following is an excerpt from the survey about what activities to specifically NOT include as clinical staff time:

Clinical staff activities for both in-person office visits and telemedicine E/M services DO NOT INCLUDE time for any administrative activities no matter who performs these activities, including:

- *Obtain referral documents*
- *Schedule patient/remind patient of appointment*
- *Obtain medical records/manage patient database/develop chart*
- *Pre-certify patient/conduct pre-service billing*
- *Verify insurance/register patient*
- *Transcribe results/file and manage patient records*
- *Schedule subsequent post service E&M services*
- *Conduct billing and collection activities*

The consensus panel reviewed the (1) survey times, (2) write in information (i.e. additional clinical activities, supplies, equipment), (3) existing inputs for the reference service codes, (4) existing

inputs for current codes, and (5) PE standards. In some cases, the consensus panel reallocated minutes within the codes to preserve relativity and establish standards. Based on this review, consensus recommendations were developed as shown below.

Clinical Activity Times as Standards for All Codes Based on Survey Responses

CA049: Identify need for imaging, lab or other test result(s) and ensure information has been obtained – 1 minute
CA009: Ensure appropriate medical records are available – 2 minutes

Clinical Activity Times That Vary by Code

CA048: Identify need for imaging, lab or other test result(s) and ensure information has been obtained – three days prior (to be used with E/M only)

Supplies
The survey listed the typical supplies used when performing an in-person office visit (99202-99215). The survey respondents were asked whether or not they typically (>50% of the time) used each of those supplies when providing telemedicine E/M services. The survey respondents were given an opportunity to write in up to four additional supply items, if relevant. The survey collected supply information in aggregate (not separate answers for each of the 17 codes).

The survey indicated that the existing supplies, included in 99202-99215 were not typically (>50% of the time) used when providing telemedicine E/M services. See below:

Supply Item	**% Used**
Paper, exam table (7 feet)	3%
Pillowcase (1 item)	1%
Gown, patient (1 item)	1%
Drape, non-sterile, sheet 40in x 60in (1 item)	1%
Swab-pad, alcohol (2 items)	2%
Cover, thermometer probe (1 item)	1%
Specula tips, otoscope (1 item)	1%
Tongue depressor (1 item)	2%
Gloves, non-sterile (2 pair)	3%
Patient education booklet (1 item)	10%
Sanitizing cloth wipe (surface, instruments, equipment (1 item)	7%

While some of the survey respondents wrote in additional supplies they used while performing telemedicine services (i.e. printer paper, envelopes, stamps, patient education materials), none of the items rose to typical (>50%), therefore no supply items are being recommended at this time.

Equipment
The survey listed the typical medical equipment items (>$500) used when performing an in-person office visit (99202-99215). The survey respondents were asked whether or not they typically (>50% of the time) used any of these medical equipment items when providing telemedicine E/M services. The survey respondents were given an opportunity to write in additional medical equipment items, if relevant. The survey collected supply information in aggregate (not separate answers for each of the 17 codes).

Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The survey indicated that the existing equipment items, included in 99202-99215 were not typically (>50% of the time) used when providing telemedicine E/M services. See below:

Equipment	% Used
Otoscope-ophthalmoscope (wall unit)	3%
Exam Table	7%
Portable stand-on scale	7%

The RUC approved the inclusion of ED021 Computer, desktop, w-monitor for the E/M office visit codes (99202-99215), however, CMS removed ED021 and indicated it was an indirect expense.

Several survey respondents wrote in additional equipment items they used while performing telemedicine services, including:

- Camera
- Computer
- Headphones
- Microphone
- Telemedicine Platform (software)

The write in items did not rise to typical (>50%), therefore no equipment items are being recommended at this time.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	XXX
93010	Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only	0.17	XXX
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	XXX
96401	Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic	0.21	XXX
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	0.24	XXX
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)	0.25	XXX
96413	Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug	0.28	XXX
93018	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only	0.30	XXX
93291	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis	0.37	XXX
93227	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional	0.39	XXX
93288	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.43	XXX
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)	0.45	XXX
93308	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0.53	XXX
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	XXX
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.	0.70	XXX
76770	Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete	0.74	XXX
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	XXX
95972	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional	0.80	XXX

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
99462	Subsequent hospital care, per day, for evaluation and management of normal newborn	0.84	XXX
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.	0.93	XXX
99231	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making.	1.00	XXX
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	XXX
93283	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system	1.15	XXX
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making.	1.30	XXX
93350	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;	1.46	XXX
99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter	1.50	XXX
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	XXX
99232	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	1.59	XXX
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making.	1.60	XXX
99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making.	1.63	XXX
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	XXX
99487	Complex chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; first 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	1.81	XXX
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	1.92	XXX
99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making.	2.00	XXX
99463	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant admitted and discharged on the same date	2.13	XXX
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15	XXX
95939	Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs	2.25	XXX
99233	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	2.40	XXX

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	XXX
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	2.60	XXX
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	2.80	XXX
99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	3.24	XXX
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	3.50	XXX
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination, Medical decision making of moderate or high complexity, Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), Medication reconciliation and review for high-risk medications, Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), Evaluation of safety (eg, home), including motor vehicle operation, Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, Development, updating or revision, or review of an Advance Care Plan, Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 60 minutes of total time is spent on the date of the encounter.	3.84	XXX
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	XXX

The American Medical
Association/Specialty Society
RVS Update Committee

Physician Work and Direct Practice Expense RVS Update Survey

For ***CPT 2025***, the CPT Editorial Panel has approved extensive changes for the**telemedicine evaluation and management (E/M) services**. You have been selected to participate in an AMA/Specialty Society RVS Update Committee (RUC) survey to review both physician work and practice expense details for this set of codes. As you may know, the components of the Medicare physician payment schedule are physician work, practice expense and professional liability insurance. This survey will help our society, in concert with the RUC, recommend accurate physician work relative value units (RVUs) and direct practice expense details to the Centers for Medicare & Medicaid Services for these services.

There are two parts to this survey: (1) physician work; and (2) office-related direct practice expense. When you get to the practice expense section of this survey, please be prepared to work with your clinical staff and practice manager. Keep in mind that you can stop this survey at any time and come back to it at a later time to continue. All information that you provide is maintained – you do not need to start over again.

Important: All references to "physician" in this survey include both "physician"and "other qualified health care professional" (ie, advanced practice nurse or physician assistant).

Please indicate the specialty society that selected you for this survey. If two or more societies invited you to participate, choose only one primary specialty society from the list below and only complete this survey once:

The following information must be provided by the physician responsible for completing the questionnaire:

Contact Information:

Physician name:

Business name:

Business phone (e.g.; xxx-xxx-xxxx)

Please provide your Email address:

Please re-enter your same Email address for verification:

Physician Specialty:

Primary geographic practice setting:

- ◯ Rural
- ◯ Suburban
- ◯ Urban

Primary type of practice:

- ◯ Solo practice
- ◯ Single specialty group
- ◯ Multispecialty group

- Multispecialty group
- Medical school faculty practice plan

Financial Disclosure:

Please answer the following questions by checking yes or no.

For the following questions, please indicate whether you and/or a "Family Member" (spouse, domestic partner, parent, child, brother, or sister) have a known, direct financial interest in this/these procedure(s), other than providing these services in the course of patient care. Disclosure of Family Member's interests applies to the extent known by the survey respondent.

For the purposes of this survey, "Organization" means any entity that makes or distributes the service or product that is utilized in performing the service for which the RUC is considering relative value recommendations. Organization does *not* mean the physician group or facility in which you or such person's family member works or performs the service.

"Materially" or "Material" means at least $10,000, excluding any reimbursement for travel expenses, to your income or such person's family member's income in the past 24 months or as reasonably anticipated in the next 24 months.

	Yes	No
Ownership interest of 5% or more in an organization with an interest in the development of relative value recommendations that are before the RUC:	◯	◯
Financial interest in an organization with an interest in the development of relative value recommendations that are before the RUC which contributed "Materially" (i.e., at least $10,000 *excluding any reimbursement for travel expenses*) to the subject person's income in the past 24 months or as reasonably anticipated in the next 24 months:	◯	◯
Ownership of stock options in an organization that is related to the issue before the RUC:	◯	◯
A position as proprietor, director, managing partner, or key employee in an organization with an interest in the development of relative value recommendations that are before the RUC:	◯	◯
A role as a consultant, researcher, expert witness (excluding professional liability testimony), speaker or writer for an organization or participation in a clinical trial with an interest in the development of relative value recommendations that are before the RUC and where payment contributes materially to the subject person's income:	◯	◯
Any other interest that a reasonable person would consider relevant to or potentially impacting the judgment or decisions of the disclosing individual in the context of RUC business:	◯	◯

Additional Disclosure

Have you been contacted by anyone <u>other than</u> your specialty society, other specialty societies sponsoring this survey (or any of their representatives) or the American Medical Association with respect to this survey?

SURVEY PART 1 - PHYSICIAN WORK

General Background for Questions 1-6

IMPORTANT: Please review the full CPT language for telemedicine evaluation and management (E/M) services (new CPT codes 9X075-9X082; 9X083-9X090; 9X091) prior to completing this survey. Based on coding changes, the code level selection for 9X075-9X082, 9X083-9X090 will either be based solely on: (1) Medical Decision Making (MDM) or (2) Total Time on the date of the encounter. Minimum time on the date of encounter will be added to the CPT Descriptors based on the final survey data. The Audio-Only codes 9X083-9X090 require more than 10 minutes of medical discussion. Code 9X091, the "virtual check-in", is based solely on medical discussion time and the time is a fixed part of the code descriptor. A link to the new telemedicine E/M services CPT guidelines and code descriptors is located throughout the survey and was also sent in your email invitation. It is important that you review all the new guidelines to fully understand the coding changes prior to completing this survey. It may be helpful to print out this information for reference as you complete the survey.

Click here to view the new CPT guidelines and code descriptors for telemedicine E/M services. These codes have substantial revisions; it is critical that you review the full language in detail before completing the survey and refer back to it while completing this survey.

Either MDM or Total Time may be used to report telemedicine E/M services codes. When total time on the date of encounter is used to select the appropriate level of the telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code.

In addition, for this survey, your physician time and physician work estimates SHOULD ALSO incorporate your typical work and time on the date of the encounter AND within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the telemedicine E/M service, but do not include time or work for services that are separately reportable.

Please note that Part 2 of this survey is intended to capture practice expense when the physician or other QHP is providing the service from the non-facility setting (e.g. the physician office). When you get to the practice expense section of this survey please be prepared to work with your clinical staff and practice manager.

Have you reviewed the new CPT guidelines and code descriptors for the new telemedicine E/M services CPT codes 9X075-9X082; 9X083-9X090; 9X091 in detail? Understanding this information is necessary to correctly complete this survey.

○ **I confirm that I have reviewed the new CPT guidelines and code descriptors in detail.**

Do you perform telemedicine E/M services for new patients, established patients or both? Your response to this question will impact which telemedicine E/M survey codes are displayed to you throughout the rest of the survey.

○ I perform telemedicine E/M service for **New Patients Only**
○ I perform telemedicine E/M service for **Established Patients Only**
○ I perform telemedicine E/M service for **BOTH New and Established Patients**
○ I do not provide telemedicine E/M service

IMPORTANT: Please check CPT codes for telemedicine E/M services that you have experience performing or are familiar with. You will be surveyed about each code you select. (*Note, by default, all codes are already selected and you will need to deselect any code you do not wish to survey.)*

Note: If you think the typical patient described for each code does not represent your typical patient, please do the following:
1) Complete the survey using the typical patient described rather than your typical patient AND
2) Explain for our information, how your typical patient differs in the space provided.

Even if your typical patient is different you may still complete the survey, as long as you are able to consider the time and work for using the typical patient we provided.

Once you have made your selection(s), please click the "Next" button below to continue.

☑ **CPT code: 9X075**
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for a new patient with a self-limited problem.

☑ **CPT code: 9X076**
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and LOW medical

decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

- [x] CPT code: 9X077
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

- [x] CPT code: 9X078
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and HIGH medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

- [x] CPT code: 9X079
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a self-limited problem.

- [x] CPT code: 9X080
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and LOW medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

- [x] CPT code: 9X081
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

- [x] CPT code: 9X082
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and HIGH medical decision making.
Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

- [x] CPT code: 9X083
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a self-limited problem.

- [x] CPT code: 9X084
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

- [x] CPT code: 9X085
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion.

making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

- [x] **CPT code: 9X086**
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

- [x] **CPT code: 9X087**
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for an established patient with a self-limited problem.

- [x] **CPT code: 9X088**
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

- [x] **CPT code: 9X089**
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

- [x] **CPT code: 9X090**
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion.
Global: XXX
Typical Patient: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

- [x] **CPT code: 9X091**
Descriptor: Brief communication technology-based service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion.
Global: XXX
Typical Patient: An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

Are <u>your</u> typical patient(s) for the following service(s) similar to the typical patient(s) described below?

CPT code: 9X075
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making.
Global: XXX

Descriptor: Brief communication technology-based service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion.
Global: XXX

Please keep in mind that all references to "physician" in this survey include both "physician" and "other qualified health care professional" (ie, advanced practice nurse or physician assistant).

PHYSICIAN WORK

“Physician work” includes the following elements:

• Physician time it takes to perform the service
• Physician mental effort and judgment
• Physician technical skill and physical effort, and
• Physician psychological stress that occurs when an adverse outcome has serious consequences

These elements will be explained in greater detail as you complete this survey.

“Physician work” does **not** include the services provided by support staff who are employed by your practice and cannot bill separately, including registered nurses, licensed practical nurses, medical assistants, receptionists, or technicians. Clinical staff activities are included in Part 2 of this survey (practice expense). **Questions 1-6 only pertain to physician work.**

Background for Question 1: Reference Service List

Below is a list of reference services that have been selected for use as comparison services for this survey because their relative values are sufficiently accurate and stable to compare with other services. The "Work RVU" column presents current Medicare RBRVS work RVUs (relative value units). Select one code that is most similar to the survey CPT code and typical patient described at the beginning of the survey.

XXX A global period does not apply to the code and other diagnostic tests or minor services performed, may be reported separately on the same day

Please click here and print a pdf version of the XXX reference service list for codes

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	XXX
93010	Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only	0.17	XXX
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	XXX
96401	Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic	0.21	XXX
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	0.24	XXX
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)	0.25	XXX
96413	Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug	0.28	XXX
93018	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only	0.30	XXX
93291	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis	0.37	XXX

93227	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional	0.39	XXX
93288	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.43	XXX
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)	0.45	XXX
93308	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0.53	XXX
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	XXX
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.	0.70	XXX
76770	Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete	0.74	XXX
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	XXX
95972	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional	0.80	XXX
99462	Subsequent hospital care, per day, for evaluation and management of normal newborn	0.84	XXX
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.	0.93	XXX
99231	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making.	1.00	XXX
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	XXX
93283	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system	1.15	XXX
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making.	1.30	XXX
93350	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;	1.46	XXX
99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter	1.50	XXX
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	XXX
99232	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	1.59	XXX
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making.	1.60	XXX
99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making.	1.63	XXX
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	XXX
99487	Complex chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute	1.81	XXX

	exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; first 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.		
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	1.92	XXX
99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making.	2.00	XXX
99463	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant admitted and discharged on the same date	2.13	XXX
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15	XXX
95939	Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs	2.25	XXX
99233	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	2.40	XXX
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	XXX
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	2.60	XXX
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	2.80	XXX
99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making.	3.24	XXX
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making.	3.50	XXX
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination, Medical decision making of moderate or high complexity, Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), Medication reconciliation and review for high-risk medications, Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), Evaluation of safety (eg, home), including motor vehicle operation, Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, Development, updating or revision, or review of an Advance Care Plan, Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 60 minutes of total time is spent on the date of the encounter.	3.84	XXX
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	XXX

Question 1

When considering physician work, which of the reference services on the list above is most

When considering physician work, which of the reference services on the list above is most similar to the Survey CPT code(s) and typical patient(s)?

Select your answer(s) in the dropdown box(es) below.

Survey Code: 9X075
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making.
Typical Patient: Synchronous audio-video visit for a new patient with a self-limited problem.

Survey Code: 9X076
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and LOW medical decision making.
Typical Patient: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X077
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making.
Typical Patient: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X078
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and HIGH medical decision making.
Typical Patient: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X079
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making.
Typical Patient: Synchronous audio-video visit for an established patient with a self-limited problem.

Survey Code: 9X080

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and LOW medical decision making.
Typical Patient: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X081
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making.
Typical Patient: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X082
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and HIGH medical decision making.
Typical Patient: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X083
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for a new patient with a self-limited problem.

Survey Code: 9X084
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X085
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X086
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X087
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for an established patient with a self-limited problem.

Survey Code: 9X088
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X089
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X090
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion.
Typical Patient: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X091
Descriptor: Brief communication technology-based

service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion.
Typical Patient: An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

Background for Question 2

Physician/other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical Information in the electronic or other health record
- independently interpreting results (not separately reported) and communicating results to the patient/family/caregiver
- care coordination (not separately reported)

Note: DO NOT include time for work related to another service, procedure, or evaluation and management code that is separately reportable. Also, DO NOT include the time provided by clinical staff, such as RNs, LPNs, MAs and technicians, as their time is measured in a separate section of this survey. For established patients do not count time spent completing a previous E/M service as part of the time preparing for the current E/M service.

Question 2

How much physician time is required per patient treated for each of the following steps in patient care related to the survey code(s)? It is important to be as precise as possible. For example, indicate 3 or 6 minutes instead of rounding to 5 minutes or indicate 14 or 17 minutes instead of rounding to 15 minutes. Type in your answers (in minutes) in each box below.

Please refer to the definitions of physician time above.

To view the descriptor for the survey code(s), place your cursor over the symbol located above the code.

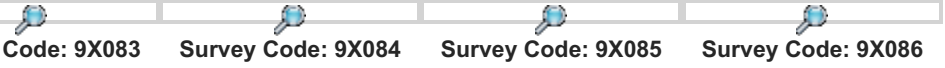
IMPORTANT: Either MDM or Total Time may be used to report telemedicine audio-visual E/M services codes 9X075-9X090. When total time on the date of encounter is used to select the appropriate level of the telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code. Minimum time on the date of encounter will be added to the CPT Descriptors based on the final survey data. The Audio-Only codes require more than 10 minutes of medical discussion. Code 9X091 may be used to report services that do not require a video component and include 5-10 minutes of medical discussion. This code does not use total time on the date of the encounter for selection, but this survey will ask for the total time on the date of the encounter in the same manner as all the other codes.

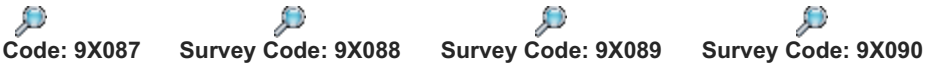
For this survey, your physician time estimates should also incorporate time you typically perform within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the service if the time is not included in a separately reportable service.

Click here to view the new CPT guidelines and code descriptors for telemedicine E/M services.

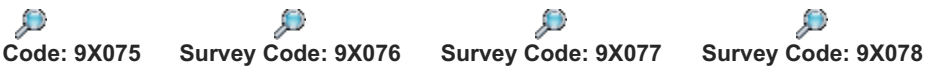
Question 2a) Physician/Qualified Health Care Professional time directly related to this telemedicine E/M service within three calendar days prior to the telemedicine E/M service (in minutes) *If not performed for this typical patient, enter 0 minutes. (Also, DO NOT include the time provided by clinical staff, such as RNs, LPNs, MAs and technicians, as their time is measured in a separate section of this survey.)*

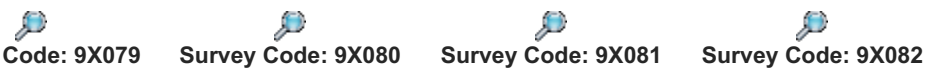
Survey Code: 9X075	Survey Code: 9X076	Survey Code: 9X077	Survey Code: 9X078
Survey Code: 9X079	Survey Code: 9X080	Survey Code: 9X081	Survey Code: 9X082
Survey Code: 9X083	Survey Code: 9X084	Survey Code: 9X085	Survey Code: 9X086

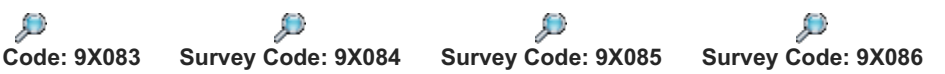




Question 2b) Physician/Qualified Health Care Professional time on the <u>calendar day</u> of the telemedicine E/M service (in minutes) *(DO NOT include the time provided by clinical staff, such as RNs, LPNs, MAs and technicians, as their time is measured in a separate section of this survey.)*







Question 2c) Physician/Qualified Health Care Professional time directly related to this telemedicine E/M service within seven calendar days after the day of the telemedicine E/M service (in minutes) *If not performed for this typical patient, enter 0 minutes. (Also, DO NOT include the time provided by clinical staff, such as*

RNs, LPNs, MAs and technicians, as their time is measured in a separate section of this survey.)

Survey Code: 9X083	Survey Code: 9X084	Survey Code: 9X085	Survey Code: 9X086

Survey Code: 9X087	Survey Code: 9X088	Survey Code: 9X089	Survey Code: 9X090

Survey Code: 9X091

Question 3

Compare INTENSITY COMPONENTS of the survey code(s) relative to the corresponding reference code(s) you selected in Question 1. Using your expertise, consider how each survey code compares directly to the corresponding reference code. For example, if you find the mental effort and judgment for the survey code is identical when compared to the corresponding reference code you chose in Question 1, select “identical” in the dropdown box below.

Click here to see background information for Question 3.

*To view the **descriptor** for the **survey code(s) and your chosen reference code(s)**, place your cursor over the symbol located next to the code number.*

You may have to scroll to the right in order to see all of the questions on this page.

Survey Code 9X075	Survey Code 9X076	Survey Code 9X077	Survey Code 9X078	Survey Code 9X079	Survey Code 9X080	Su Co 9X0

Overall Intensity/Complexity for all physician work you perform for the service							

Question 5

VERY IMPORTANT: Based on your review of all previous questions, please provide your estimated work RVU (to the 2nd decimal place) for the survey code(s) below.

For example, if the survey code involves the same amount of physician work as the reference service you choose, you would assign the same work RVU. If the survey code involves less work than the reference service you would estimate a work RVU that is less than the work RVU of the reference service and vice versa. This methodology attempts to set the work RVU of the survey service "relative" to the work RVU of comparable and established reference services. Please keep in mind the range of work RVUs in the reference service list when providing your estimate.

IMPORTANT: Either MDM or Total Time may be used to report telemedicine evaluation and management (E/M) service codes 9X075-9X090. Time of medical discussion is used to report 9X091. When total time on the date of encounter is used to select the appropriate level of the telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code. Minimum time on the date of encounter will be added to the CPT Descriptors based on the final survey data. The Audio-Only codes require more than 10 minutes of medical discussion.

For this survey, when you are estimating the work RVU for the new codes, you should also consider the physician work and time directly related to the telemedicine E/M service within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the telemedicine E/M service if the work is not included in a separately reportable service.

DO NOT include work related to another service, procedure, or evaluation and management code that is separately reportable when you estimate the work RVU for the telemedicine E/M service code(s). Also, DO NOT include clinical staff time, (eg, RN, LPN, MA and technician), as clinical staff time is captured in Part 2 (practice expense) of this survey.

Click here to view the new CPT guidelines and code descriptors for telemedicine E/M services.

You have completed Part 1 of the survey. Click NEXT to indicated that you have completed your responses to Questions 1-6 for physician work and then continue to Part 2 of the survey.

SURVEY PART 2 - DIRECT PRACTICE EXPENSE DETAILS

IMPORTANT: This survey is intended to capture practice expense for the new telemedicine E/M

services when performed in a non-facility setting (eg, physician office). In answering these practice expense questions, **it is strongly recommended that you jointly complete this section of the survey with your clinical staff and practice manager.** Keep in mind that you can stop at any time and come back to the survey at a later time to continue. All information that you provide is maintained – you do not need start over again.

Note, it may be beneficial to print out a preview of this section of the survey that you can share with your clinical staff and a practice manager to collect their input:

Click here to review a preview of part 2 direct practice expense survey section

This section of the survey pertains to Direct Practice Expense which includes the following:

- Time spent by the physician's/qualified healthcare professional's clinical staff providing clinical activities,
- Disposable medical supplies used to perform the service, and
- Medical equipment used to perform the service.

Please provide the name and title for the clinical staff and/or practice manager you worked with to complete this section of the survey, if applicable:

	Employee Name	Employee Title
Employee 1		
Employee 2		

Background for Question 7: Telemedicine E/M Service Clinical Staff Time

The purpose of this question is to capture the clinical staff time provided by health care professionals who are paid by your practice and cannot bill separately, such as registered nurses (RNs), licensed practical nurses (LPNs), and certified medical assistants (MA), or other clinical staff employed in your practice. It is important to include the time associated with clinical activities regardless of the type of staff providing the service, since it is most important to capture the time related to clinical functions.

NOTE: Do not count the clinical staff time for any separately reported services performed on the same date or other dates (eg, a procedure performed on the same date, or chronic care management services performed during the month)

Clinical staff activities for in-person office visit may include the below list of activities. You

will be asked in question 7B which similar tasks are typically performed for telemedicine E/M services as well:

- Identify need for imaging, lab or other test result(s) and ensure information has been obtained
- Greet patient, provide gowning, ensure appropriate medical records are available
- Obtain vital signs
- Prep and position patient
- Review and document history, systems, and medications
- Prepare room, equipment, supplies
- Assist physician/qualified healthcare professional during exam
- Education/instruction/counseling
- Coordinate home or outpatient care
- Clean room/equipment by clinical staff
- Conduct patient communications (i.e. calls, texts, emails, other electronic communication w/ patient, pharmacy etc,)

Clinical staff activities for both in-person office visits and telemedicine E/M services DO NOT INCLUDE time for any administrative activities no matter who performs these activities, including:

- Obtain referral documents
- Schedule patient/remind patient of appointment
- Obtain medical records/manage patient database/develop chart
- Pre-certify patient/conduct pre-service billing
- Verify insurance/register patient
- Transcribe results/file and manage patient records
- Schedule subsequent post service E&M services
- Conduct billing and collection activities

Question 7A

Do you typically (>50% of the time) use clinical staff in the provision of telemedicine E/M service?

- ◯ Yes
- ◯ No

Question 7B

Below are the typical clinical activities performed by clinical staff during in-person office visits. How much time in minutes does the clinical staff in your office spend providing the following clinical activities for a typical telemedicine E/M service with a typical patient. Please describe activities that are not the same as those for in-person visits using the "other" option.

Base estimates on a typical patient for the telemedicine E/M service specified in each column. The default value in the table below was set to 0; if there is time typically spent for that activity (>50% of the time), please revise to the typical time for each code you are surveying. It is important to be as precise as possible. For example, indicate 3 or 6 minutes instead of rounding to 5 minutes or indicate 14 or 17 minutes instead of rounding to 15 minutes. Type in your answer (in minutes). If none, enter 0.

*To view the **descriptor** for the **survey code(s)**, place your cursor over the symbol located next to the code number.*

You may have to scroll to the right in order to see all of the questions on this page.

Question 8: Telemedicine E/M Service Medical Supplies

Question 8A:

These are the typical supplies used when performing an<u>in-person</u> office visit. Please indicate whether or not you typically (>50% of the time) use this supply item for a typical <u>telemedicine</u> E/M service with a typical patient.

	Yes	No
· Paper, exam table (7 feet)	○	◉
· Pillow case (1 item)	○	◉
· Gown, patient (1 item)	○	◉
· Drape, non-sterile, sheet 40in x 60in (1	○	◉

	Yes	No
item)		
Swab-pad, alcohol (2 items)	○	◉
Cover, thermometer probe (1 item)	○	◉
Specula tips, otoscope (1 item)	○	◉
Tongue depressor (1 item)	○	◉
Gloves, non-sterile (2 pair)	○	◉
Patient education booklet (1 item)	○	◉
Sanitizing cloth-wipe (surface, instruments, equipment) (1 item)	○	◉

Question 8B:
If there are any additional medical supply items that you typically use for a telemedicine E/M service for the typical patient please list it below. Provide only supplies that are NOT separately reimbursable and are disposable. Include the units in which supplies are purchased (eg, ml, ounce, foot).

Disposable Medical Supply Description	UNIT (e.g., item, ml, ounce, foot)	Office Setting Quantity used per patient

Question 9: Telemedicine E/M Service Medical Equipment

Question 9A:
This is the typical medical equipment used when performing an<u>in-person</u> office visit. Please indicate below whether or not each item is typically (>50% of the time) necessary for your typical <u>telemedicine</u> E/M service with a typical patient.

	Yes	No

	Yes	No
· otoscope-ophthalmoscope (wall unit)	○	◉
· exam table	○	◉
· Portable stand-on scale	○	◉

Question 9B:

If there are any additional medical equipment items that you typically use for a telemedicine E/M service for the typical patient, please list it below. Include only equipment with a purchase price of $500 or more that is easily attributable to this service for this patient. Do not include general office equipment, such as computers, phones, or furniture as these items are factored into the overhead expenses of running a medical practice.

Thank you for taking the time to complete this survey. Please click the "Submit Survey" button below to turn in your answers and exit the survey.

Table B

Research requested this data when they approved adding the question.

Perform Services	Question Counts	Percentages
A. I perform telehealth E/M services on New Patients Only	2	0.5%
B. I perform telehealth E/M services on Established Patients Only	80	18.5%
C. I perform telehealth E/M services on New and Established Patients	144	33.3%
D. I do not provide telehealth E/M services visits	207	47.8%
Number of ANA surveys (6) and/or financial Interest disclosure (14) (Nursing did not have the question and if a survey participant had a financial disclosure they were taken out of the survey and it was considered completed.)	20	
TOTAL STARTED Survey and technically "finished" the survey, excludes nursing and financial disclosure	433	
Total completed survey for at least one 1 code minus nursing as they were not asked the question	226	
Total completed survey for at least one 1 code including nursing for matching totals	232	
% surveyed at least 1 code and were asked the question, therefore selected A, B or C.	52%	
% did NOT do survey, therefore, selected D	48%	

Survey Process Logistics

Prior to the call, several specialty society staff had expressed concern to AMA RUC staff regarding the number of codes in the survey and have suggested a variety of strategies to attempt to address. Even with several changes to the custom template to make completing it more efficient, surveying 17 codes for work and practice expense may take an estimated 1-2 hours of a respondent's time. As is the case with all Qualtrics RUC surveys, the survey respondent is offered the flexibility to complete the survey for the codes they are interested in completing. The Research Subcommittee considered the addition of a question to the beginning of the survey, asking whether the survey respondent typically performs telemedicine services for new patients only, established patients only or both. The purpose of this question would be to dynamically change the survey template to only a subset of the survey codes based on the respondent's selection. **The Research Subcommittee approved the addition of the following question to the custom survey template and requested that the specialties provide these data to the RUC:**

Do you perform telehealth E/M services for new patients, established patients or both?

A. I perform telehealth E/M services on New Patients Only

B. I perform telehealth E/M services on Established Patients Only

C. I perform telehealth E/M services on New and Established Patients

D. I do not provide telehealth E/M services visits

The Research Subcommittee approved the custom telemedicine E/M services survey template with the minor modifications described above.

Relevant Excerpt from February 20 Research Subcommittee Report:

> **Telemedicine Office Visits (9X075, 9X076, 9X077, 9X078, 9X079, 9X080, 9X081, 9X082, 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, 9X091): Proposed Custom Survey Template and Reference Service Lists**

At the February 2023 CPT Editorial Panel meeting, the Panel created a new E/M subsection for Telemedicine Office Visit Services, created 17 new category I CPT codes for reporting telemedicine E/M services (audio/visual, audio only, virtual check-in) and deleted 3 telephone E/M service codes. 28 societies have indicated they plan to survey some or all of the new CPT codes. AMA RUC staff drafted a custom RUC survey template and a draft reference service list (RSL) for the Subcommittee's consideration and approval on the February 20th call.

Reference Service List (RSL)
AMA RUC staff assembled a draft reference service list for the Subcommittee's consideration. The document shared with the Subcommittee included all codes from the 2019 office visit survey (updated to reflect new/revised coding changes and 2023 work values), as well as the addition of the office visit codes 99202-99215. That methodology produced an RSL of 58 codes. Specialty societies expressed an interest in paring down the number of codes included in the RSL. Therefore, AMA RUC staff highlighted several codes to potentially exclude based on systematic rules.

The Research Subcommittee reviewed the proposed systematic rules to remove codes, which were: 1) when multiple codes have a work RVU within 0.01 of each other, use the higher volume E/M code. 2) remove codes where the top specialty was not participating in this telemedicine E/M services survey, which also would not create a large gap in work RVUs. In general, the Subcommittee supported both proposed changes. **The Research Subcommittee agreed to remove codes 92285, 95165, 76514, 73620, 92250 and 92083 as the top specialty for each of those codes is not participating in the telemedicine E/M. Similarly, the Research Subcommittee agreed to remove codes 96374, 95251, 93307, 99490, 95813, 99223 and 99306 as each of those codes as an RVU that is either identical or within 0.01 of another higher volume E/M service that is also on the RSL.** The Subcommittee decided to retain code 93010 as it was selected as a top key reference code for the 2019 office visit survey and several members concurred it would still be beneficial to retain it.

In addition, an idea was discussed to remove the time portion of the long descriptor of any reference E/M code on the RSL where code-level is selected either using the level of medical decision making (MDM) or date of encounter time. The Research Subcommittee agreed that this would be helpful to avoid inadvertently anchoring the respondents' time estimates for the survey codes. **The Research Subcommittee approved the final Reference Service List of 45 CPT codes with the time sentence redacted from the long descriptors for the reference E/M services which can be reported using either MDM or time.**

Custom RUC Survey
In consultation with the Co-Chairs of the CPT/RUC Workgroup on E/M, RUC leadership and surveying specialty society staff, AMA RUC staff modeled the custom survey template on the Research-approved office visit templates from 2019 with the instructions and question text modified to fit telemedicine E/M services. This draft survey template also includes a Practice Expense (PE) section at the end similar to the process used for the office visit codes. The PE section was also modeled after the 2019 office visit survey, though reframed to first indicate what clinical activities, supplies and equipment were relevant to in-person office visits and then ask which inputs also apply to telemedicine E/M services.

During the Subcommittee's review of this template, a Subcommittee member opined whether it would be useful to include a question on the location from which the survey respondent typically performs the telemedicine service. Others pointed out that the location of the physician/QHP would not have an impact of the clinical staff working from the non-facility setting, and therefore adding that question would not be essential.

An observer on the call suggested for the term "telemedicine office visit" to be replaced with "telemedicine E/M service" throughout the survey template instructions and question text to avoid confusing the survey respondents. The Subcommittee agreed that this would be an appropriate change to make.

Survey Process Logistics

Prior to the call, several specialty society staff had expressed concern to AMA RUC staff regarding the number of codes in the survey and have suggested a variety of strategies to attempt to address. Even with several changes to the custom template to make completing it more efficient, surveying 17 codes for work and practice expense may take an estimated 1-2 hours of a respondent's time. As is the case with all Qualtrics RUC surveys, the survey respondent is offered the flexibility to complete the survey for the codes they are interested in completing. The Research Subcommittee considered the addition of a question to the beginning of the survey, asking whether the survey respondent typically performs telemedicine services for new patients only, established patients only or both. The purpose of this question would be to dynamically change the survey template to only a subset of the survey codes based on the respondents selection. **The Research Subcommittee approved the addition of the following question to the custom survey template and requested that the specialties provide these data to the RUC:**

Do you perform telehealth E/M services for new patients, established patients or both?

A. *I perform telehealth E/M services on New Patients Only*
B. *I perform telehealth E/M services on Established Patients Only*
C. *I perform telehealth E/M services on New and Established Patients*
D. *I do not provide telehealth E/M services visits*

The Research Subcommittee approved the custom telemedicine E/M services survey template with the minor modifications described above.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Practice Expense Subcommittee Referral – Skin Adhesives

April 2023

Skin Adhesives (PE Only) – Tab 07

In April 2022, the RUC approved the use of SG007 *adhesive, skin (Dermabond)* for CPT code 64590 *Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver* and 64595 *Revision or removal of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, with detachable connection to electrode array*, although there was much discussion regarding whether its use is typical. Subsequently, a Practice Expense (PE) Subcommittee workgroup was created and a virtual meeting convened in October 2022 to review the issue of skin adhesives. In January 2023, the RUC considered the report of the PE Skin Adhesives Workgroup and agreed that there are multiple skin adhesive products at different price points that work similar to Dermabond. The RUC adopted the following four recommendations of the PE Workgroup:

1. The PE Subcommittee review the six codes on the Medicare Payment Schedule with Dermabond (64590, 64595, G0168, G0516, G0517, G0518) to identify justification for its use versus the generic version and present its findings to the RUC for approval. As part of this review, the specialty should submit a letter to the RUC regarding any corrections to the vignettes for CPT codes 64590 and 64595.

2. The PE Subcommittee request that the RUC recommend to CMS that Dermabond be replaced with its generic cyanoacrylate skin adhesive alternative on the CMS Direct PE Inputs Medical Supplies Listing.

3. The PE Subcommittee request that the RUC recommend to CMS that new medical supply item codes be created to encompass the generic formulations of cyanoacrylate skin adhesive in multidose form and single use sterile application.

4. The PE Subcommittee request that the RUC recommend to CMS that generic alternatives be used in place of brand names on the CMS Direct PE Inputs Medical Supplies Listing.

Per the first recommendation, the PE Subcommittee reviewed the six codes on the Medicare Payment Schedule with SG007 *adhesive, skin (Dermabond)* (64590, 64595, G0168, G0516, G0517, G0518) at its April 2023 meeting to identify justification for its use versus the generic version.

For CPT codes 64590 and 64595, the specialties submitted a revised PE spreadsheet and a letter recommending removal of the supply input SG007 *adhesive, skin (Dermabond)* and addition of one unit of SH076 *adhesive, cyanoacrylate (2ml uou)* in the non-facility setting. The specialties agreed that the use of the specific skin adhesive (Dermabond) is not critical to the procedure and the generic version (cyanoacrylate) is an appropriate substitute. Similarly, for code G0168 *Wound closure utilizing tissue adhesive(s) only*, the specialty submitted a revised PE spreadsheet and a letter recommending removal of the supply input SG007 *adhesive, skin (Dermabond)* and addition of one unit of SH076 *adhesive, cyanoacrylate (2ml uou)* in the non-facility setting. The specialty supported revising the supply input from the brand name Dermabond

to instead using the generic adhesive cyanoacrylate from the CMS direct supply listing. Therefore, for CPT codes 64590 and 64595 and code G0168, the RUC recommends that CMS remove the supply input SG007 *adhesive, skin (Dermabond)* and add one unit of SH076 *adhesive, cyanoacrylate (2ml uou).* **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

There was no specialty society interest for the three HCPCS codes: G0516 *Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal rod implant)*, G0517 *Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*, and G0518 *Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants).* The PE Subcommittee noted the extremely low utilization and determined that a similar action should be taken for the three codes in support of the generic alternative. **For codes G0516, G0517 and G0518, the RUC recommends that CMS remove the supply input SG007 *adhesive, skin (Dermabond)* and add one unit of SH076 *adhesive, cyanoacrylate (2ml uou).***

The RUC emphasized the need to obtain invoices for the generic alternatives; also noting that CMS should review the pricing of Dermabond, to ensure it reflects accurate current pricing. **The RUC reiterated its request for CMS to create and price new medical supply item codes for generic adhesive alternatives including the formulations of cyanoacrylate listed below:**

Type	Trade name examples	Characteristic
2-Octyl-cyanoacrylate	Dermabond SurgiSeal Liquiband Exceed	Weaker, less brittle, less dehiscence, more flexible Takes longer to dry Octyl esters provide weaker bond but are more flexible.
n-Butyl-2-cyanoacrylate	Histoacryl Indermil PeriAcryl LiquiBand Swiftset	Stronger, brittle, more dehiscence Butyl esters provide stronger bond but are rigid.
n-Butyl and 2-Octyl-cyanoacrylate COMBINED TOGETHER	GluStitch / GluSeal	Available in high & low viscosity formulations
Ethyl-2-cyanoacrylate	Epiglu SuperGlue	

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
64590	Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling	010	PE Inputs (2023 Work RVU = 2.45)
64595	Revision or removal of peripheral or gastric neurostimulator pulse generator or receiver	010	PE Inputs (2023 Work RVU = 1.78)
G0168	Wound closure utilizing tissue adhesive(s) only	000	PE Inputs (2023 Work RVU = 0.31)
G0516	Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal rod implant)	000	PE Inputs (2023 Work RVU = 1.82)
G0517	Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)	000	PE Inputs (2023 Work RVU = 2.10)
G0518	Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)	000	PE Inputs (2023 Work RVU = 3.55)

March 10, 2023

To: Ezequeil Silva III, MD, Chairperson of the Relative Value Scale (RVU) Update Committee

CC: Scott Manaker, MD, Practice Expense Subcommittee

Dear Dr. Silva,

At the April 2022 RUC meeting, the American Urological Association (AUA) and American College of Obstetricians and Gynecologists (ACOG) presented recommended RVUs and Practice Expense (PE) inputs for CPT codes 64590 and 64595. During this meeting, the use of a skin adhesive, Dermabond (Supply Code SG007), was included in the PE inputs for both procedures performed in a non-facility setting.

AUA and ACOG advisors agree that the use of this specific skin adhesive, Dermabond, is not critical to the procedure and the generic version, cyanoacrylate (Supply Code SH076) may be used in its place. The AUA and ACOG would like to update the PE spreadsheet for both codes, as described below:

- Remove one unit of SG007 adhesive, skin (Dermabond) for Non-Facility procedures for 64590 and 64595
- Add one unit of SH076 adhesive, cyanoacrylate (2ml uou).doc for Non-Facility procedures for 64590 and 64595

The current vignettes for both CPT codes reflect the typical patient and do not need to be changed. Thank you for your consideration. Should you have any questions, please contact Bhavika Patel, Physician Payment and Reimbursement Manager at bpatel@auanet.org.

Thank you,

Jonathan Kiechle, MD
AUA RUC Advisor

Jon Hathaway, MD, PhD
ACOG RUC Advisor

American College of Emergency Physicians®

ADVANCING EMERGENCY CARE

March 23, 2023

Scott Manaker, MD, PhD, RUC Practice Expense Committee Chair

RE: TAB 7 PE Only Considerations for Code G0168

Dr. Manaker,

The American College of Emergency Physicians (ACEP) as the dominant provider will be presenting input for code G0168 (Wound closure using tissue adhesive(s) only) as part of the Tab 7 review of codes that include the use of skin adhesives during the April 2023 RUC meeting.

ACEP as a facility-based specialty does not incur the cost of non-physician clinical labor, supplies, or equipment and our PE spreadsheet reflects that situation. Use of this code in the non-facility setting may require additional consideration.

We support changing line 104 from listing Dermabond as a brand name to instead using the CMS direct supply listing of SH076 *adhesive, cyanoacrylate (2ml uou)*.

Thanks for the opportunity to participate in the valuation of this code.

Jordan Celeste, MD, FACEP, ACEP RUC Advisor

B. Bryan Graham, DO, FACEP, ACEP Alternate RUC Advisor

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

April 2023

Laser Treatment-Skin – Tab 08

In October 2015, CPT codes 96920, 96921 and 96922 were identified via the high-volume growth screen with Medicare utilization of 10,000 or more that increased by at least 100% from 2008 through 2013. At that time, the RUC recommended that the specialty societies develop a CPT Assistant article to ensure the codes were being used correctly which was published in September 2016. This was the third article created for this code set, with articles also published in June 2012 and May 2013.

In January 2022, the Relativity Assessment Workgroup reviewed these services again noting that their utilization continues to steadily increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that they believed the growth is appropriate due to changes in treatment and medication for psoriasis. However, due to the continued growth, the Workgroup recommended, and the RUC agreed, that CPT codes 96920, 96921 and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting.

In April 2022, the specialty societies indicated, and the RUC agreed, that CPT codes 96920-96922 be referred to the CPT Editorial Panel for editorial review at the September 2022 CPT meeting. Since the CPT descriptor was established in 2002, psoriasis is the only approved indication and use for this treatment modality. Although, the specialty societies have noted that the indications have expanded beyond what is currently noted in the code descriptors to include laser treatment for other inflammatory skin disorders such as vitiligo, atopic dermatitis, alopecia areata, etc. This issue was deferred to the February 2023 CPT meeting to complete the full CCA and submit literature supporting excimer laser treatment for other inflammatory skin disorders as the changes were deemed more than editorial given that expanded indications would change the physician work. This issue was subsequently withdrawn from the February 2023 CPT Editorial Panel meeting agenda as it was determined that existing literature was insufficient and did not support expanded indications at this time. Thus, this issue was surveyed for the April 2023 RUC meeting, without any revisions to code descriptors, since the available 2021 Medicare data indicates that the typical patient is being treated for psoriasis (96920, psoriasis = 79.3%).

The RUC expressed concern with the survey that the times have decreased and there was not a proportionate decrease in work. However, there have been multiple reviews of this code set, and the valuation of the codes is currently based on the original valuation over two decades ago in 2002, where the time was *lower* than what is in the database now. Subsequent review in 2012 adopted new survey times while maintaining the work value from 2002 for CPT codes 96920 and 96922. For both the parent code 96920 and the code 96922 with the largest treatment area, the total times have not changed since first implemented more than 20 years ago *Thus, the current value is based on a lower time than the time in the database currently* (please see the table below).

	2002 Intra Time	2002 Total Time	2002 RUC Rec.	2002 CMS RVU	2012 Intra Time	2012 Total Time	2012 RUC Rec.	2012 CMS RVU	Current Intra Time	Current Total Time	Current CMS RVU
96920	17	27	1.15	1.15	23	37	1.15	1.15	23	35	1.15
96921	20	30	1.17	1.17	30	42	1.30	1.30	30	42	1.30
96922	30	40	2.10	2.10	45	57	2.10	2.10	45	57	2.10

96920 ***Excimer laser treatment for psoriasis; total area less than 250 sq cm***
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 20606 *Arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.00, 10 minutes intra-service time, and 27 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that code 20606, when compared to fifteen recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.00 falls in the middle of the range in terms of work RVUs. The RUC recommends 10 minutes of pre-service time, 10 minutes of intra-service time, 3 minutes of post-service time, and 23 minutes total time as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time, and 24 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time, and 24 minutes total time) and noted that both comparator codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 12001 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less* (work RVU = 0.84, 10 minutes intra-service time, and 22 minutes total time) and 20611 *Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting* (work RVU = 1.10, 10 minutes intra-service time, and 27 minutes total time) and noted that the multi-specialty points of comparison values have the same intra-service time and appropriately bracket the recommendation. The RUC concluded that CPT code 96920 should be valued based on a direct work RVU crosswalk to CPT code 20606 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.00 for CPT code 96920.**

96921 ***Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm***
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and concurred that the survey respondents overvalued the service. The RUC determined that changes in intra-service and total time for the procedure warranted a direct work RVU crosswalk to CPT code 12011 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less* (work RVU = 1.07, 12 minutes intra-service time and 24 minutes total time) which falls below the survey 25th percentile and has identical intra-service time that appropriately accounts for the physician work involved in this service. The RUC noted that, crosswalk code 12011,

when compared to four recently RUC-reviewed 000-day global codes with the same intra-service time and similar total time, the crosswalk value of 1.07 falls in the middle of the range in terms of work RVUs. The recommendation also provides for a stepwise progression of the procedure based on the size of the wound or lesion. The RUC recommends 10 minutes of pre-service time, 12 minutes of intra-service time, 3 minutes of post-service time, and a total time of 25 minutes as supported by the survey.

To justify the crosswalk value, the RUC compared the surveyed code to MPC codes 11980 *Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)* (work RVU = 1.10, 12 minutes intra-service time and 27 minutes total time) and 30901 *Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method* (work RVU = 1.10, 10 minutes intra-service time and 24 minutes total time) and noted that both MPC codes involve similar intra-service time and slightly more physician work.

For additional support, the RUC compared the surveyed code to MPC codes 36620 *Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous* (work RVU = 1.00, 7 minutes intra-service time and 17 minutes total time) and 12002 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm* (work RVU = 1.14, 15 minutes intra-service time and 27 minutes total time) and noted that the multi-specialty points of comparison values appropriately bracket the recommendation. The RUC concluded that CPT code 96921 should be valued based on a direct work RVU crosswalk to CPT code 12011 which falls below the 25th percentile as supported by the survey. **The RUC recommends a work RVU of 1.07 for CPT code 96921.**

96922 *Excimer laser treatment for psoriasis; over 500 sq cm*
The RUC reviewed the survey results from 41 dermatologists with the proper equipment (excimer laser) to perform the procedure and determined that the survey 25th percentile work RVU of 1.32 appropriately accounts for the physician work involved in this service. The RUC agreed that the current value would be inappropriate given the decrease in survey time. However, the work associated with this service has not changed since it was last surveyed. The RUC recommends 10 minutes of pre-service time, 18 minutes of intra-service time, 3 minutes of post-service time, and 31 minutes total time as supported by the survey. It was noted that much of the resetting and re-prepping is intra-service time as indicated in the description of the work. Typically, seven sites are treated, requiring repeated prep, and draping after the procedure is underway.

To justify a work RVU of 1.32, the RUC compared CPT code 96922 to the to the top key reference service code 12007 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm* (work RVU = 2.90, 35 minutes intra-service time and 54 minutes total time) and noted that the intra-service time is nearly twice that of the surveyed code and intensity is more justifying a higher value. The RUC also compared CPT code 96922 to MPC code 12004 *Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm* (work RVU = 1.44, 17 minutes intra-service time and 29 minutes total time) and noted that the surveyed code involves similar intra-service time and slightly less physician work. For additional support, the RUC compared CPT code 96922 to MPC code 12013 *Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 1.22, 15 minutes intra-service time and 27 minutes total time) and noted that the surveyed code has more intra-service and total time and is therefore valued higher than the comparator code. The RUC concluded that CPT code

96922 should be valued at the 25th percentile work RVU as supported by the survey. This recommendation also provides a stepwise progression of the procedure based on the size of the wound or lesion. **The RUC recommends a work RVU of 1.32 for CPT code 96922.**

Practice Expense
The Practice Expense (PE) Subcommittee discussed the compelling evidence argument that there has been a notable change in the dominant practice model (eg, pay-per-use subscription-based model) since the code set was last surveyed in 2012 and, in addition, that the patient population has changed. The Subcommittee accepted compelling evidence based on "Evidence that there has been a change in equipment or practice expense cost."

Based on acceptance of compelling evidence, the PE Subcommittee carefully considered the direct practice expense inputs including three new supply inputs for *laser, excimer*, *pay per use* based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series of treatments. These treatments are purchased in packs of 10 and are based upon the size of the area being treated which corresponds to the three supply codes. A fourth new supply input was included for *Mupirocin 2% Topical Ointment 22 grams*. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. The Subcommittee modified this item to reflect a per gram basis.

The PE Subcommittee made several modifications to the spreadsheet including revisions to the clinical staff minutes for CA011 *Provide education/obtain consent*, CA014 *Confirm order, protocol exam* and CA035 *Review home care instructions, coordinate visits/prescriptions*. Also, an additional pair of SB023 *gloves, non-sterile, nitrile* was added to CPT code 96922 which is typical for the larger area. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RUC Database Flag
The RUC recommends a flag for CPT codes 96920, 96921 and 96922 as "Do Not Use to Validate for Physician Work" since the times are not representative.

CPT Referral
At the April 2023 meeting, the RUC voted to recommend an editorial change to CPT to add "(ie, excimer)" after "Laser treatment" for clarity in code 96920. The CPT Executive Committee voted to further editorially revise code 96920 to align with the intended use of these services exclusively for psoriasis. These editorial revisions are for the CPT 2024 code set. The changes are editorial and do not involve a change in work.

Work Neutrality
The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
96920	Excimer ~~L~~laser treatment for ~~inflammatory skin disease (~~psoriasis~~)~~; total area less than 250 sq cm	000	1.00
96921	250 sq cm to 500 sq cm	000	1.07
96922	over 500 sq cm (For laser destruction of premalignant lesions, see 17000-17004) (For laser destruction of cutaneous vascular proliferative lesions, see 17106-17108) (For laser destruction of benign lesions, see 17110-17111) (For laser destruction of malignant lesions, see 17260-17286)	000	1.32

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:96920 Tracking Number Original Specialty Recommended RVU: **1.07**
Presented Recommended RVU: **1.00**
Global Period: 000 Current Work RVU: **1.15** RUC Recommended RVU: **1.00**

CPT Descriptor: Excimer laser treatment for psoriasis; total area less than 250 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023					
Presenter(s):	Alice Gottlieb, MD, FAAD, Alexandra Flamm, MD, FAAD, Howard Rogers, MD, FAAD, Alina Bridges, MD, FAAD					
Specialty Society(ies):	American Academy of Dermatology Association (AADA)					
CPT Code:	96920					
Sample Size:	250	**Resp N:**	41			
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	43%	57%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	14%	57%	29%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	29%	29%	42%
Physical effort required	29%	29%	42%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	14%	57%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity			60%	40%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	20%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	60%	20%	20%
Physical effort required	20%	40%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	60%	20%	20%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background
In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation
The expert panel reviewed the survey data. We acknowledge the decrease in intraservice time from the survey. However, our expert panel, which includes psoriasis experts who have frequently performed this procedure for many years, felt that the time and work associated with this code has not changed since it was last surveyed. Additionally, the survey

respondents clearly indicated relative stability in the work from current values for this code. That being said, it was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time.

Therefore, the expert panel recommends a crosswalk from CPT code 20606, which has a wRVU of 1.00. This is under the 25th percentile survey value of 1.11 and the current wRVU of 1.15.

CPT code 20606 describes arthrocentesis, aspiration and/or injection, intermediate joint or bursa (eg, temporomandibular, acromioclavicular, wrist, elbow or ankle, olecranon bursa); with ultrasound guidance, with permanent recording and reporting. This code has the exact same intraservice time as our median data at 10 minutes and a similar total time at 27 minutes. This code was last valued in 2014 by the RUC based on survey data and is also a 0 day global.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0 day global codes valued since 2010 with the same intraservice time and similar total times (between 22 and 24 minutes), the proposed value of 1.00 would fall within range of the resulting RVWs values, and would not be the most highly valued code within this grouping.

Key Reference Service
The most chosen reference codes by survey participants are common dermatologic procedures.

- **96574** Debridement of premalignant hyperkeratotic lesion(s) (ie,targeted curettage, abrasion) followed with photodynamic therapy by external application of light todestroy premalignant lesions of the skin and adjacentmucosa with application and illumination /activation of photosensitizing drug(s) provided by a physician or other qualified healthcare professional, per day
- **12005** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 12.6 cm to 20.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes
Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96920*	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.15	35	7	23	5
96920**	Excimer laser treatment for psoriasis; total area less than 250 sq cm	1.00	23	10	10	3
12001	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less	0.84	22	7	10	5
20611	Arthrocentesis, aspiration and/or injection, major joint or bursa (eg, shoulder, hip, knee, subacromial bursa); with ultrasound guidance, with permanent recording and reporting	1.10	27	12	10	5

*Current
**Recommendation

Summary
In summary, our expert panel recommends using the survey median intraservice work of 10 minutes, and crosswalking the wRVU values from CPT code 20606, as the surveyed wRVU for 96920 was similar at the 25th percentile (1.11) and higher at the median (1.45) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96920

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Commonly

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 176000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 176000 Percentage 0.76 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 88,673 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021.

Specialty Dermatology Frequency 88673 Percentage 76.50 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

CPT Descriptor: Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has between 250 sq cm and 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 98%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further (unwanted UV exposure) and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023		
Presenter(s):	Alice Gottlieb, MD, Alexandra Flamm, MD, Howard Rogers, MD, Alina Bridges, MD		
Specialty Society(ies):	American Academy of Dermatology Association (AADA)		
CPT Code:	96921		
Sample Size:	250	**Resp N:**	41
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
12006	000	2.39	**RUC Time**

CPT Descriptor
Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 20.1 cm to 30.0 cm

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
11308	000	1.46	**RUC Time**

CPT Descriptor
Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter over 2.0 cm

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
36620	000	1.00	**RUC Time**	549,202

CPT Descriptor 1 Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
12002	000	1.14	**RUC Time**	129,274

CPT Descriptor 2 Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm

Other Reference CPT Code	Global	Work RVU	Time Source
12011	000	1.07	**RUC Time**

CPT Descriptor Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 6 **% of respondents:** 14.6 **%**

Number of respondents who choose 2nd Key Reference Code: 5 **% of respondents:** 12.1 **%**

TIME ESTIMATES (Median)

	CPT Code: 96921	Top Key Reference CPT Code: 12006	2nd Key Reference CPT Code: **11308**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity		17%	33%	50%	

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making		33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	33%	33%

Physical effort required		50%	50%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	17%	50%

Survey Code Compared to 2nd Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity				100%	

Mental Effort and Judgment	**Less**	**Identical**	**More**
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making		60%	40%

Technical Skill/Physical Effort	**Less**	**Identical**	**More**
Technical skill required		40%	60%
Physical effort required			100%

Psychological Stress	**Less**	**Identical**	**More**
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome		40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, Excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, Unlisted special dermatological service or procedure, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process
The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation
The expert panel reviewed the survey data. It was felt that both the current values and the 25th percentile would be inappropriate given the decrease in survey time. However, our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. Additionally, the survey respondents indicated relative stability in the RVWs, as per the survey data.

Therefore, the expert panel recommends a crosswalk from CPT code 12011, which has a wRVU of 1.07. This is under the 25th percentile survey value of 1.25 and the current wRVU of 1.30.

CPT code 12011 describes a simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less. 12011 has the same intraservice time, at 12 minutes, a similar total time, at 24 minutes, to the surveyed time for 96921. This code was last valued in April 2010 by the RUC based on survey data. This code is additionally an MPC code.

It was felt that this crosswalk would maintain relativity well when compared to other codes with similar times. On a RUC database review of 0-day global codes valued since 2010 with the same intraservice time and similar total times (between 23 and 27 minutes), the proposed value of 1.07 would fall within range of the resulting RVWs values, and would not be the most highly valued code within this grouping.

Key Reference Service
The most chosen reference codes by survey participants are common dermatologic procedures.

- **12006** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 20.1cm to 30.0cm
- **11308** Shaving of epidermal or dermal lesion, single lesion, scalp, neck, hands, feet, genitalia; lesion diameter over 2.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 14% and 12% respectively, and therefore the society was not confident these were representative for comparison.

MPC Codes
Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96921*	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.30	42	7	30	5
96921**	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	1.07	25	10	12	3
36620	Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous	1.00	17	7	7	3
12011	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less	1.07	24	12	7	5
12002	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.6 cm to 7.5 cm	1.14	27	7	15	5

*Current
**Recommendations

Summary
In summary, our expert panel recommends using the survey median intraservice work of 12 minutes, and crosswalking the wRVU values from CPT code 12011, as the surveyed wRVU for 96921 was similar at the 25th percentile (1.25) and higher at the median (1.57) to current values, but the times indicated were less.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96921

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 50,848
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 50848 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 25,424 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This is based on the 2021 Medicare utilization rate.

Specialty Dermatology Frequency 25424 Percentage 78.30 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Skin

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 96921

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. N/A

SUMMARY OF RECOMMENDATION

CPT Code:96922 Tracking Number Original Specialty Recommended RVU: **1.57**
Presented Recommended RVU: **1.32**
Global Period: 000 Current Work RVU: **2.10** RUC Recommended RVU: **1.32**

CPT Descriptor: Excimer laser treatment for psoriasis; over 500 sq cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old male presents with a history of moderate plaque psoriasis. In spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. The severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient chart with particular attention paid to any photosensitive medications that may impact treatment, confirm area of treatment with patient, and obtain informed consent, including response and reactions to therapy. New patients are advised of the risk of pain, blistering, hyper and hypopigmentation. Established patients require review of photos from prior session to evaluate response to treatment, spread, active inflammation and to determine if the treatment needs to be adjusted. Previously burned or blistered areas are assessed for healing, dyspigmentation and scarring. Additional skin care is discussed as appropriate. The physician identifies areas that are prone to pain or burning and advises the clinical staff to apply EMLA cream. The patient is appropriately positioned for access to the first treatment site. The treating physician confirms that laser safety goggles are being worn by everyone in the room. Check laser equipment.

Description of Intra-Service Work: Identify and confirm all lesion sites. EMLA is removed and a mineral oil is applied to treatment sites. Areas that previously developed complications are indicated as treatment settings may need to be adjusted due to increased sensitivity. Each lesion is draped and isolated as much as possible. Treatment fluence (or energy level) is selected for each part of each individual plaque based on the thickness of that part of the plaque and its response to previous treatment(s). The laser is then applied to the first plaque and treatment initiated with pulse duration varying based on the energy delivered. Up to 2 sq cm can be treated at a time with spot size adjusted based on clinical presentation and plaque thickness. Often, individual plaque(s) are treated with different fluences and spot sizes. Gloves are changed as needed to protect equipment. Treatment is performed sequentially to all lesions, taking care to avoid overlapping and modifying fluences as needed. Blocking templates are used to avoid treating uninvolved areas and to deal with geometric lesion configurations that would preclude overlap avoidance. Monitor for pain as well as for skin surface reaction throughout the process. Repeat process and modify for each subsequent lesion to be treated. At the end of treatment for each lesion, reassess site for adequacy of treatment and for any signs of overlap that might need post-treatment therapy.

Description of Post-Service Work: Review pain management and skin care. Ice packs are placed on all erythematous, blistered and crusted areas. Once ice packs are removed, triamcinolone is applied to intact skin with heavy inflammation, and mupirocin is applied to areas of blistering, erosion, and/or impending skin breakdown. Eucerin is applied to all other treatment areas to minimize pain. The physician directs clinical staff which exposed lesions sunscreen should be applied prior to leaving to prevent further unwanted UV exposure and potential redness after treatment.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023		
Presenter(s):	Alice Gottlieb, MD, FAAD, Alexandra Flamm, MD, FAAD, Howard Rogers, MD, FAAD, Alina Bridges, MD, FAAD		
Specialty Society(ies):	American Academy of Dermatology Association (AADA)		
CPT Code:	96922		
Sample Size:	250	**Resp N:**	41
Description of Sample:	The AADA used a targeted vendor survey approach, which was approved by the Research Subcommittee. We inquired and received vendor lists from the 2 manufacturers of the excimer laser. A total of 250 surveys went out to all names provided - 225 from one manufacturer and 25 from the other.

• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	29%	57%	14%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In 2008, CPT codes 96920, 98921, and 96922, excimer laser treatment for psoriasis, were identified by the high-volume growth and CMS fastest growing screens. At that time, the RUC recommended that these services be assessed again in two years. In October 2011, the Relativity Assessment Workgroup (RAW) reviewed these codes and recommended that the specialty society resurvey for work and practice expense. The codes were presented at the January 2012 RUC

meeting. Additionally, the RUC requested the development of a CPT Assistant article for the laser codes 96920-96922 to address incorrect reporting when using handheld devices. The CPT Assistant article was published in June 2012.

In May 2013, another CPT Assistant article was released to address treating a scar using the laser codes 96920-96922, stating that their use would not be appropriate and that 96999, *Unlisted special dermatological service or procedure*, should be used instead.

In April 2015, the code family was identified again via the high-volume growth screen with Medicare utilization of 10,000 or more. It was recommended that a CPT Assistant article be developed. Additionally, the RUC requested that the specialty societies develop an Action Plan to address the continued increase in utilization and assess the effectiveness of the CPT Assistant article. In October 2015, the RUC recommended that the specialty societies develop an additional, comprehensive CPT Assistant article, with examples, on the use of the three laser codes to ensure the code set was being billed correctly. The CPT Assistant article was published in September 2016.

In October 2017, the RUC recommended that the RAW review these services in 2 years (October 2019). In October 2019, we received the same recommendation (review services in two years ((January 2022)), since therapy for psoriasis had changed, and the utilization of these services may decrease.

In January 2022, the RAW reviewed the laser codes 96920-96922, noting that utilization continued to increase, specifically CPT code 96920. Use of 96920 peaked at 117,256 in 2016, dropped to 79,671 in 2020, and increased to 88,673 in 2021. The specialty societies indicated that this volume is appropriate due to changes in treatment and medication options for psoriasis. However, the RAW recommended that CPT codes 96920, 96921, and 96922 be surveyed for work and practice expense at the April 2022 RUC meeting. In response, the society requested that these codes be referred to CPT to revise the code descriptors to treat expanded indications. The RAW agreed, and the codes were placed on the October 2022 CPT Panel agenda as an editorial revision.

During the October 2022 CPT meeting, the codes were withdrawn as CPT indicated that our changes would not be considered an editorial revision and that we needed to complete a long code change application for the codes. The long code change application was completed and submitted for the February 2023 CPT meeting.

During the pre-facilitation conference call for the February 2023 CPT meeting, the panel reviewers expressed concern about a lack of supporting literature to move forward with the code change applications. Specifically, they indicated that the list of other inflammatory diseases, including vitiligo, eczema, alopecia, and dermatitis, did not have sufficient supporting literature indicating clinical efficacy for treatment with excimer laser. The AADA CPT advisors then recommended expansion of the codes to add just vitiligo, but the reviewers maintained the argument of insufficient supporting literature as well as lack of literature to support the treatment of specific surface area size in this disease process. The CPT panel reviewers did not support the application. AADA was advised to withdraw the tab before the meeting, which was done.

Therefore, the codes were surveyed for the April 2023 RUC meeting without any revisions to code descriptors.

Survey Process

The AADA requested and was approved for a vendor-only survey list as this service is not typically taught in training and is only performed by a small subset of dermatologists with the proper equipment (excimer laser) to perform the procedure. The AADA reached out to the only two manufacturers, Strata and LASEROPTEK Americas. Strata, which bought out the now defunct manufacturer Ro (Pharos excimer laser) holds the vast majority of the marketplace. We received 225 names from Strata and 25 names from LASEROPTEK Americas and all were surveyed.

Work RVU Recommendation

The expert panel reviewed the survey data. It was felt that the current value would be inappropriate given the decrease in survey time. Our expert panel, which included work experts who frequently perform this procedure, felt that the work associated with this code has not changed it was last surveyed. It was also noted that the request for survey arose from a utilization screen as opposed to other mechanisms. However, in contrast to the other codes in this family, the RVW data for 96922 decreased similarly to the time.

Therefore, the expert panel recommends the 25th percentile, with a wRVU of 1.32. This would represent a decrease from current value of 2.10.

Key Reference Service

The most chosen reference codes by survey participants are common dermatologic procedures.

- **12007** Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); over 30.0 cm
- **12018** Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; over 30.0 cm

Neither KRS code was chosen by a majority of the survey takers, at 17.5% and 17.5% respectively, and therefore society was not confident these were representative for comparison.

MPC Codes

Our recommendation additionally supports relativity when compared to the MPC codes noted below:

CPT Code	Descriptor	wRVU	Total Time	Pre	Intra	Post
96922*	Excimer laser treatment for psoriasis; over 500 sq cm	2.10	57	7	45	5
96922**	Excimer laser treatment for psoriasis; over 500 sq cm	1.32	31	10	18	3
12013	Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm	1.22	27	7	15	5
12004	Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm	1.44	29	7	17	5

*Current
**Recommendation

Summary

In summary, our expert panel recommends using the survey median intraservice work of 18 minutes, and recommending the 25th percentile of wRVU data at 1.37, which would align with the noted decreases in time within the survey data and still maintain relativity within the code family.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   - ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   - ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   - ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   - ☐ Multiple codes are used to maintain consistency with similar codes.
   - ☐ Historical precedents.
   - ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96922

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Dermatology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 28048
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We doubled the Medicare utilization rate.

Specialty Dermatology Frequency 28048 Percentage 82 %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 14,024 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. This rationale is based on the 2021 Medicare utilization rates for the year 2021

Specialty Dermatology Frequency 14024 Percentage 82.00 %

Specialty Frequency Percentage %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment
Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

CPT Code	Long Descriptor	Global Period
96920	Excimer laser treatment for psoriasis; total area less than 250 sq cm	000
96921	Excimer laser treatment for psoriasis; 250 sq cm to 500 sq cm	000
96922	Excimer laser treatment for psoriasis; over 500 sq cm	000

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
96920	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has still less than 250 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96921	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has between 250 sq cm and 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.
96922	a 65-year-old male presents with a history of moderate plaque psoriasis. in spite of multidrug topical therapy, the patient has more than 500 sq cm of chronic plaques on the elbows, knees, sacrum, and hips that are resistant to topical therapy. the severity of the disease is documented and the decision is made to utilize laser treatment for recurrent and recalcitrant psoriatic plaques.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Subject Matter Experts who perform this procedure as routine reviewed current PE inputs and modified them to reflect current practice.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   N/A
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   This code is **not** typically reported with an E/M service in any setting.
   See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   Dermatology dominates the reporting in all settings with 76.7% of all billing for this service in the non-facility setting and 76.5% in all sites.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The society is requesting an increase in practice expense. Since surveying the code last in 2012, the business model for the excimer laser has changed. The primary company for the excimer laser, STRATA, which controls the majority of the market of the lasers in the United States, has provided evidence that the purchase model is no longer dominant. They have presented an attestation stating that the majority of their business model is through the partnership program (eg, subscription-based model) that is a pay-per-use. The current equipment cost represents outdated data and a flawed methodology.

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

We are recommending an addition of 2 mins for positioning given the need for multiple repositionings to access areas to be treated that need to have EMLA applied before the procedure begins.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Previously 5 minutes, maintain current.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

Room preparation is completed including turning on the FDA approved excimer laser (308 nm) as it takes time to warm up. The patient is greeted by clinical staff, brought to treatment room and provided with a gown. Clinical staff ensures appropriate medical records are available. The clinical staff obtains vital signs including temperature, respiratory rate, BP and pulse. Clinical staff reviews the treatment procedure with the patient, obtains patient consent and confirms the order. Once the patient is gowned, photos are obtained of the treatment areas. EMLA cream is applied to pre-determined areas prone to pain or burning. The patient is positioned by the clinical staff to allow for ease of initial treatment.

    b. Service period (includes pre, intra and post):

The clinical staff is present with the physician and actively assists the physician throughout the procedure. The clinical staff ensures the patient is wearing the required UV goggles throughout the treatment. The physician and clinical staff also wear UV goggles. Face shields are worn by physician and clinical staff to prevent any splashing due to mineral oil or other ointments. Clinical staff assists the physician with patient re-positioning the patient throughout the entire treatment, holding any body parts to ease access (including holding skin folds back), shifting or replacing and taping the fenestrated

drapes, as well as applying necessary topical agents throughout the procedure. Clinical staff applies ice packs to previously treated areas where there is discomfort. During the procedure the clinical staff and physician will change gloves as needed due to the use of mineral oil and other ointments.

c. Post-service period:

The clinical staff provides disposable towels for the patient to clean off excess mineral oil and ointments. The patient is monitored by clinical staff in the room and the treated areas are checked for any redness, burns or other reactions. Clinical staff applies mupirocin 2% topical ointment and sunscreen to areas as directed by the physician. Instructions are given to the patient regarding home care, including any special attention a treated area may need. The clinical staff clean the treatment room and carefully clean the laser. The clinical staff will remind the patient when to return for the next treatment and answer any questions the patient presents.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Assist physician as noted above in 10b

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☒ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☒ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

On line 129, 130, and 131, we added the laser, excimer, pay per use based on size of treatment area. This piece of equipment is typically used via a subscription or a rental model. The dermatologist does not own the laser, rather the laser is placed in the dermatologist's office, and the practice buys a series

of treatments. These treatments are purchased generally in packs of 10 and are based upon the size of the area being treated which corresponds to the 3 codes. We have included a paid invoice as well as a usage agreement from the manufacturer.

On line 132 we added Mupirocin 2% Topical Ointment 22 grams. Following the laser treatment, the physician applies mupirocin to areas of blistering, erosion, and/or impending skin breakdown. An invoice is attached.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes -SA048

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	SA048	pack		5.02
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

CMS Code	Useful Life	Price	Utilization Rate	Min/Year	Cost/Year
EQ168 light, exam	10	1232.887	0.5	150000	0.003271745
EF031 table, power	10	5906.76	0.5	150000	0.015674926
ED005 camera, digital system, 12 megapixel (medical grade)	5	5607.182	0.5	150000	0.022216755

The EQ168 light is used during pre-, intra and post-service time and thus tied to the entire clinical staff time (line 10). The light allows the clinical staff and physician to easily identify the plaques as well as take well-lit photos. The light is also used during the procedure to illuminate the treatment areas to allow the physician to achieve optimal results and minimize potential risks that may occur. During post-service the light is on to allow the physician and clinical staff to identify any areas of concern and allow for ease to apply any ointments.
The EF031 table, power is used for the entirety of the procedure and tied to the entire clinical staff time (line 10).
The ED005 camera is used to capture images of the patient's lesions in pre-service time as part of the initial 2 minutes for set-up of the procedure (CA016). The photos are used by the physician to track the course of treatment and clearance of lesions over time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NONFACILITY DIRECT PE INPUTS **CPT CODE(S):96920, 96921, 96922**
SPECIALTY SOCIETY: _American Academy of Dermatology Association
PRESENTER(S): Lawrence Green, MD, FAAD, Brent Moody, MD, FAAD, Howard Rogers, MD, FAAD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Different Performing Specialty*

April 2023

Acupuncture-Electroacupuncture – Tab 09

In September 2022, the Relativity Assessment Workgroup identified the acupuncture codes with 2020 Medicare utilization over 10,000 where the service was surveyed by one specialty but is now performed by a different specialty. CPT codes 97810, 97811, 97813, and 97814 were surveyed by the American Chiropractic Association in April 2004. It is important to note that since January 1, 2020, CMS has paid for acupuncture selectively for patients with lower back pain. Therefore, the RUC database reflects two years of claims data which reflects physical medicine and rehabilitation, family medicine, and internal medicine as the top performing specialties. However, Medicare does not cover these services when reported by chiropractors and therefore, the Medicare utilization data does not include these services when provided by chiropractors. The Workgroup confirmed that chiropractors are involved and should be part of the level of interest and survey process. CPT codes 97810-97814 were surveyed for April 2023 RUC meeting.

During the RUC presentation, it was clarified that because the work RVU recommendations are, in some instances, below the current value and the utilization is expected to be the same, this family of codes is budget neutral as it does not exceed current spending. Therefore, compelling evidence for this tab is not required based on RUC standards. The increases from the current work RVU for base codes 97810 and 97813 are supported by a strong survey that includes a representative sample of survey respondents from the top performing specialties. Moreover, the median number of needles placed during the service has increased from the original recommendation. The physician or other qualified healthcare professional work throughout these four services has been refined since the last RUC HCPAC valuation. The changes involve the patient preparation based on current guidelines related to the Clean Needle Technique (CNT) and the guidance on how to approach treatment has changed slightly based on the patient's condition. This is due to the intersection of eastern and western medicine, as conditions being treated by acupuncture are better understood, the approach to treatment has modernized and informs the practitioners medical decision making.

97810 ***Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient***
The RUC reviewed the survey results from 36 physicians and chiropractors and recommends a work RVU of 0.61 based on the survey 25th percentile, which maintains relativity within the family. The RUC recommends 5 minutes of pre-service time, 13 minutes intra-service time, 5 minutes immediate post-service time, and 23 minutes total time.

For this service, the practitioner inserts sterile, single use, solid filament needles and manually stimulates the needles. The median number of needles used for the initial portion of a typical patient encounter for acupuncture without electric stimulation, as described by one unit of this base code, is 13 needles. The patient rests with the needles for 15 minutes and the practitioner monitors and re-stimulates the needles as needed until the desired effect is achieved. The needles are then removed.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 97140 *Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes* (work RVU = 0.43, 15 minutes

intra-service, and 19 minutes total time) and 98940 *Chiropractic manipulative treatment (CMT); spinal, 1-2 regions* (work RVU = 0.46, 7 minutes intra-service, and 15 minutes total time). The surveyed code is valued appropriately higher when compared to the key reference codes given the typical number of needles and total time to perform the service. For example, the number of typical needles to reach the desired effect is higher than that of the number of regions treated in the key reference services, which supports a higher work RVU for the surveyed code. For additional support, the RUC referenced HCPAC MPC code 97802 *Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes* (work RVU = 0.53, 15 minutes intra-service, and 17 minutes total time). The surveyed code is valued appropriately higher when compared to the MPC code given the work to manually manipulate the needles and overall higher total time. **The RUC recommends a work RVU of 0.61 for CPT code 97810.**

97811 ***Acupuncture, 1 or more needles; without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 32 physicians and chiropractors and recommends a work RVU of 0.46 based on the survey 25th percentile, which maintains relativity within the family for this add-on code. The RUC recommends 0 minutes of pre-service time, 11 minutes intra-service time, 0 minutes immediate post-service time, and 11 minutes total time.

Following the initial service, the practitioner selects and prepares new treatment points. The practitioner inserts sterile, single use, solid filament needles and manually stimulates the needles. The median number of needles used for the portion of the typical patient encounter for acupuncture without electric stimulation, as described by one unit of this add-on code, is 10 needles. The patient rests with the needles for 15 minutes and the practitioner monitors and re-stimulates the needles as needed until the desired effect is achieved. The needles are then removed. The median number of times this add-on code will be reported with the primary service is 1, based on the 2021 Medicare claims data.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 95886 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)* (work RVU = 0.86, 30 minutes intra-service and total time) and MPC code 95885 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)* (work RVU = 0.35, 15 minutes intra-service and total time). The surveyed code work RVU is appropriately bracketed by the key reference services given that the work RVU falls at the midpoint of the reference codes with approximately 10 needles placed during the add-on service. However, the key reference code's time to perform the add-on services is higher given that the physician or qualified health care professional reviews at least 20 voluntary motor units. For additional support, the RUC referenced HCPAC MPC code 11045 *Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 sq cm, or part thereof (List separately in addition to code for primary procedure)* (work RVU = 0.50, 15 minutes intra-service and total time) which is valued appropriately higher than the surveyed code, given the higher intra-service and total time. **The RUC recommends a work RVU of 0.46 for CPT code 97811.**

97813 ***Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient***
The RUC reviewed the survey results from 33 physicians and chiropractors and recommends a work RVU of 0.74 based on the survey 25th percentile, which maintains relativity within the family. The RUC recommends 5 minutes of pre-service time, 15 minutes intra-service time, 5 minutes immediate post-service time, and 25 minutes total time.

For this service, the practitioner inserts sterile, single use, solid filament needles. The median number of needles used for the initial portion of the typical patient encounter for acupuncture with electric stimulation, as described by one unit of this base code, is 14 needles. The practitioner attaches electrodes to the needles and the appropriate frequency and waveform is selected and manipulated based on patient tolerance. The patient rests with the needles for 15 minutes and the practitioner monitors and re-adjusts the electrical stimulation as needed until the desired effect is achieved. The needles are then removed.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 98941 *Chiropractic manipulative treatment (CMT); spinal, 3-4 regions* (work RVU = 0.71, 10 minutes intra-service, and 20 minutes total time) and 20560 *Needle insertion(s) without injection(s); 1 or 2 muscle(s)* (work RVU = 0.32, 10 minutes intra-service, and 16 minutes total time). The surveyed code is valued appropriately higher when compared to the key reference services given that the intra-service and total times are higher. Further, this code is valued appropriately within the family given that it requires the most time, highest median number of needles, and electrical stimulation. For additional support, the RUC referenced MPC code 95251 *Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report* (work RVU = 0.70, 15 minutes intra-service, 20 minutes total time), which appropriately supports the surveyed code work RVU as the intra-service time is identical and the total time of the surveyed code is appropriately higher. **The RUC recommends a work RVU of 0.74 for CPT code 97813.**

97814 ***Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)***
The RUC reviewed the survey results from 29 physicians and chiropractors and recommends a work RVU of 0.47 based on the survey 25th percentile, which maintains relativity within the family for this add-on code. The RUC recommends 0 minutes of pre-service time, 15 minutes intra-service time, 0 minutes immediate post-service time, and 15 minutes total time.

Following the initial service, the practitioner selects and prepares new treatment points. The practitioner then inserts sterile, single use, solid filament needles. The median number of needles used for the portion of the typical patient encounter for acupuncture with electric stimulation, as described by one unit of this add-on code, is 10 needles. The practitioner attaches electrodes to the needles and the appropriate frequency and waveform is selected and manipulated based on patient tolerance. The patient rests with the needles for 15 minutes and the practitioner monitors and re-adjusts the electrical stimulation as needed until the desired effect is achieved. The needles are then removed. The median number of times this add-on code will be reported with the primary service is 1, based on the 2021 Medicare claims data.

To support the recommended work RVU, the RUC compared the surveyed code to top key reference MPC code 95885 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)* (work RVU = 0.35, 15 minutes intra-service and total time), noting the identical intra-service times, and the second highest key reference code 95886 *Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)* (work RVU = 0.86, 30 minutes intra-service and total time). The surveyed code work RVU is appropriately bracketed by the key reference services given that physician or other qualified healthcare provider work falls in the middle of the reference codes with approximately 10 needles carefully placed with electrical stimulation during the intra-service time. For additional support, the RUC referenced HCPAC MPC code 96168 *Health behavior intervention, family (with the*

patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (work RVU = 0.55, 15 minutes intra-service and total time), which requires similar work and has identical intra-service and total time. **The RUC recommends a work RVU of 0.47 for CPT code 97814.**

Practice Expense
The Practice Expense (PE) Subcommittee discussed and accepted compelling evidenced based on "Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data." According to the RUC database, the acupuncture codes were originally presented only by the American Chiropractic Association. Medicare claims data for 2021 show the service is now done primarily by physicians in physical medicine and rehabilitation and family medicine.

The Subcommittee reviewed the direct practice expense inputs and made several modifications as detailed in the PE SOR. The specialty societies and the RUC agreed with the median number of needles used per service (97810 = 13, 97811 = 10, 97813 = 14, 97814 = 10) and discussed that almost all MDs, DOs, DCs, and PTs use Seirin needles. **The RUC noted that CMS should review the pricing of SC075 *needle, acupuncture* to ensure it reflects accurate current pricing for the typical Seirin needles.**

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

RAW Flag
The RUC recommends flagging CPT codes 97810, 97811, 97813, and 97814 since the survey responses for code 97814 fell just below the threshold of 30 responses based on the most recent year of Medicare utilization. These services will be reviewed by the Relativity Assessment Workgroup in three years. At that time, the specialty societies will submit an action plan indicating whether these services should be resurveyed or referred to the CPT Editorial Panel for appropriate action.

CPT Code	CPT Descriptor		Global Period	Work RVU Recommendation
Acupuncture				
	Acupuncture is reported based on 15-minute increments of personal (face-to-face) contact with the patient, not the duration of acupuncture needle(s) placement.			
	If no electrical stimulation is used during a 15-minute increment, use 97810, 97811. If electrical stimulation of any needle is used during a 15-minute increment, use 97813, 97814.			
	Only one code may be reported for each 15-minute increment. Use either 97810 or 97813 for the initial 15-minute increment. Only one initial code is reported per day.			

Evaluation and management services may be reported in addition to acupuncture procedures, when performed by physicians or other health care professionals who may report evaluation and management (E/M) services, including new or established patient office or other outpatient services (99202-99215), hospital inpatient or observation care (99221-99223, 99231-99233), office or other outpatient consultations (99242, 99243, 99244, 99245), inpatient or observation consultations (99252, 99253, 99254, 99255), critical care services (99291, 99292), inpatient neonatal intensive care services and pediatric and neonatal critical care services (99466-99480), emergency department services (99281-99285), nursing facility services (99304-99316), and home or residence services (99341-99350), separately using modifier 25 if the patient's condition requires a significant, separately identifiable E/M service above and beyond the usual preservice and postservice work associated with the acupuncture services. The time of the E/M service is not included in the time of the acupuncture service. For needle insertion(s) without injection(s) (eg, dry needling, trigger point acupuncture), see 20560, 20561.			
97810	Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient (Do not report 97810 in conjunction with 97813)	XXX	0.61
97811	without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure) (Use 97811 in conjunction with 97810, 97813)	ZZZ	0.46
97813	with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient (Do not report 97813 in conjunction with 97810)	XXX	0.74
97814	with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure) (Use 97814 in conjunction with 97810, 97813) (Do not report 97810, 97811, 97813, 97814 in conjunction with 20560, 20561. When both time-based acupuncture services and needle insertion[s] without injection[s] are performed, report only the time-based acupuncture codes)	ZZZ	0.47

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 35-year-old patient presents for repeat treatment of non-traumatic low back pain of 3 weeks duration. The patient reports lower back pain and limited range of motion.

Percentage of Survey Respondents who found Vignette to be Typical: 66%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The practitioner reviews the chart. The provider obtains an account of the response to the previous treatment and any significant changes that have occurred since the last visit. The patient is evaluated, and thirteen points are selected and marked for today's treatment. The practitioner selects the appropriate needle lengths and gauges for this treatment. Needles are removed from packaging and are placed in a stainless-steel tray. The patient is positioned comfortably prior to initiation of treatment.

Description of Intra-Service Work: The patient is prepped with 70% isopropyl alcohol to the treatment sites. The practitioner then inserts sterile, single use, solid filament needles and manually stimulates needles. The patient is instructed to rest for 15 minutes while the needles are retained.
The practitioner monitors the patient to re-stimulate the needles and to inquire about patient comfort and treatment response.

Description of Post-Service Work: When the desired effect is achieved, the practitioner removes the needles and applies pressure to the points with a cotton ball to prevent bruising or bleeding. The practitioner counts the needles to ensure all needles are removed for disposal. The practitioner then assists the patient to an upright position, making sure that the patient does not feel faint. Provider discusses expectations, exercise limitations and any other relevant post-service instructions. Final documentation is recorded in the patient chart.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation Summary

97810 – The societies recommend the 25th percentile work RVU of 0.61 and the survey times of 5/13/5 for a total time of 23 minutes.

Background

Acupuncture codes 97810, 97811, 97813 and 97814 were presented to CPT in late 2003 and valued at the April 2004 RUC meeting based on a survey by the American Chiropractic Association. The codes have not been resurveyed since that original 2004 survey, which was presented to HCPAC and included responses only from chiropractors. The four acupuncture codes became active CPT codes in 2005, but CMS continued their longstanding decision not to pay for acupuncture until a new coverage decision was made effective January 1, 2020. Effective that date, CMS now pays for acupuncture only for patients with low back pain, which they have specifically defined. The RUC database includes claims data for the acupuncture codes from 2020 and 2021, with Physical Medicine and Rehabilitation being the most common biller of these services followed by family medicine, internal medicine, and nurse practitioners. It is also important to note, that CMS does not pay chiropractors for acupuncture, although chiropractors provide this service outside of Medicare.

The RAW identified the acupuncture codes on the "different performing specialty from survey" screen. AAPM&R, AAFP and ACA presented an action plan to the RAW in January 2023 recommending a survey of all four acupuncture codes due to fact that the codes had not been surveyed since 2004 and, given the recent Medicare coverage decision, the dominant specialty has changed.

Compelling Evidence

The societies are recommending an increase to codes 97810 and 97813, we will therefore be presenting a compelling evidence argument for the family.

The societies believe these codes meet compelling evidence due to a change in specialty and flawed methodology. The 2004 survey of the acupuncture and electroacupuncture codes was conducted solely by the American Chiropractic Association and did not include any of the top performing specialties who currently use the code. We also believe there is evidence that incorrect assumptions were made in the previous valuation of the service. The societies recognize that a flawed crosswalk was used in the 2004 valuation. Code 98941, Chiropractic manipulative treatment (CMT); spinal, 3-4 regions, was used to support the value for code 97813, and then the surveyed rank order was applied for 97810, 97811 and 97814. Code 98941 was subsequently revalued in 2012 and was determined to have been previously valued based on flawed methodology, which includes the time period it was used to value 97813.

Survey

The participating specialties anticipated several challenges in surveying the acupuncture codes. Specifically, both AAPM&R and AAFP have members who perform acupuncture, but do not have a way of identifying these members in their member databases. The ACA does have a designated Council on Chiropractic Acupuncture, but it includes less than 200 members. To address this, the three societies included both a random sample and a Research Subcommittee approved targeted sample in the survey distribution. The survey was open for a three-week period and several reminders were sent to encourage more participation. Despite these efforts, the survey response numbers were low for all codes, however all codes except for 97814 met the required threshold for a valid survey.

The societies added two questions to the standard survey template to obtain additional information to inform recommendations. Participants were asked to indicate the typical number of needles used for each code surveyed. Median data is in the table below.

Code	Median # of Needles
97810	13
97811	10
97813	14
97814	10

Participants were asked to indicate the typical number of units of each add on code when billed. Median data is in the table below.

Code	Median # Units

	Billed
97811	2
97814	2

Data Discussion and Recommendation
Upon review of the data, the societies believe the survey supports recommendation of the 25th percentile RVU for the three of the four codes. The survey 25th percentile indicates an increase of 0.01 RVU over current value for base code 97810, a reduction of 0.04 RVU for add on code 97811, and an increase of 0.09 RVU for base code 97813. The societies believe this is supported by a small increase in time for code 97810 and 97813, and a decrease in time for 97811. The societies believe maintaining current value for add-on code 97814 is most appropriate because the intra-service time for that code did not change. In addition to the supporting MPC codes in the individual SORs, we've included comparison codes which support our recommendations in the tables at the end of this rationale.

Code Specific Recommendation

97810
Code 97810 Survey Data and Recommendation: The societies obtained 36 responses for code 97810 including 17 targeted sample responses and 19 random sample responses. This included 5 AAFP responses, 11 AAPM&R responses and 20 ACA responses.
Combined survey data resulted in a 25th percentile RVU of 0.61 and median RVU of 0.79 with times of 5/13/5 for a total time of 23.
97810 – The societies recommend the 25th percentile work RVU of 0.61 and the survey times of 5/13/5 for a total time of 23 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.

- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre	Intra	Post
3.	97810	XXX	0.61	5	13	5
4.	97811	ZZZ	0.46		15	
5.	97811	ZZZ	0.46		15

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Following removal of needles from the initial acupuncture service provided the practitioner adjusts the positioning of the patient. New points are selected to complete the treatment. After palpating to locate these new points, they are marked and prepped with 70% isopropyl alcohol to the treatment sites. Ten needles are selected, inserted, and manipulated to obtain the desired effect. The patient is instructed to rest for 15 minutes while these needles are retained. Periodically, the practitioner restimulates these needles.

Description of Post-Service Work:

Physical effort required	33%	33%	33%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	50%	33%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation Summary

The societies recommend the 25th percentile work RVU of 0.46 and the survey times of 0/11/0 for a total time of 11 minutes.

Background

Acupuncture codes 97810, 97811, 97813 and 97814 were presented to CPT in late 2003 and valued at the April 2004 RUC meeting based on a survey by the American Chiropractic Association. The codes have not been resurveyed since that original 2004 survey, which was presented to HCPAC and included responses only from chiropractors. The four acupuncture codes became active CPT codes in 2005, but CMS continued their longstanding decision not to pay for acupuncture until a new coverage decision was made effective January 1, 2020. Effective that date, CMS now pays for acupuncture only for patients with low back pain, which they have specifically defined. The RUC database includes claims data for the acupuncture codes from 2020 and 2021, with Physical Medicine and Rehabilitation being the most common biller of these services followed by family medicine, internal medicine, and nurse practitioners. It is also important to note, that CMS does not pay chiropractors for acupuncture, although chiropractors provide this service outside of Medicare.

The RAW identified the acupuncture codes on the "different performing specialty from survey" screen. AAPM&R, AAFP and ACA presented an action plan to the RAW in January 2023 recommending a survey of all four acupuncture codes due to fact that the codes had not been surveyed since 2004 and, given the recent Medicare coverage decision, the dominant specialty has changed.

Compelling Evidence

The societies are recommending an increase to codes 97810 and 97813, we will therefore be presenting a compelling evidence argument for the family.

The societies believe these codes meet compelling evidence due to a change in specialty and flawed methodology. The 2004 survey of the acupuncture and electroacupuncture codes was conducted solely by the American Chiropractic Association and did not include any of the top performing specialties who currently use the code. We also believe there is evidence that incorrect assumptions were made in the previous valuation of the service. The societies recognize that a flawed crosswalk was used in the 2004 valuation. Code 98941, Chiropractic manipulative treatment (CMT); spinal, 3-4 regions, was used to support the value for code 97813, and then the surveyed rank order was applied for 97810, 97811 and 97814. Code 98941 was subsequently revalued in 2012 and was determined to have been previously valued based on flawed methodology, which includes the time period it was used to value 97813.

Survey

The participating specialties anticipated several challenges in surveying the acupuncture codes. Specifically, both AAPM&R and AAFP have members who perform acupuncture, but do not have a way of identifying these members in their member databases. The ACA does have a designated Council on Chiropractic Acupuncture, but it includes less than 200 members. To address this, the three societies included both a random sample and a Research Subcommittee approved targeted sample in the survey distribution. The survey was open for a three-week period and several reminders were sent to encourage more participation. Despite these efforts, the survey response numbers were low for all codes, however all codes except for 97814 met the required threshold for a valid survey.

The societies added two questions to the standard survey template to obtain additional information to inform recommendations. Participants were asked to indicate the typical number of needles used for each code surveyed. Median data is in the table below.

Code	Median # of Needles
97810	13
97811	10
97813	14
97814	10

Participants were asked to indicate the typical number of units of each add on code when billed. Median data is in the table below.

Code	Median # Units Billed
97811	2
97814	2

Data Discussion and Recommendation

Upon review of the data, the societies believe the survey supports recommendation of the 25th percentile RVU for the three of the four codes. The survey 25th percentile indicates an increase of 0.01 RVU over current value for base code 97810, a reduction of 0.04 RVU for add on code 97811, and an increase of 0.09 RVU for base code 97813. The societies believe this is supported by a small increase in time for code 97810 and 97813, and a decrease in time for 97811. The societies believe maintaining current value for add-on code 97814 is most appropriate because the intra-service time for that code did not change. In addition to the supporting MPC codes in the individual SORs, we've included comparison codes which support our recommendations in the tables at the end of this rationale.

Code Specific Recommendation

97811

Code 97811 Survey Data and Recommendation: The societies obtained 32 responses for code 97811 including 15 targeted sample responses and 17 random sample responses. This included 5 AAFP responses, 9 AAPM&R responses and 18 ACA responses.

Combined survey data resulted in a 25th percentile RVU of 0.46 and median RVU of 0.59 with times of 0/11/0 for a total time of 11 minutes.

97811 – The societies recommend the 25th percentile work RVU of 0.46 and the survey times of 0/11/0 for a total time of 11 minutes.

Codes Supporting the Recommendation for 97811 (Global ZZZ)

Code	Descriptor	wRVU	Intra Time	Total Time

G0247	Routine foot care by a physician of a diabetic patient with diabetic sensory neuropathy resulting in a loss of protective sensation (lops) to include, the local care of superficial wounds (i.e. superficial to muscle and fascia) and at least the following if present: (1) local care of superficial wounds, (2) debridement of corns and calluses, and (3) trimming and debridement of nails	0.50	10	24
96159	Health behavior intervention, individual, face-to-face; each additional 15 minutes (List separately in addition to code for primary service)	0.50	15	15

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 56-year-old patient returns for a repeat visit to treat lower back and right sciatic pain. The patient reports that the pain was significantly reduced following the last treatment. The patient is finding it easier to get out of a chair and is sleeping better at night.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The practitioner reviews the chart. The provider obtains an account of the response to the previous treatment and any significant changes that have occurred since the last visit. The patient is evaluated, and fourteen points are selected and marked for today's treatment. The practitioner selects the appropriate needle lengths and gauges for this treatment. Needles are removed from packaging and are placed in a stainless-steel tray. The patient is positioned comfortably prior to initiation of treatment.

Description of Intra-Service Work: The patient is prepped with 70% isopropyl alcohol to the treatment sites. The practitioner then inserts sterile, single use, solid filament needles. Electrodes are then attached to the shafts of the needles and an appropriate frequency (Hz) and waveform is selected. The practitioner then slowly increases the amplitude of the signal until patient tolerance is reached. The patient is instructed to rest for 15 minutes while the needles are retained.
The practitioner monitors the patient, re-adjusts the electrical stimulation, and inquires about patient comfort and treatment response.

Description of Post-Service Work: When the desired effect is achieved, the practitioner removes the needles and applies pressure to the points with a cotton ball to prevent bruising or bleeding. The practitioner counts the needles to ensure all needles are removed for disposal. The practitioner then assists the patient to an upright position, making sure that the patient does not feel faint. Provider discusses expectations, exercise limitations and any other relevant post-service instructions. Final documentation is recorded in the patient chart.

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	17%	17%	67%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	33%	67%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	0%	50%
Physical effort required	100%	0%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	17%	67%	17%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	80%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	20%	60%	20%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	40%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation Summary

97813 – The societies recommend the 25th percentile work RVU of 0.74 and the survey times of 5/15/5 for a total time of 25 minutes.

Background

Acupuncture codes 97810, 97811, 97813 and 97814 were presented to CPT in late 2003 and valued at the April 2004 RUC meeting based on a survey by the American Chiropractic Association. The codes have not been resurveyed since that original 2004 survey, which was presented to HCPAC and included responses only from chiropractors. The four acupuncture codes became active CPT codes in 2005, but CMS continued their longstanding decision not to pay for acupuncture until a new coverage decision was made effective January 1, 2020. Effective that date, CMS now pays for acupuncture only for patients with low back pain, which they have specifically defined. The RUC database includes claims data for the acupuncture codes from 2020 and 2021, with Physical Medicine and Rehabilitation being the most common biller of these services followed by family medicine, internal medicine, and nurse practitioners. It is also important to note, that CMS does not pay chiropractors for acupuncture, although chiropractors provide this service outside of Medicare.

The RAW identified the acupuncture codes on the "different performing specialty from survey" screen. AAPM&R, AAFP and ACA presented an action plan to the RAW in January 2023 recommending a survey of all four acupuncture codes due to fact that the codes had not been surveyed since 2004 and, given the recent Medicare coverage decision, the dominant specialty has changed.

Compelling Evidence

The societies are recommending an increase to codes 97810 and 97813, we will therefore be presenting a compelling evidence argument for the family.

The societies believe these codes meet compelling evidence due to a change in specialty and flawed methodology. The 2004 survey of the acupuncture and electroacupuncture codes was conducted solely by the American Chiropractic Association and did not include any of the top performing specialties who currently use the code. We also believe there is evidence that incorrect assumptions were made in the previous valuation of the service. The societies recognize that a flawed crosswalk was used in the 2004 valuation. Code 98941, Chiropractic manipulative treatment (CMT); spinal, 3-4 regions, was used to support the value for code 97813, and then the surveyed rank order was applied for 97810, 97811 and 97814. Code 98941 was subsequently revalued in 2012 and was determined to have been previously valued based on flawed methodology, which includes the time period it was used to value 97813.

Survey

The participating specialties anticipated several challenges in surveying the acupuncture codes. Specifically, both AAPM&R and AAFP have members who perform acupuncture, but do not have a way of identifying these members in their member databases. The ACA does have a designated Council on Chiropractic Acupuncture, but it includes less than 200 members. To address this, the three societies included both a random sample and a Research Subcommittee approved targeted sample in the survey distribution. The survey was open for a three-week period and several reminders were sent to encourage more participation. Despite these efforts, the survey response numbers were low for all codes, however all codes except for 97814 met the required threshold for a valid survey.

The societies added two questions to the standard survey template to obtain additional information to inform recommendations. Participants were asked to indicate the typical number of needles used for each code surveyed. Median data is in the table below.

Code	Median # of Needles
97810	13
97811	10
97813	14
97814	10

Participants were asked to indicate the typical number of units of each add on code when billed. Median data is in the table below.

Code	Median # Units

	Billed
97811	2
97814	2

Data Discussion and Recommendation

Upon review of the data, the societies believe the survey supports recommendation of the 25th percentile RVU for the three of the four codes. The survey 25th percentile indicates an increase of 0.01 RVU over current value for base code 97810, a reduction of 0.04 RVU for add on code 97811, and an increase of 0.09 RVU for base code 97813. The societies believe this is supported by a small increase in time for code 97810 and 97813, and a decrease in time for 97811. The societies believe maintaining current value for add-on code 97814 is most appropriate because the intra-service time for that code did not change. In addition to the supporting MPC codes in the individual SORs, we've included comparison codes which support our recommendations in the tables at the end of this rationale.

Code Specific Recommendation

97813

Code 97813 Survey Data and Recommendation: The societies obtained 33 responses for code 97813 including 17 targeted sample responses and 16 random sample responses. This included 5 AAFP responses, 10 AAPM&R responses and 18 ACA responses.

Combined survey data resulted in a 25th percentile RVU of 0.74 and median RVU of 0.93 with times of 5/15/5 for a total time of 25 minutes.

97813 – The societies recommend the 25th percentile work RVU of 0.74 and the survey times of 5/15/5 for a total time of 25 minutes.

Codes Supporting the Recommendation for 97813

Code	Descriptor	wRVU	Intra Time	Total Time
62368	Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming	0.67	15	27
76882	Ultrasound, limited, joint or focal evaluation of other nonvascular extremity structure(s) (eg, joint space, per-articular tendon(s), muscle(s), other soft tissue structure(s), or soft-tissue mass(es)), real-time with image documentation	0.69	15	25
97813 (rec)	**Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient**	**0.74**	**15**	**25**
20553	Injection(s); single or multiple trigger point(s), 3 or more muscles	0.75	10	27
76377	3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation	0.79	15	25
93880	Duplex scan of extracranial arteries; complete bilateral study	0.80	15	25

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre	Intra	Post
3.	97813	XXX	0.74	5	15	5
4.	97814	ZZZ	0.55		15	
5.	97814	ZZZ	0.55		15	
6.	Totals		1.84	5	45	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97813

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Medicine and Rehabilitation How often? Sometimes

Specialty Family Medicine How often? Rarely

Specialty Chripractor How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 141000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number reflects approximately 3 times the amount this service is billed in the Medicare population.

Specialty Physical Medicine and Rehabilitation Frequency 52170 Percentage 37.00 %

Specialty Family Medicine Frequency 19740 Percentage 14.00 %

Specialty Internal Medicine Frequency 16920 Percentage 12.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 47,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Data is based on data in the most recent version of the RUC database

Specialty Physical Medicine and Rehabilitation Frequency 17390 Percentage 37.00 %

Specialty Family Medicine Frequency 6580 Percentage 14.00 %

Specialty Internal Medicine Frequency 5640 Percentage 12.00 %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97813

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION

CPT Code:97814 Tracking Number Original Specialty Recommended RVU: **0.55**
Presented Recommended RVU: **0.47**
Global Period: ZZZ Current Work RVU: **0.55** RUC Recommended RVU: **0.47**

CPT Descriptor: Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (list separately in addtion to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old patient was referred for acupuncture to relieve both their neck and shoulder pain. The patient also complains of acute vertex headaches that radiate into the frontal sinus region. (Note: This is an add-on service. Only consider the additional work related to the additional physician or other QHP time beyond the initial 15 minutes reported with code 97813.)

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Following removal of needles from the initial acupuncture service provided the practitioner adjusts the positioning of the patient. New points are selected to complete the treatment. After palpating to locate these new points, they are marked and prepped with 70% isopropyl alcohol to the treatment sites. Ten needles are selected, inserted, and manipulated to obtain the desired effect. Electrodes are then attached to the shafts of the needles and an appropriate frequency (Hz) and waveform is selected. The practitioner then slowly increases the amplitude of the signal until patient tolerance is reached. The patient is instructed to rest for 15 minutes. The practitioner continues to stimulate the needles during this phase of treatment by adjusting the electrical stimulation, until the pain and dysfunction are improved to an acceptable level.

Description of Post-Service Work:

CPT Descriptor Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
95886	ZZZ	0.86	**RUC Time**

CPT Descriptor Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
64484	ZZZ	1.00	**RUC Time**	378,950

CPT Descriptor 1 Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
77001	ZZZ	0.38	**RUC Time**	269,997

CPT Descriptor 2 Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	29%	14%	57%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed	14%	43%	43%

• Urgency of medical decision making	

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	14%	57%	29%
Physical effort required	29%	29%	43%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	43%	43%	14%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	40%	40%	20%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	20%	40%	40%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	20%	60%	20%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	20%	20%	60%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation Summary

97814 – The societies recommend maintaining the current work RVU of 0.55 and the survey times of 0/15/0 for a total time of 15 minutes.

Background

Acupuncture codes 97810, 97811, 97813 and 97814 were presented to CPT in late 2003 and valued at the April 2004 RUC meeting based on a survey by the American Chiropractic Association. The codes have not been resurveyed since that original 2004 survey, which was presented to HCPAC and included responses only from chiropractors. The four acupuncture codes became active CPT codes in 2005, but CMS continued their longstanding decision not to pay for acupuncture until a new coverage decision was made effective January 1, 2020. Effective that date, CMS now pays for acupuncture only for patients with low back pain, which they have specifically defined. The RUC database includes claims data for the acupuncture codes from 2020 and 2021, with Physical Medicine and Rehabilitation being the most common biller of these services followed by family medicine, internal medicine, and nurse practitioners. It is also important to note, that CMS does not pay chiropractors for acupuncture, although chiropractors provide this service outside of Medicare.

The RAW identified the acupuncture codes on the "different performing specialty from survey" screen. AAPM&R, AAFP and ACA presented an action plan to the RAW in January 2023 recommending a survey of all four acupuncture codes due to fact that the codes had not been surveyed since 2004 and, given the recent Medicare coverage decision, the dominant specialty has changed.

Compelling Evidence

The societies are recommending an increase to codes 97810 and 97813, we will therefore be presenting a compelling evidence argument for the family.

The societies believe these codes meet compelling evidence due to a change in specialty and flawed methodology. The 2004 survey of the acupuncture and electroacupuncture codes was conducted solely by the American Chiropractic Association and did not include any of the top performing specialties who currently use the code. We also believe there is evidence that incorrect assumptions were made in the previous valuation of the service. The societies recognize that a flawed crosswalk was used in the 2004 valuation. Code 98941, Chiropractic manipulative treatment (CMT); spinal, 3-4 regions, was used to support the value for code 97813, and then the surveyed rank order was applied for 97810, 97811 and 97814. Code 98941 was subsequently revalued in 2012 and was determined to have been previously valued based on flawed methodology, which includes the time period it was used to value 97813.

Survey

The participating specialties anticipated several challenges in surveying the acupuncture codes. Specifically, both AAPM&R and AAFP have members who perform acupuncture, but do not have a way of identifying these members in their member databases. The ACA does have a designated Council on Chiropractic Acupuncture, but it includes less than 200 members. To address this, the three societies included both a random sample and a Research Subcommittee approved targeted sample in the survey distribution. The survey was open for a three-week period and several reminders were sent to encourage more participation. Despite these efforts, the survey response numbers were low for all codes, however all codes except for 97814 met the required threshold for a valid survey.

The societies added two questions to the standard survey template to obtain additional information to inform recommendations. Participants were asked to indicate the typical number of needles used for each code surveyed. Median data is in the table below.

Code	Median # of Needles
97810	13
97811	10
97813	14
97814	10

Participants were asked to indicate the typical number of units of each add on code when billed. Median data is in the table below.

Code	Median # Units Billed
97811	2
97814	2

Data Discussion and Recommendation

Upon review of the data, the societies believe the survey supports recommendation of the 25th percentile RVU for the three of the four codes. The survey 25th percentile indicates an increase of 0.01 RVU over current value for base code 97810, a reduction of 0.04 RVU for add on code 97811, and an increase of 0.09 RVU for base code 97813. The societies believe this is supported by a small increase in time for code 97810 and 97813, and a decrease in time for 97811. The societies believe maintaining current value for add-on code 97814 is most appropriate because the intra-service time for that code did not change. In addition to the supporting MPC codes in the individual SORs, we've included comparison codes which support our recommendations in the tables at the end of this rationale.

Code Specific Recommendation

97814

Code 97814 Survey Data and Recommendation: The societies obtained 29 responses for code 97814 including 15 targeted sample responses and 14 random sample responses. This included 5 AAFP responses, 9 AAPM&R responses and 15 ACA responses.

Combined survey data resulted in a 25th percentile RVU of 0.47 and median RVU of 0.75 with times of 0/15/0 for a total time of 15 minutes.

97814 – The societies recommend maintaining the current work RVU of 0.55 and the survey times of 0/15/0 for a total time of 15 minutes.

Codes Supporting the Recommendation for 97814 (Global ZZZ)

Code	Descriptor	wRVU	Intra Time	Total Time
96171	Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service)	0.54	15	15
96571	Photodynamic therapy by endoscopic application of light to ablate abnormal tissue via activation of photosensitive drug(s); each additional 15 minutes (List separately in addition to code for endoscopy or bronchoscopy procedures of lung and gastrointestinal tract)	0.55	15	15
97814 (rec)	**Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)**	**0.55**	**15**	**15**

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- ☒ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
- ☐ Multiple codes are used to maintain consistency with similar codes.
- ☐ Historical precedents.
- ☐ Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	Code	Global	Work RVU	Pre	Intra	Post
4.	97813	XXX	0.74	5	15	5
5.	97814	ZZZ	0.55		15	
6.	97814	ZZZ	0.55		15	
7.	Totals		1.84	5	45	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 97814

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Physical Medicine and Rehabilitation How often? Sometimes

Specialty Family Medicine How often? Rarely

Specialty Chiropractor How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 168000
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This number reflects approximately 3 times the amount this service is billed in the Medicare population.

Specialty Physical Medicine and Rehabilitation Frequency 63840 Percentage 38.00 %

Specialty Internal Medicine Frequency 25200 Percentage 15.00 %

Specialty Family Medicine Frequency 21840 Percentage 13.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 56,000 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Data is based on data in the most recent version of the RUC database

Specialty Physical Medicine and Rehabilitation Frequency 21280 Percentage 38.00 %

Specialty Internal Medicine Frequency 8400 Percentage 15.00 %

Specialty Family Medicine Frequency 7280 Percentage 13.00 %

Do many physicians perform this service across the United States? No

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Minor procedure

BETOS Sub-classification Level II:
Musculoskeletal

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 97814

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2023

CPT Code	Long Descriptor	Global Period
97810	Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient	XXX
97811	Acupuncture, 1 or more needles; without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)	ZZZ
97813	Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient	XXX
97814	Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s) (List separately in addition to code for primary procedure)	ZZZ

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
97810	A 35-year-old patient presents for repeat treatment of non-traumatic low back pain of 3 weeks duration. The patient reports lower back pain and limited range of motion.
97811	A 47-year-old patient with a diagnosis of lower back pain and left anterior thigh pain presents for a return office visit. The patient is currently symptomatic, presenting with numbness and tingling into the left anterior and lateral thigh. The pain has been worse for the past 2 days. (Note: This is an add-on service. Only consider the additional work related to the additional physician or other QHP time beyond the initial 15 minutes reported with code 97810.)
97813	A 56-year-old patient returns for a repeat visit to treat lower back and right sciatic pain. The patient reports that the pain was significantly reduced following the last treatment. The patient is finding it easier to get out of a chair and is sleeping better at night.
97814	A 58-year-old patient was referred for acupuncture to relieve both their neck and shoulder pain. The patient also complains of acute vertex headaches that radiate into the frontal sinus region. (Note: This is an add-on service. Only consider the additional work related to the additional physician or other QHP time beyond the initial 15 minutes reported with code 97813.)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialties are using the current direct PE inputs for codes 97810-97814 as the point of reference.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?

   None of these codes are typically reported with an E/M service, even in the non-facility setting.

   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   For 97810, Physical Medicine is the dominant specialty in the non-facility setting and provides the service 33.6% of the time. This is also true for the global.

   For 97811, Physical Medicine is the dominant specialty in the non-facility setting and provides the service 40.5% of the time. This is also true for the global.

   For 97813, Physical Medicine is the dominant specialty in the non-facility setting and provides the service 37.2% of the time. This is also true for the global.

   For 97814, Physical Medicine is the dominant specialty in the non-facility setting and provides the service 38.5% of the time. This is also true for the global.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   The specialties recognize this code family meets PE compelling evidence guideline: "Evidence that previous practice expense inputs were based on one specialty, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data." According to the RUC database, the acupuncture codes were originally presented only by the American Chiropractic Association. Medicare claims data for 2021 show the service is now done primarily by physicians in physical medicine and rehabilitation and family medicine. The specialties believe this meets the applicable compelling evidence guideline.

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 97810, 97811, 97813, 97814**

SPECIALTY SOCIETY(IES): AAFP, AAPM&R, ACA

PRESENTER(S): Brad Fox, MD, Carlo Milani, MD, David Reece, DO, Kris Anderson, DC, MS, Leo Bronston, DC, MAppSC, Gary Estadt, DC

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

These codes currently include no clinical staff time for CA010 (obtain vital signs). The specialties recommend 3 minutes be allocated to this clinical activity for 97810 and 97813, based on the fact that staff typically obtain the following vital signs: height, weight, and blood pressure.

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

(Not applicable)

    b. Service period (includes pre, intra and post):

During the pre-service of the service period, the clinical staff: Greets the patient. Obtains vital signs prior to service, typically including height and always including weight and blood pressure. Obtains consent from the patient for the procedure, including review of potential risks. During the post-service of the service period, the clinical staff: Cleans the room, disinfecting the table, disposing of paper, any gowning, and any wrappings from the needles used during the procedure.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Reviews written instructions with the patient describing post service limitations such as exercise and reviews how to care for any points where bleeding has not completely stopped.

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

(Not applicable)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

Please see note below (#26) regarding the typical use of Seirin needles.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?

Yes, base codes 97810 and 97813 include input for the SA048 Minimum Multi-Specialty Visit Pack.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SA048, Minimum Multi-Specialty Visit Pack:

- Paper, exam table – 7 feet
- Gloves, non-sterile – 2 pairs
- Gown, patient – 1
- Pillow case – 1
- Cover, thermometer probe - 1

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

(Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas)*. If you have selected "other formula" for any of the equipment, please explain here:

EF023 – Table, exam – Other formula – The patient occupies the exam table for the 15 minutes of the service. This is not tied to the clinical staff time on which all the other equipment formulas are based. EP077 – Stimulator, splitter, power booster (model SS2) (Grass Telefactor) – This is used to provide electrical stimulation to the needles during the electroacupuncture service (97813 and 97814). This is not tied to the clinical staff time on which all other equipment formulas are based.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The specialties are recommending adding two supplies: • SG030 (non-sterile cotton balls) – Required to stem any bleeding when removing the acupuncture needles. • SM013 (surface disinfectant) – Required post-service for clean-up The specialties recognize that the RUC is not responsible for pricing of medical supplies. However, we feel it is important to note that the current price listed by CMS for acupuncture needles is inaccurate. Acupuncture needles are listed at 0.1, which would account for a $10 cost for 100 needles. Almost all MDs, DOs, DCs, and PTs use Seirin needles. They are the safest and have the best quality control. They are manufactured in Japan, not China. They cost $19.65 per box of 100 (cost of 0.19 per needle). We are in the process of obtaining a paid invoice for these needles and will provide it prior to the handouts deadline before the meeting. We would appreciate it if the RUC would share this invoice with CMS and bring this issue to CMS's attention when transmitting the RUC's recommendations to CMS.

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): 97810, 97811, 97813, 97814**

SPECIALTY SOCIETY(IES): AAFP, AAPM&R, ACA

PRESENTER(S): Brad Fox, MD, Carlo Milani, MD, David Reece, DO, Kris Anderson, DC, MS, Leo Bronston, DC, MAppSC, Gary Estadt, DC

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

The societies updated the number of needles included in supplies for each code based on data obtained in our survey. Participants were asked to indicate the typical number of needles used for each code surveyed. Median data is in the table below.

Code	Median # of Needles
97810	13
97811	10
97813	14
97814	10

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

SD063 electrode TENS-EMS, 2in x 2in (4 pack uou) – deleted from 97813 and 9714
SM013 disinfectant, surface (Envirocide, Sanizide) – deleted from 97811 and 97814
EP077 stimulator, splitter, power booster (model SS2) (Grass Telefactor) – added to 97813 and 97814

Additional information was added to this SOR form to indicate our survey data for the number of needles used in each code.

The aggregate change in cost of the family based on these changes is now a decrease and therefore our compelling evidence argument may not be needed but was accepted by the PE Subcommittee.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

April 2023

Annual Alcohol Screening – Tab 10

In April 2022, the Relativity Assessment Workgroup identified services with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020, including codes G0442 and G0443. In September 2022, the RUC recommended that these services be surveyed for April 2023 after CMS publishes revised code descriptions in the Final Rule for 2023.

CMS covers the annual alcohol screening service once per year (G0442). For patients that screen positive, CMS covers up to four brief face-to-face behavioral counseling interventions (G0443) for Medicare beneficiaries. Both services are typically performed during an annual wellness visit and/or an office visit service (codes G0438 or G0439). For G0442, clinical staff will typically assist the patient in completing the screening tool. Medicare does not define what screening instrument should be used, and there are several that are commonly used. The typical work of the physician for G0442 is to review the collected responses, make sure it is appropriate in the electronic medical record, probe for any follow up questions that need to be probed for and make an assessment based on the information collected.

The specialty societies surveyed alcohol screening and counseling codes G0442 and G0443 for the April 2023 RUC meeting but did not obtain the required number of survey responses. The survey was sent to a random sample of members from the three societies but only achieved 17 responses for G0442 and 15 responses for G0443. The RUC recommended the specialty societies work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify physicians and other qualified healthcare professionals who predominantly perform G0442 and/or G0443 and match them with societies to survey those individuals. The specialty societies were also encouraged to expand their survey sample to other sections of their membership that are more likely to perform these services.

The RUC recommends maintaining the current work RVUs as interim for these services. The RUC recommends an interim work RVU of 0.18 for HCPCS code G0442 and an interim work RVU of 0.45 for HCPCS code G0443. The specialty societies will continue collecting survey responses for the September 2023 RUC meeting and work with the RUC's Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample.

Practice Expense
The PE Subcommittee reviewed the proposed direct practice expense inputs and made several modifications. For the clinical labor in G0442, the PE Subcommittee reduced CA021 *Perform procedure/service---NOT directly related to physician work time* to five minutes as the typical time for the clinical staff to administer the screening tool. For G0443, all clinical staff time was removed for this counseling service since the counseling is performed by the physician or other qualified healthcare professional. The materials distributed to the patient were changed to the typical number of 10 pages to be printed out, SK057 *paper, laser printing (each sheet)* for G0442 and to a full SK062 *patient education booklet* for G0443. The

equipment minutes were also modified to equal the sum of clinical staff time plus the physician/QHP time as reflected by the survey median. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee. The RUC noted that the continued survey of physician work for September 2023 would not impact these practice expense recommendations.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
G0442	Annual alcohol misuse screening, 5 to 15 minutes	XXX	Continue Survey for September 2023 Interim work RVU = 0.18 (No Change)
G0443	Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes	XXX	Continue Survey for September 2023 Interim work RVU = 0.45 (No Change)

CPT Descriptor: Annual alcohol misuse screening, 5 to 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74 year old patient is screened for alcohol misuse during an annual wellness visit.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Prior to meeting with the qualified healthcare professional (QHP), the patient will have completed the screening instrument. The QHP reviews the responses to the screening instrument with the patient. The QHP validates responses to the screening instrument and probes any issues with the patient as needed. The QHP assesses the responses to determine if counseling, a referral, or treatment is needed. The QHP documents clarification of the patient's response and referral or treatment plan.

Description of Post-Service Work: N/A

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	14%	72%	14%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	29%	57%	14%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	57%	43%
Physical effort required	14%	72%	14%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	14%	14%	72%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	33%	33%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	33%	50%	17%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	50%	50%	0%
Physical effort required	33%	50%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	33%	50%	17%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0442** (*Annual alcohol misuse screening, 5 to 15 minutes*) in 2012. Effective for claims with dates of service on or after October 14, 2011, CMS will cover annual alcohol screening, and for those that screen positive, up to four brief, face-to-face, behavioral counseling interventions per year for Medicare beneficiaries (National Coverage Determination (NCD) Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse, 210.8).

Typically, G0442 is billed with an Annual Wellness Visit (G0439). The RUC database indicates that in 2021 G0442 was reported 815,675 times. 74.9% of the time it was billed with G0439.

While clinical staff may work with the patient and assist with the completion of the screening instrument, the physician or nurse practitioner is responsible for reviewing the responses to the questions with the patient, probing as appropriate and making an assessment based on information collected. It is important to remember that certain patients may be reluctant to respond to these questions and will require more effort and time to make an appropriate assessment.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0442 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. At the request of the RAW, the specialty societies submitted an action for the September 2022 RUC meeting. Following review of the action plan, the RUC recommended the code be surveyed. The societies surveyed the code for the April 2023 RUC meeting.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP) and the American Nurses Association (ANA) conducted a survey of G0442. The survey was sent to a random sample of 8,500 individuals. Reminders were sent and survey deadline was extended, however despite their best efforts, the societies only received 17 responses which is below the requisite number of responses (50 responses) for a valid survey based on the RUC criteria for survey minimums. **The societies request that the RUC maintain the existing work RVUs and time for code G0442.**

Specifically, the societies recommend that the RUC maintain the following for code G0442:

- Work RVU: 0.18 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

Advisors from the three societies discussed why they were not able to collect enough surveys and considered whether they would have a different result if another survey was conducted. The Advisors concluded that another survey would likely end in the same result.

After some consideration, the Advisors concluded that the disappointing survey results were likely due to clinicians being unfamiliar with coding for this service, which are typically provided during an Annual Wellness Visit. There are multiple reasons for this lack of familiarity.

- The utilization reflected in the RUC database is likely a result of billing professionals identifying the separately billable services when reviewing medical records. This extraction is often made independently by a billing professional, and therefore, clinician respondents may be unaware that it was captured.

- In the Medicare Advantage and commercial health insurance environments, G-codes are not used, and this may also contribute to the unfamiliarity with the coding for this service since a clinician's patient portfolio is

usually comprised of several different payers, each with their own coding-related nuances, and patients with traditional Medicare are an increasingly smaller part of the portfolio.

- Finally, there is the reality that most of their members are now employed by someone else with employment contracts that may not have an RVU productivity element. For such physicians and nurse practitioners, they may not be familiar with these codes as separately reportable services.

For these reasons, the societies concluded that they would not obtain better results with another survey at a future time.

Survey Results

Survey results from the 17 responses received are summarized below.

Work RVU

Min	25th	Median	75th	High
0.03	0.19	0.50	0.70	2.10

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
2	8	3	13

Acknowledging that the survey data was limited, the Advisors noted that the survey work RVU 25th percentile of 0.19 work RVUs is close to the current work RVU of 0.18. The Advisors also noted that the survey total time of 13 minutes is close to the current time of 15 minutes. The Advisors concluded the survey data supported current work RVUs and time.

Crosswalks

To further support their recommendation of maintaining current values, the Advisors considered several crosswalks.

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
Recommendation							
G0442	Annual alcohol misuse screening, 5 to 15 minutes	0.18	0	15	0	15	0.0120
Reference Code							
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	0	5	2	7	0.0257
MPC Codes							
96374	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug	0.18	2	5	2	9	0.0181
88304	Level III - Surgical pathology, gross and microscopic examination	0.22	0	15	0	15	0.0147
Other Crosswalks							
36410	Venipuncture, age 3 years or older, necessitating the skill of a physician or other	0.18	1	5	2	8	0.0226

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
	qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)						
78808	Injection procedure for radiopharmaceutical localization by non-imaging probe study, intravenous (eg, parathyroid adenoma)	0.18	5	5	3	13	0.0002
99474	Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient	0.18	3	5	2	10	0.0136

The Advisors concluded that these crosswalks provided further support of their recommendation.

Conclusion

AAFP, ACP and ANA recommend the RUC maintain the current values for G0442. The societies recommend:

- Work RVU: 0.18 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.

☒ Other reason (please explain) G0442 is typically billed with the annual wellness visit (G0439) or with an office visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT Code	Global	Work	Pre	Intra	Post
3.						
4.	G0439	XXX	1.92	7	30	10
5.	G0442	XXX	0.18	0	15	0
6.	TOTAL		2.10	7	45	10

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0442

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine — How often? Commonly

Specialty Family Medicine — How often? Commonly

Specialty Nurse Practitioner — How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 815675
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization. As a G-code this service is typically only reported for Medicare patients. Not reported by commerical payors. Medicare Advantage typically does not reimburse separately for these services so typically not separately reported.

Specialty Internal Medicine — Frequency 354870 — Percentage 43.50 %

Specialty Family Medicine — Frequency 338505 — Percentage 41.49 %

Specialty Nurse Practitioner — Frequency 70964 — Percentage 8.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 815,675 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization from the RUC database.

Specialty Internal Medicine — Frequency 354870 — Percentage 43.50 %

Specialty Family Medicine — Frequency 338505 — Percentage 41.49 %

Specialty Nurse Practitioner — Frequency 70964 — Percentage 8.70 %

Do many physicians perform this service across the United States? Yes

CPT Descriptor: Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74 year old patient has previously screened positive for alcohol misuse without dependence and is being seen for counseling.

Percentage of Survey Respondents who found Vignette to be Typical: 73%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The Qualified Healthcare Professional (QHP) performs an intervention which provides the patient with a specific set of tools and a plan to increase their likelihood of successfully decreasing their alcohol consumption. The components of the intervention include feedback concerning results found with the screening instrument and within the medical record about the quantity and frequency of alcohol consumed by the patient in comparison to national norms; a discussion of negative physical, emotional, occupational consequences that have occurred; and the overall severity of the problem. Feedback is accompanied by advice that is customized to the patient's own unique medical and social situation about clinically appropriate behavioral change goals. The QHP engages the patient in a joint decision-making process regarding alcohol use. Plans for follow-up are discussed and agreed to. These interventions have the objective of providing the patient with tools to change their attitude towards alcohol and to manage high-risk use situations. This intervention requires specific training and/or experience in techniques eliciting accurate information, developing a specific treatment plan to which the patient is committed, and motivating the patient toward behavioral change. The QHP documents clarification of the patient’s response and referral or treatment plan.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.70	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99422	XXX	0.50	**RUC Time**

CPT Descriptor Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
93923	XXX	0.45	**RUC Time**	349,633

CPT Descriptor 1 Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
97537	XXX	0.48	**RUC Time**	14,261

CPT Descriptor 2 Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes

Other Reference CPT Code	Global	Work RVU	Time Source
97110	XXX	0.45	**RUC Time**

CPT Descriptor Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 11 **% of respondents:** 73.3 **%**

Number of respondents who choose 2nd Key Reference Code: 2 **% of respondents:** 13.3 **%**

TIME ESTIMATES (Median)

	CPT Code: G0443	**Top Key Reference CPT Code:** 99212	**2nd Key Reference CPT Code:** **99422**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	18%	18%	55%	9%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	27%	73%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	10%	27%	63%
Physical effort required	0%	18%	82%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	18%	82%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	50%	50%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	50%	50%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	100%	0%
Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0443** (*Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes*) in 2012. Effective for claims with dates of service on or after October 14, 2011, CMS will cover annual alcohol screening, and for those that screen positive, up to four brief, face-to-face, behavioral counseling interventions per year for Medicare beneficiaries (National Coverage Determination (NCD) Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse, 210.8).

Typically, G0443 is billed with an office visit (99214). The RUC database indicates that in 2021 G0443 was reported 2,218 times. 56.2% of the time it was billed with 99214.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0442 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. The specialties note that while the volume of G0442 has increased in recent years, the utilization for code G0443 has decreased. In fact, the 2016 utilization of 2,349 is greater than the 2021 utilization of 2,218.

At the request of the RAW, the specialty societies submitted an action for the September 2022 RUC meeting. Following review of the action plan, the RUC recommended that both G0442 and G0443 be surveyed. The societies surveyed code G0443 for the April 2023 RUC meeting.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP) and the American Nurses Association (ANA) conducted a survey of G0443. The survey was sent to a random sample of 8,500 individuals. Reminders were sent and survey deadline was extended, however despite their best efforts, the societies only received 15 responses which is below the requisite number of responses (30 responses) for a valid survey based on the RUC criteria for survey minimums. **The societies request that the RUC maintain the existing work RVUs and time for code G0443.**

Specifically, the societies recommend that the RUC maintain the following for code G0443:

- Work RVU: 0.45 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

Advisors from the three societies discussed why they were not able to collect enough surveys and considered whether they would have a different result if another survey was conducted. The Advisors concluded that another survey would likely end in the same result.

After some consideration, the Advisors concluded that the disappointing survey results were likely due to not just the relatively low utilization of the code (under 2,500), clinicians are may also be unfamiliar with coding for this service, which are typically provided during an office visit. There are multiple reasons for this lack of familiarity.

- In the Medicare Advantage and commercial health insurance environments, G-codes are not used, and this may also contribute to the unfamiliarity with the coding for this service since a clinician's patient portfolio is usually comprised of several different payers, each with their own coding-related nuances, and patients with traditional Medicare are an increasingly smaller part of the portfolio.

- There is the reality that most of their members are now employed by someone else with employment contracts that may not have an RVU productivity element. For such physicians and nurse practitioners, they may not be familiar with these codes as separately reportable services.

For these reasons, the societies concluded that they would not obtain better results with another survey at a future time.

Survey Results

Survey results from the 15 responses received are summarized below.

Work RVU

Min	25th	Median	75th	High
0.05	0.56	0.70	0.85	1.00

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
3	10	3.5	16.5

Acknowledging that the survey data was limited, the Advisors noted that the survey work RVU 25th percentile of 0.56 work RVUs is relatively close to the current work RVU of 0.45. The Advisors also noted that the survey total time of 16.5 minutes is close to the current time of 15 minutes. The Advisors concluded the survey data generally supported current work RVUs and time.

Crosswalks

To further support their recommendation of maintaining current values, the Advisors considered several crosswalks.

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
Recommendation							
G0443	Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes	0.45	0	15	0	15	0.0300
Reference Code							
99422	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes	0.50	0	15	0	15	0.0333
MPC Codes							
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity	0.45	3	10	3	16	0.0316
97537	Community/work reintegration training (eg, shopping, transportation, money management, avocational activities and/or work environment/modification analysis, work task analysis, use of assistive technology device/adaptive equipment), direct one-on-one contact, each 15 minutes	0.48	5	15	5	25	0.0171

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
Other Crosswalks							
77332*	Treatment devices, design and construction; simple (simple block, simple bolus)	0.45	0	15	3	18	0.0255
93971	Duplex scan of extremity veins including responses to compression and other maneuvers; unilateral or limited study	0.45	3	10	5	18	0.0271
97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility	0.45	2	15	2	19	0.0240
97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)	0.45	2	15	2	19	0.0240

* CMS did not accept the RUC recommendation

The Advisors concluded that these crosswalks provided further support of their recommendation.

Conclusion

AAFP, ACP and ANA recommend the RUC maintain the current values for G0443. The societies recommend:

- Work RVU: 0.45 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) G0443 is typically billed with an office visit (99214).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT Code	Global	Work	Pre	Intra	Post
4.	99214	XXX	1.92	7	30	10
5.	G0443	XXX	0.45	0	15	0
6.	TOTAL		2.37	7	45	10

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0443

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2218
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization. As a G-code this service is typically only reported for Medicare patients. Not reported by commerical payors. Medicare Advantage typically does not reimburse separately for these services so typically not separately reported.

Specialty Internal Medicine Frequency 980 Percentage 44.18 %

Specialty Family Medicine Frequency 672 Percentage 30.29 %

Specialty Nurse Practitioner Frequency 133 Percentage 5.99 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,218
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization from the RUC database.

Specialty Internal Medicine Frequency 980 Percentage 44.18 %

Specialty Family Medicine Frequency 672 Percentage 30.29 %

Specialty Nurse Practitioner Frequency 133 Percentage 5.99 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0443

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

   Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

   The specialties are using the current direct PE inputs for codes G0442 and G0443 as the point of reference.

   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?

   Yes, both codes are typically reported with an E/M service, including in the non-facility setting.

   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

   For G0442, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 43.4% of the time in 2021. This is also true for the global.

   For G0443, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 46% of the time in 2021. This is also true for the global.

   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

   (Not applicable; although the cost for G0443, as modified by the PE Subcommittee, will increase, this increase is more than offset by the decrease in G0442, which is done more frequently than G0443)

   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

(Not applicable)

    b. Service period (includes pre, intra and post):

(For G0442 only) Clinical staff administers the questionnaire and/or enters the patient's responses into the electronic medical record.

    c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

(For G0442 only) Clinical staff administers the questionnaire (or enters responses into the EHR), clarifies questions as needed, and records the answers in the patient's electronic medical record for the physician or QHP to review and interpret.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
(Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time These services are typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The potentially sensitive nature of the screening questions (G0442) and counseling (G0443) supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

(Not applicable)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): G0442, G0443**

SPECIALTY SOCIETY(IES): AAFP, ACP, ANA

PRESENTER(S): Brad Fox, MD, Charlie Hamori, MD, Korinne Van Keuren, DNP

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

For code G0442:

- Clinical staff time reduced from the recommended 8 minutes to 5 minutes
- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 13 minutes (equal to 5 minutes of staff time plus 8 minutes of physician/QHP time (median from survey))

For code G0443:

- Clinical staff time was reduced from the recommended 2 minutes to zero minutes.
- The quantity of supply item SK062 (patient education booklet) was increased from 0.5 to 1.0
- EF023 (table, exam) time reduced from 15 minutes to 10 minutes (equal to physician/QHP time (median from survey))

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

April 2023

Annual Depression Screening – Tab 11

Effective October 14, 2011, a new HCPCS code, G0444 *Annual depression screening, 5 to 15 minutes* was added to the Medicare Physician Payment Schedule (MFS) to report annual depression screening for adults in the primary care setting that have staff-assisted depression care supports in place to assure accurate diagnosis, treatment and follow up. This service is typically reported with an Evaluation and Management (E/M) service and an Annual Wellness Visit (codes G0438 or G0439). The current work RVU of 0.18 was assigned by CMS in the 2013 Final Rule via the direct crosswalk to CPT 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* given the similarities in work related to screening. In April 2022, the Relativity Assessment Workgroup identified this service with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. The services were surveyed for April 2023 RUC meeting after CMS published revised code descriptors in the Final Rule for 2023.

HCPCS code G0444 was surveyed for the April 2023 RUC meeting with the Annual Alcohol Screening codes G0442 and G0443. The specialties were unable to meet the required survey threshold of 75 responses for the 2021 utilization of 2,142,759. The survey instrument was sent to a random sample size of 8,500 individuals from three specialty societies collecting a total of 22 responses over a two-and-a-half-week period. While reviewing the survey data, the specialty societies noted that all six surveyed HCPCS codes (G0442-G0447) did not meet the minimum survey threshold for the 2021 utilization. The RUC noted that the HCPCS codes would benefit from a targeted survey using available Medicare databases to identify physicians and other qualified health care professionals who perform these screening services. The specialty societies were also encouraged to expand their survey sample to other sections of their membership that are more likely to perform these services.

The RUC recommends maintaining the current work RVU of 0.18 as interim for HCPCS code G0444. The specialty societies will continue to collect survey responses for the September 2023 RUC meeting and work with the Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample.

Practice Expense
The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made several modifications. The clinical staff time was reduced for CA021 *Perform procedure/service---NOT directly related to physician work* to five minutes as the typical time for the clinical staff to administer the screening tool. Additionally, supply item SK062 *patient education booklet* was eliminated in favor of SK057 *paper, laser printing (each sheet)* in the amount of 10 sheets. Lastly, the equipment time for EF023 *table, exam* was reduced from 15 minutes to 13 minutes which is equal to 5 minutes of clinical staff time plus 8 minutes of physician/QHP time and reflects the median from survey. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee. The RUC noted that the continued survey of physician work for September 2023 would not impact these practice expense recommendations.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
G0444	Annual depression screening, 5 to 15 minutes	XXX	Continue Survey for September 2023 Interim Work RVU = 0.18 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:G0444 Tracking Number

Original Specialty Recommended RVU: **0.18**
Presented Recommended RVU: **0.18**
RUC Recommended RVU: **0.18**

Global Period: XXX Current Work RVU: **0.18**

CPT Descriptor: Annual depression screening, 5 to 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 76 year old patient is screened for depression during an annual wellness visit.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Prior to meeting with the qualified healthcare professional (QHP), the patient will have completed the screening instrument. The QHP reviews the responses to the screening instrument with the patient. The QHP validates responses to the screening instrument and probes any issues with the patient as needed. The QHP assesses the responses to determine if counseling, a referral, or treatment is needed. The QHP documents clarification of the patient's response and referral or treatment plan.

Description of Post-Service Work: N/A

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.70	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99211	XXX	0.18	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
96374	XXX	0.18	**RUC Time**	232,764

CPT Descriptor 1 Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
88304	XXX	0.22	**RUC Time**	810,872

CPT Descriptor 2 Level III - Surgical pathology, gross and microscopic examination Abortion, induced Abscess Aneurysm - arterial/ventricular Anus, tag Appendix, other than incidental Artery, atheromatous plaque Bartholin's gland cyst Bone fragment(s), other than pathologic fracture Bursa/synovial cyst Carpal tunnel tissue Cartilage, shavings Cholesteatoma Colon, colostomy stoma Conjunctiva - biopsy/pterygium Cornea Diverticulum - esophagus/small intestine Dupuytren's contracture tissue Femoral head, other than fracture Fissure/fistula Foreskin, other than newborn Gallbladder Ganglion cyst Hematoma Hemorrhoids Hydatid of Morgagni Intervertebral disc Joint, loose body Meniscus Mucocele, salivary Neuroma - Morton's/traumatic Pilonidal cyst/sinus Polyps, inflammatory - nasal/sinusoidal Skin - cyst/tag/debridement Soft tissue,

debridement Soft tissue, lipoma Spermatocele Tendon/tendon sheath Testicular appendage Thrombus or embolus Tonsil and/or adenoids Varicocele Vas deferens, other than sterilization Vein, varicosity

Other Reference CPT Code	Global	Work RVU	Time Source
99474	XXX	0.18	**RUC Time**

CPT Descriptor Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:
Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 9 **% of respondents:** 40.9 **%**

Number of respondents who choose 2nd Key Reference Code: 6 **% of respondents:** 27.2 **%**

TIME ESTIMATES (Median)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	**Much Less**	**Somewhat Less**	**Identical**	**Somewhat More**	**Much More**
Overall intensity/complexity	0%	0%	33%	22%	45%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	45%	55%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	11%	78%	11%
Physical effort required	22%	56%	22%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	22%	78%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	33%	50%	17%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	16%	68%	16%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	33%	67%	0%
Physical effort required	33%	50%	17%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	50%	50%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0444** (*Annual depression screening, 5 to 15 minutes)* in 2012. Effective October 14, 2011, CMS will cover annual screening for depression for Medicare beneficiaries in primary care settings that have staff-assisted depression care supports in place to assure accurate diagnosis, effective treatment, and follow-up. (National Coverage Determination (NCD Screening for Depression in Adults, 210.9).

Typically, G0444 is billed with an Annual Wellness Visit (G0439). The RUC database indicates that in 2021 G0444 was reported 2,142,759 times. 79% of the time G0444 was billed with G0439.

While clinical staff may work with the patient and assist with the completion of the screening instrument, the physician or nurse practitioner is responsible for reviewing the responses to the questions with the patient, probing as appropriate and making an assessment based on information collected. It is important to remember that certain patients may be reluctant to respond to these questions and will require more effort and time to make an appropriate assessment.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0444 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. At the request of the RAW, the specialty societies submitted an action for the September 2022 RUC meeting. Following review of the action plan, the RUC recommended the code be surveyed. The societies surveyed the code for the April 2023 RUC meeting.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP) and the American Nurses Association (ANA) conducted a survey of G0444. The survey was sent to a random sample of 8,500 individuals. Reminders were sent and survey deadline was extended, however despite their best efforts, the societies only received 22 responses which is below the requisite number of responses (75 responses) for a valid survey based on the RUC criteria for survey minimums. **The societies request that the RUC maintain the existing work RVUs and time for code G0444.**

Specifically, the societies recommend that the RUC maintain the following for code G0444:

- Work RVU: 0.18 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

Advisors from the three societies discussed why they were not able to collect enough surveys and considered whether they would have a different result if another survey was conducted. The Advisors concluded that another survey would likely end in the same result.

After some consideration, the Advisors concluded that the disappointing survey results were likely due to clinicians being unfamiliar with coding for this service, which are typically provided during an Annual Wellness Visit. There are multiple reasons for this lack of familiarity.

- The utilization reflected in the RUC database is likely a result of billing professionals identifying the separately billable services when reviewing medical records. This extraction is often made independently by a billing professional, and therefore, clinician respondents may be unaware that it was captured.

- In the Medicare Advantage and commercial health insurance environments, G-codes are not used, and this may also contribute to the unfamiliarity with the coding for this service since a clinician's patient portfolio is

usually comprised of several different payers, each with their own coding-related nuances, and patients with traditional Medicare are an increasingly smaller part of the portfolio.

- Finally, there is the reality that most of their members are now employed by someone else with employment contracts that may not have an RVU productivity element. For such physicians and nurse practitioners, they may not be familiar with these codes as separately reportable services.

For these reasons, the societies concluded that they would not obtain better results with another survey at a future time.

Survey Results

Survey results from the 22 responses received are summarized below.

Work RVU

Min	25th	Median	75th	High
0.03	0.18	0.63	0.82	2.10

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
2	8	5	15

Acknowledging that the survey data was limited, the Advisors noted that the survey work RVU 25th percentile of 0.18 work RVUs matched the current work RVU for G0444. The Advisors also noted that the survey total time of 15 minutes also matched the current time of the code. The Advisors concluded the survey data supported current work RVUs and time.

Crosswalks

To further support their recommendation of maintaining current values, the Advisors considered several crosswalks.

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
Recommendation							
G0444	Annual depression screening, 5 to 15 minutes	0.18	0	15	0	15	0.0120
Reference Code							
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	0	5	2	7	0.0257
MPC Codes							
96374	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug	0.18	2	5	2	9	0.0181
88304	Level III - Surgical pathology, gross and microscopic examination	0.22	0	15	0	15	0.0147
Other Crosswalks							
36410	Venipuncture, age 3 years or older, necessitating the skill of a physician or other	0.18	1	5	2	8	0.0226

Code #	Descriptor	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time	IWPUT
	qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)						
78808	Injection procedure for radiopharmaceutical localization by non-imaging probe study, intravenous (eg, parathyroid adenoma)	0.18	5	5	3	13	0.0002
99474	Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings one minute apart, twice daily over a 30-day period (minimum of 12 readings), collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient	0.18	3	5	2	10	0.0136

The Advisors concluded that these crosswalks provided further support of their recommendation.

Conclusion

AAFP, ACP and ANA recommend the RUC maintain the current values for G0444. The societies recommend:

- Work RVU: 0.18 work RVUs
- Time: 0 minutes pre-time, 15 minutes intra-time, 0 minutes post-time for a total time of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) G0444 is typically billed with Annual Wellness Visit code G0439.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT Code	Global	Work	Pre	Intra	Post
3.						
4.	G0439	XXX	1.92	7	30	10
5.	G0444	XXX	0.18	0	15	0
6.	TOTAL		2.10	7	45	10

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0444

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Commonly

Specialty Family Medicine How often? Commonly

Specialty Nurse Practitioner How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 2142759
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization. As a G-code this service is typically only reported for Medicare patients. Not reported by commercial payors. Medicare Advantage typically does not reimburse separately for these services so typically not separtely reported.

Specialty Internal Medicine Frequency 936385 Percentage 43.69 %

Specialty Family Medicine Frequency 839961 Percentage 39.19 %

Specialty Nurse Practitioner Frequency 190705 Percentage 8.89 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 2,142,759 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization from the RUC database.

Specialty Internal Medicine Frequency 936385 Percentage 43.69 %

Specialty Family Medicine Frequency 839961 Percentage 39.19 %

Specialty Nurse Practitioner Frequency 190705 Percentage 8.89 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0444

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Meeting Date: 04/2023

CPT Code	Long Descriptor	Global Period
G0444	Annual depression screening, 5 to 15 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
G0444	A 76-year-old patient is screened for depression during an annual wellness visit.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   The specialties are using the current direct PE inputs for code G0444 as the point of reference.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   Yes, G0444 is typically reported with an E/M service, including in the non-facility setting.
   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.
   For G0444, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 43.7% of the time in 2021. This is also true for the global.
   See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:
   (Not applicable)
   See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

(Not applicable)

    b. Service period (includes pre, intra and post):

Clinical staff administers the questionnaire and/or enters the patient's responses into the electronic medical record.

    c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

Clinical staff administers the questionnaire (or enters responses into the EHR), clarifies the question as needed, and records the answers in the patient's electronic medical record for the physician or QHP to review and interpret.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
(Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
(Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time This service is typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The potentially sensitive nature of the screening questions supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

(Not applicable)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

NONFACILITY DIRECT PE INPUTS **CPT CODE(S): G0444**

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

- Clinical staff time reduced from the recommended 8 minutes to 5 minutes
- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 13 minutes (equal to 5 minutes of staff time plus 8 minutes of physician/QHP time (median from survey))

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth*

April 2023

Behavioral Counseling/Therapy – Tab 12

In April 2022, the Relativity Assessment Workgroup identified services with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020, including codes G0445- G0447. In September 2022, the RUC recommended that these services be surveyed for April 2023 after CMS publishes revised code descriptions in the Final Rule for 2023.

For G0445, CMS covers up to two individual face-to-face counseling sessions annually for Medicare beneficiaries for high intensity behavioral counseling to prevent sexually transmitted infections (STIs), for all sexually active adolescents, and for adults at increased risk for STIs if provided by a Medicare eligible primary care provider in a primary care setting. For G0446, CMS covers one face-to-face cardiovascular disease risk reduction visit per year for Medicare beneficiaries whose counseling is furnished by a qualified primary care physician or other primary care practitioner in a primary care setting. For G0447 and Medicare beneficiaries with obesity, CMS covers one face-to-face visit every week for the first month, one face-to-face visit every other week for months 2-6 and one face-to-face visit every month for months 7-12 (if the beneficiary meets a 3kg weight loss requirement during the first six months). The G0447 visits would also only be covered when furnished by a qualified primary care physician or other primary care practitioner and in a primary care setting.

The specialty societies surveyed alcohol screening and counseling codes G0445-G0447 for the April 2023 RUC meeting but did not obtain the required number of survey responses. The survey was sent to a random sample of members from the three societies, but only achieved 6 responses for G0445, 7 responses for G0446 and 8 responses for G0447. The RUC recommended for the specialty societies to work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify physicians and other qualified healthcare professionals who predominantly perform G0445-G0447 and match them with societies to survey those individuals. The specialty societies were also encouraged to expand their survey sample to other sections of their membership that are more likely to perform these services.

The RUC recommends maintaining the current work RVUs for these services as interim. The RUC recommends an interim work RVU of 0.45 for HCPCS code G0445, an interim work RVU of 0.45 for HCPCS code G0446 and an interim work RVU of 0.45 for HCPCS code G0447. The specialty societies will continue collecting survey responses for the September 2023 RUC meeting and work with the RUC's Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample.

Practice Expense
The PE Subcommittee reviewed the proposed direct practice expense inputs and made a couple modifications: SK062 *patient education booklet* was eliminated in favor of SK057 *paper, laser printing (each sheet)* in the amount of 10 sheets, and the equipment minutes were modified to equal the sum of clinical staff time plus the physician/QHP time as reflected by the survey median.

The PE Subcommittee agreed with the specialties' modification of the clinical staff time to move two minutes from CA021 *Perform procedure/service---NOT directly related to physician work time* to CA035 *Review home care instructions, coordinate visits/prescriptions.* This more accurately reflects the clinical work involved in arranging follow-up and/or referrals with clinical and community resources and providing educational materials. Also, EP086 *whip mixer* and EP016 *biohazard hood* are currently included among the equipment assigned to code G0445. The specialties believe, and the PE Subcommittee concurred, that this is an error and that those two inputs should be removed. **The RUC recommends the direct practice expense inputs as modified by the PE Subcommittee. The RUC noted that the continued survey of physician work for September 2023 would not impact these practice expense recommendations.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes	XXX	Continue Survey for September 2023 Interim work RVU = 0.45 (No Change)
G0446	Annual, face-to-face intensive behavioral therapy for cardiovascular disease, individual, 15 minutes	XXX	Continue Survey for September 2023 Interim work RVU = 0.45 (No Change)
G0447	Face-to-face behavioral counseling for obesity, 15 minutes	XXX	Continue Survey for September 2023 Interim work RVU = 0.45 (No Change)

AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION

CPT Code:G0445 Tracking Number Original Specialty Recommended RVU: **0.45**
Presented Recommended RVU: **0.45**
Global Period: XXX Current Work RVU: **0.45** RUC Recommended RVU: **0.45**

CPT Descriptor: High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68 year old patient is found to have multiple sexual partners and receives education, skills training and guidance regarding sexually transmitted infection prevention during an annual wellness exam.

Percentage of Survey Respondents who found Vignette to be Typical: 66%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: (Not applicable)

Description of Intra-Service Work: The clinician counsels the patient on strategies to prevent sexually transmitted infection such as behavioral changes, strategies to make better choices, use of birth control measures (e.g., condoms IUDs), use of medications such as PrEP, interventions to address self-image and depression. The clinician will answer questions the patient may have and provide resources as needed.

Description of Post-Service Work: (Not applicable)

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	80%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	40%	60%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	60%	40%
Physical effort required	0%	60%	40%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	20%	80%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	100%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	100%	0%	0%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023. Code G0445 was included in the family.

CMS created code G0445 effective with the 2012 Medicare physician fee schedule in conjunction with the National Coverage Determination (NCD) on "Screening for Sexually Transmitted Infections (STIs) and High-Intensity Behavioral Counseling (HIBC) to prevent STIs" (NCD 210.10). CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes). CMS set the time for this service at 30 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has ranged from 889 in 2017 to 2,043 in 2020. The Medicare claims volume was 1,721 in 2021.

As noted in the letter accompanying this tab, the specialties randomly surveyed 7,500 members. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve six responses to the survey for this code. We believe there are multiple reasons for this poor response, some of which are noted in the letter accompanying this tab and others which were discussed in pre-facilitation. Given those reasons and the small volume of this code, which is specific to Medicare, we do not believe a resurvey is warranted or would be effective.

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS. We note that 0.45 work RVUs for 30 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC code noted above. It is also less than the 0.61 work RVUs for 20 minutes of physician time in 99457 (Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes) and the 0.80 work RVUs for 25 minutes of physician time in 99423 (Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes). We found 14 RUC-reviewed codes with an XXX global period and 0.45 work RVUs; all involve less time than is recommended for G0445 with the same value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) This service is typically billed with G0446 (ANNUAL, FACE-TO-FACE INTENSIVE BEHAVIORAL THERAPY FOR CARDIOVASCULAR DISEASE, INDIVIDUAL, 15 MINUTES) (60.6%), G0442 (ANNUAL ALCOHOL MISUSE SCREENING, 15 MINUTES) (52.5%), and 99214 (OFFICE OUTPATIENT VISIT 25 MINUTES) (50.5%)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre	Intra	Post
3.	G0445	XXX	0.45	0	30	0
4.	G0446	XXX	0.45	0	15	0
5.	G0442	XXX	0.18	0	15	0
6.	99214	XXX	1.92	7	30	10
7.	Totals		3.00	7	90	10
8.						
9.						

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0445

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Rarely

Specialty Family Medicine How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1721
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This code is rarely used outside the Medicare program; the national frequence and breakdown by specialty is, thus, the same as for Medicare, below.

Specialty Internal Medicine Frequency 666 Percentage 38.69 %

Specialty Family Medicine Frequency 516 Percentage 29.98 %

Specialty (all others) Frequency 539 Percentage 31.31 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,721
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on actual 2021 Medicare utilization as shown in the RUC database

Specialty Internal Medicine Frequency 666 Percentage 38.69 %

Specialty Family Medicine Frequency 516 Percentage 29.98 %

Specialty (all others) Frequency 539 Percentage 31.31 %

Do many physicians perform this service across the United States? No

Physical effort required	0%	0%	100%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	0%	100%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023.

The Centers for Medicare & Medicaid Services (CMS) created code G0446 in conjunction with the National Coverage Determination on "Intensive Behavioral Therapy for Cardiovascular Disease," effective with the 2012 Medicare physician fee schedule. CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes.) CMS set the physician time equal to 15 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has been as follows:

2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
42,750	73,223	88,449	108,901	143,493	181,760	216,004	253,992	261,551	290,059

As noted in the letter accompanying this tab, the specialties randomly surveyed 7,500 members. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve seven responses to the survey for this code. We believe there are multiple reasons for this poor response, some of which are noted in the letter accompanying this tab and others which were discussed in pre-facilitation. We further note that although this Medicare-specific code is reported almost 300,000 times per year, there are approximately 150,000 family physicians and internists, which means the average family physician or internist only reports this service once or twice a year. Given all that, we do not believe a resurvey is warranted or would be effective.

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS. We note that 0.45 work RVUs for 15 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC code noted above. In total, we found nine RUC-reviewed codes with an XXX global period that have the same intra-service and total time of 15 minutes and work RVUs greater than or equal to the 0.45 recommended for G0446:

CPT Code	Long Desc	Work RVU
76886	Ultrasound, infant hips, real time with imaging documentation; limited, static (not requiring physician or other qualified health care professional manipulation)	0.62
77300	Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician	0.62
88112	Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal	0.56
90863	Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)	0.48
95940	Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)	0.60
99401	Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 15 minutes	0.48
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50
99422	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes	0.50
99484	Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team.	0.61

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) This code is typically billed with G0439 (ANNUAL WELLNESS VISIT, INCLUDES A PERSONALIZED PREVENTION PLAN OF SERVICE (PPS), SUBSEQUENT VISIT) (64.3%) and G0444 (ANNUAL DEPRESSION SCREENING, 15 MINUTES) (52.9%).

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: (Not applicable)

Description of Intra-Service Work: The clinician educates the patient on the patient's history, counsels on strategies to lose weight or prevent obesity, and educates on blood work, medications, lifestyle changes, exercise or other interventions that can help the patient lose weight or prevent obesity. Also, the clinician explores insurance coverage and cost for medications, interventions, and/or procedures and works with the patient to overcome access barriers to interventions.

Description of Post-Service Work: (Not applicable)

SURVEY DATA

RUC Meeting Date (mm/yyyy)	04/2023					
Presenter(s):	Jeannine Engel, MD, Brad Fox, MD, Charlie Hamori, MD, FACP

Modifier -51 Exempt Status
Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:
Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99212	XXX	0.70	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

Key CPT Code	Global	Work RVU	Time Source
99211	XXX	0.18	**RUC Time**

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional

KEY MPC COMPARISON CODES:
Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

MPC CPT Code 1	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99446	XXX	0.35	**RUC Time**	7,197

CPT Descriptor 1 Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician or other qualified health care professional, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5-10 minutes of medical consultative discussion and review

MPC CPT Code 2	Global	Work RVU	Time Source	Most Recent Medicare Utilization
99407	XXX	0.50	**RUC Time**	64,547

CPT Descriptor 2 Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes

Other Reference CPT Code	Global	Work RVU	Time Source
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 5 **% of respondents:** 62.5 **%**

Number of respondents who choose 2nd Key Reference Code: 1 **% of respondents:** 12.5 **%**

INTENSITY/COMPLEXITY MEASURES
(of those that selected Key Reference codes)

Survey respondents are rating the survey code relative to the key reference code.

Survey Code Compared to Top Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	20%	40%	40%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	20%	80%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	40%	60%
Physical effort required	0%	40%	60%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	20%	80%

Survey Code Compared to 2nd Key Reference Code	Much Less	Somewhat Less	Identical	Somewhat More	Much More
Overall intensity/complexity	0%	0%	0%	100%	0%

Mental Effort and Judgment	Less	Identical	More
• The number of possible diagnosis and/or the number of management options that must be considered • The amount and/or complexity of medical records, diagnostic tests, and/or other information that must be reviewed and analyzed • Urgency of medical decision making	0%	0%	100%

Technical Skill/Physical Effort	Less	Identical	More
Technical skill required	0%	0%	100%
Physical effort required	0%	100%	0%

Psychological Stress	Less	Identical	More
• The risk of significant complications, morbidity and/or mortality • Outcome depends on the skill and judgment of physician • Estimated risk of malpractice suit with poor outcome	0%	100%	0%

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023. Code G0447 was included in the family.

CMS created code G0447 effective with the 2012 Medicare physician fee schedule in conjunction with the National Coverage Determination (NCD) on "Intensive Behavioral Therapy for Obesity" (NCD 210.12). CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes). CMS set the time for this service at 15 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has ranged from 55,809 in 2012 to 326,317 in 2019. The Medicare claims volume was 289,558 in 2021.

As noted in the letter accompanying this tab, the specialties randomly surveyed 7,500 members. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve eight responses to the survey for this code. We believe there are multiple reasons for this poor response, some of which are noted in the letter accompanying this tab and others which were discussed in pre-facilitation. We further note that although this Medicare-specific code is reported almost 300,000 times per year, there are approximately 150,000 family physicians and internists, which means the average family physician or internist only reports this service once or twice a year. Given all that, we do not believe a resurvey is warranted or would be effective.

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS. We note that 0.45 work RVUs for 15 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC code noted above. In total, we found nine RUC-reviewed codes with an XXX global period that have the same intra-service and total time of 15 minutes and work RVUs greater than or equal to the 0.45 recommended for G0446:

CPT Code	Long Desc	Work RVU
76886	Ultrasound, infant hips, real time with imaging documentation; limited, static (not requiring physician or other qualified health care professional manipulation)	0.62
77300	Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician	0.62
88112	Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal	0.56
90863	Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)	0.48
95940	Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)	0.60
99401	Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 15 minutes	0.48
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50
99422	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes	0.50
99484	Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team.	0.61

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

   Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

   ☐ The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
   ☐ Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
   ☐ Multiple codes allow flexibility to describe exactly what components the procedure included.
   ☐ Multiple codes are used to maintain consistency with similar codes.
   ☐ Historical precedents.
   ☒ Other reason (please explain) This code is typically billed together with an office E/M (most commonly, 99214)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre	Intra	Post
3.	G0447	XXX	0.45	0	15	0
4.	99214	XXX	1.92	7	30	10
5.	Totals		2.37	7	45	10
6.						
7.						

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0447

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine How often? Sometimes

Specialty Family Medicine How often? Sometimes

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 289558
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. This code is rarely used outside the Medicare program. The national frequence and breakdown by specialty is, thus, the same as for Medicare, below.

Specialty Internal Medicine Frequency 137540 Percentage 47.49 %

Specialty Family Medicine Frequency 94975 Percentage 32.79 %

Specialty (all others) Frequency 57043 Percentage 19.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 289,558 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on actual 2021 Medicare utilization as shown in the RUC database

Specialty Internal Medicine Frequency 137540 Percentage 47.49 %

Specialty Family Medicine Frequency 94975 Percentage 32.79 %

Specialty (all others) Frequency 57043 Percentage 19.70 %

Do many physicians perform this service across the United States? Yes

---

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SPECIALTY SOCIETY(IES): AAFP, ACP
PRESENTER(S): Brad Fox, MD, Charlie Hamori, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2023

CPT Code	Long Descriptor	Global Period
G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes	XXX
G0446	Annual, face-to-face intensive behavioral therapy for cardiovascular disease, individual, 15 minutes	XXX
G0447	Face-to-face behavioral counseling for obesity, 15 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)***):**

CPT Code	Vignette
G0445	A 68 year old patient is found to have multiple sexual partners and receives education, skills training and guidance regarding sexually transmitted infection prevention during an annual wellness exam.
G0446	A 72 year old patient with hypertension receives intensive behavioral therapy for cardiovascular disease prevention during an annual wellness exam.
G0447	A 68 year old patient with a BMI of 33 is seen for counseling and behavioral therapy for weight loss, exercise and diet at the time of an E/M visit.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:
   Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:
   The specialties are using the current direct PE inputs for codes G0445-G0447 as the point of reference.
   NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org* for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
   Is this code(s) typically reported with the E/M service in the nonfacility?
   Yes, each code is typically reported with an E/M service, including in the non-facility setting.
   See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility?* What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must

perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For G0445, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 38.7% of the time in 2021. This is also true for the global.

For G0446, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 47.8% of the time in 2021. This is also true for the global.

For G0447, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 47.5% of the time in 2021. This is also true for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

(Not applicable)

See the *PE compelling evidence guidelines* on the RUC Collaboration website. Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:
    a. Pre-Service period:

(Not applicable)

    b. Service period (includes pre, intra and post):

Clinical staff arranges follow-up and/or referrals with clinical and community resources and provides educational materials.

    c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time:*

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

12. If you have used a percentage of the physician intra-service work time other then 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.
(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):
(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.
(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. ☐ Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. ☐ Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:
(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 *pack, E/M visit*) or a pack that is commercially available?
No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).
(Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:
(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitute D600), ED038?
    a. If yes, please explain how the computer is used for this service(s).
    b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
    c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen *(please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas).* If you have selected "other formula" for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time These services are typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The counseling/behavioral therapy can be potentially sensitive in nature (e.g., when addressing sexually transmitted infection or obesity), which supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
    (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CMS currently includes a whip mixer (EP086) and biohazard hood (EP016) among the equipment assigned to code G0445. The specialties believe this is in error and have recommended eliminating both pieces of equipment from G0445.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)
NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

For G0445:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 20 minutes to 17 minutes (equal to 2 minutes of staff time plus 15 minutes of physician/QHP time (median from survey))

For G0446:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 12 minutes (equal to 2 minutes of staff time plus 10 minutes of physician/QHP time (median from survey))

For G0447:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets

AMA/Specialty Society RVS Update Committee **Tab 14**
Practice Expense Subcommittee
April 26, 2023

Members Present: Scott Manaker, MD, PhD, (Chair), Amy Aronsky, DO, Gregory Barkley, MD, John Blebea, MD, Michael Booker, MD, Neal Cohen, MD, William Gee, MD, David Han, MD, Katie Jordan, OTD, OTR/L, Mollie MacCormack, MD, Bradley Marple, MD, Tye Ouzounian, MD, Richard Rausch, DPT, MBA, Donald Selzer, MD, Edward Vates, MD, Elisabeth Volpert, DNP, APRN, Thomas J. Weida, MD, Adam Weinstein, MD, and Tim Swan, MD (CPT Resource)

I. Post-Operative Patient Communications

The Practice Expense (PE) Subcommittee agreed to discuss the issue of post-operative patient communications at its April meeting to determine if the PE benchmark regarding phone calls needed to be modified in light of action taken at the January 2023 PE meeting on Tab 07 Posterior Nasal Nerve Ablation, CPT codes 30117 *Excision or destruction (eg, laser), intranasal lesion; internal approach* and 30118 *Excision or destruction (eg, laser), intranasal lesion; external approach (lateral rhinotomy)*.

In January, the PE Subcommittee approved an additional 3 minutes for CA037 *Conduct patient communications* in CPT codes 30117 and 30118. The specialty society indicated that this call to a patient is typical 1-2 days post-op, and the PE members agreed that this type of communication immediately following a surgery is evolving and reflects best practice that may be applied to other 090-day global codes. However, the Subcommittee recognized that a phone call is outside of the 090-day global standard:

- All phone calls, standardized to 3 minutes. No phone calls are allowed in the post-operative period for 010 and 90 day global codes.

The PE Subcommittee discussed the existing benchmarks including the standard for Discharge Day Management:

- Discharge day management
  If the claims data indicate site-of-service is:
  less than 50% inpatient – 6 minutes (.5 99238)
  greater than 50% inpatient – 12 minutes (99238); 15 minutes (99239)
  more than 50% non-facility (e.g., office) – 0 minutes

The PE Subcommittee agreed that the existing benchmark for Discharge Day Management should clarify that it encompasses phone calls. There are two 3-minute phone calls provided for in the ½ day discharge and four 3-minute phone calls in a full day discharge code 99238.

The PE Subcommittee will continue its discussion of post-operative patient communications at the September meeting after CMS has released the Proposed Rule. It was explained that the new Evaluation and Management (E/M) services account for the work and practice expense three-days prior to the visit and seven-days following the visit. A phone call performed outside this period (ie, in the immediate days following the surgery) would not be incorporated into the bundled E/M visits in the global period. The Subcommittee will evaluate the outcome of CPT codes 30117 and 30118 in the Proposed Rule and better determine if the PE benchmark regarding phone calls needs to be modified in light of the E/M code revisions and typical communications to the patient.

II. Pricing of Packs

At the January 2023 RUC meeting, the PE Subcommittee requested that AMA staff deconstruct the packs in order to review pricing after noting a discrepancy with the SA051 *pack, pelvic exam* while reviewing Tab 13 Pelvic Exam (PE Only), CPT code 9X036 *Pelvic exam (List separately in addition to code for primary procedure)*. The SA051 pack is priced at $20.16 while the four individual items therein total $2.81 according to the 2023 CMS Direct PE Inputs Medical Supplies Listing.

One would expect the pack price to be identical to the total cost of its contents. The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. By using the packs, the RUC does not need to repeat all the individual supplies each time they are used in a code and it simplifies review of line items. The packs are for simplicity-sake only, so the pricing should be exactly the same as the total cost of the individual supplies.

AMA Staff prepared a document with the 23 deconstructed packs for consideration by the PE Subcommittee. Review of the pack pricing uncovered numerous discrepancies between the aggregated cost of a pack and the individual item components. Prior to the meeting, staff reached out to inquire about this issue to the Centers for Medicare & Medicaid Services (CMS) and received the following response:

"We agree that this is an issue that should be fixed, as the price of the individual components should be consistent across the supply packs and match the standalone prices of supplies (like gloves and sterile gauze and such). However, it needs to be tackled in comprehensive fashion to ensure consistency across the dozens of supply packs which will be a sizable undertaking. Resolving these pricing discrepancies in the supply packs is something that we will consider addressing in future rulemaking."

Accordingly, the RUC will share the deconstructed packs document and volume analysis with CMS with recommended corrections in CY2024 rulemaking. The PE Subcommittee also formed a workgroup to review the content of the packs to assess if they are still typical and revise as necessary.

III. Practice Expense Recommendations for CPT 2025:

Tab	Title	PE Input Changes	Consent Calendar
4	Iris Procedures	No Changes	
5	Optical Coherence Tomography (OCT)	Modifications	
6	Telemedicine Evaluation and Management Services	No Changes	
7	Skin Adhesives (PE Only)	No Changes	
8	Laser Treatment – Skin	Modifications	

Tab	Title	PE Input Changes	Consent Calendar
9	Acupuncture/ Electroacupuncture	Modifications	
10	Annual Alcohol Screening	Modifications	
11	Annual Depression Screening	Modifications	
12	Behavioral Counseling/Therapy	Modifications	

RUC Practice Expense Subcommittee
April 2023

Pricing of Packs
Staff Note

At the January 2023 RUC meeting, the Practice Expense (PE) Subcommittee considered Tab 13 Pelvic Exam (PE Only), CPT code 9X036 *Pelvic exam (List separately in addition to code for primary procedure)*.

The PE Subcommittee noted that SA051 *pack, pelvic exam* is priced at $20.16 which seemed high for the four items included therein.

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, pelvic exam	**SA051**	**pack**		**20.16**
lubricating jelly (K-Y) (5gm uou)		item	1	
pad, feminine mini		item	1	
swab, procto 16in		item	2	
specula, vaginal		item	1	

As listed below, the individual pack items from the 2023 CMS Direct PE Inputs Medical Supplies Listing totaled separately equal $2.81.

SJ032 lubricating jelly (K-Y) (5gm uou): $0.54
SK052 pad, feminine mini: $0.37
SJ052 swab, procto 16in: $0.27 (x2) = $0.54
SD118 specula, vaginal: $1.36

Deconstruction of packs in other tabs at the meeting also revealed similar discrepancies between the aggregated cost of a pack and the individual item components. The PE Subcommittee requested that AMA staff deconstruct the packs in order to review pricing.

One would expect the pack price to be identical to the items therein. The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. By using the packs, the RUC does not need to repeat all the individual supplies each time they are used in a code and it simplifies review of line items. The packs are for simplicity-sake only, so the pricing should be exactly the same as the total cost of the individual supplies.

The attached document with the 23 deconstructed packs was prepared for consideration of the PE Subcommittee. Review of the pack pricing uncovered numerous discrepancies. AMA staff reached out to inquire about this issue to the Centers for Medicare & Medicaid Services (CMS) and received the following response:

"We agree that this is an issue that should be fixed, as the price of the individual components should be consistent across the supply packs and match the standalone prices of supplies (like gloves and sterile gauze and such). However, it needs to be tackled in comprehensive fashion to ensure consistency across the dozens of supply packs which will be a sizable undertaking. Resolving these pricing discrepancies in the supply packs is something that we will consider addressing in future rulemaking."

Accordingly, the RUC will share the attached packs document and volume analysis with CMS with recommended corrections in CY2024 rulemaking.
