RUC Referrals to CPT Editorial Panel - Outstanding Issues

0042T Cerebral perfusion analysis using computed tomography with contrast administration, including post-processing of parametric maps with determination of cerebral blood flow, cerebral blood volume, and mean transit time	<u>Screen</u> High Volume Category III Codes 2022	<u>RUC Meeting</u> September 2022	<u>Specialty Society:</u> ACR, ASNR	<u>CPT Meeting</u> February 2024
---	--	--	--	---

Background: In April 2022, the Relativity Assessment Workgroup identified this Category III code with 2020 Medicare utilization over 1,000. The Workgroup requested an action plan for September 2022. In September 2022, the specialty societies indicated and the RUC supports a submission of a coding application for CPT May 2023. The specialty societies submitted a coding application for May 2023, but it was subsequently withdrawn. The specialty societies should address the CPT Editorial Panel concerns and submit a new CCA for the September 2023 meeting. At the September 2023 CPT meeting, this issue was withdrawn as the Panel determined that the scope was too large and went beyond the RUC request. The specialty societies should revise and resubmit a CCA for February 2024.

0394T High dose rate electronic brachytherapy, skin surface application, per fraction, includes basic dosimetry, when performed	<u>Screen</u> High Volume Category III Codes 2019	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u>	<u>CPT Meeting</u> May 2024
--	--	--	---	--

Background: In October 2019, this service was identified via the high volume category III codes based on 2021 Medicare utilization data over 1,000. These services are identified to notify and get feedback from specialty societies whether a Category I code should be created. The Workgroup requests an action plan for September 2023. In September 2023, the Workgroup recommended that this service be referred to CPT May 2024 to create a Category I code.

0421T Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed)	<u>Screen</u> High Volume Category III Codes 2023	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u>	<u>CPT Meeting</u> May 2024
---	--	--	---	--

Background: In April 2023, this service was identified via the high volume category III codes based on 2021 Medicare utilization data over 1,000. These services are identified to notify and get feedback from specialty societies whether a Category I code should be created. The Workgroup requests an action plan for September 2023. In September 2023, the Workgroup recommended that this service be referred to CPT May 2024 to create a Category I code.

37220 Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty	<u>Screen</u> High Volume Growth1	<u>RUC Meeting</u> April 2022	<u>Specialty Society:</u> SVS, ACS, SIR, ACR, ACC	<u>CPT Meeting</u> February 2024
---	--	--	--	---

Background: In October 2018, 37225, 37227 and 37229 services were identified by the PE High Cost Supplies screen for services with non-facility Medicare utilization over 10,000, not reviewed in the last five years and include a supply item greater than \$500. The RUC requested an action plan for the January 2019 on how to address these services. The Workgroup reviewed the action plan for these services, noting that CMS repriced these supply items for 2019. The specialty societies indicated that they agreed these supply items were essential to perform CPT codes 37225, 37227 and 37229 and that the current repricing was appropriate. The Workgroup noted that CPT code 37229 was identified on the High Volume Growth screen at this meeting and the Workgroup agreed with the specialty societies to refer this entire family of services to CPT for revision to accommodate new technologies. The specialty societies worked with the CPT Editorial Panel and have submitted multiple coding change proposals. In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

37221	Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed	<u>Screen</u> High Volume Growth1	<u>RUC Meeting</u> April 2022	<u>Specialty Society:</u> SVS, ACS, SIR, ACR, ACC	<u>CPT Meeting</u> February 2024

In September 2021, CPT Editorial Panel did not approve of the proposed coding changes suggested unbundling previous bundling efforts. Since this issue were not be addressed via edits at CPT, it was placed back on the Relativity Assessment Workgroup agenda to review. In April 2022, the Relativity Assessment Workgroup discussed the complexity of this issue and determined that coding clarification is still necessary. The Workgroup recommended that a joint CPT/RUC Workgroup be created to develop coding solutions for the endovascular revascularization (37220-37235) code family.

Background: In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 70496 and 70498. In September 2022, the Workgroup recommended to refer this 70496 and 70498 to the CPT Editorial Panel to create a code bundling solution for CPT 2025. At the September 2023 CPT meeting, this issue was withdrawn as the Panel determined that the scope was too large and went beyond the RUC request. The specialty societies should revise and resubmit a CCA for February 2024.

77014 Computed tomography guidance for placement of radiation therapy fields	<u>Screen</u> CMS Request - Practice Expense Review / CMS-Other - Utilization over 500,000 / CMS High Expenditure Procedural Codes1 / High Volume Growth3	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> ASTRO, ACR	<u>CPT Meeting</u> May 2024
---	---	--------------------------------------	---	--------------------------------

Background: In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services. The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

92284 Diagnostic dark adaptation examination with interpretation and report	<u>Screen</u> Harvard Valued - Utilization over 30,000-Part5	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Meeting</u> Feb 2024
--	---	--	---	--

Background: In October 2020, CPT code 92284 was identified via the Harvard valued screen. This service was surveyed and reviewed by the RUC in April 2021. At that time, the RUC recommended that CPT code 92284 be referred to CPT to editorially revise and include the word "diagnostic" in the code descriptor. "Diagnostic dark adaptation examination with interpretation and report.", which occurred at the May 2021 CPT meeting (Tab EC-M). The RUC also indicated it reviewed the typical technology used to perform this service, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology. This was flagged for review in three years. In September 2023, the specialty societies indicated and the Workgroup recommends that this issue be referred to the CPT February 2024 meeting to create a Category III CPT code for screening dark adaptation testing, followed by a re-survey of diagnostic dark adaptation examination CPT 92284 and develop a CPT Assistant article with coding guidance on correct reporting of these two services.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

95921 Testing of autonomic nervous system function; cardiovagal innervation (parasympathetic function), including 2 or more of the following: heart rate response to deep breathing with recorded r-r interval, valsalva ratio, and 30:15 ratio	<u>Screen</u> Different Performing Specialty from Survey / Codes Reported Together 75% or More-Part1 / Different Performing Specialty from Survey3	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AAFP, AAN, AANEM, ACNS, ACP	<u>CPT Meeting</u> May 2024
--	--	---	---	---------------------------------------

Background: For code pair 95921/95922, the Relativity Assessment Workgroup acknowledged that the rationale for increased utilization remains unclear. Thus, the dominant specialties for these two codes (Family Medicine and Internal Medicine) were requested to provide the following information regarding 95921 and 95922: What are the clinically appropriate scenarios for reporting each service? What is the description of service? What are the clinically appropriate scenarios when these services AAFP and ACP indicated that they do not have an explanation for the increased utilization as their physicians indicated that they do not typically perform these services. In 2008, a CPT Assistant article was published to correct inappropriate reporting by clarifying that a tilt table is required in the provision of the service. However, Medicare claims data indicate that the attempted coding education was not effective. In April 2011, the RUC recommended this code be referred to CPT to revise the descriptor to include the use of a tilt table and refer those who do not use a tilt table in autonomic testing to use an unlisted code, which was addressed at the February 2012 (Tab 17) CPT meeting. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in 3 years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The RUC noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

95922 Testing of autonomic nervous system function; vasomotor adrenergic innervation (sympathetic adrenergic function), including beat-to-beat blood pressure and r-r interval changes during valsalva maneuver and at least 5 minutes of passive tilt	<u>Screen</u> High Volume Growth1 / CMS Fastest Growing / Different Performing Specialty from Survey / Codes Reported Together 75% or More-Part1	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AAFP, AAN, AANEM, ACNS, ACP	<u>CPT Meeting</u> May 2024

Background: In October 2019, the Workgroup identified this service with Medicare utilization of 10,000 or more and has increased by at least 100% from 2013 through 2018e. The Workgroup requests action plans for review at the January 2020 Relativity Assessment Workgroup meeting. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in 3 years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

95924 Testing of autonomic nervous system function; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt	<u>Screen</u> Codes Reported Together 75% or More-Part1	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AAFP, AAN, AANEM, ACNS, ACP	<u>CPT Meeting</u> May 2024
---	--	--	--	--

Background: CPT Feb 2012 the CPT Editorial Panel established two new codes with instructional guidelines to report autonomic function testing. In April 2012, The RUC determined that the survey results for 95924 was too low (26 responses). There was also confusion about what is described in 95924 which may have resulted in invalid physician time for this service. The RUC recommended an interim value for 95924. In January 2020, the RUC recommended to refer codes 95921-95924 to CPT Assistant in 2020 to clarify correct coding on how to report these services. The RAW would review the specialty mix again in 3 years of those reporting the services (Sept 2023). In September 2023, the specialty societies indicated that the article included correct coding for autonomic testing services when a tilt table was used, clarity on terminology used in the code descriptor language of the code set, and clinical examples for each code. The intent of the article was to reduce the occurrence of any miscoding that may be contributing to the total utilization and understand if the shift in dominant specialties was now typical. The Workgroup examined these services and indicated that the decrease in utilization in 2020 may not be attributable to the CPT article but to due to the COVID-19 pandemic. The Workgroup noted that these services are typically reported with one another and the code family should be referred to CPT to be restructured.

99183 Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session	<u>Screen</u> CMS-Other - Utilization over 250,000	<u>RUC Meeting</u> January 2023	<u>Specialty Society:</u> AAFP, UHMS	<u>CPT Meeting</u>
---	---	--	---	------------------------------------

Background: In January 2023, the RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183. In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. Stakeholders pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183, the descriptor describes only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment is reported using separate treatment code C1300 Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval. Therefore, CMS created code G0277 to report the treatment delivery and to maintain consistency with the OPPS coding. CMS used a timed 30-minute code, which can be used across settings. To value G0277, CMS used the RUC recommended direct PE inputs for 99183 and adjusted them to align with the 30-minute treatment interval. The RUC recommends that CPT code 99183 be referred to CPT by the June 2023 deadline for the September 2023 CPT meeting, for revision to be time-based as well as modified to appropriately describe the treatment delivery, attendance and supervision. Then, subsequently, allow for the deletion of G0277.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

G0277 Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval	<u>Screen</u> High Volume Growth8	<u>RUC Meeting</u> January 2023	<u>Specialty Society:</u> AAFP, UHMS	<u>CPT Meeting</u>
--	--	--	---	------------------------------------

Background: In January 2023, the RUC noted that CMS created G0277 in 2015 to describe the direct practice expense inputs associated with CPT code 99183. In the Final Rule for 2015, CMS commented that CPT code 99183 is used for both professional attendance and supervision and the actual treatment delivery. Stakeholders pointed out that although CMS included the PE inputs for treatment delivery in CPT code 99183, the descriptor describes only attendance and supervision. CMS noted that under the Outpatient Prospective Payment System (OPPS), the treatment is reported using separate treatment code C1300 Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval. Then, subsequently, allow for the deletion of G0277.

G0396 Alcohol and/or substance (other than tobacco) misuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes	<u>Screen</u> CMS-Other - Utilization over 30,000	<u>RUC Meeting</u> January 2018	<u>Specialty Society:</u> AAFP, ASA, ASAM	<u>CPT Meeting</u> Time Uncertain
--	--	--	--	--

Background: In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. This list resulted in 34 services and the RAW requested action plans to be reviewed at the January 2018 meeting. In January 2018, the RUC recommended to maintain the physician work and refer to CPT to editorially remove "screening" from 99408 and 99409 to "assessment" to mirror G0396. At the February 2018 CPT meeting, the Panel postponed until time uncertain this request to revise codes 99408-99409 to identify assessment of alcohol and/or substance abuse. As a rationale for postponement, the Panel said that the service described in this application did not meet the General Criteria for Category I because the proposed service is not unique or well defined, and does not describe a service that is clearly identified and distinguished from existing services already described in CPT by other codes. The Panel's additional rationale for postponement of this item was to allow the relevant specialty societies an opportunity to submit a new code change application to address the differences between assessment and screening services.

G6001 Ultrasonic guidance for placement of radiation therapy fields	<u>Screen</u> CMS-Other - Utilization over 20,000 Part2	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u> AADA, ASTRO	<u>CPT Meeting</u> May 2024
--	--	--	--	--

Background: In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services.

The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

RUC Referrals to CPT Editorial Panel - Outstanding Issues

G6012 Radiation treatment delivery,3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 6-10 mev	<u>Screen</u> CMS-Other - Utilization over 20,000 Part2	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u>	<u>CPT Meeting</u> May 2024
---	--	--	---	--

Background: In October 2020, the RUC identified CPT codes G6012-G6015 as CMS/Other source with 2019 estimated Medicare utilization over 20,000. In January 2021, the RUC recommended the RAW review in two years (Sept 2023) after the CMS issued Radiation Oncology Advance Payment Model is initiated including these codes. The specialty society continued to advocate for the RUC recommended values and direct PE inputs for the existing CPT codes. In September 2023, the Workgroup reviewed the action plan for CPT codes G6012-G6015 and noted that in 2022 CMS Innovation Center delayed the RO Model. ASTRO began developing an episode-based alternative payment approach for radiation therapy services called Radiation Oncology Case Rate (ROCR). The proposed approach is site-neutral and expected to save more than \$200 million over the next five years while improving quality through increasing accreditation at sites providing these services.

The radiation oncology community remains committed to working with CMS and Congress to implement payment reform in the form of an episode-based payment program. In the interest of rate setting and payment stability, maintaining the core components are critical. As such, the specialty societies initially requested maintaining the inputs for all the codes in the radiation treatment delivery family and removing them from this CMS/Other screen. The Workgroup disagreed and noted that the inputs for these services were last reviewed in 2014, CMS did not accept the RUC recommendations and the inputs may not represent the services as they are currently performed. The Workgroup discussed reviewing these services for practice expense at the next meeting. The specialty societies indicated that they would bring the code set back to CPT to correctly define and attempt to address CMS' concerns. The Workgroup recommends that the radiation treatment delivery services (G6001-G6016, 77402, 77407, 77412, 77385, 77386, 77387 and 77014) be referred to CPT for revision.

G6013 Radiation treatment delivery,3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 11-19 mev	<u>Screen</u> CMS-Other - Utilization over 20,000 Part2	<u>RUC Meeting</u> September 2023	<u>Specialty Society:</u>	<u>CPT Meeting</u> May 2024

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

22310	Closed treatment of vertebral body fracture(s), without manipulation, requiring and including casting or bracing	<u>Screen:</u> Negative IWPUT / Site of Service Anomaly - 2019	<u>RUC Meeting:</u> September 2023	<u>RUC Rec:</u> Refer to CPT Assistant. 3.45.	<u>Specialty Society:</u> AANS, AAOS, CNS, ISASS, NASS	<u>CPT Asst Status:</u>
-------	---	---	---------------------------------------	--	---	-------------------------

Background: A RUC member requested that the Relativity Assessment Workgroup review services with low or negative intra-service work per unit of time (IWPUT) as a possible screen. AMA Staff gathered 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes with a negative IWPUT, which resulted in 23 services identified. The RUC recommended that all these codes be placed on the level of interest for action plans to review at the October 2017 meeting. The RUC recommended to survey this service for April 2018. In October 2019, this service was identified via the site of service anomaly screen with 2018e Medicare utilization over 5,000 and performed less than 50% of the time in the inpatient setting but includes inpatient hospital E/M services within the global period based on 2016-2018e Medicare data. Survey for January 2020. The RUC questioned the plan for education on the use of CPT code 22310. The specialty societies explained that this code is used for several different sites of service. By defining the vignette and educating their members, they will be able to better identify where to use the code whether its office, ER, or inpatient. The plan is for education internally within the specialty, but it was evident that a CPT Assistant article may be warranted in the future as the code becomes implemented more widely. The RUC recommends that the Relativity Assessment Workgroup review this service in three years to examine the site of service and ensure that education has been effective. In September 2023, the RAW reviewed the action plan for CPT code 22310 and recommended it be referred to CPT Assistant to clarify correct reporting of this service and to review after 3 years of additional data post CPT Assistant article are available.

51728	Complex cystometrogram (ie, calibrated electronic equipment); with voiding pressure studies (ie, bladder voiding pressure), any technique	<u>Screen:</u> Codes Reported Together 95% or More / Codes Reported Together 75% or More-Part5	<u>RUC Meeting:</u> September 2022	<u>RUC Rec:</u> Refer to CPT Assistant. 2.11	<u>Specialty Society:</u> AUA, ACOG	<u>CPT Asst Status:</u> Dec 2023
-------	--	---	---------------------------------------	---	--	-------------------------------------

Background: Deleted 51772 and 51795 and added three new codes to combine the services. Revised at the February 2009 CPT Meeting. In April 2022, the Workgroup identified services performed by the same physician on the same date of service 75% of the time or more. Only groups that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data and/or contained at least one ZZZ global service were removed. The Workgroup requested action plans for September 2022 to determine if specific codes bundling solutions should occur for 51728/51741 and 51728/51784. In September 2022, the Workgroup recommended that this issue be referred to CPT Assistant to educate providers about the coding and use of complex uroflowmetry. Some providers may believe that 51741 is part of the "pressure-flow" study of 51728 or 51729, but it is not. CPT code 51741 should only be reported if done separately from urodynamic studies, on a separate machine and only in certain circumstances or when indicated. Refer to CPT Assistant (51728/51784) to educate how EMG studies should only be used in certain circumstances.

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

64590	Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling	<u>Screen:</u>	<u>RUC Meeting:</u>	<u>RUC Rec:</u>	<u>Specialty Society:</u>	<u>CPT Asst Status:</u>
		Harvard-Valued Annual Allowed Charges Greater than \$10 million / Different Performing Specialty from Survey/ RUC recommendation process, not part of RAW screens / PE Skin Adhesives / Different Performing Specialty from Survey5	April 2023	New PE Inputs. CPT Assistant Article	ACOG, AUA	

Background: CMS identified this service but it did not meet the screen criteria, allowed charges are ~\$1 million. In October 2017, this service was identified as being performed by a different specialty than who originally surveyed this service. The RAW requests an action plan to review at the January 2018 meeting. In January 2018, the RUC recommended to refer to CPT for revision to properly describe the service as performed by urology. The specialty societies indicated that they do not intend on submitting a coding change application to somehow change the descriptor to describe implantation of a generator by urologists as different from implantation of a generator by gynecologists or general surgeons. It is the same work - make an incision, create a subcutaneous pocket, insert (an almost identical) medtronic generator, and close. Additionally noting, this service was never surveyed (previous 2006 change was editorial) and should not have been on this screen. Removed from screen. In February 2022, the CPT Editorial Panel created several new integrated neurostimulator Category I and Category III codes, the descriptors, guidelines and parentheticals for codes 64590 and 64595 were concurrently revised to clarify that 64590 and 64595 are only to be used for neurostimulator pulse generators or receivers that require pocket creation and include a detachable connection to a separate electrode array (non-integrated systems). In April 2022, the PE Subcommittee discussion culminated in a request for a CPT Assistant article to clarify several issues involving the use of the EQ209 programmer, neurostimulator (w-printer) and to provide clear and consistent instruction to all users of the programming and insertion codes. The stimulator is used to check the impedance of the device once placed for the initial code 64590 and is present for the entire procedure. To the extent there is additional stimulation and programming, then an additional code would be reported. An article is needed to ensure that individuals are appropriately reporting the stimulation and programming with code 95972 and not just merely checking the impedance. The RUC recommends that a CPT Assistant article be developed to clarify the appropriate use of CPT codes 64590 and 64595 as reported with other codes. In January 2023, the PE Skin Adhesives Workgroup focused on wound closure and agreed that there are multiple skin adhesive products at different price points that work similar to Dermabond. The RUC recommended that the PE Subcommittee review the six codes on the Medicare Payment Schedule with Dermabond to identify justification for its use versus the generic version and present its findings to the RUC for approval. As part of this review, the specialty should submit a letter to the RUC regarding any corrections to the vignettes for CPT codes 64590 and 64595. In April 2023, this service was identified on the different performing specialty from survey screen. In September 2023, the specialty societies indicated CPT code 64590 was revised at CPT and reviewed by the RUC for CPT 2024 and secondly the practice expense was again recently revised for the Dermabond issue for 2025. The Workgroup recommends that code 64590 be removed from this screen.

64595	Revision or removal of peripheral or gastric neurostimulator pulse generator or receiver	<u>Screen:</u>	<u>RUC Meeting:</u>	<u>RUC Rec:</u>	<u>Specialty Society:</u>	<u>CPT Asst Status:</u>
		RUC recommendation process, not part of RAW screens / PE Skin Adhesives	April 2023	New PE Inputs. CPT Assistant Article	ACOG, AUA

RUC Recommendations to Develop CPT Assistant Articles - Outstanding Issues

92284 Diagnostic dark adaptation examination with interpretation and report	<u>Screen:</u> Harvard Valued - Utilization over 30,000-Part5	<u>RUC Meeting:</u> September 2023	<u>RUC Rec:</u> Refer to CPT and CPT Assistant.	<u>Specialty Society:</u> AAO, AOA (optometry), ASRS	<u>CPT Asst Status:</u>
--	--	---------------------------------------	--	---	-------------------------

Background: The Workgroup identified CPT code 92284 via the 2019e Medicare utilization over 30,000 screen. The Workgroup requests that the specialty societies submit an action plan addressing CPT code 92284 for January 2021. In January 2021, the RUC agreed with the specialty society that this service be surveyed for the April 2021 RUC meeting. The family of services should be identified on the level of interest (LOI). In April 2021, the RUC recommended that CPT code 92284 be referred to CPT to editorially revise and include the word "diagnostic" in the code descriptor. "Diagnostic dark adaptation examination with interpretation and report." The RUC also indicated it review the typical technology used to perform this service, acknowledging that the device included in proposed direct practice costs recently was very recently replaced with a newer technology. In September 2023, the specialty societies indicated and the Workgroup recommended that this issue be referred to the CPT February 2024 meeting to create a Category III CPT code for screening dark adaptation testing, followed by a re-survey of diagnostic dark adaptation examination CPT 92284 and develop a CPT Assistant article with coding guidance on correct reporting of these two services.

92523 Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)	<u>Screen:</u> CMS Request/Speech Language Pathology Request/ High Volume Growth9	<u>RUC Meeting:</u> April 2023	<u>RUC Rec:</u> Refer to CPT Assistant. 3.36	<u>Specialty Society:</u> ASHA	<u>CPT Asst Status:</u>
--	--	-----------------------------------	---	-----------------------------------	-------------------------

Background: October 2012 CPT deleted 92506 and created 4 new codes to more accurately describe and differentiate speech evaluation services. In April 2023, this service was identified via the high volume growth screen with 2021 Medicare utilization of 10,000 or more that increased by at least 100% from 2016 through 2021. In September 2023, the Workgroup reviewed the action plan for 92523 and noted that the specialty societies indicated that this service has not changed but is not being reported appropriately. The specialty society indicated it intends to educate its members on correct reporting via various channels. The RUC agreed with the specialty and recommends that CPT code 92523 be referred to CPT Assistant for re-education to report the most specific procedure code for the procedure provided. Specifically, for speech-language pathologists, to compare evaluation procedure CPT 92523 versus 96125 and for the Workgroup to review in 3 years.

Detailed Description of Pre-Service Time Packages (Minutes)

		FACILITY				NON-FAC	
		1	2	3	4	5**	6
Total Pre-Service Time		20	25	51	63	8	23

CATEGORY SUBTOTALS

A	Pre-Service Evaluation (IWPUT =0.0224)	13	18	33	40	7	17
B	Pre-Service Positioning (IWPUT = 0.0224)	1	1	3	3	0	1
C	Pre-Service Scrub, Dress and Wait (IWPUT =0.0081)	6	6	15	20	1	5

DETAILS

A	History and Exam (Performance and review of appropriate Pre-Tests)	5	10	10	15	4	9
A	Prepare for Procedure (Check labs, plan, assess risks, review procedure)	2	2	2	4	1	1
A	Communicate with patient and/or family (Discuss procedure/ obtain consent)	3	3	5	5	2	3
A	Communicate with other professionals	0	0	5	5	0	2
A	Check/set-up room, supplies and equipment	1	1	5	5	0	1
A	Check/ prepare patient readiness (Gown, drape, prep, mark)	1	1	5	5	0	1
A	Prepare/ review/ confirm procedure	1	1	1	1	0	0
B	Perform/ supervise patient positioning	1	1	3	3	0	1
C	Administer local/topical anesthesia	1	1	0	0	1	5
C	Observe (wait anesthesia care)	0	0	10	15	0	0
C	Dress and scrub for procedure	5	5	5	5	0	0

**If the procedure does not require local anesthesia, 1 minute should be removed from pre-service time

- 1 Straightforward Patient/Straightforward Procedure (No anesthesia care)
- 2 Difficult Patient/Straightforward Procedure (No anesthesia care)
- 3 Straightforward Patient/Difficult Procedure
- 4 Difficult Patient/Difficult Procedure
- 5 Procedure with minimal anesthesia care (If no anesthesia care deduct 1 minute)
- 6 Procedure with local/topical anesthesia care requiring wait time for anesthesia to take effect

Additional Positioning Times for Spinal Surgical Procedures

SS1	Anterior Neck Surgery (Supine) (eg ACDF)	15 Minutes
SS2	Posterior Neck Surgery (Prone) (eg laminectomy)	25 Minutes
SS3	Posterior Thoracic/Lumbar (Prone) (eg laminectomy)	15 Minutes
SS4	Lateral Thoracic/Lumbar (Lateral) (eg corpectomy)	25 Minutes
SS5	Anterior Lumbar (Supine) (eg ALIF)	15 Minutes

Additional Positioning Times for Spinal Injection Procedures

SI1	Anterior Neck Injection (Supine) (eg discogram)	7 Minutes
SI2	Posterior Neck Injection (Prone) (eg facet)	5 Minutes
SI3	Posterior Thoracic/Lumbar (Prone) (eg epidural)	5 Minutes
SI4	Lateral Thoracic/Lumbar (Lateral) (eg discogram)	7 Minutes

Additional Positioning Times for Urological Procedures

U1	Dorsal Lithotomy	5 Minutes
-----------	------------------	-----------

Notes:

- Roll-over cells for additional detail where available
- Straightforward procedure: Integumentary, Non-incisional endoscopy, natural orifice

Detailed Description of Facility Based Post-Service Time Packages (Minutes)

	7A Local Anesthesia/ Straightforward Procedure	7B Local Anesthesia/ Complex Procedure	8A IV Sedation/ Straightforward Procedure	8B IV Sedation/ Complex Procedure	9A General Anesthesia or Complex Regional Block/ Straightforward Procedure	9B General Anesthesia or Complex Regional Block/Complex Procedure
Total Post-Service Time	18	21	25	28	30	33
Details:						
Application of Dressing ¹	2	2	2	2	2	2
Transfer of supine patient off table	1	1	1	1	1	1
Operative Note	5	5	5	5	5	5
Monitor patient recovery/stabilization	1	1	5	5	10	10
Communication with patient and/or family	5	5	5	5	5	5
Written post-operative note	2	5	2	5	2	5
Post-Operative Orders and Order Entry	2	2	5	5	5	5

Advisors may request additional time for circumstances that require additional work beyond the type of work described

¹ This represents a simple dressing

49654	Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); reducible	Feb 2011	Laparoscopic Hernia Repair	30	CPT 2009	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
49655	Laparoscopy, surgical, repair, incisional hernia (includes mesh insertion, when performed); incarcerated or strangulated	Feb 2011	Laparoscopic Hernia Repair	30	CPT 2012	October 2015	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50430	Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; new access	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50431	Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (eg, ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50432	Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50433	Placement of nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, new access	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
50434	Convert nephrostomy catheter to nephroureteral catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, via pre-existing nephrostomy tract	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50435	Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50593	Ablation, renal tumor(s), unilateral, percutaneous, cryotherapy	Apr 2007	Percutaneous Renal Tumor Cryotherapy	A	CPT 2008	September 2011	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>
50606	Endoluminal biopsy of ureter and/or renal pelvis, non-endoscopic, including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation (list separately in addition to code for primary procedure)	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50693	Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; pre-existing nephrostomy tract	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50694	Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
50695	Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (eg, ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50705	Ureteral embolization or occlusion, including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation (list separately in addition to code for primary procedure)	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
50706	Balloon dilation, ureteral stricture, including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation (list separately in addition to code for primary procedure)	Apr 2015	Genitourinary Catheter Procedures	08	CPT 2016	October 2019	Remove from list , no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
52284	Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed	Jan 2023	Cystourethroscopy with Urethral Therapeutic Drug Delivery	08	CPT 2024	April 2028		<input type="checkbox"/>
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	Apr 2014	Cystourethroscopy Insertion Transprostatic Implant	16	CPT 2015	October 2018	Survey for January 2019	<input checked="" type="checkbox"/>
52442	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (list separately in addition to code for primary procedure)	Apr 2014	Cystourethroscopy Insertion Transprostatic Implant	16	CPT 2015	October 2018	Survey for January 2019	<input checked="" type="checkbox"/>
53854	Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy	Jan 2018	Transurethral Destruction of Prostate Tissue	13	CPT 2019	April 2023	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
53855	Insertion of a temporary prostatic urethral stent, including urethral measurement	Feb 2009	Temporary Prostatic Urethral Stent Insertion	12	CPT 2010	September 2013	Remove from list, no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
53860	Transurethral radiofrequency micro-remodeling of the female bladder neck and proximal urethra for stress urinary incontinence	Apr 2010	Transurethral Radiofrequency Bladder Neck and Urethra	12	CPT 2011	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	<input checked="" type="checkbox"/>
55706	Biopsies, prostate, needle, transperineal, stereotactic template guided saturation sampling, including imaging guidance	Apr 2008	Saturation Biopsies	15	CPT 2009	September 2014	Remove from list, no demonstrated technology diffusions that impacts work or practice expense.	<input checked="" type="checkbox"/>
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed	Oct 2009	Laparoscopic Radical Prostatectomy	14	CPT 2011	September 2014	Survey for April 2015. Specialty society should consider surveying 55845 and 55866 at the same time.	<input checked="" type="checkbox"/>
55874	Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed	Jan 2017	Peri-Prostatic Implantation of Biodegradable Material	13	CPT 2018	April 2022	In April 2022, recommended to remove from list, no demonstrated technology diffusion that impacts work or practice expense.	<input checked="" type="checkbox"/>
55880	Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance	Oct 2019	Transrectal High Intensity Focused US Prostate Ablation	06	CPT 2021	April 2025		<input type="checkbox"/>
57423	Paravaginal defect repair (including repair of cystocele, if performed), laparoscopic approach	Apr 2007	Laparoscopic Paravaginal Defect Repair	C	CPT 2008	September 2011	Remove, code does not need to be re-evaluated	<input checked="" type="checkbox"/>

67516	Suprachoroidal space injection of pharmacologic agent (separate procedure)	Jan 2023	Suprachoroidal Injection	10	CPT 2024	April 2028	There is currently only one FDA-approved medication for this procedure, triamcinolone acetonide, and it is approved for only one indication: macular edema associated with uveitis. The relevant HCPCS code is J-3299. Medicare claims volume for this indication is expected to be low. However, if other drugs for more common indications obtain FDA approval, claims volume may grow substantially. Thus, CPT code 6X000 will be placed on the New Technology list and will be re-reviewed by the RUC in three years to ensure correct valuation and utilization assumptions. The RUC recommended that if there are new drugs that have an associated J-code that these also be considered by the Relativity Assessment Workgroup as part of the New Technology screen.	<input type="checkbox"/>

78071	Parathyroid planar imaging (including subtraction, when performed); with tomographic (spect)	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an	<input checked="" type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>CPT Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
							<p>effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years</p>

-----------------	------------------------	--------------------	--------------	----------------	-------------	--------------------------	----------------	-----------------

after the CPT Assistant article is published. In October 2018, the RUC recommended to remove from list , no demonstrated technology diffusion that impacts work or practice expense.

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>CPT Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
78072	Parathyroid planar imaging (including subtraction, when performed); with tomographic (spect), and concurrently acquired computed tomography (ct) for anatomical localization	Apr 2012	Parathyroid Imaging	23	CPT 2013	October 2018	In April 2011, CPT Code 78007, Thyroid imaging, with uptake; multiple determinations was identified in the Harvard Valued-Utilization over 30,000 screen. As part of the review of the entire endocrine family, the specialty societies determined that revisions to the parathyroid imaging procedures were necessary to reflect current bundling policies, guideline changes and new technology. AMA Staff reviewed the work neutrality impacts for codes reviewed in the CPT 2013 cycle. It appeared that was only one issue where there was a large growth in utilization in the first year. For CPT 2013 the Parathyroid Imaging codes were not work neutral, and it was initially estimated as a savings overall. It appears that there was 40% increase from what was projected. The specialty societies submitted an action plan indicating that literature supporting parathyroid scintigraphy as an	<input checked="" type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>CPT Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
							<p>effective diagnostic study for parathyroid disease has recently emerged and supports the clinical utility thus increasing utilization. Secondly, the availability of SPECT/CT cameras has increased and is greater than initially predicted, allowing for a higher utilization. The Workgroup agreed and also noted that these services are conducted on patients who are referred to the radiologists or nuclear medicine physicians. The physicians providing these services do not control the number of patients referred to them who receive these services. The Workgroup recommends that the specialty societies develop a CPT Assistant article to address potential current use of 78803 rather than the new codes 78071 and 78072. The Workgroup noted that these services are on the new technology list for review later this year and should be postponed and reviewed in 2 years</p>

Jan 2021	Principal Care Management (PCM) & Chronic Care Management (CCM)	25	CPT 2015	April 2026	Was surveyed for January 2021 with the principal care management codes. The RUC noted that the CCM codes should also be re-reviewed at that time, primarily because the clinical staff time survey responses were not obtained for the 2021 review.	<input type="checkbox"/>
99491	Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 30 minutes provided personally by a physician or other qualified health care professional, per calendar month.	Jan 2021	Principal Care Management (PCM) & Chronic Care Management (CCM)	25	CPT 2022	April 2026	Was surveyed for January 2021 with the principal care management codes. The RUC noted that the CCM codes should also be re-reviewed at that time, primarily because the clinical staff time survey responses were not obtained for the 2021 review.	<input type="checkbox"/>

<i>CPT Code</i>	<i>Long Descriptor</i>	<i>RUC Meeting</i>	<i>Issue</i>	<i>Tab</i>	<i>CPT Year</i>	<i>Date to Re-Review</i>	<i>RUC Rec</i>	<i>Complete</i>
99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	Jan 2017	Psychiatric Collaborative Care Management Services	20	CPT 2018	April 2023	In January 2020, the RUC identified Psychiatric Collaborative Care Management Services via the work neutrality process. These codes show a 468% increase in work RVUs for 2018. In reviewing the utilization data for these services, it appears one independent clinic is performing most of these services in the pediatric population. The Workgroup recommended that CMS investigate the reporting of services by this specific independent clinic. The specialty society indicated, and the Workgroup agreed, that a new CPT Assistant article on the appropriate usage of these codes be developed in 2020. However, due to the incorrect reporting of these services by one specific provider, the referral for a CPT Assistant article was removed. This family is on the new technology/new services screen and is scheduled for review at the April 2023	<input checked="" type="checkbox"/>

G2066	Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, implantable loop recorder system, or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results	Jan 2023	Remote Interrogation Device Evaluation - Cardiovascular (PE Only)	20		April 2027	Codes 93297 and 93298 were first flagged at the April 2008 meeting, Tab 23 Cardiac Device Monitoring, for CPT 2009 and reviewed at the RAW in September 2012. An Ad Hoc Workgroup was developed to determine how to address the work neutrality failure and establish guidelines for further RAW review of retrospective work neutrality. In October 2018, 93297 and 93298 were reviewed and placed on the new technology/new services list for April 2024. CMS did not accept the practice expense for these services and instead created G2066 to report the practice expense associated with these services. In January 2023, the RUC affirmed the work RVUs and recommended direct PE inputs for 93297, 93298 and G2066. These services were placed back on the new technology/new services list to assess the work and PE in 3 years (April 2027).	<input type="checkbox"/>

New Technology/Services Timeline

1. Code is identified as a new technology/service at the RUC meeting in which it is initially reviewed.
2. Code is flagged in the next version of the RUC database with date to be reviewed
3. Code will be reviewed in 5 years (depending on what meeting in the CPT/RUC cycle it is initially reviewed) after at least three years of data are available.

Specialty Societies Acronym List**May 2023**

Society	Acronym
American Academy of Audiology	AAA
American Academy of Allergy, Asthma & Immunology	AAAAI
American Academy of Child and Adolescent Psychiatry	AACAP
American Association of Clinical Urologist, Inc.	AACU
American Academy of Dermatology Association	AADA
American Academy of Family Physicians	AAFP
American Association of Gynecologic Laparoscopists	AAGL
American Academy of Hospice and Palliative Medicine	AAHPM
American Academy of Neurology	AAN
American Association of Neuromuscular & Electrodiagnostic Medicine	AANEM
American Association of Neurological Surgeons	AANS
American Academy of Ophthalmology	AAO
American Academy of Otolaryngic Allergy	AAOA
American Academy of Otolaryngology - Head and Neck Surgery	AAO-HNS
American Academy of Orthopaedic Surgeons	AAOS
American Academy of Pediatrics	AAP
American Academy of Physician Associates	AAPA
American Academy of Pain Medicine	AAPM
American Academy of Physical Medicine and Rehabilitation	AAPMR
American Academy of Sleep Medicine	AASM
American Association for Thoracic Surgery	AATS
American Burn Association	ABA
American Chiropractic Association	ACA
American College of Allergy, Asthma & Immunology	ACAAI
American College of Cardiology	ACC
American College of Emergency Physicians	ACEP
American College of Gastroenterology	ACG
American College of Medical Genetics	ACMG
American College of Mohs Surgery	ACMS
American College of Nuclear Medicine	ACNM
American Clinical Neurophysiology Society	ACNS
American College of Obstetricians and Gynecologists	ACOG
American College of Physicians	ACP
American College of Radiology	ACR
American College of Rheumatology	ACR ^h
American College of Radiation Oncology	ACRO
American College of Surgeons	ACS
American Dental Association	ADA

Society	Acronym
American Gastroenterological Association	AGA
American Geriatrics Society	AGS
AMDA-The Society for Post-Acute and Long-Term Care Medicine	AMDA
American Medical Group Association	AMGA
American Medical Woman's Association	AMWA
American Nurses Association	ANA
Academy of Nutrition and Dietetics	ANDi
American Osteopathic Association	AOA
American Optometric Association	AOA(eye)
American Orthopaedic Foot and Ankle Society	AOFAS
American Occupational Therapy Association	AOTA
American Psychiatric Association	APA(psychiatry)
American Psychological Association	APA(psychology)
American Podiatric Medical Association	APMA
American Pediatric Surgical Association	APSA
American Physical Therapy Association	APTA
American Roentgen Ray Society	ARRS
American Rhinologic Society	ARS
American Society of Anesthesiologists	ASA
American Society of Addiction Medicine	ASAM
American Society of Breast Surgeons	ASBS
American Society of Cytopathology	ASC
American Society of Clinical Oncology	ASCO
American Society for Clinical Pathology	ASCP
American Society of Cataract and Refractive Surgery	ASCRS(cat)
American Society of Colon and Rectal Surgeons	ASCRS(col)
American Society of Dermatopathology	ASDP
American Society for Dermatologic Surgery	ASDS
American Society of Echocardiography	ASE
American Society for Gastrointestinal Endoscopy	ASGE

AMA/Specialty Society RVS Update Committee Summary of Recommendations
Codes Reported Together 75% or More

September 2023

Hand, Wrist, & Forearm Repair / Reconstruction – Tab 04

In April 2022, the Relativity Assessment Workgroup (RAW) identified services performed by the same physician, on the same date of service, 75% of the time or more. Families of codes that totaled allowed charges of \$5 million or more were included. As with previous iterations, any code pairs in which one of the codes was either below 1,000 in 2020 Medicare claims data, and/or contained at least one ZZZ global service, were removed. The RAW requested action plans for September 2022 to determine if specific code bundling solutions should occur for the following 26480 and 25447. In September 2022, the RUC referred codes 26480 and 25447 to the CPT Editorial Panel for a code bundling solution in CPT 2025.

In April 2023, when AMA staff re-ran the reported together screen, CPT codes 25310 and 25447 appeared as typically reported together. Since a CCA for a bundling solution for 26480 and 25447 was at the CPT Editorial Panel, the specialty societies were notified and agreed to also create a code bundling solution for 25310 and 25447. In May 2023, the CPT Editorial Panel approved a new bundled code (2X005) to report intercarpal or carpometacarpal joint suspension arthroplasty, including transfer or transplant of tendon, with interposition when performed. In addition, current code 25447 was revised to clarify that the code only included interposition of a tendon and not suspension. The Panel approved the new code and revisions to existing codes for CPT 2025 to accomplish the bundling request and reinforce correct coding for these services.

CPT codes 25310, 25447, 26480, and new code 2X005 were surveyed for the September 2023 RUC meeting. The specialties elected not to survey related codes 25312 and 26483 because they are low volume codes and the typical patient is different. For these two codes, the typical patient is a trauma patient not related to carpometacarpal (CMC) arthroplasty and the bundling solution approved by the CPT Editorial Panel. The surveyed codes involve both the treatment of trauma and chronic conditions. The RUC agreed that, although the utilization for codes 25312 and 26483 are both low, after implementation of new code 2X005 and revised code 25447, along with education about these coding changes through CPT Assistant, the utilization will decrease even more dramatically for both codes.

25310 Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon

The RUC reviewed the survey results from 100 surgeons and determined that the survey median work RVU of 9.50 appropriately accounts for the physician work involved in this service. The RUC recommends 30 minutes pre-service evaluation time, 10 minutes positioning time, 10 minutes scrub/dress/wait time, 60 minutes intra-service time, and 25 minutes immediate post-service time, 0.5-99238 discharge day management visit, 1-99214 and 3-99213 office visits, for 263 minutes total time as supported by the survey. The RUC acknowledged an increase in post-service work and believes there is evidence that the current work RVU for 25310 is potentially misvalued due to the changes in post-operative office work that is reflective of recent changes in the value and reporting guidelines for office visit E/M codes. Although the number of postop visits has not changed, the level of visits has changed as supported by both medical decision-making (MDM) and total time on the day of the encounter.

To justify a work RVU of 9.50, the RUC compared CPT code 25310 to the top key reference service code 26356 *Repair or advancement, flexor tendon, in zone 2 digital flexor tendon sheath (eg, no man's land); primary, without free graft, each tendon* (work RVU = 9.56, 60 minutes intra-service time and 277 minutes total time) and the second key reference service code 23430 *Tenodesis of long tendon of biceps* (work RVU = 10.17, 60 minutes intra-service time and 237 minutes total time) noting that both key reference services represent similar tendon repair work. The identical intraoperative time and similar total time when compared with the surveyed code is supportive of the recommended work RVU. Further, the intensity and complexity measures confirm that the surveyed code involves a similar intensity of physician work relative to the key reference service codes. Of those survey respondents who selected the key reference services 26356 and 23430, 71% and 69% deemed them identical to 25310 in overall intensity/complexity, respectively.

For additional support, the RUC compared CPT code 25310 to MPC codes 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU = 9.23, 60 minutes intra-service time and 183 minutes total time) and 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and noted that the comparison codes have identical intra-service time and appropriately bracket the surveyed code. The RUC also reviewed a table of all 90-day global codes reviewed by the RUC in the past 10 years with an intra-time of 60 minutes and total time between 225-325 minutes and agreed that the median work RVU of 9.50 appropriately ranked code 25310 within this set of codes. The RUC concluded that CPT code 25310 should be valued at the median work RVU as supported by the survey, MPC codes, and recently reviewed codes with similar time. **The RUC recommends a work RVU of 9.50 for CPT code 25310.**

25447 Arthroplasty, intercarpal or carpometacarpal joints; interposition (eg, tendon)

The RUC reviewed the survey results from 109 surgeons and determined that maintaining the current work RVU of 11.14 appropriately accounts for the physician work involved in this service. The RUC recommends 33 minutes pre-service evaluation time, 10 minutes positioning time, 10 minutes scrub/dress/wait time, 75 minutes intra-service time, and 25 minutes immediate post-service time, 0.5-99238 discharge day management visit, 1-99214 and 3-99213 office visits, for 281 minutes total time as supported by the survey. The SOR provides a detailed description and supporting information for the increases in work and time associated with the post-operative patient care for code 25447:

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery and postoperative imaging with the patient, review the care plan, and answer

patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

In addition, the specialties noted that patient care will continue for a minimum of 6 months postoperatively and up to a year after surgery, by which time it is expected that the treatment goal for the typical patient will be achieved.

The RUC discussed the decrease in intra-service time for the surveyed code. This code was last surveyed in 2005 and the specialties attested that the technique is the same, but physicians are now more familiar with the procedure and thus it may be performed with less time. The RUC agreed that the changes to the work and time of post-operative care, along with higher surveyed pre and immediate post-service time not recognized in 2005, will offset the decrease in survey intra-service time.

By maintaining the current value, the total global work and intra-operative intensity for 25447 does not change. More specifically, the specialties provided an intra-service work per unit time (IWPUT) analysis that supports maintaining the current RVW for 25447. The analysis shows that although the intra-service time decreased, the post-operative work increased, such that the resulting intra-service work per unit of time is essentially identical. This supports the belief that the procedure and the intra-operative intensity has not changed. A decrease in work attributed to a decrease in intra-service time and an increase in work attributed to an increase in post-operative work result in no change in the intensity of the procedure and total work.

To justify a work RVU of 11.14, the RUC compared CPT code 25447 to the top key reference service code 29828 *Arthroscopy, shoulder, surgical; biceps tenodesis* (work RVU = 13.16, 75 minutes intra-service time and 252 minutes total time) and noted that the intra-service time is identical and total time is similar to the surveyed code, but the reference code is much more intense, justifying the higher work value. The RUC also compared CPT code 25447 to the second key reference service code 29888 *Arthroscopically aided anterior cruciate ligament*

repair/augmentation or reconstruction (work RVU = 14.30, 98 minutes intra-service time and 295 minutes total time) and noted that the reference service has more intra-service and total time and is appropriately valued higher than 25447. The procedures are similar in that they incise a joint capsule, excise bone, and transpose local tissue as part of the repair.

For additional support, the RUC compared CPT code 25447 to MPC code 36821 *Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)* (work RVU = 11.90, 75 minutes intra-service time and 233 minutes total time) and noted that the surveyed code has identical intra-service time yet more total time and is therefore valued slightly higher than the comparator code. The RUC concluded that the value of CPT code 25447 should be maintained at 11.14 work RVUs with time components supported by the survey. **The RUC recommends a work RVU of 11.14 for CPT code 25447.**

2X005 Arthroplasty, intercarpal or carpometacarpal joints; suspension, including transfer or transplant of tendon, with interposition, when performed

The RUC reviewed the survey results from 95 surgeons and determined that the survey median work RVU of 13.90 appropriately accounts for the physician work involved in this service. The RUC recommends 33 minutes pre-service evaluation time, 10 minutes positioning time, 10 minutes scrub/dress/wait time, 90 minutes intra-service time, and 25 minutes immediate post-service time, 0.5-99238 discharge day management visit, 1-99214 and 3-99213 office visits, for 296 minutes total time as supported by the survey. The SOR provides a detailed description of the post-operative office visits associated with code 2X005:

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery and postoperative imaging with the patient, review the care plan, and answer patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

In addition, the specialties noted that patient care will continue for a minimum of 6 months postoperatively and up to a year after surgery, by which time it is expected that the treatment goal for the typical patient will be achieved.

The new bundled code encompasses the work of 25447 and the additional complex work of drilling and creating a hole through the base of the first metacarpal for passage of the radial half of the flexor carpi radialis (FCR) from the second metacarpal to the first metacarpal. The position of the thumb and tension on the tendon transfer are carefully assessed prior to suturing the tendon to itself in the arthroplasty space created by the excised trapezium. This additional operative maneuver is technically challenging, especially considering that the patient has arthritis with brittle bones such that the tension needs to be enough for suspension, but not too much to result in bone fracture. This additional work beyond the work 25447 is much more intense, resulting in a higher for 2X005 when compared with 25447.

To justify a work RVU of 13.90, the RUC compared CPT code 2X005 to the top key reference service code 29828 *Arthroscopy, shoulder, surgical; biceps tenodesis* (work RVU = 13.16, 75 minutes intra-service time and 252 minutes total time) and noted that the surveyed code has more intra-service and total time and is appropriately valued higher than the reference service. The RUC also compared CPT code 2X005 to the second key reference service code 29888 *Arthroscopically aided anterior cruciate ligament repair/augmentation or reconstruction* (work RVU = 14.30, 98 minutes intra-service time and 295 minutes total time) and noted that the reference service has more intra-service time and is more intense than the surveyed code, therefore it is appropriately valued higher.

For additional support, the RUC compared CPT code 2X005 to MPC codes 15730 *Midface flap (ie, zygomaticofacial flap) with preservation of vascular pedicle(s)* (work RVU = 13.50, 90 minutes intra-service time and 255.5 minutes total time) and 19303 *Mastectomy, simple, complete* (work RVU = 15.00, 90 minutes intra-service time and 283 minutes total time) and noted that the comparison codes have identical intra-service time and appropriately bracket the surveyed code. The RUC concluded that CPT code 2X005 should be valued at the median work RVU as supported by the survey. **The RUC recommends a work RVU of 13.90 for CPT code 2X005.**

26480 Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon

The RUC reviewed the survey results from 99 surgeons and determined that the survey median work RVU of 9.50 appropriately accounts for the physician work involved in this service. The RUC recommends 30 minutes pre-service evaluation time, 10 minutes positioning time, 10 minutes scrub/dress/wait time, 60 minutes intra-service time, and 25 minutes immediate post-service time, 0.5-99238 discharge day management visit, 1-99214 and 3-99213 office visits, for 263 minutes total time as supported by the survey. The RUC concurred that the two surveyed codes 25310

and 26480 have identical physician work and time components. The current survey of the two codes together demonstrates the exact same time and intensity.

As with code 25310, the RUC acknowledged an increase in post-service work and believes there is evidence that the current work RVU for 26480 is potentially misvalued due to the changes in post-operative office work that is reflective of recent changes in the value and reporting guidelines for office visit E/M codes. Although the number of post-op visits has not changed, the level of visits has changed as supported by both medical decision-making (MDM) and total time on the day of the encounter.

To justify a work RVU of 9.50, the RUC compared CPT code 26480 to the top key reference service code 26356 *Repair or advancement, flexor tendon, in zone 2 digital flexor tendon sheath (eg, no man's land); primary, without free graft, each tendon* (work RVU = 9.56, 60 minutes intra-service time and 277 minutes total time) and the second key reference service code 23430 *Tenodesis of long tendon of biceps* (work RVU = 10.17, 60 minutes intra-service time and 237 minutes total time) noting that both key reference services represent similar tendon repair work, identical intra-service time, and similar total time as the surveyed code. Further, the intensity and complexity measures confirm that the surveyed code is similar to the key reference service codes.

For additional support, the RUC compared CPT code 26480 to MPC codes 14060 *Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less* (work RVU = 9.23, 60 minutes intra-service time and 183 minutes total time) and 57240 *Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed* (work RVU = 10.08, 60 minutes intra-service time and 211 minutes total time) and noted that the comparison codes have identical intra-service time and appropriately bracket the surveyed code. The RUC also reviewed a table of all 90-day global codes reviewed by the RUC in the past 10 years with an intra-time of 60 minutes and total time between 225-325 minutes and agreed that the median work RVU of 9.50 appropriately ranked code 25310 within this set of codes. The RUC concluded that CPT code 26480 should be valued at the survey median work RVU as supported by the survey, MPC codes, and recently reviewed codes with similar time, and to restore relativity within the family. **The RUC recommends a work RVU of 9.50 for CPT code 26480.**

Practice Expense

The PE Subcommittee made a single modification to the spreadsheet; EF023 *table, exam* was changed to EF031 *table, power* as the power table is typical in the orthopedic surgeon's office. **The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.**

RUC Flag

The RUC recommends that CPT codes 25312 and 26483 be reviewed by the Relativity Assessment Workgroup after three years of data are available to determine whether the utilization of these low-volume codes has further decreased.

Work Neutrality

The RUC's recommendation for these codes will result in an overall work savings that should be redistributed back to the Medicare conversion factor.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Forearm and Wrist Repair, Revision, and/or Reconstruction				
(f)25310	D1	Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon <u>(Do not report 25310 in conjunction with 25447, 2X005 when performed for intercarpal or carpometacarpal joint arthroplasty)</u>	090	9.50
(f)25312	D2	with tendon graft(s) (includes obtaining graft), each tendon	090	No recommendation
▲25447	D3	Arthroplasty, interposition , intercarpal or carpometacarpal joints; <u>interposition (eg, tendon)</u> <u>(Do not report 25447 in conjunction with 2X005)</u> <u>(Do not report 25447 in conjunction with 25310, 26480 when performed for intercarpal or carpometacarpal joint arthroplasty)</u> (For wrist arthroplasty, use 25332)	090	11.14
●2X005	D4	suspension, including transfer or transplant of tendon, with interposition, when performed (Do not report 2X005 in conjunction with 25447) (Do not report 2X005 in conjunction with 25310, 26480 when performed for intercarpal or carpometacarpal joint arthroplasty)	090	13.90

Hand and Fingers Repair, Revision, and/or Reconstruction				
(f)26480	D5	Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon <u>(Do not report 26480 in conjunction with 25447, 2X005 when performed for intercarpal or carpometacarpal joint arthroplasty)</u>	090	9.50
(f)26483	D6	with free tendon graft (includes obtaining graft), each tendon	090	No recommendation

Chicago, IL 60611

Subject: CPT Codes 25312 and 26483

Dear Dr. Silva,

The RUC Relativity Assessment Workgroup identified that code 26480 was performed with 25447 by the same physician on the same date of service more than 75% of the time and recommended these codes be referred to CPT for a code bundling solution. Subsequent to submission of a code change application to bundle 25447 and 26480, RUC staff contacted the societies to indicate that 25310 was identified as performed with 25447 by the same physician on the same date of service more than 75% of the time. During CPT review, code 25310 was added to the code change application to be bundled with 25447.

Below is the final CPT Panel approved coding changes.

Category I
Surgery
Musculoskeletal System
Forearm and Wrist
Repair, Revision, and/or Reconstruction

25310 *Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon*

(Do not report 25310 in conjunction with 25447, 2X005 when performed for intercarpal or carpometacarpal joint arthroplasty)

25312 *with tendon graft(s) (includes obtaining graft), each tendon*

▲25447 Arthroplasty, ~~interposition~~, intercarpal or carpometacarpal joints; interposition (eg, tendon)

(Do not report 25447 in conjunction with 2X005)

(Do not report 25447 in conjunction with 25310, 26480 when performed for intercarpal or carpometacarpal joint arthroplasty)

(For wrist arthroplasty, use 25332)

●2X005 suspension, including transfer or transplant of tendon, with interposition, when performed

(Do not report 2X005 in conjunction with 25447)

(Do not report 2X005 in conjunction with 25310, 26480 when performed for intercarpal or carpometacarpal joint arthroplasty)

**Hand and Fingers
Repair, Revision, and/or Reconstruction**

26480 *Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon*

(Do not report 26480 in conjunction with 25447, 2X005 when performed for intercarpal or carpometacarpal joint arthroplasty)

26483 *with free tendon graft (includes obtaining graft), each tendon*

Exclusionary parentheticals were purposely not added below CPT codes 25312 (2021 utilization 291) and 26483 (2021 utilization = 501). The intent of both of these codes is for repair of tendon laceration from trauma. Free tendon grafts would not be used for CMC arthroplasty, but may be rarely reported separately for distal thumb joint stabilization (ie, not CMC arthroplasty). Some patients with thumb CMC arthritis also have laxity with hyperextension deformity of the metacarpophalangeal (MP) joint. This more distal deformity must be treated, or the thumb CMC reconstruction will most likely sublux and fail. The MP can be treated with tenodesis of the volar MP joint requiring the use of a tendon graft.

Moving forward, codes 26483 and 25312 should be reported almost exclusively for repair of a traumatic injury or neuromuscular dysfunction. Even for that indication, these procedures should be rarely performed in the Medicare population. The Medicare utilization is low, but should be significantly lower. It is possible that the Medicare volume for both of these codes represents possible miscoding due to a misunderstanding of the intent of the codes. In fact, a review of 2021 claims shows that almost 50% of claims for 26483 are from 9 providers, and almost 30% of claims for 25312 are from 5 providers.

CPT	CITY	ST	SPEC	Srvcs	
26483	Santa Barbara	CA	Hand Surgery	80	
26483	Birmingham	AL	Ambulatory Surgical Center	27	
26483	La Jolla	CA	Hand Surgery	20	
26483	La Jolla	CA	Physician Assistant	19	
26483	San Diego	CA	Ambulatory Surgical Center	19	
26483	Lake Mary	FL	Hand Surgery	18	
26483	Santa Rosa	CA	Orthopedic Surgery	15	
26483	Santa Rosa	CA	Physician Assistant	13	
26483	Charlotte	NC	Hand Surgery	13	
subtotal				224	45%
total - 2021				501	
25312	Wexford	PA	Orthopedic Surgery	21	
25312	Wexford	PA	Ambulatory Surgical Center	18	
25312	Wexford	PA	Physician Assistant	18	
25312	Myrtle Beach	SC	Ambulatory Surgical Center	15	
25312	Birmingham	AL	Orthopedic Surgery	11	
subtotal				83	29%
total - 2021				291	

Although the utilization for codes 25312 and 26483 are both low, we believe after implementation of new code 2X005 and revised code 25447, along with education about these coding changes through

CPT Assistant, that the utilization will decrease dramatically for both codes. We did not survey 25312 and 26483 because they are low volume codes and the typical patient is a trauma patient not related to CMC arthroplasty and the bundling solution approved by the CPT Panel. The ASSH, ASPS, and AAOS advisors will be happy to respond to questions at the RUC meeting.

Sincerely,

Anne Miller, MD
Jeffrey Kozlow, MD
Hussein Elkousy, MD

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:25310	Tracking Number D1	Original Specialty Recommended RVU: 9.50
		Presented Recommended RVU: 9.50
Global Period: 090	Current Work RVU: 8.08	RUC Recommended RVU: 9.50

CPT Descriptor: Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old women presenting with a rupture of the extensor pollicis longus (EPL) undergoes a transfer of the extensor indicis proprius to the residual distal EPL stump.

Percentage of Survey Respondents who found Vignette to be Typical: 92%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 18% , In the ASC 82%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing including labs and imaging. Reexamine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Review informed consent with patient. Mark surgical site. Verify that all required instruments and supplies are available. Monitor/assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of the extremities and head, adjust as needed. The patient's arm is placed on the hand surgery table. A tourniquet is applied to the proximal arm. Indicate areas of skin to be prepped. Scrub and gown. The arm and hand are prepped and draped. Perform surgical "time out" with operating surgical team. The arm is elevated and exsanguinated. The pneumatic tourniquet is inflated.

Description of Intra-Service Work: An incision is made over the distal stump of the ruptured extensor pollicis longus (EPL). Care is taken to protect the dorsal sensor nerves and branches of the radial artery. The tendon stump is cleared of scar and prepared for the tendon transfer. A second incision is made over the index metacarpophalangeal joint and the extensor indicis proprius (EIP) is detached from its extensor hood insertion. Care is taken to not impair the function of the extensor mechanism of the index finger. A third incision is made over the EIP at the distal edge of the dorsal retinaculum of the fourth dorsal compartment. The EIP is identified and brought out through this incision. A suture is passed through the distal end of the EIP. A subcutaneous tunnel is made from the dorsal aspect of the thumb to the exposed EIP taking care to pass palmar to the dorsal sensory nerve branches and dorsal to the second dorsal compartment tendons. Using the previously placed suture the distal end of the EIP is passed through the tunnel to exit near the distal stump of the ruptured EPL. The EIP is sutured to the distal EPL paying particular attention to establishing the correct tension on the transfer. The excursion of the EIP/EPL construct is checked. The tourniquet is released and meticulous hemostasis achieved. The wounds are irrigated and closed in layers.

Description of Post-Service Work:

Facility:

Apply bulky dressing, reinforced with a splint. Discuss postoperative care with recovery room staff. Discuss surgery outcome with patient/family. Write brief operative note and medication orders in patient's chart. Monitor patient stabilization in the recovery room and circulation, sensation and motor function status of the operated extremity. Dictate operative report. Consider relevant data, options, and risks and make the decision for discharge. Discuss aftercare treatment with the patient/family including home restrictions (ie, activity, bathing). Reconcile medications and write order for pain

medication. All appropriate medical records are completed, including discharge summary, discharge instructions, and insurance forms.

Office:

The first postop office visit occurs within 24 to 48 hours after surgery. The patient is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of procedure are reviewed with the patient/family. The postoperative radiograph taken after surgery is reviewed with the patient/family. The postoperative splint and bulky dressings are removed and assessment performed of wound status, drainage, hematoma, and signs of infection. The circulation, sensation, and motor function status is assessed. The alignment of the thumb is assessed. Pain is assessed. The wounds are cleaned and redressed and the splint reapplied. An order is written for fabrication of a new splint. Activity limitations (driving, lifting, splint protection) are discussed with the patient/family. The PDMP is checked and orders are made for narcotic and nonnarcotic pain medication. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. OT will be contacted to discuss the patient-specific splint fabrication that was ordered. An update is provided to the PCP and/or referring provider.

At subsequent postop office visits, the patient is interviewed and data obtained by clinical staff is reviewed. The fitting of the fabricated splint is assessed and the splint and dressings are removed. The wound is assessed. The circulation, sensation, and motor function status of the thumb, fingers, and wrist is assessed. The alignment of the thumb and digits is assessed. Pain is assessed. Range of motion is measured and documented. Grip and pinch strength are measured and documented. The wound is cleaned and sutures removed when appropriate. The patient is counseled on scar control. Padding is applied and the splint is reapplied. Activity limitations are reinforced with the patient, including counseling on finger motion. The PDMP is checked and need for narcotic and/or nonnarcotic pain medication is considered and orders written as appropriate. The patient will be counseled on appropriate pain management. The patient will be counseled on expectations of pain and swelling during recovery and techniques for mitigation. An occupational therapy prescription is written and interval OT notes are reviewed. OT progress is assessed and orders revised as needed. Management of the patient and updates to the care plan is discussed with the OT. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are updated as required. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence - 25310

The expert panel reviewing the history and survey data for code 25310 believes there is compelling evidence that this code is potentially misvalued due to the following:

▪ *Flawed methodology in the previous valuation.*

In 2007, code 25310 was identified as having a site of service anomaly. At that time, the code was still Harvard valued and included the odd "half-visits" (ie, 0.5 x 99231; 3.5 x 99212) and no positioning time. The survey specialties agreed that the typical patient would not be admitted to the hospital and surveyed the code using the standard RUC survey. When reviewing the survey data, the RUC disagreed with the level of postop office visits that were indicated by survey, resulting in a decrease of the level for one visit. Keep in mind that in 2008, office visits for established patients followed the 1995 and/or 1997 guidelines requiring specific levels of physical and history for each level of code. The specialties recommended maintaining the then current work RVU of 8.26 which was similar to the survey 25th percentile of 8.38. During discussion at the meeting, the RUC suggested that the changes in (the Harvard) office and hospital visits based on the survey could be used to calculate an adjusted work RVU using a building block method. After downgrading one of the survey's postop office visits from 99213 to 99212, the RUC reduced the then current Harvard work RVU, assumed to be correct, to account for the removal of one-half 99238 (0.64 work RVUs), one-half 99231 (0.38 work RVUs), and one-half 99212 (0.22 work RVUs). This accounted for a total reduction in work RVU of 1.24. The specialty then added the work associated with one 99213 visit (0.92 work RVUs). The resulting value was 7.94, which the RUC agreed was appropriate and in proper rank order with its reference service 25275. The RUC did not add additional work RVUs for the survey higher preservice or immediate postservice times, including time for positioning.

Based on this evidence, we believe a flawed methodology was used to calculate a value for 25310 in 2008 – using a building block methodology to adjust Harvard times and value and exclude pre/post time changes.

▪ *Changes in time and technology*

The current work RVU for 25310 is based on selection of level of office visits using old, deleted guidelines. In 2007, when 25310 was surveyed, the 1995 or 1997 guidelines were in place and required for code level selection. Through CY 2020, the descriptors for the levels of E/M services recognized seven components, six of which were used in defining the levels of E/M services (history, examination, medical decision making, counseling, coordination of care, nature of presenting problem, and time). The first three of these components (history, examination, and medical decision making) were considered the key components in selecting a level of E/M service. In addition, for coding purposes, a typical time was included in the E/M code descriptors but could only be used if a majority of the time were spent face-to-face with the patient performing counseling or coordination of care.

For CPT 2021, the reporting guidelines for office visit E/M codes were significantly revised to reflect changes in practice including team-based care, the use of electronic health records, and to reduce physician burden. Under the new CPT coding framework, history and exam are no longer used to select the level of E/ M office visit code. Instead, an office/outpatient E/M visit includes a medically appropriate history and exam, when performed. Other changes include the directive to select the level of service based on medical decision making or total time on the date of encounter, where total time equals both face-to-face time and non-face-to-face time of the physician and/or qualified health care professional. These revisions radically changed the way the level of E/M office visit code is selected. The clinically outdated system for number of body systems/areas reviewed and examined under history and exam no longer apply, and the history and exam components will only be performed when, and to the extent, reasonable and necessary, and clinically appropriate. In addition, the work values for the office visit E/M codes were increased based on compelling evidence of a flawed methodology in 2010 when CMS accounted for work neutrality from the elimination of payment for consultation codes and based on changes in technology related to increased work due to the to use electronic health records that contain more data than paper records, most of which must be reviewed including for drug-drug and, with increasing use of homeopathic substances, drug substance interactions. The use of EHRs increased physician work by increasing the time physician spend documenting the medical record. In 2016, it was estimated that for every hour spent with patients, physicians spend 2 hours on EHR and desk work, according to an Annals of Internal Medicine study.

Based on this discussion of recent changes in the value and reporting guidelines for office visit E/M codes, we believe there is compelling evidence that the current work RVU for 25310 is potentially misvalued due to under-reporting of postoperative office work.

Recommendation - 25310

We recommend the survey median work RVU of 9.50

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Subtract 3 minutes (total = 30 minutes) to be consistent with survey median.

Positioning time: Additional 7 minutes (total = 10 minutes) for padding of bony prominences; application of thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; rotating patient onto hand surgery table; marking, prepping, and draping hand; application of tourniquet to the proximal arm; elevating and exsanguinating arm; and inflating pneumatic tourniquet. A total of 10 minutes for upper extremity positioning is supported by RUC reviewed upper extremity codes 64910-64912 (2017), 23656-26358 (2015), 25607-25609 (2014), 36831 (2013), and key reference code 26356 (2015).

Scrub, dress, wait time: Subtract 5 minutes (total time = 10 minutes) to be consistent with survey median.

Immediate Post-time

Package 9a: Subtract 3(total = 25 minutes) to be consistent with the survey median.

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery with the patient, review the care plan, and answer patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

The patient will continue to be monitored for a minimum of 6 months postoperatively and up to a year after surgery, by which time it is expected that the treatment goal for the typical patient will be achieved.

Key Reference Code Comparison

Both key reference codes 26356 and 23430 are familiar to the survey respondents and represent similar tendon repair work including the same intraoperative time. The intensity and complexity measures confirm that 25310 is similar (identical) to the key reference codes. In addition, code 25310 identical intraoperative time and similar total time when compared with the key reference codes supports the recommended work RVU of 9.50.

MPC Code Comparison

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212
14060	Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less	9.23	0.090	183	30	60	15	0		2	2
25310	Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon	9.50	0.049	263	50	60	25	0.5	1	3	
57240	Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed	10.08	0.096	211	56	60	30	0.5		2	

Comparison of 25310 and 26480

- The intraop times and visits for 25310 and 26480 are the same, however because these codes were reviewed at different times in different ways, the RVWs are significantly different.
- Code 25310 was surveyed in 2008 and a value was calculated from the then current value to account for a change from Harvard data that included one-half of a hospital inpatient visit when the claims data showed the typical patient was outpatient. Although the median survey RVW was 9.00, value and time were backed out of the current RVW to change the inpatient visits to outpatient visits.
- Code 26480 was surveyed in 2009, and although the survey data indicated the Harvard based RVW was undervalued, there was no compelling evidence for a change in work. So the RUC maintained the Harvard RVW and adopted the survey data. The rationale indicates this was based on a comparison to 25310 which was reviewed the prior year. With only 8 minutes difference in total time and exactly the same intraop time and postop visits, because there was no compelling evidence, the RUC could not increase the value of 26480.
- The current survey – this time of both codes together - once again maintains that both codes include 60 minutes of intraop and 4 post op visits. In addition, the median RVW is identical for both codes and the 25th to 75th percentile spread is also almost identical.
- We believe these codes were never actually relative in the fee schedule. Repeat survey of the two codes together now in 2023 demonstrates the exact same time and intensity which is what should be reflected in the fee schedule. While we understand the RUCs reliance of previous RUC review, there needs to be some consideration that having a 15% difference in valuation for two codes that are nearly identical in both face value descriptions, and now two different sets of survey data 15 years apart, does not fit the concept of relativity and magnitude estimation.

Comparison to Other RUC Reviewed Codes

There are almost 400 codes in the RUC-reviewed codes with 60 minutes of intraop time, but only 64 codes that have a 90-day global period. As additional support for the median work RVU of 9.50, a RUC database search was conducted with the following parameters:

- RUC reviewed in the past 10 years.
- 90-day global
- Intra-time = 60 minutes
- Total time between 225-325

The table below shows that the median RVW of 9.50 places 25310 in the lower half of codes with the above parameters. All codes below 25310 in the table have lower total times and similar or higher IWPUT. If the 25th percentile survey statistic were used, the IWPUT would be only 0.040 and the WPUT would be 0.034 – both data points would be significantly lower than any E/M code, creating a rank order anomaly.

RUC Year	CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	HV	OV
2019	35701	Exploration not followed by surgical repair, artery; neck (eg, carotid, subclavian)	7.50	0.051	229	65	60	30	2	1

2013	67042	Vitrectomy, mechanical, pars plana approach; with removal of internal limiting membrane of retina (eg, for repair of macular hole, diabetic macular edema), includes, if performed, intraocular tamponade (ie, air, gas or silicone oil)	16.33	0.160	260	51	60	15	0.5	5

Incremental Changes in Work

The current RVW for 25310 is 8.08. This value was established prior to the E/M code review and revaluation in recognition of increased work for E/M services. The RUC supported increasing all global codes for the changes in E/M values over the past few years.

For this survey, although the number of postop visits has not changed, the level of visits has changed as supported by both MDM and total time on the day of the encounter. As shown in the table below, the increase in postop work adds 3.52 work RVUs to the current value of 8.08 for a total work RVU of 11.60. This is further support for the recommendation of the median work RVU of 9.50 for 23510.

25310 Postop work changes	Prior E/M RVW	Prior Number Of Visits	Prior RVW for #/level of	2023 E/M RVW	2023 Survey Number Of	2023 Survey RVW for current

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 25447	Tracking Number D3	Original Specialty Recommended RVU: 11.14
Global Period: 090	Current Work RVU: 11.14	Presented Recommended RVU: 11.14
		RUC Recommended RVU: 11.14

CPT Descriptor: Arthroplasty, intercarpal or carpometacarpal joints; interposition (eg, tendon)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 72-year-old female with painful arthritis at the base of the thumb undergoes excision of the trapezium with interposition of local tissue between the scaphoid and base of the first metacarpal.

Percentage of Survey Respondents who found Vignette to be Typical: 91%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 19% , In the ASC 81%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing including labs and imaging. Reexamine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Review informed consent with patient. Mark surgical site. Verify that all required instruments and supplies are available. Monitor/assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of the extremities and head, adjust as needed. The patient's arm is placed on the hand surgery table. A tourniquet is applied to the proximal arm. Indicate areas of skin to be prepped. Scrub and gown. The arm and hand are prepped and draped. Perform surgical "time out" with operating surgical team. The arm is elevated and exsanguinated. The pneumatic tourniquet is inflated.

Description of Intra-Service Work: An incision is made over the base of the first metacarpal and trapezium. A meticulous dissection is performed taking care to protect the branches of the superficial radial nerve and the crossing branch of the radial artery. The capsule over the trapezium and the first carpometacarpal joint is incised and the periosteum over the trapezium is elevated. The dissection is extended proximally to identify and open the scaphotrapeziotrapezoid joint. The trapezium is exposed via subperiosteal resection. The trapezium is removed in piecemeal fashion using osteotomes and a rongeur taking care to protect the flexor carpi radialis. The base of the first metacarpal is cleared of any osteophytes. The flexor carpi radialis is exposed proximally through two transverse incisions in the distal forearm and split longitudinally. The proximal radial slip of the FCR is transected but is left attached to its insertion on the second metacarpal. This radial slip of the FCR is pulled into the distal wound and rolled up and sutured to itself. The rolled FCR is secured in the trapeziectomy void with a suture anchored in the depths of trapeziectomy wound. The first ray is held in an adducted position and a K-wire is passed the first metacarpal into the second metacarpal, if required. The wound is thoroughly irrigated. The first CMC capsule, trapezial periosteum and scaphotrapezial capsular flap is repaired in a vest-over-pants fashion. The wound is closed in layers.

Description of Post-Service Work:

Facility:

Apply bulky dressing, reinforced with a splint. Discuss postoperative care with recovery room staff. Discuss surgery outcome with patient/family. Write brief operative note and medication orders in patient's chart. Monitor patient stabilization in the recovery room and circulation, sensation and motor function status of the operated extremity. Dictate operative report. Consider relevant data, options, and risks and make the decision for discharge. Discuss aftercare treatment with the patient/family including home restrictions (ie, activity, bathing). Reconcile medications and write order for pain

medication. All appropriate medical records are completed, including discharge summary, discharge instructions, and insurance forms.

Office:

The first postop office visit occurs within 24 to 48 hours after surgery. The patient is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of procedure are reviewed with the patient/family. The postoperative radiograph taken after surgery is reviewed with the patient/family. The postoperative splint and bulky dressings are removed and assessment performed of wound status, drainage, hematoma, and signs of infection. The circulation, sensation, and motor function status is assessed. The alignment of the thumb is assessed. Pain is assessed. The wounds are cleaned and redressed and the splint reapplied. An order is written for fabrication of a new splint. Activity limitations (driving, lifting, splint protection) are discussed with the patient/family. The PDMP is checked and orders are made for narcotic and nonnarcotic pain medication. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. OT will be contacted to discuss the patient-specific splint fabrication that was ordered. An update is provided to the PCP and/or referring provider.

At subsequent postop office visits, the patient is interviewed and data obtained by clinical staff is reviewed. The fitting of the fabricated splint is assessed and the splint and dressings are removed. The wound is assessed. The circulation, sensation, and motor function status of the thumb, fingers, and wrist is assessed. The alignment of the thumb and digits is assessed. Pain is assessed. Range of motion is measured and documented. Grip and pinch strength are measured and documented. The wound is cleaned and sutures removed when appropriate. The patient is counseled on scar control. Padding is applied and the splint is reapplied. Activity limitations are reinforced with the patient, including counseling on finger motion. The PDMP is checked and need for narcotic and/or nonnarcotic pain medication is considered and orders written as appropriate. The patient will be counseled on appropriate pain management. The patient will be counseled on expectations of pain and swelling during recovery and techniques for mitigation. An occupational therapy prescription is written and interval OT notes are reviewed. OT progress is assessed and orders revised as needed. Management of the patient and updates to the care plan is discussed with the OT. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are updated as required. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Supporting Evidence - 25447

Although we are recommending maintaining the current work RVU for 25447 and should not need compelling evidence, we would like to provide supporting information for the recommendation.

(1). In 2005, code 25447 was nominated by CMS as a code with >10,000 and still Harvard valued and therefore potentially misvalued. The surveying societies indicated they did not believe there was a change in patient or technology and therefore did not have compelling evidence that the code was potentially misvalued. The survey total time and median work RVU were similar to the Harvard data further supporting the code was not misvalued. Therefore, The RUC recommended maintaining the current value as there was no compelling evidence to change the value, and accepted the new survey times. This resulted in an intensity for the procedure that was only slightly decreased from 0.062 to 0.058. During this last review of 25447 in 2005, the RUC (and CMS) considered total work – including changes to total time and visits – and accepted that even though the time and visits changed, the total work and procedure intensity did not change. This same rationale holds true for the current review—although the intraservice time has decreased, the postoperative office work included in the global is greater than previously recognized. By maintaining the current value, the intensity of the procedure is essentially unchanged from 0.058 to 0.060, which is also similar to the original Harvard relative intensity of 0.062.

(2) The current work RVU for 25447 is based on selection of level of office visits using old, deleted guidelines. In 2005, when 25447 was surveyed, the 1995 or 1997 guidelines were in place and required for code level selection. Through CY 2020, the descriptors for the levels of E/M services recognized seven components, six of which were used in defining the levels of E/M services (history, examination, medical decision making, counseling, coordination of care, nature of presenting problem, and time). The first three of these components (history, examination, and medical decision making) were considered the key components in selecting a level of E/M service. In addition, for coding purposes, a typical time was included in the E/M code descriptors, but could only be used if a majority of the time were spent face-to-face with the patient performing counseling or coordination of care.

For CPT 2021, the reporting guidelines for office visit E/M codes were significantly revised to reflect changes in practice including team-based care, the use of electronic health records, and to reduce physician burden. Under the new CPT coding framework, history and exam is no longer used to select the level of E/M office visit code. Instead, an office/outpatient E/M visit includes a medically appropriate history and exam, when performed. Other changes include the directive to select the level of service based on medical decision making or total time on the date of encounter, where total time equals both face-to-face time and non-face-to-face time of the physician and/or qualified health care professional. These revisions radically changed the way the level of E/M office visit code is selected. The clinically outdated system for number of body systems/areas reviewed and examined under history and exam no longer apply, and the history and exam components will only be performed when, and to the extent, reasonable and necessary, and clinically appropriate. In addition, the work values for the office visit E/M codes were increased based on compelling evidence of a flawed methodology in 2010 when CMS accounted for work neutrality from the elimination of payment for consultation codes and based on changes in technology related to increased work due to the use of electronic health records that contain more data than paper records, most of which must be reviewed including for drug-drug and, with increasing use of homeopathic substances, drug substance interactions. The use of EHRs increased physician work by increasing the time physician spend documenting the medical record. In 2016, it was estimated that for every hour spent with patients, physicians spend 2 hours on EHR and desk work, according to an Annals of Internal Medicine study.

The changes to work and time associated with postop patient care for 25447 has therefore increased. For this particular code, these changes, along with higher surveyed pre and immediate post time not recognized in 2005, will offset the slight decrease in survey intraservice time. By maintaining the current value, the total global work and intraoperative intensity for 25447 does not change.

Recommendation - 25447

We recommend maintaining the work RVU of 11.14

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Standard package time of 33 minutes

Positioning time: Additional 7 minutes (total = 10 minutes) for padding of bony prominences; application of thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; rotating patient onto hand surgery table; marking, prepping and draping hand; application of tourniquet to the proximal arm; elevating and

exsanguinating arm; and inflating pneumatic tourniquet. A total of 10 minutes for upper extremity positioning is supported by RUC reviewed upper extremity codes 64910-64912 (2017), 23656-26358 (2015), 25607-25609 (2014), 36831 (2013), and key reference code 26356 (2015).

Scrub, dress, wait time: Subtract 5 minutes (total time = 10 minutes) to be consistent with survey median.

Immediate Post-time

Package 9a: Subtract 3(total = 25 minutes) to be consistent with the survey median.

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery and postoperative imaging with the patient, review the care plan, and answer patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

The patient will continue to be monitored for a minimum of 6 months postoperatively and up to a year after surgery, by which time it is expected that the treatment goal for the typical patient will be achieved.

Key Reference Code Comparison

Most survey respondents would be familiar with work involved intraoperatively in the key reference codes 29828 and 29888 and they judged the intensity and complexity to be mostly identical or slightly greater. The procedures are similar in that they incise a joint capsule, excise bone, and transpose local tissue as part of the repair.

MPC Code Comparison

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212
57240	Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed	10.08	0.096	211	56	60	30	0.5		2	
25447	Arthroplasty, intercarpal or carpometacarpal joints; interposition (eg, tendon)	11.14	0.060	281	53	75	25	0.5	1	3

RUC Instructions - Supporting Analyses for Work Relative Value Recommendation: Building Block/IWPUT
Analysis: Building block/IWPUT analysis may be used to validate survey data. Survey data remains the primary source of information to value physician work for codes presented to the RUC.

The IWPUT analysis in Table 1 below supports maintaining the current RVW for 25447. These data show that although the intraop time decreased, the postop work increased such that the resulting intraop intensity (IWPUT) is essentially identical. This supports the belief that the operation and the intraop intensity has not changed; a decrease in RVWs attributed to a decrease in intraop time and an increase in RVWs attributed to an increase in postop work result in no change in the intensity of the operation and total work.

TABLE 1

IWPUT ANALYSIS		25447 Old survey data		Current RVW 11.14	25447 New survey data		Recommended RVW 11.14
Pre-service	Time	Intensity	(=time x intensity)	Time	Intensity	(=time x intensity)

99213	2	0.97	1.94	3	0.97	2.91	
99212	3	0.48	1.44		0.48	0.00	
99211		0.18	0.00		0.18	0.00	
Post-service total			4.47			5.61	
Intra-service	Time	IWPUT	INTRA RVW	Time	IWPUT	INTRA RVW	
	100	0.058	5.81	75	0.060	4.49	

Table 2 compares the resulting IWPUT using the old E/M RVWs which are the basis for the current value versus the current E/M RVWs. This analysis shows that if the IWPUT formula included the "real" E/M RVWs, the new IWPUT for 25447 would be significantly lower (0.058 vs 0.040) even though the intensity of the procedure has not changed.

TABLE 2						
IWPUT ANALYSIS	25447 (based on old E/M RVWs)		Current RVW 11.14	25447 (based on new E/M RVWs)		Recommended RVW 11.14

99212	3	0.48	1.44		0.70	0.00
99211		0.18	0.00		0.18	0.00
Post-service total			4.47			7.13
	Time	IWPUT	INTRA RVW	Time	IWPUT	INTRA RVW
Intra-service	100	0.058	5.81	75	0.040	2.97

Tables 1 and 2 show how important it is to look at "total work" – pre, intra, post – when current codes are resurveyed. Although the survey median supports an increase in the RVW, these tables provide support for (at a minimum) maintaining the current RVW of 11.14 for 25447.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number 25447

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 2X005	Tracking Number D4	Original Specialty Recommended RVU: 13.90
Global Period: 090	Current Work RVU: N/A	Presented Recommended RVU: 13.90
		RUC Recommended RVU: 13.90

CPT Descriptor: Arthroplasty, intercarpal or carpometacarpal joints; suspension, including transfer or transplant of tendon, with interposition, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 68-year-old female with painful arthritis at the base of the thumb undergoes arthroplasty with excision of the trapezium and suspension stabilization of the first metacarpal.

Percentage of Survey Respondents who found Vignette to be Typical: 97%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 19% , In the ASC 81%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 94% , Overnight stay-less than 24 hours 6% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing including labs and imaging. Reexamine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Review informed consent with patient. Mark surgical site. Verify that all required instruments and supplies are available. Monitor/assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of the extremities and head, adjust as needed. The patient's arm is placed on the hand surgery table. A tourniquet is applied to the proximal arm. Indicate areas of skin to be prepped. Scrub and gown. The arm and hand are prepped and draped. Perform surgical "time out" with operating surgical team. The arm is elevated and exsanguinated. The pneumatic tourniquet is inflated.

Description of Intra-Service Work: An incision is made over the base of the first metacarpal and trapezium. A meticulous dissection is performed taking care to protect the branches of the superficial radial nerve and the crossing branch of the radial artery. The capsule over the trapezium and the first carpometacarpal joint is incised and the periosteum over the trapezium is elevated. The dissection is extended proximally to identify and open the scaphotrapeziotrapezoid joint. The trapezium is exposed via subperiosteal resection. The trapezium is removed in piecemeal fashion using osteotomes and a rongeur. The flexor carpi radialis is protected. First metacarpal base osteophytes are removed. A bone tunnel is created in the base of the first metacarpal using successively larger drills, followed by debridement for passage of the FCR tendon. The flexor carpi radialis is exposed proximally through two transverse incisions in the distal forearm and either part or all of the tendon is transected proximally at the musculotendinous junction. The proximally transected FCR is pulled into to the distal wound. The tendon is then dissected or longitudinally split to its insertion at the base of the second metacarpal and the end(s) tagged with suture for passage. A looped suture passer is passed through the prepared drill hole in the base of the first metacarpal and the FCR tendon is brought through the hole. The first ray is aligned with the scaphoid and trapezium space height maintained without distraction to position the tendon transfer. The two limbs of the FCR tendon are tensioned and sutured to each other. Tension of the transfer is assessed to ensure no collapse of the trapezium space and motion is assessed to ensure no impingement. The remainder of the tendon is rolled up and sutured to itself and then sutured to the soft tissue in the depths of the wound. The capsule is closed in a vest over pants fashion. The wound is closed in layers.

Description of Post-Service Work:
Facility:

Apply bulky dressing, reinforced with a splint. Discuss postoperative care with recovery room staff. Discuss surgery outcome with patient/family. Write brief operative note and medication orders in patient's chart. Monitor patient stabilization in the recovery room and circulation, sensation and motor function status of the operated extremity. Dictate operative report. Consider relevant data, options, and risks and make the decision for discharge. Discuss aftercare treatment with the patient/family including home restrictions (ie, activity, bathing). Reconcile medications and write order for pain medication. All appropriate medical records are completed, including discharge summary, discharge instructions, and insurance forms.

Office:

The first postop office visit occurs within 24 to 48 hours after surgery. The patient is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of procedure are reviewed with the patient/family. The postoperative radiograph taken after surgery is reviewed with the patient/family. The postoperative splint and bulky dressings are removed and assessment performed of wound status, drainage, hematoma, and signs of infection. The circulation, sensation, and motor function status is assessed. The alignment of the thumb is assessed. Pain is assessed. The wounds are cleaned and redressed and the splint reapplied. An order is written for fabrication of a new splint. Activity limitations (driving, lifting, splint protection) are discussed with the patient/family. The PDMP is checked and orders are made for narcotic and nonnarcotic pain medication. The patient will be counseled on appropriate multi-modal pain management (ie, narcotic, nonnarcotic). The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. OT will be contacted to discuss the patient-specific splint fabrication that was ordered. An update is provided to the PCP and/or referring provider.

At subsequent postop office visits, the patient is interviewed and data obtained by clinical staff is reviewed. The fitting of the fabricated splint is assessed and the splint and dressings are removed. The wound is assessed. The circulation, sensation, and motor function status of the thumb, fingers, and wrist is assessed. The alignment of the thumb and digits is assessed. Pain is assessed. Range of motion is measured and documented. Grip and pinch strength are measured and documented. The wound is cleaned and sutures removed when appropriate. The patient is counseled on scar control. Padding is applied and the splint is reapplied. Activity limitations are reinforced with the patient, including counseling on finger motion. The PDMP is checked and need for narcotic and/or nonnarcotic pain medication is considered and orders written as appropriate. The patient will be counseled on appropriate pain management. The patient will be counseled on expectations of pain and swelling during recovery and techniques for mitigation. An occupational therapy prescription is written and interval OT notes are reviewed. OT progress is assessed and orders revised as needed. Management of the patient and updates to the care plan is discussed with the OT. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are updated as required. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Recommendation – 2X005

We recommend the survey median work RVU of 13.90.

New code 2X005 encompasses the work of 25447 and the additional complex work of drilling and creating a hole through the base of the first metacarpal for passage of the radial half of the FCR from the second metacarpal to the first metacarpal. The position of the thumb and tension on the tendon transfer are carefully assessed prior to suturing the tendon to itself in the arthroplasty space created by the excised trapezium. This additional operative maneuver is technically challenging, especially considering that the patient has arthritis and typically has brittle bones—the intensity of 2X005 is much greater than 25447.

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Standard package time of 33 minutes

Positioning time: Additional 7 minutes (total = 10 minutes) for padding of bony prominences; application of thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; rotating patient onto hand surgery table; marking, prepping and draping hand; application of tourniquet to the proximal arm; elevating and exsanguinating arm; and inflating pneumatic tourniquet. A total of 10 minutes for upper extremity positioning is supported by RUC reviewed upper extremity codes 64910-64912 (2017), 23656-26358 (2015), 25607-25609 (2014), 36831 (2013), and key reference code 26356 (2015).

Scrub, dress, wait time: Subtract 5 minutes (total time = 10 minutes) to be consistent with survey median.

Immediate Post-time

Package 9a: Subtract 3(total = 25 minutes) to be consistent with the survey median.

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery and postoperative imaging with the patient, review the care plan, and answer patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization data not available

Specialty	Frequency	Percentage	%

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 26480	Tracking Number D5	Original Specialty Recommended RVU: 9.50
		Presented Recommended RVU: 9.50
Global Period: 090	Current Work RVU: 6.90	RUC Recommended RVU: 9.50

CPT Descriptor: Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 25-year-old male suffers a loss of the ring finger extensor tendon at the dorsum of the hand. He undergoes a tendon transfer of the extensor indicis proprius to the distal stump of the extensor digitorum communis of the ring finger.

Percentage of Survey Respondents who found Vignette to be Typical: 96%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 19% , In the ASC 81%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 100% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Write preadmission orders for preoperative medications. Review results of preadmission testing including labs and imaging. Reexamine patient to make sure that physical findings have not changed and update H&P. Meet with patient and family to review planned procedure and postoperative management. Review informed consent with patient. Mark surgical site. Verify that all required instruments and supplies are available. Monitor/assist with patient positioning; padding of bony prominences; and application of thermal regulation drapes. Assess position of the extremities and head, adjust as needed. The patient's arm is placed on the hand surgery table. A tourniquet is applied to the proximal arm. Indicate areas of skin to be prepped. Scrub and gown. The arm and hand are prepped and draped. Perform surgical "time out" with operating surgical team. The arm is elevated and exsanguinated. The pneumatic tourniquet is inflated.

Description of Intra-Service Work: An incision is made over the dorsal aspect of the fourth metacarpal to expose the residual distal stump of the ring finger extensor digitorum communis. The distal tendon stump is dissected free from any surrounding scar tissue. An incision is made over the distal aspect of the second metacarpal to expose the extensor indicis proprius (EIP). The EIP is clearly identified and transected taking care not to injure the extensor hood. A counter incision is made at the distal edge of the extensor retinaculum and the EIP is identified and brought into the proximal wound. The EIP is freed of any connections to adjacent extensor tendons. A subcutaneous tunnel is created from the proximal wound to the distal stump of the ring finger extensor tendon. The EIP is gently passed in to the tunnel from proximal to distal. The EIP is then sutured to the distal stump of the ring finger extensor tendon taking care to apply the appropriate tension. The tension on the tendon transfer is adjusted as needed. The wound is irrigated and then closed in layers.

Description of Post-Service Work:

Office:

The first postop office visit occurs within 24 to 48 hours after surgery. The patient is interviewed and data obtained by clinical staff is reviewed. The findings at surgery and details of procedure are reviewed with the patient/family. The postoperative radiograph taken after surgery is reviewed with the patient/family. The postoperative splint and bulky dressings are removed and assessment performed of wound status, drainage, hematoma, and signs of infection. The circulation, sensation, and motor function status is assessed. The alignment of the thumb is assessed. Pain is assessed. The wounds are cleaned and redressed and the splint reapplied. An order is written for fabrication of a new splint. Activity limitations (driving, lifting, splint protection) are discussed with the patient/family. The PDMP is checked and orders are made for narcotic and nonnarcotic pain medication. The patient will be counseled on appropriate multi-modal pain

management (ie, narcotic, nonnarcotic). The patient will be counseled on expectations of pain and swelling and techniques for mitigation. The patient will be counseled on timing of follow-up visits and expected therapy protocol (ie, the care plan). Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are completed. Medical record progress notes are dictated, reviewed, and signed. OT will be contacted to discuss the patient-specific splint fabrication that was ordered. An update is provided to the PCP and/or referring provider.

At subsequent postop office visits, the patient is interviewed and data obtained by clinical staff is reviewed. The fitting of the fabricated splint is assessed and the splint and dressings are removed. The wound is assessed. The circulation, sensation, and motor function status of the thumb, fingers, and wrist is assessed. The alignment of the thumb and digits is assessed. Pain is assessed. Range of motion is measured and documented. Grip and pinch strength are measured and documented. The wound is cleaned and sutures removed when appropriate. The patient is counseled on scar control. Padding is applied and the splint is reapplied. Activity limitations are reinforced with the patient, including counseling on finger motion. The PDMP is checked and need for narcotic and/or nonnarcotic pain medication is considered and orders written as appropriate. The patient will be counseled on appropriate pain management. The patient will be counseled on expectations of pain and swelling during recovery and techniques for mitigation. An occupational therapy prescription is written and interval OT notes are reviewed. OT progress is assessed and orders revised as needed. Management of the patient and updates to the care plan is discussed with the OT. Patient/family questions are answered. Disability, FMLA, out of work/ other related forms are updated as required. Medical record progress notes are dictated, reviewed, and signed. An update is provided to the PCP and/or referring provider.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence - 26480

The expert panel reviewing the history and survey data for code 26480 believes there is compelling evidence that this code is potentially misvalued due to the following:

- ***Flawed methodology in the previous valuation.***

In 2009, code 26480 was identified through a fastest growing screen of more than 10% per year. The surveying societies indicated they did not believe there was a change in patient or technology and therefore did not have compelling evidence that the code was potentially misvalued even though the code was Harvard valued and did not have time allocated for positioning or discharge work and included 4 x 99212 office visits. Even though the survey data suggested a higher value, the RUC recommendation was to maintain the current value which was less than the lowest survey work RVU. The RUC gave no consideration to the significant additional pre and post time when compared with the Harvard data and instead approved maintaining the Harvard value but accepting the new survey data. This essentially reduced the Harvard IWP/UT of 0.065 to a significantly new lower IWP/UT of 0.041 (37% reduction).

Based on this information, we believe a flawed methodology – maintaining a Harvard work RVU with a specific intensity and accepting new survey data with higher times and visits resulting in a lower intensity – was a flawed methodology. When a work RVU recommendation results in an increased intensity, compelling evidence is needed to support the higher intensity. However, in this case, there was no justification provided that the work had changed and the intensity decreased.

- ***Changes in time and technology***

The current work RVU for 26480 is based on selection of level of office visits using old, deleted guidelines. In 2009, when 26480 was surveyed, the 1995 or 1997 guidelines were in place and required for code level selection. Through CY 2020, the descriptors for the levels of E/M services recognized seven components, six of which were used in defining the levels of E/M services (history, examination, medical decision making, counseling, coordination of care, nature of presenting problem, and time). The first three of these components (history, examination, and medical decision making) were considered the key components in selecting a level of E/M service. In addition, for coding purposes, a typical time was included in the E/M code descriptors but could only be used if a majority of the time were spent face-to-face with the patient performing counseling or coordination of care.

For CPT 2021, the reporting guideline for office visit E/M codes were significantly revised to reflect changes in practice including team-based care, the use of electronic health records, and to reduce physician burden. Under the new CPT coding framework, history and exam is no longer used to select the level of E/ M office visit code. Instead, an office/outpatient E/M visit includes a medically appropriate history and exam, when performed. Other changes include the directive to select the level of service based on medical decision making or total time on the date of encounter, where total time equals both face-to-face time and non-face-to-face time of the physician and/or qualified health care professional. These revisions radically changed the way the level of E/M office visit code is selected. The clinically outdated system for number of body systems/areas reviewed and examined under history and exam no longer apply, and the history and exam components will only be performed when, and to the extent, reasonable and necessary, and clinically appropriate. In addition, the work values for the office visit E/M codes were increased based on compelling evidence of a flawed methodology in 2010 when CMS accounted for work neutrality from the elimination of payment for consultation codes and based on changes in technology related to increased work due to the use of electronic health records that contain more data than paper records, most of which must be reviewed including for drug-drug and, with increasing use of homeopathic substances, drug substance interactions. The use of EHRs increased physician work by increasing the time physician spend documenting the medical record. In 2016, it was estimated that for every hour spent with patients, physicians spend 2 hours on EHR and desk work, according to an Annals of Internal Medicine study.

Based on this discussion of recent changes in the value and reporting guidelines for office visit E/M codes, we believe there is compelling evidence that the current work RVU for 26480 is potentially misvalued due to under-reporting of postoperative office work.

Recommendation - 26480

We recommend the survey median work RVU of 9.50

Pre-time

Package 3 is selected with the following modifications:

Evaluation time: Subtract 3 minutes (total = 30 minutes) to be consistent with survey median.

Positioning time: Additional 7 minutes (total = 10 minutes) for padding of bony prominences; application of thermal regulation drapes; assessing position of the extremities and head and adjusting as needed; rotating patient onto hand surgery table; marking, prepping, and draping hand; application of tourniquet to the proximal arm; elevating and exsanguinating arm; and inflating pneumatic tourniquet. A total of 10 minutes for upper extremity positioning is supported by RUC reviewed upper extremity codes 64910-64912 (2017), 23656-26358 (2015), 25607-25609 (2014), 36831 (2013), and key reference code 26356 (2015).

Scrub, dress, wait time: Subtract 5 minutes (total time = 10 minutes) to be consistent with survey median.

Immediate Post-time

Package 9a: Subtract 3(total = 25 minutes) to be consistent with the survey median.

Discussion of Postoperative Office Visits

POV1 (24-48 hours after surgery). For this visit, MDM is moderate: (1) The patient has a chronic condition with side effects of surgery (pain, loss of hand/digit function), where the patient is not at the treatment goal of complete pain relief and restoration of grip and pinch strength. (moderate). (2) Discussion of patient management including fabrication of a patient-specific splint with the OT will occur (moderate). (3) Prescription drug management, both narcotic and nonnarcotic pain medication (moderate). With respect to time, the patient will arrive with a splint and large bulky dressing that will take time to take down; assess and document wound status; check for drainage, hematoma, signs of infection; assess and document circulation, sensation, and motor function status; assess and document alignment of thumb and fingers; and assess and document pain and then redress the wound. Time is needed for counseling about pain and swelling mitigation techniques, appropriate use of multimodal pain management, and activity restrictions. Time is needed to contact OT to discuss fabrication of a patient-specific splint. Time is needed to review the findings at surgery with the patient, review the care plan, and answer patient/family questions. Time is also needed to complete medical records, file insurance forms, and update other providers. Time is needed to provide a note for work status. The total physician/QHP time for these activities is estimated to be approximately 37 minutes which, in addition to MDM, supports 99214.

POV2 (10-14 days postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and narcotic/nonnarcotic medication for pain will be considered and ordered as required. Total time is estimated at 33 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the second visit.

POV3: (~5-6 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal; continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress; and medication for pain will be considered and adjusted as required. Total time is estimated at 26 minutes. However, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the third visit.

POV4: (~9-10 weeks postop): For this visit, MDM is still moderate based on the patient still having a chronic condition from surgery and not at treatment goal and continued discussion with external OT regarding patient management and the care plan which is reviewed and revised as appropriate based on patient progress. Drug management will likely be low MDM. Total time is estimated at 24 minutes. Although 99214 may be supported, the survey median selected level for this visit was 99213, therefore we recommend 99213 for the fourth visit.

The patient will continue to be monitored for a minimum of 6 months postoperatively and up to a year after surgery, by which time it is expected that the treatment goal for the typical patient will be achieved.

Key Reference Code Comparison

Both key reference codes 26356 and 23430 are familiar to the survey respondents and represent similar tendon repair work including the same intraoperative time. The intensity and complexity measures confirm that 26480 is similar (identical) to the key reference codes. In addition, code 26480 identical intraoperative time and similar total time when compared with the key reference codes supports the recommended work RVU of 9.50.

MPC Code Comparison

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99238	99214	99213	99212
14060	Adjacent tissue transfer or rearrangement, eyelids, nose, ears and/or lips; defect 10 sq cm or less	9.23	0.090	183	30	60	15	0		2	2
26480	Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon	9.50	0.049	263	50	60	25	0.5	1	3	
57240	Anterior colporrhaphy, repair of cystocele with or without repair of urethrocele, including cystourethroscopy, when performed	10.08	0.096	211	56	60	30	0.5		2	

Comparison of 25310 and 26480

- The intraop times and visits for 25310 and 26480 are the same, however because these codes were reviewed at different times in different ways, the RVWs are significantly different.
- Code 25310 was surveyed in 2008 and a value was calculated from the then current value to account for a change from Harvard data that included one-half of a hospital inpatient visit when the claims data showed the typical patient was outpatient. Although the median survey RVW was 9.00, value and time were backed out of the current RVW to change the inpatient visits to outpatient visits.
- Code 26480 was surveyed in 2009, and although the survey data indicated the Harvard based RVW was undervalued, there was no compelling evidence for a change in work. So the RUC maintained the Harvard RVW and adopted the survey data. The rationale indicates this was based on a comparison to 25310 which was reviewed the prior year. With only 8 minutes difference in total time and exactly the same intraop time and postop visits, because there was no compelling evidence, the RUC could not increase the value of 26480.
- The current survey – this time of both codes together - once again maintains that both codes include 60 minutes of intraop and 4 post op visits. In addition, the median RVW is identical for both codes and the 25th to 75th percentile spread is also almost identical.
- We believe these codes were never actually relative in the fee schedule. Repeat survey of the two codes together now in 2023 demonstrates the exact same time and intensity which is what should be reflected in the fee schedule. While we understand the RUCs reliance of previous RUC review, there needs to be some consideration that having a 15% difference in valuation for two codes that are nearly identical in both face value descriptions, and now two different sets of survey data 15 years apart, does not fit the concept of relativity and magnitude estimation.

Comparison to Other RUC Reviewed Codes

There are almost 400 codes in the RUC-reviewed codes with 60 minutes of intraop time, but only 64 codes that have a 90-day global period. As additional support for the median work RVU of 9.50, a RUC database search was conducted with the following parameters:

- RUC reviewed in the past 10 years.
- 90-day global
- Intra-time = 60 minutes
- Total time between 225-325

The table below shows that the median RVW of 9.50 places 26480 in the lower half of codes with the above parameters. All codes below 26480 in the table have lower total times and similar or higher IWPUT. If the 25th percentile survey statistic were used, the IWPUT would be only 0.040 and the WPUT would be 0.034 – both data points would be significantly lower than any E/M code, creating a rank order anomaly.

RUC Year	CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	HV	OV

Incremental Changes in Work

The current RVW for 26480 is 6.90. This value was established prior to the E/M code review and revaluation in recognition of increased work for E/M services. The RUC supported increasing all global codes for the changes in E/M values over the past few years.

For this survey, although the number of postop visits has not changed, the level of visits has changed as supported by both MDM and total time on the day of the encounter. As shown in the table below, the increase in postop work adds 3.52 work RVUs to the current value of 6.90 for a total work RVU of 10.40. This is further support for the recommendation of the median work RVU of 9.50 for 26480.

CPT Code	Vignette
25310	A 55-year-old women presenting with a rupture of the extensor pollicis longus (EPL) undergoes a transfer of the extensor indicis proprius to the residual distal EPL stump.
26480	A 25-year-old male suffers a loss of the ring finger extensor tendon at the dorsum of the hand. He undergoes a tendon transfer of the extensor indicis proprius to the distal stump of the extensor digitorum communis of the ring finger.
25447	A 72-year-old female with painful arthritis at the base of the thumb undergoes excision of the trapezium with interposition of local tissue between the scaphoid and base of the first metacarpal.
2X005	A 68-year-old female with painful arthritis at the base of the thumb undergoes arthroplasty with excision of the trapezium and suspension stabilization of the first metacarpal.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The RUC Advisors from the surveying societies reviewed current code PE details and discussed how the codes have changed since the prior review to determine if any revisions are required.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The current codes are used as references. Code 2X005 is a new code that bundles the current codes 25310 or 26480 with 25447.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

Flawed methodology of prior review – missing required supplies and equipment.

Aggregate cost for 25310 and 25447 is greater than current cost. Almost all of this increase is due to changes in level of postop E/M. For both codes, however, there is a need for additional supplies that are required related to wound care at the first and second postop visit, including a protective dressing. For all three current codes, there is a need for a sanitizing wipe to clean surfaces (consistent with E/M office visit codes). Additionally, an exam light would be typical for the first and second visits related to examining the wound (POV1) and removal of sutures (POV2).

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including conducting

	requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to family questions about home activity restrictions. Confirmation of discharge antibiotics if needed, and pain medication. Coordination with other physicians/QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office EMR, including medication list, correspondence, and imaging or lab results pending at discharge

c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instruction.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

September 2023

Chimeric Antigen Receptor T-Cell (CAR-T) Therapy Services – Tab 5

In May 2023, the CPT Editorial Panel approved the addition of four codes to report Chimeric Antigen Receptor T-cell (CAR-T) Services, added a new subsection with guidelines, and deleted four Category III codes. Genetic alteration and cell expansion are performed by biotechnology companies operating according to FDA stringent manufacturing processes. Therefore, the new codes describe only those steps of this complex process that are currently performed or supervised by physicians. Moreover, in the U.S., the collection, testing, preparation, storage and transport of blood and blood components must comply with FDA regulations and guidance documents which are accounted for in the recommendations for the code family.

3X018 Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR-T cells, per day

The RUC reviewed the survey results from 42 pathologists and determined that the survey 25th percentile work RVU of 1.94 appropriately accounts for the physician work involved in this service. New code 3X018 describes lymphocyte collection. The RUC recommends 30 minutes pre-service time, 36 minutes intra-service time, 20 minutes post-service time, and 86 minutes total time as supported by the survey. The RUC acknowledged that 3X018 is a lengthy, 8-hour procedure and the portion that the physician is face-to-face with the patient is typically 36 minutes, while the physician remains immediately available for the entirety of the procedure. The RUC clarified that two different physicians typically report codes 3X018 and 3X019, therefore there is no overlap of pre- and post-service work between the two codes.

To justify a work RVU of 1.94, the RUC compared CPT code 3X018 to the top key reference service code 38241 *Hematopoietic progenitor cell (HPC); autologous transplantation* (work RVU = 3.00, 60 minutes intra-service time and 108 minutes total time) and noted that the reference code has 24 minutes more intra-service time and is more intense than the surveyed code and is therefore appropriately valued higher. It is also specific to stem cells. The RUC referenced CPT code 36511 *Therapeutic apheresis; for white blood cells* (work RVU = 2.00, 30 minutes intra-service time and 85 minutes total time) for further comparison, noting that both codes are cell collection services. However, 3X018 is more complex, is not a therapeutic procedure, and is specific to lymphocytes whereas 36511 is a therapeutic leukocyte procedure.

For additional support, the RUC compared CPT code 3X018 to MPC code 99214 *Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded* (work RVU = 1.92 and 47 minutes total time) and noted that the surveyed code requires more time and is therefore valued higher than the comparator code. The RUC concluded that CPT code 3X018 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 1.94 for CPT code 3X018.**

3X019 Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)

The RUC reviewed the survey results from 32 pathologists and determined that the survey 25th percentile work RVU of 0.79 appropriately accounts for the physician work involved in this service. New code 3X019 describes the post-collection handling of the lymphocytes and preparation of the cells to be shipped to the manufacturer. The RUC recommends 5 minutes pre-service time, 18 minutes intra-service time, 5 minutes post-service time as supported by the survey.

To justify a work RVU of 0.79, the RUC compared CPT code 3X019 to the top key reference service code 80504 *Pathology clinical consultation; for a moderately complex clinical problem, with review of patient's history and medical records and moderate level of medical decision making When using time for code selection, 21-40 minutes of total time is spent on the date of the consultation.* (work RVU = 0.91, 30 minutes intra-service time and total time) and noted that the reference code has 12 minutes more intra-service time than the surveyed code and therefore is appropriately valued higher. The RUC advised that the second key reference service code 38210 *Transplant preparation of hematopoietic progenitor cells; specific cell depletion within harvest, T-cell depletion* (work RVU = 1.57, 60 minutes intra-service time and 75 minutes total time) should not have been included on the RSL nor used as a key reference service. CPT code 38210 has a Medicare Status of “P” which is not valid for Medicare purposes and has no claims data. The RUC concurred that the recommended value is well supported by the first key reference service. The RUC also referenced CPT codes 86077 *Blood bank physician services; difficult cross match and/or evaluation of irregular antibody(s), interpretation and written report* (work RVU = 0.94, 40 minutes intra-service time and total time) and 86079 *Blood bank physician services; authorization for deviation from standard blood banking procedures (eg, use of outdated blood, transfusion of Rh incompatible units), with written report* (work RVU = 0.94, 30 minutes intra-service time and total time) to support the RUC recommended work RVU.

For additional support, the RUC compared CPT code 3X019 to MPC codes 85097 *Bone marrow, smear interpretation* (work RVU = 0.94, 25 minutes intra-service and total time) and 88305 *Level IV - Surgical pathology, gross and microscopic examination...* (work RVU = 0.75, 25 minutes intra-service and total time) and noted that the comparison codes appropriately bracket the surveyed code. In addition, MPC code 93015 *Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report* (work RVU = 0.75, 20 minutes intra-service time and 26 minutes total time) offers a solid comparison with similar intra-service and total time and a similar amount of physician work as the surveyed code. The RUC concluded that CPT code 3X019 should be valued at the 25th percentile work RVU as supported by the survey. **The RUC recommends a work RVU of 0.79 for CPT code 3X019.**

3X020 Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

The RUC reviewed the survey results from 32 pathologists and determined that the survey 25th percentile overestimated the physician work typically required to perform this service. New code 3X020 describes receipt of and handling and additional preparation of the genetically altered lymphocytes before administration. The RUC recommends a direct work RVU crosswalk to CPT code 92240 *Indocyanine-green angiography (includes multiframe imaging) with interpretation and report, unilateral or bilateral* (work RVU= 0.80, 20 minutes intra-service time and 22 minutes total time), noting that both services involve an identical amount of intra-service time and similar total time. The RUC recommends the following physician time components: 1-minute pre-service time, 20 minutes intra-service time, 3 minutes immediate post-service time. The RUC

reduced the pre and post-service times from the survey median of 5 minutes pre-service evaluation time to 1 minute, like the crosswalk code, and 5 minutes immediate post-service time to 3 minutes recognizing that the post-service work involves more than just signing the report but also takes into account the rules and regulations required with this service and paperwork for the manufacturer.

The RUC concurred that applying CPT code 92240 as a direct work RVU crosswalk to CPT code 3X020 is supported by several other XXX global codes with similar intra-service time and similar total time, namely, CPT code 88360 *Morphometric analysis, tumor immunohistochemistry (eg, Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; manual* (work RVU= 0.85, 23 minutes intra-service and total time) and CPT code 74485 *Dilation of ureter(s) or urethra, radiological supervision and interpretation* (work RVU= 0.83, 20 minutes intra-service time and 28 minutes total time). The RUC concluded that CPT code 3X020 should be valued based on a direct work RVU crosswalk to CPT code 92240 and agreed the crosswalk value slightly below the survey 25th percentile was appropriate. **The RUC recommends a work RVU of 0.80 for CPT code 3X020.**

3X021 Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous

The RUC reviewed the survey results from 35 oncologists and hematologists and determined that a work RVU of 3.00, which represents both the survey 25th and median values, appropriately accounts for the physician work involved in this service. New code 3X021 describes administration of genetically altered lymphocytes. The RUC recommends 40 minutes pre-service evaluation time, 30 minutes intra-service time, 30 minutes post-service time, and 100 minutes total time as supported by the survey. The RUC established that there is no duplication of work, as an Evaluation and Management (E/M) service would typically be reported with 3X021 in the facility setting and confirmed that it is typical to treat only one patient per day.

To justify a work RVU of 3.00, the RUC compared CPT code 3X021 to the top key reference service code 38241 *Hematopoietic progenitor cell (HPC); autologous transplantation* (work RVU = 3.00, 60 minutes intra-service time and 108 minutes total time) and discussed that the intra-service time is twice that of the surveyed code with similar total time, yet the surveyed code is much more intense, justifying the same value for the two codes. CAR-T services exhibit heightened intensity attributable to various factors. The CAR-T cell product is characterized by its diminutive size, exorbitant cost, and substantial scarcity, rendering its acquisition a formidable endeavor. Patients and healthcare providers invest significant time, spanning weeks or even months, in preparation for the administration of this product. Consequently, the intrinsic value of the cellular infusion is imbued with a sense of preciousness. In stark contrast to the reference code, wherein donors can be approached for additional contributions under appropriate circumstances, the CAR-T paradigm affords scant opportunities for recourse in the event of product-related mishaps. The surveyed code thus encapsulates the stressors inherent in treating patients in an advanced state of illness, for whom CAR-T therapy represents a last-chance intervention.

The RUC also noted that the median pre-service evaluation time is 40 minutes for the surveyed code compared with 18 minutes for the top key reference service code despite a similar description of pre-service work. The specialties clarified that there are several unique physician activities included in CAR-T services which are novel or more exaggerated in comparison to the key reference codes. These include checking and confirming multiple aspects of the CAR-T product specifications, quality control testing results, and dose. These are more extensive than the checks on the product in the reference code. A baseline Immune effector Cell-Associated Neurotoxicity Syndrome (ICANS) assessment is

performed, which is not part of the reference codes. Preparing the patient, staff, pre-medications, and emergency equipment are also performed in advance of product thawing (actual product thawing reported with 3X020), since the CAR-T product (unlike the product in the reference codes) has a very short expiration time. This prolongs the pre-time as compared to the reference code since coordination and preparation must be sequential and precisely coordinated.

For additional support, the RUC compared CPT code 3X021 to MPC codes 72158 *Magnetic resonance (eg, proton) imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar* (work RVU = 2.29, 25 minutes intra-service time and 35 minutes total time) and 99291 *Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes* (work RVU = 4.50, 40 minutes intra-service time and 70 minutes total time) and noted that the comparison codes appropriately bracket the surveyed code. The RUC concluded that CPT code 3X021 should be valued at the 25th and median work RVU as supported by the survey. **The RUC recommends a work RVU of 3.00 for CPT code 3X021.**

Practice Expense

For CPT code 3X021, no changes were made to the recommended inputs as submitted by the specialty societies. The PE Subcommittee discussed the monitoring time and agreed that 3 hours is typical for this service. **The RUC recommends the direct practice expense inputs for CPT code 3X021 as submitted by the specialty societies.**

The RUC determined that the non-facility practice expense RVU for CPT codes 3X018-3X020 should be contractor-priced. The RUC noted that the specialties could revisit the practice expense if this new technology moves to the physician office setting by submitting a request to CMS to price it in the non-facility.

New Technology

CPT codes 3X018-3X021 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
Hemic and Lymphatic Systems General <u>Cellular and Gene Therapies</u>				

Cellular and gene therapies involve the collection, processing and handling of cells or other tissues, genetic modification of those cells or tissues, and administration of the genetically modified cells or tissues with the intent to treat, modify, reverse, or cure a serious or life-threatening disease or condition.

Codes 3X018, 3X019, 3X020, 3X021 describe the various steps required to collect, prepare, transport, receive, and administer genetically modified T cells. The collection and handling code (3X018) may be reported only once per day, regardless of the number of collections or quantity of cells collected. Similarly, the administration code (3X021) may only be reported once per day, regardless of the number of units administered. The development of genetically modified cells is not reported with this family of codes.

Chimeric antigen receptor therapy (CAR-T) with genetically modified T cells begins with the collection of cells from the patient by peripheral blood leukocyte cell harvesting. The cells are then cryopreserved and/or otherwise prepared for processing or shipping to a manufacturing or cell processing facility, if applicable, where gene modification and expansion of the cells is performed. When gene modification and expansion of the cells by the manufacturer is complete, the genetically modified cells are returned to the physician or other qualified health care professional in which additional preparation occurs including thawing of the cryopreserved CAR-T cells, if necessary, before the cells are administered to the patient.

The procedure to administer CAR-T cells includes physician or other qualified health care professional monitoring of multiple physiologic parameters, verification of cell processing, evaluation of the patient during, as well as immediately before and after the administration of the CAR-T cells direct supervision of clinical staff, and management of any adverse events during the administration. Care on the same date of service that is not directly related to the service of administration of the CAR-T cells (eg, care provided after the administration is complete, care for the patient’s underlying condition or for other medical problems) may be separately reported using the appropriate evaluation and management code with modifier 25. Management of uncomplicated adverse events (eg, nausea, urticaria) during the infusion is not reported separately.

The fluid used to administer the cells and other infusions for incidental hydration (eg, 96360, 96361) are not reported separately. Similarly, infusion(s) of any supportive medication(s) (eg, steroids) concurrently with the CAR-T cell administration are not reported separately. However, hydration or administration of medications (eg, antibiotics, opioids) unrelated to the CAR-T administration may be reported separately with modifier 59.

(For administration of drugs, agents and biologic response modifiers, see Chemotherapy and Other Highly Complex Drug or Highly Complex Biologic Agent Administration)

(For transplant services/procedures, see Bone Marrow or Stem Cell Services/Procedures)

Category III Codes

Cellular and Gene Therapy

Cellular and gene therapies involve the collection, processing and handling of cells or other tissues, genetic modification of those cells or tissues, and administration of the genetically modified cells or tissues with the intent to treat, modify, reverse or cure a serious or life-threatening disease or condition.

Codes 0537T, 0538T, 0539T, 0540T describe the various steps required to collect, prepare, transport, receive, and administer genetically modified T cells. The collection and handling code (0537T) may be reported only once per day, regardless of the number of collections or quantity of cells collected. Similarly, the administration code (0540T) may only be reported once per day, regardless of the number of units administered. The development of genetically modified cells is not reported with this family of codes.

Chimeric antigen receptor therapy (CAR-T) with genetically modified T cells begins with the collection of cells from the patient by peripheral blood leukocyte cell harvesting. The cells are then cryopreserved and/or otherwise prepared for processing or shipping to a manufacturing or cell processing facility, if applicable, where gene modification and expansion of the cells is performed. When gene modification and expansion of the cells by the manufacturer is complete, the genetically modified cells are returned to the physician or other qualified health care professional in which additional preparation occurs including thawing of the cryopreserved CAR-T cells, if necessary, before the cells are administered to the patient.

The procedure to administer CAR-T cells includes physician monitoring of multiple physiologic parameters, physician verification of cell processing, evaluation of the patient during, as well as immediately before and after the administration of the CAR-T cells, physician presence during the administration and direct supervision of clinical staff, and management of any adverse events during the administration. Care on the same date of service that is not directly related to the service of administration of the CAR-T cells (eg, care provided after the administration is complete, care for the patient's underlying condition or for other medical problems) may be separately reported using the appropriate evaluation and management code with modifier 25. Management of uncomplicated adverse events (eg, nausea, urticaria) during the infusion is not reported separately.

The fluid used to administer the cells and other infusions for incidental hydration (eg, 96360, 96361) are not reported separately. Similarly, infusion(s) of any supportive medication(s) (eg, steroids) concurrently with the CAR-T cell administration are not reported separately.

However, hydration or administration of medications (eg, antibiotics, opioids) unrelated to the CAR-T administration may be reported separately with modifier 59.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 3X018	Tracking Number E1	Original Specialty Recommended RVU: 1.94
		Presented Recommended RVU: 1.94
Global Period: XXX	Current Work RVU: N/A	RUC Recommended RVU: 1.94

CPT Descriptor: Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR-T cells, per day

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 93%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: The physician reviews the patient's medical record to determine patient suitability for collection to detect any contraindications to leukocytapheresis or anticoagulation, to confirm an appropriate indication, and to guide the collection procedure plan. Information reviewed may include clinical notes, medications, allergies, past medical history, weight, and relevant laboratory values (complete blood count, electrolytes, coagulation testing). The physician determines any necessary interventions required prior to the apheresis procedure and ensures that they are completed. The physician documents procedure orders including anticoagulant type, blood volume processed, pre-medications, and prn medications to treat potential reactions and communicates with the apheresis team. The physician performs the consent process with the patient and answers any questions posed by the patient, family, and referring physician.

Description of Intra-Service Work: The physician supervises the initial collection of blood-derived T lymphocytes and patient monitoring. The physician remains immediately available throughout the duration of the procedure. The physician evaluates the patient and manages any complications that occur.

Description of Post-Service Work: The physician documents the procedure, including complications and treatments administered. The physician communicates with the referring team as needed for continuity of care. The physician ensures that the harvested cells are appropriately delivered to the physician responsible for sending the cells to the manufacturer for processing.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the April 2023 CPT Editorial Panel meeting Category III codes 0537T, 0538T, 0593T, and 0540T used to describe the services associated with Chimeric Antigen Receptor T cell (CAR-T) therapies were approved for Category I status for CPT 2025.

3X018 Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for

development of genetically modified autologous CAR-T cells, per day

3X019 Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)

3X020 Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

3X021 Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous

All four codes were designated as XXX global services on the RUC's level of interest. The CAP indicated level one interest in CPT codes 3X018, 3X019, and 3X020. ASCO, ASH, ASTCT indicted level one interest in CPT code 3X021 only.

CAR-T cell therapy has significantly grown in use nationwide since the Category III codes were approved. CAR-T therapies are now the standard of care for many patients with relapsed/ refractory large B-cell lymphoma and myeloma and other hematologic malignancies.

The codes describe procedures required for creating and administering CAR-T therapy, a treatment for certain cancers. Six types of CAR-T cell therapies have been approved by the FDA and are currently being administered to patients with the following conditions:

B-cell acute lymphoblastic leukemia (ALL)

Diffuse B-cell non-Hodgkin lymphoma (NHL)

Follicular lymphoma

Mantle cell lymphoma

Multiple myeloma

To create and administer CAR-T cells, lymphocytes are collected from the peripheral blood of the patient, genetically altered using a viral vector that causes the production of new cell surface receptors that enable the cells to attack the patient's cancer, expanded and then administered to the patient. Although these processes bear a resemblance to autologous stem cell transplant, there are significant differences: the patient population is frequently sicker, and the collection, handling, and administration of the cells must be performed under stringent conditions.

The genetic alteration and cell expansion are performed by biotechnology companies operating according to FDA good manufacturing processes. Therefore, the proposed codes describe only those steps of this complex process that are currently performed or supervised by physicians. The first code (3X018) describes lymphocyte collection; the second code (3X019) describes the post-collection handling of the lymphocytes and preparation of the cells to be shipped to the manufacturer; the third code (3X020) describes receipt of and handling and additional preparation of the genetically altered lymphocytes before administration; the fourth code (3X021) describes administration of the genetically altered lymphocytes. In the U.S., the collection, testing, preparation, storage and transport of blood and blood components must comply with FDA regulations and guidance documents. Additionally, the facility's standard operating procedures and administrative operations must be in compliance with applicable law and the standards of two joint accrediting agencies, the Foundation for the Accreditation of Cellular Therapy (known as FACT) and the Joint Accreditation Committee of the International Society for Cellular Therapy and the European Group for Blood & Marrow Transplantation (also known as JACIE). FACT-JACIE Standards are unique in depth and breadth, being applicable to all phases of cell collection, processing, storage, transportation, and administration, and to all phases of clinical application including standard of care therapies and products, products administered under regulatory-approved clinical trials, and licensed (or other regulatory approval) products.

Multiple specialty physicians administer CAR-T therapy. Pathologists work as a team with oncologists and hematologists to provide this service to patients. Pathologists routinely perform the harvesting of the T lymphocytes, the preparation of the cells for transport, and the receipt and preparation of the CAR-T cells for administration. Hematologists, oncologists, and transplantation physicians routinely administer CAR-T cells. Therefore, the College of American Pathologists (CAP) surveyed and developed RUC recommendations for 3X018, 3X019, and 3X020. The American Society of Hematology (ASH), American Society for Transplantation and Cellular Therapy (ASTCT), and the American Society of Clinical Oncology (ASCO) surveyed and developed RUC recommendations for 3X021.

Survey Instrument for 3X018

CPT code 3X018 is used to report the harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR-T cells, per day. The CAP realized that the standard pathology work survey (written for anatomic pathology procedures) would not be appropriate for this new service as 3X018 is a face-to-face procedure, similar to 000-day global CPT codes 36511 Therapeutic apheresis; for white blood cells and 38206 Blood-derived hematopoietic progenitor cell harvesting for transplantation, per collection; autologous. The CAP reviewed the 000-day global work survey instrument for potential edits to the standard therapy work survey instrument. The CAP requested to use a custom service period definition for question 2 of the RUC survey which is similar to the 000-day global survey instrument. The Research Subcommittee did not approve the society's initial proposal, noting that the language was too specific and should borrow more text from other standard therapy survey template. The Research Subcommittee approved the custom survey language as follows:

Research-Approved the Service Period Definitions for Custom Survey of 3X018:

Pre-service period

Preparing to see the patient, reviewing records, communicating with other professionals, patient and family, and obtaining patient consent. Preparing needed equipment for the procedure.

~~Preparing to see the patient, reviewing records, and communicating with other professionals.~~

Intra-service period

Intra-service period includes treatment/therapy/procedure and documentation of services, which may include written report.

~~Intra-service period includes treatment/therapy and documentation of services which may include written report.~~

Post-service period

Post-service period includes arranging for further services and communicating (written or verbal) with the patient, family and other professionals.

~~Post-service period includes arranging for further services communicating (written or verbal) with the patient, family and other professionals.~~

The RUC's standard therapy work survey instrument was used for CPT codes 3X019 and 3X020.

Survey effort and results

The CAP conducted a physician work survey of 6,500 randomly selected active members, resulting in 42 respondents. Survey respondents agreed (93%) that the vignette represented the typical patient, which is described as a 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy. Below are the vignettes of the three respondents that did not agree with the surveyed vignette:

- 19-year-old patient with refractory relapsed ALL, enrolled to receive CD19 CAR-T therapy.
- Pediatric patient with B cell neoplasm
- Typical patient: Relapsed, refractory acute leukemia, pediatric age range 1 - 18 years.

The survey instrument contained 21 reference codes for respondents to choose from to depict the most similar physician service that were easily recognizable and understood by all specialty physicians. AMA staff directed us to only include XXX global services on the reference service list. The reference service list physician work RVUs ranged from 0.23 to 4.00.

The Key Reference Service (KRS) codes were:

First 38241 Hematopoietic progenitor cell (HPC); autologous transplantation (work RVU = 3.00 18 minutes pre, 60 minutes intra, 30 minutes post, total time is 108 minutes. **35.7%**

Secondary 80505 - Pathology clinical consultation; for a highly complex clinical problem, with comprehensive review of patient's history and medical records and high level of medical decision making When using time for code selection, 41-60 minutes of total time is spent on the date of the consultation. (Work RVU = 1.71, 54 minutes intra and total time) **23.8%**

Pathologists are integrally involved with all aspects of blood and cell collection, processing, storage, transportation, and administration, and understand the processes undertaken and physician work associated with CPT codes 38241 and 80505.

Expert Panel Review and Opinion:

The survey results for CPT code 3X018 were reviewed by an expert panel consisting of CAP's Economic Affairs Committee physician members, including experts who perform the service. The expert panel considered the total work, time, intensity, and complexity of the typical patient case, and agreed that the 25th percentile work value of 1.94 with a median time of 30 minutes preservice, 36 minutes intra-service, and 20 minutes post service represent the physician work of this service based on the survey results and their experience. Additionally, the value of 1.94 is appropriate based on comparisons of key reference services, IWP/UT, and relative to other codes on the physician fee schedule.

Recommendation:

The CAP recommends a physician work RVU of 1.94 for CPT code 3X018 with 30 minutes preservice, 36 minutes intra-service, and 20 minutes post service and total time of 86 minutes. The expert panel believes that our survey supports our recommendation for this new CPT code service.

Additional Discussion and Comparison Codes

The work described by first KRS code 38241 (Hematopoietic progenitor cell (HPC); autologous transplantation) while very similar to 3X018, a key difference is that the physician for the surveyed code (3X018) spends significantly more

time during the pre-service period determining patient suitability for the procedure and determining if there are any required physician interventions necessary prior to the cell collection. The 25th percentile work RVU of 1.94 recommended for CPT code 3X018 is bracketed by the 1st KRS code 38241, work RVU of 3.00 and the secondary reference service code 80505 with a work RVU of 1.71.

The physician work described by the secondary reference code CPT code 80505 – Pathology clinical consultation; for a highly complex clinical problem, with comprehensive review of patient's history and medical records and high level of medical decision making. When using time for code selection, 41-60 minutes of total time is spent on the date of the consultation, only has intra-service time for physician work, whereas the survey code describes physician work in the pre-, intra- and post service periods. The total time for 3X018 is 86 minutes.

The CAP review of MPC codes determined that the following CPT codes bracket the recommended WRVU of 1.94: 36456 - Partial exchange transfusion, blood, plasma or crystalloid necessitating the skill of a physician or other qualified health care professional, newborn; (work RVU 2.00) and 99214 - Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter; (work RVU 1.92)

The CAP also reviewed other CPT codes for time and work RVUs that are similar in physician work, time, and complexity to our RUC recommendation for CPT code 3X018. See the table below.

CPT Code	Descriptor	Global Period	Work RVU	Intra-time	Total time	IWPUT
36002	Injection procedures (eg, thrombin) for percutaneous treatment of extremity pseudoaneurysm	000	1.96	30	80	0.0280
36511	Therapeutic apheresis; for white blood cells	000	2.00	40	85	0.0256
38206	Blood-derived hematopoietic progenitor cell harvesting for transplantation, per collection; autologous	000	1.50	35	95	0.0045
50391	Instillation(s) of therapeutic agent into renal pelvis and/or ureter through established nephrostomy, pyelostomy or ureterostomy tube (eg, anticarcinogenic or antifungal agent)	000	1.96	30	60.5	0.0426
79101	Radiopharmaceutical therapy, by intravenous administration	XXX	1.96	30	80	0.0280
99460	Initial hospital or birthing center care, per day, for evaluation and management of normal newborn infant	XXX	1.92	30	50	0.0491
36456	Partial exchange transfusion, blood, plasma or crystalloid necessitating the skill of a physician or other qualified health care professional, newborn	XXX	2.00	30	60	0.0443
93660	Evaluation of cardiovascular function with tilt table evaluation, with continuous ECG monitoring and intermittent blood pressure monitoring, with or without pharmacological intervention	000	1.89	50	80	0.0244
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30-39 minutes of total time is spent on the date of the encounter.	XXX	1.92	30	47	0.0409

The CAP recommends a physician work RVU of 1.94 for new CPT code 3X018 with 30 minutes of pre-service, 36 minutes of intra-service and 20 minutes of post service time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.

Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Harvesting of the cells 3X018 and preparation for transport 3X019 may be performed on the same day.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Category III CPT code 0537T Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR-T cells, per day

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Pathology How often? Sometimes

Specialty How often?

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 4000

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. CIBMTR CAR-T registry data.

Specialty Pathology Frequency 4000 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,200

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. CIBMTR CAR-T registry data, 30% Medicare patients

Specialty Pathology Frequency 1200 Percentage 100.00 %

Specialty Frequency 0 Percentage 0.00 %

Specialty Frequency 0 Percentage 0.00 %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the April 2023 CPT Editorial Panel meeting Category III codes 0537T, 0538T, 0593T, and 0540T used to describe the services associated with Chimeric Antigen Receptor T cell (CAR-T) therapies were approved for Category I status for CPT 2025.

3X018 Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for

development of genetically modified autologous CAR-T cells, per day

3X019 Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)

3X020 Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

3X021 Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous

All four codes were designated as XXX global services on the RUC's level of interest. The CAP indicated level one interest in CPT codes 3X018, 3X019, and 3X020. ASCO, ASH, ASTCT indicted level one interest in CPT code 3X021 only.

CAR-T cell therapy has significantly grown in use nationwide since the Category III codes were approved. CAR-T therapies are now the standard of care for many patients with relapsed/ refractory large B-cell lymphoma and myeloma and other hematologic malignancies.

The codes describe procedures required for creating and administering CAR-T therapy, a treatment for certain cancers. Six types of CAR-T cell therapies have been approved by the FDA and are currently being administered to patients with the following conditions:

B-cell acute lymphoblastic leukemia (ALL)

Diffuse B-cell non-Hodgkin lymphoma (NHL)

Follicular lymphoma

Mantle cell lymphoma

Multiple myeloma

To create and administer CAR-T cells, lymphocytes are collected from the peripheral blood of the patient, genetically altered using a viral vector that causes the production of new cell surface receptors that enable the cells to attack the patient's cancer, expanded and then administered to the patient. Although these processes bear a resemblance to autologous stem cell transplant, there are significant differences: the patient population is frequently sicker, and the collection, handling, and administration of the cells must be performed under stringent conditions.

The genetic alteration and cell expansion are performed by biotechnology companies operating according to FDA good manufacturing processes. Therefore, the proposed codes describe only those steps of this complex process that are currently performed or supervised by physicians. The first code (3X018) describes lymphocyte collection; the second code (3X019) describes the post-collection handling of the lymphocytes and preparation of the cells to be shipped to the manufacturer; the third code (3X020) describes receipt of and handling and additional preparation of the genetically altered lymphocytes before administration; the fourth code (3X021) describes administration of the genetically altered lymphocytes. In the U.S., the collection, testing, preparation, storage and transport of blood and blood components must comply with FDA regulations and guidance documents. Additionally, the facility's standard operating procedures and administrative operations must be in compliance with applicable law and the standards of two joint accrediting agencies, the Foundation for the Accreditation of Cellular Therapy (known as FACT) and the Joint Accreditation Committee of the International Society for Cellular Therapy and the European Group for Blood & Marrow Transplantation (also known as JACIE). FACT-JACIE Standards are unique in depth and breadth, being applicable to all phases of cell collection, processing, storage, transportation, and administration, and to all phases of clinical application including standard of care therapies and products, products administered under regulatory-approved clinical trials, and licensed (or other regulatory approval) products.

Multiple specialty physicians administer CAR-T therapy. Pathologists work as a team with oncologists and hematologists to provide this service to patients. Pathologists routinely perform the harvesting of the T lymphocytes, the preparation of the cells for transport, and the receipt and preparation of the CAR-T cells for administration. Hematologists, oncologists, and transplantation physicians routinely administer CAR-T cells. Therefore, the College of American Pathologists (CAP) surveyed and developed RUC recommendations for 3X018, 3X019, and 3X020. The American Society of Hematology (ASH), American Society for Transplantation and Cellular Therapy (ASTCT), and the American Society of Clinical Oncology (ASCO) surveyed and developed RUC recommendations for 3X021.

Survey effort and results

The RUC's standard therapy work survey instrument was used for CPT codes 3X019 and 3X020 as the standard pathology survey instrument is used mainly for anatomic pathology services. CPT code 3X019 is used to report the preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage) which occurs after the harvesting of blood-derived T lymphocytes.

The CAP conducted a physician work survey of 7,300 randomly selected active CAP members, resulting in 32 respondents. Survey respondents agreed (100%) that the vignette represented the typical patient, which describes a 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

The survey instrument contained 21 reference codes for respondents to choose from to depict the most similar physician service that were easily recognizable and understood by all specialty physicians. AMA staff directed us to only include XXX global services on the reference service list. The reference service list physician work RVUs ranged from 0.23 to 4.00.

The Key Reference Service (KRS) codes were:

First 80504 - Pathology clinical consultation; for a moderately complex clinical problem, with review of patient's history and medical records and moderate level of medical decision making When using time for code selection, 21-40 minutes of total time is spent on the date of the consultation. **34%**

Secondary 38210 - Transplant preparation of hematopoietic progenitor cells; specific cell depletion within harvest, T-cell depletion **28%**

Pathologists are integrally involved with all of the clinical and regulatory aspects of blood and cell collection, processing, storage, transportation, and administration, and understand the processes undertaken and physician work associated with CPT codes 38210 and 80504.

Expert Panel Review and Opinion:

The survey results for CPT code 3X019 were reviewed by an expert panel consisting of CAP's Economic Affairs Committee physician members, including experts who perform the service. The expert panel considered the total work, time, intensity, and complexity of the typical patient case, and agreed that the 25th percentile work value of 0.79 with a median time of 5 minutes preservice, 18 minutes intra-service, and 5 minutes post service represent the physician work of this service based on the survey results and their experience. Additionally, the value of 0.79 is appropriate based on comparisons of key reference services, IWPUT, and relative to other codes on the physician fee schedule.

Recommendation:

The CAP recommends a physician work RVU of 0.79 for CPT code 3X019 with 5 minutes preservice, 18 minutes intra-service, and 5 minutes post service and total time of 28 minutes. The expert panel believes that our survey supports our recommendation for this new CPT code service.

Additional Discussion and Comparison Codes

The CAP reviewed the following XXX global MPC codes for time and work RVUs that are similar in physician work, time, and complexity to our RUC recommendation for CPT code 3X019. See the table below.

CPT Code	Long Descriptor	Work RVU	Intra Time	Total Time	IWPUT	RUC Review
76519	Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation	0.54	10	22	0.027	2016-04
76830	Ultrasound, transvaginal	0.69	10	23	0.040	2012-04
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	15	20	0.039	2016-10
88342*	Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure	0.70	25	25	0.0280	2014-4
88305	Level IV - Surgical pathology, gross and microscopic examination	0.75	25	25	0.030	2010-04
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	20	26	0.031	2012-04
95971	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude,)	0.78	20	33	0.024	2015-04
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	11	21	0.053	2013-10
78306	Bone and/or joint imaging; whole body	0.86	10	20	0.064	2016-04

		CPT Code: 3X019				
92002	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient	0.88	15	25	0.044	2007-02
74246	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	0.90	15	22	0.050	2019-01
92012	Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient	0.92	15	25	0.046	2007-02
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter.	0.93	15	20	0.047	2019-04
85097	Bone marrow, smear interpretation	0.94	25	25	0.038	2017-04
36440	Push transfusion, blood, 2 years or younger	1.03	15	35	0.039	2016-01
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	15	26	0.056	2012-10

* Non MPC code

The CAP recommends a physician work RVU of 0.79 for new service CPT code 3X019 with 5 minutes of pre-service, 18 minutes of intra-service and 5 minutes of post service time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Harvesting (3X018) and preparation for transport (3X019) may be performed on the same day.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 0538T - Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood derived T lymphocytes for transportation (eg, cryopreservation, storage)

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)

SUMMARY OF RECOMMENDATION**

CPT Code: 3X020	Tracking Number E3	Original Specialty Recommended RVU: 0.96
Global Period: XXX	Current Work RVU: NA	Presented Recommended RVU: 0.96
		RUC Recommended RVU: 0.80

CPT Descriptor: Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 100%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Receipt and review of product from manufacturer following all mandated regulatory protocols, and other elements related to the transfection of the cells.

Description of Intra-Service Work: Confirm documentation of all steps of final review have been completed on the facility-defined CAR-T specific treatment process checklist including;

- Review and confirm the infusion order of cellular therapy products and confirm that the order product type matches the drug information as documented on the CAR-T specific treatment process checklist,
- Review commercial CAR-T certification of analysis to confirm matching of batch record patient identifiers with product information.
- Confirm infusion cell dose is within acceptable limits as described on the drug product label and package insert.
- Confirm patient infusion weight is within facility-defined change range from collection weight. If necessary, confirm drug infusion dose is not out of specification given weight change.

The physician or other qualified health care professional oversees the thawing of cryopreserved, genetically modified cells for cellular therapy. These cells must be thawed in a controlled manner to ensure viability and stored in containers to minimize risk of product cross-contamination.

Description of Post-Service Work: Ensure that cells were appropriately thawed and remain viable for infusion. Problems or deviations before and/or after infusion must be documented.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

At the April 2023 CPT Editorial Panel meeting Category III codes 0537T, 0538T, 0593T, and 0540T used to describe the services associated with Chimeric Antigen Receptor T cell (CAR-T) therapies were approved for Category I status for CPT 2025.

3X018 Chimeric antigen receptor T-cell (CAR-T) therapy; harvesting of blood-derived T lymphocytes for

development of genetically modified autologous CAR-T cells, per day

3X019 Chimeric antigen receptor T-cell (CAR-T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)

3X020 Chimeric antigen receptor T-cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

3X021 Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous

All four codes were designated as XXX global services on the RUC's level of interest. The CAP indicated level one interest in CPT codes 3X018, 3X019, and 3X020. ASCO, ASH, ASTCT indicted level one interest in CPT code 3X021 only.

CAR-T cell therapy has significantly grown in use nationwide since the Category III codes were approved. CAR-T therapies are now the standard of care for many patients with relapsed/ refractory large B-cell lymphoma and myeloma and other hematologic malignancies.

The codes describe procedures required for creating and administering CAR-T therapy, a treatment for certain cancers. Six types of CAR-T cell therapies have been approved by the FDA and are currently being administered to patients with the following conditions:

B-cell acute lymphoblastic leukemia (ALL)

Diffuse B-cell non-Hodgkin lymphoma (NHL)

Follicular lymphoma

Mantle cell lymphoma

Multiple myeloma

To create and administer CAR-T cells, lymphocytes are collected from the peripheral blood of the patient, genetically altered using a viral vector that causes the production of new cell surface receptors that enable the cells to attack the patient's cancer, expanded and then administered to the patient. Although these processes bear a resemblance to autologous stem cell transplant, there are significant differences: the patient population is frequently sicker, and the collection, handling, and administration of the cells must be performed under stringent conditions.

The genetic alteration and cell expansion are performed by biotechnology companies operating according to FDA good manufacturing processes. Therefore, the proposed codes describe only those steps of this complex process that are currently performed or supervised by physicians. The first code (3X018) describes lymphocyte collection; the second code (3X019) describes the post-collection handling of the lymphocytes and preparation of the cells to be shipped to the manufacturer; the third code (3X020) describes receipt of and handling and additional preparation of the genetically altered lymphocytes before administration; the fourth code (3X021) describes administration of the genetically altered lymphocytes. In the U.S., the collection, testing, preparation, storage and transport of blood and blood components must comply with FDA regulations and guidance documents. Additionally, the facility's standard operating procedures and administrative operations must be in compliance with applicable law and the standards of two joint accrediting agencies, the Foundation for the Accreditation of Cellular Therapy (known as FACT) and the Joint Accreditation Committee of the International Society for Cellular Therapy and the European Group for Blood & Marrow Transplantation (also known as JACIE). FACT-JACIE Standards are unique in depth and breadth, being applicable to all phases of cell collection, processing, storage, transportation, and administration, and to all phases of clinical application including standard of care therapies and products, products administered under regulatory-approved clinical trials, and licensed (or other regulatory approval) products.

Multiple specialty physicians administer CAR-T therapy. Pathologists work as a team with oncologists and hematologists to provide this service to patients. Pathologists routinely perform the harvesting of the T lymphocytes, the preparation of the cells for transport, and the receipt and preparation of the CAR-T cells for administration. Hematologists, oncologists, and transplantation physicians routinely administer CAR-T cells. Therefore, the College of American Pathologists (CAP) surveyed and developed RUC recommendations for 3X018, 3X019, and 3X020. The American Society of Hematology (ASH), American Society for Transplantation and Cellular Therapy (ASTCT), and the American Society of Clinical Oncology (ASCO) surveyed and developed RUC recommendations for 3X021.

Survey effort and results

The RUC's standard therapy work survey instrument was used for CPT codes 3X019 and 3X020 as the standard pathology survey instrument is used mainly for anatomic pathology services. CPT code 3X019 is used to report the preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage) which occurs after the harvesting of blood-derived T lymphocytes.

The CAP conducted a physician work survey of 7,300 randomly selected active CAP members, resulting in 32 respondents. Survey respondents agreed (100%) that the vignette represented the typical patient, which describes a 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

The survey instrument contained 21 reference codes for respondents to choose from to depict the most similar physician service that were easily recognizable and understood by all specialty physicians. AMA staff directed us to only include XXX global services on the reference service list. The reference service list physician work RVUs ranged from 0.23 to 4.00.

The Key Reference Service (KRS) codes were:

First 38210 - Transplant preparation of hematopoietic progenitor cells; specific cell depletion within harvest, T-cell depletion **34%**

Secondary 80504 - Pathology clinical consultation; for a moderately complex clinical problem, with review of patient's history and medical records and moderate level of medical decision making When using time for code selection, 21-40 minutes of total time is spent on the date of the consultation. **22%**

Pathologists are integrally involved with all of the clinical and regulatory aspects of blood and cell collection, processing, storage, transportation, and administration, and understand the processes undertaken and physician work associated with CPT codes 38210 and 80504.

Expert Panel Review and Opinion:

The survey results for CPT code 3X020 were reviewed by an expert panel consisting of CAP's Economic Affairs Committee physician members, including experts who perform the service. The expert panel considered the total work, time, intensity, and complexity of the typical patient case, and agreed that the 25th percentile work value of 0.96 with a median time of 5 minutes preservice, 20 minutes intra-service, and 5 minutes post service represent the physician work of this service based on the survey results and their experience. Additionally, the value of 0.96 is appropriate based on comparisons of key reference services, IWP/UT, and relative to other codes on the physician fee schedule.

Recommendation:

The CAP recommends a physician work RVU of 0.96 for CPT code 3X020 with 5 minutes preservice, 20 minutes intra-service, and 5 minutes post service and total time of 30 minutes. The expert panel believes that our survey supports our recommendation for this new CPT code service.

Additional Discussion and Comparison Codes

The CAP reviewed the following XXX global MPC codes for time and work RVUs that are similar in physician work, time, and complexity to our RUC recommendation for CPT code 3X020. See the table below.

CPT Code	Long Descriptor	Work RVU	Intra Time	Total Time	IWP/UT	RUC Review
76519	Ophthalmic biometry by ultrasound echography, A-scan; with intraocular lens power calculation	0.54	10	22	0.027	2016-04
76830	Ultrasound, transvaginal	0.69	10	23	0.040	2012-04
95251	Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report	0.70	15	20	0.039	2016-10
88305	Level IV - Surgical pathology, gross and microscopic examination	0.75	25	25	0.030	2010-04
93015	Cardiovascular stress test using maximal or submaximal treadmill or bicycle exercise, continuous electrocardiographic monitoring, and/or pharmacological stress; with supervision, interpretation and report	0.75	20	26	0.031	2012-04
95971	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude,	0.78	20	33	0.024	2015-04
76700	Ultrasound, abdominal, real time with image documentation; complete	0.81	11	21	0.053	2013-10
78306	Bone and/or joint imaging; whole body	0.86	10	20	0.064	2016-04
92002	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient	0.88	15	25	0.044	2007-02

		CPT Code: 3X020				
74246	Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (eg, high-density barium and effervescent agent) study, including glucagon, when administered	0.90	15	22	0.050	2019-01
92012	Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient	0.92	15	25	0.046	2007-02
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15-29 minutes of total time is spent on the date of the encounter.	0.93	15	20	0.047	2019-04
85097	Bone marrow, smear interpretation	0.94	25	25	0.038	2017-04
36440	Push transfusion, blood, 2 years or younger	1.03	15	35	0.039	2016-01
95819	Electroencephalogram (EEG); including recording awake and asleep	1.08	15	26	0.056	2012-10

The CAP recommends a physician work RVU of 0.96 for new service CPT code 3X020 with 5 minutes of pre-service, 20 minutes of intra-service and 5 minutes of post service time.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. Receipt and preparation 3X020 may be performed on the same day as CAR-T administration 3X021.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) Category III CPT code 0539T - Chimeric antigen receptor T cell (CAR-T) therapy; receipt and preparation of CAR-T cells for administration

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

CPT Descriptor: Chimeric antigen receptor T-cell (CAR-T) therapy; CAR-T cell administration, autologous

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

Percentage of Survey Respondents who found Vignette to be Typical: 83%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Review the medical records and clinical history. Review the plan for the procedure with the patient, nurse, and other team members. Perform mental status assessment to obtain baseline neurologic score (baseline for post-procedure ICANS monitoring). Provide premedications to patient. Ensure that emergency medications/equipment and infusion supplies are gathered. Ensure that intravenous access is obtained and has appropriate patency. Review the cell product label, patient identification, sterility testing and other quality control testing results, and product cell dose and other characteristics. Complete pre-infusion checklist. Communicate with cell therapy lab that the patient and team are ready; instruct lab to begin product thaw. Obtain thawed product from cell therapy lab. Fill out chain of custody paperwork, including checking product and patient identifiers with the lab and then again with the patient at bedside.

Description of Intra-Service Work: The physician supervises the initiation of the product infusion and is present for the first 15 to 30 minutes. The physician remains immediately available to manage toxicities and complications occurring during the infusion. The physician evaluates the patient at the end of the infusion.

Description of Post-Service Work: Manage any late toxicities. Review clinical care plan with nurse and rest of team, including monitoring for complications and avoidance of certain medications. Document the entire procedure, including the pre-infusion evaluation, verification of cell processing and appropriateness of treatment, the infusion, any intra-infusion adverse events, and the post-infusion evaluation.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Survey Data

The specialty societies received 35 completed RUC surveys, with a median service performance rate of 10. The survey data were consistent between the three surveying specialty societies.

Pre Time

The two key reference codes selected by survey respondents were CPT Codes 38241 and 38240. The key reference code has 18 minutes of pre time. The RUC database notes the surveyed pretime of 30 minutes for 38241 was reduced to 18 minutes b/c *“This service will require less pre-service time than 38240 since the donor and recipient are the same person.”* The pre service evaluation time for 38240 is 30 minutes.

The median pre service evaluation time was 40 minutes. There are several unique physician activities included in CAR-T services which are novel or more exaggerated in comparison to the 38240 and 38241 reference codes. These include checking and confirming multiple aspects of the CART product specifications, quality control testing results, and dose. These are more extensive than the checks on the product in the reference code. Performing a baseline ICANS assessment is done which is not part of the reference codes. Preparing the patient, staff, pre-medications, and emergency equipment are also done in advance before product thawing in this code, since the CART product (unlike the product in the reference codes) has a very short expiration time. This prolongs the pre-time as compared to the reference codes since coordination and preparation must be sequential and precisely coordinated.

Intensity

A significant proportion of survey respondents reported that the intensity of administering CART cells is higher than the reference codes. CAR-T services are more intense for a variety of reasons. The cell product is small, extremely expensive, and very hard to get. Patients and providers will have spent weeks or even months working to obtain and get ready for the administration of this product. Therefore, the preciousness of the bag of cells and the emotional valence are intense. If anything were to happen with the CART product, it would be extremely difficult if not impossible to get another chance, unlike in the reference codes where donors can be approached for additional donations if circumstances warranted it. Intensity is also high because the impending toxicities of CART treatment are novel and life threatening. The specialty society recommendation of 3.00 wRVUs (25th and median) for 3X021 yields an appropriate IWPUT in comparison to the reference services codes. See below:

	IWPUT	WPUT
38241	0.032	0.028
38240	0.044	0.033
3X021	0.048	0.030

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario. New Code 3X021 will be reported with new Code 3X020 on the same day, typically by a different provider.

NONFACILITY DIRECT PE INPUTS

CPT CODE(S):3X021

SPECIALTY SOCIETY(IES): ASCO, ASH, ASTCT

PRESENTER(S): Ellen Fraint, MD, Amar Kelkar, MD, Sam Silver, MD, PhD, Elizabeth Blanchard, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: Sept 2023

CPT Code	Long Descriptor	Global Period
3X021	CAR-T cell administration, autologous	XXX

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
3X021	A 67-year-old male with refractory diffuse large B-cell lymphoma is referred for treatment with autologous chimeric antigen receptor T cell (CAR-T) therapy.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The specialty societies convened multispecialty consensus panel including RUC advisors, providers of CAR-T and NF providers of CAR-T. The panel developed the direct practice expense recommendations for CPT Code 3X021 based on best practices and current AMA RUC/PE guidelines.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

CPT Code 96413 *chemotherapy administration, intravenous infusion technique, up to 1 hour, single or initial substance/drug* was selected as the reference service code for 3X021. CPT Code 96413 is performed in the non facility setting, by the same specialties involved in the development of recommendations for 3X021 and is RUC reviewed. The services are both infusions and have similarities in direct practice expenses. The key reference code on the physician work side is CPT Code 38241. However, 38241 does not currently have direct practice expense inputs.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

In the F setting, an E/M would be typically reported with 3X021.
In the NF setting, an E/M would not be typically reported with 3X021.

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must

NONFACILITY DIRECT PE INPUTS

CPT CODE(S):3X021

SPECIALTY SOCIETY(IES): ASCO, ASH, ASTCT

PRESENTER(S): Ellen Fraint, MD, Amar Kelkar, MD, Sam Silver, MD, PhD, Elizabeth Blanchard, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

CPT Code 3X021 is a new CPT code, converted from Cat III HCPCS Code 0540T. The current Medicare data for the Cat III codes has the following specialty distribution:

- Hematology/Oncology 34%
- Hematology 23%
- Medical Oncology 22%
- Hematopoietic cell transplantation and cellular therapy 8%

The specialties anticipate a similar distribution in the NF setting.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

N/A

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

N/A

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

CA013 Prepare room, equipment and supplies

The current PE standard for CA013 is two minutes.

The reference code, 96413, included both the two minutes for initial prepare room as well as the steps for preparing the drug in CA013. As such, the specialty societies developing the recommendations for 3X021 followed the same pattern. The recommendations include two minutes as well as the time to prepare the product:

- Request product (1)
- Confirm dosing (1)
- Second verification orders (1)
- Assemble supplies (1)
- Prep labels (1)
- Document lot # and product specifications (1)

PRESENTER(S): Ellen Fraint, MD, Amar Kelkar, MD, Sam Silver, MD, PhD, Elizabeth Blanchard, MD

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

- Calculate drip rate (1)
- Pre infusion checklist (3)
- Clean prep area (1)

CA035 Review home care instructions, coordinate visits/prescriptions

The current PE standard for CA035 is two minutes.

The reference code, 96413, includes five minutes for homecare instructions.

The home care instructions for 3X021 include several additional steps. CAR-T patients need to have a caretaker monitoring for side effects 24/7. The caretaker needs to perform and report ICANS scores.

The caretaker needs to take swift action to get the CAR-T patient to a facility setting at the first sign of adverse reactions.

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

Clinical activities for reference code 96413 are being rolled into similar clinical activities –

- (1) CA013 Prepare room, equipment and supplies:

2 minutes for initial prepare room

The following clinical activities rolled up into CA013

Mix Chemotherapy (21)

- Verify medication interactions (2)
- Calculate dose (1)
- Maximum and cumulative dose (2)
- Second verification orders (1)
- Assemble supplies (1)
- Prep labels (1)
- Document lot # and expiration date (1)
- Clean hood (1)
- Reconstitute drug (7)
- Prep pump (5)

- (2) CA021 Perform procedure/service – NOT directly related to physician work time

The following clinical activities rolled up into CA021:

Perform procedure	28
Start IV	5
Verification by second RN/OCN	1
Sets rate	1
Monitor during service	
1st 8min. @1 min./min.	0
1st 6min. @ 1min./1min.	6
Subsequent @ 1 min./4 min.	13
Subsquent min. @ 1 min./5 min.	0
Supplies

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

	Remove IV/hemostasis	1
	Flush line	1

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

Prior to CMS increasing obtaining vital signs to 5 minutes in 2018, 3 minutes were allocated to CA010 *obtain vital signs* for reference code 96413

10. Please provide a brief description of the clinical staff work for the following:

a. Pre-Service period:

The RN/OCN coordinates with the other physician and clinical care team, confirming product to be infused and obtaining update on patient's condition. Confirms availability of tocilizumab doses.

b. Service period (includes pre, intra and post):

The RN/OCN escorts patient to infusion chair and completes pre-infusion check. The nurse prepares the product and educates patient on adverse effects. The nurse administers product to the patient and monitors for toxicity throughout. Nurse consults with supervising physician during course of treatment.

c. Post-service period:

The nurse continues to monitor the patient after treatment is completed. S/he documents the treatment in the medical record and reviews instructions with patient. The nurse makes follow up phone calls to the patient and others with whom care is being coordinated.

11. Please provide granular detail regarding what the clinical staff is doing during the intra-service (of service period) clinical activity, *assist physician or other qualified healthcare professional---directly related to physician work time* or *Perform procedure/service---NOT directly related to physician work time*:

The nurse:
prepares the central or peripheral line (3)
verification by second RN/ONC (1)
confirms rate (1)
monitors the infusion (20)
Disconnects the line (1)
Flushes line (1)

12. If you have used a percentage of the physician intra-service work time other than 100 or 67 percent for the intra-service (of service period) clinical activity, please indicate the percentage and explain why the alternate percentage is needed and how it was derived.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

13. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

14. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

N/A

MEDICAL SUPPLIES & EQUIPMENT/INVOICES

15. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
16. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
17. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

18. Are you recommending a PE supply pack for this recommendation? Yes or No.
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

N/A

19. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

N/A

20. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

21. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

22. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?
a. If yes, please explain how the computer is used for this service(s).

- b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
- c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

- 23. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment, please explain here:

The “other” equipment formula was chosen to compute time for EF009 chair, medical recliner. Time was calculated following the guidelines for the default formula PLUS monitoring formula.

PE-ONLY CODES ADDITIONAL INFORMATION

- 24. (a) Estimate the number of times this service might be provided nationally in a one-year period?
(b) Estimate the number of times this service might be provided to Medicare patients nationally in a one-year period?

N/A

- 25. Please select a Professional Liability Insurance (PLI) crosswalk based on a similar specialty mix:

N/A

ADDITIONAL INFORMATION

- 26. If there is any other item(s) on your spreadsheet not covered in the categories above that requires greater detail/explanation, please include here:

Place of Service (POS)
 CAR-T is typically performed in the facility setting, however CMS issued instructions that POS 11 (office) and 49 (independent clinic) are valid POS for CAR T-cell claims (implementation date January 31, 2023). [CMS Transmittal 11774](#), Issued December 30, 2022. Pub.199004

Clinical Time
 Post Procedure Monitoring: CAR-T patients are monitored in the NF setting for a minimum of 3 hours.

Supplies
 There are several CAR-T cell products. They are reimbursed separately through HCPCS codes.

The following is a breakdown of the supplies from the PE spreadsheet:

Universal Protection
 SB027 gown, staff, impervious, 1
 SB033 mask, surgical, 1

Prepare Product for Infusion
 SB044 chux (laid out to prepare product), 1
 SB023 gloves, non-sterile, nitrile, 1

SC049 stop cock, 3-way

Post Procedure Flush

SB023 gloves, non-sterile, nitrile, 1
SJ053 swab-pad, alcohol, 1
SH065 sodium chloride 0.9% flush syringe, 1

Dressing Change

SG037 dressing, 4in x 4.75in (Tegaderm), 1
SH023 chlorhexidine 0.12% (Peridex)

Post Procedure Cleaning

SM022 sanitizing cloth-wipe (surface, instruments, equipment), 1

ITEMIZED LIST OF CHANGES (FOLLOWING THE PE SUBCOMMITTEE MEETING)

NOTE: The PE spreadsheets will be updated and finalized in real-time at the meeting. PE SORs must be updated based on modifications made during the meeting and resubmitted asap. The PE SOR should match the updated PE spreadsheet. *The PE SOR serves as key support for the spreadsheet and should include any important details/explanation for the inputs as these cannot be elaborated upon in the excel document itself.* Please submit the revised form electronically to Rebecca Gierhahn at rebecca.gierhahn@ama-assn.org. In addition, please provide an itemized list of the modifications made to the PE spreadsheet during the PE Subcommittee meeting in the space below (e.g. clinical activity CA010 *obtain vital signs* was reduced from 5 minutes to 3 minutes).

September 2023

Intra-Abdominal Tumor Excision or Destruction – Tab 6

In May 2023, the CPT Editorial Panel created five new Category I codes to describe the sum of the maximum length of intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s) excised or destroyed. The new codes will replace existing CPT codes 49203, 49204, and 49205 that described tumor excision or destruction based on the size of the single largest tumor, cyst, or endometrioma removed, no matter the number of tumors. The five new Category I codes were surveyed for the September 2023 RUC meeting.

Compelling Evidence

The specialty societies presented compelling evidence to support a change in physician work for excision and destruction of intra-abdominal tumors based on a change in technology and patient population. When current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201), the replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors removed. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs). In addition, regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease. Cytoreduction of macroscopic tumors represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of associated macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. **The RUC accepted compelling evidence based on a change in technology and patient population.**

4X015 Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 5 cm or less

The RUC reviewed the survey results from 52 surgeons and recommends a work RVU of 22.00 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 150 minutes intra-service time, and 30 minutes immediate post-service time, 1-99232 and 2-99231 hospital visits, 1-99238 discharge day management visit, 1-99214 and 2-99213 office visits, and 442 minutes total time. The RUC agreed that the pre-service work involved a difficult patient and difficult procedure given that patients typically have a malignant neoplastic process which leads to systemic symptoms and eventual diagnosis.

Intraoperatively, an abdominal incision is made that is large enough to allow evaluation of the entire abdominal cavity. The peritoneal cavity is entered, adhesions are cleared to expose the abdominal area, and a manual exploration of the abdominal cavity is completed. The surrounding anatomy is carefully palpated for any additional disease, infection, malignancy, or mass. After the extensive manual palpation exploration of the abdomen is complete, the self-retaining retractor is carefully inserted while avoiding injury to surrounding anatomy. The primary mass location is confirmed, and the surrounding anatomy is packed away for optimal exposure. The mass is tediously resected while avoiding division of the blood supply to the corresponding organ. The abdominal cavity is irrigated copiously with antibiotic solution, hemostasis is obtained, the cavity is inspected for injury and presence of instruments, the retractor is removed, and the organs are returned to normal anatomical position. The omentum is placed over the abdominal contents, drain(s) are placed, the fascia is closed, supplies are re-counted, and the subcutaneous tissues are irrigated and closed.

The RUC accepted that 3 post-operative inpatient visits as indicated by the survey respondents are appropriate for this tumor burden size to allow for the restoration of proper bowel function, nutrition intake, pain control, and appropriate recovery of wounds, drains, and incisions. Further imaging is also often required. Additionally, the specialty societies indicated that the number and level of office visits are appropriate based on the level of medical decision making required for one or more chronic illnesses with exacerbation, the continuation of working toward the treatment goal, review of pathology reports, coordination of care with oncologists, and management of postoperative pain. The RUC agreed with the typical post-operative care given the clear need for continuous assessment of the treatment plan for an optimal patient outcome.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU = 21.58, 150 minutes intra-service, 463 minutes total time) and 27059 *Radical resection of tumor (eg, sarcoma), soft tissue of pelvis and hip area; 5 cm or greater* (work RVU = 29.35, 220 minutes intra-service, 608 minutes total time). Survey respondents indicated that the surveyed code was somewhat more, to much more intense and complex when compared to codes 22905 and 27059. The slightly higher complexity of the surveyed code is due to the increased depth and breadth of intraperitoneal exploration to identify and excise not only a single large tumor, but also to inspect peritoneal surfaces and the abdominal contents for any additional smaller tumors that may not have shown up on preoperative imaging. This adds psychological stress and requires more mental effort and judgment to confirm excision and destruction of all macroscopic tumors. Paired with this increased complexity and the intra-service and total time when compared with the key reference services, the surveyed code is appropriately valued at the recommended work RVU of 22.00.

For additional support, the RUC compared the surveyed code to MPC code 35301 *Thromboendarterectomy, including patch graft, if performed; carotid, vertebral, subclavian, by neck incision* (work RVU = 21.16, 120 minutes intra-service, and 404 minutes total time). The MPC code

requires less intra-service time and total time providing support that the surveyed code is valued appropriately higher. **The RUC recommends a work RVU of 22.00 for CPT code 4X015.**

4X016 Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 5.1 to 10 cm

The RUC reviewed the survey results from 48 surgeons and recommends a work RVU of 28.65 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 40 minutes of pre-service evaluation time, 3 minutes positioning time, 15 minutes scrub/dress/wait time, 195 minutes intra-service time, and 30 minutes immediate post-service time, 1-99233, 1-99232, and 2-99231 hospital visits, 1-99238 discharge day management visit, 1-99214 and 2-99213 office visits, and 542 minutes total time. Similar to the first code in this family, the RUC agreed that the pre-service work related to a difficult patient and difficult procedure were appropriate given that patients typically have a malignant neoplastic process which leads to systemic symptoms and eventual diagnosis.

For code 4X016, the intra-service work is similar to code 4X015, however, additional exploration and additional excision and destruction of additional tumor burden is performed, including macroscopic tumor deposits on parietal, omental, and peritoneal surfaces and small lesions and multiple surface nodules of the omentum, visceral, and peritoneal surfaces. Lastly, given the increase in the tumor(s) or cyst(s) size, the incision is larger and the tumor excision becomes more tedious given the complexities of the surround anatomy. This also factors into the post-operative work and additional hospital inpatient care when compared with the typical postoperative stay for patients undergoing 4X015.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 27059 *Radical resection of tumor (eg, sarcoma), soft tissue of pelvis and hip area; 5 cm or greater* (work RVU = 29.35, 220 minutes intra-service, 608 minutes total time) and 22905 *Radical resection of tumor (eg, sarcoma), soft tissue of abdominal wall; 5 cm or greater* (work RVU = 21.58, 150 minutes intra-service, 463 minutes total time). Survey respondents indicated that the surveyed code was somewhat more, to much more intense and complex when compared to codes 27059 and 22905. Given that the same surgeons perform 27059 and 22905, they are optimal comparators to determine the relative intensity and complexity of the surveyed code. For example, the higher intensity and complexity of the surveyed code is due to the increased breadth of intraperitoneal exploration to identify and excise not only multiple implants identified preoperatively, but also to inspect the bowel and abdominal organs for any additional tumors that may not have shown up on preoperative imaging. This adds psychological stress and requires more mental effort and judgment, which supports a slightly higher level of complexity to perform the surveyed procedure. Given this increased complexity and the intra-service and total time when compared with the key reference services, the surveyed code is appropriately valued at the recommended work RVU of 28.65.

For additional support, the RUC compared the surveyed code to MPC code 34705 *Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)* (work RVU = 29.58, 150 minutes intra-service, and 512 minutes total time). MPC code 34705 requires less intra-service and total time, although is slightly more complex and therefore, the surveyed code is valued slightly lower at a work RVU of 28.65. The RUC also compared the survey code to MPC code 55845 *Prostatectomy, retropubic radical, with or without nerve sparing; with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes* (work RVU = 25.18, 198 minutes

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

intra-service, and 466 minutes total time). Although MPC code 55845 has almost the same intraoperative time and a similar intraoperative intensity, 55845 requires significantly less postoperative work and therefore has a lower work RVU. **The RUC recommends a work RVU of 28.65 for CPT code 4X016.**

4X017 Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 10.1 to 20 cm

The RUC reviewed the survey results from 47 surgeons and recommends a work RVU of 34.00 based on the survey 25th percentile, which maintains relativity within the family for this code. The RUC recommends 50 minutes of pre-service evaluation time, 8 minutes positioning time, 15 minutes scrub/dress/wait time, 240 minutes intra-service time, and 30 minutes immediate post-service time, 2-99233, 299232, 1-99231 hospital visits, 1-99239 discharge day management visit, 1-99214 and 3-99213 office visits, and 717 minutes total time. The RUC accepted that an additional 10 minutes of evaluation time appropriately accounts for atypical extensive preoperative review of angiograms, MR, and CT imaging and reports to assist with preoperative planning. The abdomen cannot be marked for lesion excision, and instead, imaging must be reviewed and available to appropriately sequence the exploration and excision and destruction of tumors. The RUC also accepted that additional positioning time was appropriate to account for lithotomy positioning so that the surgeon can explore all areas of the intra-abdominal cavity throughout the procedure.

The intraoperative work of 4X017 is more extensive than for 4X015 and 4X016. The increased tumor excision and destruction factors into the postoperative work and additional hospital inpatient care when compared with the postoperative stay for patients undergoing 4X015 or 4X016. As more tumors and peritoneal stripping is performed, there is increased peritoneal swelling and fluid shift, significant pain, prolonged GI dysfunction requiring modulation of nutrition, and a need for close monitoring of labs--all requiring a longer and more intensive hospital stay.

The RUC agreed with the specialties that the final facility exam and discharge management for the typical patient will require more time and work which is consistent with 99239. These patients will all be going home weak from surgery and require continued prophylaxis for DVT, and coordination with home health care providers for nutrition, therapy and drain management, and coordination with other providers regarding initiation of preoperative medications chronic disease. The RUC also agreed with the specialties that the number and level of postoperative office visits was appropriate and supported by medical decision making and time.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 47780 *Anastomosis, Roux-en-Y, of extrahepatic biliary ducts and gastrointestinal tract* (work RVU = 42.32, 240 minutes intra-service, 799 minutes total time) and 27059 *Radical resection of tumor (eg, sarcoma), soft tissue of pelvis and hip area; 5 cm or greater* (work RVU = 29.35, 220 minutes intra-service, 608 minutes total time). The surveyed code is bracketed appropriately by the key reference services given the similar intra-service times and the surveyed code total time that falls appropriately in the middle of the key reference services justifying the recommended work RVU of 34.00.

For additional support, the RUC compared the surveyed code to MPC codes 34705 *Endovascular repair of infrarenal aorta and/or iliac artery(ies) by deployment of an aorto-bi-iliac endograft including pre-procedure sizing and device selection, all nonselective catheterization(s), all associated radiological supervision and interpretation, all endograft extension(s) placed in the aorta from the level of the renal arteries to the iliac bifurcation, and all angioplasty/stenting performed from the level of the renal arteries to the iliac bifurcation; for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, penetrating ulcer)* (work RVU = 29.58, 150 minutes intra-service, 512 minutes total time) and 33534

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

Coronary artery bypass, using arterial graft(s); 2 coronary arterial grafts (work RVU = 39.88, 193 minutes intra-service, 717 total time). MPC code 34705 requires less intraoperative time and less postoperative work and is appropriately less than 4X017. MPC code 33534 requires less intraoperative time, but significantly more and higher level postoperative work and is appropriately valued higher than 4X017. The MPC codes therefore appropriately bracket the surveyed code. Therefore, the recommended work RVU of 34.00 is justified and maintains relativity within the code family and within the MPS. **The RUC recommends a work RVU of 34.00 for CPT code 4X017.**

4X018 Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 20.1 to 30 cm

The RUC reviewed the survey results from 46 surgeons and recommends a work RVU of 45.00 based on the survey median percentile, which maintains relativity within the family for this code. The RUC recommends 50 minutes of pre-service evaluation time, 15 minutes positioning time, 15 minutes scrub/dress/wait time, 310 minutes intra-service time, and 30 minutes immediate post-service time, 2-99233, 2-99232, 2-99231 hospital visits, 1-99239 discharge day management visit, 1-99214 and 3-99213 office visits, and 814 minutes total time. The RUC accepted that an additional 10 minutes of evaluation time appropriately accounts for atypical extensive preoperative review of angiograms, MR, and CT imaging and reports to assist with preoperative planning. The abdomen cannot be marked for lesion excision, and instead, imaging must be reviewed and available to appropriately sequence the exploration and excision and destruction of tumors. The RUC also accepted that additional positioning time was appropriate to account for initial lithotomy positioning and repositioning as needed to gain access to all areas of the peritoneal and retroperitoneal space during the 5+ hour procedure.

The intraoperative work of 4X018 is more extensive than for 4X015, 4X016, and 4X017. The increased tumor excision and destruction factors into the postoperative work and additional hospital inpatient care when compared with the postoperative stay. As more tumors and peritoneal stripping is performed, there is increased peritoneal swelling and fluid shift, significant pain, prolonged GI dysfunction requiring modulation of nutrition, and a need for close monitoring of labs--all requiring a longer and more intensive hospital stay.

The RUC agreed with the specialties that the final facility exam and discharge management for the typical patient will require more time and work which is consistent with 99239. These patients will all be going home weak from surgery and require continued prophylaxis for DVT and coordination with home health care providers for nutrition, therapy and drain management, and coordination with other providers regarding initiation of preoperative medications chronic disease. The RUC also agreed with the specialties that the number and level of postoperative office visits was appropriate and supported by medical decision making and time.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 58240 *Pelvic exenteration for gynecologic malignancy, with total abdominal hysterectomy or cervicectomy, with or without removal of tube(s), with or without removal of ovary(s), with removal of bladder and ureteral transplantations, and/or abdominoperineal resection of rectum and colon and colostomy, or any combination thereof* (work RVU = 49.33, 420 minutes intra-service, and 1,118 minutes total time) and 47780 *Anastomosis, Roux-en-Y, of extrahepatic biliary ducts and gastrointestinal tract* (work RVU = 42.32, 240 minutes intra-service, 799 minutes total time). Survey respondents indicated that the surveyed code was somewhat more, to much more intense and complex when compared to code 58240. Further, the survey respondents indicated that the surveyed code was identical to more intense and complex when compared to code 47780. Therefore, the surveyed code is bracketed appropriately by the key reference services given that the intra-service time falls relatively in the middle with the total time slightly higher than

code 47780. However, the complexity to perform the surveyed code is slightly higher than both key reference services offering support that the surveyed code recommended work RVU of 45.00 is appropriate.

For additional support, the RUC reviewed similar 090-day global codes that were reviewed in the last 15 years with an intra-service time between 300-320 minutes and found that the recommended work RVU of 45.00 falls at the bottom of the values for similar services. The RUC recognized that the survey 25th percentile would be too low for the complexity and intensity of this procedure and that the median work RVU would more appropriately value 4X018 relative to similarly complex and intense procedures. The RUC agreed that the recommended work RVU maintains relativity within the code family and within the MPS. **The RUC recommends a work RVU of 45.00 for CPT code 4X018.**

4X019 Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); greater than 30 cm

The RUC reviewed the survey results from 39 surgeons and recommends a work RVU of 55.00 based on the survey median percentile, which maintains relativity within the family for this code. The RUC recommends 60 minutes of pre-service evaluation time, 15 minutes positioning time, 15 minutes scrub/dress/wait time, 360 minutes intra-service time, and 40 minutes immediate post-service time, 5-99233, 2-99232, 1-99231 hospital visits, 1-99239 discharge day management visit, 2-99214 and 2-99213 office visits, and 1,046 minutes total time. The RUC accepted that an additional 20 minutes of evaluation time appropriately accounts for atypical extensive preoperative review of angiograms, MR, and CT imaging and reports to assist with preoperative planning for this procedure that would typically require two surgeons who will typically be of different specialties to access the extensive peritoneal and retroperitoneal examination to locate and excise tumor implants. Additionally, multidisciplinary discussion between the surgeons and with anesthesia requires significantly more time. The RUC also accepted that additional positioning time was appropriate to account for initial lithotomy positioning and repositioning as needed to gain access to all areas of the peritoneal and retroperitoneal space during the 6+ hour procedure.

The intraoperative work of 4X019 is more extensive than for the other codes in this family. The increased tumor excision and destruction factors into the postoperative work and additional hospital inpatient care when compared with the postoperative stay. As more tumors and peritoneal stripping is performed, there is increased peritoneal swelling and fluid shift, significant pain, prolonged GI dysfunction requiring modulation of nutrition, and a need for close monitoring of labs--all requiring a longer and more intensive hospital stay. These patients will be very weak and very sick for many days after this procedure and require very close monitoring.

The RUC agreed with the specialties that the final facility exam and discharge management for the typical patient will require more time and work which is consistent with 99239. These patients will all be going home weak from surgery and require continued prophylaxis for DVT and coordination with home health care providers for nutrition, therapy and drain management, and coordination with other providers regarding initiation of preoperative medications chronic disease. The RUC also agreed with the specialties that the number and level of postoperative office visits was appropriate and supported by medical decision making and time.

To support the recommended work RVU, the RUC compared the surveyed code to key reference codes 43124 *Total or partial esophagectomy, without reconstruction (any approach), with cervical esophagostomy* (work RVU = 69.09, 243 minutes intra-service, 1,398 minutes total time) and 43107 *Total or near total esophagectomy, without thoracotomy; with pharyngogastrostomy or cervical esophagogastronomy, with or without pyloroplasty (transhiatal)* (work RVU = 52.05, 270 minutes intra-service, 977 minutes total time). Survey respondents indicated that the surveyed

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

code was somewhat more, to much more intense and complex when compared to codes 43124 and 43107. Although the surveyed code intra-service time is significantly higher than both key reference services, the intraoperative intensity is appropriately similar or slightly less. Therefore, the surveyed code recommended work RVU of 55.00 is bracketed appropriately by the key reference services.

For additional support, the RUC reviewed similar 090-day global codes that were reviewed in the last 15 years with an intra time equivalent to 360 minutes and a total time greater than 900 minutes and found that the recommended work RVU of 55.00 falls at the bottom of the values for similar services. The RUC recognized that the survey 25th percentile would be too low for the complexity and intensity of this procedure and that the median work RVU would more appropriately value 4X019 relative to similarly complex and intense procedures. The RUC agreed that the recommended work RVU maintains relativity within the code family and within the MPS. **The RUC recommends a work RVU of 55.00 for CPT code 4X019.**

Practice Expense

The Practice Expense (PE) Subcommittee agreed with the specialty societies that there is compelling evidence to support an increase over the aggregate current cost for clinical activities, supplies, and equipment for the deleted CPT codes 49203-49205. The Subcommittee concurred that there is compelling evidence to justify the opportunity for an increase in the inputs based upon evidence of flawed methodology of prior review which was missing required postoperative disposable supplies. The Subcommittee also acknowledged the increase in post-operative office visits. The PE Subcommittee reviewed the direct practice expense inputs and made no modifications. **The RUC recommends the direct practice expense inputs as submitted by the specialty society.**

CPT Code	Tracking Number	CPT Descriptor	Global Period	Work RVU Recommendation
<p>Digestive System Abdomen, Peritoneum, and Omentum Excision, Destruction</p> <p><i>Code 49185 describes sclerotherapy of a fluid collection (eg, lymphocele, cyst, or seroma) through a percutaneous access. It includes contrast injection(s), sclerosant injection(s), sclerosant dwell time, diagnostic study, imaging guidance (eg, ultrasound, fluoroscopy), and radiological supervision and interpretation, when performed. Code 49185 may be reported once per day for each lesion treated through a separate catheter. Do not report 49185 more than once if treating multiple lesions through the same catheter. Codes for access to and drainage of the collection may be separately reportable according to location (eg, 10030, 10160, 49405, 49406, 49407, 50390).</i></p> <p><u>Codes 4X015, 4X016, 4X017, 4X018, 4X019 describe excision or destruction of intra-abdominal primary or secondary tumor(s) or cyst(s), via an open approach. Excision or destruction of intra-abdominal primary or secondary tumor(s) or cyst(s) via an open approach includes cytoreduction, debulking, or other methods of removal of the tumor(s) or cyst(s). These codes are reported based on the sum of the maximum length of each tumor or cyst that is excised or destroyed (eg, ultrasound desiccation). Only the tumor(s) and cyst(s) are measured, not the tissue (eg, mesentery) in which the tumor(s) and cyst(s) may be implanted. If only a portion of a tumor or cyst is excised or destroyed, then only the</u></p>				

excised or destroyed portion is measured. The tumor(s) and cyst(s) should be measured in situ prior to excision or destruction and documented in the operative report. Measurement includes only the tumor(s) and cyst(s) and not margins. Codes 4X015, 4X016, 4X017, 4X018, 4X019 are reported when the resected or destroyed intra-abdominal tumor(s) and cyst(s) do not directly arise from a resected organ (eg, small bowel mass, renal mass, liver mass) or soft tissue that may be separately reportable. When the tumors directly arise from an organ or soft tissue, only the organ or soft tissue resection or destruction procedure code from which the tumors arise is reported. For example, if a partial ascending colon resection including small tumor implants is performed and a separate excision of multiple small tumor implants in the mesentery of the descending colon is also performed, the appropriate colectomy code (eg, 44140) is reported for the partial ascending colon resection and the excision of the tumor implants in the mesentery of the descending colon is separately reported with an appropriate tumor excision code (4X015, 4X016, 4X017, 4X018, 4X019). The implants that were part of the ascending colon resection would not be included in the measurement for reporting the tumor excision code (4X015, 4X016, 4X017, 4X018, 4X019).

Open resection of recurrent ovarian, endometrial, tubal or primary peritoneal gynecological malignancies without lymphadenectomy should be reported with 4X015, 4X016, 4X017, 4X018, 4X019. All other open resection of initial or recurrent ovarian, endometrial, tubal, or primary peritoneal gynecologic malignancies should be reported with 58943, 58950, 58951, 58952, 58953, 58954, 58956, 58958, 58960.

(For lysis of intestinal adhesions, use 44005)

49180 *Biopsy, abdominal or retroperitoneal mass, percutaneous needle*

(If imaging guidance is performed, see 76942, 77002, 77012, 77021)

(For fine needle aspiration biopsy, see 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011, 10012, 10021)

(For evaluation of fine needle aspirate, see 88172, 88173)

49185 *Sclerotherapy of a fluid collection (eg, lymphocele, cyst, or seroma), percutaneous, including contrast injection(s), sclerosant injection(s), diagnostic study, imaging guidance (eg, ultrasound, fluoroscopy) and radiological supervision and interpretation when performed*

(For treatment of multiple lesions in a single day requiring separate access, use modifier 59 for each additional treated lesion)

(For treatment of multiple interconnected lesions treated through a single access, report 49185 once)

(For access/drainage with needle, see 10160, 50390)

(For access/drainage with catheter, see 10030, 49405, 49406, 49407, 50390)

(For exchange of existing catheter, before or after injection of sclerosant, see 49423, 75984)

(For sclerotherapy of a lymphatic/vascular malformation, use 37241)

(For sclerosis of veins or endovenous ablation of incompetent extremity veins, see 36468, 36470, 36471, 36475, 36476, 36478, 36479)

(For pleurodesis, use 32560)

96549 *Unlisted chemotherapy procedure*

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code:4X015	Tracking Number F1	Original Specialty Recommended RVU: 22.00
		Presented Recommended RVU: 22.00
Global Period: 090	Current Work RVU: n/a	RUC Recommended RVU: 22.00

CPT Descriptor: Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 5 cm or less

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 45-year-old female presents with a 4-cm mesenteric mass involving the small bowel mesentery near the base. She undergoes a resection of the mass.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 15% , Overnight stay-more than 24 hours 85%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 90%

Description of Pre-Service Work: Review pre-operative work-up, with particular attention to imaging and reports. Review results of preoperative testing (lab, EKG, chest x-ray, availability of blood products). Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of DVT prophylaxis. Write orders for preoperative medications including beta blockers, if indicated. Meet with patient and family to review planned procedure and postoperative management. Review and obtain informed consent, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor/assist with supine positioning of patient. Assist anesthesia team with line placement and induction of anesthesia and intubation. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Skin incision is made using sharp dissection. Hemostasis is achieved using electrocautery and small ligatures, as necessary. The linea alba is identified and carefully divided. The peritoneum is grasped, elevated, and carefully incised to avoid injury to bowel. The peritoneal cavity is entered under direct vision. Adhesions are cleared by sharp dissection in order to expose all of the abdominal viscera. A visual and manual complete exploration of the abdominal cavity and its contents is carried out. The NG tube is placed and its position is confirmed. The stomach is inspected and palpated for pathology. The duodenum is visualized and palpated. The gallbladder is inspected and palpated for the presence of stones. The liver is palpated bimanually, as is the porta hepatis. The pancreas is inspected through the hepatogastric ligament and palpated for possible masses. The tail of the pancreas is palpated for possible lymphadenopathy. The small bowel is inspected and palpated from the ligament of Treitz to the ileocecal valve. The small bowel mesentery is inspected and palpated for the presence of lymphadenopathy. A large mass is identified in the mesentery of the distal small bowel. The cecum and appendix, ascending, transverse, and descending colon are inspected and palpated. The cul-de-sac and pelvic contents are inspected and palpated. A self-retaining retractor is carefully inserted, while avoiding injury or entrapment of abdominal contents. The location and extent of the primary lesion is confirmed. The abdominal contents, to the exclusion of the right colon, are packed away using laparotomy pads and additional retractors are placed for optimal exposure. The right colon and distal small bowel are mobilized lateral to medial by incising the line of Toldt. The small bowel mesentery containing the mass and the corresponding loop of small bowel are identified. The 4 cm mass is resected along with the corresponding mesentery avoiding division of the blood supply to the corresponding small bowel loop and right colon. During this dissection, the right ureter is identified and a vessel loop is placed for continual identification and protection of the ureter. The abdominal cavity is irrigated copiously with antibiotic solution.

Hemostasis is obtained. The abdomen is inspected for injury and the presence of any instruments or lap-pads (ie, count is made). The retractor components are removed and accounted for. The abdominal organs are returned to normal anatomical position. The omentum is draped over the abdominal contents. Drain(s) are placed as required. The fascia is closed with running suture. A second instrument, needle, sponge, and lap-pad count is conducted. The subcutaneous tissues are irrigated and approximated and the skin is closed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in patient's chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Monitor drain(s) output. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Monitor drain(s) output. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Monitor fluid and electrolyte status and renal function. Write orders for labs, films, and medications. Manage nasogastric tube, remove when appropriate and advance diet. Write orders for patient activity and therapy as required. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds, drains and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Drains are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family, typically at the first postoperative visit. Patient and family questions are answered. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued, typically for 30 days postoperatively, unless contraindicated. Activity limitations and wound care are reviewed with the patient and family. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence**Overview**

The peritoneal surface, characterized by its unique features and the difficulties associated with studying and managing diseases involving this region, is commonly labeled as an "orphan organ." Historically, the peritoneal surface has

received less emphasis in comparison to organs like the liver, lungs, or heart. However, in the last decade or so, there has been a growing acknowledgment of the significance of the peritoneal surface, accompanied by endeavors to advance treatment options. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs).¹

Over the past 10 to 15 years, the integration of a locoregional therapeutic approach with modern multidisciplinary strategies that involve perioperative systemic treatments has profoundly changed the prognosis of patients with PSMs. Regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease.²

Changes in Patient Population and Technology

In recent years, the patient population undergoing CRS for the treatment of PSMs has witnessed several changes, including expanded eligibility criteria..

Expanded Eligibility Criteria: Over time, there has been a broadening of eligibility criteria for CRS, allowing a wider range of patients to be considered for the procedure. Initially, CRS was primarily offered to patients with limited disease burden and favorable prognostic factors. However, with advancements in surgical techniques and perioperative multidisciplinary management, there has been a shift towards considering patients with more extensive disease involvement and various primary cancer origins. This expanded eligibility has been supported by studies showing favorable outcomes in carefully selected patients.³⁴ Also, in recent years, there has been a noticeable shift towards including patients who were previously deemed marginal candidates for CRS. This change in practice considers patients with factors like advanced age, comorbidities, or suboptimal performance status. The evolving expertise in surgical techniques and improvements in perioperative care have facilitated a more personalized evaluation process that takes into account not only the extent of disease but also patient-specific factors.⁵

Targeted Surgical Approaches: Advances in imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and positron emission tomography (PET), have enabled more precise preoperative tumor mapping. This has led to the development of targeted surgical approaches, such as tumor-specific resections and organ-preserving surgeries. Surgeons can now plan and execute surgeries with greater accuracy, focusing on removing the tumor while preserving vital structures and minimizing unnecessary tissue removal. These targeted approaches require additional preoperative time as part of the evaluation work and increased intraoperative time and technical skill to preserve organs.⁶

Integration of Multimodal Therapies: In recent years, there has been a notable rise in the integration of multimodal therapies, including the use of CRS in conjunction with other treatment modalities. The combination of CRS with hyperthermic intraperitoneal chemotherapy (HIPEC) has increasingly become a common approach for selected patients, as studies have demonstrated improved outcomes compared to CRS alone. Furthermore, neoadjuvant chemotherapy or

systemic therapy followed by CRS has been employed to shrink tumors and improve the feasibility of resection. This multimodal approach enables a comprehensive treatment strategy that addresses both visible and microscopic disease, expanding the potential for surgical candidacy in patients who may not have previously been considered.^{7,8}

Expanded Perioperative Work: Enhanced anesthesia techniques and postoperative pain management strategies have improved patient comfort and recovery. Multidisciplinary perioperative teams collaborate to implement enhanced recovery after surgery (ERAS) protocols,⁹ which aim to reduce surgical stress, enhance patient recovery, and expedite return to normal function. In recent years, there has been notable improvement in the multidisciplinary management of peritoneal surface malignancies. Enhanced collaboration among surgical oncologists, medical oncologists, radiologists, and other specialists has facilitated comprehensive treatment planning and decision-making.¹⁰ This multidisciplinary approach plays a crucial role in achieving optimal patient outcomes and enhancing care coordination. This coordination requires additional perioperative time and work.

Tumor Size and burden: The current coding guidelines do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. However, recent changes in the standard of care necessitate not only the excision of individual large tumors but also the cytoreduction of macroscopic tumors. This additional task represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. The presence of larger and more extensive tumor burden also raises the likelihood of involving multiple surgeons, requiring additional preoperative time to coordinate their efforts, which was not previously accounted for.

Summary

Over the past 10 to 15 years, treatment for peritoneal surface malignancies has evolved significantly. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. These changes provide compelling evidence that work has changed since the codes were proposed in 2006, almost 20 years ago.

Background

Current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201). The replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors -- this does not accurately differentiate the surgeon's work (time, intensity, complexity). For example, excision of 15 small 1-3 cm tumors over an extensive area of the peritoneal surface versus excision of a single 4 cm tumor were both reported with the same code (49203) although the work, time, and intensity of the operations are vastly different. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. In recognition of the vastly different work in current practice, the CPT Editorial Panel deleted the current codes (49203-49205) and created five new codes (4X015-4X019) based on total peritoneal, mesenteric, and/or retroperitoneal tumor cytoreduction.

Recommendation

We recommend the survey 25th percentile work RVU of 22.00.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Standard package time of 40 minutes.

Positioning time: Standard package time of 3 minutes for supine positioning.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

Immediate Post-time

Package 9b: Subtract 3 minutes to be consistent with the survey median.

Discussion of Postoperative Office Visits

At the first postoperative visit, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Some or all staples/sutures are removed as appropriate. Drain(s) may be removed. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family. Patient and family questions are answered. A PDMP check is performed, pain medications are reviewed and alterations made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued unless contraindicated. Activity limitations and wound care are reviewed. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with reviewed. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

At the second postoperative visit, an interval history and physical exam is performed. The wounds are inspected and any remaining staples, sutures, and drain(s) are removed, with dressings applied as required. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. Activity limitations and wound care are reviewed. DVT prophylaxis is considered and continued unless contraindicated. Physical therapy, home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and ordered as required. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Patient and family questions are answered. Discussion with other treating providers

occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). Interval imaging and labs reviewed and care plan changed if appropriate. Medical record progress notes are dictated, reviewed, and signed. Leave of absence or short term disability forms are updated, as required. An update to other treating providers and primary care physician is provided.

At the third postoperative visit, an interval history and physical exam is performed, including wound check. Additional postoperative labs are reviewed. Activity and sometimes dietary restrictions are released. PDMP is reviewed and pain medication tapering or cessation will be addressed. The care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outlining surveillance plans. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

Key Reference Code Comparison

Code 22905 has identical intraop time and almost identical total time, making it a good comparator code. Respondents who chose 22905 as a reference indicated that 4X015 was somewhat more to much more intense and complex. The same surgeons who perform 4X015 will have experience with performing 22905 and therefore are fit to rate and compare the procedures. The slightly higher intensity of 4X015 when compared with 22905 is due to the increased depth and breadth of intraperitoneal exploration to identify and excise not only the single large tumor, but also to inspect the bowel and abdominal organs for any additional smaller tumors that may not have shown up on preoperative imaging. This adds psychological stress and requires more mental effort and judgment, which support a slightly higher intensity.

Similarly, respondents who chose 27059 as a reference indicated that 4X015 was somewhat more intense and complex. The same surgeons who would perform 4X015 would have experience with performing 27059 and therefore are fit to rate and compare. The slightly higher intensity of 4X015 when compared with 27059 is due to the increased breadth of intraperitoneal exploration to identify and excise not only the single large tumor, but also to inspect the bowel and abdominal organs for any additional smaller tumors that may not have shown up on preoperative imaging. This adds psychological stress and requires more mental effort and judgment, which supports a slightly higher intensity.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.

Other

Professional Liability Insurance Information (PLI)

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 62-year-old male has progressive colorectal carcinoma with limited peritoneal disease. Multiple implants measuring 8-cm in total size are removed from the peritoneal cavity.

Percentage of Survey Respondents who found Vignette to be Typical: 67%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 4% , Overnight stay-more than 24 hours 96%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 92%

Description of Pre-Service Work: Review pre-operative work-up, with particular attention to imaging and reports. Review results of preoperative testing (lab, EKG, chest x-ray, availability of blood products). Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of DVT prophylaxis. Write orders for preoperative medications including beta blockers, if indicated. Meet with patient and family to review planned procedure and postoperative management. Review and obtain informed consent, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor/assist with supine positioning of patient. Assist anesthesia team with line placement and induction of anesthesia and intubation. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Skin incision is made using sharp dissection. Hemostasis is achieved using electrocautery and small ligatures, as necessary. The linea alba is identified and carefully divided. The peritoneum is grasped, elevated, and carefully incised to avoid injury to bowel. The peritoneal cavity is entered under direct vision. Adhesions are cleared by sharp dissection in order to expose all of the abdominal viscera. A visual and manual complete exploration of the abdominal cavity and its contents is carried out. The NG tube is placed and its position is confirmed. The stomach is inspected and palpated for pathology. The duodenum is visualized and palpated. The gallbladder is inspected and palpated for the presence of stones. The liver is palpated bimanually, as is the porta hepatis. The pancreas is inspected through the hepatogastric ligament and palpated for possible masses. The tail of the pancreas is palpated for possible lymphadenopathy. The small bowel is inspected and palpated from the ligament of Treitz to the ileocecal valve. The small bowel mesentery is inspected and palpated for the presence of lymphadenopathy. The cecum and appendix, ascending, transverse, and descending colon are inspected and palpated. The cul-de-sac and pelvic contents are inspected and palpated. The greater vessels of the abdomen and the urinary tract are examined. All other intra-abdominal organs are systematically inspected. Following peritoneal and retroperitoneal exploration, excision and destruction of all macroscopic tumor deposits on parietal, omental and peritoneal surfaces is performed. Resection of the small lesions and multiple surface nodules of the omentum, visceral and peritoneal surfaces is performed. Some lesions on the small intestine serosal surface are desiccated with ultrasonic desiccation. The in situ measured total dimension of all excised tumors is documented as 8 cm. The abdominal cavity is irrigated copiously with antibiotic solution. Hemostasis is obtained. The abdomen is inspected for injury and the presence of any instruments or lap-pads (ie, count is made). The retractor components are removed and accounted for. The abdominal organs are returned to normal anatomical position. The omentum is draped over the

abdominal contents. Drain(s) are placed as required. The fascia is closed with running suture. A second instrument, needle, sponge, and lap-pad count is conducted. The subcutaneous tissues are irrigated and approximated and the skin is closed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in patient's chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to intensive care unit or general surgical floor and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Monitor drain(s) output. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Monitor drain(s) output. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Monitor fluid and electrolyte status and renal function. Write orders for labs, films, and medications. Manage nasogastric tube, remove when appropriate and advance diet. Write orders for patient activity and therapy as required. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds, drains and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Drains are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family, typically at the first postoperative visit. Patient and family questions are answered. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued, typically for 30 days postoperatively, unless contraindicated. Activity limitations and wound care are reviewed with the patient and family. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence**Overview**

The peritoneal surface, characterized by its unique features and the difficulties associated with studying and managing diseases involving this region, is commonly labeled as an "orphan organ." Historically, the peritoneal surface has

received less emphasis in comparison to organs like the liver, lungs, or heart. However, in the last decade or so, there has been a growing acknowledgment of the significance of the peritoneal surface, accompanied by endeavors to advance treatment options. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs).¹

Over the past 10 to 15 years, the integration of a locoregional therapeutic approach with modern multidisciplinary strategies that involve perioperative systemic treatments has profoundly changed the prognosis of patients with PSMs. Regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease.²

Changes in Patient Population and Technology

In recent years, the patient population undergoing CRS for the treatment of PSMs has witnessed several changes, including expanded eligibility criteria..

Expanded Eligibility Criteria: Over time, there has been a broadening of eligibility criteria for CRS, allowing a wider range of patients to be considered for the procedure. Initially, CRS was primarily offered to patients with limited disease burden and favorable prognostic factors. However, with advancements in surgical techniques and perioperative multidisciplinary management, there has been a shift towards considering patients with more extensive disease involvement and various primary cancer origins. This expanded eligibility has been supported by studies showing favorable outcomes in carefully selected patients.³⁴ Also, in recent years, there has been a noticeable shift towards including patients who were previously deemed marginal candidates for CRS. This change in practice considers patients with factors like advanced age, comorbidities, or suboptimal performance status. The evolving expertise in surgical techniques and improvements in perioperative care have facilitated a more personalized evaluation process that takes into account not only the extent of disease but also patient-specific factors.⁵

Targeted Surgical Approaches: Advances in imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and positron emission tomography (PET), have enabled more precise preoperative tumor mapping. This has led to the development of targeted surgical approaches, such as tumor-specific resections and organ-preserving surgeries. Surgeons can now plan and execute surgeries with greater accuracy, focusing on removing the tumor while preserving vital structures and minimizing unnecessary tissue removal. These targeted approaches require additional preoperative time as part of the evaluation work and increased intraoperative time and technical skill to preserve organs.⁶

Integration of Multimodal Therapies: In recent years, there has been a notable rise in the integration of multimodal therapies, including the use of CRS in conjunction with other treatment modalities. The combination of CRS with hyperthermic intraperitoneal chemotherapy (HIPEC) has increasingly become a common approach for selected patients, as studies have demonstrated improved outcomes compared to CRS alone. Furthermore, neoadjuvant chemotherapy or

systemic therapy followed by CRS has been employed to shrink tumors and improve the feasibility of resection. This multimodal approach enables a comprehensive treatment strategy that addresses both visible and microscopic disease, expanding the potential for surgical candidacy in patients who may not have previously been considered.^{7,8}

Expanded Perioperative Work: Enhanced anesthesia techniques and postoperative pain management strategies have improved patient comfort and recovery. Multidisciplinary perioperative teams collaborate to implement enhanced recovery after surgery (ERAS) protocols,⁹ which aim to reduce surgical stress, enhance patient recovery, and expedite return to normal function. In recent years, there has been notable improvement in the multidisciplinary management of peritoneal surface malignancies. Enhanced collaboration among surgical oncologists, medical oncologists, radiologists, and other specialists has facilitated comprehensive treatment planning and decision-making.¹⁰ This multidisciplinary approach plays a crucial role in achieving optimal patient outcomes and enhancing care coordination. This coordination requires additional perioperative time and work.

Tumor Size and burden: The current coding guidelines do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. However, recent changes in the standard of care necessitate not only the excision of individual large tumors but also the cytoreduction of macroscopic tumors. This additional task represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. The presence of larger and more extensive tumor burden also raises the likelihood of involving multiple surgeons, requiring additional preoperative time to coordinate their efforts, which was not previously accounted for.

Summary

Over the past 10 to 15 years, treatment for peritoneal surface malignancies has evolved significantly. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. These changes provide compelling evidence that work has changed since the codes were proposed in 2006, almost 20 years ago.

Background

Current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201). The replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors -- this does not accurately differentiate the surgeon's work (time, intensity, complexity). For example, excision of 15 small 1-3 cm tumors over an extensive area of the peritoneal surface versus excision of a single 4 cm tumor were both reported with the same code (49203) although the work, time, and intensity of the operations are vastly different. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. In recognition of the vastly different work in current practice, the CPT Editorial Panel deleted the current codes (49203-49205) and created five new codes (4X015-4X019) based on total peritoneal, mesenteric, and/or retroperitoneal tumor cytoreduction.

Recommendation

We recommend the survey 25th percentile work RVU of 28.65.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 98%

Description of Pre-Service Work: Review pre-operative work-up, with particular attention to angiograms and extensive MRI and CT imaging and reports to assist with preoperative planning. Review results of preoperative testing (lab, EKG, chest x-ray, availability of blood products). Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of DVT prophylaxis. Write orders for preoperative medications including beta blockers, if indicated. Meet with patient and family to review planned procedure and postoperative management. Review and obtain informed consent, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor/assist with lithotomy positioning of patient. Assist anesthesia team with line placement and induction of anesthesia and intubation. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Skin incision is made using sharp dissection. Hemostasis is achieved using electrocautery and small ligatures, as necessary. The linea alba is identified and carefully divided. The peritoneum is grasped, elevated, and carefully incised to avoid injury to bowel. The peritoneal cavity is entered under direct vision. Adhesions are cleared by sharp dissection in order to expose all of the abdominal viscera. A visual and manual complete exploration of the abdominal cavity and its contents is carried out. The NG tube is placed and its position is confirmed. The stomach is inspected and palpated for pathology. The duodenum is visualized and palpated. The gallbladder is inspected and palpated for the presence of stones. The liver is palpated bimanually, as is the porta hepatis. The pancreas is inspected through the hepatogastric ligament and palpated for possible masses. The tail of the pancreas is palpated for possible lymphadenopathy. The small bowel is inspected and palpated from the ligament of Treitz to the ileocecal valve. The small bowel mesentery is inspected and palpated for the presence of lymphadenopathy. The cecum and appendix, ascending, transverse, and descending colon are inspected and palpated. The cul-de-sac and pelvic contents are inspected and palpated. The greater vessels of the abdomen and the urinary tract are examined. All other intra-abdominal organs are systematically inspected. Following peritoneal and retroperitoneal exploration, resection of the large lower abdominal mass and multiple surface nodules of the omentum, visceral and peritoneal surfaces is performed. Resection of the small lesions and multiple surface nodules of the omentum, visceral and peritoneal surfaces is performed. The in situ measured total dimension of all excised tumors is documented as 19 cm. The abdominal cavity is irrigated copiously with antibiotic solution. Hemostasis is obtained. The abdomen is inspected for injury and the presence of any instruments or lap-pads (ie, count is made). The

retractor components are removed and accounted for. The abdominal organs are returned to normal anatomical position. The omentum is draped over the abdominal contents. A lateral incision is made and a closed suction drain is pulled through the abdominal wall and placed in the resection bed. The drain is sutured to the skin with monofilament suture. Additional drains may be placed as required. The fascia is closed with running suture. A second instrument, needle, sponge, and lap-pad count is conducted. The subcutaneous tissues are irrigated and approximated and the skin is closed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in patient's chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to intensive care unit and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Monitor drain(s) output. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Monitor drain(s) output. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Adjust parenteral controlled pain medication dosing appropriately. Closely monitor fluid and electrolyte status and renal function as extensive tissue excision and tumor desiccation causes dramatic fluid shifts. Write orders for labs, films, and medications. Manage nasogastric tube, remove when appropriate and advance diet. Write orders for patient activity and therapy as required. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds, drains and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Drains are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family, typically at the first postoperative visit. Patient and family questions are answered. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued, typically for 30 days postoperatively, unless contraindicated. Activity limitations and wound care are reviewed with the patient and family. Imaging to evaluate for healing or complications is considered and ordered as required. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Dietary instructions and need for nutritional supplements are discussed. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). The

postoperative care plan and the care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outline surveillance plans. Multidisciplinary discussion with other treating providers is performed. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

Overview

The peritoneal surface, characterized by its unique features and the difficulties associated with studying and managing diseases involving this region, is commonly labeled as an "orphan organ." Historically, the peritoneal surface has

received less emphasis in comparison to organs like the liver, lungs, or heart. However, in the last decade or so, there has been a growing acknowledgment of the significance of the peritoneal surface, accompanied by endeavors to advance treatment options. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs).¹

Over the past 10 to 15 years, the integration of a locoregional therapeutic approach with modern multidisciplinary strategies that involve perioperative systemic treatments has profoundly changed the prognosis of patients with PSMs. Regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease.²

Changes in Patient Population and Technology

In recent years, the patient population undergoing CRS for the treatment of PSMs has witnessed several changes, including expanded eligibility criteria..

Expanded Eligibility Criteria: Over time, there has been a broadening of eligibility criteria for CRS, allowing a wider range of patients to be considered for the procedure. Initially, CRS was primarily offered to patients with limited disease burden and favorable prognostic factors. However, with advancements in surgical techniques and perioperative multidisciplinary management, there has been a shift towards considering patients with more extensive disease involvement and various primary cancer origins. This expanded eligibility has been supported by studies showing favorable outcomes in carefully selected patients.³⁴ Also, in recent years, there has been a noticeable shift towards including patients who were previously deemed marginal candidates for CRS. This change in practice considers patients with factors like advanced age, comorbidities, or suboptimal performance status. The evolving expertise in surgical techniques and improvements in perioperative care have facilitated a more personalized evaluation process that takes into account not only the extent of disease but also patient-specific factors.⁵

Targeted Surgical Approaches: Advances in imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and positron emission tomography (PET), have enabled more precise preoperative tumor mapping. This has led to the development of targeted surgical approaches, such as tumor-specific resections and organ-preserving surgeries. Surgeons can now plan and execute surgeries with greater accuracy, focusing on removing the tumor while preserving vital structures and minimizing unnecessary tissue removal. These targeted approaches require additional preoperative time as part of the evaluation work and increased intraoperative time and technical skill to preserve organs.⁶

Integration of Multimodal Therapies: In recent years, there has been a notable rise in the integration of multimodal therapies, including the use of CRS in conjunction with other treatment modalities. The combination of CRS with hyperthermic intraperitoneal chemotherapy (HIPEC) has increasingly become a common approach for selected patients, as studies have demonstrated improved outcomes compared to CRS alone. Furthermore, neoadjuvant chemotherapy or

systemic therapy followed by CRS has been employed to shrink tumors and improve the feasibility of resection. This multimodal approach enables a comprehensive treatment strategy that addresses both visible and microscopic disease, expanding the potential for surgical candidacy in patients who may not have previously been considered.^{7,8}

Expanded Perioperative Work: Enhanced anesthesia techniques and postoperative pain management strategies have improved patient comfort and recovery. Multidisciplinary perioperative teams collaborate to implement enhanced recovery after surgery (ERAS) protocols,⁹ which aim to reduce surgical stress, enhance patient recovery, and expedite return to normal function. In recent years, there has been notable improvement in the multidisciplinary management of peritoneal surface malignancies. Enhanced collaboration among surgical oncologists, medical oncologists, radiologists, and other specialists has facilitated comprehensive treatment planning and decision-making.¹⁰ This multidisciplinary approach plays a crucial role in achieving optimal patient outcomes and enhancing care coordination. This coordination requires additional perioperative time and work.

Tumor Size and burden: The current coding guidelines do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. However, recent changes in the standard of care necessitate not only the excision of individual large tumors but also the cytoreduction of macroscopic tumors. This additional task represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. The presence of larger and more extensive tumor burden also raises the likelihood of involving multiple surgeons, requiring additional preoperative time to coordinate their efforts, which was not previously accounted for.

Summary

Over the past 10 to 15 years, treatment for peritoneal surface malignancies has evolved significantly. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. These changes provide compelling evidence that work has changed since the codes were proposed in 2006, almost 20 years ago.

Background

Current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201). The replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors -- this does not accurately differentiate the surgeon's work (time, intensity, complexity). For example, excision of 15 small 1-3 cm tumors over an extensive area of the peritoneal surface versus excision of a single 4 cm tumor were both reported with the same code (49203) although the work, time, and intensity of the operations are vastly different. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. In recognition of the vastly different work in current practice, the CPT Editorial Panel deleted the current codes (49203-49205) and created five new codes (4X015-4X019) based on total peritoneal, mesenteric, and/or retroperitoneal tumor cytoreduction.

Recommendation

We recommend the survey 25th percentile work RVU of 34.00.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Add 10 minutes (total = 50 minutes) for extensive preoperative review of angiograms and MRI and CT imaging and reports to assist with preoperative planning.

Positioning time: Add 5 minutes (total time = 8 minutes) for lithotomy positioning.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

Immediate Post-time

Package 9b: Subtract 3 minutes to be consistent with the survey median.

Discussion of Postoperative Office Visits

At the first postoperative visit, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Some or all staples/sutures are removed as appropriate. Drain(s) may be removed. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family. Patient and family questions are answered. A PDMP check is performed, pain medications are reviewed and alterations made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued unless contraindicated. Activity limitations and wound care are reviewed. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with reviewed. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

At the second postoperative visit, an interval history and physical exam is performed. The wounds are inspected and any remaining staples, sutures, and drain(s) are removed, with dressings applied as required. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. A PDMP check is performed, pain medications are reviewed and alterations made including counseling on side effects and tapering instructions. Activity limitations and wound care are reviewed. DVT prophylaxis is considered and continued unless contraindicated. Physical therapy, home

health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and ordered as required. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Patient and family questions are answered. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). Interval imaging and labs reviewed and care plan changed if appropriate. Medical record progress notes are dictated, reviewed, and signed. Leave of absence or short term disability forms are updated, as required. An update to other treating providers and primary care physician is provided.

At the third postoperative visit, an interval history and physical exam is performed, including wound check. Activity restrictions are considered and modified as appropriate. Discussion about dietary recommendations to (new) baseline and adequate weight stabilization or returning to baseline is performed. A PDMP check is performed, pain medications are reviewed, and alterations made including counseling on side effects and tapering instructions. Physical therapy, home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and discontinued or ordered as required. Interval imaging and labs reviewed and care plan changed if appropriate. Review of other treating providers care plans and discussion in a multidisciplinary fashion is performed. Additional postoperative imaging and labs are reviewed. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

At the fourth postoperative visit, an interval history and physical exam is performed, including wound check. Additional postoperative labs are reviewed. Typically, activity and sometimes dietary restrictions are released. PDMP is reviewed and pain medication tapering or cessation will be addressed. The care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outlining surveillance plans. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

CPT Descriptor: Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 20.1 to 30 cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 55-year-old male with a 28-cm retroperitoneal sarcoma and no evidence of distant metastases undergoes resection of the sarcoma.

Percentage of Survey Respondents who found Vignette to be Typical: 89%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: Review pre-operative work-up, with particular attention to angiograms and extensive MRI and CT imaging and reports to assist with preoperative planning of operative approach to search and excise suspicious/possible lesions in the peritoneal and retroperitoneal space. Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of DVT prophylaxis. Write orders for preoperative medications including beta blockers, if indicated. Meet with patient and family to review planned procedure and postoperative management. Review and obtain informed consent, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor/assist with initial lithotomy positioning of patient, keeping in mind that throughout the lengthy procedure, the patient will typically be repositioned as needed to gain access to all areas of the peritoneal and retroperitoneal space. Assist anesthesia team with line placement and induction of anesthesia and intubation. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Skin incision is made using sharp dissection. Hemostasis is achieved using electrocautery and small ligatures, as necessary. The linea alba is identified and carefully divided. The peritoneum is grasped, elevated, and carefully incised to avoid injury to bowel. The peritoneal cavity is entered under direct vision. Adhesions are cleared by sharp dissection in order to expose all of the abdominal viscera. A visual and manual complete exploration of the abdominal cavity and its contents is carried out. The NG tube is placed and its position is confirmed. The stomach is inspected and palpated for pathology. The duodenum is visualized and palpated. The gallbladder is inspected and palpated for the presence of stones. The liver is palpated bimanually, as is the porta hepatis. The pancreas is inspected through the hepatogastric ligament and palpated for possible masses. The tail of the pancreas is palpated for possible lymphadenopathy. The small bowel is inspected and palpated from the ligament of Treitz to the ileocecal valve. The small bowel mesentery is inspected and palpated for the presence of lymphadenopathy. The cecum and appendix, ascending, transverse, and descending colon are inspected and palpated. The cul-de-sac and pelvic contents are inspected and palpated. The greater vessels of the abdomen and the urinary tract are examined. All other intra-abdominal organs are systematically inspected. Following peritoneal and retroperitoneal exploration, the ascending colon is mobilized by dividing the peritoneal reflection and the hepatic flexure of the colon is taken down. The second portion of the duodenum and head of the pancreas are elevated from the retroperitoneum exposing the vena cava and aorta. The base of the small bowel mesentery is mobilized to the third portion of the duodenum further exposing the vena cava and aorta. The kidneys, vasculature and

ureters are identified. The proximal aorta, iliac arteries, subrenal vena cava and iliac veins are controlled superior and inferior to the retroperitoneal tumor. The 28 cm tumor is then resected from the retroperitoneum with sequential ligation of inflow and outflow vasculature of the tumor. The abdominal cavity is irrigated copiously with antibiotic solution. Hemostasis is obtained. The abdomen is inspected for injury and the presence of any instruments or lap-pads (ie, count is made). The retractor components are removed and accounted for. The abdominal organs are returned to normal anatomical position. The omentum is draped over the abdominal contents. A lateral incision is made and a closed suction drain is pulled through the abdominal wall and placed in the resection bed. The drain is sutured to the skin with monofilament suture. Additional drains may be placed as required. The fascia is closed with running suture. A second instrument, needle, sponge, and lap-pad count is conducted. The subcutaneous tissues are irrigated and approximated and the skin is closed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff, including need for patient-controlled analgesia. Discontinue prophylactic antibiotic therapy as appropriate. Review postoperative laboratory results. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in patient's chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to intensive care unit and discuss ongoing care with nursing staff.

Later same day hospital inpatient care [operative day after discharge from recovery room]: Review interval nursing/other staff chart notes. Discuss ongoing care with nursing staff. Evaluate vital signs and intake/output. Auscultate heart, lungs, and abdomen. Monitor fluid and electrolyte status and renal function; monitor for problems, such as ileus, intestinal ischemia, and urinary retention. Examine patient, check wounds, and change dressings. Monitor drain(s) output. Continue prophylaxis for DVT. Assess need for beta-blockers and order as required. Assess pain scores and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions. Advance diet, as appropriate.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Monitor drain(s) output. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Adjust parenteral controlled pain medication dosing appropriately. Closely monitor fluid and electrolyte status and renal function as extensive tissue excision and tumor desiccation causes dramatic fluid shifts. Write orders for labs, films, and medications. Manage nasogastric tube, remove when appropriate and advance diet. Write orders for patient activity and therapy as required. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds, drains and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Drains are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family, typically at the first postoperative visit. Patient and family questions are answered. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued, typically for 30 days postoperatively, unless contraindicated. Activity limitations and wound care are reviewed with the patient and family. Imaging to evaluate for healing or complications is considered and ordered as required. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative

anemia, hydration, electrolytes are considered and ordered as required with review. Dietary instructions and need for nutritional supplements are discussed. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). The postoperative care plan and the care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outline surveillance plans. Multidisciplinary discussion with other treating providers is performed. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWPUR analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

Overview

The peritoneal surface, characterized by its unique features and the difficulties associated with studying and managing diseases involving this region, is commonly labeled as an "orphan organ." Historically, the peritoneal surface has received less emphasis in comparison to organs like the liver, lungs, or heart. However, in the last decade or so, there has been a growing acknowledgment of the significance of the peritoneal surface, accompanied by endeavors to advance treatment options. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs).¹

Over the past 10 to 15 years, the integration of a locoregional therapeutic approach with modern multidisciplinary strategies that involve perioperative systemic treatments has profoundly changed the prognosis of patients with PSMs. Regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease.²

Changes in Patient Population and Technology

In recent years, the patient population undergoing CRS for the treatment of PSMs has witnessed several changes, including expanded eligibility criteria..

Expanded Eligibility Criteria: Over time, there has been a broadening of eligibility criteria for CRS, allowing a wider range of patients to be considered for the procedure. Initially, CRS was primarily offered to patients with limited disease burden and favorable prognostic factors. However, with advancements in surgical techniques and perioperative multidisciplinary management, there has been a shift towards considering patients with more extensive disease involvement and various primary cancer origins. This expanded eligibility has been supported by studies showing favorable outcomes in carefully selected patients.³⁴ Also, in recent years, there has been a noticeable shift towards including patients who were previously deemed marginal candidates for CRS. This change in practice considers patients with factors like advanced age, comorbidities, or suboptimal performance status. The evolving expertise in surgical techniques and improvements in perioperative care have facilitated a more personalized evaluation process that takes into account not only the extent of disease but also patient-specific factors.⁵

Targeted Surgical Approaches: Advances in imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and positron emission tomography (PET), have enabled more precise preoperative tumor mapping. This has led to the development of targeted surgical approaches, such as tumor-specific resections and organ-preserving surgeries. Surgeons can now plan and execute surgeries with greater accuracy, focusing on removing the tumor while preserving vital structures and minimizing unnecessary tissue removal. These targeted approaches require

additional preoperative time as part of the evaluation work and increased intraoperative time and technical skill to preserve organs.⁶

Integration of Multimodal Therapies: In recent years, there has been a notable rise in the integration of multimodal therapies, including the use of CRS in conjunction with other treatment modalities. The combination of CRS with hyperthermic intraperitoneal chemotherapy (HIPEC) has increasingly become a common approach for selected patients, as studies have demonstrated improved outcomes compared to CRS alone. Furthermore, neoadjuvant chemotherapy or systemic therapy followed by CRS has been employed to shrink tumors and improve the feasibility of resection. This multimodal approach enables a comprehensive treatment strategy that addresses both visible and microscopic disease, expanding the potential for surgical candidacy in patients who may not have previously been considered.^{7,8}

Expanded Perioperative Work: Enhanced anesthesia techniques and postoperative pain management strategies have improved patient comfort and recovery. Multidisciplinary perioperative teams collaborate to implement enhanced recovery after surgery (ERAS) protocols,⁹ which aim to reduce surgical stress, enhance patient recovery, and expedite return to normal function. In recent years, there has been notable improvement in the multidisciplinary management of peritoneal surface malignancies. Enhanced collaboration among surgical oncologists, medical oncologists, radiologists, and other specialists has facilitated comprehensive treatment planning and decision-making.¹⁰ This multidisciplinary approach plays a crucial role in achieving optimal patient outcomes and enhancing care coordination. This coordination requires additional perioperative time and work.

Tumor Size and burden: The current coding guidelines do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. However, recent changes in the standard of care necessitate not only the excision of individual large tumors but also the cytoreduction of macroscopic tumors. This additional task represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. The presence of larger and more extensive tumor burden also raises the likelihood of involving multiple surgeons, requiring additional preoperative time to coordinate their efforts, which was not previously accounted for.

Summary

Over the past 10 to 15 years, treatment for peritoneal surface malignancies has evolved significantly. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. These changes provide compelling evidence that work has changed since the codes were proposed in 2006, almost 20 years ago.

Coding Background

Current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201). The replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors -- this does not accurately differentiate the surgeon's work (time, intensity, complexity). For example, excision of 15 small 1-3 cm tumors over an extensive area of the peritoneal surface versus excision of a single 4 cm tumor were both reported with the same code (49203) although the work, time, and intensity of the operations are vastly different. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of

patients that were not considered candidates for treatment previously. In recognition of the vastly different work in current practice, the CPT Editorial Panel deleted the current codes (49203-49205) and created five new codes (4X015-4X019) based on total peritoneal, mesenteric, and/or retroperitoneal tumor cytoreduction.

Recommendation

We recommend the survey median work RVU of 45.00.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Add 10 minutes (total = 50 minutes) for atypical additional extensive preoperative review of angiograms, MRI, and CT imaging to assist with preoperative planning of operative approach to find additional suspicious/possible lesions in the peritoneal and retroperitoneal space.

Positioning time: Add 12 minutes (total time = 15 minutes) for initial lithotomy positioning and repositioning as needed to gain access to all areas of the peritoneal and retroperitoneal space during the 5+ hour procedure.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

Immediate Post-time

Package 9b: Subtract 3 minutes to be consistent with the survey median.

Discussion of Postoperative Office Visits

At the first postoperative visit, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Some or all staples/sutures are removed as appropriate. Drain(s) may be removed. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family. Patient and family questions are answered. A PDMP check is performed, pain medications are reviewed and alterations made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued unless contraindicated. Activity limitations and wound care are reviewed. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with reviewed. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

At the second postoperative visit, an interval history and physical exam is performed. The wounds are inspected and any remaining staples, sutures, and drain(s) are removed, with dressings applied as required. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. Activity limitations and wound care are reviewed. DVT prophylaxis is considered and continued unless contraindicated. Physical therapy, home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and ordered as required. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Patient and family questions are answered. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). Interval imaging and labs reviewed and care plan changed if appropriate. Medical record progress notes are dictated, reviewed, and signed. Leave of absence or short term disability forms are updated, as required. An update to other treating providers and primary care physician is provided.

At the third postoperative visit, an interval history and physical exam is performed, including wound check. Activity restrictions are considered and modified as appropriate. Discussion about dietary recommendations to (new) baseline and adequate weight stabilization or returning to baseline is performed. A PDMP check is performed, pain medications are reviewed, and alterations made including counseling on side effects and tapering instructions. Physical therapy, home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and discontinued or ordered as required. Interval imaging and labs reviewed and care plan changed if appropriate. Review of other treating providers care plans and discussion in a multidisciplinary fashion is performed. Additional postoperative imaging and labs are reviewed. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

At the fourth postoperative visit, an interval history and physical exam is performed, including wound check. Additional postoperative labs are reviewed. Activity and sometimes dietary restrictions are released. PDMP is reviewed and pain medication tapering or cessation will be addressed. The care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outlining surveillance plans. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

MPC Code Comparison

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99291	99233	99232	99231	99238-99239	99214	99213	99212
33426	Valvuloplasty, mitral valve, with cardiopulmonary bypass; with prosthetic ring	43.28	0.111	773	95	205	40	1	3	2	1	1	1	1	
4X018	...sum of the maximum length of tumor(s) or cyst(s); 20.1 to 30 cm	45.00	0.091	814	80	310	30		2	2	2	1	1	3	
43117	Partial esophagectomy, distal two-thirds, with thoracotomy and separate abdominal incision, with or without proximal gastrectomy; with thoracic esophagogastrostomy, with or without pyloroplasty (Ivor Lewis)	57.50	0.088	1067	105	330	45	2	2	3	3	1	1	2	1

Additional Code Comparison

As additional support for the median work RVU of 45.00, a RUC database search was conducted with the following parameters:

- RUC reviewed in the past 15 years.
- 90-day global
- Intra-time between 300-320 minutes
- Total time: no restrictions / all records

As shown in the table below, there are only a few codes that have been reviewed at this level of intraoperative work and postop visits and that a recommendation of the median work RVU at 45.00 places 4X018 at the bottom of the list in terms of work RVUs. These data also show that the intensity (IWPUT) is consistent with this level of procedures and that if the 25th percentile were used, the resulting intensity would create a rank order anomaly with other similarly intense operations.

RUC Year	CPT	Long Desc	RVW	IWPUT	Total Time	PRE	INTRA	IM-POST	HV	OV
	4X018	25 th Pctl (total = 20.1 to 30 cm)	40.00	0.075	814	80	310	30	7	4
	4X018	MEDIAN (total = 20.1 to 30 cm)	45.00	0.091	814	80	310	30	7	4
2016	43286	Esophagectomy, total or near total, with laparoscopic mobilization of the abdominal and mediastinal esophagus and proximal gastrectomy, with laparoscopic pyloric drainage procedure if performed, with open cervical pharyngogastrostomy or esophagogastrotomy (ie, laparoscopic transhiatal esophagectomy)	55.00	0.106	957	100	300	60	9	4
2018	33863	Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)	58.79	0.126	838	90	300	60	7	1
2010	33412	Replacement, aortic valve; with transventricular aortic annulus enlargement (Konno procedure)	59.00	0.122	866	63	300	60	8	1
2009	33782	Aortic root translocation with ventricular septal defect and pulmonary stenosis repair (ie, Nikaidoh procedure); without coronary ostium reimplantation	60.08	0.126	866	63	300	60	8	1
2018	33864	Ascending aorta graft, with cardiopulmonary bypass with valve suspension, with coronary reconstruction and valve-sparing aortic root remodeling (eg, David Procedure, Yacoub Procedure)	60.08	0.130	838	90	300	60	7	1
2018	33858	Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic dissection	63.40	0.124	911	70	300	60	8	2
2010	33622	Reconstruction of complex cardiac anomaly (eg, single ventricle or hypoplastic left heart) with palliation of single ventricle with aortic outflow obstruction and aortic arch hypoplasia, creation of cavopulmonary anastomosis, and removal of right and left pulmonary bands (eg, hybrid approach stage 2, Norwood, bidirectional Glenn, pulmonary artery debanding)	64.00	0.124	986	63	300	60	14	1
2018	33440	Replacement, aortic valve; by translocation of autologous pulmonary valve and transventricular aortic annulus enlargement of the left ventricular outflow tract with valved conduit replacement of pulmonary valve (Ross-Konno procedure)	64.00	0.125	998	95	300	60	11	1
2010	32852	Lung transplant, single; with cardiopulmonary bypass	65.50	0.084	1320	140	300	90	14	2

SERVICES REPORTED WITH MULTIPLE CPT CODES

- Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

- Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 49203, 49204, 49205. The current coding guidelines associated with 49203-49205 do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. So although the vignette for this code was a single large tumor, it is just as likely that the patient can be 25 or more small tumors or a mix of medium and small tumors totaling 20.1-30 cm.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery	How often? Rarely
Specialty surgical and gynecological oncology	How often? Sometimes
Specialty colorectal surgery and urological surgery	How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?
If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization is not available

Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%
Specialty	Frequency	Percentage	%

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 715
If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. specialty estimate

Specialty general surgery	Frequency 250	Percentage 34.96 %
Specialty surgical oncology	Frequency 225	Percentage 31.46 %
Specialty gynecological oncology	Frequency 125	Percentage 17.48 %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Main BETOS Classification:
Procedures

BETOS Sub-classification:
Major procedure

BETOS Sub-classification Level II:
Other

Professional Liability Insurance Information (PLI)

If the surveyed code is an existing code and the specialty believes the specialty utilization mix will not change, enter the surveyed existing CPT code number

If this code is a new/revised code or an existing code in which the specialty utilization mix will change, please select another crosswalk based on a similar specialty mix. 49205

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 4X019	Tracking Number F5	Original Specialty Recommended RVU: 55.00
		Presented Recommended RVU: 55.00
Global Period: 090	Current Work RVU: n/a	RUC Recommended RVU: 55.00

CPT Descriptor: Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); greater than 30 cm

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 58-year-old female with a prior colon resection for appendiceal adenocarcinoma develops extensive peritoneal carcinomatosis. She undergoes tumor excision and destruction.

Percentage of Survey Respondents who found Vignette to be Typical: 77%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 100% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 100%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 100%

Description of Pre-Service Work: This level of tumor excision will typically require two surgeons who are typically different specialties due to the required widespread peritoneal and retroperitoneal examination to locate and excise tumor implants. They both will review pre-operative work-up, with particular attention to angiograms and extensive MRI and CT imaging and reports to assist with preoperative planning of operative approach to search and excise suspicious/possible lesions in the peritoneal and retroperitoneal space. Select and order the appropriate antibiotic(s) and confirm timing and administration. Assure appropriate selection, timing, and administration of DVT prophylaxis. Write orders for preoperative medications including beta blockers, if indicated. Meet with patient and family to review planned procedure and postoperative management. Review and obtain informed consent, including witness. Review length and type of anesthesia with anesthesiologist. Verify that all required instruments and supplies are available. Assist in transfer of patient from gurney to operating table. Monitor/assist with initial lithotomy positioning of patient, keeping in mind that throughout the lengthy procedure, the patient will typically be repositioned as needed to gain access to all areas of the peritoneal and retroperitoneal space. Assist anesthesia team with line placement and induction of anesthesia and intubation. Indicate areas of skin to be prepped and mark surgical incisions. Scrub and gown. Perform surgical "time out" with operating surgical team.

Description of Intra-Service Work: Skin incision is made using sharp dissection. Hemostasis is achieved using electrocautery and small ligatures, as necessary. The linea alba is identified and carefully divided. The peritoneum is grasped, elevated, and carefully incised to avoid injury to bowel. The peritoneal cavity is entered under direct vision. Adhesions are cleared by sharp dissection in order to expose all of the abdominal viscera. A visual and manual complete exploration of the abdominal cavity and its contents is carried out. The NG tube is placed and its position is confirmed. The stomach is inspected and palpated for pathology. The duodenum is visualized and palpated. The gallbladder is inspected and palpated for the presence of stones. The liver is palpated bimanually, as is the porta hepatis. The pancreas is inspected through the hepatogastric ligament and palpated for possible masses. The tail of the pancreas is palpated for possible lymphadenopathy. The small bowel is inspected and palpated from the ligament of Treitz to the ileocecal valve. The small bowel mesentery is inspected and palpated for the presence of lymphadenopathy. The cecum and appendix, ascending, transverse, and descending colon are inspected and palpated. The cul-de-sac and pelvic contents are inspected and palpated. The greater vessels of the abdomen and the urinary tract are examined. All other intra-abdominal organs are systematically inspected. Following peritoneal and retroperitoneal exploration, cytoreduction of all macroscopic tumor deposits on parietal, omental and peritoneal surfaces is performed. Resection of multiple surface nodules of the omentum, visceral and

mesenteric surfaces is carried out. The liver is fully mobilized and the peritoneum is resected from both diaphragms. Resection of the small lesions and multiple surface nodules of the omentum, visceral and peritoneal surfaces is performed. The in situ measured total dimension of all excised tumors is documented as 35 cm. The abdominal cavity is irrigated copiously with antibiotic solution. Hemostasis is obtained. The abdomen is inspected for injury and the presence of any instruments or lap-pads (ie, count is made). The retractor components are removed and accounted for. The abdominal organs are returned to normal anatomical position. The omentum is draped over the abdominal contents. A lateral incision is made and a closed suction drain is pulled through the abdominal wall and placed in the resection bed. The drain is sutured to the skin with monofilament suture. Additional drains may be placed as required. The fascia is closed with running suture. A second instrument, needle, sponge, and lap-pad count is conducted. The subcutaneous tissues are irrigated and approximated and the skin is closed.

Description of Post-Service Work:

Immediate postoperative care [operative day through discharge from recovery room]: Apply sterile dressings. Discuss with anesthesia the need to extubate or electively ventilate depending upon patient comorbidities, duration of surgery, degree of cytoreduction, hemodynamic instability, vasopressor use, blood loss and the need for blood transfusion, and metabolic derangement. Monitor patient during reversal of anesthesia. Assist in transfer of patient from operating table to gurney. Monitor transport of patient from operating room to recovery room. Discuss postoperative recovery care with anesthesia and nursing staff. Review postoperative lab results. Discuss procedure and outcome with family in waiting area. Write brief operative note or complete final operative note in patient's chart. Write postoperative note in the recovery room. Dictate operative report and copy referring physician(s). Call referring physician(s). Write orders for transferring to intensive care unit and discuss ongoing care with nursing staff.

Later same day hospital inpatient care: In the intensive care unit, examine the patient, wounds, and drains. Review interval provider chart notes. Discuss ongoing care with ICU staff. Massive fluid shifts, third spacing and blood loss that are common during cytoreductive surgery continue in the immediate postoperative period and require close monitoring. The abdominal drain losses can be as high as 40% of the total output, in the first 72 hours after surgery requiring close monitoring and assessment of fluid status guided by review of various static and dynamic parameters such as cardiac output monitoring, central venous pressure, serum lactate, urine output, abdominal drain and nasogastric losses. Need for crystalloids, colloids, blood and blood products is reviewed and ordered as needed. Levels of albumin are monitored closely as there typically is significant protein loss secondary to the extensive surgical dissection. Postoperative decline in albumin levels is common, requiring monitoring and ordering exogenous replacement as required. Additional assessment for problems, such as ileus, intestinal ischemia, and urinary retention is performed. Order continued prophylaxis for DVT as required. Assess need for beta-blockers and order as required. Assess pain scores if possible and adequacy of analgesia. Write orders for laboratory tests, films, and medications. Chart patient progress notes. Answer patient and family questions. Answer nursing/other staff questions.

Daily hospital inpatient care: The patient will typically be in the intensive care unit for 2-3 midnights. Each day, the patient, wounds, and drains will be examined, typically more than once while the patient is in the ICU. Interval provider chart notes will be reviewed and ongoing care discussed with nursing staff and other providers. Fluid status and drain output will be monitored closely with IV interventions ordered as needed. Coagulopathy, which is typical, including prolongation of prothrombin time, activated partial thromboplastin time and/or reduction in platelet count requires monitoring of viscoelastic properties of clots to determine if platelet transfusion is required. Moderate to severe pain is common and will be managed closely to prevent respiratory complications or paralytic ileus. Parenteral nutrition is ordered when appropriate and switched to enteral nutrition as appropriate. The decisions regarding nutrition will consider patient baseline nutritional status, and surgical and medical concerns. Adherence to ERAS protocols include assessing the need for and ordering continued mechanical and pharmacological deep vein thrombosis prophylaxis if not contraindicated. The need for low molecular weight heparin is assessed and continued postoperatively if not contraindicated. Electrolyte abnormalities which are common due to perioperative massive fluid shifts will be reviewed with orders placed for IV intervention. Daily inpatient care will also include: Review of vital signs, and auscultation of heart, lungs, and abdomen for bowel sounds; managing dressings to wounds; monitoring status of incision, looking for signs of infection; monitoring drain output; assessing daily need for beta-blockers and antibiotics; monitoring and documenting patient progress; evaluating the patient for sepsis, bowel function, and cardiorespiratory function; assessing pain scores and adequacy of analgesia with adjustments to parenteral controlled pain medication dosing; close monitoring of fluid and electrolyte status and renal function; and writing orders for labs, films, and medications, with review of lab and film reports. When appropriate, the NG tube will be removed and diet advanced. Orders for patient activity and physical and respiratory therapy are written. Patient progress notes are charted. Patient and family questions and nursing/other provider questions are answered. Multidisciplinary discussion with other treating providers is performed.

Daily hospital inpatient care: Review interval nursing/other provider chart notes. Write patient care orders and discuss floor care with nursing staff. Examine patient, including reviewing vital signs and confirming as necessary. Auscultate heart, lungs, and abdomen for bowel sounds. Manage dressings to wounds daily, monitoring status of incision, looking for signs of infection. Monitor drain(s) output. Continue prophylaxis for DVT and monitor daily for adequacy. Assess need for beta-blockers, order as required. Assess need for antibiotics, order as required. Monitor and document patient progress: evaluate for sepsis, bowel function; cardiorespiratory function. Assess pain scores and adequacy of analgesia. Adjust parenteral controlled pain medication dosing appropriately. Closely monitor fluid and electrolyte status and renal function as extensive tissue excision and tumor desiccation causes dramatic fluid shifts. Write orders for labs, films, and medications. Manage nasogastric tube, remove when appropriate and advance diet. Write orders for patient activity and therapy as required. Chart patient progress notes. Answer patient and family questions. Answer nursing/other provider questions.

Discharge Management: The patient will be discharged when there is return of bowel function, adequate nutrition intake, and adequate pain control with oral analgesics. Prior to discharge, the patient is examined and wounds, drains and status of incisions are assessed. The heart, lungs, and abdomen are auscultated. Hospital medications are reconciled and in consultation with other treating providers, confirmation is made that all orders are in place for medications needed post-discharge, including timing and need for resumption of presurgery medications. Continuation of prophylaxis for DVT is ordered. Home restrictions (ie, diet, activity, bathing) are discussed with the patient, family members, and discharging nurse. All appropriate medical records are completed, including day of discharge progress notes, discharge summary and discharge instructions, and insurance forms.

Post-service Office Work: An interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Staples are removed when appropriate (at a single visit or over multiple visits). Drains are removed when appropriate (at a single visit or over multiple visits). Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family, typically at the first postoperative visit. Patient and family questions are answered. A PDMP check is performed at every visit, pain medications are reviewed and adjustments made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued, typically for 30 days postoperatively, unless contraindicated. Activity limitations and wound care are reviewed with the patient and family. Imaging to evaluate for healing or complications is considered and ordered as required. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with review. Dietary instructions and need for nutritional supplements are discussed. Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). The postoperative care plan and the care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outline surveillance plans. Multidisciplinary discussion with other treating providers is performed. An update to primary care physician is performed. Leave of absence or short term disability forms are completed and updated as required. Medical record progress notes are dictated, reviewed, and signed.

SURVEY DATA

RUC Meeting Date (mm/yyyy)		09/2023

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Compelling Evidence

Overview

The peritoneal surface, characterized by its unique features and the difficulties associated with studying and managing diseases involving this region, is commonly labeled as an "orphan organ." Historically, the peritoneal surface has received less emphasis in comparison to organs like the liver, lungs, or heart. However, in the last decade or so, there has been a growing acknowledgment of the significance of the peritoneal surface, accompanied by endeavors to advance treatment options. In the past, peritoneal surface malignancies (PSM) were considered orphan diseases with limited therapeutic options and a poor prognosis. The primary reasons for poor patient outcomes were related to diagnosis at an advanced stage and the limited clinical response of most entities to conventional therapeutic options such as systemic chemotherapy. Major innovations over the past two decades include the adoption of novel surgical techniques, such as complete cytoreduction (defined as absence of macroscopic disease), and the application of intraperitoneal chemotherapy to address microscopic residual disease. Despite the perception of high morbidity of such procedures, optimization of perioperative care has led to the morbidity and mortality rates of these procedures being equivalent to those of other major abdominal cancer surgeries. Concurrent development of new multidisciplinary strategies involving perioperative systemic chemotherapy and targeted and maintenance therapies has dramatically changed the landscapes and the prognoses of these diseases. In selected patients, long-term survival and even cure have become possible and the overall prognosis seems to be equivalent to that of patients with metastatic disease at other sites (such as in the liver or the lungs).¹

Over the past 10 to 15 years, the integration of a locoregional therapeutic approach with modern multidisciplinary strategies that involve perioperative systemic treatments has profoundly changed the prognosis of patients with PSMs. Regardless of the underlying origins, the two main prognostic factors for curative management of PSMs are the completeness of cytoreductive surgery (CRS) and the extent of peritoneal disease.²

Changes in Patient Population and Technology

In recent years, the patient population undergoing CRS for the treatment of PSMs has witnessed several changes, including expanded eligibility criteria..

Expanded Eligibility Criteria: Over time, there has been a broadening of eligibility criteria for CRS, allowing a wider range of patients to be considered for the procedure. Initially, CRS was primarily offered to patients with limited disease burden and favorable prognostic factors. However, with advancements in surgical techniques and perioperative multidisciplinary management, there has been a shift towards considering patients with more extensive disease involvement and various primary cancer origins. This expanded eligibility has been supported by studies showing favorable outcomes in carefully selected patients.³⁴ Also, in recent years, there has been a noticeable shift towards including patients who were previously deemed marginal candidates for CRS. This change in practice considers patients with factors like advanced age, comorbidities, or suboptimal performance status. The evolving expertise in surgical techniques and improvements in perioperative care have facilitated a more personalized evaluation process that takes into account not only the extent of disease but also patient-specific factors.⁵

Targeted Surgical Approaches: Advances in imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and positron emission tomography (PET), have enabled more precise preoperative tumor mapping. This has led to the development of targeted surgical approaches, such as tumor-specific resections and organ-preserving surgeries. Surgeons can now plan and execute surgeries with greater accuracy, focusing on removing the tumor while preserving vital structures and minimizing unnecessary tissue removal. These targeted approaches require

additional preoperative time as part of the evaluation work and increased intraoperative time and technical skill to preserve organs.⁶

Integration of Multimodal Therapies: In recent years, there has been a notable rise in the integration of multimodal therapies, including the use of CRS in conjunction with other treatment modalities. The combination of CRS with hyperthermic intraperitoneal chemotherapy (HIPEC) has increasingly become a common approach for selected patients, as studies have demonstrated improved outcomes compared to CRS alone. Furthermore, neoadjuvant chemotherapy or systemic therapy followed by CRS has been employed to shrink tumors and improve the feasibility of resection. This multimodal approach enables a comprehensive treatment strategy that addresses both visible and microscopic disease, expanding the potential for surgical candidacy in patients who may not have previously been considered.^{7,8}

Expanded Perioperative Work: Enhanced anesthesia techniques and postoperative pain management strategies have improved patient comfort and recovery. Multidisciplinary perioperative teams collaborate to implement enhanced recovery after surgery (ERAS) protocols,⁹ which aim to reduce surgical stress, enhance patient recovery, and expedite return to normal function. In recent years, there has been notable improvement in the multidisciplinary management of peritoneal surface malignancies. Enhanced collaboration among surgical oncologists, medical oncologists, radiologists, and other specialists has facilitated comprehensive treatment planning and decision-making.¹⁰ This multidisciplinary approach plays a crucial role in achieving optimal patient outcomes and enhancing care coordination. This coordination requires additional perioperative time and work.

Tumor Size and burden: The current coding guidelines do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. However, recent changes in the standard of care necessitate not only the excision of individual large tumors but also the cytoreduction of macroscopic tumors. This additional task represents a greater amount of work, particularly when dealing with very large tumors and an increased burden of macroscopic tumors compared to a single tumor measuring 10-15 cm. Several factors contribute to the increased workload, including the need for more time, physical effort, assessment of resectability, involvement of adjacent structures, and collaboration with additional surgical teams or specialties. The presence of larger and more extensive tumor burden also raises the likelihood of involving multiple surgeons, requiring additional preoperative time to coordinate their efforts, which was not previously accounted for.

Summary

Over the past 10 to 15 years, treatment for peritoneal surface malignancies has evolved significantly. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of patients that were not considered candidates for treatment previously. These changes provide compelling evidence that work has changed since the codes were proposed in 2006, almost 20 years ago.

Background

Current codes 49203-49205 were established in 2008 as a replacement for two legacy codes (pre-1990) that differentiated tumor excision as "simple" or "complex" (49200-49201). The replacement codes 49203-49205 were established to report tumor excision or destruction based on the size of the largest tumor, cyst, or endometrioma removed, no matter the number of tumors -- this does not accurately differentiate the surgeon's work (time, intensity, complexity). For example, excision of 15 small 1-3 cm tumors over an extensive area of the peritoneal surface versus excision of a single 4 cm tumor were both reported with the same code (49203) although the work, time, and intensity of the operations are vastly different. As surgical indications, techniques, and technology have advanced, resection of significantly larger tumors and/or numerous small and large tumors is being performed to save and extend lives of

patients that were not considered candidates for treatment previously. In recognition of the vastly different work in current practice, the CPT Editorial Panel deleted the current codes (49203-49205) and created five new codes (4X015-4X019) based on total peritoneal, mesenteric, and/or retroperitoneal tumor cytoreduction.

Recommendation

We recommend the survey median work RVU of 55.00.

Pre-time

Package 4 is selected with the following modifications:

Evaluation time: Add 20 minutes (total = 60 minutes). This level of tumor excision will typically require two surgeons who will typically be of different specialties to access the extensive peritoneal and retroperitoneal examination to locate and excise tumor implants. Both surgeons will review preoperative work-up, with particular attention to angiograms and extensive MRI and CT imaging and reports to assist with preoperative planning of operative approach to search and excise lesions in the peritoneal and retroperitoneal space. Multidisciplinary discussion between the surgeons and with anesthesia requires significantly more time.

Positioning time: Add 12 minutes (total time = 15 minutes) for initial lithotomy positioning and repositioning as needed to gain access to all areas of the peritoneal and retroperitoneal space during the 6+ hour procedure.

Scrub, dress, wait time: Subtract 5 minutes (total time = 15 minutes) to be consistent with survey median.

Immediate Post-time

Package 9b: Add 7 minutes (total=40 minutes) for postoperative and operative notes by two surgeons and for extensive order entry for immediate ICU care.

Discussion of Postoperative Office Visits

At the first postoperative visit, an interval history and physical exam is performed and documented. Review of other treating providers documentation is performed. Dressings are removed and the wound is evaluated. Some or all staples/sutures are removed as appropriate. Drain(s) may be removed. Dressings are reapplied as needed. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. The pathology report is reviewed with the patient and family. Patient and family questions are answered. A PDMP check is performed, pain medications are reviewed and alterations made including counseling on side effects and tapering instructions. DVT prophylaxis is considered and continued unless contraindicated. Activity limitations and wound care are reviewed. Physical therapy, home health, occupational therapy are discussed and ordered as required. Labs evaluating postoperative anemia, hydration, electrolytes are considered and ordered as required with reviewed. Imaging to evaluate for healing or complications is considered and ordered as required. Dietary instructions and need for nutritional supplements are discussed. Multidisciplinary discussion with other treating providers and update to primary care physician is performed. Leave of absence or short term disability forms are completed. Medical record progress notes are dictated, reviewed, and signed.

At the second postoperative visit, an interval history and physical exam is performed. The wounds are inspected and any remaining staples, sutures, and drain(s) are removed, with dressings applied as required. Evaluation for postoperative problems (eg, seroma, constipation) is performed and addressed. Activity limitations and wound care are reviewed. DVT prophylaxis is considered and continued unless contraindicated. Physical therapy, home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and ordered as required. Labs are ordered and reviewed to evaluate for electrolyte or anemia concerns. Medications may be ordered or continued to treat these (eg, iron supplements). Evaluation of overall nutrition, dietary recommendations, and weight evaluation is performed with consideration of referral to a dietician as required. Baseline medical conditions and their medications will be addressed (eg, resuming antihypertensives). Patient and family questions are answered. Discussion with other treating providers occurs as additional treatment plans may be initiated once surgical recovery is adequate (eg systemic therapy or radiation). Medical record progress notes are dictated, reviewed, and signed. Leave of absence or short term disability forms are updated, as required. An update to other treating providers and primary care physician is provided.

At the third postoperative visit, an interval history and physical exam is performed, including wound check. Activity restrictions are considered and modified as appropriate. Discussion about dietary recommendations to (new) baseline and adequate weight stabilization or returning to baseline is performed. A PDMP check is performed, pain medications are reviewed, and alterations made including counseling on side effects and tapering instructions. Physical therapy,

home health, and/or occupational therapy notes are reviewed. Continuation of therapy and home health is discussed with patient and discontinued or ordered as required. Interval imaging and labs reviewed and care plan changed if appropriate. Review of other treating providers care plans and discussion in a multidisciplinary fashion is performed. Additional postoperative imaging and labs are reviewed. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

At the fourth postoperative visit, an interval history and physical exam is performed, including wound check. Additional postoperative labs are reviewed. Activity and sometimes dietary restrictions are released. PDMP is reviewed and pain medication tapering or cessation will be addressed. The care plans of other treating providers are reviewed and discussed in a multidisciplinary fashion to ensure patient-centered plans that include other therapies and/or outlining surveillance plans. Medical record progress notes are dictated, reviewed, and signed. An update to other treating providers and primary care physician is provided.

MPC Code Comparison

MPC CPT	DESCRIPTOR	RVW	IWPUT	TOTAL TIME	PRE	INTRA	IMM POST	99291	99233	99232	99231	99238-99239	99214	99213	99212

43117	Partial esophagectomy, distal two-thirds, with thoracotomy and separate abdominal incision, with or without proximal gastrectomy; with thoracic esophagogastrostomy, with or without pyloroplasty (Ivor Lewis)	57.50	0.088	1067	105	330	45	2	2	3	3	1	1	2	1

Additional Code Comparison

As additional support for the median work RVU of 55.00, a RUC database search was conducted with the following parameters:

- RUC reviewed in the past 15 years.
- 90-day global
- Intra-time = 360 minutes
- Total time: all records above 900 minutes

In the entire fee schedule, there are only 72 RUC-reviewed codes that have 360 minutes or more of intraoperative time. As shown in the table below, there are only a few codes that have been reviewed at this level of intraoperative time (360 min) and that a recommendation of the median work RVU at 55.00 places 4X019 at the bottom of the list in terms of work RVU. These data also show that the intensity (IWPUT) is consistent with this level of surgery and that if the 25th percentile were used, the intensity would create a rank order anomaly with other similar procedures, including two procedures for surgical treatment of cancer.

RUC Year	CPT	Long Desc	RVW	IWPUT	Total Time	PRE	INTRA	IM-POST	HV	OV
	4X019	25th pctI (Total is greater than 30 cm)	50.00	0.075	1,046	90	360	40	9	4
	4X019	Median (Total is greater than 30 cm)	55.00	0.089	1,046	90	360	40	9	4
2016	43112	Total or near total esophagectomy, with thoracotomy; with pharyngogastrostomy or cervical esophagogastrostomy, with or without pyloroplasty (ie, McKeown esophagectomy or tri-incisional esophagectomy)	62.00	0.093	1,097	105	360	45	11	4
2016	43287	Esophagectomy, distal two-thirds, with laparoscopic mobilization of the abdominal and lower mediastinal esophagus and proximal gastrectomy, with laparoscopic pyloric drainage procedure if performed, with separate thoracoscopic mobilization of the middle and upper mediastinal esophagus and thoracic esophagogastrostomy (ie, laparoscopic thoracoscopic esophagectomy, Ivor Lewis esophagectomy)	63.00	0.097	1,097	110	360	60	10	4

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: No

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 49203, 49204, 49205. The current coding guidelines associated with 49203-49205 do not differentiate between the excision of any single intraperitoneal tumor larger than 10 cm in size. So although the vignette for this code was a single large tumor, it is just as likely that the patient can be 30 or more small tumors or a mix of medium and small tumors totaling more than 30 cm.

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty general surgery

How often? Rarely

Specialty surgical and gynecological oncology

How often? Rarely

Specialty colorectal surgery and urological surgery

How often? Rarely

Estimate the number of times this service might be provided nationally in a one-year period?

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. national utilization is not available

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Specialty Frequency Percentage %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 325If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. specialty estimate

Specialty general surgery Frequency 125 Percentage 38.46 %

Specialty surgical oncology Frequency 125 Percentage 38.46 %

Specialty gynecological oncology Frequency 50 Percentage 15.38 %

Do many physicians perform this service across the United States? No

Berenson-Eggers Type of Service (BETOS) Assignment

Please pick the appropriate BETOS classification that best corresponds to the clinical nature of this CPT code. Please select the main BETOS classification and sub-classification to the greatest level of specificity possible.

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
4X015	A 45-year-old female presents with a 4-cm mesenteric mass involving the small bowel mesentery near the base. She undergoes a resection of the mass.
4X016	A 62-year-old male has progressive colorectal carcinoma with limited peritoneal disease. Multiple implants measuring 8-cm in total size are removed from the peritoneal cavity.
4X017	A 70-year-old female diagnosed with peritoneal mesothelioma with a 6-cm right lower quadrant mass and multiple intraperitoneal and retroperitoneal implants undergoes resection of the mass and excision and destruction of the implants.
4X018	A 55-year-old male with a 28-cm retroperitoneal sarcoma and no evidence of distant metastases undergoes resection of the sarcoma.
4X019	A 58-year-old female with a prior colon resection for appendiceal adenocarcinoma develops extensive peritoneal carcinomatosis. She undergoes tumor excision and destruction.

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

The RUC Advisors from the surveying societies reviewed the current code PE details for deleted codes 49203-49205 and discussed how the codes have changed since the prior review to determine if any revisions are needed to the current inputs.

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

The similar deleted codes 49203-49205 are used as references.

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?

No

See the *Billed Together* tab in the RUC Database.

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

4. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

The surveying specialties are recommending an increase in the aggregate cost of clinical labor, supplies and equipment compared to the existing inputs.

Flawed methodology of prior review – missing required supplies.

Clinical labor time and equipment time are consistent with standards and based on the physician work survey number and level of E/M visits.

Current disposable supplies for codes 49203-49205 were based on minimal standard 90-day global supply assignment and did not consider the additional supplies required for these procedures:

SM022, *sanitizing cloth-wipe (surface, instruments, equipment)*, is needed to clean hard surfaces at each postoperative visit. This is consistent with the addition of SM022 to E/M office visit codes as this was not included in the E/M office visit pack.

SA054, *pack, post-op incision care (suture)*, is needed for codes 4X017-4X019 in addition to SM022 as more than one drain is typical and a drain will be removed at a visit separate from removal of sutures and staples.

SB044, *underpad 2ft x 3ft (Chux)*, will be used at the visits that drains, sutures, and staples are removed

SG039, *dressing, 5in x 9in (ABD-Combine)*, and SG079, *tape, surgical paper 1in (Micropore)*, will be used for dressings related to the operative wound or drains for codes 4X017-4X019

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require either minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

5. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

No

6. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

N/A

7. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

N/A

8. Please provide a brief description of the clinical staff work for the following:
a. Pre-Service period:

Activity	Clinical Staff Work
Complete pre-service diagnostic and referral forms	Staff reviews all forms with patient and family to ensure all relevant history and diagnostic information is included.
Coordinate pre-surgery services (including test results)	Staff coordinates collection and documentation of imaging/lab results, patient specific information and other relevant patient information for a surgical procedure including conducting requisite pre-surgery assessment with anesthesiologist. Enter and record all clinical updates in EHR.
Schedule space and equipment in facility	Staff interacts with facility to schedule space, supplies, equipment, and review checklists.
Provide pre-service education/obtain consent	Staff reviews procedure, complication risk, process of recovery, and answers patient/family questions.
Complete pre-procedure phone calls and prescription	Staff reviews preoperative medication changes, preop diet restrictions, reviews patient medical status and answers final pre-admission questions.

- b. Service period (includes pre, intra and post):

Prior to discharge, office clinical staff will assist with necessary post-discharge care coordination, such as: Responding to patient/family questions about home activity restrictions. Coordination with other physicians and QHPs involved in the care of the patient for transfer of records. Transitioning discharge information to the surgeon's office medical record, including medication list, correspondence and imaging or lab results pending at discharge

- c. Post-service period:

The clinical staff work includes the standard activities involved in any E/M visit including ensuring the appropriate supplies are available in the room, ensuring imaging and lab reports are available, rooming and gowning the patient, reviewing current medications/allergies in EHR, obtaining vital signs, assisting with positioning, wound care, coordination of care, cleaning of the room, and home instruction.

9. If you are recommending a new clinical activity, please provide a detailed explanation of why the new clinical activity is needed and cannot conform to any of the existing clinical activities (*please see 2nd worksheet tab in PE spreadsheet*):

N/A

10. If you wish to identify a new staff type, please include a very specific staff description, salary estimate and its source. Staff types or an identified and appropriate proxy must be listed by the Bureau of Labor Statistics (BLS). You can find the BLS database at <http://www.bls.gov>.

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

11. Please check the box to confirm that you have provided invoices for all new supplies and/or equipment?
12. Please check the box to confirm that you have provided an estimate price on the PE spreadsheet for all new supplies and/or equipment?
13. If you wish to include a supply that is not on the Direct PE Inputs Medical Supplies Listing (*please see 4th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the supply input and invoice here:

N/A

14. Are you recommending a PE supply pack for this recommendation? **Yes.**
If Yes, please indicate if the pack is an established package of supplies as defined by CMS (eg, SA047 pack, E/M visit) or a pack that is commercially available?

The surveying specialty societies have included recommendations that include established PE supply packs (CMS defined):

- SA048 pack, minimum mutli-specialty visit
- SA053 pack, post-op incision care (suture & staple)
- SA054 pack, post-op incision care (suture)

15. Please provide an itemized list of the contents for all supply kits, packs and trays included in your recommendation (*please see 8-10th worksheet tabs in PE spreadsheet*). Please include the description, CMS supply code, unit, item quantity and unit price (if available).

DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, minimum multi-specialty visit	SA048	pack		5.02
paper, exam table		foot	7	
gloves, non-sterile		pair	2	
gown, patient		item	1	
pillow case		item	1	
cover, thermometer probe		item	1	
DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture & staple)	SA053	pack		5.47
kit, staple removal		kit	1	
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	

FACILITY DIRECT PE INPUTS

**AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC)
PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	
DESCRIPTION	Code	Unit	Item Qty	Unit price
pack, post-op incision care (suture)	SA054	pack		4.62
kit, suture removal		kit	1	
povidone soln (Betadine)		ml	10	
gauze, sterile 4in x 4in		item	2	
gloves, sterile		pair	1	
steri-strip (6 strip uou)		item	2	
swab-pad, alcohol		item	2	
tape, surgical paper 1in (Micropore)		inch	12	
tincture of benzoin, swab		item	1	

16. If you wish to include an equipment item that is not on the Direct PE Inputs Equipment Listing (*please see 5th worksheet tab in PE spreadsheet*), a paid invoice is required. Identify and explain the equipment input and invoice here:

N/A

17. Please provide an estimate of the useful life of the new equipment item as required to calculate the equipment cost per minute:

N/A

18. Have you recommended equipment minutes for a computer or equivalent laptop/integrated computer, equipment item computer, desktop, w-monitor, ED021 or notebook (Dell Latitude D600), ED038?

- a. If yes, please explain how the computer is used for this service(s).
- b. Is the computer used exclusively as an integral component of the service or is it also used for other purposes not specific to the code?
- c. Does the computer include code specific software that is typically used to provide the service(s)?

N/A

19. List all the equipment included in your recommendation and the equipment formula chosen (*please see 7th worksheet tab in PE spreadsheet: Equipment minute formulas*). If you have selected “other formula” for any of the equipment please explain here:

The surveying specialty societies are recommending time based on the ‘office visit’ equipment formula for EQ168, light, exam and EF031 table, power.

PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)**

Meeting Date: 09-2023

CPT Code	Long Descriptor	Global Period
4X015	Excision or destruction, open, intra-abdominal (ie, peritoneal, mesenteric, retroperitoneal), primary or secondary tumor(s) or cyst(s), sum of the maximum length of tumor(s) or cyst(s); 5 cm or less	090
4X016	5.1 to 10 cm	090
4X017	10.1 to 20 cm	090
4X018	20.1 to 30 cm	090
4X019	greater than 30 cm	090

Vignette(s) (*vignette required even if PE only code(s)*):

CPT Code	Vignette
4X015	A 45-year-old female presents with a 4-cm mesenteric mass involving the small bowel mesentery near the base. She undergoes a resection of the mass.
4X016	A 62-year-old male has progressive colorectal carcinoma with limited peritoneal disease. Multiple implants measuring 8-cm in total size are removed from the peritoneal cavity.
4X017	A 70-year-old female diagnosed with peritoneal mesothelioma with a 6-cm right lower quadrant mass and multiple intraperitoneal and retroperitoneal implants undergoes resection of the mass and excision and destruction of the implants.
4X018	A 55-year-old male with a 28-cm retroperitoneal sarcoma and no evidence of distant metastases undergoes resection of the sarcoma.
4X019	A 58-year-old female with a prior colon resection for appendiceal adenocarcinoma develops extensive peritoneal carcinomatosis. She undergoes tumor excision and destruction.

****** NO NONFACILITY DIRECT PE INPUTS******

1. Please provide a brief description of the process used to develop your recommendation and the composition of your Specialty Society RVS Committee Expert Panel:

2. Please provide reference code(s) for comparison on your spreadsheet. If you are making recommendations on an existing code, you are required to use the current direct PE inputs as your reference code but may provide an additional reference code for support. Provide an explanation for the selection of reference code(s) here:

NOTE: For services reviewed prior to the implementation of clinical activity codes in 2016-17, detail is not provided in the RUC database, please contact *Rebecca Gierhahn* at rebecca.gierhahn@ama-assn.org for PE spreadsheets for your older reference codes.

3. Is this code(s) typically reported with an E/M service?
Is this code(s) typically reported with the E/M service in the nonfacility?

NONFACILITY DIRECT PE INPUTS

SPECIALTY SOCIETY(IES): ACS, ACOG, ASCRS, AUA, APSA

PRESENTER(S): Charles Mabry, MD, FACS; David Holtz, MD; Kelly Tyler, MD, FACS; Richard Weiss, MD, FACS; Jonathan Kiechle, MD

AMA/SPECIALTY SOCIETY RELATIVE VALUE UPDATE COMMITTEE (RUC) PRACTICE EXPENSE SUMMARY OF RECOMMENDATION (SOR)

See the *Billed Together* tab in the RUC Database.

4. What specialty is the dominant provider *in the nonfacility*? What percent of the time does the dominant provider provide the service(s) in the nonfacility? Is the dominant provider in the nonfacility different than for the global? Note: When discussing specialties that perform the code, they must perform 51% to be called the “typical” physicians. If no one specialty meets the 51% but is the top specialty with 27% (for example), then they are referred as the top or dominant specialty.

See the *Claims Data* tab in the RUC Database. Use the *Medicare Specialty (Non-Facility Only)* table.

5. If you are requesting an increase over the aggregate current cost for clinical activities, supplies and equipment, please provide compelling evidence:

See the *PE compelling evidence guidelines* on the [RUC Collaboration website](#). Be sure to explain if the increase can be entirely accounted for because of an increase in physician time.

CLINICAL STAFF ACTIVITIES

The RUC has agreed that there is a presumption of zero pre-service clinical staff time unless the specialty can provide evidence to the PE Subcommittee that any pre-service time is appropriate. The RUC agreed that with evidence some subset of codes may require minimal or extensive use of clinical staff and has allocated time when appropriate (for example when a service describes a major surgical procedure). If the package times are not applicable, alternate times may be presented and should be justified for consideration by the Subcommittee.

6. Are the global periods of the codes transitioning? Information about the amount of pre-service clinical staff time and a rationale for the change from a 090-day global to a 000 or 010 day global should be described below.

7. If you are recommending more minutes than the PE Subcommittee standards for clinical activities, you must provide rationale to justify the time:

8. If a clinical activity in your reference code(s) is being rolled into a similar clinical activity approved by the PE Subcommittee and assigned a clinical activity code (*please see 2nd worksheet tab in PE spreadsheet*), please explain the difference here:

9. How much time was allocated to clinical activity, *obtain vital signs* (CA010) prior to CMS increasing the clinical activity to 5 minutes for calendar year 2018? The standard for clinical activity, obtains vital signs remains 0, 3 and 5 based on the number of vital signs taken. Please provide a rationale for the clinical staff time that you are requesting for obtain vital signs here:

AMA/Specialty Society RVS Update Committee Summary of Recommendations

September 2023

MRI-Monitored Transurethral Ultrasound Ablation of Prostate – Tab 7

At the April 2023 CPT Editorial Panel meeting, three new CPT codes, 5X006, 5X007 and 5X008, were approved for MRI-monitored transurethral ultrasound ablation (TULSA). Prior to this, the CPT code set did not have codes that reflected the physician work involved in the treatment of planning, insertion and ablation procedures conducted with an MRI-monitored TULSA system, which consists of robotically driven directional thermal ultrasound and closed-loop temperature feedback control software to deliver predictable physician prescribed ablation of prostate tissue. The MRI-monitored TULSA procedure treats patients with prostate cancer while maintaining quality of life due to low rates of adverse events. CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component is individually performed by one physician on the same patient. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves. This code family was surveyed for the September 2023 RUC meeting.

5X006 Insertion of transurethral ablation transducers for delivery of thermal ultrasound for prostate tissue ablation, including suprapubic tube placement during the same session and placement of an endorectal cooling device, when performed

The RUC reviewed the survey results from 34 urologists and radiologists and recommends a work RVU of 4.05, which is a direct work RVU crosswalk to CPT code 52224 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) or treatment of MINOR (less than 0.5 cm) lesion(s) with or without biopsy* (work RVU = 4.05, 30 minutes intra-service time and 79 minutes total time). CPT code 5X006 describes MRI-monitored transurethral thermal ultrasound ablation typically performed by a urologist. The RUC recommends 23 minutes pre-service evaluation time, 5 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 29 minutes intra-service time, and 15 minutes post-service time, which equals 82 minutes of total time.

The specialty society selected pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Pro*. Both standard time packages were modified to more accurately reflect pre- and post-service time involved with this service. Ten minutes of pre-service evaluation time were removed from the pre-service time package in accordance with the survey time of 23 minutes. Two minutes of pre-service positioning time were also added to the pre-service time package, which is necessary given the use of MRI technology and the importance of positioning to ensure the alignment of the treatment planning images and appropriate placement of the transducer to the intended target match while avoiding any nearby critical structures, which includes the neurovascular bundle, the anal sphincter, and the bladder. Five minutes of pre-service scrub/dress/wait time were removed from the pre-service time package in accordance with the survey time of 10 minutes. Eighteen minutes were removed from the post-service time package in accordance with the survey time of 15 minutes. The RUC agreed with all modifications to both the pre-service and post-service time packages.

The RUC concluded that CPT code 5X006 should be valued at a work RVU of 4.05 in accordance with a direct work RVU crosswalk to CPT code 52224 to accurately reflect the physician work involved with this procedure and to maintain rank order with the other services in this code family.

CPT five-digit codes, two-digit modifiers, and descriptions only are copyright by the American Medical Association.

For additional support, the RUC referenced MPC code 52441 *Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant* (work RVU = 4.00, 25 minutes intra-service time and 81 minutes total time), which requires similar physician work and time to perform supporting the RUC recommended work RVU. **The RUC recommends a work RVU of 4.05 for CPT code 5X006.**

5X007 Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation;

The RUC reviewed the survey results from 37 radiologists and urologists and determined the survey 25th percentile work RVU of 9.80 accurately reflects the physician work necessary to perform this service. CPT code 5X007 describes MRI-monitored transurethral thermal ultrasound ablation typically performed by a radiologist. The RUC recommends 40 minutes pre-service evaluation time, 5 minutes pre-service positioning time, 10 minutes pre-service scrub/dress/wait time, 120 minutes intra-service time, and 27 minutes post-service time, which equals 202 minutes of total time.

The specialty society selected pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Pro*. Both standard time packages were modified to more accurately reflect pre- and post-service time involved with this service. Seven minutes of pre-service evaluation time were added to the pre-service time package, which is necessary to ensure and review the additional preparations of the patient for compliance with MRI protocols that are specific to the procedure, including a full evaluation of imaging exams and review of the patient's clinical and pathological diagnoses. Two minutes of pre-service positioning time were also added to the pre-service time package, which is necessary given the use of MRI technology and the importance of positioning to ensure the alignment of the treatment planning images and appropriate placement of the transducer to the intended target match while avoiding any nearby critical structures, which includes the neurovascular bundle, the anal sphincter, and the bladder. Five minutes of pre-service scrub/dress/wait time were removed from the pre-service time package, which is three minutes less than the survey time to align with the post-service time for CPT code 5X008. Six minutes were removed from the post-service time package in accordance with the survey results. The RUC agreed with all modifications to both the pre-service and post-service time packages.

To support the recommended work RVU value of 9.80, the RUC compared the surveyed code to the top key reference services 32994 *Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation* (work RVU = 9.03, 90 minutes intra-service time and 168 minutes total time) and noted that the surveyed code is somewhat less intense than CPT code 32994, but requires 30 more minutes intra-service time, thus is appropriately valued higher. For additional support, the RUC referenced MPC code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (work RVU = 10.42, 90 minutes intra-service time and 141 minutes total time) and noted that the high intraoperative intensity offsets the difference in intra-service time, strengthening the comparison between the referenced code and the surveyed code. The RUC concluded that CPT code 5X007 should be valued at

the 25th percentile work RVU as supported by the survey, as it maintains rank order with the other services in this code family. **The RUC recommends a work RVU of 9.80 for CPT code 5X007.**

5X008 Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation; with insertion of transurethral ultrasound transducers for delivery of the thermal ultrasound, including suprapubic tube placement and placement of an endorectal cooling device, when performed

The RUC reviewed the survey results from 37 radiologists and urologists and determined the survey 25th percentile work RVU of 11.50 accurately reflects the physician work necessary to perform this service. CPT code 5X008 describes MRI-monitored transurethral thermal ultrasound ablation when a single physician performs the entire procedure. The RUC recommends 50 minutes pre-service evaluation time, 5 minutes pre-service positioning time, 15 minutes pre-service scrub/dress/wait time, 125 minutes intra-service time, and 27 minutes post-service time, which equals 222 minutes of total time.

The specialty society selected pre-service time package *3-FAC Straightforward Patient/Difficult Procedure* and post-service time package *9B General Anes or Complex Regional Blk/Cmplx Pro*. Both standard time packages were modified to more accurately reflect pre- and post-service time involved with this service. Seventeen minutes of pre-service evaluation time were added to the pre-service time package, which is necessary to ensure and review the additional preparations of the patient for compliance with MRI protocols that are specific to the procedure, including a full evaluation of imaging exams and review of the patient's clinical and pathological diagnoses. Two minutes of pre-service positioning time were also added to the pre-service time package, which is necessary given the use of MRI technology and the importance of positioning to ensure the alignment of the treatment planning images and appropriate placement of the transducer to the intended target match while avoiding any nearby critical structures, which includes the neurovascular bundle, the anal sphincter, and the bladder. Six minutes were removed from the post-service time package in accordance with the survey results. Additionally, there are five additional minutes of pre-service scrub/dress/wait time (compared to CPT codes 5X006 and 5X007) consistent with the survey time and the standard time package, and this is due to a sole physician completing two separate activities in succession, namely setting up the computer software and performing the scrub/dress/wait. The RUC agreed with all modifications to both the pre-service and post-service time packages.

To support the recommended work RVU value of 11.50, the RUC compared the surveyed code to the top key reference services 93653 *Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and His bundle recording, when performed; with treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry* (work RVU = 15.00, 120 minutes intra-service time and 199 minutes total time) and to the second highest key reference service 93591 *Percutaneous transcatheter closure of paravalvular leak; initial occlusion device, aortic valve* (work RVU = 17.97, 120 minutes intra-service time and 208 minutes total time). The RUC recognized that the surveyed requires 5 additional minutes of intra-service time than the two key reference services but is significantly less complex/intense to perform. CPT code 93653 involves electrophysiologic evaluation with catheter ablation, while CPT code 93591 requires

percutaneous transcatheter closure of a paravalvular leak, initial device. Thus, a lower work RVU despite the increased intra-service time is appropriate for CPT code 5X008.

For additional support, the RUC referenced MPC codes 37244 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation* (work RVU = 13.75, 90 minutes intra-service time and 166 minutes total time) and 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit* (work RVU = 10.42, 90 minutes intra-service time and 141 minutes total time), which appropriately bracket the surveyed code. The RUC concluded that CPT code 5X008 should be valued at the 25th percentile work RVU as supported by the survey, as it maintains rank order with the other services in this code family. **The RUC recommends a work RVU of 11.50 for CPT code 5X008.**

Practice Expense

The Practice Expense (PE) Subcommittee discussed and approved a new high-cost supply item TULSA-PRO Disposable Kit and a new equipment item TULSA-PRO TDC Cart for CPT codes 5X007 and 5X008. The PE Subcommittee made one modification to add minutes for the new equipment item to CPT code 5X006 as well. An additional modification was made at the RUC table to reduce by 1 the number of caps, masks, and shoe covers (SB001, SB033, SB039) in code 5X008 upon receiving confirmation that the code is not intended to be used by co-surgeons.

The RUC continues to call on CMS to separately identify and pay for high-cost disposable supplies (i.e., priced more than \$500). The RUC makes this recommendation to address the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology. The current system not only accounts for a large amount of direct practice expense for these supplies but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. Because of specialty pools and how the PE formula derives the code-level indirect practice expense in part as a multiple of the code-level direct practice expense inputs when CPT codes include a high-cost disposable supply, a larger portion of indirect practice expense is inappropriately allocated to the subset of practices performing the service which is subsidized by the broader specialty and all other Medicare providers. If high cost supplies were paid separately with appropriate HCPCS codes, the indirect expense would no longer be associated with that service. The result would be that indirect PE RVUs would be redistributed throughout the specialty practice expense pool and the practice expense for all other services. **The RUC recommends that CMS separately identify and pay for high-cost disposable supplies priced more than \$500 using appropriate HCPCS codes. The pricing of these supplies should be based on a transparent process, where items are annually reviewed and updated.**

The RUC recommends the direct practice expense inputs as modified by the Practice Expense Subcommittee.

New Technology

CPT codes 5X006, 5X007 and 5X008 will be placed on the New Technology list and be re-reviewed by the RUC in three years to ensure correct valuation, patient population, and utilization assumptions.

**AMA/SPECIALTY SOCIETY RVS UPDATE PROCESS
SUMMARY OF RECOMMENDATION**

CPT Code: 5X006	Tracking Number G1	Original Specialty Recommended RVU: 5.68
		Presented Recommended RVU: 5.68
Global Period: 000	Current Work RVU: N/A	RUC Recommended RVU: 4.05

CPT Descriptor: Insertion of transurethral ablation transducers for delivery of thermal ultrasound for prostate tissue ablation, including suprapubic tube placement during the same session and placement of an endorectal cooling device, when performed

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.

Percentage of Survey Respondents who found Vignette to be Typical: 88%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Appropriate preoperative studies including cross sectional imaging with CT and dedicated prostate MRI, are obtained, and reviewed. Additionally, biopsy imaging and pathology reports are reviewed. Patient assessment is reviewed by physician to verify the bowel prep and MRI safety assessment were completed and appropriate. Induction of general anesthesia is performed and the patient is brought into the MRI suite. Time out is performed by all team members. The patient is then connected to a system for continuous MRI-compatible pulse oximetry, core temperature measurement, and cardiac monitoring. Patient assessment is reviewed by physician to verify the bowel prep and MRI safety assessment were completed and appropriate. Time out is performed and prophylactic IV antibiotics are administered as well as the first dose of the anti-spasmodic drug.

Description of Intra-Service Work: The anterior pelvis is prepped and draped, and the suprapubic catheter is placed. The patient is transferred and positioned appropriately in the MRI scanner to begin the process of placing the necessary applicators for the procedure. A rectal examination is performed to assess the adequacy of bowel preparation, and an endorectal cooling device with balloon is then placed into the rectum. The patient's anterior pelvis and penis are prepped and draped in sterile fashion and a foley catheter is placed via the urethra into the bladder to empty it. The bladder is then partially filled with sterile fluid after which a guidewire is advanced through the catheter and coiled into the bladder. The foley catheter is removed over the wire. Following anesthetization of the urethra with lidocaine gel, the transurethral ultrasound ablation transducer is inserted over the guidewire and positioned in the urethra with tip extending into the bladder. The guidewire is removed, and the transurethral ultrasound ablation transducer is secured within the MRI compatible robot and tested. After scout MRI imaging is obtained, any air bubbles within the treatment field or endorectal cooling device are removed by deflating, inflating, and twisting the endorectal device. A brief MRI scan is again acquired to ensure all air bubbles which could impede the cooling of the endorectal device have been removed.

Next, multiplanar MRI images are acquired to confirm correct positioning of the ultrasound transurethral ablation transducer and endorectal cooling device by another physician on a separate workstation. The patient is advanced back into the bore, and localizer images are re-acquired and reviewed. If needed, more favorable urethral treatment device and rectal cooling device positioning are achieved by entering the MRI magnet room. This is done by backing the patient out of the bore and manually adjusting the ultrasound applicator positioning and angulation, as well as the endorectal cooling device

positioning, lubrication, and balloon volume. The physician leaves the patient care area, the remainder of the MRI-guided ablation is performed, and the physician returns once ablation is completed.

The transurethral transducer is removed. If no suprapubic catheter was placed, under sterile conditions a wire is placed through the transducer into bladder and the transducer is removed over the wire. A foley catheter is advanced over the wire and the wire is removed from the foley catheter which is connected to a bag. Lastly the endorectal device is removed.

Description of Post-Service Work: The patient is transferred to a stretcher and after reversal of general anesthesia, the patient is transported to the recovery room. The physician meets with the patient and family to discuss the procedure and the postoperative regimen. Later the same day, the physician assesses the patient prior to discharge home; reviews interval chart notes; answers patient and family questions; assesses pain score, adjusts pain medication as necessary; and document the services in the medical record; discuss home restrictions (eg, activity, bathing) with the patient and family members; write prescriptions for medications needed post discharge; and complete all appropriate medical records, including discharge instructions for catheter removal, and insurance forms.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

There were no current codes in the CPT code set that matched the physician work involved in the treatment planning, insertion, and ablation procedures done with an MRI-monitored TULSA system. MRI-monitored transurethral ultrasound ablation (TULSA) consists of robotically driven directional thermal ultrasound and closed-loop temperature feedback control software to deliver predictable physician prescribed ablation of

prostate tissue. The MRI-Monitored TULSA procedure treats patients with prostate cancer, while maintaining quality of life due to low rates of adverse events.

Three new CPT codes (5X006, 5X007, AND 5X008) were approved by CPT Editorial Panel for MRI-monitored transurethral ultrasound ablation (TULSA) at the April 2023 meeting.

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

Methodology

A multi-disciplinary survey including ACR, AUA and SIR was distributed to randomly selected members of the representative societies. The vendor provided a targeted list of providers to be included in this survey, in addition to the required RUC vendor attestation statement prior to the survey. For code 5X006, 34 surveys were completed. The surveys were reviewed by the multi-specialty group and determined to be valid.

The pre-service time from the survey reflected greater positioning time than the selected package and both KRS codes. Most of the positioning attributed to the procedure happens during the intraservice time, specific to the placement of the applicators and positioning of the patient within the MRI scanner. The societies believe the members surveyed may not have appropriately understood the question related to the pre-service positioning time, instead attributing time related to positioning the patient throughout the procedure in their answers, not just the pre-service portion.

Work RVU Recommendation for 5X006

We are recommending a crosswalk from code 52224 (wRVU of 4.05) as the wRVU of 4.05 for 5X006.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 3 (straightforward patient/ difficult procedure), with standard package times of 33 minutes pre-evaluation time, 3 minute of pre-positioning time, and 15 minutes of pre-scrub, dress, and wait time.

The specialties recommend the following times

1. **Evaluation:** We recommend a pre-service evaluation time of 23 minutes. This is 10 minutes less than the pre-service package and median time, but still appropriate for the evaluation needed.
2. **Positioning:** We recommend a time of 5 minutes, which is 2 minutes more than the package time. We feel this additional time is justified given the importance of positioning of the patient for this procedure. This is critical as the added time needed to ensure proper positioning placement of the ablation transducers and endorectal cooling device relative to nearby critical structures.
3. **Scrub, dress, and wait:** We recommend time of 10 minutes, which is 5 minutes less than the package time. We feel the median time from the survey, although less than the package time, is still appropriate for the scrub, dress, and wait.
4. **Post:** We recommend a time of 15 minutes; this is 18 minutes less than the selected post-service package 9B (general anesthesia or complex regional block/complex procedure) time of 33 minutes. We believe the post time for the physician still allows for necessary post evaluation of this procedure.

Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 52351 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; diagnostic* (24%) and 57155 *Insertion of uterine tandem and/or vaginal ovoids for clinical brachytherapy* (18%).

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
5X006 Survey	4.05	0.104	82	23	5	10	29	15
52224 Addl Reference Crosswalk	4.05	0.1008	70	19	5	5	30	20
52351 Key Ref 1	5.75	0.096	118	33	5	15	45	20
57155 Key Ref 2	5.15	0.096	123	23	5	5	60	30

We are recommending a crosswalk from code 52224 (wRVU of 4.05) as the wRVU of 4.05 for 5X006.

Comparison to MPC codes

Based on recommendation of wRVU of 4.05 for 5X006, two current MPC codes not part of the survey RSL but bracket the recommended values of the survey code include 49405 *Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst); visceral (eg, kidney, liver, spleen, lung/mediastinum), percutaneous* with wRVU of 4.00 and 11044 *Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less*, with wRVU of 4.10. We believe the values of these MPC codes well brackets the recommended wRVU for code 5X006.

Conclusion

A multi-disciplinary survey of CPT 5X006 was performed with concordance between specialties. When comparing the survey results to the key reference services, it was determined a crosswalk was needed for the recommended value. We believe wRVU of 4.05, the current wRVUs for code 52224 *Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) or treatment of MINOR (less than 0.5 cm) lesion(s) with or without biopsy*, appropriately aligns in the work and intensity related to CPT 5X006 than either KRS one or two based on survey data.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.
- Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.

CPT Descriptor: Ablation of prostate tissue, transurethral, using thermal ultrasound, including magnetic resonance imaging guidance for, and monitoring of, tissue ablation;

CLINICAL DESCRIPTION OF SERVICE:

Vignette Used in Survey: A 67-year-old male with prostate cancer presents for MRI-monitored transurethral thermal ultrasound ablation.

Percentage of Survey Respondents who found Vignette to be Typical: 95%

Site of Service (Complete for 010 and 090 Globals Only)

Percent of survey respondents who stated they typically perform the procedure; In the hospital 0% , In the ASC 0%, In the office 0%

Percent of survey respondents who stated they typically perform this procedure in the hospital, stated the patient is; Discharged the same day 0% , Overnight stay-less than 24 hours 0% , Overnight stay-more than 24 hours 0%

Percent of survey respondents who stated that if the patient is typically kept overnight also stated that they perform an E&M service later on the same day 0%

Description of Pre-Service Work: Appropriate preoperative studies including cross sectional imaging with CT and dedicated prostate MRI, are obtained, and reviewed. Additionally, biopsy imaging and pathology reports are reviewed. Quality assurance testing of the treatment devices is performed by the MRI technologist according to the manufacturer's directions and local standard operating procedures and reviewed by the physician.

Description of Intra-Service Work: The patient was transferred to the MRI scanner and the necessary catheters and applicators were placed and secured by the other physician. An MRI surface coil is placed over the patient's pelvis, all straps and pressure points were checked, and the patient is advanced head-first into the MRI for imaging. A brief scout MRI scan is performed to determine if any air bubbles are in rectum after the placement of the transurethral ultrasound ablation transducer and endorectal cooling tube. Any air bubbles and adjustment to the applicators is performed by the other physician. A brief MRI scan is again acquired to ensure all air bubbles which could impede the cooling of the endorectal device have been removed.

Next, multiplanar MRI images are acquired and used to confirm correct positioning of the ultrasound transurethral ablation transducer and endorectal cooling device. 3-D reformatted images are created in the treatment planning software on a separate workstation and reviewed by the physician. The patient is then advanced back into the bore, and localizer images are re-acquired and reviewed.

After satisfactory device positioning is confirmed, the position of the ultrasound transurethral ablation transducer is registered by visualization of fiducial markers located within the applicator. Any needed minor adjustments are made to the position of the applicator. Treatment planning quality MRI images are obtained and transferred to the treatment planning software within a separate workstation. If prostatic calcifications are detected that would impede treatment, the ultrasound applicator is shifted a further, placing the calcification between transducer elements and thereby reducing the ultrasound energy absorbed and reflected by the calcification. A detailed treatment plan is generated by manually contouring the target volume of prostate tissue and outlining the boundary of the ablation zone where the treatment will be directed, while contouring the surrounding critical structures of the rectal wall, neurovascular bundles, external urinary sphincter, and internal urinary sphincter which are to be avoided from ablation. The treatment planning system creates a report of the MRI temperature images to confirm whether the thermometry precision can be achieved or if any manual correction of geometric distortion in the images is needed. The physician will review the report and make any adjustments to the

placement of the ultrasound transurethral ablation transducer. Any adjustments will require a new MRI dataset, new contouring of the target tissues and ablation zone and critical structures, and treatment plan to be generated. The new report from the treatment planning system is again reviewed to confirm the treatment plan can be achieved and no other adjustments are needed.

Using the MRI-compatible robotic positioning system, the ultrasound transurethral ablation transducer is advanced for precise ablation of the prescribed, targeted volume and zone. The treating physician determines the rotational angle and direction of rotation for the ultrasound applicator. Additional MRI images may be acquired to confirm the planned target volume of prostate tissue is within the prescribed ablation volume and the normal tissue and critical structures are adequately spared prior to the ablation. A second dose of anti-spasmodic drug is administered, and the physician initiates the closed-loop MRI-guided ultrasound ablation treatment. Throughout the treatment each ultrasound transurethral ablation transducer emits the planned intensity and frequency of the ultrasound energy while also modulating the rotation rate of the transducer to achieve an optimal ablative temperature within the treatment target and ablation zone. Real-time MRI images and MRI thermometry images are acquired continuously throughout the treatment and displayed as they are acquired for the physician to closely monitor the amount of energy delivered by each transducer. Based on the thermal feedback response of the target and ablation zone, the treatment is modulated to pause or adjust the robotically driven ultrasound transducer.

Any changes which require repositioning the patient or due to any changes in the surrounding environment impacting the position of the ultrasound transurethral ablation transducer or patient will require stopping treatment, proceeding with a 20-minute cool-down phase of the target tissues, and subsequent new MRI images and treatment plan. Once the prescribed zone of treatment is ablated, pre- and post-contrast-enhanced MRI images are acquired immediately following the treatment to confirm satisfactory ablation. The physician reviews the completion imaging to confirm no intraprocedural complication(s) occurred. The power to the TULSA-PRO system electronics is turned off. The anterior MRI coil and positioning straps are removed. The ultrasound applicator is detached from the robotic positioning system, system electronics, and fluid tube sets. The applicators are removed, and catheters are managed by another physician.

Description of Post-Service Work: The physician provides review and interpretation of the images on the PACS workstation, writes a postoperative note and documentation of the procedure in the medical record; and write orders for recovery nurses for pain medication adjustments and activity restrictions.

Additional Rationale and Comments

Describe the process by which your specialty society reached your final recommendation. *If your society has used an IWP/UT analysis, please refer to the Instructions for Specialty Societies Developing Work Relative Value Recommendations for the appropriate formula and format.*

The additional rationale below is the original rationale submitted by the specialty society(ies) prior to the RUC meeting and does not necessarily represent the rationale for the RUC recommendation. To view the RUC's rationale, please review the separate RUC recommendation document.

Background

There were no current codes in the CPT code set that matched the physician work involved in the treatment planning, insertion, and ablation procedures done with an MRI-monitored TULSA system. MRI-monitored transurethral ultrasound ablation (TULSA) consists of robotically driven directional thermal ultrasound and closed-loop temperature feedback control software to deliver predictable physician prescribed ablation of prostate tissue. The MRI-Monitored TULSA procedure treats patients with prostate cancer, while maintaining quality of life due to low rates of adverse events.

Three new CPT codes (5X006, 5X007, AND 5X008) were approved by CPT Editorial Panel for MRI-monitored transurethral ultrasound ablation (TULSA) at the April 2023 meeting.

CPT 5X006 and 5X007 are reported when the work of the MRI-Monitored TULSA procedure is split, and each component individually performed by one physician. One physician, commonly a urologist, performs the work as defined by CPT 5X006 and the other physician, commonly a radiologist, performs the work as defined by CPT 5X007. CPT 5X008 describes the work when a single physician performs the entire procedure themselves.

Methodology

A multi-disciplinary survey including ACR, AUA and SIR was distributed to randomly selected members of the representative societies. The vendor provided a targeted list of providers to be included in this survey, in addition to the required RUC vendor attestation statement prior to the survey. For code 5X007, 37 surveys were completed. The surveys were reviewed by the multi-specialty group and determined to be valid and reflective of the work and intensity involved.

Work RVU Recommendation for 5X007

We are recommending the 25th percentile survey value of 9.80 RVW for 5X007.

Pre- and Post-Service Time Packages

The specialties have selected pre-package 3 (straightforward patient/difficult procedure), with standard package times of 33 minutes pre-evaluation time, 3 minute of pre-positioning time, and 15 minutes of pre-scrub, dress, and wait time.

The specialties recommend the following times

1. **Evaluation:** We recommend a pre-service evaluation time of 40 minutes. This is 7 minutes greater than the pre-service package, but necessary to ensure and review the patient is prepared and compliant with MRI protocols specific to this procedure as part of the evaluation.
2. **Positioning:** We recommend a time of 5 minutes, which is 2 minutes more than the package time. We feel this additional time is justified given the importance of positioning of the patient for this procedure within the MRI scanner to ensure the alignment of the treatment planning images and appropriate placement of the transducer to the intended target match while avoiding any nearby critical structures.
3. **Scrub, dress, and wait:** We recommend a time of 10 minutes, which is 5 minutes less than the package time. We feel the median time from the survey, although less than the package time, is still appropriate for the scrub, dress, and wait.
4. **Post:** Based on reviewer comments, we have adjusted the immediate post time to match the value for code 5X008 of 27 minutes, this is 6 minutes less than the selected post-service package 9B (general anesthesia or complex regional block/complex procedure) time of 33 minutes. We believe the post time for the physician still allows for necessary post evaluation of this procedure.

Comparison with Key Reference Services

The key reference codes chosen by the majority of the survey respondents were 32994 *Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation* (30%) and 37244 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation* (11%).

CPT	RVW	IWPUT	Total Time	Eval	Posit	SDW	INTRA	IM-post
32994 Key Ref	9.03	0.082	168	33	10	5	90	30
5X007 Survey	9.80	0.068	202	40	5	10	120	27
37244 Key Ref	13.75	0.135	166	23	3	5	90	45

This comparison supports our recommendation for the 25th percentile survey value of 9.80 RVW for CPT 5X007.

Comparison to MPC codes

The highest value 000 day global MPC code 37244 *Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; for arterial or venous hemorrhage or lymphatic extravasation* with value of 13.75 wRVUs was the second KRS selected in the survey. The next highest MPC is code 36906 *Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit*, 10.42 wRVU and bracketed lower than the recommended wRVU value for 5X007 with MPC code 52356 *Cystourethroscopy, with ureteroscopy and/or pyeloscopy; with lithotripsy including insertion of indwelling ureteral stent (eg, Gibbons or double-J type)*, 8.00 wRVU.

Conclusion

A multi-disciplinary survey of CPT 5X007 was performed with strong survey results and concordance between specialties. When comparing the survey results to the key reference services, one of which is also an MPC code, we believe that the 25th percentile survey RVW of 9.80 appropriately ranks CPT 5X007 relative to other services.

SERVICES REPORTED WITH MULTIPLE CPT CODES

1. Is this code typically reported on the same date with other CPT codes? If yes, please respond to the following questions: Yes

Why is the procedure reported using multiple codes instead of just one code? (Check all that apply.)

- The surveyed code is an add-on code or a base code expected to be reported with an add-on code.
- Different specialties work together to accomplish the procedure; each specialty codes its part of the physician work using different codes.
- Multiple codes allow flexibility to describe exactly what components the procedure included.
- Multiple codes are used to maintain consistency with similar codes.
- Historical precedents.

Other reason (please explain)

2. Please provide a table listing the typical scenario where this code is reported with multiple codes. Include the CPT codes, global period, work RVUs, pre, intra, and post-time for each, summing all of these data and accounting for relevant multiple procedure reduction policies. If more than one physician is involved in the provision of the total service, please indicate which physician is performing and reporting each CPT code in your scenario.
3. CPT RVW IWP/UT Total Time Eval Posit SDW INTRA IM-post Physician
4. 5X006 4.05 0.104 82 23 5 10 29 15 urologist
5. 5X007 9.80 0.068 202 40 5 10 120 27 radiologist

FREQUENCY INFORMATION

How was this service previously reported? (if unlisted code, please ensure that the Medicare frequency for this unlisted code is reviewed) 53899 and 77022

How often do physicians in your specialty perform this service? (ie. commonly, sometimes, rarely)
If the recommendation is from multiple specialties, please provide information for each specialty.

Specialty Interventional Radiology How often? Sometimes

Specialty Diagnostic Radiology How often? Rarely

Specialty How often?

Estimate the number of times this service might be provided nationally in a one-year period? 1170

If the recommendation is from multiple specialties, please provide the frequency and percentage for each specialty. Please explain the rationale for this estimate. According to statistics provided by a manufacturer, the 2022 U.S. volume of services was 1,522. Annualization of Q4/2022 procedural volume in the U.S. exceeds 130 procedure per month (1,560) plus 50%, is 2340. Assuming 50% are done by using two code system (5X006 and 5X007) and 50% done by single code system (5X008).

Specialty Interventional Radiology Frequency 1053 Percentage 90.00 %

Specialty Diagnostic Radiology Frequency 117 Percentage 10.00 %

Specialty Frequency 0 Percentage 0.00 %

Estimate the number of times this service might be **provided to Medicare patients** nationally in a one-year period? 1,092

If this is a recommendation from multiple specialties please estimate frequency and percentage for each specialty. Please explain the rationale for this estimate. According to statistics provided by a manufacturer, the 2022 U.S. volume of services was 1,522. Annualization of Q4/2022 procedural volume in the U.S. exceeds 130 procedure per month (1,560) plus 40% is 2184, per vignette and typical age of prostate cancer diagnosis, estimate this may be predominantly performed on Medicare beneficiaries. Assuming 50% are done by using two code system (5X006 and 5X007) and 50% done by single code system (5X008).

Specialty Interventional Radiology Frequency 983 Percentage 90.01 %

Specialty Diagnostic Radiology Frequency 109 Percentage 9.98 %

Specialty Frequency 0 Percentage 0.00 %
