If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 75731

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 5X008	Tracking Number G3	Original Specialty Recommended RVU: 11.50
Global Period: 000	Current Work RVU: N/A	Presented Recommended RVU: 11.50
		RUC Recommended RVU: 11.50

CPT Descriptor: Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducers for delivery of the thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Appropriate preoperative studies including cross sectional imaging with CT and dedicated prostate MRI, are obtained, and reviewed. Additionally, biopsy imaging and pathology reports are reviewed. Patient assessment is reviewed to verify the bowel prep and MRI safety assessment were completed and appropriate. Quality assurance testing of the treatment devices is performed by the MRI technologist according to the manufacturer's directions and local standard operating procedures and reviewed by the physician. Following approval of the assessment and induction of general anesthesia, the patient is brought into the MRI suite. Time out is performed by all team members. The patient is then connected to a system for continuous MRI-compatible pulse oximetry, core temperature measurement, and cardiac monitoring. Prophylactic IV antibiotics and the first dose of the anti-spasmodic drug are administered.

Description of Intra-Service Work: The anterior pelvis is prepped and draped, and the suprapubic catheter is placed. The patient is transferred and positioned appropriately in the MRI scanner to begin the process of placing the necessary applicators for the procedure. A rectal examination is performed to assess the adequacy of bowel preparation, and an endorectal cooling device with balloon is then placed into the rectum. The patient's anterior pelvis and penis are prepped and draped in sterile fashion and a foley catheter is placed via the urethra into the bladder to empty it. The bladder is then partially filled with sterile fluid after which a guidewire is advanced through the catheter and coiled into the bladder. The foley catheter is removed over the wire. Following anesthetization of the urethra with lidocaine gel, the transurethral ultrasound ablation transducer is inserted over the guidewire and positioned in the urethra with tip extending into the bladder. The guidewire is removed, and the transurethral ultrasound ablation transducer is secured within the MRI compatible robot and tested. An MRI surface coil is placed over the patient's pelvis, all straps and pressure points are checked, and the patient is advanced head-first into the MRI for imaging. A brief scout MRI scan is performed to determine if any air bubbles are in rectum after the placement of the transurethral ultrasound ablation transducer and endorectal cooling tube. Any air bubbles within the treatment field or endorectal cooling device are removed by deflating, inflating, and twisting the endorectal device. A brief MRI scan is again acquired to ensure all air bubbles which could impede the cooling of the endorectal device have been removed.

Next, multiplanar MRI images are acquired and used to confirm correct positioning of the ultrasound transurethral ablation transducer and endorectal cooling device. 3-D reformatted images are created in the treatment planning software on a

separate workstation and reviewed by the physician. The patient is then advanced back into the bore, and localizer images are re-acquired and reviewed.

If needed, more favorable urethral treatment device and rectal cooling device positioning are achieved by entering the MRI magnet room. This is done by backing the patient out of the bore and manually adjusting the ultrasound applicator positioning and angulation, as well as the endorectal cooling device positioning, lubrication, and balloon volume. The patient is then advanced back into the bore, and localizer images are re-acquired and reviewed.

After satisfactory device positioning is confirmed, the position of the ultrasound transurethral ablation transducer is registered by visualization of fiducial markers located within the applicator. Any needed minor adjustments are made to the position of the applicator. Treatment planning quality MRI images are obtained and transferred to the treatment planning software within a separate workstation. If prostatic calcifications are detected that would impede treatment, the ultrasound applicator is shifted a further, placing the calcification between transducer elements and thereby reducing the ultrasound energy absorbed and reflected by the calcification. A detailed treatment plan is generated by manually contouring the target volume of prostate tissue and outlining the boundary of the ablation zone where the treatment will be directed, while contouring the surrounding critical structures of the rectal wall, neurovascular bundles, external urinary sphincter, and internal urinary sphincter which are to be avoided from ablation. The treatment planning system creates a report of the MRI temperature images to confirm whether the thermometry precision can be achieved or if any manual correction of geometric distortion in the images is needed. The physician will review the report and make any adjustments to the placement of the ultrasound transurethral ablation transducer. Any adjustments will require a new MRI dataset, new contouring of the target tissues and ablation zone and critical structures, and treatment plan to be generated. The new report from the treatment planning system is again reviewed to confirm the treatment plan can be achieved and no other adjustments are needed.

Using the MRI-compatible robotic positioning system, the ultrasound transurethral ablation transducer is advanced for precise ablation of the prescribed, targeted volume and zone. The treating physician determines the rotational angle and direction of rotation for the ultrasound applicator. Additional MRI images may be acquired to confirm the planned target volume of prostate tissue is within the prescribed ablation volume and the normal tissue and critical structures are adequately spared prior to the ablation. A second dose of anti-spasmodic drug is administered, and the physician initiates the closed-loop MRI-guided ultrasound ablation treatment. Throughout the treatment each ultrasound transurethral ablation transducer emits the planned intensity and frequency of the ultrasound energy while also modulating the rotation rate of the transducer to achieve an optimal ablative temperature within the treatment target and ablation zone. Real-time MRI images and MRI thermometry images are acquired continuously throughout the treatment and displayed as they are acquired for the physician to closely monitor the amount of energy delivered by each transducer. Based on the thermal feedback response of the target and ablation zone, the treatment is modulated to pause or adjust the robotically driven ultrasound transducer.

Any changes which require repositioning the patient or due to any changes in the surrounding environment impacting the position of the ultrasound transurethral ablation transducer or patient will require stopping treatment, proceeding with a 20-minute cool-down phase of the target tissues, and subsequent new MRI images and treatment plan. Once the prescribed zone of treatment is ablated, pre- and post-contrast-enhanced MRI images are acquired immediately following the treatment to confirm satisfactory ablation. The physician reviews the completion imaging to confirm no intraprocedural complication(s) occurred. The power to the TULSA-PRO system electronics is turned off. The anterior MRI coil and positioning straps are removed. The ultrasound applicator is detached from the robotic positioning system, system electronics, and fluid tube sets.

The transurethral transducer is removed. If no suprapubic catheter was placed, under sterile conditions a wire is placed through the transducer into bladder and the transducer is removed over the wire. A foley catheter is advanced over the wire and the wire is removed from the foley catheter which is connected to a bag. Lastly the endorectal device is removed.

Description of Post-Service Work: The patient is transferred to a stretcher and after reversal of general anesthesia, the patient is transported to the recovery room. The physician meets with the patient and family to discuss the procedure and the postoperative regimen. The physician provides written and oral reports and orders; review and interpretation of the images on the PACS workstation, writes a postoperative note and documentation of the procedure in the medical record; and write orders for recovery nurses for pain medication adjustments and activity restrictions. Later the same day, the physician assesses the patient prior to discharge home; reviews interval chart notes; answers patient and family questions; assesses pain score, adjusts pain medication as necessary; and document the services in the medical record; discuss home restrictions (eg, activity, bathing) with the patient and family members; write prescriptions for medications needed post

discharge; and complete all appropriate medical records, including discharge instructions for catheter removal, and insurance forms.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

There were no current codes in the CPT code set that matched the physician work involved in the treatment planning, insertion, and ablation procedures done with an MRI-monitored TULSA system. MRI-monitored transurethral ultrasound ablation (TULSA) consists of robotically driven directional thermal ultrasound and closed-loop temperature feedback control software to deliver predictable physician prescribed ablation of prostate tissue. The MRI-Monitored TULSA procedure treats patients with prostate cancer, while maintaining quality of life due to low rates of adverse events.

Three new CPT codes (5X006, 5X007, AND 5X008) were approved by CPT Editorial Panel for MRI-monitored transurethral ultrasound ablation (TULSA) at the April 2023 meeting.

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

Methodology

A multi-disciplinary survey including ACR, AUA and SIR was distributed to randomly selected members of the representative societies. The vendor provided a targeted list of providers to be included in this survey, in addition to the required RUC vendor attestation statement prior to the survey. For code 5X008, 37 surveys were completed. The surveys were reviewed by the multi-specialty group and determined to be valid and reflective of the work and intensity involved.

Work RVU Recommendation for 5X008

We are recommending the 25th percentile survey value of 11.50 RVW for 5X008.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 3 (straightforward patient/difficult procedure), with standard package times of 33 minutes pre-evaluation time, 3 minute of pre-positioning time, and 15 minutes of pre-scrub, dress, and wait time.

The specialties recommend the following times

1. **Evaluation:** We recommend a pre-service evaluation time of 50 minutes. This is 17 minutes greater than the pre-service package, but necessary to ensure and review the additional preparations of the patient for compliance with MRI protocols and specific to the procedure.
2. **Positioning:** We recommend a time of 5 minutes, which is 2 minutes more than the package time. We feel this additional time is justified given the use of MRI technology and additional protocols as well as the importance of positioning of the patient for this procedure to ensure the alignment of the treatment planning images and appropriate placement of the transducer to the intended target match while avoiding any nearby critical structures.
3. **Scrub, dress, and wait:** We recommend time of 15 minutes, which is equal to the package time.
4. **Post:** We recommend time of 27 minutes, which is 6 minutes less than the selected post-service package 9B (General Anesthesia or Complex Regional Block/Complex Procedure) time of 33 minutes. We believe the post time for the physician still allows for necessary post evaluation of this procedure.

Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 93653 *Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or*

attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; with treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry (19%) and 93591 Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve (16%).

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
93653 Key Ref	15.00	0.112	199	31	3	15	120	30
5X008 Survey	11.50	0.076	222	50	5	15	125	27
93591 Key Ref	17.97	0.135	208	40	3	15	120	30

This comparison supports our recommendation for the 25th percentile survey value of 11.50 RVW for CPT 5X008.

Comparison to MPC codes

Additional comparison to other MPC codes with CMS accepted values includes 37244 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation* with wRVU of 13.75, which is slightly higher than 5X008 and code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit*, with wRVU of 10.42 which brackets the survey code on the other side. The total times for these codes are closer to the survey total time for 5X008 than the KRS codes, but their wRVUs are lower than median survey values. The wRVUs for the KRS codes are both significantly higher and with their lower times results in higher IWPUT than the IWPUT value for 5X008.

Another comparison MPC code recommended is 37243 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for tumors, organ ischemia, or infarction*, with a wRVU of 11.74 this presents a closer upper wRVU and better bracket for 5X008. CMS did not accept the RUC recommended value, but we believe it should be included for comparison.

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
37244	13.75	0.1347	166	23	3	5	90	45
37243	11.74	0.0842	196	23	3	5	120	45
5X008 Survey	11.50	0.076	222	50	5	15	125	27
36906	10.42	0.1039	141	22	4	5	90	20

Conclusion

A multi-disciplinary survey of CPT 5X008 was performed in concordance of the survey results between specialties. We believe the 25th percentile of 11.50 RVW appropriately represents CPT 5X008 relative to other services and the key reference codes.

NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): 5X006,
5X007, 5X008**

SPECIALTY SOCIETY(IES): ACR, AUA, SIR

PRESENTER(S): Robert

Kennedy, Minhajuddin Khaja, Raj Ayyagari, Lauren Nicola, Jonathan Kiechle, and Thomas Turk

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: 09/2023

CPT Code	Long Descriptor	Global Period
5X006	Insertion of transurethral ablation transducers for delivery of thermal ultrasound for prostate tissue ablation, including suprapubic tube placement during the same session and placement of an endorectal cooling device, when performed	000
5X007	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation;	000
5X008	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducers for delivery of the thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed	000

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
5X006	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.
5X007	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.
5X008	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

ACR, AUA, and SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for three new MRI-Monitored Transurethral Ultrasound Ablation codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

MRI-Monitored Transurethral Ultrasound Ablation tab includes 3 new procedures. We have included codes 36475 and 32994 as comparison codes for the practice expense. Codes 36475 is an MPC code which was included on the RSL. Code 32994 was selected as the first reference code for 5X007. The codes also provide similar clinical experiences and distributions of work to the new codes.

The reference code selected for 5X006 was not a top KRS code. KRS 1 code 52351 does not have any nonfacility PE, so it was not selected for the purposes of comparison. KRS 2 code 57155 does have nonfacility PE, but it was determined code 36475, which is a code from the RSL and falls between the KRS codes for 5X006 represented a better match for reference in the staff, supplies, and equipment.

NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): 5X006,
5X007, 5X008**

SPECIALTY SOCIETY(IES): ACR, AUA, SIR

PRESENTER(S): Robert

Kennedy, Minhajuddin Khaja, Raj Ayyagari, Lauren Nicola, Jonathan Kiechle, and Thomas Turk

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The reference code selected for 5X007 was the top KRS code 32994. This includes PE for the nonfacility and facility settings. It also represents a good match related to staff, supplies and equipment.

No separate reference code was selected for 5X008 because this code represents the combined PE recommendations of 5X006 and 5X007. By utilizing 36475 and 32994 as reference codes for 5X006 and 5X007 respectively, these codes are by extension reference for 5X008.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

- 3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

No

See the *Billed Together* tab in the RUC Database.

- 4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

The dominant provider of this service is not known as this is a new service. It is believed that this procedure will be performed 50% in the non-facility setting.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

- 5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- 6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, new CPT codes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Extensive Use of Clinical Staff for 000 and 010 Day Global Pre-Service Clinical Staff Time Packages

We are requesting the pre-service clinical staff times established for this 000 day global code for:

CA001 Complete pre-service diagnostic and referral forms = 5 minutes

CA002 Coordinate pre-surgery services (including test results) = 3 minutes

CA003 Schedule space and equipment in facility = 0 minutes

CA004 Provide pre-service education/obtain consent = 7 minutes

CA005 Complete pre-procedure phone calls and prescription = 3 minutes

CA008 Perform regulatory mandated quality assurance activity (pre-service) = 0- minutes

There is extensive staff time during the pre-service time to ensure the necessary pre-diagnostic imaging and tests related to the prostate disease of the patient have been completed and reviewed prior to the ablation procedure. Coordinating the staff for both urology and radiology and scheduling the procedure around other procedures for the MRI scanner. Lastly, in addition to the consent and education process for the ablation, ensuring the patient has no implants or other issues which may not meet the necessary guidelines and protocols for use of MRI technology. Due to this, we believe the established times for extensive clinical staff for a 000-day global code are supported.

Review patient clinical extant information and questionnaire

We are requesting an additional minute to review the patient information and questionnaire related to MRI protocols. This procedure takes place in the MRI suite and requires additional review and discussion with the patient to ensure adherence with protocols and the patient is cleared to enter the suite.

Prepare and Position Patient

We are requesting 4 additional minutes for preparing the room, equipment, and supplies. The patient is initially prepared and anesthetized prior to being brought into the MRI suite. This will require additional time to prepare the necessary supplies and equipment and ensure MRI protocols are followed. The ablation equipment will require proper setup and alignment relative to the MRI table. To allow for the coordination of the staff and equipment for the placement procedure and ablation procedure, additional time is needed.

Extra personnel to assist physician - Our recommendations follow the ‘interventional’ standards whereby a “hip to hip” technologist is needed to assist the MD during the procedure as a scrub hand, one vascular interventional technologist (75%) and one nurse blend (25%) is used as a circulator. An MRI technologist (100%) is needed to perform the MRI imaging required continuously throughout the procedure.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

We are requesting 5 minutes for vital signs to measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature, and blood pressure before these procedures.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

- *Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.*
- *Coordinate pre-surgery services (including test results) (3) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating MRI suite availability.*
- *Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, reviewing MRI protocol questionnaire, and obtaining any consent not yet completed.*
- *Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.*
- *Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.*
- *Review patient clinical extant information and questionnaire (2) – RN/LPN/MTA discuss with the patient the procedure, confirm patient information and patient performed the assigned bowel prep.*

b. Service period (includes pre, intra and post):

- *Greet patient, provide gowning, ensure appropriate medical records are available (3)*
- *Obtain vital signs (5) - vital signs to measure weight and obtain heart rate, O2 saturation, respiratory rate, temperature and blood pressure performed*
- *Prepare room, equipment and supplies (6) Vascular Interventional Technologist (2) RN/LPN/MA each staff member will prepare the equipment and supplies related to their specific duties*
- *Prepare, set-up and start IV, initial positioning and monitoring of patient (2)*
- *Assist Physician – depending on the portion of the procedure this will either be the RN/LPN/MA (L037D) assisting the physician 100% for 5X006 or for this same time within the single physician procedure 5X008, a hip to hip” blend of Vascular Interventional Technologist (L041A) (75%) and RN/LPN/MTA (L037D) (25%) as a circulator will also assist the physician..*
- *MRI Technologist (L047A) – is assisting with imaging to confirm placement of applicators, positioning and treatment planning, then continuous MRI imaging during the ablation, and acquiring post ablation to assess the treatment zone.*

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

- *Monitor patient following procedure/service, multitasking 1:4 - Nurse monitors patients vital signs and pain post procedure as well as monitors for signs of bleeding or issues with urination.*
- *Clean room/equipment by clinical staff*
- *Complete post-procedure diagnostic forms, lab and x-ray requisitions – Nurse will complete*
- *Check dressings, catheters, wounds – Nurse will check catheter and manage as necessary*
- *Technologist QC's images in PACS – MRI Technologist will each review images and ensure transfer to PACs is performed*
- *Review examination with interpreting MD/DO – MRI Technologist will review the images and documentation of the treatment planning to ensure complete*
- *Scan exam documents into PACS - MRI Technologist will scan documents into PACs*
- *Review home care instructions, coordinate visits/prescriptions – Nurse will review home instructions with patient and family*

c. Post-service period:

- *Conduct patient communications – Nurse will follow-up with patient and conduct any post communication for additional visits*

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

- Assist Physician –
 - Nurse/LPN/MTA (L037D) 100% physician time scrubbed in assisting the physician in the placement of the applicators and catheter.
 - Vascular Interventional Technologist (L041A) 75% and RN/LPN/MTA (L037D) 25% blend pphysician time - This is a hip-to-hip clinical staff who is scrubbed into the procedure and assists the physician throughout the ablation procedure, handing equipment/supplies off the sterile table, maintaining sterility of wires, catheters, devices, and a circulator.
 - MRI Technologist (L047A) 100% physician time assisting with imaging to confirm placement of applicators, positioning and treatment planning, then continuous MRI imaging during the ablation, and acquiring post ablation to assess the treatment zone

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

We have introduced a new supply, TULSA-PRO Disposable Kit.

This kit includes the ultrasound applicator, endorectal cooling device, fluid circuit tubes, and fluid supplement which are all disposable and used for a single patient only. The kit also includes access to the treatment planning system (TULSA PRO-System) which is owned by the vendor, but the purchase of the kit provides the necessary access for each procedure.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

Yes.			
Pack SA045			
DESCRIPTION	Code	Unit	Item Qty

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly an interventional radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any*

important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.
Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

9/25/23 updates – following pre-facilitation.

7. Added to explain additional time for 000-day code

Extensive Use of Clinical Staff for 000 and 010 Day Global Pre-Service Clinical Staff Time Packages

We are requesting the pre-service clinical staff times established for this 000 day global code for:

CA001 Complete pre-service diagnostic and referral forms = 5 minutes

CA002 Coordinate pre-surgery services (including test results) = 3 minutes

CA003 Schedule space and equipment in facility = 0 minutes

CA004 Provide pre-service education/obtain consent = 7 minutes

CA005 Complete pre-procedure phone calls and prescription = 3 minutes

CA008 Perform regulatory mandated quality assurance activity (pre-service) = 0- minutes

There is extensive staff time during the pre-service time to ensure the necessary pre-diagnostic imaging and tests related to the prostate disease of the patient have been completed and reviewed prior to the ablation procedure. Coordinating the staff for both urology and radiology and scheduling the procedure around other procedures for the MRI scanner. Lastly, in addition to the consent and education process for the ablation, ensuring the patient has no implants or other issues which may not meet the necessary guidelines and protocols for use of MRI technology. Due to this, we believe the established times for extensive clinical staff for a 000-day global code are supported.

10. Replaced “staff” with the actual title of staff member providing the work.

Pre-Service

- *Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.*
- *Coordinate pre-surgery services (including test results) (3) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating MRI suite availability.*
- *Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, reviewing MRI protocol questionnaire, and obtaining any consent not yet completed.*
- *Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.*
- *Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.*

NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): 5X006,
5X007, 5X008**

SPECIALTY SOCIETY(IES): ACR, AUA, SIR

PRESENTER(S): Robert

Kennedy, Minhajuddin Khaja, Raj Ayyagari, Lauren Nicola, Jonathan Kiechle, and Thomas Turk

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- *Review patient clinical extant information and questionnaire (2) – RN/LPN/MTA discuss with the patient the procedure, confirm patient information and patient performed the assigned bowel prep.*

Post-Service (of service period) – replaced Vascular Interventional Technologist with MRI Technologist

- *Review examination with interpreting MD/DO – MRI Technologist will review the images and documentation of the treatment planning to ensure complete*
- *Scan exam documents into PACS - MRI Technologist will scan documents into PACS*

Post Service Period – adjusted on PE spreadsheet from 2 minutes by RN/LPN/MTA for code 5X007 and now allocated to code 5X006 for same staff type.

- *Conduct patient communications – Nurse will follow-up with patient and conduct any post communication for additional visits*

19. suprapubic kit added to list of other kits in PE and all of the items in each kit listed.

SA006	kit, catheter, suprapubic	kit	52.68
-------	---------------------------	-----	-------

9/28/23 updates – following PE Subcommittee

During the PE subcommittee meeting it was noted the equipment time under 5X006 excluded time for the TULSA Pro TDC Cart which is used throughout the entire procedure. The societies explained this was an oversight and the default formula was added at the table. The added time was 41 minutes for the under 5X006 for the equipment in the nonfacility setting.

New	TULSA-PRO TDC Cart	1638	Default	0.006490077	41
-----	--------------------	------	---------	-------------	----

9/29/23 updates – following RUC Meeting and Facilitation

#26. Additional Information – updated to remove language that code 5X008 may include the work of co-surgeons.

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

PE Spreadsheet Supply quantities adjusted for following items from 5 to 4 due to only 1 physician performing the procedure for code 5X008.

Clinical Code	Descriptor	Value	Type	Old Quantity	New Quantity
SB001	cap, surgical	1.14	item	5	4
SB033	mask, surgical	0.43	item	5	4
SB039	shoe covers, surgical	0.1	pair	5	4

Meeting Date: 09/2023

CPT Code	Long Descriptor	Global Period
5X006	Insertion of transurethral ablation transducers for delivery of thermal ultrasound for prostate tissue ablation, including suprapubic tube placement during the same session and placement of an endorectal cooling device, when performed	000
5X007	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation;	000
5X008	Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducers for delivery of the thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed	000

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
5X006	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.
5X007	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.
5X008	A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

ACR, AUA, and SIR convened a panel of experts familiar with these services to evaluate the direct practice expense inputs for three new MRI-Monitored Transurethral Ultrasound Ablation codes.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

MRI-Monitored Transurethral Ultrasound Ablation tab includes 3 new procedures. We have included codes 36475 and 32994 as comparison codes for the practice expense. Codes 36475 is an MPC code which was included on the RSL. Code 32994 was selected as the first reference code for 5X007. The codes also provide similar clinical experiences and distributions of work to the new codes.

The reference code selected for 5X006 was not a top KRS code. KRS 1 code 52351 does not have any nonfacility PE, so it was not selected for the purposes of comparison. KRS 2 code 57155 does have nonfacility PE, but it was determined code 36475, which is a code from the RSL and falls between the KRS codes for 5X006 represented a better match for reference in the staff, supplies, and equipment.

FACILITY DIRECT PE INPUTS

**CPT CODE(S): 5X006,
5X007, 5X008**

SPECIALTY SOCIETY(IES): ACR, AUA, SIR

PRESENTER(S): Robert

Kennedy, Minhajuddin Khaja, Raj Ayyagari, Lauren Nicola, Jonathan Kiechle, and Thomas Turk

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The reference code selected for 5X007 was the top KRS code 32994. This includes PE for the nonfacility and facility settings. It also represents a good match related to staff, supplies and equipment.

No separate reference code was selected for 5X008 because this code represents the combined PE recommendations of 5X006 and 5X007. By utilizing 36475 and 32994 as reference codes for 5X006 and 5X007 respectively, these codes are by extension reference for 5X008.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No, new CPT codes

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Extensive Use of Clinical Staff for 000 and 010 Day Global Pre-Service Clinical Staff Time Packages
We are requesting the pre-service clinical staff times established for this 000 day global code for:
CA001 Complete pre-service diagnostic and referral forms = 5 minutes
CA002 Coordinate pre-surgery services (including test results) = 3 minutes
CA003 Schedule space and equipment in facility = 5 minutes
CA004 Provide pre-service education/obtain consent = 7 minutes
CA005 Complete pre-procedure phone calls and prescription = 3 minutes
CA008 Perform regulatory mandated quality assurance activity (pre-service) = 0- minutes

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

There is extensive staff time during the pre-service time to ensure the necessary pre-diagnostic imaging and tests related to the prostate disease of the patient have been completed and reviewed prior to the ablation procedure. Coordinating the staff for both urology and radiology and scheduling the procedure around other procedures for the MRI scanner. Lastly, in addition to the consent and education process for the ablation, ensuring the patient has no implants or other issues which may not meet the necessary guidelines and protocols for use of MRI technology. Due to this, we believe the established times for extensive clinical staff for a 000-day global code are supported. Review patient clinical extant information and questionnaire

Review patient clinical extant information and questionnaire

We are requesting an additional minute to review the patient information and questionnaire related to MRI protocols. This procedure takes place in the MRI suite and requires additional review and discussion with the patient to ensure adherence with protocols and the patient is cleared to enter the suite.

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

- *Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.*
- *Coordinate pre-surgery services (including test results) (10) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating MRI suite availability.*
- *Schedule space and equipment in facility (5) – RN/LPN/MTA will schedule time for the MRI suite for the ablation procedure*
- *Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, reviewing MRI protocol questionnaire, and obtaining any consent not yet completed.*
- *Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.*
- *Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.*
- *Review patient clinical extant information and questionnaire (2) - RN/LPN/MTA discuss with the patient the procedure, confirm patient information and patient performed the assigned bowel prep.*

b. Service period (includes pre, intra and post):

ADDITIONAL INFORMATION

22. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly an interventional radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

9/25/23 updates – following pre-facilitation.

6. Added to explain additional time for 000-day code

Extensive Use of Clinical Staff for 000 and 010 Day Global Pre-Service Clinical Staff Time Packages

We are requesting the pre-service clinical staff times established for this 000 day global code for:

CA001 Complete pre-service diagnostic and referral forms = 5 minutes

CA002 Coordinate pre-surgery services (including test results) = 3 minutes

CA003 Schedule space and equipment in facility = 0 minutes

CA004 Provide pre-service education/obtain consent = 7 minutes

CA005 Complete pre-procedure phone calls and prescription = 3 minutes

CA008 Perform regulatory mandated quality assurance activity (pre-service) = 0- minutes

There is extensive staff time during the pre-service time to ensure the necessary pre-diagnostic imaging and tests related to the prostate disease of the patient have been completed and reviewed prior to the ablation procedure. Coordinating the staff for both urology and radiology and scheduling the procedure around other procedures for the MRI scanner. Lastly, in addition to the consent and education process for the ablation, ensuring the patient has no implants or other issues which may not meet the necessary guidelines and protocols for use of MRI technology. Due to this, we believe the established times for extensive clinical staff for a 000-day global code are supported.

8. Replaced “staff” with the actual title of staff member providing the work.

Pre-Service

- *Complete pre-service diagnostic and referral forms (5) - During this time the RN/LPN/MTA is collecting and coordinating the request from referring physician and ensuring all appropriate preoperative imaging has been performed.*
- *Coordinate pre-surgery services (including test results) (10) - During this portion the RN/LPN/MTA is arranging a preoperative medical clearance and coordinating MRI suite availability.*
- *Schedule space and equipment in facility (5) – RN/LPN/MTA will schedule time for the MRI suite for the ablation procedure*
- *Provide pre-service education/obtain consent (7) – RN/LPN/MTA is reviewing with the patient the necessary care and limitations post ablation procedure, reviewing MRI protocol questionnaire, and obtaining any consent not yet completed.*
- *Complete pre-procedure phone calls and prescription (3) - RN/LPN/MTA coordinate with patient any information related to scheduling of procedure. Prescribe preoperative lab work if any are missing.*
- *Confirm availability of prior images/studies (2) – Vascular Interventional Technologist must ensure that imaging studies are available for review prior to the procedure.*
- *Review patient clinical extant information and questionnaire (2) - RN/LPN/MTA discuss with the patient the procedure, confirm patient information and patient performed the assigned bowel prep.*

9/29/23 updates – following RUC Meeting and Facilitation

#22. Additional Information – updated to remove language that code 5X008 may include the work of co-surgeons.

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

Optical Coherence Tomography (OCT) – Tab 8

At the February 2023 CPT Editorial Panel meeting, CPT code 9X059 was created in response to new technology that allows imaging of the retina using optical coherence tomography (OCT) with and without non-dye OCT angiography (OCT-A). This new Category I code describes a combined imaging procedure, which bundles the work currently described by 92134 along with more specific angiography testing which reflects new technology. All four services in this ophthalmic diagnostic imaging code family were reviewed and resurveyed for the April 2023 RUC meeting.

The survey was sent to a random sample of ophthalmologists and optometrists from the three participating specialty societies. In reviewing survey responses for CPT code 9X059, it was apparent to the specialty societies that the survey instructions were unclear given the respondents' underestimation of time and misinterpretation of CPT code 9X059. The RUC recommended interim recommendations at the April 2023 RUC meeting. Further, the RUC agreed that all four services in the OCT code family should be resurveyed for the September 2023 RUC meeting using a targeted survey instrument that has been reviewed and approved by the Research Subcommittee

92132 Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral

The RUC reviewed the survey results from 75 ophthalmologists, retina specialists, and optometrists and determined a work RVU of 0.29 appropriately accounts for the physician work required to perform CPT code 92132, which is a direct work RVU crosswalk to CPT code 71110 *Radiologic examination, ribs, bilateral; 3 views* (work RVU = 0.29, 6 minutes intra-service time and 8 minutes total time). For this procedure, OCT of the anterior segment is typically performed on patients with the clinical appearance of a shallow anterior chamber or narrow anterior chamber angle to assess the risk of angle closure. The RUC recommends 1 minute pre-service evaluation time, 6 minutes intra-service time, and 1 minute post-service time, which equals 8 minutes of total time. There is only one minute of both pre- and post-service time because this procedure is typically done on the same date of service as an ophthalmological Evaluation and Management (E/M) visit.

To support the recommended work RVU value of 0.29, the RUC compared the surveyed code to the top key reference service 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes intra-service time and 12 minutes total time) and recognized that while the surveyed code has four fewer minutes of intra-service time, it requires greater intra-service intensity to perform than CPT code 92250. For additional support, the RUC referenced MPC codes 74019 *Radiologic examination, abdomen; 2 views* (work RVU = 0.23, 4 minutes intra-service time and 6 minutes total time) and 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time). The RUC determined that using CPT code 71110 as a direct work RVU crosswalk for the surveyed code is appropriate because it accounts for low intra-service time while preserving a higher level of intra-service intensity. Furthermore, a work RVU of 0.29 maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.29 for CPT code 92132.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

92133 Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve

The RUC reviewed the survey results from 127 ophthalmologists, retina specialists, and optometrists and determined a work RVU of 0.31 appropriately accounts for the physician work required to perform CPT code 92133, which is a direct work RVU crosswalk to CPT code 71048 *Radiologic examination, chest; 4 or more views* (work RVU = 0.31, 5 minutes intra-service time and 7 minutes total time). For this procedure, OCT of the optic nerve is typically performed on patients with elevated intraocular pressure (IOP) or glaucoma and is repeated for longitudinal follow-up, typically once a year. The RUC recommends 1 minute pre-service evaluation time, 5 minutes intra-service time, and 1 minute post-service time, which equals 7 minutes of total time. There is only one minute of both pre- and post-service time because this procedure is typically done on the same date of service as an ophthalmological E/M visit.

To support the recommended work RVU value of 0.31, the RUC compared the surveyed code to the second highest key reference service 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes intra-service time and 12 minutes total time) and recognized that while the surveyed code has five fewer minutes of intra-service time, it requires greater intra-service intensity to perform than CPT code 99250. For additional support, the RUC referenced MPC codes 74019 *Radiologic examination, abdomen; 2 views* (work RVU = 0.23, 4 minutes intra-service time and 6 minutes total time) and 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time). The RUC determined that using CPT code 71048 as a direct work RVU crosswalk for the surveyed code is appropriate because it accounts for low intra-service time while preserving a higher level of intra-service intensity. Furthermore, a work RVU of 0.31 maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.31 for CPT code 92133.**

92134 Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina

The RUC reviewed the survey results from 151 ophthalmologists, retina specialists, and optometrists and determined a work RVU of 0.32 appropriately accounts for the physician work required to perform CPT code 92134, which is a direct work RVU crosswalk to CPT code 74022 *Radiologic examination, complete acute abdomen series, including 2 or more views of the abdomen (eg, supine, erect, decubitus), and a single view chest* (work RVU = 0.32, 5 minutes intra-service time and 7 minutes total time). For this procedure, OCT of the retina is typically performed on patients with wet macular degeneration, diabetic macular edema, or a retinal vascular occlusion to determine the response to intravitreal anti-VEGF (anti-vascular endothelial growth factor) therapy and determine the need for and timing of further intravitreal injections. The RUC recommends 1 minute pre-service evaluation time, 5 minutes intra-service time, and 1 minute post-service time, which equals 7 minutes of total time required to perform this service. There is only one minute of both pre- and post-service time because this procedure is typically done on the same date of service as an ophthalmological E/M visit.

To support the recommended work RVU value of 0.29, the RUC compared the surveyed code to the top key reference service 92250 *Fundus photography with interpretation and report* (work RVU = 0.40, 10 minutes intra-service time and 12 minutes total time) and recognized that while the surveyed code has five fewer minutes of intra-service time, it requires greater intra-service intensity to perform than CPT code 99250. For

additional support, the RUC referenced MPC codes 74019 *Radiologic examination, abdomen; 2 views* (work RVU = 0.23, 4 minutes intra-service time and 6 minutes total time) and 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time). The RUC determined that using CPT code 74022 as a direct work RVU crosswalk for the surveyed code is appropriate because it accounts for low intra-service time while preserving a higher level of intra-service intensity. Furthermore, a work RVU of 0.32 maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.32 for CPT code 92134.**

9X059 Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography

The RUC reviewed the survey results from 66 ophthalmologists, retina specialists and optometrists and determined a work RVU of 0.64 appropriately accounts for the physician work required to perform CPT code 9X059, which is a direct crosswalk to CPT code 76511 *Ophthalmic ultrasound, diagnostic; quantitative A-scan only* (work RVU = 0.64, 10 minutes intra-service time and 15 minutes total time). For this combined procedure, OCT combined with OCT-A of the retina is typically performed on patients with retinal vascular disease, most often diabetic retinopathy, to allow evaluation of retinal ischemia in addition to retinal thickness and response to intravitreal anti-VEGF therapy. It is also used to evaluate choroidal neovascularization in eyes with possible exudative macular degeneration. The RUC recommends 1 minute pre-service evaluation time, 10 minutes intra-service time, and 2 minutes post-service time, which equals 13 minutes of total time required to perform this service. Like the other codes in this family, this service is typically done on the same date of service as an ophthalmologic E/M visit. There is only one minute of pre-service time, but unlike the other codes in this family, there are two minutes of post-service time attributable to this being a combined procedure wherein the report is longer and takes more time to review.

CPT code 9X059 is a combined procedure in that the intra-service work involves the same analysis of the standard OCT images as CPT code 92134, but it also includes the OCT-A component, which entails a comprehensive evaluation of the retinal and choroidal vasculature in the posterior segment for evidence of ischemia, microaneurysms and neovascularization. The RUC concurred that 10 minutes intra-service time was appropriate for the time required to complete both components for the combined study of all OCT and OCT-A images.

To support the recommended work RVU value of 0.64, the RUC compared the surveyed code to the top key reference services 92235 *Fluorescein angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (work RVU = 0.75, 15 minutes intra-service time and 17 minutes total time) and 92242 *Fluorescein angiography and indocyanine-green angiography (includes multiframe imaging) performed at the same patient encounter with interpretation and report, unilateral or bilateral* (work RVU = 0.95, 20 minutes intra-service time and 22 minutes total time). The RUC recognized that while the surveyed code requires 5 minutes less intra-service time compared to the two ophthalmologic top key reference services, CPT code 92134 requires greater intra-service intensity to perform.

For additional support, the RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 76830 *Ultrasound, transvaginal* (work RVU = 0.69, 10 minutes intra-service time and 23 minutes total time). The RUC determined that using CPT code 76511 as a direct work RVU crosswalk for the surveyed code is appropriate because it accounts for low intra-service time while

preserving a higher level of intra-service intensity. Furthermore, a work RVU of 0.64 maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.64 for CPT code 9X059.**

Practice Expense

At the April 2023 meeting, the Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs for the four OCT services in this family and made one modification. An adjustment was made to move the one minute of clinical staff time from CA004 *Provide pre-service education/obtain consent* to CA011 *Provide education/obtain consent* which is the appropriate service period as the patient moves from the screening lane for their first service to the diagnostic room for the OCT service. The PE Subcommittee verified that the typical service for all four OCT services in this family is bilateral even though the CPT descriptors include both unilateral and bilateral. The Subcommittee also reviewed the new equipment item *tomographic device, optical coherence angiography (OCTA)* for CPT code 9X059 and determined that the default formula was appropriate for calculating the equipment minutes. At the April 2023 meeting, the RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee. At the September 2023 meeting, the Practice Expense Subcommittee reviewed and affirmed the direct practice inputs from May 2023 without modification. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

New Technology

CPT code 9X059 will be placed on the New Technology list to be reviewed in three years to ensure correct valuation, patient population, and utilization assumptions.

Work Neutrality

The RUC’s recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 92132	Tracking Number B1	Original Specialty Recommended RVU: 0.29
		Presented Recommended RVU: 0.29
Global Period: XXX	Current Work RVU: 0.30	RUC Recommended RVU: 0.29

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male complains of inability to read small print. The patient has temporal narrowing of the anterior chamber angle in the left eye. Imaging is ordered to evaluate the risk of angle closure.

Percentage of Survey Respondents who found Vignette to be Typical: 85%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The images and numerical values are analyzed and referenced to normative data. Prior studies are reviewed if available and compared for evaluation of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92132, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral* is in a family of ophthalmic diagnostic imaging codes based on optical coherence tomography. CPT 92134, OCT of the retina, was identified for claims volume growth, which triggered the review. A new code, CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with OCT angiography. These codes and CPT 92133, OCT of the optic nerve, were reviewed at the last RUC meeting in April 2023 and received interim values due to concerns with survey validity for the 9X059 code only. They are being re-reviewed at this meeting. The previous review of the family was in October 2015.

The concern with the validity of the April survey for CPT 9X059 centered on the median IST of 6 minutes. Despite this code describing a combination of both OCT of the retina and OCT angiography of the retina, the median IST was only 1 minute longer than standalone OCT of the retina (CPT 92134). The expert panel was unable to reconcile the minimal difference in IST with the increase in physician work required to analyze and interpret both sets of images. We assumed that respondents misunderstood the survey and answered for performing OCT angiography alone rather than the combined procedure. We therefore proposed an interim value for all of the codes in the family and re-surveyed for this meeting. We also obtained Research Committee approval to highlight on the survey instrument that CPT 9X059 represented both OCT and OCT angiography of the retina and to highlight in the survey invitation cover letter that CPT 92134 and 9X059 could not be billed together.

OCT of the anterior segment is typically performed on patients with clinical appearance of a shallow anterior chamber or narrow anterior chamber angle to assess the risk of angle closure. It is typically performed once but may be repeated if the patient's clinical presentation changes. Claims volume was 43,316 in 2021, representing a gradual 13% decline since its peak in 2016. The procedure, indications, patient population, and instrumentation are unchanged since it was last valued.

CPT 92132 has been performed in conjunction with a same-day office visit 83% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data are presented separately and combined.

We received 75 responses (66 MD, 9 OD). The vignette was considered typical by 85% of respondents (85% MD, 89% OD).

The 2015 work value was 0.30 RVU with an IST of 8 minutes. The interim RUC-approved work value is 0.26 RVU with an IST of 5 minutes. The survey median RVU was 0.50 (0.50 MD, 0.40 OD) and the 25th percentile was 0.40 (0.40 MD, 0.40 OD). The median IST was 6 minutes (6 MD, 6 OD).

The top key reference service (KRS) for both groups, chosen by 44%, was CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes. The second reference service, chosen by the combined groups at 23%, was CPT 92136, *Ophthalmic biometry by partial coherence interferometry with intraocular lens power calculation* (RUC 2016), with a work value of 0.54 RVU, an IST of 10 minutes, and 22 minutes total time.

Respondents rated the surveyed code identical to the KRS on the overall intensity/complexity measure and all submeasures. The surveyed code was ranked higher than the second reference service on psychological stress, and identical on the overall intensity/complexity measure and other metrics. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO, ASRS, and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings.

Both top reference services have ISTs that are almost twice the survey median for CPT 92132. The KRS work value matches that of the survey 25th percentile but is greater than the procedure's 2015 value. Absent compelling evidence for an increase in work value, and given the mismatched ISTs, the panel rejected the reference services and the survey 25th percentile as means for valuation.

The survey median IST of 6 minutes is a reduction from the 2015 value of 8 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The typical anterior segment OCT readout does not present a list of norms, interval change, or an automated analysis.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 5 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service

time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there was no post-service time included in the 2015 valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245).

Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E/M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

After discussion at the last meeting in April, the RUC approved 1 minute of pre-time and 1 minute of post-time for this service.

We searched the RUC database for crosswalks and found 6 XXX codes reviewed by the RUC within the past 10 years with 6-minute ISTs. The median work value of these 6 services is 0.31 RVU, with a range of 0.25 to 0.76 RVU.

We chose as a crosswalk CPT 71110, *Radiologic examination, ribs, bilateral; 3 views* (RUC 2016), with a work value of 0.29 RVU. The IST of 6 minutes and total time of 8 minutes match our recommended values. This value is also supported by CPT 73523, *Radiologic examination, hips, bilateral, with pelvis when performed; minimum of 5 views* (RUC 2015), with identical work values and times and a work value of 0.31 RVU.

The recommended work value of 0.29 RVU is well bracketed by MPC 74019, *Radiologic examination, abdomen; 2 views* (RUC 2016) with a work value of 0.23 RVU, an IST of 4 minutes, and a total time of 6 minutes, and MPC 71111, *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (RUC 2016), with a work value of 0.32 RVU, an IST of 7 minutes, and a total time of 9 minutes.

The recommended value of 0.29 RVU for this code, although it differs by only a few hundredths of an RVU from the others in this review tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, then 92134, and finally 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it can't be accurately quantified by IWPUT or WPUT for services with such short and similar times, the intensity and complexity increase in our consensus opinion as we progress from 92132 to 92133 and then to 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss associated with the diseases being imaged is a consideration for all these services, the risk is greater with optic nerve disease (92133) and retinal disease (92134, 9X059) than anterior segment disease (92132). The risk to vision is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which secondarily also maintain an appropriate rank order. This is consistent with the prior review in 2015, when CPT 92134 was valued 0.05 RVU greater than CPT 92133 despite identical times, and with the interim review at the April meeting.

We recommend a work value of 0.29 RVU for CPT 92132 based on a crosswalk to CPT 71110, with times of 1/6/1 and a total time of 8 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.

Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic tests related to glaucoma.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

6.	6.	92014	XXX	1.42	5	24	8 37	29.8%
7.	7.	92020	XXX	.37	5	10	5 20	20.8%
8.	8.	92250	XXX	.40	1	10	0 11	19.1%

9. CPT 92132 is frequently performed with one or more other testing services related to glaucoma. These are all subject to the MPPR for testing. The service is also typically provided with a same-day office visit (83%). This has been taken into account in our time and work value recommendations. Providing these services at one visit is more efficient for providers, more convenient for patients, and less costly for both patients and the system after application of the MPPR.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 92132

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Ophthalmology How often? Commonly

Specialty Optometry How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 85000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Estimate based on Medicare claims data

Specialty Ophthalmology Frequency 58310 Percentage 68.60 %

Specialty Optometry Frequency 26435 Percentage 31.10 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 43,316 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare claims data

Specialty Ophthalmology Frequency 29715 Percentage 68.60 %

Specialty Optometry Frequency 13471 Percentage 31.09 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:92133	Tracking Number B2	Original Specialty Recommended RVU: 0.31
Global Period: XXX	Current Work RVU: 0.40	Presented Recommended RVU: 0.31
		RUC Recommended RVU: 0.31

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female presents with elevated levels of intraocular pressure (IOP) in both eyes. Visual-field examinations reveal no evidence of visual-field loss attributable to glaucoma. Examination of the nerve fiber layer by optical coherence tomography (OCT) in both eyes is indicated to look for evidence of retinal nerve fiber layer damage consistent with glaucoma.

Percentage of Survey Respondents who found Vignette to be Typical: 94%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The images and numerical values are analyzed and referenced to normative data. Prior studies are reviewed and compared for evaluation of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92133, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve* is in a family of ophthalmic diagnostic imaging codes based on optical coherence tomography. CPT 92134, OCT of the retina, was identified for claims volume growth, which triggered the review. A new code, CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with OCT angiography. These codes and CPT 92132, OCT of the anterior segment, were reviewed at the last RUC meeting in April 2023 and received interim values due to concerns with survey validity for the 9X059 code only. They are being re-reviewed at this meeting. The previous review of the family was in October 2015.

OCT of the optic nerve is typically performed on patients with elevated intraocular pressure (IOP) or glaucoma and is repeated for longitudinal follow-up, typically once a year. Claims volume is high, but stable (2.6 million in 2021). The procedure, indications, patient population, and instrumentation are unchanged since it was last valued.

CPT 92133 has been performed in conjunction with a same-day office visit 92% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 127 responses (116 MD, 11 OD). The vignette was considered typical by 94% of respondents (94% MD, 91% OD).

The 2015 work value was 0.40 RVU with an IST of 10 minutes. The interim RUC-approved work value is 0.29 RVU with an IST of 6 minutes. The survey median RVU was 0.50 (0.50 MD, 0.60 OD) and the 25th percentile was 0.50 (0.50 MD, 0.47 OD). The median and 25th percentile values are the same because so many respondents chose 0.50 RVU. The median IST was 5 minutes (5 MD, 12 OD).

The top key reference service (KRS) for both groups, chosen by 37%, was CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time. The second reference service, chosen by both groups at 24%, was CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes.

Respondents rated the surveyed code identical to the primary KRS and second reference service on overall intensity/complexity and each sub-measure. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO, ASRS, and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings.

Both top reference services have ISTs that are twice the survey median for CPT 92133. The KRS work value matches that of the survey 25th percentile but is greater than the procedure's 2015 value. Absent compelling evidence for an increase in work value, and given the mismatched ISTs, the panel rejected the reference services selected by respondents and the survey 25th percentile as means for valuation.

The survey median IST of 5 minutes is a significant reduction from the 2015 value of 10 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The panel questioned whether the 1-minute difference in IST between this service and CPT 92132 and 92134 is within the limit of error of the measurement process despite the large number of respondents.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 4 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past

10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245).

Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E/M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

After discussion at the last meeting in April, the RUC approved 1 minute of pre-time and 1 minute of post-time for this service.

We searched the RUC database for crosswalks reviewed by the RUC within the past 10 years with 5-minute ISTs and total times of 6-7 minutes. We found 21 codes with a median work value of 0.25 RVU and a range of 0.05 to 0.32 RVU. There are also 6 XXX services with 6-minute ISTs which have been RUC-reviewed within 10 years. These range from 0.25 to 0.76 RVU with a median work value of 0.31 RVU.

We chose as a crosswalk CPT 71048, *Radiologic examination, chest; 4 or more views* (RUC 2016), with a work value of 0.31 RVU. The IST of 5 minutes and total time of 7 minutes match our recommended values. This value is also supported by CPT 74022, *Radiologic examination, complete acute abdomen series, including 2 or more views of the abdomen (eg, supine, erect, decubitus), and a single view chest* (RUC 2016), with a work value of 0.32 RVU and identical times.

The recommended work value of 0.31 RVU for CPT 92133 is bracketed by MPC 74019, *Radiologic examination, abdomen; 2 views* (RUC 2016) with a work value of 0.23 RVU, an IST of 4 minutes, and a total time of 6 minutes, and MPC 71111, *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (RUC 2016), with a work value of 0.32 RVU, an IST of 7 minutes, and a total time of 9 minutes.

The recommended value of 0.31 RVU for this code, although it differs by a few hundredths of an RVU from the others in the tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, then 92134, and finally 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it cannot be quantified by IWPUT or WPUT for services with such short and similar times, the intensity and complexity increase in our consensus opinion as we progress from 92132 to 92133 and then to 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss associated with the diseases being imaged is a consideration for all of these services, the risk is greater with optic nerve disease (92133) and retinal disease (92134, 9X059) than anterior segment disease (92132). The risk to vision is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which secondarily also maintain an appropriate rank order. This is consistent with the review in 2015, when CPT 92134 was valued 0.05 RVU greater than CPT 92133 despite identical times, and with the interim review at the April meeting.

We recommend a work value of 0.31 RVU for CPT 92133 based on a crosswalk to CPT 71048, with times of 1/5/1 and a total time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic tests related to glaucoma.

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 92134, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina* was identified for claims volume growth, which triggered a review of the family. A new code, CPT 9X059, was created by CPT to separately identify OCT of the retina when combined with non-dye OCT angiography. These codes and CPT 92132, OCT of the anterior segment, and CPT 92132, OCT of the optic nerve, were reviewed at the last RUC meeting in April 2023 and received interim values due to concerns with survey validity for the 9X059 code only. They are being re-reviewed at this meeting. The previous review of the family was in October 2015.

OCT of the retina is typically performed on patients with wet macular degeneration, diabetic macular edema, or a retinal vascular occlusion to determine response to intravitreal anti-VEGF therapy and determine the need for and timing of further intravitreal injections. It is frequently repeated, typically multiple times a year, sometimes as often as monthly. Use of OCT allows ophthalmologists to extend the intravitreal anti-VEGF treatment window, often to 2 months, occasionally longer. Without OCT, injections would need to be administered monthly per FDA labeling. Therefore, despite the extremely high claims volume (7.4 million in 2021), frequent use of retinal OCT has saved patients countless thousands of injections and the Medicare program billions of dollars. The claims growth is commensurate with the increasing Medicare population and increasing prevalence of diabetes.

While OCT of the retina has not changed since its last valuation, new technology now allows performance of non-dye angiography in conjunction with OCT. Those combined tests were being billed with CPT 92134, although they entail increased practice expense and require interpretation of more images and more data. A new CPT code, 9X059, was created for reporting this combined test procedure, and is being separately reviewed at this meeting.

CPT 92134 has been performed in conjunction with a same-day office visit 78% of the time.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 151 responses (141 MD, 10 OD). The vignette was considered typical by 95% of respondents (96% MD, 90% OD).

The 2015 work value was 0.45 RVU with an IST of 10 minutes. The survey median RVU was 0.54 (0.54 MD, 0.54 OD) and the 25th percentile was 0.48 (0.47 MD, 0.49 OD). The median IST was 5 minutes (5 MD, 11 OD).

The top 2 key reference services (KRS) for both groups, each of which were chosen by 26%, were CPT 92250, *Fundus photography with interpretation and report* (RUC 2015), with a work value of 0.40 RVU, an IST of 10 minutes, and a total time of 12 minutes, and CPT 92083, *Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30 deg, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2)* (RUC 2012), with a work value of 0.50 RVU, an IST of 10 minutes, and 26 minutes total time.

Respondents rated the surveyed code higher than fundus photos (CPT 92250) on overall intensity/complexity and each of the submeasures other than physical effort, which was rated identically by the majority who chose it. Those who chose visual field testing (CPT 92083) rated the surveyed code identical on overall intensity/complexity and each of the submeasures other than mental effort, which was rated higher for the surveyed code. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

The expert panel of members from AAO, ASRS, and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The two KRS work values bracket the 2015 value of CPT 92134 and are lower than the survey 25th percentiles, but their ISTs are double the survey median. Given the mismatched ISTs, the panel rejected the reference services and the survey 25th percentile as means for valuation.

The survey median IST of 5 minutes is a significant reduction from the 2015 value of 10 minutes. This is a realistic amount of time to determine the adequacy of the study, evaluate the images and numerical values, compare them to norms, make an interpretation, and enter it into the medical record. The panel questioned whether the 1-minute difference in IST between this service and CPT 92132, with a 6-minute median IST, is within the limit of error of the measurement process, despite the large number of respondents.

Because the service is typically performed with a same-day office visit, we reduced the survey median pre-service time of 4 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 5 minutes to 1 minute. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained one minute of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care/ or referring physician.

As with the other codes in this family, there is no post-service time included in the current valuation. Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245).

Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E&M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

After discussion at the April 2023 meeting, the RUC approved 1 minute of pre-time and 1 minute of post-time for this service.

We searched the RUC database for crosswalks and found 21 XXX codes reviewed by the RUC within the past 10 years with 5-minute ISTs and total times of 6-7 minutes. The median work value of these 21 services is 0.25 RVU, with a range of 0.05 to 0.32 RVU. There are also 6 XXX codes reviewed by the RUC within the past 10 years with 6-minute ISTs. The median work value of these 6 services is 0.31 RVU, with a range of 0.25 to 0.76 RVU.

We chose as a crosswalk CPT 74022, *Radiologic examination, complete acute abdomen series, including 2 or more views of the abdomen (eg, supine, erect, decubitus), and a single view chest* (RUC 2016), with a work value of 0.32 RVU. The IST of 5 minutes and total time of 7 minutes match our recommended values. This value is also supported by CPT 71048, *Radiologic examination, chest; 4 or more views* (RUC 2016), with a work value of 0.31 RVU and identical times.

The recommended value of 0.32 RVU for this code, although it differs by a few hundredths of an RVU from the others in the tab, is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, then 92134, and finally 9X059. There are an increasing number of images and data to analyze as we progress from 92132 to 92133 and 92134, and then a large jump in the amount of data to analyze for 9X059.

In addition, although it can't be accurately quantified by IWP/PUT or W/PUT for services with such short and similar times, the intensity and complexity increase in our consensus opinion as we progress from 92132 to 92133 and then to 92134. The number of diagnoses to consider increases with each code in the family. While the potential for irreversible vision loss associated with the diseases being imaged is a consideration for all these services, the risk is greater with optic nerve disease (92133) and retinal disease (92134, 9X059) than anterior segment disease (92132). The risk to vision is most time-sensitive with retinal disease where progression can occur within days or weeks. Our ability to recognize these differences with increasing work values is limited by the available crosswalks, but they are recognized by the recommended values, which also maintain an appropriate rank order. This is consistent with the prior review in 2015, when CPT 92134 was valued 0.05 RVU higher than CPT 92133 despite identical times, and with the interim review at the April meeting.

We recommend a work value of 0.32 RVU for CPT 92134 based on a crosswalk to CPT 74022, with times of 1/5/1 and a total time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) Typically performed with a same-day office visit or other ophthalmic imaging.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3.	CPT	Global	WRVU	Pre	Intra	Post	Total Time	% Billed Together

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X059	Tracking Number B4	Original Specialty Recommended RVU: 0.64
		Presented Recommended RVU: 0.64
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 0.64

CPT Descriptor: Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with a history of non-insulin dependent diabetes mellitus notes blurred vision and is found to have diabetic macular edema. Optical coherence tomography (OCT) and OCT angiography are ordered to examine retinal structure in depth and to determine the cause of the edema and identify any associated foveal ischemia with non-dye angiography.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The patient's records and the reason for the test are reviewed. An order is placed in the electronic health record. The images are displayed.

Description of Intra-Service Work: The quality of the study is evaluated. The OCT images and numerical values are analyzed and referenced to normative data. The images are reformatted for angiography. The OCT angiography images are analyzed for artefacts by comparison to the non-angiographic OCT images. The OCT angiography images of the vasculature of the posterior segment are evaluated at multiple levels of the retina and choroid for evidence of ischemia, microaneurysms and neovascularization. If available, prior studies are reviewed and a comparison made for assessment of interval change. The interpretation is entered into the electronic health record.

Description of Post-Service Work: The final report is reviewed and signed. Findings are included in a letter that accompanies the report and is sent to the primary care or referring physician.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

CPT 9X059, *Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography* was created by CPT in response to new technology which allows imaging of the retina using OCT with and without non-dye OCT angiography (OCT-A). The new code describes the combined imaging procedure, which was previously reported with CPT 92134, OCT of the retina. In addition to the two retinal OCT codes, CPT 92132, OCT of the anterior segment, and CPT 92133, OCT of the optic nerve, were reviewed at the last RUC meeting in April 2023 and received interim values due to concerns with survey validity for the 9X059 code only. They are being re-reviewed at this meeting. The previous review of the family was in October 2015.

The concern with the validity of the April survey for CPT 9X059 centered on the median IST of 6 minutes. Despite this code describing a combination of both OCT of the retina and OCT angiography of the retina, the median IST was only 1 minute longer than standalone OCT of the retina (CPT 92134). The expert panel was unable to reconcile the minimal difference in IST with the increase in physician work required to analyze and interpret both sets of images. We assumed that respondents misunderstood the survey and answered for performing OCT angiography alone rather than the combined procedure. We therefore proposed an interim value for all of the codes in the family and re-surveyed them for this meeting. We also obtained Research Committee approval to highlight on the survey instrument that CPT 9X059 represented both OCT of the retina plus OCT angiography of the retina and to highlight in the survey invitation cover letter that CPT 92134 and CPT 9X059 could not be billed together.

OCT combined with OCT-A of the retina is typically performed on patients with retinal vascular disease, most often diabetic retinopathy, to allow evaluation of retinal ischemia in addition to retinal thickness and response to intravitreal anti-VEGF therapy. It is also used to evaluate choroidal neovascularization in eyes with possible exudative macular degeneration. Because the combined procedure is currently being reported with CPT 92134, we anticipate that the combined claims volume of CPT 92134 and 9X059 will be no greater than claims volume for CPT 92134 would have been without addition of the new code. It is also likely that some providers will switch from CPT 92235, fluorescein angiogram to CPT 9X059 to eliminate the need for IV access and the risk of an adverse dye reaction.

We surveyed a random sample of members of the American Academy of Ophthalmology, American Society of Retina Specialists, American Glaucoma Society, and American Optometric Association. Ophthalmologist and optometrist data will be presented separately and combined.

We received 66 responses (59 MD, 7 OD). The vignette was considered typical by 92% of respondents (95% MD, 71% OD).

The expert panel of members from AAO, ASRS, and AOA, which is familiar with the procedure and the RUC process, reviewed the survey findings.

The survey median RVU was 0.80 (0.80 MD, 0.72 OD) and the 25th percentile was 0.72 (0.74 MD, 0.55 OD). The April survey 25th percentile work RVU was 0.55.

The median IST was 10 minutes (10 MD, 9 OD), double that of the median survey IST for standalone OCT of the retina (CPT 92134). The April median IST of the combined service (9X059) was 6 minutes.

The increased 25th percentile estimate of work value and median IST are consistent with our supposition that the prior responses were for OCT angiography of the retina alone, without including the separate OCT component. It is also consistent with the notably greater number of images and increased amount of data displayed *en face* for angiography which must be analyzed when the combination study is performed.

In addition to the analysis of the standard OCT images, the retinal and choroidal vasculature in the posterior segment is evaluated at 7 different levels for evidence of ischemia, microaneurysms and neovascularization. The traditional OCT non-angiography component of the service is analogous to reading a chest X-ray. The angiography component is analogous to reading a chest CT. Both are performed every time CPT 9X059 is performed. In addition, the angiography imaging technology is subject to artefacts. This requires switching back and forth between the legacy OCT and OCT angiography images multiple times – they are not simultaneously displayed – to identify the artefacts and accurately analyze the angiography images.

The top key reference service (KRS) for both groups, chosen by 41%, was CPT 92235, *Fluorescein angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (RUC 2016), with a work value of 0.75 RVU, an IST of 15 minutes, and a total time of 17 minutes. The second reference service, chosen by both groups at 29%, was CPT 92242, *Fluorescein angiography and indocyanine-green angiography (includes multiframe imaging) performed at the same patient encounter with interpretation and report, unilateral or bilateral* (RUC 2016), with a work value of 0.95 RVU, an IST of 20 minutes, and 22 minutes total time.

Respondents rated the surveyed code higher than the KRS on overall intensity/complexity and all submeasures except psychological stress, which was rated identical. The surveyed code was ranked higher than the second reference service on mental effort and technical skill, and identical on overall intensity/complexity, physical effort, and psychological stress. Optometrists ranked the surveyed code slightly higher than ophthalmologists on some metrics, but the differences were not dramatic.

Because CPT 92134, OCT of the retina, is typically performed with a same-day office visit, we assumed that the new combined OCT/OCT angiography service would be as well. We developed pre- and post-work descriptors, time recommendations, and a work value recommendation based on that assumption.

We reduced the survey median pre-service time from 5 minutes to 1 minute. This time is necessary to review the reason for the test, place an order into the electronic health record, and display the images on the monitor prior to interpretation.

In accordance with the same-day office visit, we reduced our recommendation from the survey median post-service time of 7 minutes to 2 minutes. We did not include integrating the results into the treatment plan or explaining the results to the patient in our description of post-service work. Those activities are part of the E/M visit on that day. We maintained two minutes of post-service time, which is needed to review and sign the final report and include the findings in a letter to the primary care or referring physician.

Post-service time for signing the report and communicating with the primary care or referring physician is included in almost all imaging services, indicating that this is the appropriate place for them. For services typically performed with an office visit and reviewed by the RUC within the past 10 years, this work is often listed in the post-service work descriptor and the post-service time, typically 1 minute, is appropriately included in the valuation (e.g., CPT 92250, 92235, 92240, 92245). We recommend 2 minutes of post-service time for CPT 9X059 because the report is significantly longer than for most imaging services, requiring more time for final review and sign-off.

Signing the report in the EHR and adding the imaging findings and interpretation to the letter to the primary care or referring physician, even though a letter may be part of the office visit, are each separate activities from those included in the office visit and are not part of the E&M or Eye Code office visit. Because these imaging services are billed separately and do not count towards review of data for office E/M services, there is no duplication of work with respect to choosing office visit code levels.

After discussion at the April 2023 meeting, the RUC approved 1 minute of pre-time and 2 minutes of post-time for this service.

Because the ISTs of both reference services are greater than that of the surveyed code and their work values are greater than the survey 25th percentile estimate of work value, we chose not to use them for valuation.

We considered a work value equal to the survey 25th percentile of 0.72 RVU. However, this value is greater than that of other codes in the RUC database with similar ISTs.

We searched the RUC database for crosswalks to XXX codes reviewed by the RUC within the past 10 years with 10-minute ISTs and total times of 11 to 15 minutes. We found 16 eligible codes with work values ranging from 0.21 to 0.64 and a median of 0.40 RVU. Eight of these are ophthalmic or radiologic imaging services. Their work values range from 0.40 to 0.64 with a median of 0.54 RVU.

We recommend a value of 0.64 RVU with a crosswalk to CPT 76511, *Ophthalmic ultrasound, diagnostic; quantitative A-scan only* (RUC 2016) with a 10-minute IST, 15 minutes total time, and a work value of 0.64 RVU. This is the highest-valued code of the 8 recently valued imaging services with identical ISTs. The intensity and complexity of the service (it was ranked more intense and complex than the KRS, fluorescein angiography) and its status as new technology support a valuation at the top of the list.

The recommended value is lower than the survey 25th percentile, and is consistent with the increasing physician work, intensity, and complexity going from 92132 to 92133, then 92134, and finally 9X059. A work value of 0.64 RVU for CPT 9X059 is twice that of our recommendation for CPT 92134 (0.32 RVU), which is consistent with an IST of 10 minutes, also double that of CPT 92134 (5 minutes).

We recommend a work value of 0.64 RVU for CPT 9X059 based on a crosswalk to CPT 76511, with times of 1/10/2 and a total time of 13 minutes. This code should be placed on the new technology list.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Tests

BETOS Sub-classification:

CPT Code	Long Descriptor	Global Period
92132	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), anterior segment, with interpretation and report, unilateral or bilateral	XXX
92133	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; optic nerve	XXX
92134	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina	XXX
9X059	Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography CPT CODE DESCRIPTOR	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
92132	A 45-year-old male complains of inability to read small print. The patient has temporal narrowing of the anterior chamber angle in the left eye. Imaging is ordered to evaluate the risk of angle closure. The procedure is performed bilaterally.
92133	A 65-year-old female presents with elevated levels of intraocular pressure (IOP) in both eyes. Visual-field examinations reveal no evidence of visual-field loss attributable to glaucoma. Examination of the nerve fiber layer by optical coherence tomography in both eyes is indicated to look for evidence of retinal nerve fiber layer damage consistent with glaucoma.
92134	A 75-year-old male presents with exudative age-related macular degeneration with recent history of an intravitreal drug injection. Optical coherence tomography is indicated to evaluate subretinal fluid thickness and intraretinal edema in one eye.
9X059	A 67-year-old male with a history of non-insulin dependent diabetes mellitus notes blurred vision and is found to have diabetic macular edema. OCT and OCT angiography are ordered to examine retinal structure in depth and to determine the cause of the edema and identify any associated foveal ischemia with non-dye angiography.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

<p>The Academy convenes a consensus subcommittee utilizing the appropriate subspecialty representatives who sit on our Health Policy Committee that oversees our activities at RUC and CPT. Additionally, we queried other physicians who have the appropriate expertise for this code and performed time motion studies (two ophthalmic technicians performing 10 of each of these procedures). The consensus committee considered the survey data, PE details, and observations from time motion studies to determine clinical time and applicable standard</p>

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

packages were also applied. The physicians on the consensus panel familiar with the service provided input on whether any changes were needed for the existing supplies and equipment.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

For 92132, 92133, 92134 the current code was used as a reference.

For the new CPT code 9X059, we believe the best comparator is 92134 (since every 9X059 requires the performance of a 92134 in addition to the more specific angiography testing); however, since 92134 was being re-evaluated we also provided 92083, diagnostic visual field testing the second KRS choice from the survey.

While the physician work is more comparable to 92235 (the primary KRS), the technician work is more similar to 92083 (the secondary KRS) because there is no injection of dye required for this imaging test; thus, we believe it is the best alternative reference code.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Yes for the code family. Based on how other codes in the family are used we expect 9X059 to also be typically reported with a same day E/M service.

All codes are performed typically performed in the nonfacility setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Ophthalmology is the dominant provider for all codes:
92132 (68.6%), 92133 (70.0%), 92134 (88.5%), 9X059 (88.5%)* (Presumed for the new code based on 92134)

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

92132, 92133, 92134 all have reductions in PE. 9X059 is new.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

CA004 – changed to zero based on discussions at the April 2023 PEAC meeting and moved (and reduced to 1 minute) to CA011.

b. Service period (includes pre, intra and post):

The total time of 13 minutes for the service period remains the same in the current recommendations as the procedure has not changed other than the 1 minute from CA004 that was moved to CA011 based on April 2023 PEAC meeting. However, due to a shift towards more granular time placement, the times have been broken down into the component times as below for each code.

Pre:

Line CA011 – 1 minute of time moved from CA004 based on PEAC discussions. Technician performs pre-service education/consent for the patient. The total education and consent time was reduced from 2 minutes previously (at that time listed under CA004) for existing codes to 1 minute (now listed under CA011). The same 1 minute is included for the new code 9X059.

Line CA013 – Standard time 2 minutes included. The technician prepares the equipment, room, and supplies. The technician turns on the equipment, registers the patient (if new on the device) or look's up and opens the patient's file (if established) This is required and separate from EHR since each patient has a separate folder file

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

on the imaging device. For established patients the prior photos are also opened prior to bringing the patient back.

Line CA014 – Standard time 1 minute included. The technician confirms the protocol to be used. Multiple protocols are available for each CPT code and needs to be verified and setup.

Intra:

Line CA021– The technician performs the diagnostic imaging test, references the prior images, and uploads images for review. This is a bilateral test, so the procedure is effectively performed twice.

Post:

Line CA024 – Standard time 3 minutes included. The equipment and room are cleaned and sterilized

c. Post-service period:

N/A

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

During the intraservice period, the technician adjusts the height of the diagnostic machine, adjusts the machine for the patient’s optical refraction, images the patient’s eye, adjusts patient fixation during the exam as needed which is typical since these patients have vision issues, confirm that the images were able to be referenced to prior images (otherwise rescan is performed at this time), and the procedure is repeated for the fellow eye.

For CPT 9X059, there is considerably more image acquisition time (this is approximately a 10-fold increase in the number of scans) as the amount of data required is substantially greater. Additionally uploading the data takes considerably longer. In our time motion studies we found 4 minutes greater time for image acquisition and 1 minute greater time to upload the images so they could be read by the HCP.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

The HCP doesn’t perform the procedure – thus the technician time is listed under CA021 because the technician is wholly responsible for image acquisition.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

SJ053 Swab-alcohol – used to wipe down the machine between patients (omitted previously in error)

SB023 gloves, non-sterile, nitrile – this pair of gloves is for the ophthalmic technician that is typically the designated photographer. This is a separate individual from the technician working the patient up for their exam which is typically done the same day; thus no duplication. Gloves are changed between each patient.

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

New Equipment – OCT Angiography Device:

This new equipment only applies to the new code 9X059. This is a considerably more expensive machine required to scan fast enough that minor fluctuations in blood flow are noted between serial scans to identify and reconstruct the retinal and choroidal vasculature. 2 invoices have been provided. The cost for 1 was 164,000, the other was 165,000. We have placed the average 164,500 as the cost of the equipment. The invoices are for the typical device currently in use.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

The useful life of OCT angiography devices is expected to be 7 years, consistent with the current useful life of OCT devices. The default formula would be utilized.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth / Codes Reported Together 75% or More

September 2023

Transcranial Doppler Studies – Tab 9

In April 2022, the Relativity Assessment Workgroup (RAW) identified services performed by the same physician, on the same date of service, 75% of the time or more. Only groups that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific code bundling solutions should occur for 93890/93886, 93890/93892, 93892/93886, and 93892/93890. In September 2022, the RAW referred this issue to the CPT Editorial Panel to create a code bundling solution for CPT 2025. The code family was revised at the May 2023 CPT Editorial Panel meeting. Three new add-on codes were created to report when additional studies are performed on the same date of services as a complete transcranial Doppler study (93886). CPT codes 93886, 93888, 93892 and related new/revised codes were surveyed for the September 2023 RUC meeting. CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently.

93886 *Transcranial Doppler study of the intracranial arteries; complete study*

The RUC reviewed the survey results from 38 neurologists, radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 0.90 appropriately accounts for the typical physician work involved in this service. The RUC recommends 5 minutes pre-service time, 16 minutes intra-service time and 6 minutes post-service time. This CPT code describes a complete transcranial doppler study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete transcranial doppler evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

The specialties noted that due to changes in practice related to increased thrombectomy and other interventional procedures, there is an increased need to identify and evaluate all segments of each vessel, particularly those proximal and distal to lesions following thrombectomy. Interrogation of the anterior territory via the temporal window is more complicated than the posterior territory via the suboccipital window, because the suboccipital window is both an easier window, not going through the skull, and involves fewer segments. Limited studies now typically include all segments of the right and left anterior territories via the temporal window, leaving out the vertebral and basilar arteries via the suboccipital window. As a result, a limited study that includes both anterior territories finds only a small time savings for both performance and interpretation compared with a study that includes both anterior territories and the posterior territory.

To justify a work RVU of 0.90, the RUC referenced MPC code 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU= 0.81, intra-service time of 11 minutes, total time of 21 minutes) and noted that the survey code involves 5 more minutes of intra-service and 6 more minutes of total time, justifying a higher work value. The RUC also compared the surveyed code to CPT code 93307 *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

spectral or color Doppler echocardiography (work RVU=0.92, intra-service time of 15 minutes, total time of 25 minutes) and noted that the survey code involves slightly more intra-service time and total time and should be valued similarly. The RUC concluded that CPT code 93886 should be valued at the 25th percentile as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 0.90 for CPT code 93886.**

93888 Transcranial Doppler study of the intracranial arteries; limited study

The RUC reviewed the survey results from 35 neurologists, radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 0.73 appropriately accounts for the typical physician work involved in this service. The RUC recommends 5 minutes pre-service time, 15 minutes intra-service time and 5 minutes post-service time.

The specialty noted that the limited study code is reported whenever anything less than all three territories is performed: the left anterior circulation, the right anterior circulation, and the posterior circulation. When this service was last valued, the limited study was typically the posterior circulation. And it is the anterior circulation territories that take up the majority of the time. The specialties noted and the RUC concurred that a limited study now typically includes all segments of the right and left anterior territories via the temporal window, leaving out the vertebral and basilar arteries via the suboccipital window. Interrogation of the anterior territory via the temporal window is more complicated than the posterior territory via the suboccipital window, because the suboccipital window is both an easier window, not going through the skull, and involves fewer segments.

As a result, a limited study that includes both anterior territories typically involves only a small time savings for both performance and interpretation compared with a study that includes both anterior territories and the posterior territory (CPT code 93886). The specialty noted that, although the service is considered “limited” as it involves looking at a subsection of the vascular tree going to the brain, that does not necessarily mean that it involves much less time. If the physician must review more anatomic nuance within different branches of the cerebrovascular system, the “limited” study could still end up being similar time to a complete study.

To justify a work RVU of 0.73, the RUC referenced top key reference code 93880 *Duplex scan of extracranial arteries; complete bilateral study* (work RVU= 0.80, intra-service time of 15 minutes, total time of 25 minutes) and noted that both services involve identical times. The RUC also compared the surveyed code to CPT code 93925 *Duplex scan of lower extremity arteries or arterial bypass grafts; complete bilateral study* (work RVU= 0.80, intra-service time of 15 minutes, total time of 25 minutes) and noted that both services involve identical times. The RUC concluded that CPT code 93888 should be valued at the 25th percentile as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 0.73 for CPT code 93888.**

93892 Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection

The RUC reviewed the survey results from 35 neurologists, radiologists and neuroradiologists and determined that the survey median work RVU of 1.15 appropriately accounts for the typical physician work involved in this service. The RUC recommends 5 minutes pre-service time, 25 minutes intra-service time and 7 minutes post-service time. This service includes monitoring of intracranial vessels to identify spontaneous microembolization. The study typically includes both the right and left middle cerebral arteries in the anterior territory via the temporal window to help show not only the presence of microembolization but also to help with localization of the source. The specialty noted that the physician will review many images or recordings of possible emboli from either side.

Under the prior coding structure, CPT code 93892 was reported 95% of the time with 93886 and 89% of the time with 93890 for CY2021 Medicare claims data. Under the new coding structure, CPT code 93890 is deleted and 93892 can no longer be reported with 93886. Going forward, CPT code 93892 will typically be reported alone and contributes to the 5-minute increase in intra-service time relative to the times that were previously assigned to this code.

To justify a work RVU of 1.15, the RUC referenced CPT code 76883 *Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity* (work RVU= 1.21, intra-service time of 25 minutes, total time of 39 minutes) and noted that both services involve an identical amount of intra-service time and a similar amount of total time. The RUC also compared the surveyed code to CPT code 71270 *Computed tomography, thorax, diagnostic; without contrast material, followed by contrast material(s) and further sections* (work RVU= 1.25, intra-service time of 18 minutes, total time of 27 minutes) and noted that the survey code involves 7 more minutes of intra-service time and 10 more minutes of total time. The RUC concluded that CPT code 93892 should be valued at the current and survey median work value as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 1.15 for CPT code 93892.**

93893 *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*

The RUC reviewed the survey results from 36 neurologists, radiologists and neuroradiologists and determined that the current work RVU of 1.15 appropriately accounts for the typical physician work involved in this service. The RUC recommends 6 minutes pre-service time, 24 minutes intra-service time and 8 minutes post-service time. This CPT code describes shunt detection, which allows identification of right-to-left shunts. Typically, only one temporal window is used to monitor a middle cerebral artery during this procedure.

Under the prior coding structure, CPT code 93893 was reported 53% of the time with 93886 and 30% of the time with 93890 for CY2021 Medicare claims data. Under the new coding structure, CPT code 93890 is deleted and 93893 can no longer be reported with 93886. Going forward, CPT code 93893 will typically be reported alone and contributes to the 4-minute increase in intra-service time relative to the times that were previously assigned to this code.

To justify a work RVU of 1.15, the RUC referenced CPT code 76883 *Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity* (work RVU= 1.21, intra-service time of 25 minutes, total time of 39 minutes) and noted that both services typically involve a similar amount of intra-service and total time. The RUC also compared the surveyed code to CPT code 71270 *Computed tomography, thorax, diagnostic; without contrast material, followed by contrast material(s) and further sections* (work RVU= 1.25, intra-service time of 18 minutes, total time of 27 minutes) and noted that the survey code involves 6 more minutes of intra-service time and 11 more minutes of total time. The RUC concluded that CPT code 93893 should be valued at the current work value as supported by the comparison to reference codes. **The RUC recommends a work RVU of 1.15 for CPT code 93893.**

93X94 *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

The RUC reviewed the survey results from 30 neurologists, radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 0.81 appropriately accounts for the typical physician work involved in this service. The RUC recommends 15 minutes intra-service time.

A vasoreactivity study includes monitoring of the right and left middle cerebral arteries via the temporal windows during inhalation of carbon dioxide or injection of acetazolamide to evaluate cerebral reserve capacity. CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently.

It was noted that although 93X94 is being assigned the same amount of time as add-on code 93X95, it is an appropriate rank order to assign a slightly higher valuation. It was noted that the typical patient for a vasoreactive study would typically be someone with critical carotid stenosis who experienced some kind of neurologic event and is presumably getting this study to assess their reserve in anticipation of either stenting, or some other therapy that is deemed appropriate. When an embolus appears on an emboli detection study, it is hard to miss. Whereas with a vasoreactive study, detecting a vasospasm is more subtle and a relatively more complex study to perform.

To justify a work RVU of 0.81, the RUC referenced top key reference code 76979 *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)* (work RVU= 0.85, intra-service time of 15 minutes, total time of 15 minutes) and noted that both services typically involve an identical amount of time and a similar overall amount of physician work. The RUC also compared the surveyed code to 2nd key reference code 95984 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)* (work RVU= 0.80, intra-service time of 15 minutes, total time of 15 minutes) and noted that both services typically involve an identical amount of time and a similar overall amount of physician work. The RUC concluded that CPT code 93X94 should be valued at the current and survey 25th percentile work value as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 0.81 for CPT code 93X94.**

93X95 Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 31 neurologists, radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 0.73 appropriately accounts for the typical physician work involved in this service. The RUC recommends 15 minutes intra-service time. The specialty noted that there are some time savings when emboli detection is performed as an add-on related to finding the temporal windows for both the right and the left anterior territories compared to when performed as a standalone since these were already located in the base code. The specialty and the RUC concurred that, although both services typically involve the same amount of physician time, this service is slightly less intense than a vasoreactive study.

To justify a work RVU of 0.73, the RUC referenced top key reference code 76979 *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)* (work RVU= 0.85, intra-service time of 15 minutes, total time of 15 minutes) and noted that although both services typically involve an identical amount of time and a similar overall amount of physician work. The RUC also compared the surveyed code to 2nd key reference code 95984 *Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection*

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

*algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure) (work RVU= 0.80, intra-service time of 15 minutes, total time of 15 minutes) and noted that although both services typically involve an identical amount of time and a similar overall amount of physician work. The RUC concluded that CPT code 93X95 should be valued at the current and survey 25th percentile work value as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 0.73 for CPT code 93X95.***

93X96 Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 31 neurologists, radiologists and neuroradiologists and determined that the survey 25th percentile work RVU of 0.85 appropriately accounts for the typical physician work involved in this service. The RUC recommends 20 minutes intra-service time. The specialty noted that there are some time savings when venous-arterial shunt detection is performed as an add-on service related to finding the window on the side being tested since this was already located in the base code.

To justify a work RVU of 0.85, the RUC referenced top key reference code 76979 *Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure) (work RVU= 0.85, intra-service time of 15 minutes, total time of 15 minutes) and noted that although the surveyed code typically involves 5 more minutes of total time, both services should have a similar valuation due to differences in intensity. The RUC also compared the surveyed code to MPC code 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure) (work RVU= 0.80, intra-service time of 15 minutes, total time of 15 minutes) and noted that the surveyed code typically involves 5 more minutes of intra-service and total time. The RUC concluded that CPT code 93X96 should be valued at the current and survey 25th percentile work value as supported by the survey and favorable comparison to reference codes. **The RUC recommends a work RVU of 0.85 for CPT code 93X96.****

Practice Expense

The Practice Expense Subcommittee made two changes to the original proposal submitted by the specialties. For 93893, the Practice Expense Subcommittee removed some of the clinical staff time, as it overlapped a typically performed E/M service on the same day. The Practice Expense Subcommittee also removed CA031 *Review examination with interpreting MD/DO* as that is not typical for the four base codes. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

Work Neutrality

The RUC's recommendation for these CPT codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 93886	Tracking Number H1	Original Specialty Recommended RVU: 0.91
Global Period: XXX	Current Work RVU: 0.91	Presented Recommended RVU: 0.91
		RUC Recommended RVU: 0.90

CPT Descriptor: Transcranial Doppler study of the intracranial arteries; complete study

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female has had a stroke or stroke like symptoms. A complete transcranial ultrasound study is ordered to evaluate the anterior and posterior circulation territories for stenosis or occlusion.

Percentage of Survey Respondents who found Vignette to be Typical: 76%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history including patient demographics, symptoms, and suspected diagnosis. Review any prior applicable examinations including prior transcranial Doppler examinations and brain magnetic resonance (MR) and computed tomographic (CT) examinations.

Description of Intra-Service Work: Supervise patient preparation and performance of the test by the vascular technologist as needed. Review the recorded data, including demographics, VS, and blood gases. Scan the right and left anterior circulation territories and the posterior circulation territory to include vertebral arteries and basilar arteries. Compare with findings from prior examinations. Document the normal and abnormal findings. Interpret the findings and provide clinical correlation of the findings based on the patient's history. Dictate, review, and approve the report.

Description of Post-Service Work: Contact referring physician for alert values or to rectify differences between preliminary and final reports when appropriate. Discuss findings with patient and referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*
- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*

- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.
- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

Code 93893 represents venous arterial shunt detection with intravenous microbubble injection which is used to look for right-to-left shunt or conduit such as an atrial septal defect (ASD) or patent foramen ovale (PFO), which is present in about 30% of the population and can be the cause of strokes. This test can offer a quantitative evaluation of the size of such a shunt by measuring the number of bubbles detected. Furthermore, this test can also be used to look for intrapulmonary venous-arterial shunts such as in an A-V fistula or other small conduits. When there is an intravenous microbubble injection, we are specifically looking for the presence of a shunt by creating emboli through injection. Shunt is the keyword used here to distinguish this study from emboli monitoring. If there is no intravenous microbubble injection, it is more appropriate to use the term emboli monitoring since the test is investigating a thrombotic source that is embolizing. This phenomenon is unrelated to the presence of a right-to-left shunt.

Code +93X94 is a new code that represents a vasoreactivity study and will be reported with performed on the same date of service as a complete TCD.

Code +93X95 is a new code that represents emboli monitoring without intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

Code +93X96 is a new code that represents venous arterial shunt detection with intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

The American Academy of Neurology (AAN), American College of Radiology (ACR), and the American Society of Neuroradiology (ASNR) convened an expert panel familiar with these services to provide value and time recommendations for the September 2023 RUC meeting.

Survey Process

The AAN surveyed a sample of 2,420 current US members from the AAN's Neuroimaging, Stroke & Vascular Neurology, Critical Care, Neurohospitalist, and Endovascular & Interventional Neurology sections. The ACR surveyed a random sample of 3,000 current US members, and a random sample of 3,000 members from a subset of US members with diagnostic radiology designation. The ASNR surveyed a random sample of 1,392 current US members. The total combined survey sample was 9,812.

Work RVU and Time Recommendations

The expert panel recommends maintaining the current work RVU of 0.91, with a survey median time of 16 minutes intra-service. Additionally, we are recommending the survey median times of 5 minutes pre-service and 6 minutes post-service, for 27 minutes total time.

Key Reference Services

Our recommended work RVU of 0.91 compares favorably to the most commonly chosen key reference service, CPT code 93880 (*Duplex scan of extracranial arteries; complete bilateral study*), which is a clinically similar cerebrovascular arterial study code. CPT code 93880 has near identical survey times of 5 minutes pre-service and 5 minutes post-service time but includes less intra-service time at 15 minutes compared to the surveyed code. The recommended 0.91 work RVU is appropriately higher than that of key reference code 93880 at 0.80 work RVU, which is reflected in the higher IWPUT. 31% of survey respondents also reported that the surveyed code was "somewhat more" or "much more" intense overall than key reference code 93880.

The second key reference service code, CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.*) supports the recommendation as well and is also an MPC code. The higher intra-service time (20 minutes) and work RVU (1.30) of 99213 in comparison to the surveyed code (16 minutes and 0.91 work RVU respectively) supports the recommendation given the 2 codes have a similar IWPUT, demonstrating appropriate relativity.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
93880	Duplex scan of extracranial arteries; complete bilateral study	0.80	5	15	5	25	0.038	0.032
93886	Transcranial Doppler study of the intracranial arteries; complete study	0.91	5	16	6	27	0.041	0.034
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.	1.30	5	20	5	30	0.43	0.43

MPC Codes

Our recommendation for surveyed code 93886 compares favorably to the MPC codes depicted in the table below including CPT code 76700 (*Ultrasound, abdominal, real time with image documentation; complete*), which has a similar RVU. However, CPT code 76700 has 5 minutes less intra-service time at 11 minutes compared to the surveyed code which results in an appropriately higher IWPUT.

The surveyed code recommendations are also supported by MPC code 95805 (*Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness*) which has an appropriately lower IWPUT given the combination of 4 more minutes intra-service and 20% greater work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	5	11	5	21	0.053	0.039
93886	Transcranial Doppler study of the intracranial arteries; complete study	0.91	5	16	6	27	0.041	0.034
95805	Multiple sleep latency or maintenance of wakefulness testing, recording, analysis and interpretation of physiological measurements of sleep during multiple trials to assess sleepiness.	1.20	15	20	15	50	0.026	0.024

Summary

In summary, our expert panel recommends maintaining the existing value at **0.91 work RVU** and a survey median time of **16 minutes intra-service**. Additionally, we are recommending the survey median times of **5 minutes pre-service and 6 minutes post-service for 27 minutes total time**. The recommended value compares favorably with the key reference services, 93880 and 99213, and maintains relativity within the RBRVS.

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*
- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*
- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.

- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

Code 93893 represents venous arterial shunt detection with intravenous microbubble injection which is used to look for right-to-left shunt or conduit such as an atrial septal defect (ASD) or patent foramen ovale (PFO), which is present in about 30% of the population and can be the cause of strokes. This test can offer a quantitative evaluation of the size of such a shunt by measuring the number of bubbles detected. Furthermore, this test can also be used to look for intrapulmonary venous-arterial shunts such as in an A-V fistula or other small conduits. When there is an intravenous microbubble injection, we are specifically looking for the presence of a shunt by creating emboli through injection. Shunt is the keyword used here to distinguish this study from emboli monitoring. If there is no intravenous microbubble injection, it is more appropriate to use the term emboli monitoring since the test is investigating a thrombotic source that is embolizing. This phenomenon is unrelated to the presence of a right-to-left shunt.

Code +93X94 is a new code that represents a vasoreactivity study and will be reported with performed on the same date of service as a complete TCD.

Code +93X95 is a new code that represents emboli monitoring without intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

Code +93X96 is a new code that represents venous arterial shunt detection with intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

The American Academy of Neurology (AAN), American College of Radiology (ACR), and the American Society of Neuroradiology (ASNR) convened an expert panel familiar with these services to provide value and time recommendations for the September 2023 RUC meeting.

Survey Process

The AAN surveyed a sample of 2,420 current US members from the AAN's Neuroimaging, Stroke & Vascular Neurology, Critical Care, Neurohospitalist, and Endovascular & Interventional Neurology sections. The ACR surveyed a random sample of 3,000 current US members, and a random sample of 3,000 members from a subset of US members with diagnostic radiology designation. The ASNR surveyed a random sample of 1,392 current US members. The total combined survey sample was 9,812.

Compelling Evidence for Tab 9 Transcranial Doppler Studies Code 93888

The specialty societies are recommending an increase in work RVU over the current value. CPT Code 93888 *Transcranial Doppler study of the intracranial arteries; limited study* was last reviewed in 2014, at which time the RUC approved a work value of 0.70 RVU. CMS did not accept the RUC recommendation and assigned a work RVU of 0.50, which is the current value. Several clinical studies have been conducted since that time, which resulted in revised clinical guidance, thereby increasing the physician time from the current time of 20 minutes (5/10/5) to the survey time of 25 minutes (5/15/5).

- Recent thrombectomy trials in last 6 years (DAWN) have increased awareness and recognition of large vessel occlusion as a treatable cause of large ischemic strokes leading to widespread use of CT angiography and digital subtraction angiography (DSA) compared to the previous decade in evaluation of acute stroke. The increased use of angiograms has led to recognition of multifocal lesions and anatomical abnormalities that may need further evaluation. Due to risks related to contrast and radiation and invasive nature with repeat CT or DSA, TCD has become the preferred tool for follow-up vascular imaging in these patients. These patients typically will have a limited TCD to follow up since they have already received CTA/DSA and such a TCD will require review of associated CT angio/DSA in addition to presentation for interpretation increasing the physician time. Follow-up limited studies now typically examine the entirety of the anterior circulation (first and second segments of the anterior and middle cerebral arteries) in thrombectomy cases. Previously, less time was spent in

stroke cases either focused on only the proximal segments in the anterior circulation, or on the posterior circulation. Relevant publications:

- <https://www.nejm.org/doi/full/10.1056/nejmoa1706442>
- <https://www.nejm.org/doi/full/10.1056/nejmoa1713973>

- Increased recognition of needing patient centric blood pressure goals post thrombectomy indicates the use of limited TCDs in acute settings as well. This circumstance also leads to increased time required to compare these TCD studies with previous imaging to ascertain changes in cerebral hemodynamics.

Relevant publications:

- <https://www.ahajournals.org/doi/10.1161/SVIN.121.000214>

- Limited TCDs are being used to follow patients after stroke that requires carotid stenting to predict possibility of reperfusion syndrome specially in patient with difficult to control blood pressures. Such TCDs need additional review of previous studies in this rare but life-threatening complications in the postop period. Relevant publications:

- <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7341015/>
- <https://jnis.bmj.com/content/12/8/788>

Therefore, we believe we meet the compelling evidence argument: Documentation in the peer-reviewed medical literature or other reliable data that there have been changes in physician work due to physician time.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile work RVU of 0.73 and a survey median time of 15 minutes intra-service. Additionally, we are recommending the median times of 5 minutes pre-service and 5 minutes post-service, for 25 minutes total time.

Key Reference Services

Our recommended work RVU of 0.73 compares favorably to the most commonly chosen key reference service, CPT code 93880 (*Duplex scan of extracranial arteries; complete bilateral study*) which is a clinically similar cerebrovascular arterial study code. CPT code 93880 has identical survey times of 5 minutes pre-service, 15 minutes intra-service, and 5 minutes post-service time to the surveyed code. The recommended 0.73 work RVU for 93888, is appropriately lower than that of key reference code 93880) at 0.80 work RVU, which is reflected in the relative IWP/PUT for 2 codes with identical times.

The second key reference service code, CPT code 93971 (*Duplex scan of extremity veins including responses to compression and other maneuvers; unilateral or limited study.*) has 5 minutes less of intra-service time and 7 minutes less of total time, supporting its lower 0.45 work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/PUT	WPUT
93880	Duplex scan of extracranial arteries; complete bilateral study	0.80	5	15	5	25	0.038	0.032
93888	Transcranial Doppler study of the intracranial arteries; limited study	0.73	5	15	5	25	0.034	0.029
93971	Duplex scan of extremity veins including responses to compression and other maneuvers; unilateral or limited study	0.45	3	10	5	18	0.027	0.025

MPC Codes

Our recommendation for surveyed code 93888 compares favorably to the MPC codes depicted in the table below. The surveyed code has 7 minutes more intra-service time compared to MPC code 93224 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional*) and has an appropriately lower IWP/UT when considering 93888 is a limited study involving a review of two or fewer territories. The surveyed code recommendations are also supported by the second MPC code, 95972 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*). which has an appropriately lower IWP/UT given the combination of 8 more minutes intra-service and 10% greater work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/UT	WPUT
93224	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional	0.39	2	8	5	15	0.029	0.026
93888	Transcranial Doppler study of the intracranial arteries; limited study	0.73	5	15	5	25	0.034	0.029
95972	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional	0.80	8	23	5	36	0.022	0.022

Summary

In summary, our expert panel recommends the survey 25th percentile **work RVU of 0.73**, with a survey median time of **15 minutes intra-service**. Additionally, we are recommending the median times of **5 minutes**

Specialty Neurology	Frequency 2332	Percentage 27.00 %

		RUC Recommended RVU: 1.15

CPT Descriptor: Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female has had a stroke or stroke like symptoms. As part of the evaluation, transcranial doppler emboli detection without intravenous microbubble injection is ordered to assess for evidence of a proximal embolic source.

Percentage of Survey Respondents who found Vignette to be Typical: 86%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history including patient demographics, symptoms, and suspected diagnosis. Review any prior applicable examinations including prior transcranial Doppler examinations and brain magnetic resonance (MR) and computed tomographic (CT) examinations. Help technologist decide which vessels to insonate.

Description of Intra-Service Work: Supervise vascular technologist with patient preparation and performance of the test as needed. Review acquired Doppler spectral waveforms, flow direction, mean, systolic, and diastolic flow velocity, depth of sampling, and pulsatility index values, including waveforms throughout the monitoring epoch. Identify and review each high intensity transient signal event recorded and classify as genuine embolic signals or artifact. Count total number of embolic signals occurring spontaneously, and document vessel segment(s) in which they occurred, as well as the length of the monitoring period. Document procedure results. Integrate findings with clinical presentation to formulate and document examination interpretation. Dictate, review, and approve the report.

Description of Post-Service Work: Contact referring physician for alert values or to rectify differences between preliminary and final reports when appropriate. Discuss findings with patient and referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: Transcranial Doppler study of the intracranial arteries; complete study
- 93888: Transcranial Doppler study of the intracranial arteries; limited study

- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.
- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

93880	Duplex scan of extracranial arteries; complete bilateral study	0.80	5	15	5	25	0.038	0.032
93892	Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection	1.15	5	25	7	37	0.035	0.031
70544	Magnetic resonance angiography, head; without contrast material(s)	1.20	5	12	5	22	0.081	0.055

MPC Codes

Our recommendation for surveyed code 93892 compares favorably to MPC code 99202 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*). 99202 has 10 minutes less intra service time than the surveyed codes and an appropriately higher IWP/UT when comparing the work RVU between the two services.

The second key MPC service code, CPT code 70490 (*Computed tomography, soft tissue neck; without contrast material*) also supports the recommendation. Though MPC code 70490 has a slightly higher work RVU, it has an IWP/UT twice that of survey code 93892, which correlates the intra-service time of 15 minutes that is nearly half that of 93892 (25 minutes).

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWP/UT	WPUT
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter	0.93	2	15	3	20	0.047	0.047
93892	Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection	1.15	5	25	7	37	0.035	0.031
70490	Computed tomography, soft tissue neck; without contrast material	1.28	5	15	5	25	0.070	0.051

Summary

In summary, our expert panel recommends maintaining the existing value at **1.15 work RVU** and a survey median time of **25 minutes intra-service**. Additionally, we are recommending the median times of **5 minutes pre-service and 7 minutes post-service for 37 minutes total time**. The recommended value compares favorably with the KRS codes 93880 and 70544 and maintains relativity with the TCD code family and the RBRVS as a whole.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93892

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 5691

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate three times the 2021 Medicare claims data with similar frequency of reporting as Medicare claims data by specialty.

Specialty Diagnostic Radiology Frequency 2220 Percentage 39.00 %

Specialty Neurology Frequency 1879 Percentage 33.01 %

Specialty Cardiology Frequency 456 Percentage 8.01 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,897

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 Medicare claims data and the frequency of specialties for reporting

Specialty Diagnostic Radiology Frequency 738 Percentage 38.90 %

Specialty Neurology Frequency 627 Percentage 33.05 %

Specialty Cardiology Frequency 152 Percentage 8.01 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93892

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code:93893	Tracking Number H4	Original Specialty Recommended RVU: 1.15
		Presented Recommended RVU: 1.15
Global Period: XXX	Current Work RVU: 1.15	RUC Recommended RVU: 1.15

CPT Descriptor: Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old male has had an episode of stroke like symptoms. A transcranial doppler with agitated saline injection is ordered to assess for right-to left intracardiac shunt or pulmonary AV fistula.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the reason for the examination and any pertinent clinical history including patient demographics, symptoms, and suspected diagnosis. Review any prior applicable examinations including prior transcranial Doppler examinations and brain magnetic resonance (MR) and computed tomographic (CT) examinations Help technologist decide which vessels to insonate.

Description of Intra-Service Work: Supervise vascular technologist with patient preparation and performance of the test as needed. Review acquired Doppler spectral waveforms, flow direction, mean, systolic, and diastolic flow velocity, depth of sampling, and pulsatility index values, including waveforms obtained before, during, and after the agitated saline injection(s). Identify and review any high intensity transient signal events and classify as embolic or artifact. Count total number of post-injection embolic signals and note any "shower" or "curtain" appearance of embolic signals, and the vessel segment(s) in which they were identified. Record relationship to time after intravenous injection and to Valsalva maneuver. Document procedure results. Integrate findings with clinical presentations to formulate and document exam interpretation. Dictate, review, and approve the report.

Description of Post-Service Work: Contact referring physician for alert values or to rectify differences between preliminary and final reports when appropriate. Discuss findings with patient and referring physician as appropriate.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*
- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*

- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.
- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

Code 93893 represents venous arterial shunt detection with intravenous microbubble injection which is used to look for right-to-left shunt or conduit such as an atrial septal defect (ASD) or patent foramen ovale (PFO), which is present in about 30% of the population and can be the cause of strokes. This test can offer a quantitative evaluation of the size of such a shunt by measuring the number of bubbles detected. Furthermore, this test can also be used to look for intrapulmonary venous-arterial shunts such as in an A-V fistula or other small conduits. When there is an intravenous microbubble injection, we are specifically looking for the presence of a shunt by creating emboli through injection. Shunt is the keyword used here to distinguish this study from emboli monitoring. If there is no intravenous microbubble injection, it is more appropriate to use the term emboli monitoring since the test is investigating a thrombotic source that is embolizing. This phenomenon is unrelated to the presence of a right-to-left shunt.

Code +93X94 is a new code that represents a vasoreactivity study and will be reported with performed on the same date of service as a complete TCD.

Code +93X95 is a new code that represents emboli monitoring without intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

Code +93X96 is a new code that represents venous arterial shunt detection with intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

The American Academy of Neurology (AAN), American College of Radiology (ACR), and the American Society of Neuroradiology (ASNR) convened an expert panel familiar with these services to provide value and time recommendations for the September 2023 RUC meeting.

Survey Process

The AAN surveyed a sample of 2,420 current US members from the AAN's Neuroimaging, Stroke & Vascular Neurology, Critical Care, Neurohospitalist, and Endovascular & Interventional Neurology sections. The ACR surveyed a random sample of 3,000 current US members, and a random sample of 3,000 members from a subset of US members with diagnostic radiology designation. The ASNR surveyed a random sample of 1,392 current US members. The total combined survey sample was 9,812.

Work RVU and Time Recommendations

The expert panel recommends maintaining the current work RVU of 1.15, which is below the survey median, with a survey median time of 24 minutes intra-service. Additionally, we are recommending the median survey times of 6 minutes pre-service and 8 minutes post-service, for 38 minutes total time.

Key Reference Services

Our recommended work RVU of 1.15 compares favorably to the most commonly chosen key reference service, CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter*), which is an MPC code.

99213. Survey code 93893 has a survey median time of 24 minutes intra-service and recommended 1.15 work RVU, which reflects appropriate relativity to key reference code 99213, which has a lower intra service time of 20 minutes, and greater work RVU 1.30. Comparing the IWPOT of the survey code and key reference code supports the recommended median work RVU of 1.15.

The second key reference service code, CPT code 93880 (*Duplex scan of extracranial arteries; complete bilateral study*) also supports the recommendation. The survey median time of 24 minutes intra-service and recommended 1.15 work RVU, appropriately reflects the similar complexity of the service compared to key reference code 93880, which has a lower intra service time of 15 minutes, and accordingly a lower work RVU of 0.80 demonstrating relativity. Given the similar intensity of CPT code 93893 to CPT code 93880, our expert panel asserts it is appropriate to maintain the current work RVU.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
93880	Duplex scan of extracranial arteries; complete bilateral study	0.80	5	15	5	25	0.038	0.032
93893	Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection	1.15	6	24	8	38	0.035	0.030
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20-29 minutes of total time is spent on the date of the encounter.	1.30	5	20	5	30	0.043	0.043

MPC Codes

Our recommendation for surveyed code 93893 compares favorably to MPC code 99202 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*). 99202 has 10 minutes less intra service time than the surveyed codes and an appropriately higher IWPUT when comparing the work RVU between the two services.

The second key MPC service code, CPT code 70490 (*Computed tomography, soft tissue neck; without contrast material*) also supports the recommendation. Though MPC code 70490 has a slightly higher work RVU, it has an IWPUT twice that of survey code 93893, which correlates the intra-service time of 15 minutes that is nearly half that of 93893 (25 minutes).

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter	0.93	2	15	3	20	0.047	0.047
93892	Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection	1.15	5	25	7	37	0.035	0.031
70490	Computed tomography, soft tissue neck; without contrast material	1.28	5	15	5	25	0.070	0.051

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 506
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 Medicare claims data and the frequency of specialties for reporting

Specialty Neurology	Frequency 323	Percentage 63.83 %
Specialty Family Medicine	Frequency 59	Percentage 11.66 %
Specialty Cardiology	Frequency 30	Percentage 5.92 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 93893

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 93X94	Tracking Number H5	Original Specialty Recommended RVU: 0.81
		Presented Recommended RVU: 0.81
Global Period: ZZZ	Current Work RVU: N/A	RUC Recommended RVU: 0.81

CPT Descriptor: Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old female is referred to the TCD laboratory after a carotid duplex ultrasound examination identified 90% left internal carotid artery stenosis. During the complete TCD, vasoreactivity testing is ordered to assess cerebrovascular reserve adequacy of collateral flow.

[Note: This is an add-on service. Only consider the additional work related to vasoreactivity testing.]

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Supervise vascular technologist with patient preparation and performance of the TCD test as needed. Review clinical history in relation to safety of administering CO₂ or acetazolamide. Review the recorded data, including demographics, vital signs, and blood gases. Scan the right and left anterior circulation territories and the posterior circulation territory to include vertebral arteries and basilar arteries. Compare with findings from prior examinations. Assist technologist with identification of vessels to insonate. Review acquired Doppler spectral waveforms, flow direction, mean, systolic and diastolic flow velocities, depth of sampling, pulsatility index values, and capnometer values throughout the duration of the CO₂ administration in the resting values for the arterial segments studied. Document procedure results. Integrate findings with clinical presentation to formulate and document exam interpretation.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*
- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*
- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.
- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

Code 93893 represents venous arterial shunt detection with intravenous microbubble injection which is used to look for right-to-left shunt or conduit such as an atrial septal defect (ASD) or patent foramen ovale (PFO), which is present in about 30% of the population and can be the cause of strokes. This test can offer a quantitative evaluation of the size of such a shunt by measuring the number of bubbles detected. Furthermore, this test can also be used to look for intrapulmonary venous-arterial shunts such as in an A-V fistula or other small conduits. When there is an intravenous microbubble injection, we are specifically looking for the presence of a shunt by creating emboli through injection. Shunt is the keyword used here to distinguish this study from emboli monitoring. If there is no intravenous microbubble injection, it is more appropriate to use the term emboli monitoring since the test is investigating a thrombotic source that is embolizing. This phenomenon is unrelated to the presence of a right-to-left shunt.

Code +93X94 is a new code that represents a vasoreactivity study and will be reported with performed on the same date of service as a complete TCD.

Code +93X95 is a new code that represents emboli monitoring without intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

Code +93X96 is a new code that represents venous arterial shunt detection with intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

The American Academy of Neurology (AAN), American College of Radiology (ACR), and the American Society of Neuroradiology (ASNR) convened an expert panel familiar with these services to provide value and time recommendations for the September 2023 RUC meeting.

Survey Process

The AAN surveyed a sample of 2,420 current US members from the AAN's Neuroimaging, Stroke & Vascular Neurology, Critical Care, Neurohospitalist, and Endovascular & Interventional Neurology sections. The ACR surveyed a random sample of 3,000 current US members, and a random sample of 3,000 members from a subset of US members with diagnostic radiology designation. The ASNR surveyed a random sample of 1,392 current US members. The total combined survey sample was 9,812.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile work RVU of 0.81, and the survey median intra-service time of 15 minutes.

Key Reference Services

Our recommended work RVU of 0.81 compares favorably to the most commonly chosen key reference service, CPT code 76979 (*Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)*). The surveyed code has an identical survey intra-service time of 15 minutes and a similar work RVU of 0.81 as compared to the key reference code, which has a work RVU of 0.85, resulting in a comparable IWPUT.

The second key reference service code, CPT code 64634 (*Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional facet joint (List separately in addition to code for primary procedure)*) supports the recommendation, as it demonstrates appropriate relativity between the two codes. The IWPUT of 64634 is appropriately higher given it has a

higher work RVU of 1.32 (compared to a 0.81 work RVU of the surveyed code) with only 5 minutes more of intra-service time at 20 minutes (compared to 15 minutes intra-service time of the surveyed code).

The same number of survey respondents selected CPT code 95984 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)*) as a top reference code as the second KRS 64634. 95984 further supports the recommendation as it has a near identical values of the surveyed code with a work RVU of 0.80 (compared to the recommended work RVU of 0.81), intra-service time of 15 minutes (same as the surveyed code), and an IWPUT of 0.053 (compared to surveyed code IWPUT of 0.054).

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95984	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)	0.80	-	15	-	15	0.053	0.053
76979	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)	0.85	-	15	-	15	0.057	0.057
93X94	Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.81	-	15	-	15	0.054	0.054
64634	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional facet joint	1.32	-	20	-	20	0.066	0.066

(List separately in addition to code for primary procedure)							
---	--	--	--	--	--	--	--

MPC Codes

Our recommendation for surveyed code 93X94 compares favorably to the MPC codes depicted in the table below, including CPT code 95885 (*Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)*). While 95885 has the same intra-service time of 15 minutes as the survey median time, the recommended median survey work RVU of 0.81 is more than twice that of MPC code. The recommendation is supported as the IWPUT of 95885, at 0.023, correlates appropriately with the IWPUT of 93X94, at 0.054.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95885	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)	0.35	-	15	-	15	0.023	0.023
93X94	Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.81	-	15	-	15	0.054	0.054
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	1.00	-	10	-	10	0.100	0.100

Summary

In summary, our expert panel recommends the survey 25th percentile **work RVU of 0.81** and the survey median **intra service time of 15 minutes**. The recommended value compares favorably with MPC codes 95885 and 64484 and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.

Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93890

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 135840

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate three times the 2021 Medicare claims data with similar frequency of reporting as Medicare claims data by specialty.

Specialty Diagnostic Radiology Frequency 57053 Percentage 42.00 %

Specialty Neurology Frequency 40752 Percentage 30.00 %

Specialty Cardiology Frequency 12226 Percentage 9.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 45,280 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 Medicare claims data and the frequency of specialties for CPT code 93890-how the service was previously reported.

Specialty Diagnostic Radiology Frequency 19018 Percentage 42.00 %

Specialty Neurology Frequency 13584 Percentage 30.00 %

Specialty Cardiology Frequency 4076 Percentage 9.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93890

SUMMARY OF RECOMMENDATION**

CPT Code: 93X95	Tracking Number H6	Original Specialty Recommended RVU: 0.73
		Presented Recommended RVU: 0.73
Global Period: ZZZ	Current Work RVU: N/A	RUC Recommended RVU: 0.73

CPT Descriptor: Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 65-year-old woman is referred to the TCD laboratory after presenting with a right hemisphere infarct. During the complete TCD study, embolus detection is ordered to assess evidence of a proximal embolic source. [Note: This is an add-on service. Only consider the additional work related to emboli detection.]

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Supervise vascular technologist with patient preparation and performance of the TCD test as needed. Review the recorded data, including demographics, vital signs, and blood gases. Scan the right and left anterior circulation territories and the posterior circulation territory to include vertebral arteries and basilar arteries. Compare with findings from prior examinations. Emboli detection is performed in cerebral arteries to monitor high-intensity transients consistent with thromboembolic phenomena. Document procedure results. Integrate findings with clinical presentation to formulate and document exam interpretation.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*
- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*
- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or

carotid endarterectomy.

- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

Code 93893 represents venous arterial shunt detection with intravenous microbubble injection which is used to look for right-to-left shunt or conduit such as an atrial septal defect (ASD) or patent foramen ovale (PFO), which is present in about 30% of the population and can be the cause of strokes. This test can offer a quantitative evaluation of the size of such a shunt by measuring the number of bubbles detected. Furthermore, this test can also be used to look for intrapulmonary venous-arterial shunts such as in an A-V fistula or other small conduits. When there is an intravenous microbubble injection, we are specifically looking for the presence of a shunt by creating emboli through injection. Shunt is the keyword used here to distinguish this study from emboli monitoring. If there is no intravenous microbubble injection, it is more appropriate to use the term emboli monitoring since the test is investigating a thrombotic source that is embolizing. This phenomenon is unrelated to the presence of a right-to-left shunt.

Code +93X94 is a new code that represents a vasoreactivity study and will be reported with performed on the same date of service as a complete TCD.

Code +93X95 is a new code that represents emboli monitoring without intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

Code +93X96 is a new code that represents venous arterial shunt detection with intravenous microbubble injection and will be reported with performed on the same date of service as a complete TCD.

The American Academy of Neurology (AAN), American College of Radiology (ACR), and the American Society of Neuroradiology (ASNR) convened an expert panel familiar with these services to provide value and time recommendations for the September 2023 RUC meeting.

Survey Process

The AAN surveyed a sample of 2,420 current US members from the AAN's Neuroimaging, Stroke & Vascular Neurology, Critical Care, Neurohospitalist, and Endovascular & Interventional Neurology sections. The ACR surveyed a random sample of 3,000 current US members, and a random sample of 3,000 members from a subset of US members with diagnostic radiology designation. The ASNR surveyed a random sample of 1,392 current US members. The total combined survey sample was 9,812.

Work RVU and Time Recommendations

The expert panel recommends the survey 25th percentile work RVU of 0.73, and the survey median intra-service time of 15 minutes.

Key Reference Services

Our recommended work RVU of 0.73 compares favorably to the most commonly chosen key reference service 76979 (*Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)*). The IWPUT of 76979 is appropriately higher at 0.057, (as compared to the IWPUT of the surveyed code at 0.049) given it has a higher work RVU of 0.85 and the same intra-service time of 15 minutes as the surveyed code.

The second key reference service code, CPT code 95984 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)*) also supports the recommendation as it demonstrates appropriate relativity between the two codes. The surveyed code has an identical survey intra-service time of 15 minutes

and a slightly lower work RVU of 0.73 as compared to the key reference code which has a work RVU of 0.80 resulting in a comparable IWPUT.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
93X95	Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.73	-	15	-	15	0.049	0.049
95984	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)	0.80	-	15	-	15	0.053	0.053
76979	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)	0.85	-	15	-	15	0.057	0.057

MPC Codes

Our recommendation for surveyed code 93X95 compares favorably to the MPC codes depicted in the table below, including CPT code 95885 (*Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)*). While 95885 has the same intra-service time of 15 minutes as the survey median time, the recommended median survey work RVU of 0.73 is twice that of MPC code. The recommendation is supported as the IWPUT of 95885, at 0.023, correlates appropriately with the IWPUT of 93X95, at 0.049.

The surveyed code recommendations are also supported by MPC code 64484 (*Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)*), as it demonstrates appropriate relativity between the two codes. The IWPUT of 64484 is appropriately higher given it has a higher work

RVU of 1.00 (compared to a 0.73 work RVU of the surveyed code) and a lower intra-service time of 10 minutes (compared to 15 minutes intra-service time of the surveyed code).

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
95885	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)	0.35	-	15	-	15	0.023	0.023
93X95	Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.73	-	15	-	15	0.049	0.049
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	1.00	-	10	-	10	0.100	0.100

Summary

In summary, our expert panel recommends the 25th percentile **work RVU of 0.73** and the survey median **intra service time of 15 minutes**. The recommended value compares favorably with MPC codes 95885 and 64484 and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 93892

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Sometimes

Specialty Neurology How often? Sometimes

Specialty Cardiology How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 133731

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. We anticipate three times the 2021 Medicare claims data with similar frequency of reporting as Medicare claims data by specialty.

Specialty Diagnostic Radiology Frequency 52156 Percentage 39.00 %

Specialty Neurology Frequency 45469 Percentage 34.00 %

Specialty Cardiology Frequency 10699 Percentage 8.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

44,577 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 Medicare claims data and the frequency of specialties for CPT code 93892, which is how the service was previously reported (93892 billed together data indicates 94% billed with 93886)

Specialty Diagnostic Radiology Frequency 17386 Percentage 39.00 %

Specialty Neurology Frequency 15157 Percentage 34.00 %

Specialty Cardiology Frequency 3567 Percentage 8.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93892

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 93X96	Tracking Number H6	Original Specialty Recommended RVU: 0.85
		Presented Recommended RVU: 0.85
Global Period: ZZZ	Current Work RVU: N/A	RUC Recommended RVU: 0.85

CPT Descriptor: Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 50-year-old man is referred to the TCD laboratory following an episode of aphasia and right hemiparesis. During the complete TCD study, an agitated saline injection is ordered to assess for right-to-left intracardiac shunt or pulmonary AV fistula. [Note: This is an add-on service. Only consider the additional work related to shunt detection.]

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: Supervise vascular technologist with patient preparation and performance of the TCD test as needed. Review acquired Doppler spectral waveforms, flow direction, mean, systolic, and diastolic flow velocity, depth of sampling, and pulsatility index values, including waveforms obtained before, during, and after the agitated saline injection(s). Identify and review any high intensity transient signal events and classify as embolic or artifact. Count total number of post-injection embolic signals and note any "shower" or "curtain" appearance of embolic signals, and the vessel segment(s) in which they were identified. Record relationship to time after intravenous injection and to Valsalva maneuver. Document procedure results. Integrate findings with clinical presentations to formulate and document exam interpretation.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Transcranial Doppler (TCD) code family consists of the following seven codes:

- 93886: *Transcranial Doppler study of the intracranial arteries; complete study*

- 93888: *Transcranial Doppler study of the intracranial arteries; limited study*
- 93892: *Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection*
- 93893: *Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection*
- +93X94: *Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X95: *Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*
- +93X96: *Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*

In April 2022, TCD codes 93886, 93890 (*Transcranial Doppler study of the intracranial arteries; vasoreactivity study*), and 93892 were included in a RAW screen as code pairs of services performed by the same physician on the same date of service 75% of the time or more. The code pairs were ultimately referred to the CPT Editorial Panel for a code bundling solution. The Panel approved add-on codes 93X94, 93X95, and 93X96 to report when performed on the same date of service as existing code transcranial Doppler (TCD) study 93886, thereby eliminating the duplication of any pre- or post-service activities. There are clinically appropriate scenarios when emboli detection without intravenous microbubble injection or venous-arterial shunt with intravenous microbubble injection are reported in conjunction with a TCD study, as well as independently on a separate date of service, typically as a follow-up study to track ongoing embolization. At the request of the specialty societies, CPT code 93890 was deleted as it is not typically clinically appropriate for a vasoreactivity study to be performed independently. Additionally, the CPT Panel revised the descriptor of 93893 from “emboli” detection to “venous-arterial shunt” detection.

CPT code 93886 represents a complete TCD study, which can assess for underlying abnormalities that could explain the cause of stroke, identify baseline before a subarachnoid patient goes into vasospasm, or collateralization pattern in a severe internal carotid artery stenosis to plan surgical options for carotid surgery. A complete TCD evaluation includes examination of the right and left anterior circulation territories and the posterior circulation territory, including the vertebral arteries and basilar artery.

CPT Code 93888 represents a limited TCD study which does not assess all the required elements included in 93886. A limited TCD evaluation includes evaluation of two or fewer of the right anterior circulation territory, the left anterior circulation territory, or the posterior circulation territory, including vertebral arteries and basilar arteries.

CPT code 93892 represents emboli monitoring without intravenous microbubble injection which detects high-intensity transient signals that are traveling through the vessel chosen to be insonated. This test is used to identify artery to artery emboli, from a stenotic carotid artery, middle cerebral artery, or vertebral artery, regardless of the degree of stenosis. This can be a standalone study since embolic events are sentinel events and are monitored in a prolonged fashion that can be seen as distinct signals in that vessel. If a known source of emboli from a diseased large artery, like a fragile carotid plaque, is present, then one can only insonate in the vessel downstream from that carotid without a need to investigate other vessels, whereas an unknown source necessitates additional tests. Emboli monitoring without intravenous microbubble injection can be used in:

- Patients who continue to have ischemic strokes despite various antithrombotic therapies. If emboli are still detected, it may indicate failure of such therapies.
- Monitoring for emboli during carotid artery interventions such as carotid artery angioplasty and stenting, or carotid endarterectomy.
- Monitoring for emboli during any cardiac interventions, from coronary artery bypass graft (CABG) to transcatheter aortic valve replacement (TAVR)

76979	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection (List separately in addition to code for primary procedure)	0.85	-	15	-	15	0.057	0.057
93X96	Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.85	-	20	-	20	0.043	0.043
64484	Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure)	1.00	-	10	-	10	0.100	0.100

MPC Codes

Our recommendation for surveyed code 93X96 compares favorably to the MPC codes depicted in the table below, including CPT code 51797 (*Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)*) as it demonstrates appropriate relativity between the two codes. The recommended work RVU of 0.85 is supported by the MPC code when you compare it to the work RVU of 51797, which is 0.80 and the corollary time relationship between the two codes (20 minutes and 15 minutes, respectively.) The resulting IWPUT of survey code 96X96 at 0.043 is appropriately relative to that of MPC code 51797, which is 0.053.

The surveyed code recommendations are also supported by MPC code 64480 (*Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), cervical or thoracic, each additional level (List separately in addition to code for primary procedure)*). The IWPUT of 64480 is appropriately higher given it has a higher work RVU of 1.20 (compared to the recommended 0.85 work RVU of the surveyed code) and a lower intra-service time of 15 minutes (compared to 20 minutes intra-service time of the surveyed code). The resulting IWPUTs of each code demonstrate appropriate relativity.

CPT Code	Descriptor	Work RVU	Pre	Intra	Post	Total Time	IWPUT	WPUT
51797	Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)	0.80	-	15	-	15	0.053	0.053
93X96	Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	0.85	-	20	-	20	0.043	0.043

Specialty Family Medicine	Frequency 408	Percentage 12.00 %
---------------------------	---------------	--------------------

Specialty Cardiology	Frequency 204	Percentage 6.00 %
----------------------	---------------	-------------------

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,133
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 Medicare claims data and the frequency of specialties for CPT code 93893, which is how the service was previously reported (93893 billed together data indicates 56% billed with 93886)

Specialty Neurology	Frequency 726	Percentage 64.07 %
---------------------	---------------	--------------------

Specialty Family Medicine	Frequency 136	Percentage 12.00 %
---------------------------	---------------	--------------------

Specialty Cardiology	Frequency 68	Percentage 6.00 %
----------------------	--------------	-------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 93893

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 93886, 93888, 93892, 93893, 93X94, 93X95, 93X96

SPECIALTY SOCIETY(IES): AAN, ACR, ASNR

PRESENTER(S): Kevin

Kerber, MD; Charles Tegeler, MD; Lauren Nicola, MD; Melissa Chen, MD; Jacob Ormsby, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2023

Surveyed CPT Code	93886	Global Period: XXX
CPT Code Descriptor	Transcranial Doppler study of the intracranial arteries; complete study	
Typical Patient	A 65-year-old female has had a stroke or stroke like symptoms. A complete transcranial ultrasound study is ordered to evaluate the anterior and posterior circulation territories for stenosis or occlusion.	

Surveyed CPT Code	93888	Global Period: XXX
CPT Code Descriptor	Transcranial Doppler study of the intracranial arteries; limited study	
Typical Patient	A 65-year-old female has had a stroke or stroke like symptoms localized to the left carotid artery territory. A limited transcranial ultrasound study (2 or fewer territories) of the left anterior circulation territory is ordered to evaluate for occlusion or stenosis	

Surveyed CPT Code	93892	Global Period: XXX
CPT Code Descriptor	Transcranial Doppler study of the intracranial arteries; emboli detection without intravenous microbubble injection	
Typical Patient	A 65-year-old female has had a stroke or stroke like symptoms. As part of the evaluation, transcranial doppler emboli detection without intravenous microbubble injection is ordered to assess for evidence of a proximal embolic source.	

Surveyed CPT Code	93893	Global Period: XXX
CPT Code Descriptor	Transcranial Doppler study of the intracranial arteries; venous-arterial shunt detection with intravenous microbubble injection	
Typical Patient	A 50-year-old male has had an episode of stroke like symptoms. A transcranial doppler with agitated saline injection is ordered to assess for right-to left intracardiac shunt or pulmonary AV fistula.	

Surveyed CPT Code	93X94	Global Period: ZZZ
CPT Code Descriptor	Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	
Typical Patient	A 65-year-old female is referred to the TCD laboratory after a carotid duplex ultrasound examination identified 90% left internal carotid artery stenosis. During the complete TCD, vasoreactivity testing is ordered to assess cerebrovascular reserve adequacy of collateral flow. [Note: This is an add-on service. Only consider the additional work related to vasoreactivity testing.]	

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 93886, 93888, 93892, 93893, 93X94, 93X95, 93X96

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Surveyed CPT Code	93X95	Global Period: ZZZ
CPT Code Descriptor	Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	
Typical Patient	A 65-year-old woman is referred to the TCD laboratory after presenting with a right hemisphere infarct. During the complete TCD study, embolus detection is ordered to assess evidence of a proximal embolic source. [Note: This is an add-on service. Only consider the additional work related to emboli detection.]	

Surveyed CPT Code	93X96	Global Period: ZZZ
CPT Code Descriptor	Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)	
Typical Patient	A 50-year-old man is referred to the TCD laboratory following an episode of aphasia and right hemiparesis. During the complete TCD study, an agitated saline injection is ordered to assess for right-to-left intracardiac shunt or pulmonary AV fistula. [Note: This is an add-on service. Only consider the additional work related to shunt detection.]	

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American Academy of Neurology, American College of Radiology, and the American Society of Neuroradiology convened a panel that included RUC advisors and subject matter experts familiar with these services to evaluate the direct practice expense inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The current CMS direct PE inputs were used as reference for existing codes 93886, 93888, 93892, and 93892.

CPT code 93890 is being deleted and the service will be reported with a new ZZZ add on code 93X94. As such the current CMS direct PE inputs for 93890 were used as reference for 93X94.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 93886, 93888, 93892, 93893, 93X94, 93X95, 93X96
SPECIALTY SOCIETY(IES): AAN, ACR, ASNR
PRESENTER(S): Kevin

Kerber, MD; Charles Tegeler, MD; Lauren Nicola, MD; Melissa Chen, MD; Jacob Ormsby, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Codes 93X95 and 93X96 are new ZZZ add on codes that represent similar intra-service work (of the service period) as existing XXX codes 93892 and 93893 respectively. As such the current CMS direct PE inputs for 93892 and 93893 were used as reference for 93X95 and 93X96.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
 Is this code(s) typically reported with the E/M service in the nonfacility?

93886 – No
 93888 – No
 93892 – No
 93893 – Yes

For CPT codes 93X94, 93X95, and 93X96, the societies are uncertain if the services will typically be billed with an E/M.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

	Dominant provider in non-facility	% dominant provider provides in non-facility	Is dominant provider in non-facility different than global?
93886	Neurology	38%	No
93888	Cardiology	40%	Yes
93892	Diagnostic Radiology	41%	No
93893	Neurology	55%	No

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has

NONFACILITY DIRECT PE INPUTS

PRESENTER(S): Kevin

Kerber, MD; Charles Tegeler, MD; Lauren Nicola, MD; Melissa Chen, MD; Jacob Ormsby, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CPT codes 93886 and 93888 were last reviewed by the RUC in April 2014. Many of the standards were set by CMS after this time (2015+), which explains some of the discrepancies with our current times and the standards as detailed below.

Pre-service (of service period)

CA013:

93892 and 93893: The standard is 2 minutes. The specialties recommend 4 minutes to account for set up of ultrasound equipment. This is consistent across the code family. In 2014, CMS approved 2 minutes for preparing the room and 2 minutes for setting up the US equipment for codes 93886 and 93888. With the creation of the new PE spreadsheet, 4 minutes was assigned to clinical activity code CA013.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

CPT codes 93886 and 93888 were last reviewed by the RUC in April 2014. Many of the standards were set by CMS after this time (2015+), which explains some of the discrepancies with our current times and the standards as detailed below.

Pre-Service

CA008: reallocated 3 minutes to CA006 (2 min), and CA007 (1 min) – for consistency across the family and to align with standard for each clinical activity. (93892, 93893)

Pre-service (of service period)

CA014: The specialties recommend 1 minute to align with imaging service standard (93886, 93888, 93892, 93893) and since the tech is performing the scanning. Note: In the 2015 MPFS CMS approved 2 minutes for "reviewing pt questionnaire & protocol exam" as std. The PE Spreadsheet Workgroup later divided this into 2 line items (CA007 & CA014), at 1 minute each.

Intra service (of service period)

For 93892 and 93893, the intra service minutes were reallocated from CA018 (*Assist physician or other qualified healthcare professional---directly related to physician work time (100%)*) to CA021 (*Perform procedure/service---NOT directly related to physician work time*); as the clinical staff activities are not dependent on the presence of physician/qualified health care professional. This is consistent across the code family, and it is our understanding that the intra service minutes for

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 93886, 93888, 93892, 93893, 93X94, 93X95, 93X96

PRESENTER(S): Kevin

Kerber, MD; Charles Tegeler, MD; Lauren Nicola, MD; Melissa Chen, MD; Jacob Ormsby, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

93892 and 93893 were assigned to CA018 in error as this is not a new standard for the delivery of care.

Post-service (of service period)

CA027: The specialties redistributed the 5 minutes from CA027 to CA030 (2 min), CA031 (2 min), and CA032 (1 min) – for consistency across the family and to align with standard for each clinical activity. (93892, 93893)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

93886 and 93888 each had 3 minutes allocated for CA010 prior to 2018. The current inputs for 93886 and 93888 for this activity is 5 minutes.
As blood pressure and pulse are the only vitals obtained, we are recommending the standard 3 minutes.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

93886, 93888, 93892, 93893:

Verify correct procedure ordered. Review the history in the patient chart and schedule patient appointment. Communicate preparation instructions to the patient prior to their visit. Verify instruments and supplies are available.

b. Service period (includes pre, intra and post):

Pre (of the service period)

Greet and verify patient identification. Confirm reason for exam and correct test ordered. Ensure appropriate records/previous imaging are available if needed for comparison. Obtain patient consent, room patient and provide gowning. Obtain brief history, take vital signs (blood pressure, pulse) and listen for Carotid Bruits. Prepare room, ultrasound equipment, and supplies.
*93893 only: prepare, set up and start IV.

Intra (of the service period)

Perform procedure/service- (see question 11 for details)

Post (of the service period)

93886, 93888, 93892, 93893

Access reporting software. Review all recorded images and information and compare to previous study if available. Record vital signs and presence of carotid bruits with any additional related

patient information obtained. Transfer data to reading station and archive data. Sign preliminary report and submit to reading physician. Clean room and equipment.

c. Post-service period:

[Empty box for post-service period details]

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time:

Assist patient in a position appropriate for the study. Attach probes, identify, and optimize doppler signal. Proceed in performing the TCD exam accessing bilateral Temporal, sub-occipital windows on the patient. Freeze, label, measure and store all samples of the intracranial circulation and posterior circulation. Communicate with the patient any special positioning required if related to their onset of symptom. Adjust power settings to insonate via the Orbit bilaterally. Remove all visible ultrasound gel and provide a dry cloth to the patient. Ensure patient vitals are normal and no new symptoms prior to discharge. Release patient.
Additional activities for 93893 and 93X96:
Coordinate injection of agitated saline bubbles while scanning the patient through temporal windows. Record all images corresponding to injection and set duration of time afterwards to show presence or absence of embolic phenomena with injection. Remove IV.
Additional activities for 93X94:
Review the instructions for inhaling CO2 and address patient questions and concerns. Calibrate the capnometer to monitor exhaled CO2.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (please see 2nd worksheet tab in PE spreadsheet):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at http://www.bls.gov.

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CPT codes 93886 and 93888 were last reviewed by the RUC in April 2014. Many of the standards were set by CMS after this time (2015+), which explains some of the discrepancies with our current times and the standards as detailed below.
Pre-service
CA006: The specialties recommend 2 minutes to align with imaging service standard (93886, 93888)
CA007: The specialties recommend 1 minute to align with imaging service standard (93886, 93888).
Pre-service (of service period)
CA009: The specialties recommend 3 minutes to align with standard, a reduction from for codes 93892 and 93893.
CA010: The specialties recommend 3 minutes to align with standard (93886, 93888, 93892, 93893)
Post-service (of service period)
CA031: The specialties recommend 2 minutes to align with standard (93886, 93888). This standard was set in the 2015 MPFS by CMS, after these codes were initially reviewed.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 93886, 93888, 93892, 93893, 93X94, 93X95, 93X96

SPECIALTY SOCIETY(IES): _AAN, ACR, ASNR

PRESENTER(S): Kevin

Kerber, MD; Charles Tegeler, MD; Lauren Nicola, MD; Melissa Chen, MD; Jacob Ormsby, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Clinical activity CA009 *Greet patient, provide gowning, ensure appropriate medical records are available* was reduced from 3 minutes to 1 minute for 93893 (as 93893 typically performed on the same date of service as an E/M).

Clinical activity CA010 *obtain vital signs* was reduced from 3 minutes to 0 minutes for 93893 (as 93893 is typically performed on the same date of service as an EM).

Clinical activity CA031 *Review examination with interpreting MD/DO* was reduced from 2 minutes to 0 minutes for codes 93886, 93888, 93892, 93893 (as it is not typical to convey the exam results with the interpreting MD/DO).

September 2023

Hyperthermic Intraperitoneal Chemotherapy (HIPEC) – Tab 10

In September 2022, the CPT Editorial Panel created two time-based add-on Category I codes to report hyperthermic intraperitoneal chemotherapy (HIPEC) procedures for CPT 2024. CPT codes 96547 and 96548 were surveyed for the January 2023 RUC meeting. While reviewing the survey data, it was clear to the specialty societies that the instructions were not sufficient as the survey data reflected time estimates that far exceed the time specified in these new time-based code descriptors. The RUC reached the conclusion that the survey data was flawed due to a lack of work definition and guidelines for reporting these time-based codes. As a result, the RUC recommended contractor pricing for 2024 and also recommended that the two codes be referred to the CPT Editorial Panel for additional clarification. At the May 2023 CPT Editorial Panel meeting new guidelines that describe the activities included in the HIPEC procedure were approved and the codes were re-surveyed for the September 2023 RUC meeting using the standard add-on code RUC survey.

96547 Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; first 60 minutes (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 46 surgeons and recommends a work RVU of 6.53 based on the survey 25th percentile, which maintains relativity within the family for this add-on code. The RUC recommends 60 minutes intra-service and total time for this time-based add-on code.

The HIPEC procedure is reported based on the surgeon's total time for both face-to-face and non-face-to-face activities related to the HIPEC procedure, which may include chemotherapy agent selection, confirmation of perfusion equipment settings for chemotherapy agent delivery, additional incision(s) for catheter and temperature probe placement, perfusion supervision and manual agitation of the heated chemotherapy agent in the abdominal cavity during chemotherapy agent dwell time, irrigation of the chemotherapy agent, closure of wounds related to HIPEC, and documentation of the chemotherapy agent and HIPEC procedure in the medical record. The HIPEC procedure does not include the typical preoperative, intraoperative, and postoperative work related to the primary procedure(s) such as peritoneal tumor resection and cytoreduction. Code 96547 is reported for the first 60 minutes of total time and code 96548 is reported for each additional 30 minutes of total time.

To support the recommended work RVU, the RUC compared the surveyed code to key reference service codes 34709 *Placement of extension prosthesis(es) distal to the common iliac artery(ies) or proximal to the renal artery(ies) for endovascular repair of infrarenal abdominal aortic or iliac aneurysm, false aneurysm, dissection, penetrating ulcer, including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, and treatment zone angioplasty/stenting, when performed, per vessel treated (List separately in addition to code for primary procedure)* (work RVU = 6.50, 60 minutes intra-service and total time) and 34833 *Open iliac artery exposure with creation of conduit for delivery of endovascular prosthesis or for establishment of cardiopulmonary bypass, by abdominal or retroperitoneal incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 8.16, 72 minutes intra-service and total time). Key reference code and MPC code, 34709, is a favorable comparator given that both codes typically involve the same amount of time and both also include preoperative planning, intraoperative maneuvers and introduction/removal of additional devices, and

postoperative documentation of the add-on work. Overall, the intensity and complexity of both procedures are similar. The surveyed code is valued appropriately lower than the other key reference service 34833 given that the intra-service and total time are lower.

For further support, the RUC compared the surveyed code to an additional MPC code, 34715 *Open axillary/subclavian artery exposure for delivery of endovascular prosthesis by infraclavicular or supraclavicular incision, unilateral (List separately in addition to code for primary procedure)* (work RVU = 6.00, 60 minutes intra-service and total time). The surveyed code is appropriately valued slightly higher as the HIPEC procedure includes intraoperative treatment of microscopic tumors using a heated chemotherapeutic agent which is significantly more complex and intense than the exposure and closure of a vessel (ie, no treatment) as described by 34715. **Therefore, the RUC recommends a work RVU of 6.53 for CPT code 96547.**

96548 Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; each additional 30 minutes (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 46 surgeons and recommends a work RVU of 3.00 based on the survey 25th percentile, which maintains relativity within the family for this add-on code. The RUC recommends 30 minutes intra-service and total time for this add-on code. The HIPEC procedure generally lasts between 60-120 minutes. Therefore, it is expected that 1-2 units of this add-on code will be reported when necessary.

The HIPEC procedure is reported based on the surgeon's total time for both face-to-face and non-face-to-face activities related to the HIPEC procedure. Code 96547 is reported for the first 60 minutes of total time and code 96548 is reported for each additional 30 minutes of total time.

To support the recommended work RVU, the RUC compared the surveyed code to key reference service codes 19294 *Preparation of tumor cavity, with placement of a radiation therapy applicator for intraoperative radiation therapy (IORT) concurrent with partial mastectomy (List separately in addition to code for primary procedure)* (work RVU = 3.00, 40 minutes intra-service and total time) and 44701 *Intraoperative colonic lavage (List separately in addition to code for primary procedure)* (work RVU = 3.10, 35 minutes intra-service and total time). The survey respondents found that the surveyed code was overall more intense/complex than both key reference services. For example, key reference service code 19294 describes preparation of a post-mastectomy cavity to receive a radiation treatment applicator that is placed by a radiation oncologist. This involves additional dissection of the cavity and then suturing the applicator in place. Neither of these activities are as intense or complex as intra-abdominal perfusion, manipulation, and removal of a heated chemotherapeutic agent in an effort to destroy microscopic peritoneal tumors as described by the surveyed code. Further, key reference service code 44701 is similar to the surveyed code as both services are "flushing" an organ (colon and peritoneum, respectively). However, the intensity and complexity for intra-abdominal perfusion, manipulation, and removal of a heated chemotherapeutic agent, is significantly greater for the surveyed code.

For additional support, the RUC compared the surveyed code to MPC code 36476 *Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (List separately in addition to code for primary procedure)* (work RVU = 2.65, 30 minutes intra-service and total time). The surveyed code is more intense and complex and is valued appropriately higher than the MPC code 36476 which describes a percutaneous office-based treatment for varicose veins. **The RUC recommends a work RVU of 3.00 for CPT code 96548.**

Practice Expense

The RUC recommends no direct practice expense inputs for CPT codes 96547 and 96548 as they are facility-only add-on services.

New Technology

CPT codes 96547 and 96548 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p>Hydration, Therapeutic, Prophylactic, Diagnostic Injections and Infusions, and Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration Other Injection and Infusion Services</p> <p>▲ 96446 <i>Chemotherapy administration into the peritoneal cavity via indwelling implanted port or catheter</i> <i>(For intraoperative hyperthermic intraperitoneal chemotherapy [HIPEC], see 96547, 96548)</i></p> <p>96542 <i>Chemotherapy injection, subarachnoid or intraventricular via subcutaneous reservoir, single or multiple agents</i> <i>(For radioactive isotope therapy, use 79005)</i></p> <p><u>Codes 96547, 96548 describe the hyperthermic intraperitoneal chemotherapy (HIPEC) procedure that includes intraoperative perfusion of a heated chemotherapy agent into the abdominal cavity through catheters. The HIPEC procedure is distinct from the primary procedure and may include chemotherapy agent selection, confirmation of perfusion equipment settings for chemotherapy agent delivery, additional incision(s) for catheter and temperature probe placement, perfusion supervision and manual agitation of the heated chemotherapy agent in the abdominal cavity during chemotherapy agent dwell time, irrigation of the chemotherapy agent, closure of wounds related to HIPEC, and documentation of the chemotherapy agent and HIPEC procedure in the medical record. Codes 96547, 96548 are add-on codes and do not include the typical preoperative, intraoperative, and postoperative work related to the primary procedure. Code 96547 is reported for the first 60 minutes of the HIPEC procedure and 96548 is reported for each additional 30 minutes.</u></p>

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two time-based add-on Category I codes, 96547 and 96548, were approved by the CPT Editorial Panel at the September 2022 meeting for reporting the work involved in performing hyperthermic intraperitoneal chemotherapy (HIPEC). Since the standard ZZZ code survey lacks a definition of work (unlike the XXX and global code survey instruments), the surveying specialties requested the inclusion of a description of intraservice work in Question 2, which pertains to the intraservice time estimate. However, during the Research Subcommittee discussion, it was decided that a customized ZZZ survey template would be created that would include additional instructions defining and adding fields for collecting pre-, intra-, and post-time for the add-on codes. Consequently, the time estimate would be divided into three categories as shown below.

Background for Question 2: Surgery (ZZZ global period)

Pre-service period

Pre-operative work, *if applicable*, may include additional work **not included in the primary procedure**, such as breaking scrub, preparing needed equipment for the additional procedure, and dressing and scrubbing for the additional procedure.

Intra-service period

The intra-service period includes all “skin-to-skin” work that is a necessary part of the **add-on** procedure.

Post-service period

Post-operative work, *if applicable*, may include additional documentation of the **add-on** procedure.

Question 2

How much of your own time is required per patient treated for each of the following steps in patient care related to this procedure? It is important to be as precise as possible. For example, indicate 3 or 6 minutes instead of rounding to 5 minutes or indicate 14 or 17 minutes instead of rounding to 15 minutes. Indicate your time for the survey code on the front cover. (Refer to definitions above.)

Note: Do not include time for work related to the primary procedure that is separately reportable.

Day of procedure

Pre-service time (*if applicable*):

Intra-service "skin-to-skin" time:

Post-service time (*if applicable*):

Survey code

_____ minutes

_____ minutes

_____ minutes

Unfortunately, upon reviewing the survey data, it became evident that the survey instructions might have been confusing, as the data showed time estimates that greatly surpassed the time specified in the new descriptors for the time-based codes.

The RUC reached the conclusion that the survey data was flawed due to a lack of work definition and guidelines for reporting the time-based codes. As a result, the RUC recommended that the two new codes be referred to the CPT Editorial Panel for additional clarification and subsequently be surveyed again during the 2025 CPT cycle. In the meantime, for the calendar year 2024, the RUC recommended Contractor Pricing.

A code change application was submitted by the societies with the aim of incorporating introductory reporting guidelines for the two codes that accurately described the work associated with the HIPEC procedure and provided clear instructions on reporting the codes based on time. These guidelines (shown below) were approved during the May 2023 CPT Panel meeting and were included in the standard ZZZ survey instrument.

Codes 96547, 96548 describe the hyperthermic intraperitoneal chemotherapy (HIPEC); procedure that includes intraoperative perfusion of a heated chemotherapy agent into the abdominal cavity through catheters. The HIPEC procedure is distinct from the primary procedure and may include chemotherapy agent selection, confirmation of

perfusion equipment settings for chemotherapy agent delivery, additional incision(s) for catheter and temperature probe placement, perfusion supervision and manual agitation of the heated chemotherapy agent in the abdominal cavity during chemotherapy agent dwell time, irrigation of the chemotherapy agent, closure of wounds related to HIPEC, and documentation of the chemotherapy agent and HIPEC procedure in the medical record. Codes 96547, 96548 are add-on codes and do not include the typical preoperative, intraoperative, and postoperative work related to the primary procedure. Code 96547 is reported for the first 60 minutes of the HIPEC procedure and 96548 is reported for each additional 30 minutes.

These new introductory guidelines have seemingly provided clarification on the accurate reporting of codes 96547 and 96548, as a substantial majority of responses regarding the time estimate align with the specified code descriptor time.

Recommendation – 96547

We recommend the survey 25th pctl work RVU of 6.53 and intraservice time of 60 minutes for code 96547.

Comparison to Key Reference Code 34709

Survey code 96547 compares well to reference code 34709. Both codes include: 1) preoperative planning; 2) intraoperative maneuvers and introduction/removal of additional devices; and 3) postoperative documentation of the add-on work. The intensity and complexity of both procedures are similar.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 96547 is an add-on code that is reported with one or more of the following codes as indicated in CPT: 38100, 38101, 38102, 38120, 43611, 43620, 43621, 43622, 43631, 43632, 43633, 43634, 44010, 44015, 44110, 44111, 44120, 44121, 44125, 44130, 44139, 44140, 44141, 44143, 44144, 44145, 44146, 44147, 44150, 44151, 44155, 44156, 44157, 44158, 44160, 44202, 44203, 44204, 44207, 44213, 44227, 47001, 47100, 48140, 48145, 48152, 48155, 49000, 49010, 49320, 58200, 58210, 58575, 58940, 58943, 58950, 58951, 58952, 58953, 58954, 58956, 58958, 58960. There is no overlap in work between the primary code(s) and 9X034 and MPPR does not apply to 96547.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96549 or primary procedure code with modifier 22 appended

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

Two time-based add-on Category I codes, 96547 and 96548, were approved by the CPT Editorial Panel at the September 2022 meeting for reporting the work involved in performing hyperthermic intraperitoneal chemotherapy (HIPEC). Since the standard ZZZ code survey lacks a definition of work (unlike the XXX and global code survey instruments), the surveying specialties requested the inclusion of a description of intraservice work in Question 2, which pertains to the

intraservice time estimate. However, during the Research Subcommittee discussion, it was decided that a customized ZZZ survey template would be created that would include additional instructions defining and adding fields for collecting pre-, intra-, and post-time for the add-on codes. Consequently, the time estimate would be divided into three categories as shown below.

Background for Question 2: Surgery (ZZZ global period)

Pre-service period

Pre-operative work, *if applicable*, may include additional work **not included in the primary procedure**, such as breaking scrub, preparing needed equipment for the additional procedure, and dressing and scrubbing for the additional procedure.

Intra-service period

The intra-service period includes all “skin-to-skin” work that is a necessary part of the **add-on** procedure.

Post-service period

Post-operative work, *if applicable*, may include additional documentation of the **add-on** procedure.

Question 2

How much of your own time is required per patient treated for each of the following steps in patient care related to this procedure? It is important to be as precise as possible. For example, indicate 3 or 6 minutes instead of rounding to 5 minutes or indicate 14 or 17 minutes instead of rounding to 15 minutes. Indicate your time for the survey code on the front cover. (Refer to definitions above.)

Note: Do not include time for work related to the primary procedure that is separately reportable.

Day of procedure

Pre-service time (*if applicable*):
 Intra-service "skin-to-skin" time:
 Post-service time (*if applicable*):

Survey code

_____ minutes
 _____ minutes
 _____ minutes

Unfortunately, upon reviewing the survey data, it became evident that the survey instructions might have been confusing, as the data showed time estimates that greatly surpassed the time specified in the new descriptors for the time-based codes.

The RUC reached the conclusion that the survey data was flawed due to a lack of work definition and guidelines for reporting the time-based codes. As a result, the RUC recommended that the two new codes be referred to the CPT Editorial Panel for additional clarification and subsequently be surveyed again during the 2025 CPT cycle. In the meantime, for the calendar year 2024, the RUC recommended Contractor Pricing.

A code change application was submitted by the societies with the aim of incorporating introductory reporting guidelines for the two codes that accurately described the work associated with the HIPEC procedure and provided clear instructions on reporting the codes based on time. These guidelines (shown below) were approved during the May 2023 CPT Panel meeting and were included in the standard ZZZ survey instrument.

Codes 96547, 96548 describe the hyperthermic intraperitoneal chemotherapy (HIPEC); procedure that includes intraoperative perfusion of a heated chemotherapy agent into the abdominal cavity through catheters. The HIPEC procedure is distinct from the primary procedure and may include chemotherapy agent selection, confirmation of perfusion equipment settings for chemotherapy agent delivery, additional incision(s) for catheter and temperature probe placement, perfusion supervision and manual agitation of the heated chemotherapy agent in the abdominal cavity during chemotherapy agent dwell time, irrigation of the chemotherapy agent, closure of wounds related to HIPEC, and documentation of the chemotherapy agent and HIPEC procedure in the medical record. Codes 96547, 96548 are add-on codes and do not include the typical preoperative, intraoperative, and postoperative work related to the primary procedure. Code 96547 is reported for the first 60 minutes of the HIPEC procedure and 96548 is reported for each additional 30 minutes.

These new introductory guidelines have seemingly provided clarification on the accurate reporting of codes 96547 and 96548, as a substantial majority of responses regarding the time estimate align with the specified code descriptor time.

Recommendation – 96548

We recommend the survey 25th pctl work RVU of 3.00 and intraservice time of 30 minutes for code 96548.

Comparison to Key Reference Code 19294

Reference code 19294 describes preparation of a post-mastectomy cavity to receive a radiation treatment applicator that is placed by a radiologist. This involves additional dissection of the cavity and then suturing the applicator in place. Neither of these tedious activities are as intense or complex as intra-abdominal perfusion, manipulation, and removal of a heated chemotherapeutic agent in an effort to destroy microscopic peritoneal tumors as described by 96548.

Comparison to Key Reference Code 44701

Reference code 44701 is similar to 96548 as both services are "flushing" an organ (colon for 44701 and peritoneum for 96548). However, the intensity and complexity for intra-abdominal perfusion, manipulation, and removal of a heated chemotherapeutic agent is greater for 96548.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Code 96548 is an add-on code that is reported with one or more of the following codes as indicated in CPT: 38100, 38101, 38102, 38120, 43611, 43620, 43621, 43622, 43631, 43632, 43633, 43634, 44010, 44015, 44110, 44111, 44120, 44121, 44125, 44130, 44139, 44140, 44141, 44143, 44144, 44145, 44146, 44147, 44150, 44151, 44155, 44156, 44157, 44158, 44160, 44202, 44203, 44204, 44207, 44213, 44227, 47001, 47100, 48140, 48145, 48152, 48155, 49000, 49010, 49320, 58200, 58210, 58575, 58940, 58943, 58950, 58951, 58952, 58953, 58954, 58956, 58958, 58960. There is no overlap in work between the primary code(s) and 9X035 and MPPR does not apply to 96548.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 96549 or primary procedure code with modifier 22 appended

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Date: August 28, 2023

To: Scott Manaker, MD
Chair, AMA/RUC PE Subcommittee

From: Charles Mabry, MD, FACS; ACS RUC Advisor
Jon Hathaway, MD, PhD, FACS; ACOG RUC Advisor
Kelly Tyler, MD, FACS; ASCRS RUC Advisor

Subject: Tab 10, Hyperthermic Intraperitoneal Chemotherapy (HIPEC)

Tab 10 of the RUC agenda includes the facility-only ZZZ-global codes 96547 and 96548. We recommend no direct practice expense inputs for these two codes.

Thank you for your consideration of this information.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Referral: CPT/RUC Telemedicine Office Workgroup

September 2023

Telemedicine Evaluation and Management (E/M) Services – Tab 11

During the COVID-19 public health emergency (PHE), there was a need to immediately provide office evaluation and management (E/M) visits via telemedicine. For Medicare patients, the office visits CPT codes 99202-99215 were reported with modifier 95 *Synchronous Telemedicine Service Rendered via a Real-Time Interactive Audio and Video Telecommunications System* appended to indicate the encounter was performed via telemedicine. Additionally, CPT codes 99441-99443 for telephone E/M services were reported for both new and established patients at the same Medicare payment rate analogous to in-person office E/M visits.

In June 2022, the joint CPT/RUC Telemedicine Office Visits Workgroup was formed to assess available data and recommend the appropriate next steps to determine accurate coding and valuation, as needed, for office E/M visits performed via audio-video and audio-only modalities, beyond the PHE. The Workgroup utilized the following guiding principles:

- Allow enhanced patient access and improve care by use of clear service descriptions and use of a resource-based valuation methodology
- Administratively simple
- Reduce the need for audits
- Provide a single recognized source of coding for telemedicine and audio-only office visits
- There is no direct goal for payment redistribution between specialties

The Workgroup gathered feedback via survey from 70 specialty societies for office visits performed via telemedicine to determine the next steps. Most respondents indicated they use clinical staff in the provision of telemedicine services. Another survey was also conducted to gather information about services provided via audio-only. This information allowed the Workgroup to conclude that separate audio-video and audio-only telemedicine services codes should be developed. The Workgroup submitted a CPT Code Change Application (CCA) for the February 2023 CPT meeting.

In February 2023, the CPT Editorial Panel added a new Evaluation and Management (E/M) subsection for Telemedicine Services. The Panel added 17 codes for reporting telemedicine E/M services as well as new guidelines and notes throughout the new Telemedicine Services subsection. The Panel also deleted three codes (99441-99443) for reporting telephone E/M services and the related guidelines.

Sixteen of the telemedicine E/M codes include eight codes for synchronous audio-video services and eight codes for synchronous audio-only services. Each of these code sets is further split into four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the date of the encounter, the same as reporting for the in-person office visit codes. For each set of four codes, there is a code that may be reported for a straightforward, low, moderate and high level of MDM. These codes are patterned after the in-person office visit codes, but there is no code that mirrors 99211 because all of the telemedicine codes require the physician or qualified healthcare provider (QHP) to meet with the patient (99211 does not require the presence of a physician or QHP).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

In addition, the CPT Editorial Panel established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion* and is intended to replace that code. The code does not require video technology and is expected to be patient-initiated. It must involve 5-10 minutes of medical discussion. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or the soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then the time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M. Similarly, CPT codes 9X083 or 9X087 are intended to be reported in lieu of HCPCS code G2252, *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion.*

Survey

In April 2023, the RUC noted that the survey instrument did not include the time (when time is used for code selection) in the new telemedicine E/M services descriptors, nor the E/M services displayed on the reference service list (RSL). The RUC made interim recommendations and conducted a new survey for September 2023, which included the minimum required times in the code descriptors, mirroring the office visits (99202-99205, 99212-99215) as approved by the CPT Editorial Panel in May 2023. Also, additional specialties who perform these services participated in the second round of this survey.

To ensure that survey respondents understood the new CPT guidelines and descriptors and the impact that these changes may have on their work, the RUC survey asked that each respondent carefully read the new descriptors/guidelines and attest that they had read the information. The survey respondents understood that code selection will be based on either MDM or time on the date of the patient encounter. When codes are reported based on time, there are specific time requirements within each code descriptor (e.g., 15 minutes must be met or exceeded for 9X075).

The CPT time describes the total time devoted to the visit on the day of service (i.e., the sum of synchronous and asynchronous physician or QHP time that day). Importantly, however, the work value for the code is based on the entire time spent by the physician or QHP from three days before the visit to seven days following the visit (that is not described by a separately reportable service). The survey clarified this distinction throughout the survey. The Research Subcommittee approved capturing the time and work of three days prior and seven days following the telemedicine visits in the survey instrument, which was also used for the survey of in-person office visit services.

The telemedicine E/M services were surveyed by 35 specialty societies and other health care organizations whose physicians and QHPs perform these services. The survey estimates for physician work were similar across all categories of individuals surveyed (medicine, surgery and QHP). The RUC noted that the 25th percentile and median work RVUs reported in the survey were identical for the audio-video telemedicine services, indicating a high degree of consistency in the responses. **The RUC concluded that, in general, in person office visits and audio-video office visits are similar in physician work. Additionally, the RUC concluded that the audio-video and in-person office visits require more physician work than the audio-only office visits.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Physical Exam

Similar to the in-person office E/M visit codes, the new telemedicine E/M codes only require a medically appropriate history and/or examination. The RUC had an extensive discussion about how a medically appropriate physical examination could be performed via an audio-video or audio-only. To the extent possible via the modality, a physical exam is commonly performed during the telemedicine visit. When MDM is being used for E/M code level selection, code selection is based on the complexity of the problem or problems being addressed, the data being analyzed, points that are considered when making decisions and the risk of the treatment decisions are considered. Alternatively, total physician or QHP time on the date of the encounter is used for code selection.

Most of what a physician or QHP does in terms of chronic management of disease can be accomplished without a traditional physical examination. Some examples of a physical exam performed via telemedicine may be assessing the patient's appearance, gauging if the patient is in any distress, appearance of the patient's skin (pale or well-perfused), clarity of patient's speech, determining if the patient is having trouble breathing, assessing if the patient is confused, hearing the patient's cough and viewing the patient's social/living situation. Additionally, a more focused physical exam in which the patient can assist the physician or QHP could be palpation or percussion of certain parts of the body, range of motion of painful joints, focusing the video capture on a relevant part of the body (e.g., skin lesions, conjunctiva, the back of the throat) and aiding with a neurological exam (e.g. finger to nose testing, or having a family member test the skin sensation of certain body parts).

Audio-Video – New Patient

9X075 Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

The RUC reviewed the survey results from 152 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.93 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes total time.

The RUC compared the surveyed code to the top two key reference services and MPC codes 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time) and 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time). The RUC determined the 9X075 was equivalent in physician work to the top key reference code 99202.

For additional support, the RUC referenced MPC code 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time). **The RUC recommends a work RVU of 0.93 for CPT code 9X075.**

9X076 Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

The RUC reviewed the survey results from 175 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 1.60 appropriately accounts for the work required to perform this service. The RUC recommends 36 minutes total time.

The RUC compared the surveyed code to the top two key reference services and MPC codes 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time) and 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time). The RUC determined that the physician work for 9X076 was equivalent to the top key reference code 99203.

For additional support, the RUC referenced MPC code 92004 *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits* (work RVU = 1.82, 25 minutes intra-service time and 40 minutes total time). **The RUC recommends a work RVU of 1.60 for CPT code 9X076.**

9X077 Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

The RUC reviewed the survey results from 187 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 2.60 appropriately accounts for the work required to perform this service. The RUC recommends 58 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time) and 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time). The RUC determined the surveyed code was equivalent to the top key reference code 99204, as both require the same work and similar time, 58 and 60 minutes total time, respectively.

For additional support, the RUC referenced MPC code 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (work RVU = 2.80 and 70 minutes total time). The surveyed code is appropriately lower because it is less intense/complex and requires less physician work and time to perform. **The RUC recommends a work RVU of 2.60 for CPT code 9X077.**

9X078 Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

The RUC reviewed the survey results from 172 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 3.50 appropriately accounts for the work required to perform this service. The RUC recommends 80 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.* (work RVU = 3.50 and 88 minutes total time) and 99483 *Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination, Medical decision making of moderate or high complexity, Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), Medication reconciliation and review for high-risk medications, Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), Evaluation of safety (eg, home), including motor vehicle operation, Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, Development, updating or revision, or review of an Advance Care Plan, Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 60 minutes of total time is spent on the date of the encounter.* (work RVU = 3.84 and 86 minutes total time). The RUC determined that the physician work for 9X078 was equivalent to the top key reference code 99205.

For additional support, the RUC referenced MPC codes 99306 *Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 3.50 and 80 minutes total time), which requires the same intensity/complexity, physician work and time to perform. **The RUC recommends a work RVU of 3.50 for CPT code 9X078.**

Audio-Video – Established Patient

9X079 Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

The RUC reviewed the survey results from 307 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 0.70 appropriately accounts for the work required to perform this service. The RUC recommends 16 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time). The RUC determined that the surveyed code was equivalent to the top key reference code 99212 as both require the same work and time.

For additional support, the RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 0.70 for CPT code 9X079.**

9X080 Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

The RUC reviewed the survey results from 357 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 1.30 appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time). The RUC determined that the surveyed code was equivalent to the top key reference code 99213 as both require the same work and time.

For additional support, the RUC referenced MPC codes 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time) and 70491 *Computed tomography, soft tissue neck; with contrast material(s)* (work RVU = 1.38, 17 minutes intra-service time and 27 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 1.30 for CPT code 9X080.**

9X081 Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

The RUC reviewed the survey results from 369 physicians and qualified health care professionals and determined that the survey 25th percentile and median work RVU of 1.92 appropriately accounts for the work required to perform this service. The RUC recommends 44 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded* (work RVU = 1.30 and 30 minutes total time). The RUC determined that the physician work for 9X081 was equivalent to the top key reference code 99214.

For additional support, the RUC referenced MPC code 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time) and 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29 and 35 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 1.92 for CPT code 9X081.**

9X082 Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.

The RUC reviewed the survey results from 312 physicians and qualified health care professionals and determined that a work RVU of 2.60 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes total time. The RUC recommends a direct crosswalk to 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time). These services require the same intensity/complexity, work and time to perform. The RUC determined a crosswalk was more appropriate than the survey 25th percentile work RVU of 2.80 since the total time was 10 minutes less than the top key reference service 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (work RVU = 2.80 and 70 minutes total time).

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced code 75561 *Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences*; (work RVU = 2.60, 45 minutes intra-service time and 65 minutes total time), which requires the same physician work and similar time to perform. **The RUC recommends a work RVU of 2.60 for CPT code 9X082.**

Audio-Only – New Patient

9X083 Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

The RUC reviewed the survey results from 88 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 0.90 appropriately accounts for the work required to perform this service. The RUC recommends 25 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99202 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.* (work RVU = 0.93 and 20 minutes total time) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time). The RUC determined that the 25th percentile work RVU of 0.90 is appropriate to validate that this audio-only telemedicine visit requires slightly less work compared to the top key reference code office visit 99202.

For additional support, the RUC referenced MPC code 91111 *Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus with interpretation and report* (work RVU = 0.90 and 25 minutes total time), which requires the same physician work and time to perform. **The RUC recommends a work RVU of 0.90 for CPT code 9X083.**

9X084 Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

The RUC reviewed the survey results from 92 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.55 appropriately accounts for the work required to perform this service. The RUC recommends 35 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99203 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.* (work RVU = 1.60 and 35 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically*

appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded (work RVU = 1.30 and 30 minutes total time). The RUC determined that the survey 25th percentile work RVU of 1.55 is appropriate to validate that this audio-only telemedicine visit requires slightly less work compared to the top key reference code office visit 99203.

For additional support, the RUC referenced MPC code 99304 *Initial nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.* (work RVU = 1.50 and 36 minutes total time), which requires similar physician work and time to perform. **The RUC recommends a work RVU of 1.55 for CPT code 9X084.**

9X085 Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

The RUC reviewed the survey results from 98 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 2.42 appropriately accounts for the work required to perform this service. The RUC recommends 51 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99204 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.* (work RVU = 2.60 and 60 minutes total time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time). The RUC noted that the surveyed code requires 9 minutes less than the office visit code 99204 and thus is appropriately valued lower.

For additional support, the RUC referenced MPC code 93312 *Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report* (work RVU = 2.30, 30 minutes intra-service time and 55 minutes total time), which requires less physician work. **The RUC recommends a work RVU of 2.42 for CPT code 9X085.**

9X086 Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

The RUC reviewed the survey results from 93 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 3.20 appropriately accounts for the work required to perform this service. The RUC recommends 70 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99205 *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.* (work RVU = 3.50 and 88 minutes total time) and 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (work RVU = 2.80 and 70 minutes total time). The RUC noted that the surveyed code requires 18 minutes less than the office visit code 99205 and thus is appropriately valued lower.

For additional support, the RUC referenced MPC codes 12052 *Repair, intermediate, wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm* (work RVU = 2.87, 30 minutes intra-service time and 70 minutes total time) and 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes* (work RVU = 4.50 and 70 minutes total time), which appropriately brackets the surveyed code. **The RUC recommends a work RVU of 3.20 for CPT code 9X086.**

Audio-Only – Established Patient

9X087 Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

The RUC reviewed the survey results from 262 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 0.65 appropriately accounts for the work required to perform this service. The RUC recommends 15 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time) and 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18 and 7 minutes total time). The RUC determined that the 25th percentile work RVU of 0.65 is appropriate to validate that this audio-only telemedicine visit requires slightly less work compared to the top key reference code office visit 99212.

For additional support, the RUC referenced MPC codes 74220 *Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study* (work RVU = 0.60, 10 minutes intra-service time and 16 minutes total time) and 78306 *Bone and/or joint imaging; whole body* (work RVU = 0.86, 10 minutes intra-service time and 20 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 0.65 for CPT code 9X087.**

9X088 Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

The RUC reviewed the survey results from 288 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.20 appropriately accounts for the work required to perform this service. The RUC recommends 30 minutes total time.

The RUC compared the surveyed code to the top two key reference services MPC codes 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30 and 30 minutes total time) and 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time). The RUC determined that the 25th percentile work RVU of 1.20 is appropriate to validate that this audio-only telemedicine visit requires slightly less work compared to the top key reference code office visit 99213.

For additional support, the RUC referenced MPC codes 95819 *Electroencephalogram (EEG); including recording awake and asleep* (work RVU = 1.08, 15 minutes intra-service time and 26 minutes total time) and 73721 *Magnetic resonance (eg, proton) imaging, any joint of lower extremity; without contrast material* (work RVU = 1.35, 20 minutes intra-service time and 30 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 1.20 for CPT code 9X088.**

9X089 Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

The RUC reviewed the survey results from 270 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 1.75 appropriately accounts for the work required to perform this service. The RUC recommends 41 minutes total time.

The RUC compared the surveyed code to the top key reference service MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time) and 99213 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.* (work RVU = 1.30 and 30 minutes total time). The RUC noted that the surveyed code requires 6 minutes less than the office visit code 99214 and thus is appropriately valued lower.

For additional support, the RUC referenced MPC codes 74176 *Computed tomography, abdomen and pelvis; without contrast material* (work RVU = 1.74, 22 minutes intra-service time and 32 minutes total time) and 99460 *Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant* (work RVU = 1.92, 30 minutes intra-service time and 50 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 1.75 for CPT code 9X089.**

9X090 Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

The RUC reviewed the survey results from 217 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 2.60 appropriately accounts for the work required to perform this service. The RUC recommends 60 minutes total time.

The RUC compared the surveyed code to the top key reference service MPC codes 99215 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded* (work RVU = 2.80 and 70 minutes total time) and 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time). The RUC noted that the surveyed code requires 10 minutes less than the office visit code 99215 and thus is appropriately valued lower.

For additional support, the RUC referenced code 75561 *Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences;* (work RVU = 2.60, 45 minutes intra-service time and 65 minutes total time), which requires the same physician work and similar time to perform. **The RUC recommends a work RVU of 2.60 for CPT code 9X090.**

Virtual Check-In

9X091 Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion

The RUC reviewed the survey results from 131 physicians and qualified health care professionals and determined that the survey 25th percentile work RVU of 0.30 appropriately accounts for the work required to perform this service. The RUC recommends 14 minutes total time.

The RUC compared the surveyed code to the key reference service MPC code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

minutes total time) and determined that the surveyed code may require a similar amount of time to perform, but it is much less intense and complex, thus valued lower.

For additional support, the RUC referenced MPC codes 93010 *Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only* (work RVU = 0.17, 3 minutes intra-service time and 6 minutes total time) and 97530 *Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes* (work RVU = 0.44, 15 minutes intra-service time and 19 minutes total time), which appropriately bracket the surveyed code. **The RUC recommends a work RVU of 0.30 for CPT code 9X091.**

Practice Expense

The Practice Expense Subcommittee reviewed and affirmed the direct practice inputs from May 2023 without modification. The specialty societies surveyed the clinical activities for the telemedicine E/M services and received 182 responses in which 60% of the respondents indicated that the use of clinical staff in the provision of telemedicine E/M services was typical (>50%). The survey directed survey respondents to indicate typical clinical time by CPT code and by clinical activity. The survey included the clinical activities currently included in the direct PE inputs for 99202-99215 as well as an opportunity to write in time and specify additional activities for pre-service period, service period and post-service period. For the survey responses that included clinical staff time, the clinical activity medians were computed and then summed to calculate total time.

In April 2023, the Practice Expense Subcommittee approved the direct practice expense inputs as recommended by the specialty societies without modification. The specialty societies detailed their methodology for making some changes to specific clinical activity codes to adapt them for telemedicine. The specialty societies indicated that only specific clinical activities are applicable and edited CA009 *Greet patient, provide gowning, Ensure appropriate medical records are available*, by deleting “greet patient, provide gowning” and CA013 *Prepare room, equipment and supplies Prepare patient for the visit (i.e., check audio and/or visual)*, by deleting “prepare room, equipment and supplies” and adding “prepare patient for the visit (i.e., check audio and/or visual).” The specialty societies explained how they solicited both individual time in each of the clinical activities and total time. The specialty societies also assiduously reviewed each code using the medians for relevant clinical activities and making minor adjustments, so the amount of time for the clinical staff increased appropriately along with the complexity of the medical decision making. In addition, the PE Subcommittee recommends to CMS that a camera and microphone should be considered typical in the computer contained in the indirect overhead expense. The RUC recommends the direct practice expense inputs as submitted by the specialty societies. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

HCPCS Codes

The RUC recommends deletion of G2012 *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion* as this service may be reported using CPT code 9X091 in 2025. The RUC also recommends deletion of G2252 *Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion* as this service may be reported using CPT codes 9X083 or 9X087. **The RUC recommends that CMS delete G2012 and G2252.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Work Neutrality

The RUC's recommendation for these CPT codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

RUC Flag

The RUC recommends that this family of services be reviewed by the Relativity Assessment Workgroup after three years of data are available.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p>Evaluation and Management Office or Other Outpatient Services</p> <p>...</p> <p><u>Telemedicine Services</u></p> <p><u>Telemedicine services are synchronous, real-time, interactive encounters between a physician or other qualified health care professional and a patient utilizing either combined audio-video or audio-only telecommunication. Unless specifically stated in the code descriptor, telemedicine services level selection is based on either the level of MDM or the total time for E/M services performed on the date of the encounter, as defined for each service. Telemedicine services are used in lieu of an in-person service when medically appropriate to address the care of the patient and when the patient and/or family/caregiver agree to this format of care. Telemedicine services are not used to report routine telecommunications related to a previous encounter (eg, to communicate lab results). They may be used for follow-up of a previous encounter when a follow-up E/M service is required in the same manner as in-person E/M services are utilized. For example, telemedicine services may be used for a patient requiring re-assessment for response or complications related to the treatment plan of a previous visit. Except for 9X091, these services do not require a specific time interval from the last in-person or telemedicine visit and may be initiated by a physician or other qualified health care professional as well as by a patient and/or family/caregiver. However, the telemedicine services must be performed on a separate calendar date from another E/M service. When performed on the same date of another E/M service, the elements and time of these services are summed and reported in aggregate, ensuring that any overlapping time is only counted once.</u></p> <p><u>For audio-only telemedicine services for established patients with 5-10 minutes of medical discussion, report brief communication technology service (eg, virtual check-in) code 9X091. Code 9X091 is reported for established patients only. The service is patient initiated and intended to evaluate whether a more extensive visit type is required (eg, an office or other outpatient E/M service [99212, 92213, 99214, 99215]). Video technology is not required. When the patient-initiated check in leads to an E/M service on the same calendar date, and when time is used to select the level of that E/M service, the time from 9X091 may be added to the time of the E/M service for total time on the day of the encounter.</u></p> <p><u>For services that are asynchronous (ie, not live in real time), see Online Digital Evaluation and Management Services (99421, 99422, 99423). Do not report telemedicine services for oversight of clinical staff (eg, chronic care management). Do not count the time performing</u></p>				

telemedicine services towards time performing chronic care management (99437, 99491) or principal care management services (99424, 99425). See Table 2, Telemedicine E/M Office Visits.

For 9X075-9X090, the level of service is selected based on medical decision making (MDM) or total time on the date of the encounter. For audio-only codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, the service must exceed 10 minutes of medical discussion. Code 9X091 describes services for established patients with 5-10 minutes of medical discussion and is based only on the time of medical discussion and not MDM. (See E/M Guidelines). Do not count time establishing the connection or arranging the appointment, even when performed by the physician or other qualified health care professional. Services less than five minutes are not reported.

For audio-only codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, medical discussion is synchronous (real-time) interactive verbal communication and does not include on-line digital communication (except when via a telecommunication technology device for the deaf). MDM has the meaning used in the E/M Guidelines and is a cognitive process by the physician or qualified health care professional.

If during the encounter, audio-video connections are lost and only audio is restored, report the service that accounted for the majority of the time of the interactive portion of the service. Ten minutes of medical discussion or patient observation must be exceeded in order to report the service.

Table 2: Telemedicine E/M Services					
<u>Service</u>	<u>New / Established</u>	<u>Synchronous</u>	<u>Level / Unit Reported</u>	<u>Service Period</u>	<u>Other E/M Notations</u>
<u>Synchronous Audio-video (9X075-9X082)</u>	<u>Both</u>	<u>Yes</u>	<u>MDM or total time on the date of the service. No minimum required time unless level selected by time.</u>	<u>Per single calendar date</u>	<u>Do not report with same day in-person E/M</u>
<u>Synchronous Audio-only (9X083-9X090)</u>	<u>Both</u>	<u>Yes</u>	<u>MDM or total time on the date of the service. Must be more than 10 minutes of medical discussion.</u>	<u>Per single calendar date</u>	<u>Do not report with same day in-person E/M</u>
<u>Brief Synchronous Communication</u>	<u>Established</u>	<u>Yes</u>	<u>A single 5-10-minute medical discussion</u>	<u>Per single calendar date</u>	<u>Not related to E/M in prior 7 days</u>

	<u>Technology Service (9X091)</u>					<u>or leading to E/M next 24 hours</u>
	<u>On-line Digital E/M (99421-99423)</u>	<u>Established</u>	<u>No</u>	<u>Minutes during 7-day period</u>	<u>Per 7 days</u>	<u>Not related to E/M in prior 7 days or leading to E/M next 24 hours</u>
	<u>Interprofessional Telephone/Internet/EHR Consultations (99446-99451)</u>	<u>Both</u>	<u>Not required</u>	<u>Minutes during 7-day period</u>	<u>Per 7 days</u>	<u>No in-person encounter within 14 days.</u>
	<u>Interprofessional Telephone/Internet/EHR Consultations (99452)</u>	<u>Both</u>	<u>Not Required</u>	<u>Minutes during a single day</u>	<u>Per 14 days</u>	<u>No in-person encounter within 14 days.</u>
	<u>Care Management and Remote Treatment Management (99424, 99425, 99437, 99484, 99491)</u>	<u>Established</u>	<u>Not required</u>	<u>Minutes</u>	<u>Per calendar month</u>	<u>Physician or qualified health care professional time excluded on date of other E/M</u>
	<u>All</u>	<u>Same time is not counted twice</u>				

Synchronous Audio-Video Evaluation and Management Services

Codes 9X075, 9X076, 9X077, 9X078, 9X079, 9X080, 9X081, 9X082 may be reported for new or established patients. Synchronous audio and video telecommunication is required. These services may be reported based on total time on the date of the encounter or MDM.

New Patient

#●9X075	C1	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX	0.93
#●9X076	C2	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	1.60
#●9X077	C3	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX	2.60
#●9X078	C4	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX	3.50

<u>Established Patient</u>				
#●9X079	C5	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	XXX	0.70
#●9X080	C6	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX	1.30
#●9X081	C7	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	1.92
#●9X082	C8	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)	XXX	2.60

Synchronous Audio-Only Evaluation and Management Services

Codes 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090 may be reported for new or established patients. They require more than 10 minutes of medical discussion. For services of 5-10 minutes of medical discussion, report 9X091, if appropriate. If 10 minutes of medical discussion is exceeded, total time on the date of the encounter or MDM may be used for code level selection.

New Patient

#●9X083	C9	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX	0.90
#●9X084	C10	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX	1.55
#●9X085	C11	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX	2.42
#●9X086	C12	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX	3.20

<u>Established Patient</u>				
#●9X087	C13	<p>Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.</p> <p>When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.</p>	XXX	0.65
#●9X088	C14	<p>Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion.</p> <p>When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.</p>	XXX	1.20
#●9X089	C15	<p>Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion.</p> <p>When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.</p>	XXX	1.75
#●9X090	C16	<p>Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion.</p> <p>When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.</p> <p>(For services 55 minutes or longer, use prolonged services code 99417)</p> <p>(Do not report 9X087, 9X088, 9X089, 9X090 when using 99374, 99375, 99377, 99378, 99379, 99380 for the same call[s])</p> <p>(Do not report 9X087, 9X088, 9X089, 9X090 for home and outpatient INR monitoring when reporting 93792, 93793)</p> <p>(Do not report 9X087, 9X088, 9X089, 9X090 during the same month with 99487, 99489)</p>	XXX	2.60

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

		(Do not report 9X087, 9X088, 9X089, 9X090 when performed during the service time of 99495, 99496)		
<p><u>Brief Synchronous Communication Technology Service (eg, Virtual Check-In)</u></p> <p><u>Code 9X091 is reported for established patients only. The service is patient initiated and intended to evaluate whether a more extensive visit type is required (eg, an office or other outpatient E/M service [99212, 92213, 99214, 99215]). Video technology is not required. It is of shorter duration than the audio-only services and has other restrictions that are related to the intended use as a “virtual check-in” or triage to determine if another E/M service is necessary. When the patient-initiated check in leads to an E/M service on the same calendar date, and when time is used to select the level of that E/M service, the time from 9X091 may be added to the time of the E/M service for total time on the day of the encounter.</u></p>				
#●9X091	C17	<p>Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion</p> <p>(Do not report 9X091 in conjunction with 9X075-9X090)</p> <p>(Do not report services of less than 5 minutes of medical discussion)</p>	XXX	0.30
DG2012	-	Brief communication technology based service, e.g. virtual check in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion	XXX	(2023 Work RVU = 0.25)
DG2252		Brief communication technology based service, e.g. virtual check in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to an e/m service or procedure within the next 24 hours or soonest available appointment; 11-20 minutes of medical discussion	XXX	(2023 Work RVU = 0.50)

Non-Face-to-Face Services

Telephone Services

Telephone services are non face to face evaluation and management (E/M) services provided to a patient using the telephone by a physician or other qualified health care professional, who may report evaluation and management services. These codes are used to report episodes of patient care initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent E/M service, procedure, and visit. Likewise, if the telephone call refers to an E/M service performed and reported by that individual within the previous seven days (either requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) is considered part of that previous E/M service or procedure. (Do not report 99441-99443, if 99421, 99422, 99423 have been reported by the same provider in the previous seven days for the same problem.)

(For telephone services provided by a qualified nonphysician who may not report evaluation and management services [eg, speech language pathologists, physical therapists, occupational therapists, social workers, dietitians), see 98966-98968)

D99441	-	Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion	XXX	(2023 Work RVU = 0.70)
D99442	-	11-20 minutes of medical discussion	XXX	(2023 Work RVU = 1.30)
D99443	-	21-30 minutes of medical discussion (Do not report 99441-99443 when using 99374-99380 for the same call[s]) (Do not report 99441-99443 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 99441-99443 during the same month with 99487-99489) (Do not report 99441-99443 when performed during the service time of codes 99495 or 99496) <u>(99441, 99442, 99443 have been deleted. To report, see 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, 9X091)</u>	XXX	(2023 Work RVU = 1.92)

Interprofessional Telephone/Internet/Electronic Health Record Consultations

The consultant should

...

Telephone/Internet/electronic health record consultations of less than five minutes should not be reported. Consultant communications with the patient and/or family may be reported using 98966, 98967, 98968, 99421, 99422, 99423, ~~99441, 99442, 99443~~, 9X087, 9X088, 9X089, 9X090, 9X091, and the time related to these services is not used in reporting 99446, 99447, 99448, 99449. Do not report 99358, 99359 for any time within the service period, if reporting 99446, 99447, 99448, 99449, 99451.

Non-Face-to-Face Nonphysician Services

Telephone Services

Telephone services are non-face-to-face assessment and management services provided by a qualified health care professional to a patient using the telephone. These codes are used to report episodes of care by the qualified health care professional initiated by an established patient or guardian of an established patient. If the telephone service ends with a decision to see the patient within 24 hours or the next available urgent visit appointment, the code is not reported; rather the encounter is considered part of the preservice work of the subsequent assessment and management service, procedure, and visit. Likewise, if the telephone call refers to a service performed and reported by the qualified health care professional within the previous seven days (either qualified health care professional requested or unsolicited patient follow-up) or within the postoperative period of the previously completed procedure, then the service(s) are considered part of that previous service or procedure. (Do not report 98966-98968 if reporting 98966-98968 performed in the previous seven days.)

(For telephone services provided by a physician, see 99441, 99442, 99443, 9X087, 9X088, 9X089, 9X090, 9X091)

98966 *Telephone assessment and management service provided by a qualified nonphysician health care professional to an established patient, parent, or guardian not originating from a related assessment and management service provided within the previous 7 days nor leading to an assessment and management service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion*

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X075	Tracking Number C1	Original Specialty Recommended RVU: 0.93
Global Period: XXX	Current Work RVU: 0.93	Presented Recommended RVU: 0.93
		RUC Recommended RVU: 0.93

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of history of present illness (HPI), review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history and visual examination to formulate a differential diagnosis and treatment plan (requiring straightforward medical decision making [MDM]). Discuss treatment plan with patient and family. Provide patient education and respond to questions from patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60

9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

Code Level Review

9X075

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.

When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

There were 152 respondents of whom 84% found the vignette to be typical. This compares to the previous survey where there were 84 respondents of whom 88% found the vignette to be typical. Both the surveys had identical median and 25th percentile RVWs of 0.93. The times for both surveys were identical: 5/15/5/25.

The first key reference service, which was chosen by 105 of the respondents, was 99202, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter*, which has an RVW of 0.93, and times of 2/15/3/20.

When reported based on MDM, both codes require straightforward decision making, and the survey total time was 5 minutes longer for 9X075 than the time for 99202, which supports both the median and 25th percentile RVW. Based on the review of all the survey data,, the consensus of the expert panel is that the survey median RVW is appropriate. The consensus of the expert panel is that the median intraservice time is appropriate because it is identical to the time for 99202.

For 9X075, the expert panel recommends an RVW of 0.93, preservice time of 5 minutes, intraservice time of 15 minutes, post service time of 5 minutes, and a total time of 25 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99202-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code:9X076	Tracking Number C2	Original Specialty Recommended RVU: 1.60
		Presented Recommended RVU: 1.60
Global Period: XXX	Current Work RVU: 1.60	RUC Recommended RVU: 1.60

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated injury.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring low level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30

9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

Code Level Review**9X076**

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making.

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

There were 175 respondents of whom 88% found the vignette to be typical. This compares to the previous survey, which had 98 respondents of whom 93% found the vignette to be typical. Both the surveys had identical median and 25th percentile RVWs of 1.60, and the survey times are 6/25/5/36 as compared to the previous survey times of 5/25/5/35.

The first key reference service, which was chosen by 124 of the respondents, was 99203, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter,* which has an RVW of 1.60 and times of 5/25/5/35.

When reported based on MDM, both codes require low level MDM. The survey median and 25th percentile RVW are equal to 99203, and the total time of 36 minutes is one minute longer than the total time for 99203. The consensus of the expert panel is that the median intraservice time of 25 minutes is appropriate because it is identical to the intraservice time for 99203.

For 9X076, the expert panel recommends an RVW of 1.60, preservice time of 6 minutes, intraservice time of 25 minutes, post service time of 5 minutes, and a total time of 36 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.

- Multiple codes are used to maintain consistency with similar codes.
 Historical precedents.
 Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99203-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

241,299 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99203-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:9X077	Tracking Number C3	Original Specialty Recommended RVU: 2.60
		Presented Recommended RVU: 2.60
Global Period: XXX	Current Work RVU: 2.60	RUC Recommended RVU: 2.60

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring moderate level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15

9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

Code Level Review

9X077

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making.

When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

There were 187 respondents of whom 91% found the vignette to be typical. This compares to the previous survey, which had 135 respondents of whom 96% found the vignette to be typical. Both surveys had identical median and 25th percentile RVWs of 2.60, and the survey times are 10/38/10/58 as compared to the previous survey times of 8/30/6/44.

The first key reference service, which was chosen by 141 of the respondents, was 99204, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter, which has an RVW of 2.60 and times of 10/40/10/60.*

When reported based on MDM, both codes require moderate level MDM. The survey median intraservice and total times in this survey are significantly longer than the times in the previous survey and are each only 2 minutes less than 99204. The expert panel also noted that the WPUT from this survey using the median RVW was 0.045 which is almost the same as the WPUT for 99204, which is 0.043. In addition, the WPUT of 0.045 is less than the WPUT using the RUC recommended RVW of 2.20 (0.050).

Based on the strength of the current survey, the consensus of the expert panel is that the survey median RVW is appropriate and places 9X077 in proper rank order with 99204.

For 9X077, the expert panel recommends an RVW of 2.60, preservice time of 10 minutes, intraservice time of 38 minutes, post service time of 10 minutes, and total time of 58 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

Global Period: XXX	Current Work RVU: 3.50	RUC Recommended RVU: 3.50

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to formulate a differential diagnosis, diagnostic strategy, and treatment plan (requiring high level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased

sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

Code Level Review 9X078

Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making.

When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.

There were 172 respondents, of whom 90% found the vignette to be typical. This compares to the previous survey, which had 117 respondents, of whom 90% found the vignette to be typical. Both surveys had identical median and 25th percentile RVWs of 3.50, and the survey times are 15/50/15/80 as compared to the previous survey times of 10/40/10/60.

The first key reference service, which was chosen by 137 of the respondents, was 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter, with an RVW of 3.50 and times of 14/59/15/88.*

When reported using MDM, both codes require high level MDM. The survey median intraservice time is 9 minutes less than that of 99205 and the total times is 8 minutes less. However, the WPUT is 0.044 as compared to 0.040 for 99205 and 0.050, which is the WPUT using the RUC recommended RVW of 3.00 from the April meeting. Based on the review of all the survey data, the consensus of the expert panel is that the survey median RVW of 3.50 is appropriate and places 9X078 in proper rank order with the other AV E/M telemedicine codes and 99205.

For 9X078, the expert panel recommends an RVW of 3.50, preservice time of 15 minutes, an intraservice time of 50 minutes, a post service time of 15 minutes, and a total time of 80 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99205-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

- Specialty How often?
- Specialty How often?
- Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commerical utilization unknown.

- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?
160,335 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99205-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 90%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: If necessary, review interval correspondence, referral notes, and medical records generated since the last visit. Communicate with other members of the health care team regarding the visit. Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history. Update pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Perform a medically appropriate visual examination. Synthesize the relevant history and visual examination to formulate a differential diagnosis and treatment plan (requiring straightforward MDM). Discuss the treatment plan with patient and family. Provide patient education and respond to questions from the patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates. After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT		Time on the Date of
-----	--	---------------------

Code		Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the

first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X079

*Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making.
When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*

There were 307 respondents of whom 90% found the vignette to be typical. This compares to the previous survey, which had 151 respondents, of whom 92% found the vignette to be typical. Both surveys had identical

Estimate the number of times this service might be provided nationally in a one-year period? 0

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X080	Tracking Number C6	Original Specialty Recommended RVU: 1.30
		Presented Recommended RVU: 1.30
Global Period: XXX	Current Work RVU: 1.30	RUC Recommended RVU: 1.30

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: PRIOR TO VISIT: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring low level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT		Time on the Date of
-----	--	---------------------

Code		Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the

first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X080

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making.

When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

There were 357 respondents, of whom 95% found the vignette to be typical. This compares to the previous survey, which had 189 respondents, of whom 97% found the vignette to be typical. Both surveys had identical

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

CPT Code: 9X081	Tracking Number C7	Original Specialty Recommended RVU: 1.92
		Presented Recommended RVU: 1.92
Global Period: XXX	Current Work RVU: 1.92	RUC Recommended RVU: 1.92

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: PRIOR TO VISIT: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring moderate level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT		Time on the Date of
-----	--	---------------------

Code		Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the

first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X081

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making.

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

There were 369 respondents, of whom 95% found the vignette to be typical. This compares to the previous survey, which had 207 respondents, of whom 98% found the vignette to be typical. Both surveys had identical

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99214-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X082	Tracking Number C8	Original Specialty Recommended RVU: 2.80
Global Period: XXX	Current Work RVU: 2.80	Presented Recommended RVU: 2.80
		RUC Recommended RVU: 2.60

CPT Descriptor: Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: **PRIOR TO VISIT:** Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

DAY OF VISIT: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Perform a medically appropriate visual examination. Synthesize the relevant history, visual examination, and data elements to update differential diagnosis, diagnostic strategy, and treatment plan (requiring high level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

AFTER VISIT: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office

visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with

comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X082

Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making.

When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.

There were 312 respondents, of whom 89% found the vignette to be typical. This compares to the previous survey, which had 171 respondents, of whom 88% found the vignette to be typical. Both surveys had identical median and 25th percentile RVWs of 2.80, and the survey times are 10/40/10/60 as compared to the previous survey times of 10/30/10/50.

The first key reference service, which was chosen by 247 of the respondents, was 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter, with an RVW of 2.80 and times of 10/45/15/70.*

When MDM is used to report these codes, both require high level MDM. The survey median intraservice time was 5 minutes less than that of 99215, and total time was 10 minutes less. The consensus of the expert panel is that the survey times in the resurvey are more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate. The expert panel also noted that the survey WPUT of 0.047, while higher than the WPUT for 99215 (0.040), is less than the WPUT of 0.048 that resulted from the April RUC recommendation of 2.40 RVWs. The consensus of the expert panel is that the that the survey median RVW of 2.80 places 9X082 in proper rank order with the other AV telehealth codes and with 99215.

For 9X082, the expert panel recommends an RVW of 2.80, preservice time of 10 minutes, intraservice time of 40 minutes, post service time of 10 minutes, and total time of 60 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99215-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization is unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,027,175 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99215-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X083	Tracking Number C9	Original Specialty Recommended RVU: 0.93
		Presented Recommended RVU: 0.93
Global Period: XXX	Current Work RVU: 0.93	RUC Recommended RVU: 0.90

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a self-limited problem

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of history of present illness (HPI), review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring straightforward medical decision making [MDM]). Discuss treatment plan with patient and family. Provide patient education and respond to questions from patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30

9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X083

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

There were 88 respondents, of whom 81% found the vignette to be typical. This compares to the previous survey, which had 65 respondents, of whom 86% found the vignette to be typical. Both surveys had identical median RVWs of 0.93. The current survey had a 25th percentile RVW of 0.90, while the previous survey had a 25th percentile RVW of 0.93. The survey times are 5/15/5/25 as compared to the previous survey which had times of 5/15/4/24.

The first key reference service, which was chosen by 55 of the respondents, was 99202, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter, which has an RVW of 0.93 and times of 2/15/3/20.*

When reported using MDM, both codes require a straightforward level of MDM. The consensus of the expert panel is that the survey median RVWs, which were identical, and the survey times, which were practically identical (the current survey had one minute longer total time), support the survey median RVW of 0.93, which is what the RUC recommended in April.

For 9X083, the expert panel recommends an RVW of 0.93, 5 minutes of preservice time, 15 minutes of intraservice time, 5 minutes of post service time, and a total time of 25 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X084	Tracking Number C10	Original Specialty Recommended RVU: 1.60
		Presented Recommended RVU: 1.60
Global Period: XXX	Current Work RVU: 1.60	RUC Recommended RVU: 1.55

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring low level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30

9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X084

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 30 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

There were 92 respondents, of whom 80% found the vignette to be typical. This compared to the previous survey, which had 70 respondents, of whom 91% found the vignette to be typical. The survey median RVW for both surveys is 1.60, the survey 25th percentile RVW is 1.55 as compared to the previous survey 25th percentile of 1.57, and the survey times are 5/25/2/35 as compared to the previous survey times of 5/20/5/30.

The first key reference service, which was chosen by 62 of the respondents, was 99203, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30-44 minutes of total time is spent on the date of the encounter, which has an RVW of 1.60 and times of 5/25/5/35.*

When reported using MDM, both codes require low level MDM. The consensus of the expert panel is that the survey times support the median RVW of 1.60 because the times are identical. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate.

For 9X084, the expert panel recommends an RVW of 1.60, a preservice time of 5 minutes, an intraservice time of 25 minutes, a post service time of 5 minutes, and total time of 35 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99203-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

75,449 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99203-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

SUMMARY OF RECOMMENDATION**

CPT Code: 9X085	Tracking Number C11	Original Specialty Recommended RVU: 2.60
		Presented Recommended RVU: 2.42
Global Period: XXX	Current Work RVU: 2.60	RUC Recommended RVU: 2.42

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Percentage of Survey Respondents who found Vignette to be Typical: 87%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring moderate level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30

9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X085

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 45 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

There were 98 respondents, of whom 87% found the vignette to be typical. This compares to the previous survey, which had 79 respondents, of whom 94% found the vignette to be typical. The survey median RVW is 2.60, and the 25th percentile RVW is 2.42. This compares to the previous survey, which had the same median RVW and a 25th percentile RVW of 2.18. The current survey times are 10/31/10/51 as compared to the previous survey times of 6/28/5/39.

The first key reference service, which was chosen by 66 of the of the respondents, was 99204, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter, which has an RVW of 2.60 and times of 10/40/10/60.*

When reported based on MDM, both codes require moderate level MDM. The median intraservice time is 31 minutes, which is 9 minutes less than that for 99204, and the total time is also 9 minutes less. The consensus of the expert panel is that the survey times in the resurvey are more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate. The intensity/complexity measures and the times support the survey median RVW of 2.60. The resulting WPUT is 0.051, which compares favorably with the WPUT of 0.052 based on the 2.01 the RUC recommended in April.

For 9X085, after consideration at pre-facilitation, the expert panel recommends an RVW of 2.42, preservice time of 10 minutes, intra-service time of 31 minutes, post service time of 10 minutes, and a total time of 51 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99204-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

New

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99204-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X086	Tracking Number C12	Original Specialty Recommended RVU: 3.50
		Presented Recommended RVU: 3.20
Global Period: XXX	Current Work RVU: 3.50	RUC Recommended RVU: 3.20

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review any medical records and data. Query the prescription monitoring program (PMP), health information exchange (HIE), and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring high level of MDM). Discuss the treatment options with patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from patient and/or family. Electronically prescribe all chronic and new medications after verifying preferred pharmacy, making changes as needed based on payer formulary. Arrange for diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

judgment of physician • Estimated risk of malpractice suit with poor outcome

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Telemedicine Codes Rationale for including in the SoR FINAL of 8-24-2023.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30

9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled "survey counts per society & per survey code."

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be "identical to" or "somewhat more" than the KRC, except for the physical effort measure, which was either "identical to" or "somewhat less than." These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert

panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X086

Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 60 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.

There were 93 respondents, of whom 84% found the vignette to be typical. This compares to the previous survey, which had 69 respondents, of whom 91% found the vignette to be typical. The median survey RVW for both surveys is 3.50. The 25th percentile for the current survey is 3.20, and for the previous survey, it was 3.00. The survey times are 12/48/10/70 as compared to the previous survey’s times of 10/38/7/55.

The first key reference service, which was chosen by 65 of the respondents, was 99205, *Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60-74 minutes of total time is spent on the date of the encounter, with an RVW of 3.50 and times of 14/59/15/88.*

When reported based on time, both codes require high level MDM. The survey times are significantly higher than the times from the last survey. Even though the intra-time is 11 minutes less than that of 99205 and the total time is 18 minutes less, the expert panel noted that the WPUT, using the median RVW of 3.50, is 0.050, which is similar to the WPUT for the April RUC recommended RVW of 2.60 at 0.047. The consensus of the expert panel is that the survey median RVW places 9X086 in proper rank order with the other AV and A only codes.

For 9X086, after consideration at pre-facilitation, the expert panel recommends an RVW of 3.20, preservice time of 12 minutes, intra-service time of 48 minutes, post service time of 10 minutes, and total time of 70 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99205-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X087	Tracking Number C13	Original Specialty Recommended RVU: 0.70
		Presented Recommended RVU: 0.70
Global Period: XXX	Current Work RVU: 0.70	RUC Recommended RVU: 0.65

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a self-limited problem.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: If necessary, review interval correspondence, referral notes, and medical records generated since the last visit. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history. Update pertinent components of HPI, review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring straightforward MDM). Discuss the treatment plan with patient and family. Provide patient education and respond to questions from the patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30

9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X087

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

There were 262 respondents, of whom 91% found the vignette to be typical, as compared to the last survey which had 141 respondents, 95% of whom found the vignette to be typical. Both surveys had a median RVW of 0.70. This survey has a 25th percentile RVW of 0.65 while the previous survey had a 25th percentile RVW of 0.70. The current survey times are 3/10/2/15 as compared to the previous survey times of 5/11/3/19.

The key reference service, which was chosen by 176 of the respondents, was 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter, with an RVW of 0.70 and times of 2/11/3/16.*

When reported based on MDM, both codes require straightforward MDM. The expert panel noted that both surveys have identical median RVWs that are the same as 99212, and the current survey total time is one minute less than 99212. The consensus of the expert panel is that the survey supports the median RVW.

For 9X087, the expert panel recommends an RVW of 0.70, preservice time of 3 minutes, intraservice time of 10 minutes, post service time of 2 minutes, and total time of 15 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions:

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring low level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30

9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X088

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and 20 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

There were 288 respondents, of whom 93% found the vignette to be typical. This compares to the previous survey which had 158 respondents, 96% of whom found the vignette to be typical. The survey median RVW is 1.30, and the 25th percentile RVW is 1.20; both are identical to the previous survey. The survey times are 5/20/5/30 as compared to the previous survey times of 5/16/5/26.

The first key reference service, which was chosen by 205 of the respondents, was 99213, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter*, with an RVW of 1.30 and times of 5/20/5/30.

The expert panel noted that the median and 25th percentile RVWs were identical for both surveys and that the times from the current survey equal those of 99213. The consensus of the expert panel is that the survey times in the resurvey are more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate. Additionally, they equal those of 99213 and support the median RVW of 1.30 while placing the code in proper rank order to 99213 and the other AV and A-only codes.

For 9X088, the expert panel recommends an RVW of 1.30, preservice time of 5 minutes, intraservice time of 20 minutes, post service time of 5 minutes, and total time of 30 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 99213-95

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty How often?

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
 If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Commercial utilization unknown

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,359,399
 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Submission in a separate attachment.

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
 Evaluation Management

BETOS Sub-classification:
 Office visit

BETOS Sub-classification Level II:
 Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99213-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring moderate level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)		09/2023			
Presenter(s):	Brad Fox, MD; Phillip E. Rodgers, MD, FAAHPM; Steve Krug, MD, FAAP; Suzanne Berman, MD, FAAP; Richard Wright, MD; Ed Touhy, MD; Patricia Garcia, MD; Lisa Price, MD; Korinne Van Keuren, DNP, APRN, NP-BC, RNFA; Amy Ahasic, MD; Minhajuddin S. Khaja, MD

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these codes sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30

9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X089

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and 30 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

There were 270 respondents, of whom 90% found the vignette to be typical. This compares to the previous survey, which had 144 respondents, of whom 94% found the vignette to be typical. The survey median survey RVW is 1.92, which is identical to the previous survey, and the 25th percentile RVW is 1.75, as compared to the previous survey’s 25th percentile RVW of 1.80. The current survey times are 7/28/6/41 as compared to the previous survey times of 6/23/5/34.

The first key reference service, which was chosen by 194 of the respondents, was 99214, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter, with an RVW of 1.92 and times of 7/30/10/47.*

The expert panel reviewed the data and noted that the intra-time from the current survey was only two minutes less than that of 99214 and the total time was only six minutes less. The consensus of the expert panel is that the survey times in the resurvey are more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate. The expert panel also noted that the WPUT based on the survey is 0.047 as compared to 0.041 for 99214 and 0.053 from the April RUC recommended RVW of 1.80. Based on the review of all the survey data,, the consensus of the expert panel is that the times support the median RVW of 1.92, which places it in proper rank order to the other AV and A-only codes.

For 9X089, after consideration at pre-facilitation, the expert panel recommends an RVW of 1.75, preservice time of 7 minutes, intra-service time of 28 minutes, post service time of 6 minutes, and total time of 41 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X090	Tracking Number C16	Original Specialty Recommended RVU: 2.80
		Presented Recommended RVU: 2.60
Global Period: XXX	Current Work RVU: 2.80	RUC Recommended RVU: 2.60

CPT Descriptor: Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.

(For services 55 minutes or longer, use prolonged services code 99417) (Do not report 9X087, 9X088, 9X089, 9X090 when using 99374, 99375, 99377, 99378, 99379, 99380 for the same call[s]) (Do not report 9X087, 9X088, 9X089, 9X090 for home and outpatient INR monitoring when reporting 93792, 93793) (Do not report 9X087, 9X088, 9X089, 9X090 during the same month with 99487, 99489) (Do not report 9X087, 9X088, 9X089, 9X090 when performed during the service time of 99495, 99496)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Percentage of Survey Respondents who found Vignette to be Typical: 84%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to Visit: Review interval correspondence, referral notes, medical records, and diagnostic data generated since the last visit. Query the PMP, HIE, and other registries, as required. Communicate with other members of the health care team regarding the visit.

Day of Visit: Confirm patient's identity. Review the medical history form completed by the patient as well as the prior clinical note. Obtain a medically appropriate history, including the response to any treatment initiated or continued at the last visit. Update pertinent components of the social history, family history, review of systems, and allergies that have changed since the last visit. Reconcile the medication list. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan (requiring high level of MDM). Discuss treatment options with the patient and family, incorporating their values in creation of the plan. Provide patient education and respond to questions from the patient and/or family. Electronically prescribe medications, making changes as needed based on payer formulary. Arrange diagnostic testing and referral if necessary. Document the encounter in the medical record. In concert with the clinical staff, complete prior authorizations for medications and other orders, when performed. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After Visit: Answer follow-up questions from patient and/or family and respond to treatment failures or complications, or adverse reactions to medications that may occur after the visit. Review and analyze interval testing results. Communicate results and plan modifications with patient and/or family. Respond to queries from the pharmacy regarding changes in medications due to formulary or other issues.

Description of Post-Service Work:

SURVEY DATA

RUC Meeting Date (mm/yyyy)		09/2023			
Presenter(s):	Brad Fox, MD; Phillip E. Rodgers, MD, FAAHPM; Steve Krug, MD, FAAP; Suzanne Berman, MD, FAAP; Richard Wright, MD; Ed Touhy, MD; Patricia Garcia, MD; Lisa Price, MD; Korinne Van Keuren, DNP, APRN, NP-BC, RNFA; Amy Ahasic, MD; Minhajuddin S. Khaja, MD				
Specialty Society(ies):	American Academy of Child and Adolescent Psychiatry (AACAP), American Academy of Neurology (AAN), American Association of Neurological Surgeons (AANS), American Academy of Orthopaedic Surgeons (AAOS), American Academy of Pediatrics (AAP), American Academy of Dermatologists Association (AADA) American Academy of Family Physicians (AAFP) American Academy of Physician Associates (AAPA), American Academy of Physical Medicine and Rehabilitation (AAPM&R), American Academy of Hospice and Palliative Medicine (AAHPM) American Association for Thoracic Surgery (AATS), American College of Cardiology (ACC), American College of Gastroenterology (ACG), American College of Obstetricians and Gynecologists (ACOG), American College of Medical Genetics (ACMG) American College of Physicians (ACP) American College of Surgeons (ACS), American Gastroenterological Association (AGA), American Geriatrics Society (AGS), American Nurses Association (ANA), American Osteopathic Association (AOA) American Psychiatric Association (APA) American Society of Anesthesiologists (ASA), American Society of Colon and Rectal Surgeons (ASCRS - Colon), American Society for Gastrointestinal Endoscopy (ASGE), American Society of Regional Anesthesia and Pain Medicine (ASRA), American Society for Surgery of the Hand (ASSH), American Thoracic Society (ATS), American Urological Association (AUA), American College of Chest Physicians (CHEST) Congress of Neurological Surgeons (CNS), Endocrine Society (ES), North American Neuromodulation Society (NANS), Society of Interventional Radiology (SIR) Society of Thoracic Surgeons (STS), and Society for Vascular Surgery (SVS)

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99215	XXX	2.80	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99214	XXX	1.92	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99214	XXX	1.92	RUC Time	97,525,862

CPT Descriptor 1 Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Medicare Utilization</u>
99204	XXX	2.60	RUC Time	11,933,824

CPT Descriptor 2 Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45-59 minutes of total time is spent on the date of the encounter.

	0%	47%	53%

judgment of physician • Estimated risk of malpractice suit with poor outcome

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40

9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded
9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the

A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X090

Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and 40 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.

There were 217 respondents, of whom 84% found the vignette to be typical. This compares to the previous survey, which had 120 respondents, of whom 85% found the vignette to be typical. The survey median RVW is 2.80, which is identical to the previous survey, and the 25th percentile RVW is 2.60 as compared to the 25th percentile from the previous survey of 2.49. The survey times are 10/40/10/60 as compared to the previous survey times of 9/30/8/47.

The first key reference service, which was chosen by 164 of the respondents, was 99215, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40-54 minutes of total time is spent on the date of the encounter, with an RVW of 2.80 and times of 10/45/15/70.*

The consensus of the expert panel is that the survey times in the resurvey are more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate. The survey intra-time is five minutes less than the time for 99215, and the total time is 10 minutes less. However, the WPUT using the survey median RVW of 2.80 is 0.047, which is less than the WPUT resulting from the April RUC recommendation of 2.40 RVWs (0.051). The consensus of the expert panel is that the survey median RVW of 2.80 places 9X090 in proper rank order to 99215 and 9X082.

For 9X090, after review at pre-facilitation, the expert panel recommends an RVW of 2.60, preservice time of 10 minutes, intra-service time of 40 minutes, post service time of 10 minutes, and total time of 60 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 99215-95

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 9X091 Tracking Number C17 Original Specialty Recommended RVU: **0.30**
Presented Recommended RVU: **0.30**
Global Period: XXX Current Work RVU: **0.25** RUC Recommended RVU: **0.30**

CPT Descriptor: Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion. (Do not report 9X091 in conjunction with 9X075-9X090). (Do not report services of less than 5 minutes of medical discussion)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Prior to visit: Review any medical records and data. Communicate with other members of the health care team regarding the visit.

Day of visit: Confirm patient's identity. Review the medical history forms completed by the patient. Obtain a medically appropriate history, including pertinent components of history of present illness (HPI), review of systems, social history, family history, and allergies, and reconcile the patient's medications. Assess the patient's condition with available information to formulate a differential diagnosis and treatment plan. (requiring straightforward medical decision making [MDM]. Discuss treatment plan with patient and family. Provide patient education and respond to questions from patient and/or family. Document the encounter in the medical record. Perform electronic data capture and reporting to comply with quality payment program and other electronic mandates.

After visit: Answer follow-up questions from patient and/or family that may occur after the visit and respond to treatment failures. Coordinate follow up/orders with office staff.

Description of Post-Service Work:

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT created 16 new codes for telemedicine E/M services and one code for a brief virtual check-in communication technology-based service at the February 2023 meeting.

The 16 telemedicine E/M codes are comprised of eight codes for synchronous audio-video (AV) services and eight codes for synchronous audio-only (A-only) services. Each of these code sets contains four codes for new patients and four codes for established patients. These codes may be reported based on the level of medical decision making (MDM) or total time on the day of the encounter, similar to reporting for the office visit (OV) codes. In other words, for each set of four codes, there is a code that may be reported for straightforward, low-level, moderate-level, and high-level MDM. These codes are patterned after the office visit codes, but there is no code that mirrors 99211 because all the telemedicine codes require the physician or QHP to be meeting with the patient.

In addition, CPT established a code for a brief virtual check-in encounter that is intended to evaluate whether a more extensive visit is required. The code descriptor is identical to that of existing HCPCS code G2012 and is intended to replace that code. The code does not require video technology and is expected to be patient initiated. It must involve 5-10 minutes of medical discussion – not longer. It may not be reported if it originates from a related E/M service furnished within the previous 7 days or if it leads to another E/M or procedure within the next 24 hours or soonest available appointment. However, if the virtual check-in leads to an E/M in the next 24 hours, and if that E/M is reported based on time, then time from the virtual check-in may be added to the time of the resulting E/M to determine the total time on the date of encounter for the resulting E/M.

The codes were initially surveyed for both work and practice expense (PE) for the April 2023 RUC meeting. For the survey instrument used, the physician time was not included in the new telemedicine E/M services descriptors or the E/M services displayed on the reference service list (RSL). The RUC recommendations to CMS were voted as interim and a new survey was to be conducted for the September 2023 RUC meeting to include the minimum required times in both the survey codes and the reference service list codes as approved by the CPT Editorial Panel. Based on claims data for OV codes to which the -95 modifier was appended, the following specialty societies are expected to be Medicare high utilizers of the telemedicine codes: the American College of Physicians (ACP), the American Psychiatric Association (APA), and the American Academy of Family Physician (AAFP). These three specialty societies did not participate in the April survey but did participate in the September 2023 survey.

In addition to interim RVW recommendations, the RUC also recommended to CPT that the physician times for the telemedicine codes be the same as the physician/QHP time for the comparable level of MDM office visit code. This recommendation was approved by the CPT editorial panel at its May meeting. The table below shows those times:

CPT Code		Time on the Date of Encounter Recommendation to CPT
9X075	Audio-video, new patient, straightforward MDM	15
9X076	Audio-video, new patient, low MDM	30
9X077	Audio-video, new patient, moderate MDM	45
9X078	Audio-video, new patient, high MDM	60
9X079	Audio-video, established patient, straightforward MDM	10
9X080	Audio-video, established patient, low MDM	20
9X081	Audio-video, establishes patient, moderate MDM	30
9X082	Audio-video, established patient, high MDM	40
9X083	Audio-only, new patient, straightforward MDM	15
9X084	Audio-only, new patient, low MDM	30
9X085	Audio-only, new patient, moderate MDM	45
9X086	Audio-only, new patient, high MDM	60
9X087	Audio-only, established patient, straightforward MDM	10 must be exceeded

9X088	Audio-only, established patient, low MDM	20
9X089	Audio-only, establishes patient, moderate MDM	30
9X090	Audio-only, established patient, high MDM	40

The surveying specialties met with the RUC Research Subcommittee, which approved the September survey instrument and methodology.

Thirty five societies participated in the survey with a total of 690 survey respondents.

A complete list of the specialty societies that surveyed these codes can be found in the AMA RUC materials, specifically in the agenda, as well as in our Tab 11 submission titled “survey counts per society & per survey code.”

For this September 2023 RUC meeting, only work was surveyed.

All the surveying societies used a random sample of their members. Not all the societies surveyed all the codes. The list of codes surveyed by each society can be found in the society counts for each survey code additional attachment A to our submission.

The societies established an expert panel to review the survey results.

GENERAL COMMENTS AND COMPARISON TO PREVIOUS SURVEY

Audio-Video Codes

The expert panel re-affirmed its overarching comments submitted in the April rationales. The expert panel also noted that, for the audio-video (AV) codes, the survey median and 25th percentile RVWs for all 8 codes were identical to each other and to the 1st key reference code (KRC), which was always the office visit with comparable time and medical decision making (MDM). This was identical to the results from the first survey. In addition, the survey times for the AV codes requiring straightforward or low-level MDM were practically identical to the times for the 1st KRC and with those from the first survey except for the 9X080 (AV est pt, low MDM) where the intra and total times were higher than the first survey and identical to the times for the first KRC. For the AV codes with moderate and high-level MDM, the survey intra and total times were significantly higher than the times from the previous survey, making them more comparable to the times for the first KRC, and the WPUT using the survey median RVW were very close to those for the first KRC.

The expert panel noted that we now have two surveys with identical RVWs at both the median and 25th percentiles, which confirms that the respondents believe the work of an AV visit is the same as the work of an office visit. The consensus of the expert panel is that the survey times in the resurvey were more accurate than the times in the first survey due to modified methodology, increased sample size, and broader specialty representation and that the times validate the median RVW as being appropriate for all the AV codes.

The expert panel also reviewed the intensity/complexity measures and noted that they support the survey median RVW for 9X075-9X082. For all the codes, the individual and overall intensity/complexity measures compared to the first KRC (which was chosen by the vast majority of respondents) were considered to be “identical to” or “somewhat more” than the KRC, except for the physical effort measure, which was either “identical to” or “somewhat less than.” These responses demonstrate that the respondents carefully considered each measure and that the data was valid.

The expert panel notes that two surveys were conducted where the respondents have indicated that the work RVUs of AV telemedicine visits is the same as the work RVUs of an in-person office visit.

Audio Only Codes

As with the first survey of the audio (A) only codes, the survey median RVWs were identical to the comparable OV with the same level of MDM and the 25th percentile RVWs were less. However, the intra and total times for most of the codes increased in this second survey where the times were included in the survey codes and the reference service codes, and the resulting WPUT was much more comparable to the WPUT for the first KRC. Based on the review of all the survey data, the consensus of the expert panel is that the resurvey supported the median RVW for all the A only codes, and the expert panel noted that the WPUT for all the A only codes, using the median RVW, was lower than the WPUT that resulted from the RUC recommendations at the April meeting.

The expert panel reviewed the responses to the intensity/complexity measures and noted that the median RVW was supported for 9X083-9X090. As with the AV codes, the responses for the individual measures, except for the physical effort, were that the A service was “identical to” or “somewhat more” than the first KRC (which was chosen by a significant majority of respondents). Appropriately, the “physical effort” was considered to be “identical to” or “somewhat less” than the KRC. For six of the eight A only codes, the “overall” intensity/complexity was considered to be “much more” than the KRC. The consensus of the expert panel

is that this was consistent with the responses to the individual intensity/complexity measures. Specifically, respondents believed that the overall intensity/complexity was “much more” than the KRC while believing that each individual measure was either “identical to” or “somewhat more” than the KRC.

Consistent with the prior survey, the estimated work RVUs for the survey codes indicate that the work of A only telemedicine visits is the same as the work of an in-person office visit based on similar times and increased intensity/complexity.

9X091

Brief communication technology-based service (eg, virtual check-in) by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion

There were 131 respondents, of whom 92% found the vignette to be typical. This compares to the previous survey, which had 112 respondents, of whom 86% found the vignette to be typical. The median survey RVW for both surveys was 0.70, and the 25th percentile RVW from this survey is 0.30 as compared to 0.29 from the previous survey. The current survey times are 2/10/2/14 as compared to the previous survey times of 3/10/2/15.

The first key reference service, which was chosen by 47 of the respondents, was 99212, *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter*, with an RVW of 0.70 and times of 2/11/3/16.

The second key reference service, which was chosen by 32 of the respondents, was 99211, *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional*, with an RVW of 0.18 and times of 0/5/2/7.

This service is currently described by HCPCS code G2012 which has the same descriptor as 9X091. The current RVW is 0.25, and the times are 1/8/4/13. The RVW and times were established by CMS in 2018 by cross walking to 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion). Code 99441 currently has 0.70 RVW and times of 2/11/3/16.

The expert panel reviewed the data and, although the times were similar to those for 99212, the consensus of the expert panel is that the comparison to 99212 was inappropriate because 9X091 does not require any MDM and is meant to be used as a triage service to determine whether a patient requires an E/M service. Furthermore, the check-in typically will originate from the patient, and if any MDM is required, or the check-in takes longer than 10 minutes, a different code will be reported. So, the RVW for 9X091 must be less than the RVW for 99212. The expert panel reviewed other codes, including the second key reference service 99211, and concluded that the 99211 RVW of 0.18 was too low because it is based on 5 minutes of physician time and the check-in can last for up to 10 minutes. The expert panel reviewed the April RUC recommendation of the 0.29 RVW, which was the survey 25th percentile. The expert panel noted this survey was more robust with more respondents and that the 25th percentile RVW was 0.30. The expert panel did a RUC database search for XXX global codes with 5-10 minutes of intraservice time that had been reviewed by the RUC since 2012. There were 176 codes with a wide range of RVWs. The consensus of the expert panel is that the code most similar to 9X091 is 99211 but the value for 99211 is not appropriate based on time comparison. Based on the review of all the survey data,, the consensus of the expert panel is to recommend the survey 25th percentile of 0.30 and recommending the survey times.

For 9X091, the expert panel recommends an RVW of 0.30, preservice time of 2 minutes, intraservice time of 10 minutes, post service time of 2 minutes, and total time of 14 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G2012

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: September 2023 (affirmed April 2023 recommendations)

CPT Code	Long Descriptor	Global Period
9X075	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX
9X076	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded	XXX
9X077	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX
9X078	Synchronous audio-video visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX
9X079	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	XXX
9X080	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX
9X081	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X082	Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high medical decision making.	XXX

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CPT Code	Long Descriptor	Global Period
	When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)	
9X083	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	XXX
9X084	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X085	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	XXX
9X086	Synchronous audio-only visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)	XXX
9X087	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, straightforward medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.	XXX
9X088	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	XXX
9X089	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, moderate medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	XXX
9X090	Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, high medical decision making, and more than 10 minutes of medical discussion.	XXX

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

9X085	Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.
9X086	Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.
9X087	Synchronous audio-only visit for an established patient with a self-limited problem.
9X088	Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.
9X089	Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.
9X090	Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.
9X091	An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The practice expense survey tool was approved by the AMA research subcommittee. The joint societies listed in Attachment #1 surveyed members totaling 41,334. The survey response totals varied by CPT Code. The breakout of survey responses by code, including specialty breakouts are included in Attachment #2.

A consensus panel consisting of RUC advisors and subject matter experts from the surveying societies met via multiple conference calls to develop the practice expense recommendations. The consensus panel reviewed the (1) survey times, (2) write in information (i.e. additional clinical activities, supplies, equipment), (3) existing inputs for the reference service codes, (4) existing inputs for current codes, (5) PE standards.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The current direct practice expense inputs for CPT Codes 99202-99215, 99441-99443 and G2012 are included on the PE spreadsheet. The current in-person E/M codes were selected as key reference codes on the work portion of the telemedicine recommendations. As such, they are included on the PE spreadsheet as references to the new telemedicine codes. In addition, CPT Codes 99441-99443 and G2012 were included on the PE spreadsheet as 'current' inputs. When G2012 was created by CMS in 2018, they cross walked the physician work, time and direct practice expenses from CPT Code 99441. Although CMS increased 99441 to be paid the same as 99212 during the PHE and included the same direct PE inputs, they did not change the G2012 inputs. CMS initially said G2012 and 99441 were the same. That is how the clinical staff time was assigned to G2012. Also note that CMS implemented

CPT CODE(S): 9X075-9X091

SPECIALTY SOCIETIES: See Attachment #1

PRESENTER(S): Steve Sentovich, MD, Richard Wright, MD
Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

G2012 before the PHE at the same time they said 99441-99443 were still bundled services, meaning they were willing to pay for a brief check in, but not pay for phone calls.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

N/A

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

See Excel file provided by AMA staff titled "2021 Medicare Specialty Mix for Telemedicine"

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

The following clinical staff activities were revised and used as proxies for this telemedicine PE Survey. No change is being requested to the activity descriptors.

CA009: Greet patient, provide gowning, ensure appropriate medical records are available

Revised to:

Ensure appropriate medical record are available

CA013: Prepare room, equipment, supplies

Revised to:

Prepare patient for the visit (i.e. check audio and/or visual)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) have 5 minutes for obtain vital signs. There is no time for obtain vital signs recommended for the new telemedicine codes.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

Identify need for imaging, lab or other test result(s) and ensure information has been obtained - *three days prior* (to be used with E/M only)

b. Service period (includes pre, intra and post):

Pre-Service

- Identify need for imaging, lab or other test result(s) and ensure information has been obtained - *day of* (to be used with E/M only)
- Greet patient, ensure appropriate medical records are available
- Prepare patient for the visit (i.e. check audio and/or visual)
- Review and document history, systems, and medications

Intra-Service (of service period)

- N/A

Post-Service (of service period)

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Coordinate home or outpatient care (to be used with E/M only)

c. Post-service period:

Conduct patient communications

(For more detail See Question #26)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

N/A

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

See response to Question 8.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? **No**

NONFACILITY DIRECT PE INPUTS

Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) include SA047, pack, E/M visit. No supply pack is recommended for the new telemedicine codes.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- a. If yes, please explain how the computer is used for this service(s).
 - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

The existing in person evaluation and management office visit codes (99202-99215) and telephone evaluation and management codes (99441-99443) include three equipment items (EQ189 otoscope-ophthalmoscope (wall unit), EF023 table, exam and EF048). EQ189 and EF023 use the “office visit” equipment formula. EF048 uses the “other” equipment formula, since the scale is portable. No equipment time is recommended for the new telemedicine codes.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

The research subcommittee reviewed and approved telemedicine practice expense survey questions that were added to the survey instrument used to survey for physician/QHP work. The first question asked survey respondents to indicate (Yes/No) whether the use of clinical staff in the provision of telemedicine E/M services was typical (>50%). We received 182 PE responses and 60% indicated the use of clinical staff was typical. Therefore, we are making direct practice expense recommendations for the new telemedicine E/M services.

The survey directed survey respondents to indicate typical clinical time by CPT Code (17 new telemedicine E/M services) and by clinical activity. The survey included the clinical activities currently included in the direct PE inputs for 99202-99215 as well as an opportunity to write in time and specify additional activities for Pre Service Period, Service Period and Post Service Period. There were two modifications to the standard E/M clinical activities, to accommodate the telemedicine aspect of the services:

CA009: ~~Greet patient, provide gowning,~~ eEnsure appropriate medical records are available
CA013: ~~Prepare room, equipment, supplies~~ Prepare patient for visit (i.e. check audio and/or visual)

For the survey responses that included clinical staff time, the clinical activity medians were computed and then summed to calculate total time. The total survey times are included for each code, on the spreadsheet, in line 3. In addition, the number of survey responses, per code, are also indicated in the PE spreadsheet on line 3.

Survey respondents had the opportunity to write in ‘other clinical activities’ and include time. Those responses were analyzed, and in cases where survey respondents included activities that were included on the survey in the “DO NOT INCLUDE” section, those times were removed from the data. The following is an excerpt from the survey about what activities to specifically NOT include as clinical staff time:

Clinical staff activities for both in-person office visits and telemedicine E/M services DO NOT INCLUDE time for any administrative activities no matter who performs these activities,

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 9X075-9X091

SPECIALTY SOCIETIES: See Attachment #1

PRESENTER(S): Steve Sentovich, MD, Richard Wright, MD
Amy Ahasic, MD, Suzanne Berman, MD, Lisa Price, MD,
Korinne Van Keuren, DNP and Ed Tuohy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

including:

- *Obtain referral documents*
- *Schedule patient/remind patient of appointment*
- *Obtain medical records/manage patient database/develop chart*
- *Pre-certify patient/conduct pre-service billing*
- *Verify insurance/register patient*
- *Transcribe results/file and manage patient records*
- *Schedule subsequent post service E&M services*
- *Conduct billing and collection activities*

The consensus panel reviewed the (1) survey times, (2) write in information (i.e. additional clinical activities, supplies, equipment), (3) existing inputs for the reference service codes, (4) existing inputs for current codes, and (5) PE standards. In some cases, the consensus panel reallocated minutes within the codes to preserve relativity and establish standards. Based on this review, consensus recommendations were developed as shown below.

Clinical Activity Times as Standards for All Codes Based on Survey Responses

CA049: Identify need for imaging, lab or other test result(s) and ensure information has been obtained – 1 minute

CA009: Ensure appropriate medical records are available – 2 minutes

Clinical Activity Times That Vary by Code

CA048: Identify need for imaging, lab or other test result(s) and ensure information has been obtained – three days prior (to be used with E/M only)

Supplies

The survey listed the typical supplies used when performing an in-person office visit (99202-99215). The survey respondents were asked whether or not they typically (>50% of the time) used each of those supplies when providing telemedicine E/M services. The survey respondents were given an opportunity to write in up to four additional supply items, if relevant. The survey collected supply information in aggregate (not separate answers for each of the 17 codes).

The survey indicated that the existing supplies, included in 99202-99215 were not typically (>50% of the time) used when providing telemedicine E/M services. See below:

Supply Item	% Used
Paper, exam table (7 feet)	3%
Pillowcase (1 item)	1%
Gown, patient (1 item)	1%
Drape, non-sterile, sheet 40in x 60in (1 item)	1%
Swab-pad, alcohol (2 items)	2%
Cover, thermometer probe (1 item)	1%
Specula tips, otoscope (1 item)	1%
Tongue depressor (1 item)	2%
Gloves, non-sterile (2 pair)	3%

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Patient education booklet (1 item)	10%
Sanitizing cloth wipe (surface, instruments, equipment (1 item)	7%

While some of the survey respondents wrote in additional supplies they used while performing telemedicine services (i.e. printer paper, envelopes, stamps, patient education materials), none of the items rose to typical (>50%), therefore no supply items are being recommended at this time.

Equipment

The survey listed the typical medical equipment items (>\$500) used when performing an in-person office visit (99202-99215). The survey respondents were asked whether or not they typically (>50% of the time) used any of these medical equipment items when providing telemedicine E/M services. The survey respondents were given an opportunity to write in additional medical equipment items, if relevant. The survey collected supply information in aggregate (not separate answers for each of the 17 codes).

The survey indicated that the existing equipment items, included in 99202-99215 were not typically (>50% of the time) used when providing telemedicine E/M services. See below:

Equipment	% Used
Otoscope-ophthalmoscope (wall unit)	3%
Exam Table	7%
Portable stand-on scale	7%

The RUC approved the inclusion of ED021 Computer, desktop, w-monitor for the E/M office visit codes (99202-99215), however, CMS removed ED021 and indicated it was an indirect expense.

Several survey respondents wrote in additional equipment items they used while performing telemedicine services, including:

- Camera
- Computer
- Headphones
- Microphone
- Telemedicine Platform (software)

The write in items did not rise to typical (>50%), therefore no equipment items are being recommended at this time.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any*

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	XXX
93010	Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only	0.17	XXX
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	XXX
96401	Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic	0.21	XXX
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	0.24	XXX
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)	0.25	XXX
96413	Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug	0.28	XXX
93018	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only	0.30	XXX
93291	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis	0.37	XXX
93227	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional	0.39	XXX
93288	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.43	XXX
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)	0.45	XXX
93308	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0.53	XXX
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	XXX
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	0.70	XXX
76770	Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete	0.74	XXX
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	XXX
95972	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional	0.80	XXX
99462	Subsequent hospital care, per day, for evaluation and management of normal newborn	0.84	XXX

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	0.93	XXX
99231	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.	1.00	XXX
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	XXX
93283	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system	1.15	XXX
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	XXX
93350	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;	1.46	XXX
99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter	1.50	XXX
95861	Needle electromyography; 2 extremities with or without related paraspinal areas	1.54	XXX
99232	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.	1.59	XXX
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.60	XXX
99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	1.63	XXX
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	XXX
99487	Complex chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; first 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	1.81	XXX
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	XXX
99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	2.00	XXX

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
99463	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant admitted and discharged on the same date	2.13	XXX
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15	XXX
95939	Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs	2.25	XXX
99233	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.	2.40	XXX
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	XXX
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	2.60	XXX
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	2.80	XXX
99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.	3.24	XXX
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.	3.50	XXX
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination, Medical decision making of moderate or high complexity, Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), Medication reconciliation and review for high-risk medications, Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), Evaluation of safety (eg, home), including motor vehicle operation, Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, Development, updating or revision, or review of an Advance Care Plan, Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 60 minutes of total time is spent on the date of the encounter.	3.84	XXX
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	XXX

Typical Patient (9X075)

Synchronous audio-video visit for a new patient with a self-limited problem.

Typical Patient 9X076)

Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Typical Patient (9X077)

Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Typical Patient (9X078)

Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Typical Patient (9X079)

Synchronous audio-video visit for an established patient with a self-limited problem.

Typical Patient (9X080)

Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Typical Patient (9X081)

Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Typical Patient (9X082)

Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Typical Patient (9X083)

Synchronous audio-only visit for a new patient with a self-limited problem.

Typical Patient (9X084)

Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Typical Patient (9X085)

Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Typical Patient (9X086)

Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Typical Patient (9X087)

Synchronous audio-only visit for an established patient with a self-limited problem.

Typical Patient (9X088)

Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Typical Patient (9X089)

Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Typical Patient (9X090)

Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Typical Patient (9X091)

An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

We thank you for your time spent taking this survey.
Your response has been recorded.

The American Medical
Association/Specialty Society
RVS Update Committee

**Physician Work
RVS Update Survey**

For **CPT 2025**, the CPT Editorial Panel has approved extensive changes for the **telemedicine evaluation and management (E/M) services**. You have been selected to participate in an AMA/Specialty Society RVS Update Committee (RUC) survey to review physician work for this set of codes. As you may know, the components of the Medicare physician payment schedule are physician work, practice expense and professional liability insurance. This survey will help our society, in concert with the RUC, recommend accurate physician work relative value units (RVUs) to the Centers for Medicare & Medicaid Services for these services.

Keep in mind that you can stop this survey at any time and come back to it at a later time to continue. All information that you provide is maintained – you do not need to start over again.

Important: All references to "physician" in this survey include both "physician" and "other qualified health care professional" (ie, advanced practice nurse or physician assistant).

Please indicate the specialty society that selected you for this survey. If two or more societies invited you to participate, choose only one primary specialty society from the list below and only complete this survey once:

The following information must be provided by the physician responsible for completing the questionnaire:

Contact Information:

Physician name:

Business name:

Business phone (e.g.; xxx-xxx-xxxx)

Please provide your Email address:

Please re-enter your same Email address for verification:

Physician Specialty:

Primary geographic practice setting:

- Rural
- Suburban
- Urban

Primary type of practice:

- Solo practice
- Single specialty group
- Multispecialty group
- Medical school faculty practice plan

Financial Disclosure:

Financial Disclosure.

Please answer the following questions by checking yes or no.

For the following questions, please indicate whether you and/or a “Family Member” (spouse, domestic partner, parent, child, brother, or sister) have a known, direct financial interest in this/these procedure(s), other than providing these services in the course of patient care. Disclosure of Family Member’s interests applies to the extent known by the survey respondent.

For the purposes of this survey, “Organization” means any entity that makes or distributes the service or product that is utilized in performing the service for which the RUC is considering relative value recommendations. Organization does *not* mean the physician group or facility in which you or such person’s family member works or performs the service.

“Materially” or “Material” means at least \$10,000, excluding any reimbursement for travel expenses, to your income or such person’s family member’s income in the past 24 months or as reasonably anticipated in the next 24 months.

	Yes	No
· Ownership interest of 5% or more in an organization with an interest in the development of relative value recommendations that are before the RUC:	<input type="radio"/>	<input type="radio"/>
· Financial interest in an organization with an interest in the development of relative value recommendations that are before the RUC which contributed “Materially” (i.e., at least \$10,000 <i>excluding any reimbursement for travel expenses</i>) to the subject person’s income in the past 24 months or as reasonably anticipated in the next 24 months:	<input type="radio"/>	<input type="radio"/>
· Ownership of stock options in an organization that is related to the issue before the RUC:	<input type="radio"/>	<input type="radio"/>
· A position as proprietor, director, managing partner, or key employee in an organization with an interest in the development of relative value recommendations that are before the RUC:	<input type="radio"/>	<input type="radio"/>
· A role as a consultant, researcher, expert witness (excluding professional liability testimony), speaker or writer for an organization or participation in a clinical trial with an interest in the development of relative value recommendations that are before the RUC and where payment contributes materially to the subject person’s income:	<input type="radio"/>	<input type="radio"/>
· Any other interest that a reasonable person would consider relevant to or potentially impacting the judgment or decisions of the disclosing individual in the context of RUC business:	<input type="radio"/>	<input type="radio"/>

Additional Disclosure

Have you been contacted by anyone other than your specialty society, other specialty societies sponsoring this survey (or any of their representatives) or the American Medical Association with respect to this survey?

SURVEY PART 1 - PHYSICIAN WORK

General Background for Questions 1-6

IMPORTANT: Please review the full CPT language for telemedicine evaluation and management (E/M) services (new CPT codes 9X075-9X082; 9X083-9X090; 9X091) prior to completing this survey. Based on coding changes, the code level selection for 9X075-9X082, 9X083-9X090 will either be based solely on: (1) Medical Decision Making (MDM) or (2) Total Time on the date of the encounter. The Audio-Only codes 9X083-9X090 require more than 10 minutes of medical discussion. Code 9X091, the “virtual check-in”, is based solely on medical discussion time and the time is a fixed part of the code descriptor. A link to the new telemedicine E/M services CPT guidelines and code descriptors is located throughout the survey and was also sent in your email invitation. It is important that you review all the new guidelines to fully understand the coding changes prior to completing this survey. It may be helpful to print out this information for reference as you complete the survey.

[Click here to view the new CPT guidelines and code descriptors for telemedicine E/M services.](#) These codes have substantial revisions; it is critical that you review the full language in detail before completing the survey and refer back to it while completing this survey.

Either MDM or Total Time may be used to report telemedicine E/M services codes. When total time on the date of encounter is used to select the appropriate level of the telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code.

In addition, for this survey, your physician time and physician work estimates SHOULD ALSO incorporate your typical work and time on the date of the encounter AND within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the telemedicine E/M service, but do not include time or work for services that are separately reportable.

Have you reviewed the new [CPT guidelines and code descriptors](#) for the new telemedicine E/M services CPT codes 9X075-9X082; 9X083-9X090; 9X091 in detail? Understanding this information is necessary to correctly complete this survey.

I confirm that I have reviewed the new CPT guidelines and code descriptors in detail.

Do you perform telemedicine E/M services for new patients, established patients or both? Your response to this question will impact which telemedicine E/M survey codes are displayed to you throughout the rest of the survey.

- I perform telemedicine E/M service for **New Patients Only**
- I perform telemedicine E/M service for **Established Patients Only**
- I perform telemedicine E/M service for **BOTH New and Established Patients**
- I do not provide telemedicine E/M service

IMPORTANT: Please check CPT codes for telemedicine E/M services that you have experience performing or are familiar with. You will be surveyed about each code you select. *(Note, by default, all codes are already selected and you will need to deselect any code you do not wish to survey.)*

Note: If you think the typical patient described for each code does not represent your typical patient, please do the following:

- 1) Complete the survey using the typical patient described rather than your typical patient
AND
- 2) Explain for our information, how your typical patient differs in the space provided.

Even if your typical patient is different you may still complete the survey, as long as you are able to consider the time and work for using the typical patient we provided.

Once you have made your selection(s), please click the "Next" button below to continue.

CPT code: 9X075

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a **NEW** patient, which requires a medically appropriate history and/or examination and **STRAIGHTFORWARD** medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a self-limited problem.

CPT code: 9X076

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a **NEW** patient, which requires a medically appropriate history and/or examination and **LOW** medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

CPT code: 9X077

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a **NEW** patient, which requires a medically appropriate history and/or examination and **MODERATE** medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

CPT code: 9X078

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a **NEW**

✓ patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)
Global: XXX
Typical Patient: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

CPT code: 9X079
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a self-limited problem.

CPT code: 9X080
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and LOW medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

CPT code: 9X081
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

CPT code: 9X082
Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)
✓ Global: XXX
Typical Patient: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

CPT code: 9X083
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a self-limited problem.

CPT code: 9X084
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

CPT code: 9X085
Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.
✓ Global: XXX
Typical Patient: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

CPT code: 9X086

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Global: XXX

Typical Patient: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

CPT code: 9X087

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion.

When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

Global: XXX

Typical Patient: Synchronous audio-only visit for an established patient with a self-limited problem.

CPT code: 9X088

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

CPT code: 9X089

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When

using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

CPT code: 9X090

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

Global: XXX

Typical Patient: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

CPT code: 9X091

Descriptor: Brief communication technology-based service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion. (Do not report 9X091 in conjunction with 9X075-9X090) (Do not report services of less than 5 minutes of medical discussion)

Global: XXX

Typical Patient: An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

Are your typical patient(s) for the following service(s) similar to the typical patient(s) described below?

CPT code: 9X075

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a self-limited problem.

Yes

No

CPT code: 9X076

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and LOW medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a stable chronic illness or acute

CPT code: 9X077

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

Global: XXX

Typical Patient: Synchronous audio-video visit for a new patient with a progressing illness or acute injury

CPT code: 9X078

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Global: XXX

CPT code: 9X079

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

Global: XXX

CPT code: 9X080

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and LOW medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

Global: XXX

CPT code: 9X081

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

CPT code: 9X082

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

Global: XXX

CPT code: 9X083

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

Global: XXX

CPT code: 9X084

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

CPT code: 9X085

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

Global: XXX

CPT code: 9X086

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Global: XXX

CPT code: 9X087

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be exceeded.

Global: XXX

CPT code: 9X088

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

Global: XXX

CPT code: 9X089

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Global: XXX

CPT code: 9X090

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

CPT code: 9X091

Descriptor: Brief communication technology-based service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion. (Do not report 9X091 in conjunction with 9X075-9X090) (Do not report services of less than 5 minutes of medical discussion)

Global: XXX

Please keep in mind that all references to "physician" in this survey include both "physician"

Please keep in mind that all references to "physician" in this survey include both "physician and "other qualified health care professional" (ie, advanced practice nurse or physician assistant).

PHYSICIAN WORK

"Physician work" includes the following elements:

- Physician time it takes to perform the service
- Physician mental effort and judgment
- Physician technical skill and physical effort, and
- Physician psychological stress that occurs when an adverse outcome has serious consequences

These elements will be explained in greater detail as you complete this survey.

"Physician work" does **not** include the services provided by support staff who are employed by your practice and cannot bill separately, including registered nurses, licensed practical nurses, medical assistants, receptionists, or technicians. **This survey only pertains to physician work.**

Background for Question 1: Reference Service List

Below is a list of reference services that have been selected for use as comparison services for this survey because their relative values are sufficiently accurate and stable to compare with other services. The "Work RVU" column presents current Medicare RBRVS work RVUs (relative value units). Select one code that is most similar to the survey CPT code and typical patient described at the beginning of the survey.

XXX A global period does not apply to the code and other diagnostic tests or minor services performed, may be reported separately on the same day

[Please click here and print a pdf version of the XXX reference service list for codes](#)

CPT Code	2023 Long Descriptor	2023 Work RVU	Global
93042	Rhythm ECG, 1-3 leads; interpretation and report only	0.15	XXX
93010	Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only	0.17	XXX
99211	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	XXX
96401	Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic	0.21	XXX
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	0.24	XXX
93922	Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries, (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus bidirectional, Doppler waveform recording and analysis at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus volume plethysmography at 1-2 levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries with, transcutaneous oxygen tension measurement at 1-2 levels)	0.25	XXX
96413	Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial	0.28	XXX

93413	Chemotherapy administration, intravenous infusion technique, up to 1 hour, single or initial substance/drug	0.28	XXX
93018	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; interpretation and report only	0.30	XXX
93291	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; subcutaneous cardiac rhythm monitor system, including heart rhythm derived data analysis	0.37	XXX
93227	External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional	0.39	XXX
93288	Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead pacemaker system, or leadless pacemaker system	0.43	XXX
93923	Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels (eg, for lower extremity: ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental blood pressure measurements with bidirectional Doppler waveform recording and analysis, at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental volume plethysmography at 3 or more levels, or ankle/brachial indices at distal posterior tibial and anterior tibial/dorsalis pedis arteries plus segmental transcutaneous oxygen tension measurements at 3 or more levels), or single level study with provocative functional maneuvers (eg, measurements with postural provocative tests, or measurements with reactive hyperemia)	0.45	XXX
93308	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, follow-up or limited study	0.53	XXX
76705	Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)	0.59	XXX
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.	0.70	XXX
76770	Ultrasound, retroperitoneal (eg, renal, aorta, nodes), real time with image documentation; complete	0.74	XXX
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	XXX
95972	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (eg, sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional	0.80	XXX
99462	Subsequent hospital care, per day, for evaluation and management of normal newborn	0.84	XXX
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.	0.93	XXX
99231	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.	1.00	XXX
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	XXX
93283	Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead transvenous implantable defibrillator system	1.15	XXX
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.	1.30	XXX
93350	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report;	1.46	XXX
99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter	1.50	XXX
95861	Needle electromyography; 2 extremities with or without related paraspinous areas	1.54	XXX
99232	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.	1.59	XXX
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.60	XXX

99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	1.63	XXX
93351	Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with supervision by a physician or other qualified health care professional	1.75	XXX
99487	Complex chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored, moderate or high complexity medical decision making; first 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month.	1.81	XXX
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.	1.92	XXX
99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	2.00	XXX
99463	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant admitted and discharged on the same date	2.13	XXX
99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter	2.15	XXX
95939	Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs	2.25	XXX
99233	Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.	2.40	XXX
95810	Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist	2.50	XXX
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.	2.60	XXX
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.	2.80	XXX
99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.	3.24	XXX
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded.	3.50	XXX
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination, Medical decision making of moderate or high complexity, Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity, Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]), Medication reconciliation and review for high-risk medications, Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s), Evaluation of safety (eg, home), including motor vehicle operation, Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks, Development, updating or revision, or review of an Advance Care Plan, Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 60 minutes of total time is spent on the date of the encounter.	3.84	XXX
99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes	4.50	XXX

CPT® five-digit codes, two-digit number modifiers, and descriptions only are copyright by the American Medical Association. No payment schedules, fee schedules, relative value units, scales, conversion factors, or components thereof are included in CPT®. The AMA is not recommending that any specific relative values, fees, payment schedules, or related listings be attached to CPT®. Any relative value scales or relative listings assigned to CPT® codes are not those of the AMA, and the AMA is not recommending use of these relative values.

Question 1

When considering physician work, which of the reference services on the list above is most similar to the Survey CPT code(s) and typical patient(s)?

Select your answer(s) in the dropdown box(es) below.

Survey Code: 9X075

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for a new patient with a self-limited problem.

Survey Code: 9X076

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and LOW medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X077

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X078

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Typical Patient: Synchronous audio-video visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X079

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and STRAIGHTFORWARD medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for an established patient with a self-limited problem.

Survey Code: 9X080

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and LOW medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X081

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and MODERATE medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Typical Patient: Synchronous audio-video visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X082

Descriptor: Synchronous AUDIO-VIDEO visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination and HIGH medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

Typical Patient: Synchronous audio-video visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X083

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.

Typical Patient: Synchronous audio-only visit for a new patient with a self-limited problem.

Survey Code: 9X084

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Typical Patient: Synchronous audio-only visit for a new patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X085

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.

Typical Patient: Synchronous audio-only visit for a new patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X086

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of a NEW patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 60 minutes must be met or exceeded. (For services 75 minutes or longer, use prolonged services code 99417)

Typical Patient: Synchronous audio-only visit for a new patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X087

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, STRAIGHTFORWARD medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 10 minutes must be

exceeded.

Typical Patient: Synchronous audio-only visit for an established patient with a self-limited problem.

Survey Code: 9X088

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, LOW medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded.

Typical Patient: Synchronous audio-only visit for an established patient with a stable chronic illness or acute uncomplicated illness or injury.

Survey Code: 9X089

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, MODERATE medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.

Typical Patient: Synchronous audio-only visit for an established patient with a progressing illness or acute injury that requires medical management or potential surgical treatment.

Survey Code: 9X090

Descriptor: Synchronous AUDIO-ONLY visit for the evaluation and management of an ESTABLISHED patient, which requires a medically appropriate history and/or examination, HIGH medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded. (For services 55 minutes or longer, use prolonged services code 99417)

Typical Patient: Synchronous audio-only visit for an established patient with a chronic illness with severe exacerbation that poses an acute threat to life or bodily function, or an acute illness/injury that poses a threat to life or bodily function.

Survey Code: 9X091

Descriptor: Brief communication technology-based service (eg, VIRTUAL CHECK-IN) by a physician or other qualified health care professional who can report evaluation and management services, provided to an ESTABLISHED patient, not originating from a related evaluation and management service provided within the previous 7 days nor leading to an evaluation and management service or procedure within the next 24 hours or soonest available appointment, 5-10 minutes of medical discussion. (Do not report 9X091 in conjunction with 9X075-9X090) (Do not report services of less than 5 minutes of medical discussion)

Typical Patient: An established patient contacts the office to request an evaluation regarding the necessity of being seen for symptoms of concern to the patient.

Background for Question 2

Physician/other qualified health care professional time includes the following activities, when performed:

- preparing to see the patient (eg, review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (not separately reported) and communicating results to the patient/family/caregiver
- care coordination (not separately reported)

Note: DO NOT include time for work related to another service, procedure, or evaluation and management code that is separately reportable. Also, DO NOT include the time provided by clinical staff, such as RNs, LPNs, MAs and technicians, as their time is measured separately from this survey. For established patients do not count time spent completing a previous E/M service as part of the time preparing for the current E/M service.

Question 2

How much physician time is required per patient treated for each of the following steps in patient care related to the survey code(s)? It is important to be as precise as possible. For example, indicate 3 or 6 minutes instead of rounding to 5 minutes or indicate 14 or 17 minutes instead of rounding to 15 minutes. Type in your answers (in minutes) in each box below.

Please refer to the definitions of physician time above.

To view the descriptor for the survey code(s), place your cursor over the symbol located above the code.

IMPORTANT: Either MDM or Total Time may be used to report telemedicine audio-visual E/M services codes 9X075-9X090. When total time on the date of encounter is used to select the appropriate level of the telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code. The Audio-Only codes require more than 10 minutes of medical

discussion. Code 9X091 may be used to report services that do not require a video component and include 5-10 minutes of medical discussion. This code does not use total time on the date of the encounter for selection, but this survey will ask for the total time on the date of the encounter in the same manner as all the other codes.

For this survey, your physician time estimates should also incorporate time you typically perform within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the service if the time is not included in a separately reportable service.

[Click here to view the new CPT guidelines and code descriptors for telemedicine E/M services.](#)

Question 2a) Physician/Qualified Health Care Professional time directly related to this telemedicine E/M service within three calendar days prior to the telemedicine E/M service (in minutes) *If not performed for this typical patient, enter 0 minutes. (Also, DO NOT include the time provided by clinical staff, such as RNs, LPNs, MAs and technicians, as their time is measured separately from this survey.)*

Overall Intensity/Complexity for all physician work you perform for the service							

Question 5

VERY IMPORTANT: Based on your review of all previous questions, please provide your estimated work RVU (to the 2nd decimal place) for the survey code(s) below.

For example, if the survey code involves the same amount of physician work as the reference service you choose, you would assign the same work RVU. If the survey code involves less work than the reference service you would estimate a work RVU that is less than the work RVU of the reference service and vice versa. This methodology attempts to set the work RVU of the survey service “relative” to the work RVU of comparable and established reference services. Please keep in mind the range of work RVUs in the reference service list when providing your estimate.

IMPORTANT: Either MDM or Total Time may be used to report telemedicine evaluation and management (E/M) service codes 9X075-9X090. Time of medical discussion is used to report 9X091. When total time on the date of encounter is used to select the appropriate level of the

telemedicine E/M service code, ALL time personally spent by the physician (or other qualified health care professional that is reporting the telemedicine E/M service) assessing and managing the patient on that date is summed to select the appropriate code. The Audio-Only codes require more than 10 minutes of medical discussion.

For this survey, when you are estimating the work RVU for the new codes, you should also consider the physician work and time directly related to the telemedicine E/M service within three calendar days prior to the telemedicine E/M service and within seven calendar days after the day of the telemedicine E/M service if the work is not included in a separately reportable service.

DO NOT include work related to another service, procedure, or evaluation and management code that is separately reportable when you estimate the work RVU for the telemedicine E/M service code(s). Also, DO NOT include clinical staff time, (eg, RN, LPN, MA and technician), as clinical staff time is captured separately from this survey.

Relevant Excerpt from May 22 Research Subcommittee Report:

Telemedicine E/M Visits (9X075, 9X076, 9X077, 9X078, 9X079, 9X080, 9X081, 9X082, 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, 9X091): Survey Logistics and Brief Check-in Code 9X091 Requests

The surveying specialty societies for telemedicine E/M visits requested Research Subcommittee approval for two items: 1) providing societies with the option to conduct the telemedicine survey by grouping the codes into smaller subsets in multiple surveys and, 2) the flexibility to exclude the brief check-in code 9X091. Specifically, some societies expressed interest in the ability to break up the 17-code survey into multiple smaller surveys including one or more of the four groups of codes: Audio-video new patient, Audio-video established patient, Audio-only new patient and the Audio-only established patient. This would consist of 4 survey links that would be distributed in the same survey distribution email. For brief check-in code 9X091, the presenters asserted that the first survey of 9X091 was valid and that the April 2023 interim recommendation could be affirmed by the RUC in September. Presenters noted that the issues that impacted the 9X075-9X090 did not pertain to 9X091.

Research Subcommittee members asked the presenters to provide additional detail as to the rationale why some societies would prefer to break the survey into 4 separate survey links. One of the presenters noted that this process is not new and that some societies have done this in the past when there are large number of codes in a survey. They noted that some respondents may feel that they can more easily do the full survey in small chunks by clicking on separate survey links instead of one survey link that they need to save and come back to.

The Research Subcommittee approved the request to either distribute the telemedicine survey via a single link, or for societies to use 4 survey links distributed in the same email. For those societies opting to use 4 links, the groupings would be Audio-video new patient, Audio-video established patient, Audio-only new patient and the Audio-only established patient.

The Research Subcommittee did not agree with the societies request to exclude code 9X091 from the re-survey. The RUC recommendation for 9X091 was interim in April 2023 and several of the specialties that perform this service did not participate in the April 2023 survey. **The Research Subcommittee did not approve the requests to exclude 9X091 from the re-survey for the September 2023 RUC meeting.**

Relevant Excerpt from February 20 Research Subcommittee Report:

Telemedicine Office Visits (9X075, 9X076, 9X077, 9X078, 9X079, 9X080, 9X081, 9X082, 9X083, 9X084, 9X085, 9X086, 9X087, 9X088, 9X089, 9X090, 9X091): Proposed Custom Survey Template and Reference Service Lists

At the February 2023 CPT Editorial Panel meeting, the Panel created a new E/M subsection for Telemedicine Office Visit Services, created 17 new category I CPT codes for reporting telemedicine E/M services (audio/visual, audio only, virtual check-in) and deleted 3 telephone E/M service codes. 28 societies have indicated they plan to survey some or all of the new CPT codes. AMA RUC staff drafted a custom RUC survey template and a draft reference service list (RSL) for the Subcommittee's consideration and approval on the February 20th call.

Reference Service List (RSL)

AMA RUC staff assembled a draft reference service list for the Subcommittee's consideration. The document shared with the Subcommittee included all codes from the 2019 office visit survey (updated to reflect new/revised coding changes and 2023 work values), as well as the addition of the office visit codes

99202-99215. That methodology produced an RSL of 58 codes. Specialty societies expressed an interest in paring down the number of codes included in the RSL. Therefore, AMA RUC staff highlighted several codes to potentially exclude based on systematic rules.

The Research Subcommittee reviewed the proposed systematic rules to remove codes, which were: 1) when multiple codes have a work RVU within 0.01 of each other, use the higher volume E/M code. 2) remove codes where the top specialty was not participating in this telemedicine E/M services survey, which also would not create a large gap in work RVUs. In general, the Subcommittee supported both proposed changes. **The Research Subcommittee agreed to remove codes 92285, 95165, 76514, 73620, 92250 and 92083 as the top specialty for each of those codes is not participating in the telemedicine E/M. Similarly, the Research Subcommittee agreed to remove codes 96374, 95251, 93307, 99490, 95813, 99223 and 99306 as each of those codes as an RVU that is either identical or within 0.01 of another higher volume E/M service that is also on the RSL.** The Subcommittee decided to retain code 93010 as it was selected as a top key reference code for the 2019 office visit survey and several members concurred it would still be beneficial to retain it.

In addition, an idea was discussed to remove the time portion of the long descriptor of any reference E/M code on the RSL where code-level is selected either using the level of medical decision making (MDM) or date of encounter time. The Research Subcommittee agreed that this would be helpful to avoid inadvertently anchoring the respondents' time estimates for the survey codes. **The Research Subcommittee approved the final Reference Service List of 45 CPT codes with the time sentence redacted from the long descriptors for the reference E/M services which can be reported using either MDM or time.**

Custom RUC Survey

In consultation with the Co-Chairs of the CPT/RUC Workgroup on E/M, RUC leadership and surveying specialty society staff, AMA RUC staff modeled the custom survey template on the Research-approved office visit templates from 2019 with the instructions and question text modified to fit telemedicine E/M services. This draft survey template also includes a Practice Expense (PE) section at the end similar to the process used for the office visit codes. The PE section was also modeled after the 2019 office visit survey, though reframed to first indicate what clinical activities, supplies and equipment were relevant to in-person office visits and then ask which inputs also apply to telemedicine E/M services.

During the Subcommittee's review of this template, a Subcommittee member opined whether it would be useful to include a question on the location from which the survey respondent typically performs the telemedicine service. Others pointed out that the location of the physician/QHP would not have an impact of the clinical staff working from the non-facility setting, and therefore adding that question would not be essential.

An observer on the call suggested for the term "telemedicine office visit" to be replaced with "telemedicine E/M service" throughout the survey template instructions and question text to avoid confusing the survey respondents. The Subcommittee agreed that this would be an appropriate change to make.

Survey Process Logistics

Prior to the call, several specialty society staff had expressed concern to AMA RUC staff regarding the number of codes in the survey and have suggested a variety of strategies to attempt to address. Even with several changes to the custom template to make completing it more efficient, surveying 17 codes for work and practice expense may take an estimated 1-2 hours of a respondent's time. As is the case with all Qualtrics RUC surveys, the survey respondent is offered the flexibility to complete the survey for the codes they are interested in completing. The Research Subcommittee considered the addition of a

question to the beginning of the survey, asking whether the survey respondent typically performs telemedicine services for new patients only, established patients only or both. The purpose of this question would be to dynamically change the survey template to only a subset of the survey codes based on the respondents selection. **The Research Subcommittee approved the addition of the following question to the custom survey template and requested that the specialties provide these data to the RUC:**

Do you perform telehealth E/M services for new patients, established patients or both?

- A. I perform telehealth E/M services on New Patients Only*
- B. I perform telehealth E/M services on Established Patients Only*
- C. I perform telehealth E/M services on New and Established Patients*
- D. I do not provide telehealth E/M services visits*

The Research Subcommittee approved the custom telemedicine E/M services survey template with the minor modifications described above.

Survey Process Logistics

Prior to the call, several specialty society staff had expressed concern to AMA RUC staff regarding the number of codes in the survey and have suggested a variety of strategies to attempt to address. Even with several changes to the custom template to make completing it more efficient, surveying 17 codes for work and practice expense may take an estimated 1-2 hours of a respondent's time. As is the case with all Qualtrics RUC surveys, the survey respondent is offered the flexibility to complete the survey for the codes they are interested in completing. The Research Subcommittee considered the addition of a question to the beginning of the survey, asking whether the survey respondent typically performs telemedicine services for new patients only, established patients only or both. The purpose of this question would be to dynamically change the survey template to only a subset of the survey codes based on the respondent's selection. **The Research Subcommittee approved the addition of the following question to the custom survey template and requested that the specialties provide these data to the RUC:**

Do you perform telehealth E/M services for new patients, established patients or both?

- A. I perform telehealth E/M services on New Patients Only*
- B. I perform telehealth E/M services on Established Patients Only*
- C. I perform telehealth E/M services on New and Established Patients*
- D. I do not provide telehealth E/M services visits*

The Research Subcommittee approved the custom telemedicine E/M services survey template with the minor modifications described above.

Research Question

Research requested this data when they approved adding the question for April Survey, and requested it again for September Survey 2023	April 2023 Survey	April 2023 Survey	September 2023 Survey	September 2023 Survey
Perform Services	Question Counts	Percentages	Question Counts	Percentages
A. I perform telehealth E/M services on New Patients Only	2	0.5%	1	0.2%
B. I perform telehealth E/M services on Established Patients Only	80	18.5%	166	25.0%
C. I perform telehealth E/M services on New and Established Patients	144	33.3%	320	48.3%
D. I <u>do not</u> provide telehealth E/M services visits	207	47.8%	176	26.5%
<i>Number of ANA surveys (6) and/or financial Interest disclosure (14)(April Survey 2023) (For Sept 2023 Survey we counted blanks to get those that did not get the question or had a financial disclosure.Nursing did get the question.)</i>	20		30	
TOTAL STARTED Survey and technically "finished" the survey, excludes nursing and financial disclosure	433		663

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Site of Service Anomaly

September 2023

Transcatheter Insertion and Replacement of a Permanent Leadless Pacemaker – Tab 12

In April 2023, the Relativity Assessment Workgroup identified CPT code 33274 via the site of service anomaly screen. Based on Medicare data from 2019-2021 and utilization over 10,000, this service is typically performed in the inpatient hospital setting, yet only a half discharge day management (99238) is included. The RUC noted that codes 33274 and 33275 were on the April 2023 Workgroup meeting technology/new services list for review. The RUC removed these codes from the new technology/new services list since there was no demonstrated technology diffusion that impacts work or practice expense. The Workgroup questioned the site of service for code 33274 and noted that the RUC valued this service as typically involving an overnight stay that is less than 24 hours in length. However, Medicare claims data shows that 63% are performed in the inpatient hospital setting. The RUC recommended that CPT code 33274 and the relevant family of codes be surveyed for the September 2023 RUC meeting.

In September 2023, the specialty societies indicated that although this service is typically performed in the inpatient setting for Medicare patients, this is not accurate for all patients receiving this service. The specialties indicated that this service was recently reviewed for CPT 2019 and conducting another survey at this time would be premature and result in the same response: that that patient typically stays overnight but less than 24 hours and a half discharge day be applied. These services have not changed since the last review, and based on that data the RUC would not apply a full discharge day.

The specialty societies reported that within the past 60 days, the U.S. Food and Drug Administration (FDA) has granted approval for both atrial and ventricular leadless pacemakers. Atrial leadless pacemakers were not previously available. This development is expected to have a significant impact as many individuals currently receiving lead pacemakers may now receive leadless pacemakers. As a result, there may be a change in the typical patient and physician work associated with these services.

The specialty societies requested, and the RUC agreed, to maintain the current work RVU of 7.80 for CPT code 33274 and 8.59 for CPT code 33275 and for the Relativity Assessment Workgroup to examine these services in three years (September 2026).

Practice Expense

The Practice Expense Subcommittee affirmed the direct practice inputs from January 2018 without modification. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
33274	Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed	090	7.80 (No Change)
(f)33275	<p>Transcatheter removal of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography), when performed (Do not report 33275 in conjunction with 33274)</p> <p>(Do not report 33274, 33275 in conjunction with femoral venography [75820], fluoroscopy [76000, 77002], ultrasound guidance for vascular access [76937], right ventriculography [93566])</p> <p>(Do not report 33274, 33275 in conjunction with 93451, 93453, 93456, 93457, 93460, 93461, 93593, 93594, 93596, 93597, 93598, unless complete right heart catheterization is performed for indications distinct from the leadless pacemaker procedure)</p> <p>(For subsequent leadless pacemaker device evaluation, see 93279, 93286, 93288, 93294, 93296)</p> <p>(For insertion, replacement, repositioning, and removal of pacemaker systems with leads, see 33202, 33203, 33206, 33207, 33208, 33212, 33213, 33214, 33215, 33216, 33217, 33218, 33220, 33221, 33227, 33228, 33229, 33233, 33234, 33235, 33236, 33237)</p>	090	8.59 (No Change)

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

Ultrasound Elastography – Tab 13

In January 2018, the RUC reviewed and submitted recommendations for the ultrasound elastography code family, which describes the physician work involved with assessing organ parenchyma and focal lesions. The purpose of these procedures is to evaluate the degree of scarring within a solid organ, like the liver, or lesions within solid organs, such as masses within the breast or thyroid. Measuring the stiffness within a solid organ can characterize the severity of parenchymal disease in lieu of performing an invasive procedure to test potential malignancy, such as a biopsy. This code family was flagged for re-review at the April 2023 RUC meeting by the new technology/new services screen. Due to increased utilization of CPT code 76981, the entire code family was resurveyed for the September 2023 RUC meeting.

76981 *Ultrasound, elastography; parenchyma (eg, organ)*

The RUC reviewed the survey results from 41 diagnostic radiologists and interventional radiologists and determined the survey 25th percentile work RVU of 0.59, which is also the current value, accurately reflects the physician work necessary to perform this service. CPT code 76981 describes the examination and evaluation of a solid organ using elastography imaging. The RUC recommends 5 minutes pre-service evaluation time, 10 minutes intra-service time, and 4 minutes post-service time, which equals 19 minutes of total time. These pre-service and post-service times align with other similar ultrasound and diagnostic radiology codes.

To support the recommended work RVU value of 0.59, the RUC compared the surveyed code to the top key reference service, 76705 *Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)* (work RVU = 0.59, 8 minutes intra-service time and 18 minutes total time) and to the second highest key reference service, 76700 *Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81, 11 minutes intra-service time and 21 minutes total time) and agreed that both services, with similar intra-service time and comparable physician work, offer accurate comparisons to the recommended work RVU. The RUC recognized that the physician work involved with the surveyed code is similar to that of a limited or complete abdominal ultrasound study as described by the key reference services. While evaluating a patient directly and making clinical judgments using real-time image documentation for an abdominal ultrasound study differs from the physician work performed by a radiologist in measuring the stability or interval changes in organ parenchyma stiffness, the RUC determined it to be an appropriate comparison. Moreover, performing a complete abdominal ultrasound in CPT code 76700 requires more measurements and time; so, the recommended work RVU of 0.59 for the surveyed code is appropriately lower and aligns with the limited abdominal ultrasound study in CPT code 76705 given its lesser intra-service time.

For additional support, the RUC referenced MPC code 76604 *Ultrasound, chest (includes mediastinum), real time with image documentation* (work RVU = 0.59 and 19 minutes total time) and noted that the reference service requires similar physician time as CPT code 76981. The RUC concluded that CPT code 76981 should be valued at the 25th percentile work RVU as supported by the survey, as it maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.59 for CPT code 76981.**

76982 Ultrasound, elastography; first target lesion

The RUC reviewed the survey results from 35 diagnostic radiologists and interventional radiologists and determined the survey 25th percentile work RVU of 0.59, which is also the current value, appropriately accounts for the physician work necessary to perform this service. CPT code 76982 describes the examination and evaluation of a single, specific lesion within a solid organ using elastography imaging. The RUC recommends 5 minutes pre-service evaluation time, 10 minutes intra-service time, and 5 minutes post-service time, which equals 20 minutes of total time.

To support the recommended work RVU value of 0.59, the RUC compared the surveyed code to the top key reference service, *76705 Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)* (work RVU = 0.59, 8 minutes intra-service time and 18 minutes total time) and to the second highest key reference service *76700 Ultrasound, abdominal, real time with image documentation; complete* (work RVU = 0.81, 11 minutes intra-service time and 21 minutes total time) and agreed that both services, with similar intra-service time and comparable physician work, offer accurate comparisons to support the recommended work RVU. The RUC recognized that the physician work involved with the surveyed code is similar to that of a limited or complete abdominal ultrasound study. While evaluating a patient directly and making a clinical judgment using real-time image documentation for an abdominal ultrasound sound study differs from the physician work a radiologist conducts in measuring the stability or interval changes in the stiffness of a focal lesion within a solid organ, the RUC found this to be an appropriate comparison. Moreover, performing a complete abdominal ultrasound, code 76700, requires more measurements and time; so, the recommended work RVU of 0.59 for the surveyed code is appropriately lower and aligns with the limited abdominal ultrasound study in CPT code 76705 given its lesser intra-service time.

For additional support, the RUC referenced MPC code *76604 Ultrasound, chest (includes mediastinum), real time with image documentation* (work RVU = 0.59 and 19 minutes total time) and noted that the reference service requires similar physician time as CPT code 76982. The RUC concluded that CPT code 76982 should be valued at the 25th percentile work RVU as supported by the survey, as it maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.59 for CPT code 76982.**

76983 Ultrasound, elastography; each additional target lesion (List separately in addition to code for primary procedure)

The RUC reviewed the survey results from 34 diagnostic radiologists and interventional radiologists and determined the survey 25th percentile work RVU of 0.47, which is lower than the current work RVU of 0.50, appropriately accounts for the physician work required to perform this service. CPT code 76983 is an add-on code describing the examination and evaluation of each additional target lesion within a solid organ using elastography imaging. The RUC recommends 9 minutes intra-service time, which also represents the total time.

To support the recommended work RVU value of 0.47, the RUC compared the surveyed code to the top key reference service, *76802 Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)* (work RVU = 0.83 and 10 minutes intra-service and total time) and to the second highest key reference service, *93319 3D echocardiographic imaging and postprocessing during transesophageal*

echocardiography, or during transthoracic echocardiography for congenital cardiac anomalies, for the assessment of cardiac structure(s) (eg, cardiac chambers and valves, left atrial appendage, interatrial septum, interventricular septum) and function, when performed (List separately in addition to code for echocardiographic imaging) (work RVU = 0.50 and 20 minutes intra-service time and total time).

For additional support, the RUC referenced MPC codes 51797 *Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure) (work RVU = 0.80 and 15 minutes intra-service time and total time) and 64484 Injection(s), anesthetic agent(s) and/or steroid; transforaminal epidural, with imaging guidance (fluoroscopy or CT), lumbar or sacral, each additional level (List separately in addition to code for primary procedure) (work RVU = 1.00 and 10 minutes intra-service time and total time), The RUC concluded that CPT code 76983 should be valued at the 25th percentile work RVU as supported by the survey, as it maintains rank order with the other existing services in this code family. **The RUC recommends a work RVU of 0.47 for CPT code 76983.***

Practice Expense

The Practice Expense Subcommittee noted that the specialties are recommending the current existing direct practice expense inputs for CPT codes 76981-76983 and made no modifications. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
76981	Ultrasound, elastography; parenchyma (eg, organ)	XXX	0.59 (No Change)
76982	first target lesion	XXX	0.59 (No Change)
76983	each additional target lesion (List separately in addition to code for primary procedure) (Use 76983 in conjunction with 76982)	ZZZ	0.47

	<p>(Report 76981 only once per session for evaluation of the same parenchymal organ)</p> <p>(To report shear wave liver elastography without imaging, use 91200)</p> <p>(For evaluation of a parenchymal organ and lesion[s] in the same parenchymal organ at the same session, report only 76981)</p> <p>(Do not report 76981, 76982, 76983 in conjunction with 0689T)</p> <p>(Do not report 76983 more than two times per organ)</p>

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 76981	Tracking Number N/A	Original Specialty Recommended RVU: 0.59
Global Period: XXX	Current Work RVU: 0.59	Presented Recommended RVU: 0.59
		RUC Recommended RVU: 0.59

CPT Descriptor: Ultrasound, elastography; parenchyma (eg, organ)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old male has a history of chronic hepatitis C for 15 years. The patient has had no significant complications secondary to portal hypertension and routine ultrasounds of the liver have been normal, with no imaging evidence of cirrhosis. The patient is being considered for definitive treatment for the hepatitis C and undergoes an ultrasound elastogram of the liver to determine the degree of hepatic fibrosis.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness and discuss with ordering physician. Review clinical history. Review prior diagnostic imaging, to include ultrasound, CT, and/or MRI as available and indicated based on the organ of interest. Communicate with US technologist to delineate area to be interrogated and any structures to be avoided.

Description of Intra-Service Work: Review obtained US elastography images at the picture archiving and communication system (PACS) workstation. The anatomic images and elastography images are analyzed by the physician. Quality/confidence criterion is appropriately assessed by the radiologist to ensure good quality acquisition of data. If additional images are required, additional scanning is performed by the physician or technologist, as appropriate. The physician interprets all images and evaluates stiffness measurements of the parenchyma of interest. The current examination is compared to any prior examinations to evaluate for stability or interval changes. The physician dictates the examination report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The ultrasound elastography codes below were flagged for re-review at the April 2023 RUC under the New Technology screen. Due to the increase in utilization for CPT Code 76981, the family was sent for resurvey.

- 76981 (*Ultrasound, elastography; parenchyma (eg, organ)*) is a stand-alone procedure for the evaluation of a single organ,
- 76982 (*Ultrasound, elastography; first target lesion*) is a stand-alone code for the evaluation of a single lesion, and
- 76983 (*Ultrasound, elastography; each additional target lesion (List separately in addition to code for primary procedure)*) is an add-on code for evaluating each additional lesion.

These codes will most often be used to work up patients with disease of solid organs (e.g. cirrhosis of the liver) or lesions within solid organs, such as masses within the breast or thyroid. The goal with elastography in solid organs is to evaluate the degree of scarring (i.e. stiffness) within an organ like the liver to characterize the severity of parenchymal disease, follow disease progression, or response to therapy. This non-invasive study may be performed in lieu of performing an invasive procedure like a biopsy. The use of elastography to characterize lesions within solid organs can help with risk stratification and further decrease the need for biopsies in lesions with a lower pre-test probability for malignancy (e.g. thyroid, breast, etc).

Survey Process

The American College of Radiology (ACR) surveyed a total of 2,000 random members. Additionally, we surveyed 430 members from the Society of Radiologists in Ultrasound (SRU); this targeted survey was approved by the Research Subcommittee. The Society of Interventional Radiology performed a random sample of 1,489 members.

Work RVU Recommendation:

We recommend maintaining the current value of 0.59 RVU, which is consistent with the survey 25th percentile.

Time Recommendation:

We recommend the median survey times: 5 minutes pre-service, 10 minutes intra-service, and 4 minutes post-service. This is a total time of 19 minutes.

Key Reference Services

The surveyed code and selected key reference services are compared in the table below.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76705	US Abdomen; limited	0.59	18	5	8	5	0.046
76981	US Elastography; organ	0.59	19	5	10	4	0.039
76700	US abdomen; complete	0.81	21	5	11	5	0.053

CPT code 76981 is bracketed by the selected key reference services. CPT code 76705 (*Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)*) focuses on evaluation of the right upper quadrant, and is equivalent clinical work compared to CPT code 76981, which involves a detailed analysis of the liver. CPT code 76981 has similar total time to CPT code 76705, supporting the same 0.59 value.

CPT code 76700 (*Ultrasound, abdominal, real time with image documentation; complete*) includes evaluation of more abdominal structures which requires only slightly more time, after accounting for the increased time needed to evaluate the elastography data in assessment of the diseased liver. Thus the recommended value of 0.59 for CPT code 76981 is appropriately lower than CPT code 76700 given the slightly lower intra-service time.

MPC Codes

There are two MPC codes that compare well with the surveyed code.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76981	US Elastography; organ	0.59	19	5	10	4	0.039
99212	Office/Outpatient E/M of established pt, 10-19 minutes of total time	0.70	16	2	11	3	0.044
76700	US abdomen, complete	0.81	21	5	11	5	0.053

The most appropriate comparison code for CPT code 76981 is 76700 (*Ultrasound, abdominal, real time with image documentation; complete*), which is also the second key reference service. CPT code 76700 is an ultrasound of the abdomen, and the most common organ for study, while for CPT code 76981 it is the liver. The additional work involved with CPT code 76981 is the physiologic assessment of a diseased organ, the technical ability to evaluate the elastography data, and the training to understand the physics and appropriate quality control for elastography in addition to diagnostic ultrasound.

An additional MPC code that compares well with CPT code 76981 is CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.*). This code has one minute of intra-service time, and three less minutes of total time. The work RVU for CPT code 99212 is slightly higher than CPT code 76981, which appropriately reflects the slightly increased intensity of the E/M visit with straightforward decision making compared to the work of CPT code 76981.

Conclusion

CPT code 76981 (*Ultrasound, elastography; parenchyma (eg, organ)*) is a stand-alone code describing the evaluation of a solid organ using ultrasound elastography. The recommended code value of 0.59 is strongly supported by the chosen KRS and MPC codes and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76981

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 64581

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 76981 is estimated to be provided 64,581 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 54541 Percentage 84.45 %

Specialty Interventional Radiology Frequency 1262 Percentage 1.95 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 21,527 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 utilization, the service described by CPT code 76981 is estimated to be provided 21,527 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 18180 Percentage 84.45 %

Specialty Interventional Radiology Frequency 421 Percentage 1.95 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Echography/ultrasonography

BETOS Sub-classification Level II:

Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 76981

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 76982	Tracking Number N/A	Original Specialty Recommended RVU: 0.59
Global Period: XXX	Current Work RVU: 0.59	Presented Recommended RVU: 0.59
		RUC Recommended RVU: 0.59

CPT Descriptor: Ultrasound, elastography; first target lesion

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female undergoes mammography for a right breast mass. A diagnostic ultrasound demonstrates a solid hypoechoic mass at 10:00 location. Ultrasound elastography of the right breast mass is performed (reported separately) to characterize the lesion.

Percentage of Survey Respondents who found Vignette to be Typical: 57%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the request for appropriateness and discuss with ordering physician. Review clinical history. Review prior diagnostic ultrasound or other imaging study on which lesion of interest is found. Communicate with US technologist to delineate lesion to be interrogated and any structures to be avoided.

Description of Intra-Service Work: Review obtained US elastography images at the PACS workstation. The anatomic images and elastography images are analyzed by the physician. If additional images of the first target lesion are required, this is communicated to the technologist. The physician interprets all images and evaluates stiffness measurements of the lesion of interest. The current examination is compared to any prior examinations to evaluate for stability or interval changes. The physician dictates the examination report.

Description of Post-Service Work: Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The ultrasound elastography codes below were flagged for re-review at the April 2023 RUC under the New Technology screen. Due to the rapid increase in utilization for CPT Code 76981, the family was sent for resurvey.

- 76981 (*Ultrasound, elastography; parenchyma (eg, organ)*) is a stand-alone procedure for the evaluation of a single organ,
- 76982 (*Ultrasound, elastography; first target lesion*) is a stand-alone code for the evaluation of a single lesion, and
- 76983 (*Ultrasound, elastography; each additional target lesion (List separately in addition to code for primary procedure)*) is an add-on code for evaluating each additional lesion.

These codes will most often be used to work up patients with disease of solid organs (e.g. cirrhosis of the liver) or lesions within solid organs, such as masses within the breast or thyroid. The goal with elastography in solid organs is to evaluate the degree of scarring (i.e. stiffness) within an organ like the liver to characterize the severity of parenchymal disease, follow disease progression, or response to therapy. This non-invasive study may be performed in lieu of performing an invasive procedure like a biopsy. The use of elastography to characterize lesions within solid organs can help with risk stratification and further decrease the need for biopsies in lesions with a lower pre-test probability for malignancy (e.g. thyroid, breast, etc).

Survey Process

The American College of Radiology (ACR) surveyed a total of 2,000 random members. Additionally, we surveyed 430 members from the Society of Radiologists in Ultrasound (SRU); this targeted survey was approved by the Research Subcommittee. The Society of Interventional Radiology performed a random sample of 1,489 members.

Work RVU Recommendation:

We recommend maintaining the current value of 0.59 RVU, which is consistent with the survey 25th percentile.

Time Recommendation:

We recommend the median survey times: 5 minutes pre-service, 10 minutes intra-service, and 5 minutes post-service. This is a total time of 20 minutes. This is consistent with the current times.

Key Reference Services

The surveyed code and selected key reference services are compared in the table below.

76982	US Elastography; first lesion	0.59	20	5	10	5	0.045
76700	US abdomen; complete	0.81	21	5	11	5	0.053

CPT code 76982 is bracketed by the selected key reference services. CPT code 76700 (*Ultrasound, abdominal, real time with image documentation; complete*) given the lower time. CPT code 76705 focuses on evaluation of the right upper quadrant, and is equivalent clinical work compared to CPT code 76982 which involves a detailed analysis of the target lesion. CPT code 76982 has similar total time to CPT code 76705 (*Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)*), supporting the same 0.59 value.

CPT code 76700 includes evaluation of more abdominal structures which requires only slightly more time, after accounting for the increased time needed to evaluate the elastography data in assessment of the targeted lesion. Thus the recommended value of 0.59 for CPT code 76982 is appropriately lower.

MPC Codes

There are two MPC codes that compare well with CPT code 76982 as shown in the table below.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76982	US Elastography; first lesion	0.59	20	5	10	5	0.045
99212	Office/Outpatient E/M of established pt, 10-19 minutes of total time	0.70	16	2	11	3	0.044
76700	US abdomen; complete	0.81	21	5	11	5	0.053

The most appropriate comparison code for CPT code 76982 is 76700 (*Ultrasound, abdominal, real time with image documentation; complete*), which is also the second key reference service. 76700 is an ultrasound of the abdomen, while CPT code 76982 typically pertains to ultrasound elastography of the breast. The additional work involved with CPT code 76982 is the physiologic assessment of a diseased organ, the technical ability to evaluate the elastography data, and the training to understand the physics and appropriate quality control for elastography in addition to diagnostic ultrasound. CPT code 76700 includes evaluation of more abdominal structures which requires slightly more time, after accounting for the increased time needed to evaluate the elastography data in assessment of the target lesion. The increased time and increased anatomy evaluated is reflected in the increased work RVU of CPT code 76700.

An additional MPC code that compares well with CPT code 76982 is CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.*). This code has one more minute of intra-service time, and four less minutes of total time. The work RVU for CPT code 99212 is slightly higher than the work RVU for CPT code 76982, which appropriately reflects the slightly increased intensity of the E/M visit with straightforward decision making compared to the work of CPT code 76982.

Conclusion

CPT code 76982 is a stand-alone code that describes the evaluation of a lesion using ultrasound elastography. The recommended work RVU of 0.59 is strongly supported by the chosen KRS and MPC codes and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) CPT code 76982 is billed with CPT code 76642 55% of the time.

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76982

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 76983	Tracking Number N/A	Original Specialty Recommended RVU: 0.50
		Presented Recommended RVU: 0.47
Global Period: ZZZ	Current Work RVU: 0.50	RUC Recommended RVU: 0.47

CPT Descriptor: Ultrasound, elastography; each additional target lesion (List separately in addition to code for primary procedure)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 52-year-old female undergoes mammography for bilateral breast masses. A diagnostic ultrasound demonstrates bilateral solid hypoechoic masses. Ultrasound elastography of the left breast mass is performed after prior ultrasound elastography of the right breast mass (reported separately) to characterize the additional lesion. (List separately in addition to code for primary procedure.)

Percentage of Survey Respondents who found Vignette to be Typical: 59%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: Review the request for appropriateness and discuss with ordering physician. Review clinical history. Review prior diagnostic ultrasound or other imaging study on which additional lesion of interest is found. Communicate with US technologist to delineate additional lesion to be interrogated and any structures to be avoided. The obtained US elastography images are reviewed at the PACS workstation. The anatomic images and elastography images are analyzed by the physician. If additional images of the additional target lesion are required, this is communicated to the technologist. The physician interprets all images and evaluates stiffness measurements of the lesion of interest. The current examination is compared to any prior examinations to evaluate for stability or interval changes. The physician dictates the examination report. Review, edit, and sign report for the medical record. Communicate the findings with referring provider and/or patient as needed.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The ultrasound elastography codes below were flagged for re-review at the April 2023 RUC under the New Technology screen. Due to the rapid increase in utilization for CPT Code 76981, the family was sent for resurvey.

- 76981 (*Ultrasound, elastography; parenchyma (eg, organ)*) is a stand-alone procedure for the evaluation of a single organ,
- 76982 (*Ultrasound, elastography; first target lesion*) is a stand-alone code for the evaluation of a single lesion, and
- 76983 (*Ultrasound, elastography; each additional target lesion (List separately in addition to code for primary procedure)*) is an add-on code for evaluating each additional lesion.

These codes will most often be used to work up patients with disease of solid organs (e.g. cirrhosis of the liver) or lesions within solid organs, such as masses within the breast or thyroid. The goal with elastography in solid organs is to evaluate the degree of scarring (i.e. stiffness) within an organ like the liver to characterize the severity of parenchymal disease, follow disease progression, or response to therapy. This non-invasive study may be performed in lieu of performing an invasive procedure like a biopsy. The use of elastography to characterize lesions within solid organs can help with risk stratification and further decrease the need for biopsies in lesions with a lower pre-test probability for malignancy (e.g. thyroid, breast, etc).

Survey Process

The American College of Radiology (ACR) surveyed a total of 2,000 random members. Additionally, we surveyed 430 members from the Society of Radiologists in Ultrasound (SRU); this targeted survey was approved by the Research Subcommittee. The Society of Interventional Radiology performed a random sample of 1,489 members.

Work RVU Recommendation:

We recommend the survey 25th percentile value of 0.47 RVU, which is a decrease from the current 0.50 RVU. Because the current value was derived from a crosswalk rather than a true survey value, we chose the 25th percentile wRVU for this code to restore a direct valuation from the survey.

Time Recommendation:

We recommend the median survey intra time of 9 minutes. This is consistent with the existing time.

Key Reference Services

The surveyed code and selected key reference services are compared in the table below.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76983	US Elastography; each additional lesion	0.47	9		9		0.052
93319	3D echocardiographic imaging	0.50	20		20		0.025
76802	US Uterus, 1 st trimester; each additional gestation	0.83	10		10		0.083

CPT code 76983 is supported by the top two key reference services, CPT codes 93319 (*3D echocardiographic imaging and postprocessing during transesophageal echocardiography, or during transthoracic echocardiography for congenital cardiac anomalies, for the assessment of cardiac structure(s) (eg, cardiac*

chambers and valves, left atrial appendage, interatrial septum, interventricular septum) and function, when performed (List separately in addition to code for echocardiographic imaging)) and 76802 (Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, first trimester (< 14 weeks 0 days), transabdominal approach; each additional gestation (List separately in addition to code for primary procedure)). CPT code 93319 is a 3D postprocessing code which is less intense, but requires more time, lending itself to the slightly higher work RVU. CPT code 76802 includes one more minute of time and is a more intense service given the complexity of anatomy of an additional gestation in a twin pregnancy. Therefore, the work RVU for CPT code 76802 is appropriately higher than that recommended for CPT code 76983.

MPC Codes

There are two MPC codes that compare well with CPT code 76983 as shown in the table below.

CPT	Short Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
76983	US Elastography; each additional lesion	0.47	9		9		0.052
51797	Voiding Pressure, intra-abdominal	0.80	15		15		0.053
64484	Injection, transforaminal; lumbar or sacral, each additional level	1.00	10		10		0.100

There are a limited number of MPC codes with ZZZ global periods in this time and work RVU range. Both MPC codes above have higher intra-service times and, therefore, appropriately higher work RVUs. The work value recommended for CPT code 76983 is significantly lower than CPT code 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)*), which is appropriate given that 64484 is an invasive procedure.

CPT code 76983 also compares favorably to MPC code 51797 (*Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)*), which has higher intra-service time, higher work RVU, and similar IWPUT.

Conclusion

CPT code 76983 is an add-on code that describes the evaluation of an additional lesion using ultrasound elastography. The recommended work RVU of 0.47 is strongly supported by the chosen KRS and MPC codes and maintains relativity within the RBRVS.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.

Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 76983

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
76981	A 45-year-old male has a history of chronic hepatitis C for 15 years. The patient has had no significant complications secondary to portal hypertension and routine ultrasounds of the liver have been normal, with no imaging evidence of cirrhosis. The patient is being considered for definitive treatment for the hepatitis C and undergoes an ultrasound elastogram of the liver to determine the degree of hepatic fibrosis.
76982	A 45-year-old female undergoes mammography for a right breast mass. A diagnostic ultrasound demonstrates a solid hypoechoic mass at 10:00 location. Ultrasound elastography of the right breast mass is performed (reported separately) to characterize the lesion.
76983	A 52-year-old female undergoes mammography for bilateral breast masses. A diagnostic ultrasound demonstrates bilateral solid hypoechoic masses. Ultrasound elastography of the left breast mass is performed after prior ultrasound elastography of the right breast mass (reported separately) to characterize the additional lesion. (List separately in addition to code for primary procedure.)

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) convened a consensus panel to finalize the practice expense for ultrasound elastography codes 76981, 76982, and 76983.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

As these are existing codes, we used the current PE inputs as a reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 76981, 76982, 76983

SPECIALTY SOCIETY(IES): ACR, SIR

PRESENTER(S): Lauren

Nicola, MD; Andrew Moriarity, MD; Minhaj Khaja, MD; Robert Kennedy, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

According to the RUC database, CPT codes 76981 and 76982 are not reported with an E/M, but CPT code 76983 is.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For 76981:

Diagnostic Radiology is the dominant provider in the non-facility (69.0%) and is also the dominant provider in the global.

For 76982:

Diagnostic Radiology is the dominant provider in the non-facility (66.7%) and is also the dominant provider in the global.

For 76983:

Diagnostic Radiology is the dominant provider in the non-facility (31.4%) and is also the dominant provider in the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CA016 – Prepare, set-up and start IV, initial positioning and monitoring of patient: We are requesting 3 minutes (standard is 2 minutes) for CPT codes 76981 and 76982, as these procedures require the technologist to find a patient position that not only allows for a good acoustic window, but also allows the patient to remain motionless (with the exception of quiet respiratory motion) so that repeatable, accurate elastography measurements can be obtained.

3 minutes is the current allotted time for this clinical activity for these codes.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A.

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

- Confirm availability of prior images/studies
- Review patient clinical extant information and questionnaire

b. Service period (includes pre, intra and post):

- Greet patient, provide gowning, ensure appropriate medical records
- Prepare room, equipment, and supplies
- Confirm order, protocol exam
- Prepare, set-up and start IV, initial positioning and monitoring of patient

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Perform procedure/service
- Clean room
- Technologist QC's imagines in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD/DO
- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

CA021: For 76981 we requested 20 minutes of time (NOT directly related to physician work). The ultrasound technologist (sonographer) reviews any pertinent previous imaging studies. The sonographer brings the patient in the ultrasound room and positions the patient on the bed. The sonographer will have to position the patient appropriately for the procedure and may change the position to optimize the elastography measurements. The sonographer then scans the respective organ for an appropriate transducer position to obtain the elastography measurements. The sonographer gives breathing instructions to the patient to accurately obtain measurements. Elastography measurements are obtained per the respective organ protocol, which varies between 3 and 10 measurements in different areas of the target organ. Images are subsequently sent to PACS.

CA021: For 76982 we requested 15 minutes of time (NOT directly related to physician work). The ultrasound technologist reviews any pertinent previous imaging studies. The sonographer brings the patient in the ultrasound room and positions the patient on the bed. The sonographer then scans the respective organ and localizes the respective lesion needing elastography. The sonographer then optimizes the patient's position to obtain the elastography measurements. The sonographer may change the patient or transducer position to optimize the elastography measurements. Elastography measurements are obtained per the respective organ-based protocol. Images are subsequently sent to PACS.

CA021: For 76983 we requested 12 minutes of time (NOT directly related to physician work). The ultrasound technologist is reviewing any pertinent previous imaging studies. Then the sonographer scans the respective organ and localizes the respective lesion needing elastography. The sonographer then optimizes the patient's position to obtain the elastography measurements. The sonographer may change the patient or transducer position to optimize the elastography measurements. Elastography measurements are obtained per the respective organ-based protocol. Images are subsequently sent to PACS.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
** Codes Reported Together 75% or More**

September 2023

CT Guidance Needle Placement – Tab 14

CPT code 77012 was last reviewed by the RUC in April 2017. Subsequently, a CPT code bundling lung biopsy with image guidance was created in February 2019. The CPT Editorial Panel approved the replacement of CPT code 32405 with the new code 32408 to describe lung needle biopsy, including imaging guidance. Following the April 2019 RUC meeting, the specialty society was to submit a request to the Research Subcommittee to modify the vignette for CPT code 77012 to reflect a typical patient who is not a lung biopsy patient. In June 2019, the Research Subcommittee noted that the current vignette for CPT code 77012 describes a patient with a suspicious lung nodule, which reflected the most common diagnostic code in the latest claims data. Since there was no clear dominant diagnosis code once patients with lung nodules are removed, and the next four most common diagnostic codes each represent a similar percentage of the claims (between 4.04 and 4.88%), the specialty proposed to defer updating this vignette for three years to allow time for utilization data to accrue on the new patient population for 77012. The RUC agreed that the specialty societies could wait until after utilization data for the new patient population became available and survey for September 2023. The Research Subcommittee created the new vignette on its May 22, 2023, call.

77012 Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation

The RUC reviewed the survey results from 173 interventional radiologists and diagnostic radiologists and determined that maintaining the current work RVU of 1.50, which falls below the survey 25th percentile, appropriately accounts for the physician work involved in this service. The RUC recommends 15 minutes of pre-service evaluation time, 35 minutes intra-service time and 5 minutes immediate post-service time, for 55 minutes total time. It was noted that the median survey times are recommended for the pre-service and intra-service times while the recommended post-service time of 5 minutes is equal to the current time and lower than the survey.

To justify a work RVU of 1.50, the RUC compared CPT code 77012 to the top key reference service code 10007 *Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion* (work RVU = 1.81, 27 minutes intra-service time and 47 minutes total time) and noted that the intra-service and total time for the reference code is less than the surveyed code, yet the reference service is a bundled code that also includes in the work of the procedure, justifying a higher value for key reference service. The RUC also compared the surveyed code to the second key reference code 10005 *Fine needle aspiration biopsy, including ultrasound guidance; first lesion* (work RVU = 1.46, 20 minutes intra-service time and 39 minutes total time) and noted that although the reference code is a bundled code, the radiological supervision and interpretation surveyed code describes an imaging modality (CT) that is typically used for longer and more intense image-guided procedures. The surveyed code involves much more intra-service and total time, therefore justifying a higher value. The RUC recommendation is bracketed by the top two key reference services. CPT code 77012 includes more time inherent to the CT modality, however, some of the combined work is less intense than the bundled FNA procedure codes with either ultrasound or fluoroscopic guidance. This is reflected in the higher intensity for CPT codes 10005 and 10007. Given these differences in intensity, the recommended work RVU for CPT code 77012 maintains relativity with a value slightly higher than CPT code 10005 and lower than CPT code 10007.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC compared CPT code 77012 to MPC codes 92014 *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits* (work RVU = 1.42, 24 minutes intra-service time and 37 minutes total time) and 95861 *Needle electromyography; 2 extremities with or without related paraspinal areas* (work RVU = 1.54, 29 minutes intra-service time and 49 minutes total time) and noted that 77012 compares well with the two non-radiology MPC codes. Code 92014 has less intra-service and total time, and a slightly lower work value than the surveyed code while code 95861 has a slightly higher work value, but lower total time than the surveyed code. Both MPC comparisons are associated with slightly more intense work than the CT guidance code for needle placement. Accounting for the survey times and intensity differences, the recommended work value is appropriately bracketed between the comparator codes. The RUC concluded that the value of CPT code 77012 should be maintained at 1.50 work RVUs, below the 25th percentile of the survey. **The RUC recommends a work RVU of 1.50 for CPT code 77012.**

Practice Expense

The Practice Expense (PE) Subcommittee approved the PE compelling evidence argument that CMS applied a flawed methodology in its assignment of 9 minutes of CT room time. In April 2017, the RUC approved 28 minutes for CT room time for CPT code 77012, applying the highly technical formula. However, in the 2019 MPFS, CMS reduced the room time to 9 minutes, applying the angiographic room time allocation convention, which assigns 9 mins for radiologic supervision and interpretation (RS&I) codes. Angiography procedures are structured to include room time (e.g., CPT code 36247); therefore, it is appropriate for the angiography RS&I codes (e.g., 76726) to only have an additional 9 minutes of room time. In contrast, non-angiography procedures can be reported with or without CT guidance. For CMS to apply the angiography room time convention to the CT guidance code describing a different imaging modality is inappropriate, as CT procedure codes do not contain room time. CPT code 77012 is most commonly performed with procedure code 38222 *Diagnostic bone marrow; biopsy(ies) and aspiration(s)* which does not include CT room time. Only assigning 9 minutes to CT guidance is an underestimation of utilization for this code; the procedure described by 38222 typically has 30 minutes of cut-to-close time. The RUC agreed that application of the highly technical formula is most appropriate, resulting in the recommended 26 minutes for EL007 room, CT.

The PE Subcommittee reviewed the direct practice expense inputs and made no modifications. The specialty recommended, and the RUC agreed, to a change in clinical staff type from L041B *Radiologic Technologist* to a L046A *CT Technologist*. When this code was created (formerly CPT code 76360), the clinical staff was identified as a radiology technologist; however, the required technical proficiency for this CT-guided procedure is out of scope for a radiologic tech. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 77012	Tracking Number	Original Specialty Recommended RVU: 1.50
		Presented Recommended RVU: 1.50
Global Period: XXX	Current Work RVU: 1.50	RUC Recommended RVU: 1.50

CPT Descriptor: Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: An 80-year-old male has a suspicious abdominal mass seen on CT. CT guided needle biopsy is requested.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review patient order, clinical history, and relevant prior imaging examinations. Confirm appropriateness of imaging guidance and determine appropriate protocol and approach. Assess need for contrast administration to assist guidance. Review patient history for contrast allergy, renal insufficiency, or other contraindications for receiving contrast as needed. Discuss with the patient (and family) the risks due to radiation exposure and use of contrast dye (if needed) relative to other potential imaging modalities. Discuss the equipment being used and the potential need for prolonged immobility and repositioning to ensure optimal imaging for guidance and interpretation. Provide instructions for the radiologic technologists regarding patient positioning and proper settings for the imaging equipment. Confirm patient positioning and imaging setup, ensuring the entire area necessary can be imaged and that equipment and patient can be repositioned as needed during sterile procedure (ie, the field must be clear of impediments to table motion for movement into and out of the CT gantry). The physician dresses in radiation safety attire if use of CT fluoroscopy is anticipated.

Description of Intra-Service Work: Supervise and interpret scout views of area to be imaged to select appropriate field of view. Obtain and interpret preliminary CT images acquired to assess appropriate approach to the target(s), evaluate for unexpected findings, interval changes in target lesion(s), and adjust patient positioning or protocol as needed. Mark skin entry site and prepare in sterile fashion. Perform intermittent or continuous CT guidance to direct needle to target(s) and reposition as necessary. Confirm satisfactory needle placement in the target(s). Obtain and interpret post-procedural CT to evaluate for complications. Interpret all images resulting from the study including dedicated review of the target(s) as well as all visualized viscera, fascial planes, vasculature, soft tissues, and osseous structures. Assess for complications or other unexpected findings. Compare to all pertinent available prior studies. Review and document radiation dose to the patient in terms of Dose-Length Product (DLP). Dictate report for medical record.

Description of Post-Service Work: Review and sign final report. Communicate findings to referring physician as appropriate.

SURVEY DATA

RUC Meeting Date (mm/yyyy)	09/2023

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

CPT Code 77012 (*Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation*) was surveyed in April 2017, at which time the typical patient presented with a lesion suspicious for lung cancer. More recently, in April 2019, a new code, 32408 (*Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed*), was created that bundled in lung biopsy (32405) with imaging guidance (77012). It was then requested that CPT code 77012 be resurveyed after new utilization data for the new patient population was available in 2023.

Survey Process

The American College of Radiology (ACR) and the Society of Interventional Radiology (SIR) conducted a random survey of members. The ACR also surveyed a random subset of members who perform interventional radiology procedures. Both societies assembled an expert panel to review the data and develop the following recommendations.

Compelling Evidence

Although the patient population has changed for CPT code 77012, and with the most recent survey data demonstrating 10 additional minutes of post-service time, the specialties are not requesting any change to the existing time and value, even though the current value is below the survey 25th percentile.

Work RVU Recommendation

We recommend a work RVU of 1.50, which is the current value and below the survey 25th percentile value.

Time Recommendation

We recommend the median survey times of 15 minutes pre-service and 35 minutes intra-service. We recommend a post-service time of 5 minutes, equal to the current post-service time and lower than the survey median.

Key Reference Services

Our recommendation is bracketed by our top two chosen key reference services (KRS), CPT codes 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*) and 10007 (*Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion*). CPT code 77012 includes more time inherent to the CT modality, however some of the work is less intense than the FNA procedures with both ultrasound and fluoroscopic guidance. This is reflected in the higher IWP/UT for CPT codes 10005 and 10007. Given these differences in intensity, the recommended work RVU for CPT code 77012 maintains relativity with a value slightly higher than CPT code 10005 and lower than CPT code 10007.

All three codes are presented for comparison in the following table.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWP/UT
10005	FNA w/US guidance; first lesion	1.46	39	10	20	9	0.052
77012	CT guidance for Needle placement	1.50	55	15	35	5	0.030
10007	FNA w/fluoro guidance; first lesion	1.81	47	10	27	10	0.050

MPC Codes

CPT code 77012 compares well with two non-radiology MPC codes. CPT code 92014 (*Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment*

program; comprehensive, established patient, 1 or more visits) has less intra-service and total time, and a slightly lower work RVU than CPT code 77012. CPT code 95861 (Needle electromyography; 2 extremities with or without related paraspinal areas) has a slightly higher work RVU, but lower total time than CPT code 77012.

Both MPC comparisons are associated with slightly more intense work than the CT guidance code for needle placement. Accounting for the survey times and intensity differences, the recommended 1.50 work RVU is appropriately bracketed between CPT codes 92014 and 95861.

The surveyed code and the two MPC codes are listed in the table below for comparison.

CPT	Descriptor	wRVU	Total Time	Pre	Intra	Post	IWPUT
92014	Ophthalmological medical exam and evaluation; comprehensive, established pt, 1 or more visits	1.42	37	5	24	8	0.047
77012	CT guidance for Needle placement	1.50	55	15	35	5	0.030
95861	Needle electromyography, 2 areas	1.54	49	10	29	10	0.038

Conclusion

The survey results and comparison with applicable codes support the specialties' recommendation to maintain the current value and times for CPT code 77012.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 77012

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Diagnostic Radiology

How often? Commonly

Specialty Interventional Radiology How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 413907

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. The service described by CPT code 77012 is estimated to be provided 413,907 times nationally in a one-year period.

Specialty Diagnostic Radiology Frequency 299098 Percentage 72.26 %

Specialty Interventional Radiology Frequency 93211 Percentage 22.51 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 137,969 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on 2021 utilization, the service described by CPT code 77012 is estimated to be provided 137,969 times nationally in a one-year period to Medicare patients.

Specialty Diagnostic Radiology Frequency 99699 Percentage 72.26 %

Specialty Interventional Radiology Frequency 31070 Percentage 22.51 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Imaging

BETOS Sub-classification:

Standard imaging

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2023

CPT Code	Long Descriptor	Global Period
77012	Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
77012	An 80-year-old male has a suspicious abdominal mass seen on CT. CT guided needle biopsy is requested.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The American College of Radiology (ACR) and Society of Interventional Radiology (SIR) convened a consensus panel to finalize the practice expense data for the CT guidance for needle placement CPT code 77012.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

This is an existing code. The societies included the current PE inputs for CPT code 77012 on the spreadsheet to serve as a reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
 Is this code(s) typically reported with the E/M service in the nonfacility?

No.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

Diagnostic Radiology is the dominant provider in the non-facility at 69.9% of the time. Diagnostic Radiology is also the dominant provider for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The specialties are proposing an increase over the current cost for this procedure based on flawed methodology, including corrections to the clinical staff type and the CT room time.

When this code was created (formerly CPT code 76360) the clinical staff was identified as a radiology technologist. We are requesting a revision to correct the staff type from a Rad Tech (L041B) to a CT Tech (L046A). The required technical proficiency for a CT-guided procedure such as this is out of scope for a Rad Tech. CT technologists are required by the American Registry of Radiologic Technologists (ARRT) to complete 125 documented exam repetitions and complete 62 procedures in six different categories. Once those objectives are met, the technologist must pass a computer based exam to demonstrate competency in CT. It is unclear why Rad Tech is the current staff type for this code, which is by definition a CT procedure, but the specialties believe it is a mistake and are recommending the correct staff type be added.

The specialties believe CMS applied a flawed methodology in their assignment of 9 minutes of CT room time. In April 2017, the RUC approved 28 minutes for CT room time for CPT code 77012, applying the highly technical formula. However, in the 2019 MPFS, CMS reduced the room time to 9 minutes, applying the angiographic room time allocation convention, which assigns 9 mins for RS&I codes. We believe the application of the highly technical formula is more appropriate, resulting in our recommended 26 minutes of room time. This explains the increase in equipment cost.

Angiography procedures are structured to include room time (ex: CPT code 36247); therefore, it is appropriate for the angiography RS&I codes (ex: 76726) to only have an additional 9 minutes of room time. In contrast, non-angiography procedures can be billed with or without CT guidance. For CMS to apply the angiography room time convention to the CT guidance code is inappropriate, as CT procedure codes do not contain room time. CPT code 77012 (CT guidance) is most commonly performed with procedure code 38222, which does not include CT room time. Only assigning 9 minutes to CT guidance is an underestimation of utilization for this code.

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

- **Prepare room, equipment and supplies (CA013)** – In the CY 2019 MPFS Final Rule, CMS refined CA013 from 2 minutes to 3 minutes by deleting the 1 minute from CA014 (*Confirm order, protocol exam*) and adding it to CA013.
- **Technologist QC's images in PACS, checking for all images, reformats, and dose page (CA006)** – CMS finalized a standard of 3 minutes for services involving CTs which are considered “intermediate” in the CY 2017 MPFS Final Rule.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A.

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

0 minutes.

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

- Confirm availability of prior images/studies

- b. Service period (includes pre, intra and post):

- Provide education/obtain consent
- Prepare room, equipment and supplies
- Prepare, set-up and start IV, initial positioning and monitoring of patient
- Perform procedure/service—NOT directly related to physician work time
- Clean room/equipment by clinical staff
- Technologist QC's images in PACS, checking for all images, reformats, and dose page
- Review examination with interpreting MD/DO

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue.

c. Post-service period:

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

After positioning patient on the CT table at the direction of the radiologist, the technologist loads the CT protocol and chooses an appropriate field of view. Scout images of the procedure area are acquired and reviewed in consultation with the radiologist. Thereafter, axial CT images are acquired through an appropriately selected region. These images are reviewed with the radiologist and the parameters of the biopsy scans are chosen (slice thickness, number of slices, level of imaging, field of view, window widths/levels) and prepared for the viewing screen in the CT room.

While the radiologist initiates the procedure and uses CT guidance for needle placement, the technologist assists the physician by opening additional equipment items (e.g. needles, fiducials, etc.), changing CT scan parameters or repositioning the patient as needed. For each repeated CT scan during needle guidance, the technologist confirms the agreed upon settings and acquires the axial CT data, which is then presented to the radiologist. This series of activities is repeated for any change in position, as needed.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A.

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A.

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A.

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

No.

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A.

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A.

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- If yes, please explain how the computer is used for this service(s).
 - Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - Does the computer include code specific software that is typically used to provide the service(s)?

No.

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

- PACS Workstation Proxy (ED050)** [PACS formula]: Equal to the total clinical service period time
- Professional PACS Workstation Proxy (ED053)** [Other formula]: Equal to the physician work intra service time + ½ of the physician work pre-service time.
- Room, CT (EL007)** [Highly technical equipment formula]

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A.

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A.

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

N/A.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

[Empty box for itemized list of changes]

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

September 2023

Annual Alcohol Screening – Tab 15

In April 2022, the Relativity Assessment Workgroup identified services with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020, including codes G0442 and G0443. In September 2022, the RUC recommended that these services be surveyed for April 2023 after CMS publishes revised code descriptions in the Final Rule for 2023.

CMS covers the annual alcohol screening service once per year (G0442). For patients who screen positive, CMS covers up to four brief face-to-face behavioral counseling interventions (G0443) for Medicare beneficiaries. Both services are typically performed during an annual wellness visit (AWV) (codes G0438 or G0439) and/or an office visit service For G0442, clinical staff will typically assist the patient in completing the screening tool. Medicare does not define what screening instrument should be used, and there are several that are commonly used. The typical work of the physician for G0442 is to review the collected responses, make sure it is appropriate in the electronic medical record, probe for any follow-up questions, and make an assessment based on the information collected.

The specialty societies surveyed alcohol screening and counseling codes G0442 and G0443 for the April 2023 RUC meeting but did not obtain the required number of survey responses. The RUC recommended the specialty societies work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify physicians and other qualified healthcare professionals who predominantly perform G0442 and/or G0443 and match them with societies to survey those individuals. The specialty societies were also encouraged to expand their random survey sample to other sections of their membership that are more likely to perform these services. As a result, the specialty societies continued to collect survey responses for the September 2023 RUC meeting and worked with the Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample. The specialties were successful in exceeding the minimum number of survey responses for each code for the September 2023 RUC meeting.

Compelling Evidence

The current value for CPT code G0443 is a CMS/Other source, which reflects a value CMS independently assigned from CPT code 97803 *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes* (work RVU= 0.45, intra-service time of 15 minutes, total time of 17 minutes). CPT code 97803 is performed by registered dietitians/nutrition professionals 100% of the time and is a time-based code that can be reported multiple times (2021 Medicare claims had a median of 2 units for this code). CPT code G0443 has never been reviewed by the RUC and the direct crosswalk code is not performed by physicians. Thus, the specialty societies indicated, and the RUC agreed, that there is compelling evidence that CPT code G0443 is currently based on flawed methodology.

G0442 Annual alcohol misuse screening, 5 to 15 minutes

The RUC reviewed the survey results from 74 family medicine physicians, internal medicine physicians, and nurse practitioners and determined that the survey 25th percentile and current work RVU of 0.18 appropriately accounts for the typical physician work involved in this service. The CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

RUC recommends 5 minutes of intra-service and total time. As described above, G0442 is only covered once per year and is typically billed with an AWW or office visit. The typical work of the physician for G0442 is to review the collected responses, make sure it is appropriate in the electronic medical record, probe for any follow-up questions, and make an assessment based on the information collected. As G0442 is typically performed with an E/M service, the RUC ensured that the time and work valuation is separate and distinct from same-day E/M services. Therefore, the RUC does not recommend any pre-service or post-service time for this code.

To justify a work RVU of 0.18, the RUC referenced the second top key reference code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU= 0.18, total time of 7 minutes) and noted that although the reference code has two more minutes of physician time, 99211 does not require the presence of a physician or other qualified healthcare professional and is a less intense service.

The RUC also compared the surveyed code to CPT code 70250 *Radiologic examination, skull; less than 4 views* (work RVU= 0.18, intra-service time of 3 minutes, total time of 5 minutes) and noted that although the reference code typically involves two minutes less of intra-service time, both services typically involve the same amount of total time and should have a similar valuation. The RUC concluded that CPT code G0442 should be valued at the 25th percentile and current work RVU as supported by the survey and comparison codes. **The RUC recommends a work RVU of 0.18 for CPT code G0442.**

G0443 *Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes*

The RUC reviewed the survey results from 59 family medicine physicians, internal medicine physicians and nurse practitioners and determined that the survey 25th percentile work RVU of 0.60 appropriately accounts for the typical physician work involved in this service. The RUC recommends 10 minutes of intra-service time and 4 minutes of post-service time.

For patients who screen positive (G0442), CMS covers up to four brief face-to-face behavioral counseling interventions (G0443) for Medicare beneficiaries. Both services are typically performed during an annual wellness visit and/or an office visit service. As G0443 is typically performed with an E/M service, the RUC ensured that the time and work valuation are separate and distinct from same-day E/M services and therefore is not recommending any pre-service time. The distinct work includes discussing the frequency of alcohol use, negative health and social consequences, and overall severity. Clinically appropriate goals are developed and follow-up is discussed.

To justify a work RVU of 0.60, the RUC referenced top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU= 0.70, total time of 16 minutes) and noted that 99212 typically involves 2 more minutes of total time, and therefore it is appropriate to assign a slightly lower valuation to the survey code as both services involve a similar intensity of physician or other qualified healthcare professional work.

The RUC also compared the surveyed code to CPT code 99484 *Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and* CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team. (work RVU= 0.61, intra-service and total time of 15 minutes) and noted that although the reference code involves somewhat more intra-service time, it is a less intense service as the physician or other qualified healthcare professional is directing clinical staff for the reference code instead of performing the service themselves. The reference code involves only one more minute of total time. The RUC concluded that CPT code G0443 should be valued at the 25th percentile as supported by the survey and comparison codes. **The RUC recommends a work RVU of 0.60 for CPT code G0443.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed and affirmed the direct practice inputs from April 2023 without modification. At the April 2023 meeting, the PE Subcommittee reviewed the proposed direct practice expense inputs and made several modifications. For the clinical labor in G0442, the PE Subcommittee reduced CA021 *Perform procedure/service---NOT directly related to physician work time* to five minutes as the typical time for the clinical staff to administer the screening tool. For G0443, all clinical staff time was removed for this counseling service since the counseling is performed by a physician or other qualified healthcare professional. The materials distributed to the patient were changed to the typical number of 10 pages to be printed out, SK057 *paper, laser printing (each sheet)* for G0442 and a full SK062 *patient education booklet* for G0443. The equipment minutes were also modified to equal the sum of clinical staff time plus the physician/QHP time as reflected by the survey median. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

CPT Descriptor: Annual alcohol misuse screening, 5 to 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old patient is screened for alcohol misuse during an annual wellness visit.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician/QHP reviews the responses to the screening instrument with the patient. The physician/QHP validates responses to the screening instrument and probes any issues with the patient as needed. The physician/QHP assesses the responses to determine if counseling, a referral, or treatment is needed.

Description of Post-Service Work: N/A

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0442** (*Annual alcohol misuse screening, 5 to 15 minutes*) in 2012. Effective for claims with dates of service on or after October 14, 2011, CMS will cover annual alcohol screening, and for those that screen positive, up to four brief, face-to-face, behavioral counseling interventions per year for Medicare beneficiaries (National Coverage Determination (NCD) [Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse](#), 210.8).

Typically, G0442 is billed with an Annual Wellness Visit (AWV) (G0439). The RUC database indicates that in 2021 G0442 was reported 815,675 times. 74.9% of the time, it was billed with G0439.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0442 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. At the request of the RAW, the specialty societies (AAFP, ANA, and ACP) submitted an action plan for the September 2022 RUC meeting. Following the action plan review, the RUC recommended that the code be surveyed. The three societies surveyed the code for the April 2023 RUC meeting. Despite sending the survey out to 8,500 members across the three societies, the societies failed to meet the minimum response rate for the survey.

At the April 2023 RUC meeting, the RUC directed the societies to keep the survey open, continue the survey and expand our sample size, hoping that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as reporting this code in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, between the surveys sent in April and September, the survey was sent to 24,390 AAFP, ANA, and ACP members. The specialties were able to meet the survey minimum for the September 2023 meeting.

Note that the data presented in this SOR referred to as the September survey, represents the combined data from the April 2023 and September 2023 surveys.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), and the American Nurses Association (ANA) conducted a survey of G0442. The survey was sent to 24,390 individuals. A total of 74 responses were received.

The societies recommend maintaining the existing work RVU of 0.18. The societies recommend 9 minutes total time with 2 minutes pre-time, 5 minutes intra-time, and 2 minutes post-time for code G0442.

Survey Results

Survey results from the 74 responses received are summarized below.

Work RVU

Min	25 th	Median	75 th	High
0.03	0.18	0.25	0.70	9.00

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
2	5	2	9

Time

When CMS created code G0442, it set the time as 15 minutes, based solely on the code descriptor at the time, and made all the time intra-service time. There was no survey underlying this time construct, which is why the time is labeled “CMS/Other” in the RUC Database.

Respondents to our survey have indicated that there is time in the pre-, intra-, and post-service periods. This time and work are distinct from those of the AWV at the same encounter:

- In the pre-service period, the physician/QHP reviews the responses and other patient records specific to prior screening and treatment for alcohol use disorders. Survey respondents said it typically takes them 2 minutes to review these responses. This screening instrument is not part of the AWV, so the time and work to review the responses to the instrument are not a part of the AWV either.
- In the intra-service period, the physician/QHP reviews the responses to the screening instrument with the patient, validates those responses, and probes any issues with the patient, as needed. The physician/QHP also assesses the responses to determine if counseling, a referral, or treatment is needed. Survey respondents said it typically takes them 5 minutes to go through this process with the patient. Since this screening is not part of the AWV, the time and work to go through this process is over and above that involved in the AWV.
- In the post-service period, the physician/QHP documents clarification of the patient’s response and referral or treatment plan in the patient’s record. Survey respondents said it typically takes them 2 minutes to perform this documentation. Again, since this screening is not part of the AWV, documentation of it is in addition to the documentation associated with the AWV itself.

To further test the robustness of the recommendation relative to the times from the survey, the specialties conducted a time analysis of RUC surveyed codes valued at 0.18 work RVUs. 22 RUC surveyed codes with a global period of XXX and a work RVU value of 0.18 were identified.

Total Time: RUC Surveyed, Global Period of XXX, Work RVU = 0.18

Min	25 th	Median	75 th	High
3.2	5	6	9	13

(Note 22 codes were identified using the RUC Database v2023)

Analyzing the total time for these 22 codes, the specialties found that the total time for G0442, of 9 minutes, fell into the 75th percentile. Put another way, three fourths of the RUC surveyed XXX codes with a work RVU of 0.18 have total time **less than** the 9 minutes recommended for G0442. Advisors concluded that this provided further support for their recommendation.

Comparators

The Advisors considered several comparators to support further their recommendation of 0.18 work RVUs. When the 0.18 work RVU recommendation is compared to compared to the following codes, the valuation seems appropriate and maintains rank order:

Code#	Descriptor	Work RVU	Total Time	Pre-Time	Intra-Time	Post Time
<i>Recommendation</i>						
G0442	Annual alcohol misuse screening, 5 to 15 minutes	0.18	9	2	5	2

Comparators

36410	Venipuncture, age 3 years or older, necessitating the skill of a physician or other qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)	0.18	8	1	5	2
70250	Radiologic examination, skull; less than 4 views	0.18	5	1	3	1

96374 (MPC code)	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug	0.18	9	2	5	2
97014	Application of a modality to 1 or more areas; electrical stimulation (unattended)	0.18	9	1	7	1
99211 (MPC code)	Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional	0.18	7	0	5	2

The Advisors concluded that these comparators provided further support of their recommendation.

Conclusion

AAFP, ACP, and ANA recommend:

- Work RVU: 0.18 work RVUs
- Time: 2 minutes pre-time, 5 minutes intra-time, 2 minutes post-time for a total time of 9 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) G0442 is typically billed with the annual wellness visit (G0439) or with an office visit.

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	CPT Code	Global	Work	Pre	Intra	Post
3.	G0439	XXX	1.92	7	30	10
4.	G0442	XXX	0.18	2	5	2
5.	TOTAL		2.10	9	35	12

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) G0442

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Internal Medicine	How often? Commonly
Specialty Family Medicine	How often? Commonly
Specialty Nurse Practitioner	How often? Sometimes

Estimate the number of times this service might be provided nationally in a one-year period? 815,675

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization. As a G-code this service is typically only reported for Medicare patients. Not reported by commercial payors. Medicare Advantage typically does not reimburse separately for these services so typically not separately reported.

Specialty Internal Medicine	Frequency 354870	Percentage 43.50 %
Specialty Family Medicine	Frequency 338505	Percentage 41.49 %
Specialty Nurse Practitioner	Frequency 70964	Percentage 8.70 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 815,675 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Used Medicare utilization from the RUC database.

Specialty Internal Medicine	Frequency 354870	Percentage 43.50 %
Specialty Family Medicine	Frequency 338505	Percentage 41.49 %
Specialty Nurse Practitioner	Frequency 70964	Percentage 8.70 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Evaluation Management

BETOS Sub-classification:
Office visit

BETOS Sub-classification Level II:
Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0442

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

		RUC Recommended RVU: 0.60

CPT Descriptor: Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 74-year-old patient has previously screened positive for alcohol misuse without dependence and is being seen for counseling.

Percentage of Survey Respondents who found Vignette to be Typical: 81%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician/QHP performs an intervention that provides the patient with a specific set of tools and a plan to increase their likelihood of successfully decreasing their alcohol consumption. The components of the intervention include feedback concerning results found with the screening instrument and within the medical record about the quantity and frequency of alcohol consumed by the patient in comparison to national norms; a discussion of negative physical, emotional, and occupational consequences that have occurred; and the overall severity of the problem. Feedback is accompanied by advice customized to the patient's unique medical and social situation about clinically appropriate behavioral change goals. The physician/QHP engages the patient in a joint decision-making process regarding alcohol use (most physicians/QHP use motivational interviewing techniques). Plans for follow-up are discussed and agreed to. These interventions have the objective of providing the patient with tools to change their attitude towards alcohol and to manage high-risk use situations. This intervention requires specific training and/or experience in techniques eliciting accurate information, developing a specific treatment plan to which the patient is committed, and motivating the patient toward behavioral change. If medications such as naltrexone are prescribed, additional time discussing potential adverse reactions will be required.

Description of Post-Service Work: The physician/QHP documents clarification of the patient's response and referral or treatment plan in the patient's record. The physician/QHP reviews the responses and other patient records. Additional work might include discussing medications with pharmacy and obtaining prior authorizations.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

The societies are requesting an increase in the valuation of the work RVU and, as such, are required to submit compelling evidence. Code G0443 has never been RUC surveyed, and the RUC database assigns “CMS/Other” as the time source for this code. Lacking a RUC survey, G0443 meets the following criteria for compelling evidence:

- Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as a flawed mechanism or methodology used in the previous valuation by either the RUC or CMS, for example, evidence that no pediatricians were consulted in assigning pediatric values or CMS/Other source codes; and/or

CMS established the value of G0443 based on a crosswalk to 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes). That service (97803) is performed and reported almost entirely by registered dietitians and nutrition professionals (99%) and rarely by physicians (<1%). Meanwhile, G0443 is performed predominantly by physicians. This suggests a flawed assumption on the part of CMS regarding who would be providing this service and the nature of the work involved.

The societies appreciate the RUC’s consideration of our recommendation that this code meets the criteria for compelling evidence.

Background

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0443** (*Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes*) in 2012. Effective for claims with dates of service on or after October 14, 2011, CMS will cover annual alcohol screening, and for those that screen positive, up to four brief, face-to-face, behavioral counseling interventions per year for Medicare beneficiaries (National Coverage Determination (NCD) [Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse](#), 210.8).

Typically, G0443 is billed with an office visit (99214). The RUC database indicates that in 2021 G0443 was reported 2,218 times. 56.2% of the time, it was billed with 99214.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0442 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. The specialties note that while the volume of G0442 has increased in recent years, the utilization for code G0443 has decreased. In fact, the 2016 utilization of 2,349 is greater than the 2021 utilization of 2,218.

At the request of the RAW, the specialty societies submitted an action plan for the September 2022 RUC meeting. Following a review of the action plan, the RUC recommended that both G0442 and G0443 be surveyed. The societies surveyed code G0443 for the April 2023 RUC meeting. Despite sending the survey out to 8,500 members across the three societies, the societies failed to meet the minimum response rate for the survey.

At the April 2023 RUC meeting, the RUC directed the societies to keep the survey open, continue the survey and expand our sample size, hoping that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as reporting this code in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, between the surveys sent in April and September, the survey was sent to 24,390 AAFP, ANA, and ACP members. The specialties were able to meet the survey minimum for the September 2023 meeting.

Note that the data presented in this SOR referred to as the September survey, represents the combined data from the April 2023 and September 2023 surveys.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), and the American Nurses Association (ANA) conducted a survey of G0442. The survey was sent to 24,390 individuals. A total of 59 responses were received.

The societies recommend the survey 25th percentile of 0.60 work RVU. The societies recommend 17 minutes total time with 3 minutes pre-time, 10 minutes intra-time, and 4 minutes post-time for code G0443.

Survey Results

Survey results from the 59 responses received are summarized below.

Work RVU

Min	25 th	Median	75 th	High
0.05	0.60	0.74	0.90	10.00

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
3	10	4	17

Time

When CMS created code G0443, it set the time as 15 minutes, based solely on the code descriptor at the time, and made all the time intra-service time. There was no survey underlying this time construct, which is why the time is labeled “CMS/Other” in the RUC Database.

Respondents to our survey have indicated that there is time in the pre-, intra-, and post-service periods.

- In the pre-service period, the physician/QHP reviews the patient’s record prior to the visit specific to alcohol use disorders. Survey respondents indicated this typically takes 2 minutes.
- In intra-service period, the physician/QHP performs an intervention that provides the patient with a specific set of tools and a plan to increase their likelihood of successfully decreasing their alcohol consumption. The components of the intervention include feedback concerning results found with the screening instrument and within the medical record about the quantity and frequency of alcohol consumed by the patient in comparison to national norms; a discussion of negative physical, emotional, and occupational consequences that have occurred; and the overall severity of the problem. Feedback is accompanied by advice customized to the patient's unique medical and social situation about clinically appropriate behavioral change goals. The physician/QHP engages the patient in a joint decision-making process regarding alcohol use (most physicians/QHP use motivational interviewing techniques). Plans for follow-up are discussed and agreed to. These interventions have the objective of providing the patient with tools to change their attitude towards alcohol and to manage high-risk use situations. This intervention requires specific training and/or experience in techniques eliciting accurate information, developing a specific treatment plan to which the patient is committed, and motivating the patient toward behavioral change. If medications such as naltrexone are prescribed, additional time discussing potential adverse reactions will be required. Survey respondents indicated this behavioral counseling typically takes 10 minutes.
- In the post-service period, the physician/QHP documents clarification of the patient’s response and referral or treatment plan in the patient’s record. The physician/QHP reviews the responses and other patient records. Additional work might include discussing medications with pharmacy and obtaining prior authorizations. Survey respondents indicated work typically takes 4 minutes.

Increase in Valuation

G0443 is reported for a subset of G0442 patients who have been diagnosed with alcohol misuse. Over the years, the data reviewed and analyzed for these patients has increased in volume and complexity. Patients are often reluctant to engage and try to obfuscate. These can be complicated and intense interactions that may require the physician or nurse practitioner to probe and press the patient for a response.

With this in mind, advisors discussed the appropriateness of recommending the survey’s 25th percentile, which represented an increase in valuation from the current value. The advisors noted that it was a robust survey of 59 responses and that the total time of 17 minutes is greater than that of comparably valued services (discussed below). Advisors also observed that when comparing the various iterations of the survey, the 25th percentile ranged from 0.56-0.68, with 0.60 being in the middle.

25th Percentile Work RVU G0443: Various Survey Iterations

April 2023 -Only	September 2023-Only	April 2023 + September 2023
------------------	---------------------	-----------------------------

(15 responses)	(44 responses)	(59 responses)
0.56	0.68	0.60

For these reasons, the advisors felt data supported this recommendation.

Comparators

The Advisors considered several comparators to further support their recommendation of 0.60 work RVUs. When the 0.60 work RVU recommendation is compared to the codes below, the valuation seems appropriate and maintains rank order:

Code#	Descriptor	Work RVU	Total Time	Pre-Time	Intra-Time	Post Time
<i>Recommendation</i>						
G0443	Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes	0.60	17	3	10	4

Comparators

74210	Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study	0.59	15	3	10	2
74220 (MPC code)	Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (eg, barium) study	0.60	16	3	10	3
76513	Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy, unilateral or bilateral	0.60	15	3	10	2
99484	Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required	0.61	15		15	

The Advisors concluded that these comparators provided further support for their recommendation.

Conclusion

AAFP, ACP and ANA recommend:

- Work RVU: 0.60 work RVUs
- Time: 3 minutes pre-time, 10 minutes intra-time, 4 minutes post-time for a total time of 17 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0443

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

August 29, 2023

Scott Manaker, MD, PhD
Chair, Practice Expense Subcommittee
Relative Value Scale Update Committee (RUC)
American Medical Association
AMA Plaza
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611-5885

Dear Dr. Manaker,

The American Academy of Family Physicians, American College of Physicians, and American Nurses Association presented the practice expenses for Tab 15 (*Annual Alcohol Screening (G0442, G0443)*), Tab 16 (*Annual Depression Screening (G0444)*), and Tab 17 (*Behavioral Counseling/Therapy (G0445, G0446, G0447)*) at the April 2023 RUC meeting. At that meeting, the specialties, the Practice Expense Subcommittee, and the RUC agreed upon a set of direct practice expense inputs for each of the codes in these three tabs.

At the April 2023 RUC meeting, the RUC directed us to continue the survey of work for each of these codes due to an insufficient number of survey responses. We did that and will be presenting recommendations related to work and physician/qualified healthcare professional time at this meeting. However, we do not believe any of those recommendations will impact the direct practice expense inputs agreed upon in April. Accordingly, we request that the Practice Expense Subcommittee affirm its April 2023 recommendations regarding the inputs for each of these codes at its September 2023 meeting.

Thank you for your time and consideration. If there are any questions or needs from the Practice Expense Subcommittee in advance of the meeting, please let us know.

Sincerely,

Brad Fox, MD
American Academy of Family Physicians

Charles Hamori, MD
American College of Physicians

Korinne Van Keuren, DNP
American Nurses Association

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)Meeting Date: 04/2023 and 09/2023

CPT Code	Long Descriptor	Global Period
G0442	Annual alcohol misuse screening, 5 to 15 minutes	XXX
G0443	Brief face-to-face behavioral counseling for alcohol misuse, 15 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
G0442	A 74-year-old patient is screened for alcohol misuse during an annual wellness visit.
G0443	A 74-year-old patient has previously screened positive for alcohol misuse without dependence and is being seen for counseling.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The specialties are using the current direct PE inputs for codes G0442 and G0443 as the point of reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Yes, both codes are typically reported with an E/M service, including in the non-facility setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the "typical" physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For G0442, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 43.4% of the time in 2021. This is also true for the global.

For G0443, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 46% of the time in 2021. This is also true for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

(Not applicable; although the cost for G0443, as modified by the PE Subcommittee, will increase, this increase is more than offset by the decrease in G0442, which is done more frequently than G0443)

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

(Not applicable)

- b. Service period (includes pre, intra and post):

(For G0442 only) Clinical staff administers the questionnaire and/or enters the patient’s responses into the electronic medical record.

- c. Post-service period:

(Not applicable)

NONFACILITY DIRECT PE INPUTS

**CPT CODE(S): G0442,
G0443**

**SPECIALTY SOCIETY(IES): AAFP, ACP, ANA
**PRESENTER(S): Brad Fox,
MD, Charlie Hamori, MD, Korinne Van Keuren, DNP****

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

(For G0442 only) Clinical staff administers the questionnaire (or enters responses into the EHR), clarifies questions as needed, and records the answers in the patient's electronic medical record for the physician or QHP to review and interpret.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

(Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- a. If yes, please explain how the computer is used for this service(s).
 - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time
See notes at end of SOR.

These services are typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The potentially sensitive nature of the screening questions (G0442) and counseling (G0443) supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

For code G0442:

- Clinical staff time reduced from the recommended 8 minutes to 5 minutes
- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 13 minutes (equal to 5 minutes of staff time plus 8 minutes of physician/QHP time (median from survey))

April Recommendation:

The equipment time for EF023 *table, exam* was reduced from 15 minutes to 13 minutes which is equal to the revised 5 minutes of clinical staff time plus 8 minutes of physician/QHP time and reflects the median from survey.

September Recommendation:

The equipment time for EF023 *table, exam* was reduced from 13 minutes to 10 minutes which is equal to the 5 minutes of clinical staff time plus 5 minutes of physician/QHP time and reflects the median from the recent survey.

For code G0443:

- Clinical staff time was reduced from the recommended 2 minutes to zero minutes.
- The quantity of supply item SK062 (patient education booklet) was increased from 0.5 to 1.0
- EF023 (table, exam) time reduced from 15 minutes to 10 minutes (equal to physician/QHP time (median from survey))

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

September 2023

Annual Depression Screening – Tab 16

Effective October 14, 2011, a new HCPCS code, G0444 *Annual depression screening, 5 to 15 minutes* was added to the Medicare Physician Payment Schedule (MFS) to report annual depression screening for adults in the primary care setting that have staff-assisted depression care supports in place to assure accurate diagnosis, treatment and follow up. This service is typically reported with an Evaluation and Management (E/M) service or an Annual Wellness Visit (codes G0438 or G0439). The current work RVU of 0.18 was assigned by CMS in the 2013 Final Rule via the direct crosswalk to CPT code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional*, given the similarities in work related to screening. In April 2022, the Relativity Assessment Workgroup identified this service with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that this service be surveyed for April 2023 after CMS publishes revised code descriptions in the Final Rule for 2023.

The specialty societies surveyed depression screening code G0444 for the April 2023 RUC meeting but did not obtain the required number of survey responses. The RUC recommended the specialty societies work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify physicians and other qualified healthcare professionals who predominantly perform G0444 and match them with societies to survey those individuals. The specialty societies were also encouraged to expand their random survey sample to other sections of their membership that are more likely to perform this service. As a result, the specialty societies continued to collect survey responses for the September 2023 RUC meeting and worked with the Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample. The specialties were successful in exceeding the minimum number of survey responses for the code for the September 2023 RUC meeting.

G0444 *Annual depression screening, 5 to 15 minutes*

The RUC reviewed the survey results from 94 physicians and recommends a work RVU of 0.18 based on the current work RVU that is supported by other similar services in the MFS. The RUC recommends 5 minutes intra-service and total time. As G0444 is typically performed with an E/M service, the RUC removed all pre- and post-service time to ensure that the time and work valuation is separate and distinct from same-day E/M services.

For this screening, the physician or qualified healthcare professional (QHP) reviews the responses to the completed screening instrument with the patient. The physician or QHP validates responses to the screening instrument and probes any issues with the patient as needed. The physician or QHP assesses the responses to determine if counseling, a referral, or treatment is needed. The physician or QHP documents clarification of the patient's response and referral or treatment plan.

To support the recommended work RVU, the RUC compared the surveyed code to second key reference code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18 and 7 minutes total time) and top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU = 0.70 and 16 minutes total time). The key reference services appropriately bracket the surveyed code. The second key reference service, 99211, has an identical work RVU, although slightly lower times and the first key reference service, 99212, has overall higher times and an appropriately higher work RVU.

For additional support, the RUC compared the surveyed code to MPC code 96374 *Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); intravenous push, single or initial substance/drug* (work RVU = 0.18, 5 minutes intra-service, 9 minutes total time) and noted that the work value recommendation for the surveyed code is identical to the comparator code given the identical intra-service time and similar total time. **The RUC recommends a work RVU of 0.18 for code G0444.**

Practice Expense

The Practice (PE) Subcommittee reviewed and affirmed the direct practice inputs from April 2023 without modification. At the April 2023 meeting, the PE Subcommittee reviewed the direct practice expense inputs and made several modifications. The clinical staff time was reduced for CA021 *Perform procedure/service---NOT directly related to physician work* to five minutes as the typical time for the clinical staff to administer the screening tool. Additionally, supply item SK062 *patient education booklet* was eliminated in favor of SK057 *paper, laser printing (each sheet)* in the amount of 10 sheets. Lastly, the equipment time for EF023 *table, exam* was reduced from 15 minutes to 13 minutes which is equal to 5 minutes of clinical staff time plus 8 minutes of physician/QHP time and reflects the median from survey. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

The Centers for Medicare and Medicaid Services (CMS) established CPT code **G0444** (*Annual depression screening, 5 to 15 minutes*) in 2012. Effective October 14, 2011, CMS will cover annual screening for depression for Medicare beneficiaries in primary care settings that have staff-assisted depression care supports in place to assure accurate diagnosis, effective treatment, and follow-up. (National Coverage Determination (NCD) [Screening for Depression in Adults](#), 210.9).

Typically, G0444 is billed with an Annual Wellness Visit (AWV) (G0439). The RUC database indicates that in 2021 G0444 was reported 2,142,759 times. 79% of the time G0444 was billed with G0439.

In April 2022, the Relativity Assessment Workgroup (RAW) identified G0444 in the screen for Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020. At the request of the RAW, the specialty societies submitted an action plan for the September 2022 RUC meeting. Following the action plan review, the RUC recommended that the code be surveyed. The societies surveyed the code for the April 2023 RUC meeting. Despite sending the survey out to 8,500 members across the three societies, the societies failed to meet the minimum response rate for the survey.

At the April 2023 RUC meeting, the RUC directed the societies to keep the survey open, continue the survey and expand our sample size, hoping that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as reporting this code in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, between the surveys sent in April and September, the survey was sent to 24,390 AAFP, ANA, and ACP members. The specialties were able to meet the survey minimum for the September 2023 meeting.

Note that the data presented in this SOR referred to as the September survey, represents the combined data from the April 2023 and September 2023 surveys.

Recommendation

The American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), and the American Nurses Association (ANA) conducted a survey of G0444. The survey was sent to 24,390 individuals. A total of 94 responses were received.

The societies recommend maintaining the existing work RVU of 0.18. The societies recommend 10 minutes total time with 2 minutes pre-time, 5 minutes intra-time, and 3 minutes post-time for code G0444.

Survey Results

Survey results from the 94 responses received are summarized below.

Work RVU

Min	25 th	Median	75 th	High
0.03	0.20	0.48	0.70	10.00

Time (median values)

Pre-Time	Intra-Time	Post-Time	Total Time
2	5	3	10

Time

When CMS created code G0444, it set the time as 15 minutes, based solely on the code descriptor at the time, and made all the time intra-service time. There was no survey underlying this time construct, which is why the time is labeled “CMS/Other” in the RUC Database.

Respondents to our survey have indicated that there is time in the pre-, intra-, and post-service periods. This time and work are distinct from those of the AWV at the same encounter:

- In the pre-service period, the physician/QHP reviews the responses to the screening instrument and the medical record specific to prior psychiatric diagnoses and medications. Survey respondents said it typically takes them 2 minutes to review these responses. This screening instrument is not part of the AWV, so the time and work to do this review are not a part of the AWV either.
- In the intra-service period, the physician/QHP reviews the responses to the screening instrument with the patient, validates those responses, and probes any issues with the patient, as needed. The physician/QHP also assesses the responses to determine if counseling, a referral, or treatment is needed. Survey respondents said it typically takes them 5 minutes to go through this process with the patient. Since this screening is not part of the AWV, the time and work to go through this process is over and above that involved in the AWV.
- In the post-service period, the physician/QHP documents clarification of the patient’s response and referral or treatment plan in the patient’s record. Survey respondents said it typically takes them 3 minutes to perform this documentation. Again, since this screening is not part of the AWV, documentation of it is in addition to the documentation associated with the AWV itself.

To further test the robustness of the recommendation relative to the times from the survey, the specialties conducted a time analysis of RUC surveyed codes valued at 0.18 work RVUs. 22 RUC surveyed codes with a global period of XXX and a work RVU value of 0.18 were identified.

Total Time: RUC Surveyed, Global Period of XXX, Work RVU = 0.18

Min	25 th	Median	75 th	High
3.2	5	6	9	13

(Note 22 codes were identified using the RUC Database v2023)

Analyzing total time of the 22 codes, the specialties found that the total time for G0444, of 10 minutes, fell very close to the 75th percentile. Put another way, three fourths of the RUC surveyed XXX codes with a work RVU of 0.18 have total time **less than** the 10 minutes recommended for G0444. Advisors concluded that this provided further support for their recommendation.

Comparators

The Advisors considered several comparators to support further their recommendation of 0.18 work RVUs. When the recommended value of 0.18 is compared to these services, it seems appropriate and maintains rank order.

Code#	Descriptor	Work RVU	Total Time	Pre-Time	Intra-Time	Post Time

Specialty Nurse Practitioner	Frequency 190705	Percentage 8.89 %
------------------------------	------------------	-------------------

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

Established

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0444

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

August 29, 2023

Scott Manaker, MD, PhD
Chair, Practice Expense Subcommittee
Relative Value Scale Update Committee (RUC)
American Medical Association
AMA Plaza
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611-5885

Dear Dr. Manaker,

The American Academy of Family Physicians, American College of Physicians, and American Nurses Association presented the practice expenses for Tab 15 (*Annual Alcohol Screening (G0442, G0443)*), Tab 16 (*Annual Depression Screening (G0444)*), and Tab 17 (*Behavioral Counseling/Therapy (G0445, G0446, G0447)*) at the April 2023 RUC meeting. At that meeting, the specialties, the Practice Expense Subcommittee, and the RUC agreed upon a set of direct practice expense inputs for each of the codes in these three tabs.

At the April 2023 RUC meeting, the RUC directed us to continue the survey of work for each of these codes due to an insufficient number of survey responses. We did that and will be presenting recommendations related to work and physician/qualified healthcare professional time at this meeting. However, we do not believe any of those recommendations will impact the direct practice expense inputs agreed upon in April. Accordingly, we request that the Practice Expense Subcommittee affirm its April 2023 recommendations regarding the inputs for each of these codes at its September 2023 meeting.

Thank you for your time and consideration. If there are any questions or needs from the Practice Expense Subcommittee in advance of the meeting, please let us know.

Sincerely,

Brad Fox, MD
American Academy of Family Physicians

Charles Hamori, MD
American College of Physicians

Korinne Van Keuren, DNP
American Nurses Association

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
 PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: 04/2023 and 09/2023

CPT Code	Long Descriptor	Global Period
G0444	Annual depression screening, 5 to 15 minutes	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
G0444	A 76-year-old patient is screened for depression during an annual wellness visit.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Acting as an expert panel, the specialty societies’ advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The specialties are using the current direct PE inputs for code G0444 as the point of reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
 Is this code(s) typically reported with the E/M service in the nonfacility?

Yes, G0444 is typically reported with an E/M service, including in the non-facility setting.
 See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For G0444, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 43.7% of the time in 2021. This is also true for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

(Not applicable)

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

(Not applicable)

10. Please provide a brief description of the clinical staff work for the following:

- a. Pre-Service period:

(Not applicable)

- b. Service period (includes pre, intra and post):

Clinical staff administers the questionnaire and/or enters the patient's responses into the electronic medical record.

- c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

Clinical staff administers the questionnaire (or enters responses into the EHR), clarifies the question as needed, and records the answers in the patient's electronic medical record for the physician or QHP to review and interpret.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): G0444
SPECIALTY SOCIETY(IES): AAFP, ACP, ANA
PRESENTER(S): Brad Fox,
MD, Charlie Hamori, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

(Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

(Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- 22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
 - a. If yes, please explain how the computer is used for this service(s).
 - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - c. Does the computer include code specific software that is typically used to provide the service(s)?

No

- 23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time
See notes at end of SOR.

This service is typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The potentially sensitive nature of the screening questions supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

- 24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
 (b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

(Not applicable)

- 25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

- 26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

(Not applicable)

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

- Clinical staff time reduced from the recommended 8 minutes to 5 minutes
- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 13 minutes (equal to 5 minutes of staff time plus 8 minutes of physician/QHP time (median from survey))

April Recommendation:

The equipment time for EF023 *table, exam* was reduced from 15 minutes to 13 minutes which is equal to 5 minutes of clinical staff time plus 8 minutes of physician/QHP time and reflects the median from survey.

September Recommendation:

The equipment time for EF023 *table, exam* was reduced from 13 minutes to 10 minutes which is equal to 5 minutes of clinical staff time plus 5 minutes of physician/QHP time and reflects the median from the recent survey.

AMA/Specialty Society RVS Update Committee Summary of Recommendations
High Volume Growth

September 2023

Behavioral Counseling/Therapy – Tab 17

In April 2022, the Relativity Assessment Workgroup identified services with Medicare utilization of 10,000 or more that have increased by at least 100% from 2015 through 2020, including codes G0445-G0447. In September 2022, the RUC recommended that these services be surveyed for April 2023 after CMS publishes revised code descriptions in the Final Rule for 2023.

The specialty societies surveyed behavioral counseling codes G0445-G0447 for the April 2023 RUC meeting but did not obtain the required number of survey responses. The RUC recommended that the specialty societies work with the Research Subcommittee to develop a targeted survey, using the Medicare Claims database to identify physicians and other qualified healthcare professionals who predominantly perform G0445-G0447 and match them with societies to survey those individuals. The specialty societies were also encouraged to expand their random survey sample to other sections of their membership that are more likely to perform these services. As a result, the specialty societies continued to collect survey responses for the September 2023 RUC meeting and worked with the Research Subcommittee to identify a targeted survey sample in addition to an expanded random sample. The specialty societies were again unable to achieve the required minimum number of survey responses for any of the codes in this family for the September 2023 RUC meeting.

G0445 High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes

The RUC reviewed the survey results from 22 family medicine and internal medicine physicians and noted that the required minimum number of survey responses, 30, was not achieved. Also, the RUC noted that G0445 is a CMS-created time-based code with 30 minutes of time assigned in the code's long descriptor. The RUC acknowledged that this low-volume service is assigned the same value currently as G0446 and G0447 though twice the amount of physician time. **Given the constraints of an insufficient number of survey responses and this being a CMS-created time-based code, the RUC determined it would be most appropriate to maintain the current times and values at this time.** The RUC would also flag this service for review in 3 years and for the service to not be used as a comparison code.

For G0445, CMS covers up to two individual face-to-face counseling sessions annually for Medicare beneficiaries for high intensity behavioral counseling to prevent sexually transmitted infections (STIs), for all sexually active adolescents, and for adults at increased risk for STIs if provided by a Medicare eligible primary care provider in a primary care setting.

To justify maintaining a work value of 0.45, the RUC compared the surveyed code to top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU= 0.70, 16 minutes of total time) and noted that this reference code supports maintaining the current value for the surveyed code and would not overvalue the service. **The RUC recommends a work RVU of 0.45 for CPT code G0445.**

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

G0446 Annual, face-to-face intensive behavioral therapy for cardiovascular disease, individual, 15 minutes

The RUC reviewed the survey results from 26 family medicine and internal medicine physicians and noted that the required minimum number of survey responses was not achieved (at least 50 survey responses for a service with Medicare volume between 100,000 and 1 million claims). The RUC recommends 15 minutes intra-service and total time. **Given the constraints of an insufficient number of survey responses and this being a CMS-created time-based code, the RUC determined it would be most appropriate to maintain the current times and values at this time.** The RUC would also flag this service for review in 3 years and for the service to not be used as a comparison code.

For G0446, CMS covers one face-to-face cardiovascular disease risk reduction visit per year for Medicare beneficiaries whose counseling is furnished by a qualified primary care physician or other primary care practitioner in a primary care setting.

To justify maintaining a work value of 0.45, the RUC compared the survey code to top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU= 0.70, 16 minutes of total time) and noted that this reference code supports that maintaining the current value for the survey code would not overvalue the service. The RUC also compared the surveyed code to MPC code 99407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes* (work RVU=0.50, intra-service and total time of 15 minutes).

As G0446 is typically performed with an E/M service, the RUC ensured that maintaining the current value would assign a valuation that did not include duplicative work from a same-day E/M service. **The RUC recommends a work RVU of 0.45 for CPT code G0446.**

G0447 Face-to-face behavioral counseling for obesity, 15 minutes

The RUC reviewed the survey results from 35 family medicine and internal medicine physicians and noted that the required minimum number of survey responses was not achieved (at least 50 survey responses for a service with Medicare volume between 100,000 and 1 million claims). The RUC recommends 15 minutes of intra-service and total time. **Given the constraints of an insufficient number of survey responses and this being a CMS-created time-based code, the RUC determined it would be most appropriate to maintain the current times and values at this time.** The RUC would also flag this service for review in 3 years and for the service to not be used as a comparison code.

For G0447 and Medicare beneficiaries with obesity, CMS covers one face-to-face visit every week for the first month, one face-to-face visit every other week for months 2-6 and one face-to-face visit every month for months 7-12 (if the beneficiary meets a 3kg weight loss requirement during the first six months). The G0447 visits would also only be covered when furnished by a qualified primary care physician or other primary care practitioner and in a primary care setting.

To justify maintaining a work value of 0.45, the RUC compared the surveyed code to top key reference code 99212 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.* (work RVU= 0.70, 16 minutes of total time) and noted that this reference code supports that maintaining the current value for the

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

surveyed code would not overvalue the service. The RUC also compared the surveyed code to MPC code 99407 *Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes* (work RVU=0.50, intra-service and total time of 15 minutes).

As G0447 is typically performed with an E/M service, the RUC ensured that maintaining the current value would assign a valuation that did not include duplicative work from a same-day E/M service. **The RUC recommends a work RVU of 0.45 for CPT code G0447.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed and affirmed the direct practice inputs from April 2023 without modification. At the April 2023 meeting, the PE Subcommittee reviewed the proposed direct practice expense inputs and made a couple modifications: SK062 *patient education booklet* was eliminated in favor of SK057 *paper, laser printing (each sheet)* in the amount of 10 sheets, and the equipment minutes were modified to equal the sum of clinical staff time plus the physician/QHP time as reflected by the survey median. The PE Subcommittee agreed with the specialties’ modification of the clinical staff time to move two minutes from CA021 *Perform procedure/service---NOT directly related to physician work time* to CA035 *Review home care instructions, coordinate visits/prescriptions*. This more accurately reflects the clinical work involved in arranging follow-up and/or referrals with clinical and community resources and providing educational materials. **The RUC recommends the direct practice expense inputs as affirmed by the Practice Expense Subcommittee.**

Relativity Assessment Workgroup Review

The RUC recommends that the Relativity Assessment Workgroup review CPT codes G0445, G0446 and G0447 in three years as these services did not achieve the required minimum number of survey responses. Also, as G0445 and G0446 did not achieve 30 responses, specialty societies will be asked in three years to submit an action plan indicating whether these services should be resurveyed, referred to CPT to create a Category I code or referred to CMS for deletion or revision.

RUC Database Flag

CMS HCPCS codes G0445, G0446 and G0447 did not achieve the required number of survey responses and therefore would not be appropriate comparators for other services. The RUC notes that they will be flagged as “**Do not use to validate for physician work.**”

CPT Code	CPT Descriptor	Global Period	Work RVU Recommendation
G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes	XXX	0.45 (No Change)

G0446	Annual, face-to-face intensive behavioral therapy for cardiovascular disease, individual, 15 minutes	XXX	0.45 (No Change)
G0447	Face-to-face behavioral counseling for obesity, 15 minutes	XXX	0.45 (No Change)

SUMMARY OF RECOMMENDATION**

CPT Code:G0445	Tracking Number	Original Specialty Recommended RVU: 0.45
		Presented Recommended RVU: 0.45
Global Period: XXX	Current Work RVU: 0.45	RUC Recommended RVU: 0.45

CPT Descriptor: High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68 year old patient is found to have multiple sexual partners and receives education, skills training and guidance regarding sexually transmitted infection prevention during an annual wellness exam.

Percentage of Survey Respondents who found Vignette to be Typical: 63%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: (Not applicable)

Description of Intra-Service Work: The clinician counsels the patient on strategies to prevent sexually transmitted infection such as behavioral changes, strategies to make better choices, use of birth control measures (e.g., condoms IUDs), use of medications such as PrEP, interventions to address self-image and depression. The clinician will answer questions the patient may have and provide resources as needed.

Description of Post-Service Work: (Not applicable)

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023. Code G0445 was included in the family.

CMS created code G0445 effective with the 2012 Medicare physician fee schedule in conjunction with the National Coverage Determination (NCD) on “Screening for Sexually Transmitted Infections (STIs) and High-Intensity Behavioral Counseling (HIBC) to prevent STIs” (NCD 210.10). CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes). CMS set the time for this service at 30 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has ranged from 889 in 2017 to 2,043 in 2020. The Medicare claims volume was 1,721 in 2021.

As noted in the letter accompanying this tab, the specialties initially randomly surveyed 7,500 members for the April 2023 RUC meeting. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve six responses to the survey for this code. At the April 2023 RUC meeting, the RUC directed us to continue the survey and expand our sample size in hopes that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, the survey was sent to 17,244 AAFP and ACP members and still only achieved 22 responses, less than the 30 needed for a code with this one’s volume of services.

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS and flag the code for resurvey in two years. We note that 0.45 work RVUs for 30 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC counseling code noted above. It is also less than the 0.61 work RVUs for 20 minutes of physician time in 99457 (Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes) and the 0.80 work RVUs for 25 minutes of physician time in 99423 (Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes). We found 14 RUC-reviewed codes with an XXX global period and 0.45 work RVUs; all involve less time than is recommended for G0445 with the same value.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) This service is typically billed with G0446 (ANNUAL, FACE-TO-FACE INTENSIVE BEHAVIORAL THERAPY FOR CARDIOVASCULAR DISEASE, INDIVIDUAL, 15 MINUTES) (60.6%), G0442 (ANNUAL ALCOHOL MISUSE SCREENING, 15 MINUTES) (52.5%), and 99214 (OFFICE OUTPATIENT VISIT 25 MINUTES) (50.5%)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

3. Code Global Work RVU Pre Intra Post

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0445

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

Modifier -51 Exempt Status

Is the recommended value for the new/revised procedure based on its modifier -51 exempt status? No

New Technology/Service:

Is this new/revised procedure considered to be a new technology or service? No

TOP KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99212	XXX	0.70	RUC Time

CPT Descriptor Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10-19 minutes of total time is spent on the date of the encounter.

SECOND HIGHEST KEY REFERENCE SERVICE:

<u>Key CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
99422	XXX	0.50	RUC Time

CPT Descriptor Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes

KEY MPC COMPARISON CODES:

Compare the surveyed code to codes on the RUC's MPC List. Reference codes from the MPC list should be chosen, if appropriate that have relative values higher and lower than the requested relative values for the code under review.

<u>MPC CPT Code 1</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99446	XXX	0.35	RUC Time	7,197

CPT Descriptor 1 Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician or other qualified health care professional, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5-10 minutes of medical consultative discussion and review

<u>MPC CPT Code 2</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>	<u>Most Recent Medicare Utilization</u>
99407	XXX	0.50	RUC Time	64,547

CPT Descriptor 2 Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes

<u>Other Reference CPT Code</u>	<u>Global</u>	<u>Work RVU</u>	<u>Time Source</u>
		0.00	

CPT Descriptor

RELATIONSHIP OF CODE BEING REVIEWED TO TOP TWO KEY REFERENCE SERVICES:

Compare the pre-, intra-, and post-service time (by the median) and the intensity factors (by percent distribution) of the service you are rating to the top two chosen key reference services listed above. **Make certain that you are including existing time data (RUC if available, Harvard if no RUC time available) for the reference code listed below.**

Number of respondents who choose Top Key Reference Code: 14 % of respondents: 53.8 %

Number of respondents who choose 2nd Key Reference Code: 3 % of respondents: 11.5 %

TIME ESTIMATES (Median)

	CPT Code: G0446	Top Key Reference CPT Code: 99212	2nd Key Reference CPT Code: 99422

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023.

The Centers for Medicare & Medicaid Services (CMS) created code G0446 in conjunction with the [National Coverage Determination on “Intensive Behavioral Therapy for Cardiovascular Disease,”](#) effective with the 2012 Medicare physician fee schedule. CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes.) CMS set the physician time equal to 15 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has been as follows:

2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
42,750	73,223	88,449	108,901	143,493	181,760	216,004	253,992	261,551	290,059

As noted in the letter accompanying this tab, the specialties randomly surveyed 7,500 members for the April 2023 RUC meeting. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve seven responses to the survey for this code. At the April 2023 RUC meeting, the RUC directed us to continue the survey and expand our sample size in hopes that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, the survey was sent to 17,244 AAFP and ACP members and still only achieved 26 responses, less than the 50 needed for a code with this one’s volume of services.

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS. We note that 0.45 work RVUs for 15 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC code noted above. In total, we found nine RUC-reviewed codes with an XXX global period that have the same intra-service and total time of 15 minutes and work RVUs greater than or equal to the 0.45 recommended for G0446:

CPT Code	Long Desc	Work RVU
76886	Ultrasound, infant hips, real time with imaging documentation; limited, static (not requiring physician or other qualified health care professional manipulation)	0.62
77300	Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician	0.62
88112	Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal	0.56
90863	Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)	0.48
95940	Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)	0.60
99401	Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 15 minutes	0.48
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50
99422	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes	0.50
99484	Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team.	0.61

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 290,059 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. Based on actual 2021 Medicare utilization as shown in the RUC database

Specialty Internal Medicine	Frequency 137778	Percentage 47.49 %
Specialty Family Medicine	Frequency 109352	Percentage 37.69 %
Specialty (all others)	Frequency 42929	Percentage 14.80 %

Do many physicians perform this service across the United States? Yes

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:

Evaluation Management

BETOS Sub-classification:

Office visit

BETOS Sub-classification Level II:

CPT Descriptor: Face-to-face behavioral counseling for obesity, 15 minutes

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68 year old patient with a BMI of 33 is seen for counseling and behavioral therapy for weight loss, exercise and diet at the time of an E/M visit.

Percentage of Survey Respondents who found Vignette to be Typical: 80%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: (Not applicable)

Description of Intra-Service Work: The clinician educates the patient on the patient's history, counsels on strategies to lose weight or prevent obesity, and educates on blood work, medications, lifestyle changes, exercise or other interventions that can help the patient lose weight or prevent obesity. Also, the clinician explores insurance coverage and cost for medications, interventions, and/or procedures and works with the patient to overcome access barriers to interventions.

Description of Post-Service Work: (Not applicable)

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

In April 2022, the Relativity Assessment Workgroup identified G0446 as being a service with Medicare utilization of 10,000 or more that has increased by at least 100% from 2015 through 2020. In September 2022, the RUC recommended that G0446 be surveyed for April 2023 after the Centers for Medicare & Medicaid Services (CMS) publishes revised code descriptions in the Final Rule for 2023. Code G0447 was included in the family.

CMS created code G0447 effective with the 2012 Medicare physician fee schedule in conjunction with the National Coverage Determination (NCD) on “Intensive Behavioral Therapy for Obesity” (NCD 210.12). CMS crosswalked its value from code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes). CMS set the time for this service at 15 minutes, consistent with the code descriptor. The physician work RVUs for this service have been 0.45 since its inception, and Medicare volume for this code has ranged from 55,809 in 2012 to 326,317 in 2019. The Medicare claims volume was 289,558 in 2021.

As noted in the letter accompanying this tab, the specialties randomly surveyed 7,500 members for the April 2023 RUC meeting. The survey was in the field for more than two weeks. Despite reminders and a deadline extension, we were only able to achieve eight responses to the survey for this code. At the April 2023 RUC meeting, the RUC directed us to continue the survey and expand our sample size in hopes that we would achieve enough responses to meet the RUC response threshold. We subsequently secured Research Subcommittee approval to add a targeted survey sample of AAFP and ACP members who are identified as providing these codes in the Medicare Physician & Other Practitioners – by Provider and Service data set. In the end, the survey was sent to 17,244 AAFP and ACP members and still only achieved 35 responses, less than the 50 needed for a code with this one’s volume of services..

Accordingly, the specialties recommend that the RUC accept the current value and time as set by CMS. We note that 0.45 work RVUs for 15 minutes of physician time, as recommended, is less than the 0.50 work RVUs for 15 minutes of physician time for 99407 (Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes), an MPC code noted above. In total, we found nine RUC-reviewed codes with an XXX global period that have the same intra-service and total time of 15 minutes and work RVUs greater than or equal to the 0.45 recommended for G0446:

CPT Code	Long Desc	Work RVU
76886	Ultrasound, infant hips, real time with imaging documentation; limited, static (not requiring physician or other qualified health care professional manipulation)	0.62
77300	Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician	0.62
88112	Cytopathology, selective cellular enhancement technique with interpretation (eg, liquid based slide preparation method), except cervical or vaginal	0.56
90863	Pharmacologic management, including prescription and review of medication, when performed with psychotherapy services (List separately in addition to the code for primary procedure)	0.48
95940	Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)	0.60
99401	Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 15 minutes	0.48
99407	Smoking and tobacco use cessation counseling visit; intensive, greater than 10 minutes	0.50
99422	Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11-20 minutes	0.50
99484	Care management services for behavioral health conditions, at least 20 minutes of clinical staff time, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team.	0.61

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number G0447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

August 29, 2023

Scott Manaker, MD, PhD
Chair, Practice Expense Subcommittee
Relative Value Scale Update Committee (RUC)
American Medical Association
AMA Plaza
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611-5885

Dear Dr. Manaker,

The American Academy of Family Physicians, American College of Physicians, and American Nurses Association presented the practice expenses for Tab 15 (*Annual Alcohol Screening (G0442, G0443)*), Tab 16 (*Annual Depression Screening (G0444)*), and Tab 17 (*Behavioral Counseling/Therapy (G0445, G0446, G0447)*) at the April 2023 RUC meeting. At that meeting, the specialties, the Practice Expense Subcommittee, and the RUC agreed upon a set of direct practice expense inputs for each of the codes in these three tabs.

At the April 2023 RUC meeting, the RUC directed us to continue the survey of work for each of these codes due to an insufficient number of survey responses. We did that and will be presenting recommendations related to work and physician/qualified healthcare professional time at this meeting. However, we do not believe any of those recommendations will impact the direct practice expense inputs agreed upon in April. Accordingly, we request that the Practice Expense Subcommittee affirm its April 2023 recommendations regarding the inputs for each of these codes at its September 2023 meeting.

Thank you for your time and consideration. If there are any questions or needs from the Practice Expense Subcommittee in advance of the meeting, please let us know.

Sincerely,

Brad Fox, MD
American Academy of Family Physicians

Charles Hamori, MD
American College of Physicians

Korinne Van Keuren, DNP
American Nurses Association

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: 04/2023 and 09/2023

CPT Code	Long Descriptor	Global Period
G0445	High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes	XXX
G0446	Annual, face-to-face intensive behavioral therapy for cardiovascular disease, individual, 15 minutes	XXX
G0447	Face-to-face behavioral counseling for obesity, 15 minutes	XXX

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
G0445	A 68 year old patient is found to have multiple sexual partners and receives education, skills training and guidance regarding sexually transmitted infection prevention during an annual wellness exam.
G0446	A 72 year old patient with hypertension receives intensive behavioral therapy for cardiovascular disease prevention during an annual wellness exam.
G0447	A 68 year old patient with a BMI of 33 is seen for counseling and behavioral therapy for weight loss, exercise and diet at the time of an E/M visit.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

Acting as an expert panel, the specialty societies' advisors used the current, CMS direct practice expense inputs as a basis for their recommendation.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The specialties are using the current direct PE inputs for codes G0445-G0447 as the point of reference.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Yes, each code is typically reported with an E/M service, including in the non-facility setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must

NONFACILITY DIRECT PE INPUTS

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

For G0445, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 38.7% of the time in 2021. This is also true for the global.

For G0446, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 47.8% of the time in 2021. This is also true for the global.

For G0447, Internal Medicine is the dominant specialty in the non-facility setting, providing the service 47.5% of the time in 2021. This is also true for the global.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

(Not applicable)

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

(Not applicable)

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

(Not applicable)

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

(Not applicable)

b. Service period (includes pre, intra and post):

Clinical staff arranges follow-up and/or referrals with clinical and community resources and provides educational materials.

c. Post-service period:

(Not applicable)

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

(Not applicable)

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

(Not applicable)

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

(Not applicable)

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

(Not applicable)

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?

16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

(Not applicable)

18. Are you recommending a PE supply pack for this recommendation? Yes or No.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

No

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

(Not applicable)

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

(Not applicable)

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

(Not applicable)

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

a. If yes, please explain how the computer is used for this service(s).

b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?

c. Does the computer include code specific software that is typically used to provide the service(s)?

No

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected "other formula" for any of the equipment, please explain here:

EF023 – Table, exam (Other formula) – Clinical staff time plus physician/QHP time

See notes at end of SOR.

These services are typically done in conjunction with an E/M service, such as the Medicare annual wellness visit, which occurs in an exam room. The counseling/behavioral therapy can be potentially sensitive in nature (e.g., when addressing sexually transmitted infection or obesity), which supports the provision of these services in an exam room in the typical case. The exam table is otherwise unavailable to other patients or for other services during this time. Clinical staff time does not typically overlap physician/QHP time.

PE-ONLY CODES ADDITIONAL INFORMATION

24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

(Not applicable)

ADDITIONAL INFORMATION

26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

CMS currently includes a whip mixer (EP086) and biohazard hood (EP016) among the equipment assigned to code G0445. The specialties believe this is in error and have recommended eliminating both pieces of equipment from G0445.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Modifications made to the PE spreadsheet during the PE Subcommittee meeting:

For G0445:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 20 minutes to 17 minutes (equal to 2 minutes of staff time plus 15 minutes of physician/QHP time (median from survey))

For G0446:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets
- EF023 (table, exam) time reduced from 15 minutes to 12 minutes (equal to 2 minutes of staff time plus 10 minutes of physician/QHP time (median from survey))

For G0447:

- Supply item SK062 (patient education booklet) eliminated in favor of SK057 (paper, laser printing (each sheet)) in the amount of 10 sheets

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

SARS-CoV-2-Immunization Administration – Tab 18

On August 14, 2023, new CPT codes were created to consolidate over 50 previously implemented codes and streamline the reporting of immunizations for the novel coronavirus (SARS-CoV-2, also known as COVID-19). The CPT Editorial Panel approved the addition of new product codes 91318-91322 to identify monovalent vaccine product for immunization against COVID-19 (Pfizer, Moderna); retained existing Novavax Product Code 91304 for currently authorized vaccine product available for use in the U.S. and the updated (XBB.1.5) vaccine; deleted and/or revised all other existing COVID codes (product and administration with associated guidelines and parenthetical note deletions/revisions); and added a single administration code (90480) for administration of new (i.e., 91318-91322) and existing (i.e., 91304) COVID-19 vaccine products.

All existing CPT codes that describe COVID-19 vaccine products and associated administration codes that end in “A” for products that are no longer covered under an existing Emergency Use Authorization (EUA) or Biologics License Application (BLA) from the US Food and Drug Administration (FDA) will be deleted effective November 1, 2023.

In August 2023, the specialty societies conducted an expedited survey to value the consolidated single COVID-19 immunization administration code, CPT code 90480. The RUC reviewed the specialty societies’ recommendation at the September 2023 RUC meeting.

90480 Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose

The RUC reviewed the survey results from 171 pediatricians and obstetricians/gynecologists and determined that the survey median work RVU of 0.25 appropriately accounts for the work required to perform this service. The RUC recommends 7 minutes of intra-service/total time. The RUC noted that this service is typically performed on the same day as an Evaluation and Management (E/M) office visit and the recommended work and time is not duplicative from that which is included in the E/M visit.

The RUC compared the surveyed code with the top key reference service 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes intra-service/total time). The RUC noted that 70% of the respondents who chose CPT code 90460 as the key reference service indicated the surveyed code is overall slightly more intense and complex to perform. This is supported by the additional complexity of the intra-service work as compared to 90460 based on the need to address ongoing vaccine hesitancy associated with COVID-19. Analysis from the [CDC’s State of Vaccine Confidence Insights Report](#), [KFF COVID-19 Vaccine Monitor](#), [American Academy of Family Physicians](#), [American College Health Association](#), [American Academy of Pediatrics](#), and [Journal of Community](#) have shown that the

COVID-19 pandemic has had a profound effect on vaccine confidence, with a significant overall increase in vaccine hesitancy. Notably, COVID-19 vaccines have experienced the highest level of hesitancy compared to other vaccines. Therefore, the RUC determined that the physician or QHP work is slightly more for code 90480 compared to 90460.

The RUC compared the surveyed code to the second top key reference service 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (work RVU = 0.17 and 7 minutes intra-service/total time). The RUC noted that while both services require the same amount of time, offering CPT code 90471 (such as for seasonal influenza), which entails less physician work and is less intense/complex. CPT code 90741 is valued appropriately lower, as there is slightly less patient education and discussion about vaccination hesitancy when compared to the COVID related patient education and vaccine protection that is required for CPT code 90480.

For additional support, the RUC referenced MPC codes 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service/total time) and 71111 *Radiologic examination, ribs, bilateral; including posteroanterior chest, minimum of 4 views* (work RVU = 0.32, 7 minutes intra-service time and 9 minutes total time), which places the surveyed code in the proper rank order based on the intensity, complexity, and time required to perform this service. **The RUC recommends a work RVU of 0.25 for CPT code 90480.**

Practice Expense

The Practice Expense (PE) Subcommittee reviewed the direct practice expense inputs and made no modifications. The specialty societies recommended identical inputs as recently reviewed and approved for immunization administration code 90460. **The RUC recommends the direct practice expense inputs as submitted by the specialty societies.**

New Technology/New Services

The RUC recommends that CPT code 90480 be placed on the New Technology/New Services list and be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions.

Modifier -51 Exempt

The RUC acknowledges that vaccines and immunizations are inherently precluded from the modifier -51 application and note that the revisions to the CPT guidelines are already in place, which includes COVID immunizations.

<p>Vaccines, Toxoids</p> <p><i>To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website, which features updates of CPT Editorial Panel actions regarding these products. Once approved by the CPT Editorial Panel, these codes will be made available for release on a semiannual (twice a year: July 1 and January 1) basis. As part of the electronic distribution, there is a six-month implementation period from the initial release date (ie, codes released on January 1 are eligible for use on July 1 and codes released on July 1 are eligible for use January 1).</i></p> <p><i>The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✎ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ✎ symbol will be removed. CPT users should refer to the AMA CPT website (www.ama-assn.org/go/cpt-vaccine) for the most up-to-date information on codes with the ✎ symbol.</i></p> <p>Codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322, 91300-91317, identify the vaccine product only. To report the administration of a vaccine/toxoid other than SARS-CoV-2 (coronavirus disease [COVID-19]), the vaccine/toxoid product codes (90476-90759) must be used in addition to an immunization administration code(s) (90460, 90461, 90471, 90472, 90473, 90474). To report the administration of a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine, the vaccine/toxoid product codes <u>91304, 91318, 91319, 91320, 91321, 91322</u> (91300-91317) should be reported with the corresponding immunization administration code (904800001A, 0002A, 0003A, 0004A, 0011A, 0012A,</p>				

0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A). All SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine codes in this section are listed in Appendix Q with their associated vaccine code descriptors, vaccine administration codes, patient age, vaccine manufacturer, vaccine name(s), NDC Labeler Product ID, and interval between doses. In order to report these codes, the vaccine must fulfill the code descriptor and must be the vaccine represented by the manufacturer and vaccine name listed in Appendix Q.

Do not report 90476-90759 in conjunction with the SARS-CoV-2 (coronavirus disease [COVID-19]) immunization administration codes ~~904800001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~ unless both a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter.

Modifier 51 should not be reported with vaccine/toxoid codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322~~91300-91317~~, when reported in conjunction with administration codes 90460, 90461, 90471, 90472, 90473, 90474, ~~904800001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A~~.

If a significantly separately identifiable Evaluation and Management (E/M) service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

To meet the reporting requirements of immunization registries, vaccine distribution programs, and reporting systems (eg, Vaccine Adverse Event Reporting System) the exact vaccine product administered needs to be reported. Multiple codes for a particular vaccine are provided in the CPT codebook when the schedule (number of doses or timing) differs for two or more products of the same vaccine type (eg, hepatitis A, Hib) or the vaccine product is available in more than one chemical formulation, dosage, or route of administration.

The “when administered to” age descriptions included in CPT vaccine codes are not intended to identify a product’s licensed age indication. The term “preservative free” includes use for vaccines that contain no preservative and vaccines that contain trace amounts of preservative agents that are not present in a sufficient concentration for the purpose of preserving the final vaccine formulation. The absence of a designation regarding a preservative does not necessarily indicate the presence or absence of preservative in the vaccine. Refer to the product’s prescribing information (PI) for the licensed age indication before administering vaccine to a patient.

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The vaccine/toxoid abbreviations listed in codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322,~~91300-91317~~, reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely

basis via the AMA CPT website (www.ama-assn.org/go/cpt-vaccine). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

For the purposes of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccinations, codes 0003A, 0013A, 0053A, 0073A, 0083A, 0093A, 0113A, and 0173A represent the administration of a third dose in the primary series (eg, patient with immunocompromising condition or patient age 6 months through 4 years). In contrast, the booster or additional dose codes 0004A, 0034A, 0044A, 0054A, 0064A, 0074A, 0094A, 0104A, 0124A, 0134A, 0144A, 0154A, 0164A and 0174A represent the administration of a dose of vaccine when the initial immune response to a primary vaccine series was sufficient, but has likely waned over time.

(For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365-96375)

~~D91300~~ — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 meg/0.3 mL dosage, diluent reconstituted, for intramuscular use

(Report 91300 with administration codes 0001A, 0002A, 0003A, 0004A)

(Do not report 91300 in conjunction with administration codes 0051A, 0052A, 0053A, 0054A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0121A, 0124A, 0151A, 0154A, 0171A, 0172A, 0173A, 0174A)

~~D91305~~ — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 meg/0.3 mL dosage, tris-sucrose formulation, for intramuscular use

(Report 91305 with administration codes 0051A, 0052A, 0053A, 0054A)

(Do not report 91305 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0121A, 0124A, 0151A, 0154A, 0171A, 0172A, 0173A, 0174A)

~~D91312~~ — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 30 meg/0.3 mL dosage, tris-sucrose formulation, for intramuscular use

(Report 91312 with administration code 0121A, 0124A)

(Do not report 91312 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0051A, 0052A, 0053A, 0054A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0151A, 0154A, 0171A, 0172A, 0173A, 0174A)

~~D91307~~ — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 10 meg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use

(Report 91307 with administration codes 0071A, 0072A, 0073A, 0074A)

(Do not report 91307 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0051A, 0052A, 0053A, 0054A, 0081A, 0082A, 0083A, 0121A, 0124A, 0151A, 0154A, 0171A, 0172A, 0173A, 0174A)

- D91315** — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 10 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use
(Report 91315 with administration code 0151A, 0154A)
(Do not report 91315 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0051A, 0052A, 0053A, 0054A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0121A, 0124A, 0171A, 0172A, 0173A, 0174A)
- D91308** — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 3 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use
(Report 91308 with administration codes 0081A, 0082A, 0083A)
(Do not report 91308 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0051A, 0052A, 0053A, 0054A, 0071A, 0072A, 0073A, 0074A, 0121A, 0124A, 0151A, 0154A, 0171A, 0172A, 0173A, 0174A)
- D91317** — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 3 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use
(Report 91317 with administration codes 0171A, 0172A, 0173A, 0174A)
(Use 91317 as the third dose in the primary series, with the first two doses reported using 91308, 0081A, 0082A)
(Use 91317 as the additional dose in the primary series, with the first three doses reported using 91308, 0081A, 0082A, 0083A)
(Do not report 91317 in conjunction with administration codes 0001A, 0002A, 0003A, 0004A, 0051A, 0052A, 0053A, 0054A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0121A, 0124A, 0151A, 0154A)
- D91301** — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5 mL dosage, for intramuscular use
(Report 91301 with administration codes 0011A, 0012A, 0013A)
(Do not report 91301 in conjunction with administration codes 0064A, 0091A, 0092A, 0093A, 0094A, 0111A, 0112A, 0113A, 0134A, 0141A, 0142A, 0144A, 0164A)
- D91306** — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 50 mcg/0.25 mL dosage, for intramuscular use
(Report 91306 with administration code 0064A)

Appendix Q

Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) Vaccines

The crosswalk of COVID-19 vaccine code descriptors, administration codes, patient age, and vaccine manufacturer, vaccine name(s), NDC Labeler Product ID, and interval between doses instructions (formerly Appendix Q) have been removed from the have been removed from the CPT code set. For information or guidance on reporting for COVID-19 immunization services, refer to the E/M and Medicine section guidelines.

*This table links the individual severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine product codes (91300-91317) to their associated immunization administration codes (0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A), patient age, manufacturer name, vaccine name(s), 10- and 11-digit National Drug Code (NDC) Labeler Product ID, and interval between doses. These codes are also located in the **Medicine** section of the CPT code set.*

*Additional introductory and instructional information for codes 0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A and 91300-91317 can be found in the **Immunization Administration for Vaccines/Toxoids and Vaccines, Toxoids** guidelines in the **Medicine** section of the CPT code set.*

Appendix Q

Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) Vaccines

Vaccine Code	Vaccine Administration Code(s)	Patient Age	Vaccine Manufacturer	Vaccine Name(s)	NDC 10/NDC 11 Labeler Product ID (Vial)	Dosing Interval
#91300 — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3 mL dosage, diluent reconstituted, for intramuscular use	0001A (1st Dose) 0002A (2nd Dose) 0003A (3rd Dose) 0004A (Booster)	12 yrs of age and older	Pfizer, Inc	Pfizer-BioNTech COVID-19 Vaccine / Comirnaty	59267-1000-1 59267-1000-01	All Dosing: Refer to FDA/CDC Guidance
#91305 — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 30 mcg/0.3 mL dosage, tris-sucrose formulation, for intramuscular use	0051A (1st Dose) 0052A (2nd Dose) 0053A (3rd Dose) 0054A (Booster)	12 yrs of age and older	Pfizer, Inc	Pfizer-BioNTech COVID-19 Vaccine	59267-1025-1 59267-1025-01 00069-2025-1 00069-2025-01	All Dosing: Refer to FDA/CDC Guidance
#91312 — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 30 mcg/0.3 mL dosage, tris-sucrose formulation, for intramuscular use	0121A (Single Dose) 0124A (Additional Dose)	12 years and older	Pfizer, Inc	Pfizer-BioNTech COVID-19 Bivalent	59267-0304-1 59267-0304-01 59267-1404-1 59267-1404-01	All Dosing: Refer to FDA/CDC Guidance
#91307 — Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 10 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use	0071A (1st Dose) 0072A (2nd Dose) 0073A (3rd Dose) 0074A (Booster)	5 yrs through 11 yrs	Pfizer, Inc	Pfizer-BioNTech COVID-19 Vaccine	59267-1055-1 59267-1055-01	All Dosing: Refer to FDA/CDC Guidance

#91315	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 10 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use	0151A (1st Dose) 0154A (Additional Dose)	5 years through 11 years	Pfizer, Inc	Pfizer-BioNTech COVID-19 Bivalent	59267-0565-1 59267-0565-01	All Dosing: Refer to FDA/CDC Guidance
#91308	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 3 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use	0081A (1st Dose) 0082A (2nd Dose) 0083A (3rd Dose)	6 mo through 4 yrs	Pfizer, Inc	Pfizer-BioNTech COVID-19 Vaccine	59267-0078-1 59267-0078-01 59267-0078-4 59267-0078-04	All Dosing: Refer to FDA/CDC Guidance
91317	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, bivalent spike protein, preservative free, 3 mcg/0.2 mL dosage, diluent reconstituted, tris-sucrose formulation, for intramuscular use	0171A (1st Dose) 0172A (2nd Dose) 0173A (3rd Dose) 0174A (Additional Dose)	6 months through 4 years	Pfizer, Inc	Pfizer-BioNTech COVID-19 Bivalent	59267-0609-1 59267-0609-01	All Dosing: Refer to FDA/CDC Guidance
#91301	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 100 mcg/0.5 mL dosage, for intramuscular use	0011A (1st Dose) 0012A (2nd Dose) 0013A (3rd Dose)	12 years and older	Moderna, Inc	Moderna COVID-19 Vaccine/Spikevax	80777-273-10 80777-0273-10 80777-100-11 80777-0100-11	All Dosing: Refer to FDA/CDC Guidance
#91306	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 50 mcg/0.25 mL dosage, for intramuscular use	0064A (Booster)	18 yrs of age and older	Moderna, Inc	Moderna COVID-19 Vaccine	80777-273-10 80777-0273-10	All Dosing: Refer to FDA/CDC Guidance

#●91313	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease [COVID]-19) vaccine, mRNA-LNP, spike protein, bivalent, preservative free, 50 mcg/0.5 mL dosage, for intramuscular use	0134A (Additional Dose)	12 years and older	Moderna, Inc	Moderna COVID-19 Vaccine, Bivalent	80777-282-05 80777-0282-05	Additional Dose: Refer to FDA/CDC Guidance
#●91314	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease COVID-19) vaccine, mRNA-LNP, spike protein, bivalent, preservative free, 25 mcg/0.25 mL dosage, for intramuscular use	0141A (1st Dose) 0142A (2nd Dose) 0144A (Additional Dose)	6 months through 11 years	Moderna, Inc	Moderna COVID-19 Vaccine, Bivalent	80777-282-05 80777-0282-05	All Dosing: Refer to FDA/CDC Guidance
# ● 91311	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 25 mcg/0.25 mL dosage, for intramuscular use	0111A (1st Dose) 0112A (2nd Dose) 0113A (3rd Dose)	6 mo through 5 yrs	Moderna, Inc	Moderna COVID-19 Vaccine	80777-279-05 80777-0279-05	All Dosing: Refer to FDA/CDC Guidance
# ● 91316	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, bivalent, preservative free, 10 mcg/0.2 mL dosage, for intramuscular use	0164A (Additional Dose)	6 months through 5 years	Moderna, Inc	Moderna COVID-19 Vaccine, Bivalent	80777-283-02 80777-0283-02	Additional Dose: Refer to FDA/CDC Guidance
#●91309	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, mRNA-LNP, spike protein, preservative free, 50 mcg/0.5 mL dosage, for intramuscular use	0091A (1st Dose) 0092A (2nd Dose) 0093A (3rd Dose)	6 years through 11 years	Moderna, Inc	Moderna COVID-19 Vaccine	80777-275-05 80777-0275-05	All Dosing: Refer to FDA/CDC Guidance
		0094A (Additional Dose)	18 years and older	Moderna, Inc	Moderna COVID-19 Vaccine	80777-275-05 80777-0275-05	All Dosing: Refer to FDA/CDC Guidance
# ● 91302	Severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, chimpanzee adenovirus Oxford 1 (ChAdOx1) vector, preservative free, 5x10 ¹⁰ viral particles/0.5 mL dosage, for intramuscular use	0021A (1st Dose) 0022A (2nd Dose)	18 yrs of age and older	AstraZeneca, Plc	AstraZeneca COVID-19 Vaccine	0310-1222-10 00310-1222-10	28 Days

#91303	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, DNA, spike protein, adenovirus type 26 (Ad26) vector, preservative free, 5x10 ¹⁰ viral particles/0.5 mL dosage, for intramuscular use	0031A (Single Dose) 0034A (Booster)	18 yrs of age and older	Janssen	Janssen COVID-19 Vaccine	59676-580-05 59676-0580-05	Booster: Refer to FDA/CDC Guidance
#91304	Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, recombinant spike protein nanoparticle, saponin-based adjuvant, preservative free, 5 mcg/0.5 mL dosage, for intramuscular use	0041A (1st Dose) 0042A (2nd Dose)	12 yrs of age and older	Novavax, Inc	Novavax COVID-19 Vaccine	80631-100-01 80631-1000-01	21 Days

● 90480	DD1	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose (Report 90480 for the administration of vaccine 91304, 91318, 91319, 91320, 91321, 91322) (Do not report 90480 in conjunction with 90476-90759)	XXX	0.25

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website, which features updates of CPT Editorial Panel actions regarding these products. Once approved by the CPT Editorial Panel, these codes will be made available for release on a semiannual (twice a year: July 1 and January 1) basis. As part of the electronic distribution, there is a six-month implementation period from the initial release date (ie, codes released on January 1 are eligible for use on July 1 and codes released on July 1 are eligible for use January 1).

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✎ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approval, the ✎ symbol will be removed. CPT users should refer to the AMA CPT website (www.ama-assn.org/go/cpt-vaccine) for the most up-to-date information on codes with the ✎ symbol.

Codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 identify the vaccine product **only**. To report the administration of a vaccine/toxoid other than SARS-CoV-2 (coronavirus disease [COVID-19]), the vaccine/toxoid product codes (90476-90759) must be used in addition to an immunization administration code(s) (90460, 90461, 90471, 90472, 90473, 90474). To report the administration of a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine, the vaccine/toxoid product codes 91304, 91318, 91319, 91320, 91321, 91322 should be reported with the corresponding immunization administration code (90480).

Do not report 90476-90759 in conjunction with the SARS-CoV-2 (coronavirus disease [COVID-19]) immunization administration code 90480 unless both a SARS-CoV-2 (coronavirus disease [COVID-19]) vaccine/toxoid product and at least one vaccine/toxoid product from 90476-90759 are administered at the same encounter.

Modifier 51 should not be reported with vaccine/toxoid codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 when reported in conjunction with administration codes 90460, 90461, 90471, 90472, 90473, 90474, 90480.

If a significantly separately identifiable Evaluation and Management (E/M) service (eg, office or other outpatient services, preventive medicine services) is performed, the appropriate E/M service code should be reported in addition to the vaccine and toxoid administration codes.

To meet the reporting requirements of immunization registries, vaccine distribution programs, and reporting systems (eg, Vaccine Adverse Event Reporting System) the exact vaccine product administered needs to be reported. Multiple codes for a particular vaccine are provided in the CPT codebook when the schedule (number of doses or timing) differs for two or more products of the same vaccine type (eg, hepatitis A, Hib) or the vaccine product is available in more than one chemical formulation, dosage, or route of administration.

The “when administered to” age descriptions included in CPT vaccine codes are not intended to identify a product’s licensed age indication. The term “preservative free” includes use for vaccines that contain no preservative and vaccines that contain trace amounts of preservative agents that are not present in a sufficient concentration for the purpose of preserving the final vaccine formulation. The absence of a designation regarding a preservative does not necessarily indicate the presence or absence of preservative in the vaccine. Refer to the product’s prescribing information (PI) for the licensed age indication before administering vaccine to a patient.

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The vaccine/toxoid abbreviations listed in codes 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322 reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely basis via the AMA CPT website (www.ama-assn.org/go/cpt-vaccine). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

Appendix Q

Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) Vaccines

The crosswalk of COVID-19 vaccine code descriptors, administration codes, patient age, and vaccine manufacturer, vaccine name(s), NDC Labeler Product ID, and interval between doses instructions (formerly Appendix Q) have been removed from the have been removed from the CPT code set. For information or guidance on reporting for COVID-19 immunization services, refer to the E/M and Medicine section guidelines.

September 25, 2023

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee
Relative Value Systems, American Medical Association
330 N. Wabash Ave., Suite 39300
Chicago, IL 60611

Dear Dr. Silva:

On behalf of the American Academy of Family Physicians (AAFP) and its 129,600 members, we write to comment on the recommendations in Tab 18 (SARS-CoV-2-Immunization Administration – Revised Code Set) of the September 2023 RUC agenda. Although the AAFP did not participate in the survey for this tab, many family physicians provide this service as part of their practices. These comments are based on our review of the recommendations.

Upon review, we support the specialties' recommendation of 0.25 work relative value units (RVUs) for new code 90480. As noted in the corresponding summary of recommendation (SOR) form, this value is supported by a time and intensity comparison with the key reference service, 90460, and fits nicely with the established work RVUs for other codes with similar time, which are also noted in the SOR.

We likewise support the recommended direct practice expense inputs for code 90480. We note they are the same inputs currently assigned to code 90460, which the RUC recently reviewed in 2021.

Thank you for the opportunity to comment on this tab. Please let us know if you have any questions about these comments.

Sincerely,

/s/

Brad Fox, MD
AAFP RUC Advisor

/s/

Amber Isley, MD
AAFP Alternate RUC Advisor

STRONG MEDICINE FOR AMERICA

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:90480	Tracking Number DD1	Original Specialty Recommended RVU: 0.25
		Presented Recommended RVU: 0.25
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 0.25

CPT Descriptor: Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A female patient presents for possible immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. After counseling, she is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

Percentage of Survey Respondents who found Vignette to be Typical: 82%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work:

Description of Intra-Service Work: The physician or other QHP reviews the patient's chart to confirm that vaccination to decrease the risk of COVID-19 is indicated. Counsel the patient, parent or guardian on the benefits and risks of vaccination to decrease the risk of COVID-19 and obtain consent. Administer the dose of the COVID-19 vaccine by intramuscular injection. Monitor the patient for any adverse reaction. Update the patient's immunization record (and registry when applicable) to reflect the vaccine administered.

Description of Post-Service Work:

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

In response to the needs of the public health emergency (PHE), in 2020 through 2023 the CPT Editorial Panel approved over 50 new CPT codes for the new vaccine products developed for protection against the novel coronavirus (SARS-CoV-2, also known as COVID-19) and their associated administration. These codes were developed based on extensive collaboration with CMS and the CDC to support tracking, reporting and analysis for data-driven planning and allocation to meet the needs of the new pandemic and are unique to each corresponding vaccine, dose and patient age range.

Due to the existing pandemic and public health need for rapid deployment of COVID-19 vaccines, the RUC convened special meetings to expedite approval of recommendations for work relative values and direct practice expense inputs for the 47 codes that described immunization administration (IA) by intramuscular injection of COVID-19 vaccines. The American Academy of Family Physicians (AAFP), American College of Obstetricians and Gynecologists (ACOG), American College of Physicians (ACP), American Academy of Pediatrics (AAP), and American Nurses Association (ANA) received approval by the Research Subcommittee to develop work RVU and intra-service time recommendations using a crosswalk methodology. For the initial four IA codes, the RUC approved a work RVU and intra-service time based on a crosswalk to the 2009 RUC recommendations for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered) as proposed by the societies. RUC recommendations for all subsequent COVID-19 IA codes were based on either a similar crosswalk to 90460 or a crosswalk to previously approved values for COVID-19 IA codes. This work occurred in the same time period that CMS agreed with the RUC regarding the importance of appropriate resource-based valuation for IA services in general, as critical in maintaining high immunization rates in the United States, as well as ensuring capacity to respond quickly to vaccinate against preventable disease outbreaks. Prior to this point, CMS has not accepted RUC survey-based recommendations for IA codes with the one exception of the value for CPT code 90470 -- immunization administration for the pandemic H1N1 vaccine in 2009. Similar to the COVID-19 IA codes, the value for CPT code 90470 was a crosswalk to the RUC-approved value for CPT code 90460 at the same RUC meeting because the timing of the H1N1 vaccine need did not allow for a separate survey. The CPT code 90470 was viewed as temporary for the pandemic and has since been retired.

Beginning August 14, 2023, new CPT codes were created to consolidate over 50 previous codes and greatly streamline the reporting of immunizations for the novel coronavirus (SARS-CoV-2, also known as COVID-19). The CPT Editorial Panel approved the addition of new product codes 91318-91322 to identify monovalent vaccine product for immunization against COVID-19 (Pfizer, Moderna); retained existing Novavax Product Code 91304 for currently authorized vaccine product available for use in the U.S. and the updated (XBB.1.5) vaccine; deleted and/or revised all other existing COVID codes (product and administration with associated guidelines and parenthetical note deletions/revisions); and added a single administration code (90480) for administration of new (i.e., 91318-91322) and existing (i.e., 91304) COVID-19 vaccine product.

All existing CPT codes that describe COVID-19 vaccine products and associated administration codes that end in "A" for products that are no longer covered under an existing Emergency Use Authorization (EUA) or Biologics License Application (BLA) from the US Food and Drug Administration (FDA) will be deleted effective Nov. 1, 2023.

Survey Process

In August 2023, ACOG and AAP conducted an expedited survey to value the consolidated single COVID-19 IA code, CPT code 90480, with a total of 171 survey respondents. ACOG used a random sample of their members; AAP used a random sample of applicable subsets of their members. AAP pulled a random sample of US membership from the following practice sections, excluding RUC members, alternate RUC members, students, post-graduate trainees and retirees: Administration and Practice Management, Community Pediatrics, Children with Disabilities, Early Career Physicians, Early Childhood, Immigrant Child and Family Health, and Adolescent Health. AAP determined that these members would most likely be familiar with or have experience administering COVID-19 vaccines. AAP pulled an equal size random sample from each subsection based on expert opinion of the estimated demographics of the providers performing the service.

The societies established an expert panel to review the survey results. The vignette of the typical patient used for the survey was provided by the CPT Editorial Panel. 82% of respondents found the vignette to be typical.

The following recommendations represent the first time standard RUC survey methodology is being used to develop proposed work RVU and intra-service time values for this service.

The RUC reviewed all non-COVID related immunization CPT codes, including 90460, at the April 2021 RUC meeting.

Recommendations

Based on the review of the survey data, the specialties recommend the survey median of 0.25 work RVUs and the survey median of 7 minutes intra-service time, which also serves as the total time. The survey yielded a strong response rate by individuals experienced with the service and indicated tight alignment in their RVU valuations. The median RVUs of 0.25 is supported by the intensity/complexity measures, where 70% of survey respondents indicated the service overall was more intense/complex than the top key reference service code, 90460, *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid*, which has an RVW of 0.24. The IWPOT of 0.036 supports the additional complexity of the intra-service work as compared to 90460 based on the need to address ongoing vaccine hesitancy associated with COVID-19. Surveys on the impact of the COVID-19 pandemic on vaccine confidence indicate vaccine hesitancy overall has increased, and the COVID-19 vaccines may have the greatest hesitancy ([CDC's State of Vaccine Confidence Insights Report](#), [KFF COVID-19 Vaccine Monitor](#), [American Academy of Family Physicians](#), [American College Health Association](#), [Pediatrics](#), [Journal of Community](#)).

The recommended time is supported by the primary key reference service, 90460, *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid*, which has an intra-service time of 7 minutes. It is also supported by MPC code 99406, *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes*, which also has an intra-service time of 7 minutes.

There are multiple other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
88311	Decalcification procedure	XXX	0.24	0	5	2	7
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	XXX	0.24	0	7	0	7
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24	0	7	0	7
90480	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus	XXX	0.25	0	7	0	7

	disease [COVID-19] vaccine, single dose						
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7
70260	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.28	1	4	1	6

These examples illustrate that the recommended value and time for code 90480 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 90480, *Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR-CoV-2) (coronavirus disease [COVID-19]) vaccine, single dose*, the societies recommend an RVU of 0.25 and intra-service time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) Code 90480 is typically reported in addition to an office visit E/M

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
- | Code | Global | Work RVU | Pre-Time | Intra-Time | Post-Time |
|-----------|--------|----------|----------|------------|-----------|
| 99213 XXX | | 1.30 | 5 | 20 | 5 |
| 90480 XXX | | 0.25 | 0 | 7 | 0 |
| Total | | 1.55 | 5 | 27 | 5 |

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) One of 47 COVID-19 IA codes

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty AAP How often? Commonly

Specialty ACOG How often? Commonly

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 269868876

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CDC COVID Vaccine Data Tracker; CDC VaxView 2023 data on intent to vaccinate; 2020 US Census Data

Specialty AAP Frequency 14962400 Percentage 5.54 %

Specialty ACOG Frequency 2922458 Percentage 1.08 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period?

7,105,693 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. 2021 Medicare utilization in RUC database for 0004A Booster dose NF

Specialty AAP Frequency 71056 Percentage 0.99 %

Specialty ACOG Frequency 7106 Percentage 0.10 %

Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States? Yes

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: September 2023

CPT Code	Long Descriptor	Global Period
90480	Immunization administration by intramuscular injection of severe acute respiratory syndrome coronavirus 2 (SAR CoV2) (coronavirus disease [COVID 19]) vaccine, single dose	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
90480	A female patient presents for possible immunization against SARS-CoV-2 to decrease the risk of contracting this disease, consistent with evidence-supported guidelines. After counseling, she is offered and accepts an intramuscular injection of SARS-CoV-2 vaccine for this purpose.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The specialty societies convened multispecialty consensus panel including RUC advisors and providers of immunizations in the NF setting. The panel developed the direct practice expense recommendations for CPT Code 90480 based on best practices and current AMA RUC/PE guidelines.
--

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

CPT Code 90460 <i>Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered</i> was selected as a comparison on the PE spreadsheet. Code 90460 is a recently PE reviewed IA service.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Code 90480 is typically reported with an E/M service. Code 90480 is typically reported with an E/M service in the NF setting.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

The dominant provider for new CPT Code 90480 in the facility and non facility is not known at this time.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

- If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

- If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre Service

CA007 Review patient clinical extant information and questionnaire
Used for imaging service. 1 minute standard.

Specialties are recommending 1 minute to account for the clinical staff time to review the patient immunization questionnaire.

CA008

Perform regulatory mandated quality assurance activity (pre-service)
Standard is 0 for XXX services.

Specialties are recommending 1 minute to account for the clinical staff time to ensure the vaccine stock is viable.

Service

CA014 Confirm order, protocol exam
Used for imaging service. 1 minute standard.

Specialties are recommending 2 minutes to account for the clinical staff time to ensure the correct sequencing and vaccination.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

9. How much time was allocated to clinical activity, *obtain vital signs (CA010)* prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient

CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable

CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine

CA021: Actual administration of vaccine; bandage application

CA022: Watching patient after vaccine is administered

CA024: Disposal of vaccine-specific medical waste

CA034: Charting administered immunizations in the patient chart and EMR; preparing patient record/immunization card

c. Post-service period:

CA037: Contacting patient/parent to follow up on immunization administration

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time or Perform procedure/service---NOT directly related to physician work time*:

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

CA021: RN/LPN/MTA prepares the vaccine, instructs the patient (or parent) on proper positioning, selects and prepares the injection site, administers the vaccine, and applies a bandage to the injection site. The patient is then monitored for potential anaphylaxis response to the vaccine.

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

N/A

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment? **N/A**

16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment? **N/A**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or **No**.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.
Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org.
In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

October 3, 2023

The Honorable Chiquita Brooks-LaSure
Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
7500 Security Boulevard
Baltimore, MD 21244-1850

Subject: Respiratory Syncytial Virus (RSV) Monoclonal Antibody Administration Recommendations

Dear Administrator Brooks-LaSure,

The American Medical Association (AMA)/Specialty Society RVS Update Committee (RUC) appreciates the opportunity to submit the enclosed recommendation for work relative values and direct practice expense inputs to the Centers for Medicare & Medicaid Services (CMS). This recommendation relates to new codes 96380 and 96381, which describe passive administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. These codes will be effective October 6, 2023.

The RUC reviewed and approved physician work relative values and direct practice costs presented by the American Academy of Pediatrics at a September 28-30, 2023, meeting. The RUC agreed that the resource costs are similar to those required to provide other immunization administrative services (i.e., CPT codes 90460 and 90471).

We appreciate your consideration of these RUC recommendations. If you have any questions regarding the attached materials, please contact Sherry Smith at Sherry.Smith@ama-assn.org or (312) 464-5604.

Sincerely,

Ezequiel Silva III, MD
Chair, AMA/Specialty Society RVS Update Committee

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

Respiratory Syncytial Virus (RSV) Monoclonal Antibody Administration – Tab 19

At the September 21-23, 2023, CPT meeting, the CPT Editorial Panel created two codes to report passive administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. CPT codes 96380 and 96381 were reviewed the following week at the September 28-30, 2023, RUC meeting. These two administration codes were created to be reported with Nirsevimab product codes to protect against severe disease caused by RSV, which is common throughout the fall and winter season, highly contagious and sometimes deadly for infants. CPT codes 96380 and 96381 will be effective October 6, 2023, for immediate use.

96380 Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional

The RUC recommends a work RVU of 0.24 based on a direct crosswalk to CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered* (work RVU = 0.24 and 7 minutes intra-service and total time), which maintains relativity within the Medicare Physician Payment Schedule. The RUC recommends 7 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

For additional support, the RUC compared code 96380 to MPC code 99406 *Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes* (work RVU = 0.24 and 7 minutes intra-service time and total time), code 88311 *Decalcification procedure (List separately in addition to code for surgical pathology examination)* (work RVU = 0.24, 5 minutes intra-service time and 7 minutes total time), 77073 *Bone length studies (orthoroentgenogram, scanogram)* (work RVU = 0.26, 5 minutes intra-service time and 7 minutes total time) and 92202 *Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral* (work RVU = 0.26, 5 minutes intra-service time and 7 minutes total time). The RUC determined that an interim work value of 0.24 appropriately places 96380 relative to other services based on time, work, intensity and complexity. **Therefore, the RUC recommends an interim work RVU of 0.24 for code 96380 and the specialty societies will survey this service for the April 2024 RUC meeting after more widespread use has occurred.**

96381 Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection

The RUC recommends a work RVU of 0.17 based on a direct crosswalk to CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* (work RVU = 0.17, 7 minutes intra-service and total time), which maintains relativity within Medicare Physician Payment Schedule. The RUC recommends 7 minutes intra-service and total time. There is no pre-service or post-service time as this service is typically reported with an Evaluation and Management (E/M) office visit.

For additional support, the RUC compared code 96381 to MPC code 99211 *Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional* (work RVU = 0.18 and 5 minutes intra-service time and 7 minutes total time) and code 90970 *End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older* (work RVU = 0.18, 3.2 minutes intra-service and total time). The RUC determined that an interim work value of 0.17 appropriately places 96381 relative to other services based on time, work, intensity and complexity. **Therefore, the RUC recommends a work RVU of 0.17 for code 96381 and the specialty societies will survey this service for the April 2024 RUC meeting after more widespread use has occurred.**

Practice Expense

The Practice Expense Subcommittee reviewed and accepted the practice expense inputs as submitted by the specialty society. The direct practice expense inputs are a direct crosswalk to 90460 and 90471, respectively. One additional minute of clinical staff time was added to complete vaccine pre-check eligibility process (see attachment Nirsevimab Visual Guide). **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p>Category I Evaluation and Management Services Preventive Medicine Services</p> <p><i>The following codes are used to report the preventive medicine evaluation and management of infants, children, adolescents, and adults.</i></p> <p><i>The extent and focus of the services will largely depend on the age of the patient.</i></p> <p><u>Immunization/vaccine/toxoid products</u>, immunization administrations, ancillary studies involving laboratory, radiology, other procedures, or screening tests (eg, vision, hearing, developmental) identified with a specific CPT code are reported separately. In recognition of public health interest in immune globulin products, the CPT Editorial Panel has chosen to publish new immune globulin product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✎ symbol and will be tracked by the AMA to monitor FDA approval status. Once the FDA status changes to approved, the ✎ symbol will be removed. CPT code users should refer to the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes) for the most up-to-date information on codes with the ✎ symbol.

90378 *Respiratory syncytial virus, monoclonal antibody, recombinant, for intramuscular use, 50 mg, each*

90380 *Respiratory syncytial virus, monoclonal antibody, seasonal dose; 0.5 mL dosage, for intramuscular use*

90381 *1 mL dosage, for intramuscular use*

(Do not report 90380, 90381 in conjunction with 96372)

(For administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, see 96380, 96381)

90384 *Rho(D) immune globulin (RhIg), human, full-dose, for intramuscular use*

Immunization Administration for Vaccines/Toxoids

Report vaccine immunization . . .

. . .

A component refers to all antigens in a vaccine that prevent disease(s) caused by one organism (90460 and 90461). Multi-valent antigens or multiple serotypes of antigens against a single organism are considered a single component of vaccines. Combination vaccines are those vaccines that contain multiple vaccine components. Conjugates or adjuvants contained in vaccines are not considered to be component parts of the vaccine as defined above.

For immune globulins and monoclonal antibodies immunizations, see 90281-90399. For administration of immune globulins and monoclonal antibodies immunizations, see 96365, 96366, 96367, 96368, 96369, 96370, 96371, 96372, 96374, 96380, 96381.

(For allergy testing, see 95004 et seq)

(For skin testing of bacterial, viral, fungal extracts, see 86485-86580)

(For therapeutic or diagnostic injections, see 96372- 96379)

Vaccines, Toxoids

To assist users to report the most recent new or revised vaccine product codes, the American Medical Association (AMA) currently uses the CPT website (ama-assn.org/cpt-cat-i-immunization-codes), which features updates of CPT Editorial Panel actions regarding these products. See the Introduction section of the CPT code set for a complete list of the dates of release and implementation.

The CPT Editorial Panel, in recognition of the public health interest in vaccine products, has chosen to publish new vaccine product codes prior to approval by the US Food and Drug Administration (FDA). These codes are indicated with the ✎ symbol and will be tracked by the

AMA to monitor FDA approval status. Once the FDA status changes to approval, the *✓* symbol will be removed. CPT users should refer to the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes) for the most up-to-date information on codes with the *✓* symbol.

[...]

Separate codes are available for combination vaccines (eg, Hib-HepB, DTap-IPV/Hib). It is inappropriate to code each component of a combination vaccine separately. If a specific vaccine code is not available, the unlisted procedure code should be reported, until a new code becomes available.

The immunization/vaccine/toxoid abbreviations listed in codes 90380, 90381, 90476-90759, 91304, 91318, 91319, 91320, 91321, 91322, 91300-91317 reflect the most recent US vaccine abbreviation references used in the Advisory Committee on Immunization Practices (ACIP) recommendations at the time of CPT code set publication. Interim updates to vaccine code descriptors will be made following abbreviation approval by the ACIP on a timely basis via the AMA CPT website (ama-assn.org/cpt-cat-i-immunization-codes). The accuracy of the ACIP vaccine abbreviation designations in the CPT code set does not affect the validity of the vaccine code and its reporting function.

For the purposes of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19]) vaccinations, codes 0003A, 0013A, 0053A, 0073A, 0083A, 0093A, 0113A, and 0173A represent the administration of a third dose in the primary series (eg, patient with immunocompromising condition or patient age 6 months through 4 years). In contrast, the booster or additional dose codes 0004A, 0034A, 0044A, 0054A, 0064A, 0074A, 0094A, 0104A, 0124A, 0134A, 0144A, 0154A, 0164A, and 0174A represent the administration of a dose of vaccine when the initial immune response to a primary vaccine series was sufficient, but has likely waned over time.

(For immune globulins and monoclonal antibodies immunizations, see 90281-90399)

(For administration of immune globulins and monoclonal antibodies immunizations, with the exception of respiratory syncytial virus, monoclonal antibody, seasonal product, see 96365-96375)

(For administration of respiratory syncytial virus, monoclonal antibody, seasonal product, see 96380, 96381)

(91303 has been deleted. To report severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2] [coronavirus disease {COVID-19}] vaccine product immunization, see 91318, 91319, 91320, 91321, 91322)

#91304 Severe acute respiratory syndrome coronavirus 2 (SARSCoV-2) (coronavirus disease [COVID-19]) vaccine, recombinant spike protein nanoparticle, saponin-based adjuvant, 5 mcg/0.5 mL dosage, for intramuscular use

(Report 91304 with administration codes 90480)

90683 Respiratory syncytial virus vaccine, mRNA lipid nanoparticles, for intramuscular use

(For seasonal respiratory syncytial virus [RSV] monoclonal antibodies immunization codes, see 90380, 90381. For administration of seasonal RSV monoclonal antibodies immunizations, ~~use 96372~~ see 96380, 96381)

90680 Rotavirus vaccine, pentavalent

Hydration, Therapeutic, Prophylactic, Diagnostic Injections and Infusions, and Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration

Therapeutic, Prophylactic, and Diagnostic Injections and Infusions (Excludes Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration)

A therapeutic, prophylactic, or diagnostic IV infusion or injection (other than hydration) is for the administration of substances/drugs. When fluids are used to administer the drug(s), the administration of the fluid is considered incidental hydration and is not separately reportable. These services typically require direct supervision for any or all purposes of patient assessment, provision of consent, safety oversight, and intra-service supervision of staff. Typically, such infusions require special consideration to prepare, dose or dispose of, require practice training and competency for staff who administer the infusions, and require periodic patient assessment with vital sign monitoring during the infusion. These codes are not intended to be reported by the physician or other qualified health care professional in the facility setting.

Passive immunizations, such as an immune globulin or monoclonal antibody, provide long-term passive immunization to the patient.

See codes 96401-96549 for the administration of chemotherapy or other highly complex drug or highly complex biologic agent services. These highly complex services require advanced practice training and competency for staff who provide these services; special considerations for preparation, dosage or disposal; and commonly, these services entail significant patient risk and frequent monitoring. Examples are frequent changes in the infusion rate, prolonged presence of nurse administering the solution for patient monitoring and infusion adjustments, and frequent conferring with the physician or other qualified health care professional about these issues.

(Do not report 96365-96379 with codes for which IV push or infusion is an inherent part of the procedure [eg, administration of contrast material for a diagnostic imaging study])

(For mechanical scalp cooling, see 0662T, 0663T)

96365 Intravenous infusion, for therapy, prophylaxis, or diagnosis (specify substance or drug); initial, up to 1 hour

96372 Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular

(For administration of vaccines/toxoids, see 90460, 90461, 90471, 90472, 90473, 90474, 90480 0001A, 0002A, 0003A, 0004A, 0011A, 0012A, 0013A, 0021A, 0022A, 0031A, 0034A, 0041A, 0042A, 0044A, 0051A, 0052A, 0053A, 0054A, 0064A, 0071A, 0072A, 0073A, 0074A, 0081A, 0082A, 0083A, 0091A, 0092A, 0093A, 0094A, 0104A, 0111A, 0112A, 0113A, 0121A, 0124A, 0134A, 0141A, 0142A, 0144A, 0151A, 0154A, 0164A, 0171A, 0172A, 0173A, 0174A)

(Report 96372 for non-antineoplastic hormonal therapy injections)

(Report 96401 for anti-neoplastic nonhormonal injection therapy)

(Report 96402 for anti-neoplastic hormonal injection therapy)

(For intradermal cancer immunotherapy injection, see 0708T, 0709T)

(Do not report 96372 for injections given without direct physician or other qualified health care professional supervision. To report, use 99211. Hospitals may report 96372 when the physician or other qualified health care professional is not present)

(96372 does not include injections for allergen immunotherapy. For allergen immunotherapy injections, see 95115-95117)

96377 Application of on-body injector (includes cannula insertion) for timed subcutaneous injection

●96380	EE1	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional (Report 96380 for administration of respiratory syncytial virus, monoclonal antibody, seasonal dose [90380, 90381])	XXX	0.24 (Interim Recommendation Survey April 2024)

Re: Respiratory Syncytial Virus Monoclonal Antibody Administration Codes (96380, 96381)

Dear Dr. Silva:

The American Academy of Pediatrics (AAP) respectfully submits recommendations for the Respiratory Syncytial Virus Monoclonal Antibody Administration codes as follows:

96380 Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional

Recommendation:

- **Crosswalk to April 2021 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered)**
- **Utilize April 2021 RUC-recommended direct practice expense inputs for CPT code 90460 as a template with incremental direct practice expense inputs required for administering the RSV monoclonal antibody vaccine.**

96381 Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection

Recommendation:

- **Crosswalk to April 2021 RUC-recommended work relative value units (RVUs) and intraservice time (7 minutes) for CPT code 90471 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)**
- **Utilize April 2021 RUC-recommended direct practice expense inputs for CPT code 90471 as a template with incremental direct practice expense inputs required for administering the RSV monoclonal antibody vaccine.**

Background

New CPT codes for an immune globulin product protecting against respiratory syncytial virus for seasonal duration, Nirsevimab, were approved during the May 2023 CPT meeting. There was discussion surrounding the fact that the current administration code used for intramuscular injection of an immune globulin product, 96372, was not sufficient for this product, which will be administered to all infants prophylactically as a passive immunization. Subsequent to the May 2023 CPT meeting, the Food and Drug Administration (FDA) and the FDA's Pediatric Advisory Committee approved Nirsevimab via their Fast Track process and the CDC's Advisory Committee on Immunization Practices (ACIP) recommended single dose of Nirsevimab for all infants younger than 8 months born during or entering their first RSV season and infants and for children aged 8 through 19 months who are at increased risk of severe RSV disease and entering their second RSV season.

At the September 2023 meeting, the CPT Editorial Panel created two new CPT codes to report the passive immunization administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. The new administration codes were developed for this product to support the increased physician and other qualified healthcare provider (QHP) work involved in parent/caretaker counseling regarding this novel vaccine-like product as well as address efforts that are commonly associated with the administration of an immunization (in this case, a passive immunization) in a preventive care setting and practice expenses associated with product storage and entry into the state immunization registry. These codes fell under the CPT Panel's Early Release Policy and will be effective October 2023 to protect against severe disease caused by RSV, which is common, highly contagious and sometimes deadly. RSV is one of the leading causes of death for otherwise healthy young infants and for young and older infants with underlying medical concerns, henceforth, the urgency to get this countermeasure approved.

Nirsevimab is currently available in the marketplace, creating an urgent need for the RUC to value these passive immunization administration codes and forward recommendations to CMS so children can begin to receive this life-saving intervention. This vaccine is a seasonal product, October 1 through March 31. For pediatricians to give it this year, the valuation needs to come out now to avoid an unacceptable public health delay. Last year's RSV peak was November.

While the situation was particularly dire during the last RSV season (the 'triple-demic'), which saw alignment in surges of three viral pathogens (RSV, influenza and COVID), the RSV season has had a longstanding impact on the care of all ill or injured children as it results in a substantial reduction of available pediatric inpatient and critical care bed capacity. While RSV can have an impact on all populations, it represents a true public health risk in pediatrics.

While the gold standard for determining work RVUs is survey methodology, the RUC set a precedent during the COVID-19 public health emergency of using crosswalk methodology when it was in the public's best interest to do so. The AAP believes the current situation to be of equal urgency and asks the RUC to approve interim work, time, and PE valuations based on our recommended crosswalks. In addition to the need for timely valuations, we are concerned that pediatricians and other primary care providers who will be administering this vaccine presently have no experience in doing so, which may ultimately create flawed methodology for any expedited survey conducted at this time. The AAP, along with other interested societies, will survey the codes for the April 2024 RUC meeting.

Rationale

- 1) The April 2021 RUC-recommended wRVU and intraservice time for CPT code 90460 are the appropriate crosswalks for new CPT code 96380. The April 2021 RUC-recommended direct practice expense inputs for CPT code 90460 form the appropriate template for this RSV monoclonal antibody administration code.**

CPT code 90460 and 96380 both describe immunization administration services that include parent/caretaker benefit and risk counseling by the physician or QHP. While this new code was created partially based on the idea that this immunization service involved more work than CPT code 90460, this expert panel believes crosswalking the wRVU and intraservice time for 96380 to the RUC recommended work for CPT code 90460 is an appropriate interim valuation. CPT code 90460 has a recent RUC valuation (April 2021), has high utilization in the non-facility pediatric setting, and is on the RUC MPC list. The expert panel also looked at other RUC-reviewed services with an XXX global period that have

comparable times and work RVUs. The expert panel feels an interim work RVU of 0.24 and intra-service time of 7 minutes are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
88311	Decalcification procedure	XXX	0.24	0	5	2	7
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	XXX	0.24	0	7	0	7
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered	XXX	0.24	0	7	0	7
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional	XXX	0.24	0	7	0	7
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7

70260	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.28	1	4	1	6
-------	---	-----	------	---	---	---	---

This expert panel reviewed each PE input for CPT code 90460 and believes the RUC-recommended direct PE inputs for code 90460 should be utilized as the template for 96380, adding the incremental direct practice expense inputs required for administering the RSV monoclonal antibody vaccine.

2) The April 2021 RUC-recommended wRVU and intraservice time for CPT code 90471 are the appropriate crosswalks for new CPT code 96381. The April 2021 RUC-recommended direct PE inputs for CPT code 90471 form the appropriate template for this RSV monoclonal antibody administration code.

CPT code 90471 and 96381 both describe immunization administration services that do not include parent/caretake benefit and risk counseling by the physician or QHP. This expert panel believes the physician work for 96381 is the same as the RUC recommended work for CPT code 90471. CPT code 90471 has a recent RUC valuation (April 2021) and has high utilization in the non-facility pediatric setting. The expert panel also looked at other RUC-reviewed services with an XXX global period that have comparable times and work RVUs. The expert panel feels an interim work RVU of 0.17 and intraservice time of 7 minutes are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
94781	Car seat/bed testing for airway integrity, for infants through 12 months of age, with continual clinical staff observation and continuous recording of pulse oximetry, heart rate and respiratory rate, with interpretation and report; each additional full 30 minutes	ZZZ	0.17	0	5	0	5
90471	Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)	XXX	0.17	0	7	0	7

96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection	XXX	0.17	0	7	0	7
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
99211	Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.	XXX	0.18	0	5	2	7
99188	Application of topical fluoride varnish by a physician or other qualified health care professional	XXX	0.20	2	5	2	9

This expert panel reviewed each PE input for CPT code 90471 and believes the RUC-recommended direct PE inputs for code 90471 should be utilized as the template for 96381, adding the incremental direct practice expense inputs required for administering the RSV monoclonal antibody vaccine.

We thank both CPT and RUC teams for their timely attention to this matter.

Sincerely,

Steven Krug, MD

RUC Advisor

American Academy of Pediatrics

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:96380	Tracking Number EE1	Original Specialty Recommended RVU: 0.24
Global Period: XXX	Current Work RVU:	Presented Recommended RVU: 0.24
		RUC Recommended RVU: 0.24

CPT Descriptor: Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 6-month-old female presents during the fall season. The physician or other qualified healthcare professional provides benefit and risk counseling on immunization for the seasonal respiratory syncytial virus to the parents and answers all their questions. The parent agrees to have their child receive the product.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician or qualified health care professional recommends passive immunization with the respiratory syncytial virus (RSV) immune globulin seasonal product for protection against RSV during the infant's vulnerable first year. The physician or QHP provides benefit and risk counseling to the parents and answers all their questions. Consent is obtained from the parent or guardian. Following the administration of the injection the patient is monitored for any adverse reaction. The physician or QHP then discusses the care plan for the child in the days to follow specific to the anticipated or possible side effects (eg, soreness and pain at the injection site, fever) and reviews the signs or symptoms that warrant a call back.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

New CPT codes for an immune globulin product protecting against respiratory syncytial virus for seasonal duration, Nirsevimab, were approved during the May 2023 CPT meeting. There was discussion surrounding the fact that the current administration code used for intramuscular injection of an immune globulin product, 96372, was not sufficient for this product, which will be administered to all infants prophylactically as a passive immunization. Subsequent to the

May 2023 CPT meeting, the Food and Drug Administration (FDA) and the FDA's Pediatric Advisory Committee approved Nirsevimab via their Fast Track process and the CDC's Advisory Committee on Immunization Practices (ACIP) recommended single dose of Nirsevimab for all infants younger than 8 months born during or entering their first RSV season and infants and for children aged 8 through 19 months who are at increased risk of severe RSV disease and entering their second RSV season.

At the September 2023 meeting, the CPT Editorial Panel created two new CPT codes to report the passive immunization administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. The new administration codes were developed for this product to support the increased physician and other qualified healthcare provider (QHP) work involved in parent/caretaker counseling regarding this novel vaccine-like product as well as address efforts that are commonly associated with the administration of an immunization (in this case, a passive immunization) in a preventive care setting and practice expenses associated with product storage and entry into the state immunization registry. These codes fell under the CPT Panel's Early Release Policy and will be effective October 2023 to protect against severe disease caused by RSV, which is common, highly contagious and sometimes deadly. RSV is one of the leading causes of death for otherwise healthy young infants and for young and older infants with underlying medical concerns, henceforth, the urgency to get this countermeasure approved.

Nirsevimab is currently available in the marketplace, creating an urgent need for the RUC to value these passive immunization administration codes and forward recommendations to CMS so children can begin to receive this life-saving intervention. This vaccine is a seasonal product, October 1 through March 31. For pediatricians to give it this year, the valuation needs to come out now to avoid an unacceptable public health delay. Last year's RSV peak was November.

While the gold standard for determining work RVUs is survey methodology, the RUC set a precedent during the COVID-19 public health emergency of using crosswalk methodology when it was in the public's best interest to do so. The AAP believes the current situation to be of equal urgency and was granted approval use crosswalk methodology to recommend interim work and time valuations for these new CPT codes.

Rationale

CPT code 90460, *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid*, which has an RVW of 0.24 and intraservice time of 7 minutes, and 96380 both describe immunization administration services that include parent/caretaker benefit and risk counseling by the physician or QHP. While this new code was created partially based on the idea that this immunization service involved more work than CPT code 90460, this expert panel believes crosswalking the wRVU and intraservice time for 96380 to the RUC recommended work for CPT code 90460 is an appropriate interim valuation. CPT code 90460 has a recent RUC valuation (April 2021), has high utilization in the non-facility pediatric setting, and is on the RUC MPC list. The expert panel also looked at other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
88311	Decalcification procedure	XXX	0.24	0	5	2	7
99406	Smoking and tobacco use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes	XXX	0.24	0	7	0	7
90460	Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care	XXX	0.24	0	7	0	7

	professional; first or only component of each vaccine or toxoid administered						
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional	XXX	0.24	0	7	0	7
77073	Bone length studies (orthoroentgenogram, scanogram)	XXX	0.26	1	5	1	7
92202	Ophthalmoscopy, extended; with drawing of optic nerve or macula (eg, for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral)	XXX	0.26	1	5	1	7
70260	Radiologic examination, skull; complete, minimum of 4 views	XXX	0.28	1	4	1	6

These examples illustrate that the recommended value and time for code 96380 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 96380, *Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional*, the societies recommend an RVU of 0.24 and intra-service time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) Code 96380 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time

CPT Descriptor: Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 6-month-old female seeks immunization against seasonal respiratory syncytial virus. The parent is offered and accepts an intramuscular injection of the RSV monoclonal antibody for their child.

Percentage of Survey Respondents who found Vignette to be Typical: 0%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: N/A

Description of Intra-Service Work: The physician or qualified health care professional recommends passive immunization with the respiratory syncytial virus (RSV) immune globulin seasonal product for protection against RSV during the infant's vulnerable first year. Consent is obtained from the parent or guardian. Following the administration of the injection the patient is monitored for any adverse reaction.

Description of Post-Service Work: N/A

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

New CPT codes for an immune globulin product protecting against respiratory syncytial virus for seasonal duration, Nirsevimab, were approved during the May 2023 CPT meeting. There was discussion surrounding the fact that the current administration code used for intramuscular injection of an immune globulin product, 96372, was not sufficient for this product, which will be administered to all infants prophylactically as a passive immunization. Subsequent to the

May 2023 CPT meeting, the Food and Drug Administration (FDA) and the FDA's Pediatric Advisory Committee approved Nirsevimab via their Fast Track process and the CDC's Advisory Committee on Immunization Practices (ACIP) recommended single dose of Nirsevimab for all infants younger than 8 months born during or entering their first RSV season and infants and for children aged 8 through 19 months who are at increased risk of severe RSV disease and entering their second RSV season.

At the September 2023 meeting, the CPT Editorial Panel created two new CPT codes to report the passive immunization administration of respiratory syncytial virus, monoclonal antibody, seasonal dose, with and without counseling. The new administration codes were developed for this product to support the increased physician and other qualified healthcare provider (QHP) work involved in parent/caretaker counseling regarding this novel vaccine-like product as well as address efforts that are commonly associated with the administration of an immunization (in this case, a passive immunization) in a preventive care setting and practice expenses associated with product storage and entry into the state immunization registry. These codes fell under the CPT Panel's Early Release Policy and will be effective October 2023 to protect against severe disease caused by RSV, which is common, highly contagious and sometimes deadly. RSV is one of the leading causes of death for otherwise healthy young infants and for young and older infants with underlying medical concerns, henceforth, the urgency to get this countermeasure approved.

Nirsevimab is currently available in the marketplace, creating an urgent need for the RUC to value these passive immunization administration codes and forward recommendations to CMS so children can begin to receive this life-saving intervention. This vaccine is a seasonal product, October 1 through March 31. For pediatricians to give it this year, the valuation needs to come out now to avoid an unacceptable public health delay. Last year's RSV peak was November.

While the gold standard for determining work RVUs is survey methodology, the RUC set a precedent during the COVID-19 public health emergency of using crosswalk methodology when it was in the public's best interest to do so. The AAP believes the current situation to be of equal urgency and was granted approval use crosswalk methodology to recommend interim work and time valuations for these new CPT codes.

Rationale

CPT code 90471, *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)*, which has a RVU of 0.17 and an intraservice time of 7 minutes, and 96381 both describe immunization administration services that do not include parent/caretake benefit and risk counseling by the physician or QHP. This expert panel believes the physician work for 96381 is the same as the RUC recommended work for CPT code 90471. CPT code 90471 has a recent RUC valuation (April 2021) and has high utilization in the non-facility pediatric setting. The expert panel also looked at other RUC-reviewed services with an XXX global period that have comparable times and work RVUs:

Code	Descriptor	Global	Work RVU	Pre-Time	Intra-Time	Post-Time	Total Time
94781	Car seat/bed testing for airway integrity, for infants through 12 months of age, with continual clinical staff observation and continuous recording of pulse oximetry, heart rate and respiratory rate, with interpretation and report; each additional full 30 minutes	ZZZ	0.17	0	5	0	5
90471	Immunization administration (includes percutaneous, intradermal,	XXX	0.17	0	7	0	7

	subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)						
96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection	XXX	0.17	0	7	0	7
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	XXX	0.18	0	3.2	0	3.2
99211	Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal.	XXX	0.18	0	5	2	7
99188	Application of topical fluoride varnish by a physician or other qualified health care professional	XXX	0.20	2	5	2	9

These examples illustrate that the recommended value and time for code 96381 are properly positioned when compared to other services of other specialties in the resource-based relative value scale.

Conclusion

For code 96381 *Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection*, the societies recommend an RVU of 0.17 and intra-service time of 7 minutes.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain) Code 96381 is typically reported in addition to an office visit E/M

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

	Code	Global	Work RVU	Pre-Time	Intra-Time	Post-Time
3.	99213	XXX	1.30	5	20	5
4.	96381	XXX	0.17	0	7	0
5.	Total		1.47	5	27	5

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) N/A This is a new service

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
 If the recommendation is from multiple specialties, please provide information for each specialty.

- Specialty How often?
- Specialty How often?
- Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 0
 If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate.

- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 0 If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate.

- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage 0.00 %
- Specialty Frequency 0 Percentage %

Do many physicians perform this service across the United States?

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
 Other

BETOS Sub-classification:
 Immunizations/Vaccinations

BETOS Sub-classification Level II:

NA

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 90471

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Meeting Date: September 2023

CPT Code	Long Descriptor	Global Period
96380	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection, with counseling by physician or other qualified health care professional	XXX
96381	Administration of respiratory syncytial virus, monoclonal antibody, seasonal dose by intramuscular injection	XXX

Vignette(s) (vignette required even if PE only code(s)):

CPT Code	Vignette
96380	A 6-month-old female presents during the fall season. The physician or other qualified healthcare professional provides benefit and risk counseling on immunization for the seasonal respiratory syncytial virus to the parents and answers all their questions. The parent agrees to have their child receive the product.
96381	A 6-month-old female seeks immunization against seasonal respiratory syncytial virus. The parent is offered and accepts an intramuscular injection of the RSV monoclonal antibody for their child.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

RUC Advisors from AAP and several AAP members from large pediatric practices with expertise in immunization administration acted as an expert panel and communicated via email to develop the recommended PE inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

We are utilizing CPT code 90460 *Immunization administration through 18 years of age via any route of administration, with counseling by physician or other QHP; first or only component of each vaccine or toxoid administered* as our base reference code for 96380 due to the inherent similarity between the service described by 90460 and this new service. Code 90460 is a recently PE reviewed IA service. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as established by manufacturers and the CDC Advisory Committee on Immunization Practices for administering the Nirsevemab vaccine.

We are utilizing CPT code 90471 *Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)* as our based reference code for 96381 due to the inherent similarity between the service described by 90471 and this new service. Code 90471 is a recently PE reviewed IA service. To the base of 90460 direct PE inputs, we are recommending incremental direct PE inputs as established by manufacturers and the CDC Advisory Committee on Immunization Practices for administering the Nirsevemab vaccine.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S): 96380-96381

SPECIALTY SOCIETY(IES): AAP

PRESENTER(S): Steven Krug, MD, Suzanne Berman, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

- 3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

Code 96380 and 96381 are typically reported with an E/M service. Codes 96380 and 96381 are typically reported with an E/M service in the NF setting.

See the *Billed Together* tab in the RUC Database.

- 4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

The dominant provider for new CPT Codes 96380 and 96381 in the facility and non facility is not known at this time.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

- 5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

- 6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

- 7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

Pre Service
CA007 Review patient clinical extant information and questionnaire
Used for imaging service. 1 minute standard.
Specialties are recommending 2 minutes to account for the clinical staff time to review the patient immunization questionnaire and complete the required pre-check eligibility process (see attachment

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

Nirsevemab Visual Guide)
CA008
Perform regulatory mandated quality assurance activity (pre-service)
Standard is 0 for XXX services.
Specialties are recommending 1 minute to account for the clinical staff time to ensure the vaccine stock is viable.

Service
CA014 Confirm order, protocol exam
Used for imaging service. 1 minute standard.
Specialties are recommending 2 minutes to account for the clinical staff time to compute the correct dose based on patient’s age and weight. Additional calculation complexity based on the “If baby is under X kg or over age Y” component of formula.

- 8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

- 9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

N/A

- 10. Please provide a brief description of the clinical staff work for the following:
 - a. Pre-Service period:

CA007: Confirming vaccine order/checking appropriateness for patient. Complete vaccine pre-check eligibility process (see attachment Nirsevemab Visual Guide).

CA008: Checking historical and current temperatures for vaccine refrigerator; recording temperatures; reporting temperatures; vaccine inventorying; ordering vaccines; completing required Vaccines for Children (VFC) paperwork; receiving vaccines; inspecting/logging vaccines and putting them in the vaccine refrigerator; creating lot numbers in EHR

- b. Service period (includes pre, intra and post):

CA011: Giving Vaccine Information Sheet (VIS) to patient/family; getting informed consent and signature if applicable

CA014: Going to laboratory and taking vaccine vials out of vaccine refrigerator; computing dose based on patient’s age and weight; drawing up vaccine into syringe; going back to patient room and preparing patient/parent, confirming that this is correct patient-correct vaccine

CA021: Actual administration of vaccine; bandage application

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or **No**.

If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
- a. If yes, please explain how the computer is used for this service(s).
 - b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
 - c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

The specialty societies included the following equipment items:

EF049 refrigerator, vaccine medical grade, 2-data logger sngl glass door
ED043 refrigerator, vaccine, temperature monitor w-alarm, security mounting w-sensors, NIST certificates

The specialties used the ‘default’ equipment formula for both EF049 and ED043.

- 25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

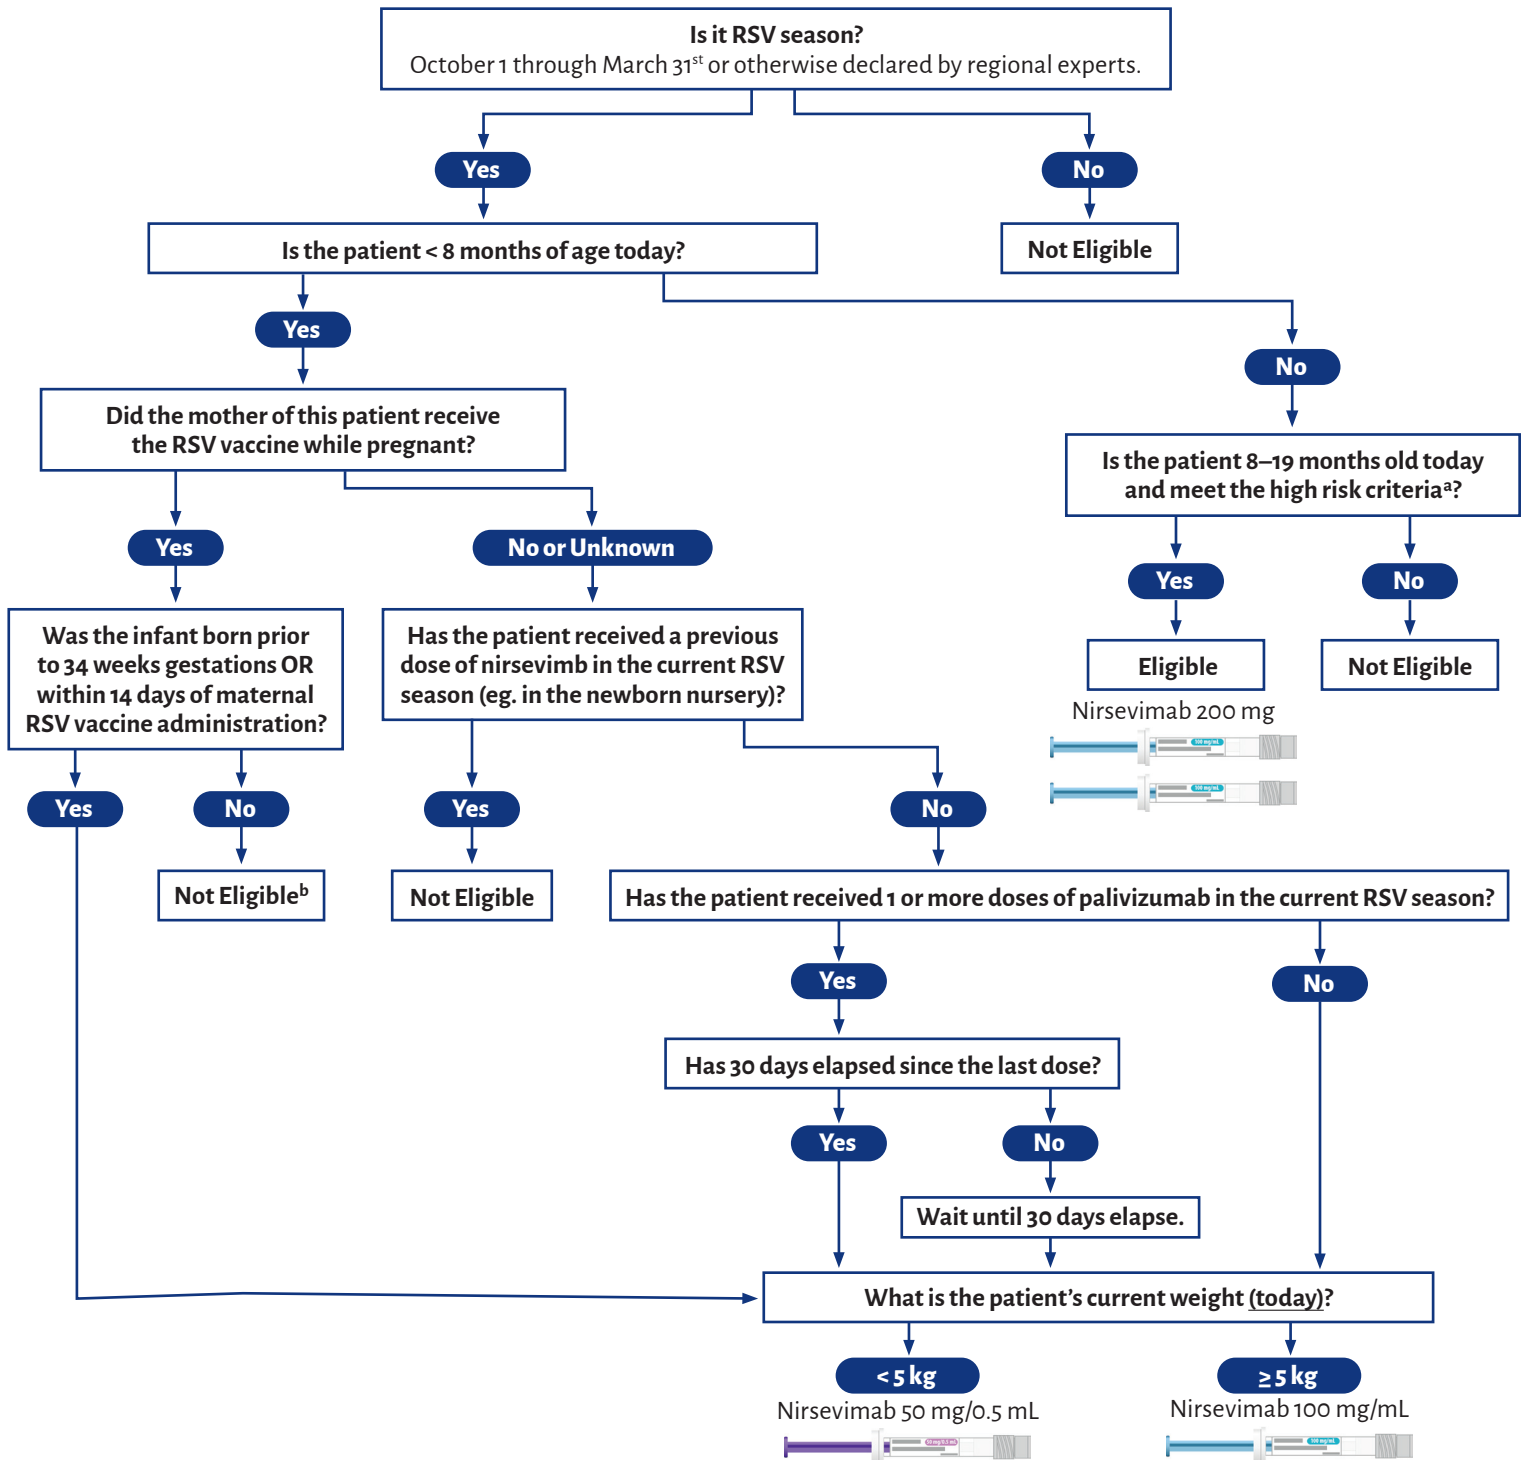

- 26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Equipment
 ED043: While its description begins with “refrigerator, vaccine,” it is the temperature monitor with alarm for the vaccine medical grade refrigerator. The specialties do not have two vaccine refrigerators included as part of the recommendations.

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

Nirsevimab Administration Visual Guide

- a. Children 8 through 19 months of age who are recommended to receive nirsevimab when entering their second RSV season because of increased risk of severe disease.
- Children with chronic lung disease of prematurity who required medical support (chronic corticosteroid therapy, diuretic therapy, or supplemental oxygen) any time during the 6-month period before the start of the second RSV season.
 - Children who are severely immunocompromised.
 - Children with cystic fibrosis who have manifestations of severe lung disease (previous hospitalization for pulmonary exacerbation in the first year of life or abnormalities on chest imaging that persist when stable) or have weight-for-length that is <10th percentile.
 - American Indian and Alaska Native children (note that this is a new group for whom second-season prophylaxis is recommended in contrast to the current palivizumab recommendations).
- b. Nirsevimab can be considered in rare circumstances when, per the clinical judgment of the healthcare provider, the potential incremental benefit of administration is warranted:
- Infants born to pregnant people who may not mount an adequate immune response to vaccination or have conditions associated with reduced transplacental antibody transfer
 - Infants who have undergone cardiopulmonary bypass, leading to loss of maternal antibodies
 - Infants with substantial increased risk for severe RSV disease (eg, hemodynamically significant congenital heart disease, intensive care admission, and requiring oxygen at discharge).

Nirsevimab Administration Visual Guide (continued)

At the time of administration, affirm the 7 rights to reduce errors:

1. Right patient
2. Right time (age, in RSV season)
3. Right immunization (correct medication)
4. The right dosage (based on weight)
5. The right route, needle length, and technique
6. [Right site](#)

Intramuscular (IM) injection		
Use a 22–25 gauge needle. Choose the injection site and needle length that is appropriate to the person's age and body mass.		
Age	Needle length	Injection site
Newborns (1 st 28 days)	$\frac{5}{8}$ " ^c	Anterolateral thigh muscle
Infants (1–12 months)	1"	Anterolateral thigh muscle
Toddlers (1–2 years)	1–1 $\frac{1}{4}$ "	Anterolateral thigh muscle ^e
	$\frac{3}{8}$ " ^d –1"	Deltoid muscle of arm

7. The right documentation

c. If skin is stretched tightly and subcutaneous tissues are not bunched.

d. Alternate needle lengths may be used if the skin is stretched tightly and subcutaneous tissues are not bunched, as follows: a) a $\frac{3}{8}$ " needle in toddlers, children, and patients weighing less than 130 lbs (less than 60 kg) for IM injection in the deltoid muscle only, or b) a 1" needle for administration in the thigh muscle for adults of any weight.

e. Preferred site

NOTE: Always refer to the package insert included with each biologic for complete vaccine administration information. CDC's Advisory Committee on Immunization Practices (ACIP) recommendations for the particular vaccine should be reviewed as well. Access the ACIP recommendations at www.immunize.org/acip.

**RUC Practice Expense Subcommittee
Packs Workgroup
June 2023**

Workgroup Report

Workgroup Members Present: Donald Selzer, MD (Chair), Michael Booker, MD, Dheeraj Mahajan, MD, Richard Rausch, DPT, MBA, Edward Vates, MD

At the April 2023 meeting, the PE Subcommittee formed a workgroup to review the content of the packs to assess if they are still typical and revise as necessary. This was a result of discrepancies found with the packs pricing at the January 2023 RUC meeting.

The purpose of the packs is to simplify the process of identifying and recommending PE supply direct inputs. One would expect the pack price to be identical to the total cost of its individual contents. The price of the individual components should be consistent across the supply packs and match the standalone prices of supplies. However, the RUC noted a discrepancy with the SA051 *pack, pelvic exam* while reviewing CPT code 9X036 *Pelvic exam (List separately in addition to code for primary procedure)*. The SA051 pack is priced at \$20.16 while the four individual items therein total \$2.81 according to the 2023 CMS Direct PE Inputs Medical Supplies Listing.

AMA Staff prepared a document with the 23 deconstructed packs for consideration by the PE Subcommittee at its April 2023 meeting. Review of the pack pricing uncovered numerous discrepancies between the aggregated cost of a pack and the individual item components. Prior to the meeting, staff reached out to inquire about this issue to the Centers for Medicare & Medicaid Services (CMS) and received the following response:

“We agree that this is an issue that should be fixed, as the price of the individual components should be consistent across the supply packs and match the standalone prices of supplies (like gloves and sterile gauze and such). However, it needs to be tackled in comprehensive fashion to ensure consistency across the dozens of supply packs which will be a sizable undertaking. Resolving these pricing discrepancies in the supply packs is something that we will consider addressing in future rulemaking.”

The RUC shared the deconstructed packs document and volume analysis with CMS as part of its May 2023 RUC recommendations stating, **“The RUC strongly recommends that CMS resolve these pricing discrepancies in the supply packs during CY2024 rulemaking.”**

The Packs Workgroup convened a Teams meeting on June 28, 2023, and completed the following tasks to be included with the RUC comments on the CY2024 Proposed Rule:

I. Incomplete Packs Review

When the 23 supply packs were deconstructed, four packs stood out as containing items that did not have assigned supply codes and were no longer included on the CMS Direct PE Inputs Medical Supplies Listing. The pricing of these packs was clearly incorrect because the individual components could not be properly accounted for or summed. The Workgroup reviewed the contents of these four incomplete packs (SA045, SA046, SA049 and SA082) to ensure they are complete for submission to CMS with the RUC comment letter in August 2023.

AMA Staff searched the RUC database for the codes that used each of the four incomplete supply packs and contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to review the contents of the respective packs to ensure they are correct and to provide invoices for any missing supply items. The attached spreadsheet accounts for all

the packs and details the recommended modifications for the packs as explained below. Invoices are also attached for new supply items.

SA045 – All the items listed in SA045 *pack, drapes, cystoscopy* were no longer available in the current CMS Direct PE Inputs Medical Supplies Listing, thus the specialties rebuilt the pack to include two new supply items:

- *drape, surgical, legging*
- *drape, surgical, split, impervious, absorbent.*

The specialty clarified that two leggings are typical, one for each leg. They explained that there are three components to the pack, a legging on each leg and the drape in the center. A one piece drape is considerably more expensive and not typical. The Workgroup carefully reviewed the invoices and clarified that the leggings invoice is for a single legging drape (2 cases of 20), thus a quantity of two is appropriate.

SA046 – The specialties examined the codes which include SA046 *pack, drapes, laparotomy (chest-abdomen)* and recommended alternative supply items to replace the pack as detailed in the attached spreadsheet.

The Workgroup agreed that pack SA046 should be removed for the six CPT codes 19020, 19101, 19110, 19112, 20102, 20101 and replaced with supply item SB011 *drape, sterile, fenestrated 16in x 29in* as recommended by the surgical specialties. The specialties explained that a laparotomy drape-pack is not a typical supply in a surgeon's office. In addition, SA046 duplicates a few items that are separately identified for these codes (eg, SB012 drape, sterile, for Mayo stand). For these 6 procedures, it would be more typical to use a fenestrated drape which is an item commonly stocked in a surgeon's office and not included in the current PE details.

For CPT codes 19000, 60300, 22510, 22511, 22513, 22514, the Workgroup did not immediately accept the recommendation to substitute existing supply items SB014 *drape, sterile, three-quarter sheet* and SB019 *drape, towel, sterile 18in x 26in* for a longer drape but instead requested a brief rationale of what is typically used for the procedures and why, whether it be the existing supplies or a new supply item.

For CPT codes 22510, 22511, 22513, 22514, the specialties submitted a revised recommendation and invoice for a new supply item, *Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in)*, along with existing supply item SB019. They explained that “A laparotomy drape-pack is not a typical supply in a surgeon’s office and that SA046 also includes several items which are unnecessary (e.g., fan-folded drape sheets, Mayo stand cover, suture bag) for these procedures. For these four procedures, it would be more typical to use sterile drape towels (4) and a fenestrated drape, which is an item commonly stocked in a surgeon’s office but not included in the current CMS list of PE supply inputs.”

The specialties submitted a revised recommendation for CPT code 19000 with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that “A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient’s lower chest and abdomen, and two sterile towels folded into triangles to create a sterile field surrounding the targeted area on the breast for puncture. These supply items are currently on the CMS list of PE supply inputs.”

Finally, the specialties submitted a revised recommendation for CPT code 60300 also with rationale to recommend replacing pack SA046 with existing supply items SB014 and SB019. They explained that “A laparotomy drape-pack is not a typical supply item for this procedure and contains duplicate items. It would be more typical to use a three-quarter sheet drape to cover the patient, and two sterile towels folded

into triangles to create a sterile field surrounding the targeted area for puncture on the neck. These supply items are currently on the CMS list of PE supply inputs.”

The Workgroup recommends that pack SA046 be eliminated and replaced with the supply items as specified in the attached spreadsheet.

SA049 – Several items in the existing SA049 pack, *ocular photodynamic therapy* were no longer included on the CMS Direct PE Inputs Medical Supplies Listing, thus the specialty submitted modifications to correct the pack. The Workgroup discussed the specialty recommendation for SA049 and modified it further to include only two items as detailed in the attached spreadsheet. The Workgroup thoroughly discussed the contents of the ocular photodynamic therapy (PDT) kit and noted that a significant portion of the supply items in the existing pack are included in the kit. The specialty confirmed that the kit is correct, and the only additional item needed is the Y-adapter cap. Invoices are attached and include a picture to identify the contents of the kit.

SA082 – For SA082 pack, *ophthalmology visit (w-dilation)*, the specialty recommended that all the items in the existing pack remain, except for one (rev-eyes 0.5% ophth). They submitted the missing invoice for post-mydriatic spectacles, and the Workgroup clarified that the invoice includes 25 spectacles per box for a total of \$0.328 per item as noted on the attached spreadsheet.

II. Review of One Supply Item in SA042 pack, *cleaning and disinfecting, endoscope*

The unit of measurement and price for SM018 *glutaraldehyde 3.4% (Cidex, Maxicide, Wavicide)* were highlighted for review by the Packs Workgroup. AMA Staff contacted CMS to inquire about what size bottle was used for pricing SM018. CMS did not have any information on the unit size (bottle or otherwise) which was used to price the SM018 supply during the last supply/equipment pricing update. Given that the old price was 17 cents per ounce and now it is \$3.44 per ounce, there may have been a unit quantity error that took place somewhere during the process.

According to the RUC database, there are 306 codes that utilize SA042 pack, *cleaning and disinfecting, endoscope* in the Non-Facility or the Facility setting. AMA Staff contacted the specialties who are the dominant providers for one or more of these services. The specialties involved were requested to provide invoices for SM018 to ensure that quantity and pricing of this supply item is accurate. Invoices shared by the specialties will be forwarded to CMS.

The specialties were further asked if there were any other discrepancies in the contents of SA042 including alternative scope disinfectants. The specialties determined, and the Workgroup agreed, that glutaraldehyde use is no longer typical. Thus, a non-glutaraldehyde disinfectant, ortho-phthalaldehyde 0.55% (eg, Cidex OPA), is recommended as a new supply item. A specialty explained that Cidex OPA is what is used in the office setting as a replacement to the old version of Cidex (glutaraldehyde). Cidex OPA replaced Cidex several years ago to respond to glutaraldehyde-resistant mycobacteria (eg, *M.chelonae*). Another specialty confirmed that glutaraldehyde has been replaced by safer less toxic alternatives in most centers. The Workgroup clarified the unit of measurement for the new supply item is ounces with the quantity for the pack equal to 32 oz. which is what was used previously with SM018.

In addition, an additional new supply item is recommended to replace SM019 *glutaraldehyde test strips (Cidex, Metrex)* in pack SA042. Invoices were requested for ortho-phthalaldehyde test strips to complete the pack and are shared in the attachments.

III. Supply Pack Affirmation – CMS Mathematical Correction Needed

There are 18 packs in the attached spreadsheet where all content is complete. **The Workgroup affirmed the contents of the complete packs for submission to CMS with the RUC request to ensure accurate packs pricing.** The Workgroup concurred that these packs should be rectified as soon as possible by CMS to ensure that the sum totals from the individual items.

The PE Subcommittee Packs Workgroup recommends that:

- 1. The RUC request that the Centers for Medicare & Medicaid Services (CMS) revise packs SA042, SA045, SA046, SA049 and SA082 according to the attached spreadsheet.**
- 2. The RUC request that the Centers for Medicare & Medicaid Services (CMS) immediately initiate correction of the packs pricing such that the sum of the individual components match the price of the corresponding pack.**
